Sanford, Albert, Oshkosh, Wis. Cant-hook	408,755	Aug. 13	850	226	48	850
Sanford, Lazarus B., and T. Grisenthwaite, Fall River, Mass. Lubricator for spinning machinery	407,122	July 16	1663	435	48	341
Sanger, John N., Brooklyn, assignor to F. Adee & Co., New York, N. Y. Device for heating soldering-irons, lead-melting pots, &c	406,310	July 2	400	109	48	80
Sanitary and Fertilizer Company of the United States. (See McClellan, Oscar D., assignor.)						
Santy, Louis P., Clements, Kans. Water-motor	407,123	July 16	1664	435	48	341
Sargent, Allan C. (See Sargent, Frederick G. and A. C.)						
Sargent, Arthur G., Tilton, assignor of one-half to Laconia Car Company, Laconia, N. H. Automatic oil-feeder for oil-stoves	410,453	Sept. 3	498	133	48	1365
Sargent & Company. (See Page, Albert A., assignor.)						
Sargent, Frederick G. and A. C., Graniteville, Mass. Wool-washing machine	411,533	Sept. 24	2107	556	48	1699
Sargent, Frederick G. and A. C., Graniteville, Mass. Feeding mechanism for wool-washing machines	411,534	Sept. 24	2108	556	48	1699
Sarratt, James F. (See Bleich and Sarratt.)						
Sater, Hans H., Dubuque, Iowa. Attachment for plows	407,450	July 23	2172	560	48	447
Sattley, Archibald. (See Sattley, Marshall, assignor.)						
Sattley, Marshall, assignor of one-half to A. Sattley, Taylorville, Ill. Cultivator	406,856	July 9	1257	332	48	250
Saulnier, Jules L. F. (See Siret, Antoine, assignor.)						
Sauls, Edward C., Columbus, Ga. Can-filler	407,252	July 16	1859	485	48	379
Saunders, Alexander, assignor to D. Saunders' Sons, Yonkers, N. Y. Screw-cutting die	406,857	July 9	1258	332	48	251
Saunders, Benjamin, deceased; L. A. Saunders, Nashua, N. H., executrix. Machine for winding thread or yarn upon bobbins	407,124	July 16	1665	435	48	342
Saunders, Henry, Perry, Mo. Gage for saws	406,774	July 9	1130	300	48	228
Saunders, Louisa A., executrix. (See Saunders, Benjamin.)						
Saunders' Sons, D. (See Saunders, Alexander, assignor.)						
Saunders, Theodore, Danbury, Conn. Car-seal	406,113	July 2	125	37	48	26
Saunders, Theodore, Danbury, Conn. Press for car-seals	406,114	July 2	126	37	48	26
Sautter, Charles F., Brooklyn, N. Y. Thermostatic-valve regulator	406,775	July 9	1132	300	48	228
Sautter, Charles F., Brooklyn, N. Y. Funnel	407,253	July 16	1860	485	48	379
Sautter, Charles F., Brooklyn, N. Y. Lifter for jars, bottles, or other articles	407,254	July 16	1861	485	48	379
Savage, David, Bloomsburg, Pa. Washing-machine	407,453	July 23	2177	562	48	448
Savoral, Edvard, New York, N. Y. Friction-clutch	409,871	Aug. 27	2532	662, 663	48	1184
Sawhill, Frank C. (See Dosch and Sawhill.)						
Sawin, Charles A., assignor of one-half to H. A. Bacon, Waltham, Mass. Heating apparatus	408,263	Aug. 6	93	23	48	697
Sawyer, Albert P. (See Milliken, George F., assignor.)						
Sawyer, Andrew W., Providence, R. I. Spool-holder	410,699	Sept. 10	863	232	48	1443
Sawyer, Charles H., assignor of one-half to H. A. Smith, Minneapolis, Minn. Wheeled scraper or self-loading cart	407,451	July 23	2173	560, 561	48	448
Sawyer, Charles H., assignor of one-half to H. A. Smith, Minneapolis, Minn. Wheeled scraper	407,452	July 23	2176	561, 562	48	448
Sawyer, Charles R. (See Parent, Charles, assignor.)						
Sawyer, Harry H., Ridley Park, assignor of one-half to Thackara Manufacturing Company, Philadelphia, Pa. Holder for electric-light shades	411,396	Sept. 17	1908	509	48	1655
Sawyer Spindle Company. (See Draper, William F., assignor.)						
Sawyer Spindle Company. (See Goodale, Benjamin N., assignor.)						
Sawyer, William H., Providence, R. I. Wire-drawing die	406,671	July 9	973	262	48	198
Saxton, Lionel D., Kansas City, Mo. Harness attachment	410,029	Aug. 27	2749	722	48	1228
Sayles, Fred. L. (See Allison, George A., assignor.)						
Sayles, W. F. & F. C. (See Peck, Ira F., assignor.)						
Sayles, W. F. & F. C. (See Peck, Walter L., assignor.)						
Scanlon, John, Ironton, Mich. Blast-heater	411,618	Sept. 24	2244	596	48	1729
Scarborough, William D., Pennington, Tex. Door-check	411,557	Sept. 24	2141	568	48	1707
Schaaf, Ferdinand, Frankfort-on-the-Main, Germany. Piano	407,695	July 23	2510	648	48	515
Schade, John, Brooklyn, N. Y., assignor to Hopkins & Dickinson Manufacturing Company, of New York. Knob attachment	407,902	July 30	2826	735	48	582
Schaefer, John, Hyde Park, assignor to himself, and H. H. Windsor, Chicago, Ill. Automatic feeder for printing-presses	407,840	July 30	2731	709, 710	48	563
Schaper, Kasper H., Linn's Mills, Mo. Automatic grain-scale	410,857	Sept. 10	1118	301	48	1493
Schaum, Charles L. (See Motter and Todd, assignors.)						
Schaum, Otto W., Philadelphia, Pa. Brake mechanism	407,615	July 23	2400	623	48	495
Scheele, August H. (See Scheele, Henry W. and A. H.)						
Scheele, Henry W. and A. H., Cross Plains, Wis. Rail-joint	411,064	Sept. 17	1412	377	48	1560
Scheen, Sophus M., Christiania, Norway. Letter file and binder combined with a perforating device	406,396	July 9	848	229	48	175
Schelker, Gaspard, assignor of one-half to H. Goll, Brooklyn, N. Y. Picture-holder attachment for watch-cases	410,808	Sept. 10	1050	281	48	1180
Schembeck, Louis, New York, N. Y. Wind-instrument	410,740	Sept. 10	943	252	48	1456

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Schenck, Charles S., New York, N. Y. Apparatus for discharging and conveying coal	409,872	Aug. 27	2533	663	48	1184
Schenck, John C. F., Moline, Ill. Car step and platform safety-bar	406,960	July 16	1409	370	48	291
Scherer, Joseph, Buffalo, N. Y. Hand loom	410,772	Sept. 10	926	267	48	1467
Scherffius, Jacob, Winona, Minn. Charcoal apparatus	409,873	Aug. 27	2535	664	48	1185
Schilling, August. (See Roensch, Hugo, assignor.)						
Schilling, August M., Chicago, Ill. Lantern	409,506	Aug. 20	1977	522	48	1077
Schilling, August M., Chicago, Ill. Flooring-strip	411,684	Sept. 24	2339	619	48	1748
Schiltz, Mathias V., Cologne, Prussia, Germany. Hydrocarbon-engine	406,540	July 9	778	211	48	163
Schimansky, Otto, assignor to Barney & Kilby and D. J. Brown Manufacturing Company, Sandusky, Ohio. Machine for cutting hoops	407,841	July 30	2734	710 711	48	564
Schimmel, Oscar, Chemnitz, Saxony, Germany. Spinning-mule	408,540	Aug. 6	518	135 136	48	778
Schimper, Rudolph J., Jersey City, N. J., assignor to G. Frank, New York, N. Y. Artificial fuel	408,854	Aug. 13	999	.....	48	879
Schlatter, Friederich, Madretsch, Switzerland. Micrometer-gage	407,903	July 30	2827	736	48	582
Schlesinger, William M., Philadelphia, Pa. Regulating device for electric-railway cars	406,961	July 16	1410	370	48	292
Schlesinger, William M., Philadelphia, Pa. Electric railway	408,855	Aug. 13	999	264 265	48	879
Schlesser, Nickolas, Chicago, Ill. Safety-gate for swing-bridges	407,967	July 30	2926	762	48	601
Schloemer, Gottfried, and E. Hausknecht, Milwaukee, Wis. Velocipede	409,758	Aug. 27	2368	621	48	1154
Schlund, Henry A. (See Kynoch, George, assignor.)						
Schmalz Cigar Machine Company. (See Schmalz, John E., assignor.)						
Schmalz, François, New York, N. Y., assignor to American Waltham Watch Company, Waltham, Mass. Stripped negative	409,507	Aug. 20	1980	523	48	1077
Schmalz, John E., New York, N. Y., assignor to Schmalz Cigar Machine Company, of New York. Cigar-bunch-wrapping machine	411,304	Sept. 17	1777	475 476	48	1632
Schmasen, Henry. (See Doren, Lewis W., assignor.)						
Schmid, Albert, Allegheny, assignor to Westinghouse Electric Company, Pittsburg, Pa. Laminated core for electrical apparatus	406,776	July 9	1133	300	48	228
Schmid, Albert, Allegheny, assignor to Westinghouse Electric Company, Pittsburg, Pa. Forming laminated cores for electrical apparatus	406,858	July 9	1260	332	48	251
Schmid, Albert, Allegheny, assignor to Westinghouse Electric Company, Pittsburg, Pa. Forming cores for electrical apparatus	406,859	July 9	1262	333	48	251
Schmid, Albert, assignor to Westinghouse Electric Company, Pittsburg, Pa. Armature for electric machines	406,777	July 9	1135	301	48	228
Schmid, Wolfgang, Munich, Bavaria, Germany. Brake	408,756	Aug. 13	851	226	48	850
Schmidlapp, Jacob, New York, N. Y. Hook-and-ladder truck	409,759	Aug. 27	2369	622	48	1154
Schmidt, Ferdinand, Demmin, Prussia, Germany. Dental plugger	410,935	Sept. 10	1226	330	48	1514
Schmidt, Friedrich H., Schindlerswerk, near Bockau, Saxony, Germany. Apparatus for grinding wood	411,734	Sept. 24	2408	638	48	1763
Schmidt, Gottlieb, Philadelphia, Pa. Heel	410,030	Aug. 27	2750	723	48	1228
Schmidt, Johann F. E. W., Dresden, Saxony, Germany. Regenerative lamp	408,197	July 30	2989	859	48	666
Schmidt, John G., Philadelphia, Pa. Rotary meat-tenderer	411,169	Sept. 17	1584	421	48	1594
Schmidt, John M., Saginaw, Mich. Alarm	408,992	Aug. 13	1205	317 318	48	918
Schmidt, Oscar W., assignor of one-half to I. S. Cohen, San Francisco, Cal. Driving or stop mechanism	409,068	Aug. 13	1323	349	48	940
Schmidt, Wilhelm, Halberstadt, Prussia, Germany. Utilizing exhaust-steam	406,372	July 2	486	135 136	48	97
Schmitt, Joseph. (See Schrader and Schmitt.)						
Schmitt, Rudolf, Dresden, assignor to F. von Heyden, Nachfolger, Radebeul, Saxony, Germany. Making beta naphthol carbon acid	410,295	Sept. 3	241	.....	48	1316
Schmucker, John P., Franklin Grove, Ill. Motive power	411,065	Sept. 17	1413	377	48	1560
Schnarrenberger, Jacob H., assignor to himself and T. Reynolds, Springfield, Ohio. Adding-machine	409,710	Aug. 27	2300	604 605	48	1141
Schneekloth, Hans A., assignor to S. Littman, New York, N. Y. Barber's chair	410,296	Sept. 3	242	63	48	1316
Schneider, Edward F., Racine, Wis. Split pulley	406,237	July 2	206	81	48	59
Schneider, Henri, Paris, France. Gun-mounting having a disappearing action	407,418	July 23	2123	545	48	437
Schneider, Paul, administrator. (See Nicolaus, Edmund B.)						
Schneider, Peter, Brooklyn, N. Y. Automatic cigar-selling machine	408,932	Aug. 13	1117	291 292	48	902
Schnur, Charles. (See Blosfeld and Schnur.)						
Schoellig, Eduard. (See Endres and Schoellig.)						
Schoen, Charles T. (See Kemp and Marsden, assignors.)						
Schoen, Charles T., Philadelphia, Pa. Center-bearing plate for railway-cars	408,757	Aug. 13	852	227	48	850
Schofield, Richard, Paris, Ontario, Canada. Circular-rib-knitting machine	411,685	Sept. 24	2341	619	48	1748
Scholder, Edward F., Fort Scott, Kans. Cornstalk cutter or harvester	407,419	July 23	2124	548	48	438
Scholder, Edward F., Fort Scott, Kans. Truck. (Reissue)	11,022	Aug. 13	1475	390 391	48	971
Scholfield, Joseph J., Providence, R. I. Device for guiding the edges of fabrics	408,758	Aug. 13	853	227	48	850
Scholl, William, and T. G. Wolf, Scranton, Pa. Machine for reducing rails	408,993	Aug. 13	1121	297 298	48	903
Schoop, Paul, Zurich, Switzerland. Gelatinizing electrolytes for galvanic batteries	408,138	July 30	3189	.....	48	650
Schrack, James S., Jesup, Iowa. Liniment	407,551	July 23	2319	.....	48	478
Schrader, George, New York, and J. Schmitt, Brooklyn, N. Y. Forming screw-caps	406,479	July 9	673	180	48	144
Schrage, William. (See Meyer and Schrage.)						
Schrankel, John, assignor to L. Schrankel, Lancaster, N. Y. Double-acting force-pump	411,261	Sept. 17	1713	456	48	1620
Schrankel, Louisa. (See Schrankel, John, assignor.)						
Schroeder, Carl A. J. H., London, England. Carbon for electric lighting	408,358	Aug. 6	225	.....	48	723
Schroeder, Gottlieb W., Huntington, Ind. Poultry-house	406,778	July 9	1136	301	48	229
Schroeder, Max. (See Hänisch and Schroeder.)						
Schroth, C. F. (See McCullough, Oscar, assignor.)						
Schubert, Carl, assignor to himself and R. Kremmler, Dresden, Saxony, Germany. System of laying out patterns for garments	411,686	Sept. 24	2343	619 620	48	1749
Schubert, Louis L., and F. Malerhoefer, Chicago, Ill. Hod	407,968	July 30	2928	760	48	601
Schuermann, Anton, Decatur, Ill. Tool-driver	407,842	July 30	2735	711	48	564
Schuett, Henry J. H., Detroit, Mich. Envelope-damping machine	411,355	Sept. 17	1853	490 491	48	1645
Schultze, Charles, New York, N. Y. Kite-cord stick	406,672	July 9	974	252	48	198
Schulz, Theodore, and F. A. Cody, Rochester, N. Y. Hydrocarbon-lighting device	411,170	Sept. 17	1585	422	48	1594
Schulze-Berge, Hermann, Rochester, Pa. Furnace for heating glassware	411,131	Sept. 17	1530	400	48	1584
Schulze-Berge, Hermann, Rochester, Pa. Apparatus for reheating glassware	411,132	Sept. 17	1532	400	48	1584
Schüpphaus, Charles R., Adams, Mass., assignor to American Zylonite Company, New York, N. Y. Pyroxyline compound	410,204	Sept. 3	114	.....	48	1221

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.

Schüpphaus, Charles R., Zylonite, Mass., assignor to American Zylonite Company, New York, N. Y. Pyroxyline varnish	410,206	Sept. 3	115	.....	48	1221
Schüpphaus, Charles R., Zylonite, Mass., assignor to American Zylonite Company, New York, N. Y. Pyroxyline compound	410,207	Sept. 3	116	.....	48	1221
Schüpphaus, Charles R., Zylonite, Mass., assignor to American Zylonite Company, New York, N. Y. Pyroxyline varnish	410,208	Sept. 3	116	.....	48	1221
Schüpphaus, Charles R., Zylonite, Mass., assignor to American Zylonite Company, New York, N. Y. Pyroxyline compound	410,209	Sept. 3	117	.....	48	1221
Schupphaus, Robert C., Adams, Mass., and M. T. White, Newark, N. J. Apparatus for the manufacture of pyroxyline	406,597	July 9	832	229	48	176
Schureman, Howard B., Newark, N. J. Motor for toys	409,806	Aug. 27	2443	640	48	1168
Schuster, Jacob, St. Clair, Pa. Hydrant	406,149	July 2	176	51	48	36
Schutz, Frederick A., Brooklyn, N. Y. Cigar-bunching machine	409,607	Aug. 27	2445	641 642	48	1169
Schwab, Charles M., Homestead, Pa. Apparatus for hot-sawing beams	410,119	Aug. 27	2214	765	48	1256
Schwab, Charles M., Munhall, Pa. Making metal rolls	410,651	Sept. 10	784	212	48	1429
Schwarts, Charles, Brooklyn, N. Y. Paper box	407,494	July 23	2230	576	48	459
Schwars, Herman, New York, N. Y. Cap	408,934	Aug. 13	1122	296	48	903
Schweickhardt, William, St. Louis, Mo. Leather-working machine	408,896	Aug. 13	1069	281	48	892
Schweitzer, Joseph, Paris, France. Grinding-mill	406,779	July 9	1138	302	48	229
Schweizer, Edward. (See Misle and Schweizer.)						
Schwenke, Paul, Zerbst, Anhalt, Germany. Electrical lock	409,508	Aug. 20	1980	523	48	1077
Schwerin, C. Morris. (See Spielman, William, assignor.)						
Schwinn, George W., Philadelphia, Pa. Damper for hot-air flues	408,856	Aug. 13	1005	265	48	880
Schwob, Adolphe. (See Sandos, Henri, assignor.)						
Scofield, Frank M., *et al.* (See Tripp, James, assignor.)						
Scofield, Frank R., Cleveland, Ohio. Bolt-pointing machine	409,244	Aug. 20	1596	421	48	1001
Scofield, Gerrit S., *et al.* (See Tripp, James, assignor.)						
Scofield, Levi, Grand Haven, Mich. Planter	411,203	Sept. 17	1635	435	48	1604
Scollay, Edward F. (See Miles and Scollay.)						
Scotford, Louis K., Chicago, Ill. Apparatus for vulcanizing rubber	407,255	July 16	1392	485 486	48	379
Scott, George A., New York, N. Y. Magnetic body-wear	410,652	Sept. 10	785	213	48	1429
Scott, George L. (See Chorlton and Scott.)						
Scott, Morley & Co. (See Morley, Joseph D., assignor.)						
Scott, Nelson T., New York, N. Y. Nut-lock	406,150	July 2	177	51	48	36
Scott, Robert W., assignor of one-half to L. N. D. Williams, Philadelphia, Pa. Needle-picking tool for knitting-machines	407,125	July 16	1666	433	48	342
Scott, Robert W., assignor of one-half to L. N. D. Williams, Philadelphia, Pa. Needle-picking tool for knitting-machines	407,126	July 16	1667	436	48	342
Scott, Robert W., assignor of one-half to L. N. D. Williams, Philadelphia, Pa. Knitting-machine and needle therefor	407,616	July 23	2401	623	48	495
Scott, Robert W., assignor of one-half to L. N. D. Williams, Philadelphia, Pa. Narrowed knitted web	410,631	Aug. 27	2751	723	48	1228
Scott, Robert W., assignor of one-half to L. N. D. Williams, Philadelphia, Pa. Narrowing knitted webs	410,858	Sept. 10	1119	301	48	1493
Scott, Robert W., assignor of one-half to L. N. D. Williams, Philadelphia, Pa. Knitting-machine	410,859	Sept. 10	1121	301 302	48	1493
Scott, Samuel J., Cincinnati, Ohio. Jug-cover	406,238	July 2	227	82	48	59
Scott, Samuel P., assignor to Star Manufacturing Company, Hillsborough, Ohio. Carriage-curtain fastening	409,009	Aug. 13	1324	349	48	940
Scott Spring Company, Charles (See Bell, Thomas M., assignor.)						
Scott, Walter, Plainfield, N. J. Dampening and feeding mechanism for printing-machines	411,535	Sept. 24	2109	556 557	48	1699
Scott, Walter A., St. Paul, Minn. Six-wheeled car-truck	408,993	Aug. 13	1206	318 319	48	918
Scott, William, Medford, Mass. Water-closet bowl	406,780	July 9	1141	302	48	230
Scott, William, Medford, Mass. Water-closet	407,041	July 16	1526	399	48	313
Scott, William, Medford, Mass. Set wash-basin	407,793	July 30	2954	687	48	550
Scott, William, Medford, Mass. Waste-pipe connection	408,897	Aug. 13	1071	282	48	892
Scovill Manufacturing Company. (See Fuller, Willard H., assignor.)						
Scoville, Elijah U., Manlius, N. Y. Pipe-coupling	410,032	Aug. 27	2751	723	48	1228
Scribner, Charles E., assignor to Western Electric Company, Chicago, Ill. Electric polarized annunciator	411,133	Sept. 17	1534	409	48	1584
Sealy, Amanda. (See Sealy, Thomas, assignor.)						
Sealy, Thomas, assignor to A. Sealy, Newark, N. J. Treating fur or wool felt for hats, &c.	409,651	Aug. 20	2192	.....	48	1116
Seaman, Joseph B., South Lynne, Ill. Drying or evaporating apparatus	411,397	Sept. 17	1909	509 510	48	1655
Seaman, Sherman C., Clinton, Iowa. Crate	409,118	Aug. 13	1405	371	48	956
Seaman, William. (See Eynon and Seaman.)						
Searle, Harry F., Brooklyn, N. Y. Phonogram-receiving box	407,127	July 16	1669	436	48	342
Searls, Anson, assignor to Searls-Randall Company, Newark, N. J. Top-prop nut	407,904	July 30	2928	736	48	582
Searls, Anson, assignor to Searls-Randall Company, Newark, N. J. Arm-rail for sleighs	407,905	July 30	2929	736	48	582
Searls-Randall Company. (See Searls, Anson, assignor.)

Smallwood, Edward, Elyria, Ohio. Stone-planing machine	409,249	Aug. 20	1604	423	48	1003
Smaltig, Fredrick C., Allegheny, Pa. Cigar-bunching machine	411,736	Sept. 24	2410	639	48	1763
Smith, Abby C. (See Young, Annie M., assignor.)						
Smith, Adolph T., New York, N. Y. Electric cut-out	407,455	July 23	2181	562, 563	48	449
Smith, Albert C., Sardinia, Ind. Seed-planter	406,962	July 16	1413	371	48	293
Smith, Alonzo F., Milwaukee, Wis. Spelling-stick	407,374	July 23	2052	531	48	494
Smith & Anthony Stove Company. (See McHugh, Timothy, assignor.)						
Smith & Anthony Stove Company. (See West, Augustine C., assignor.)						
Smith, Benjamin, Mechanicsburg, Ohio. Wagon-spring	410,211	Sept. 3	119	30	48	1291
Smith, Benjamin C., Brooklyn, assignor to F. Adee & Co., New York, N. Y. Needle-bath water-supply valve	408,761	Aug. 13	858	228	48	851
Smith Brothers Manufacturing Company. (See Smith and Grasser, assignors.)						
Smith, Byrd, and F. Howard, Devine, Tex. Insecticide	410,036	Aug. 27	2761	.....	48	1230
Smith, Charles C., Mohawk, and H. W. Martin, Ilion, assignors to Electrical Spectacle and Eye Glass Manufacturing Company, (limited,) Mohawk, N. Y. Electric attachment for eyeglasses	411,689	Sept. 24	2348	621	48	1750
Smith, Charles F. (See Milliken and D'Amour, assignors.)						
Smith, Charles G., Detroit, Mich. Excelsior-machine	410,564	Sept. 3	648	172	48	1396
Smith, Charles L., Cleveland, Ohio. Hose-coupling	409,512	Aug. 20	1965	524	48	1078
Smith, Chester W. M., San Francisco, Cal. Railway-car. (Reissue)	11,023	Aug. 13	1476	389	48	971
Smith, Comly S., Philadelphia, Pa. Ferrule for umbrellas, canes, &c	407,375	July 23	2053	531	48	494
Smith, Daniel A., Boston, Mass. Holder for letters, papers, cards, &c	408,541	Aug. 6	520	136	48	778
Smith, Daniel W., assignor of one-half to J. C. Addington, St. Louis, Mo. Electric water-heater	411,737	Sept. 24	2412	639	48	1764
Smith, David. (See Wilson, Malcolm, assignor.)						
Smith, Edward, Plymouth, Pa. Fastening for mining-drill stocks	406,782	July 9	1146	303	48	230
Smith, Edward C., Brooklyn, N. Y., assignor to Smith Portable Rail Saw Company, of New Jersey. Rail-sawing machine	410,298	Sept. 3	249	65	48	1317
Smith, Edward F., Corry, Pa. Leaching tan-bark	409,876	Aug. 27	2539	665	48	1186
Smith, Edward S., Waterbury, Conn. Last	411,622	Sept. 24	2248	597	48	1729
Smith & Egge Manufacturing Company. (See Sjoberg, Carl J. A., assignor.)						
Smith, Emor E., assignor of one-half to J. A. Weed, Dayton, Ohio. Fodder-binder	406,407	July 2	546	153	48	109
Smith, Eugene G., *et al.* (See Rote, Charles V., assignor.)						
Smith Exhaust Pipe Company. (See Smith, John Y., assignor.)						
Smith, Ezra W. (See Loftus, John, assignor.)						
Smith, Frank L., Sioux City, Iowa. Sirup for soda-water	406,783	July 9	1147	.....	48	231
Smith, Frank P. (See Proctor, David R., assignor.)						
Smith, Frederick H., Baltimore, Md. Electrode for secondary batteries	410,037	Aug. 27	2762	725	48	1230
Smith, Friend W., Bridgeport, Conn., assignor to Beasley Supply Company, New York, N. Y. Registering-wheel	406,312	July 2	405	110	48	81
Smith, George, Glasgow, county of Lanark, Scotland. Primer-tube for dynamite cartridges	411,206	Sept. 17	1641	436	48	1605
Smith, George D., New York, N. Y. Service, cash, and pass check	409,877	Aug. 27	2541	665	48	1186
Smith, George E., Kingston, N. Y. Brick-mold-sanding machine	411,228	Sept. 17	1669	446, 447	48	1612
Smith, George S. (See Lyon, Benjamin, assignor.)						
Smith, H. A. (See Sawyer, Charles H., assignor.)						
Smith, Hamilton E., New York, N. Y. Reversing belt-gear	408,049	July 30	3045	797	48	624
Smith, Hamilton E., New York, N. Y. Reversing belt-gear	411,738	Sept. 24	2413	640	48	1764
Smith, Henry W., Boston, Mass. Piano-case	409,513	Aug. 20	1965	524	48	1078
Smith, Hiram. (See Smith, William H. and H.)						
Smith, Israel S., Sr., assignor of one-half to C. M. Martin, Washington, D. C. File-box	410,257	Sept. 3	162	47	48	1304
Smith, James G., Jr. (See Marsden, John H., assignor.)						
Smith, James M., Greenwich, Conn. Thill-coupling jack	407,131	July 16	1674	437	48	343
Smith, Jesper, Washington, N. J. Water-motor	409,514	Aug. 20	1966	524	48	1078
Smith, Job, assignor to G. C. Hetzel & Co., Philadelphia, Pa. Apparatus for dyeing	406,784	July 9	1148	303	48	231
Smith, John. (See Willis and Smith.)						
Smith, John, Kansas City, Mo. Fire and water proof ceiling	407,376	July 23	2054	531	48	494
Smith, John G., St. Louis, Mo. Folding cot	408,141	July 30	3196	835	48	651.
Smith, John H., J. F. Knuth, G. Thompson, and J. Ewald, Fairchild, Wis. Car-coupling	409,431	Aug. 20	1873	494	48	1056
Smith, John J. C., and C. Grasser, assignor to Smith Brothers Manufacturing Company, Passaic, N. J. Apparatus for casting metals under pressure	407,696	July 23	2511	648, 649	48	516
Smith, John R., assignor of three-eighths to L. A. Young and H. J. Cartice, Neosho, Mo. Telephone system	408,387	Aug. 6	180	46	48	714
Smith, John Y., Doylestown, Pa., assignor to Smith Exhaust Pipe Company, of New Jersey. Blast or exhaust apparatus	406,482	July 9	677	180	48	145
Smith, John Y., Doylestown, Pa., assignor to Smith Exhaust Pipe Company, of New Jersey. Triple-expansion blast or exhaust apparatus for locomotives	406,483	July 9	680	180	48	145

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Smith, John Y., Doylestown, Pa., assignor to Smith Exhaust Pipe Company, of New Jersey. Exhaust apparatus for locomotives	406,484	July 9	686	191	48	147
Smith, Joseph D., Rising City, Nebr. Ironing-board	409,516	Aug. 20	1967	525	48	1079
Smith, Joseph R., Waterbury, Conn., assignor to S. S. Stafford, New York, N. Y. Pad for indelible marking	411,264	Sept. 17	1718	459	48	1621
Smith, Levi F., Philadelphia, Pa. Steam-boiler attachment	409,617	Aug. 20	2146	564	48	1107
Smith, Levi W., East Troy, Wis. Whiffletree	410,861	Sept. 10	1125	302	48	1494
Smith, Lewis, Green Top, Mo. Harrow	408,816	Aug. 13	945	251	48	869
Smith, Loring M. (See Brabb and Smith.)						
Smith, Mark. (See Buxton, Braithwaite, and Smith.)						
Smith, Mark A. (See Ridgely, Charles T., assignor.)						
Smith, Martin V., Pittsburg, Pa., assignor of one-half to Calumet Fire Clay Company, Calumet, Ohio. Pot-furnace	410,742	Sept. 10	945	253, 254	48	1456
Smith, Myers & Schnier. (See Smith, Samuel R., assignor.)						
Smith, Myers & Schnier. (See Smith and Myers, assignors.)						
Smith, Nathaniel P., Memphis, Tenn. Pulley	409,878	Aug. 27	2543	666	48	1186
Smith, Orren M., assignor to W. Grange, Philadelphia, Pa. Tubular lantern	410,459	Sept. 3	508	136	48	1368
Smith, Orren M., assignor to W. Grange, Philadelphia, Pa. Tubular lantern	410,460	Sept. 3	509	136	48	1368
Smith Portable Rail Saw Company. (See Smith, Edward C., assignor.)						
Smith, Prince, Jr., and J. Lund, Keighley, county of York, England. Spinning-machine	408,900	Aug. 13	1074	282, 283	48	893
Smith, Rensselaer J., Albany, N. Y. Ticket-casing for car-seats	409,870	Aug. 27	2544	666	48	1187
Smith, Robert W. (See Phillips and Smith.)						
Smith, Roswell T., assignor to himself, N. W. Goddard, Nashua, N. H., and G. H. Dunham, New York, N. Y. Machine for trimming the edges of fabrics	410,655	Sept. 10	788	214	48	1429
Smith, Rudolph C., assignor to Otis Brothers & Company, Yonkers, N. Y. Elevator	410,212	Sept. 3	120	30, 31	48	1292
Smith, Rufus W. (See Drake, Edwin L., assignor.)						
Smith, Samuel R., assignor to Smith, Myers & Schnier, Cincinnati, Ohio. Dogging device for saw-mill head-blocks	409,516	Aug. 20	1968	525	48	1079
Smith, Samuel R., and E. Myers, assignors to Smith, Myers & Schnier, Cincinnati, Ohio. Saw-mill head-block	409,517	Aug. 20	1969	525, 526	48	1079
Smith, Thomas, 74 Cyprus Road, Bootle-Cum-Linacre, county of Lancaster, England. Nautical-signaling apparatus	409,250	Aug. 20	1606	423	48	1003
Smith, Tliomas J., Brooklyn, N. Y., assignor to E. S. Greeley & Company, of New York. Electric call-bell	408,676	Aug. 6	724	188	48	817
Smith, Walter, *et al.* (See Shank, Charles A., assignor.)						
Smith, Walton D., assignor of one-half to G. Seyller, Prophetstown, Ill. Tag	408,359	Aug. 6	226	58	48	723
Smith, Wesley. (See Hawk, Smith, and Fox.)

Seeber, Frank A., and J. S. Ammon, Reading, Pa. "Coin Gum." (For packages of chewing-gum with which coin is given away)	6,013	Sept. 10	48	1404
Smith, George, Little Cooley, Pa. "Smith's Iron Wood and Vegetable Specific Bitters"	6,024	Sept. 24	48	1666
Sommer, Adolph, Berkeley, Cal. "Viscol-Dressing" (for Leather)	5,965	July 9	48	120
Stahl, F. A. (See Thomas and Stahl.)				
Stovall & Co., L. P., Danville, Va. "One Solid Foot of Chewing Tobacco for 10 cts." (For tobacco)	6,018	Sept. 17	48	1542
Taylor, E. W., Jefferson, Tex. "Taylor's Compound Elixir of Blackberry"	6,008	Sept. 3	48	1268
Taylor, E. W., Jefferson, Tex. "Taylor's Extract of Ginger and Tolu with Mint"	6,009	Sept. 3	48	1268
Thomas, George, and F. A. Stahl, Effingham, Ill. "Hog Cholera Cured." (For a medical compound)	6,006	Aug. 27	48	1124
Union Print Works, New York, N. Y. "Bay Side," (for Printed Woolen Goods)	5,971	July 16	48	264
Union Print Works, New York, N. Y. "Riversdge" (for Printed Woolen Goods)	5,990	July 30	48	542
Voelcker, Jacob C. H., Louisville, Ky. "Voelcker's Prune Syrup Laxative"	6,019	Sept. 17	48	1542
Walt, Robert J., Greenwich, N. Y. "White Pine." (For a cough cure)	6,020	Sept. 17	48	1542
Wales, William R., Baltimore, Md. "Chemical and Vegetable Parlor Illuminator" (for Burning Fluid)	5,975	July 23	48	404
Young, Martin B., Philadelphia, Pa. "Young's Headache Tablets"	5,972	July 16	48	264

DISCLAIMERS.

Name, residence, and invention.	No.	Filed.	Official Gazette. Vol.	Page.
Deering, Mark L., Cleveland, Ohio; disclaimer filed by assignee. Manufacture of paper bags. (Reissue)	10,083	July 29, 1869	48	678
Ellis, James M., Bridgeport, Conn.; disclaimer filed by assignee. Coil-spring garters and belts	145,160	June 29, 1869	48	120
Hyatt, Isaac S., Morristown, N. J.; disclaimer filed by assignee. Purifying water	293,740	July 27, 1869	48	678
Short, Sidney H., Columbus, Ohio; disclaimer filed by patentee. Insulating support for electric conductors	398,661	July 15, 1869	48	404
Whysall, George, Toledo, Ohio, and John A. Lambing, Wilkinsburg, Pa.; disclaimer filed by patentees. Gas-furnace for steam-boilers	398,462	Sept. 4, 1869	48	1404

ALPHABETICAL LIST OF INVENTIONS.

Invention.	Name.	No.	Date.	Monthly volume. Specification.	Drawing.	Official Gazette. Volume.	Page.
Abdominal supporter	I. M. Ferris	407,341	July 23	1993	518	48	413
Abrasive surfaces. Tool for dressing	G. G. Crowell	410,581	Sept. 10	677	181	48	1408
Acid. Apparatus for extracting sulphurous	E. Hänisch and M. Schroeder	410,415	Sept. 3	437	115	48	1355
Acid. Making beta naphthol carbon	R. Schultz	410,395	Sept. 3	241	.....	48	1316
Acid. Making paraoxybenzoic	B. E. Seifert	407,906	July 30	2830	.....	48	562
Acids. Purifying fatty	C. Bardy	406,159	July 9	188	54	48	39
Adding-machine	J. H. Schnarrenberger	409,710	Aug. 27	2300	{604, 605}	48	1141
Advertising and street-announcing apparatus	G. W. McKenzie and W. I. Miller	411,050	Sept. 17	1392	373	48	1556
Advertising device	R. Freeland	408,009	Aug. 6	616	159	48	797
Advertising device or coin-protector	E. W. Parker	411,309	Sept. 17	1902	507	48	1654
Aerator. Milk	P. W. Strong	411,694	Sept. 24	2355	622	48	1751
Aeriform fluids. Administering	J. C. Kennedy	408,723	Aug. 13	807	213	48	840
Agitator and conveyer. Combined	V. D. Anderson	409,816	Aug. 27	2469	645	48	1173
Agricultural boiler	I. Shoudy, Jr.	407,498	July 23	2235	577	48	400
Agricultural boiler	I. Shoudy, Jr., and L. L. Miller	407,497	July 23	2234	577	48	400
Agricultural implement. Wheeled	N. B. Spradley	408,963	July 16	1415	371	48	292
Air. Apparatus for cooling, warming, moistening, or saturating	J. Howorth	408,216	July 2	966	73	48	55
Air-brake	H. S. Park	407,445	July 23	2163	{558, 559}	48	446
Air-brake	N. J. Pritchard	410,922	Sept. 10	1206	396	48	1510
Air-brakes. Releasing attachment for automatic	E. J. Lewis	410,288	Sept. 3	230	60	48	1314
Air-compressor	H. Davey	409,773	Aug. 27	2392	627	48	1159
Air engine. Compressed	B. F. Wright	408,784	Aug. 13	893	{238, 239, 240}	48	856
Air-heater	L. Hussey	411,382	Sept. 17	1888	504	48	1652
Alarm: *See* Burglar-alarm. Knob-alarm. High and low water alarm.							
Alarm	J. M. Schmidt	408,992	Aug. 13	1205	318	48	918
Alarm	G. M. Williams	409,068	Aug. 13	1355	358	48	946
Album	C. Jaeger	407,074	July 16	1567	412	48	322
Alcohol. Rectification of	A. T. Christoph	408,583	Aug. 6	581	.....	48	791
Alcoholic liquids. Manufacture of	J. Takamine	411,231	Sept. 17	1673	.....	48	1613
Alloy for secondary-battery plates	E. R. Knowles	408,182	July 30	3270	854	48	663
Alloy. Non-magnetic	H. Ostermann and C. Lacroix	408,130	July 30	3181	.....	48	648
Alloys. Making aluminium	W. A. Baldwin	406,343	July 2	500	.....	48	102
Aluminium chlorides. Purifying	H. Y. Castner	409,664	Aug. 27	2224	.....	48	1130
Aluminium. Obtaining alloys of	L. O. Brin	410,574	Sept. 10	668	178	48	1406
Aluminium. Producing	M. Wanner	410,568	Sept. 3	654	174	48	1397
Ammonia-soda apparatus	J. P. Barnum	409,382	Aug. 20	1804	475	48	1041
Anchor	J. O. Jones	406,285	July 2	358	98	48	72
Anchor-tripper	C. W. Delon	409,176	Aug. 20	1499	397	48	963
Andiron and fender. Combined	S. Dunn	406,508	July 9	729	200	48	153
Aniline-black	J. Bracewell	409,822	Aug. 27	2468	.....	48	1173
Aniline-black discharge	J. Bracewell	409,819	Aug. 27	2463	.....	48	1173
Animal-catching device	C. Wisdon	407,496	July 23	2133	550	48	430
Animal-releasing device	M. M. Shelley	406,674	July 9	977	263	48	199
Animal-shears	R. Dixon	410,352	Sept. 3	338	89	48	1335
Animal-trap	H. Barry	407,987	July 30	2803	730	48	578
Animal-trap	E. L. Dunlap	407,646	July 23	2446	633	48	503
Animal-trap	H. E. Kelley	409,467	Aug. 20	1925	510	48	1067
Animal-trap	H. E. Kelley	409,468	Aug. 20	1927	510	48	1067
Animal-trap	H. E. Kelley	411,089	Sept. 17	1378	370	48	1554
Animal-trap	H. E. Kelley	411,246	Sept. 17	1603	452	48	1616
Animal-trap	H. E. Kelley	411,247	Sept. 17	1604	453	48	1616
Animal-trap	Z. R. Kidder	409,592	Aug. 20	2102	554	48	1099
Animal-trap	L. N. Loomis	409,212	Aug. 20	1551	410	48	992
Animal-trap	H. J. Seymour	407,129	July 16	1071	436	48	343
Animal-trap	A. Worden	409,381	Aug. 20	1803	474	48	1041
Animals by electricity. Apparatus for treating	G. M. Lawrance	409,470	Aug. 20	1929	{510, 511}	48	1068
Animals. Device for catching	I. S. Krick	408,309	Aug. 6	153	38	48	709
Annunciator	A. A. Vanderpool	406,377	July 2	497	139	48	99
Annunciator. Electric polarized	C. E. Scribner	411,133	Sept. 17	1534	409	48	1584
Ant-trap	E. E. Davis	407,889	July 30	2806	731	48	578
Antimony. Double sulphate of	C. J. E. de Haën	407,925	July 30	2864	.....	48	586
Anvil. Farrier's	J. T. Nichols	407,833	July 30	2722	{706, 707}	48	562
Anvil. Horseshoe	J. Houck	410,972	Sept. 10	1283	347	48	1526
Anvil. Horseshoe	L. E. Wescott	411,405	Sept. 17	1922	513	48	1656
Arches. Construction of	J. Bogert	411,213	Sept. 17	1651	{439, 440}	48	1607
Arches for flooring. Apparatus for laying tile	J. Pajeau	411,468	Sept. 24	2021	535	48	1682
Armature	J. R. Johnson	410,592	Sept. 10	692	185	48	1410
Armature	C. F. Winkler	411,629	Sept. 24	2257	600	48	1731

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Armature-core for dynamos	D. Higham	409,463	Aug. 20	1920	508	48	1066
Armature. Dynamo-	S. C. C. Currie	406,429	July 9	582	164	48	126
Armature for electric machines	A. Schmid	406,777	July 9	1135	301	48	228
Armature-winding for dynamos	J. J. Wood	406,492	July 9	698	193	48	118
Armatures. Protecting-case for	A. L. Riker	408,045	July 30	3036	794	48	622
Armlets, &c. Making	G. H. Blakesley	411,416	Sept. 24	1946	518	48	1068
Armpit-shield	N. Bain	407,318	July 23	1948	508	48	405
Artist's drawing-board	T. C. Roussel	406,675	Aug. 6	722	188	48	817
Artist's field and material case	C. J. Krumbein	409,962	Aug. 27	2263	704	48	1215
Artist's wet-canvas carrier	F. D. Sutton	406,937	Aug. 13	1125	297	48	904
Asbestus sheets. Manufacturing	H. W. Johns	408,538	Aug. 13	974	.....	48	874
Astronomical mirror	D. O'Brien	408,511	Aug. 6	468	123	48	771
Atomizer	P. Köthner	406,288	July 2	360	98	48	73
Atomizer for dampening fabrics	M. Partington	410,187	Sept. 3	78	19	48	1283
Atomizer for dampening fabrics	M. Partington	410,188	Sept. 3	80	20	48	1283
Atomizing solid substances. Apparatus for	S. W. Kimble	410,247	Sept. 3	167	44	48	1301
Augers. Die for the manufacture of	J. A. Marsell	406,497	Aug. 6	445	116	48	767
Aurin derivatives. Making	T. Sandmeyer	410,739	Sept. 10	942	.....	48	1456
Automaton. Coin-operated	A. M. Pierce	411,106	Sept. 17	1496	397	48	1576
Awl. Centering	L. Van Alstyne	409,130	Aug. 13	1426	375	48	980
Ax-helve	H. Hall, Jr.	406,899	July 16	1324	347	48	274
Axes. Manufacture of	H. Hammond	407,591	July 23	2168	614	48	429
Axle-box	C. B. Hobron	410,590	Sept. 10	690	185	48	1410
Axle-box	P. Pfeifer	408,633	Aug. 6	653	{169 / 170	48	805
Axle box. Car-	H. M. Johnson	408,860	Aug. 13	1043	276	48	887
Axle box. Car-	D. S. Stimson	406,151	July 2	178	51	48	36
Axle-box lid. Car-	L. Freidel	406,721	July 9	1047	279	48	211
Axle boxes. Dust-guard for car-	C. W. Hayes	411,100	Sept. 17	1485	394	48	1574
Axle-lubricator	E. S. Coyle	409,018	Aug. 13	1248	330	48	926
Axle-lubricator	H. M. Goodman	409,573	Aug. 20	2071	546	48	1094
Axle-lubricator	A. A. Gregory	409,962	Aug. 27	2660	698	48	1210
Axle-lubricator	J. L. House	406,839	July 9	1231	326	48	247
Axle-lubricator	J. E. Shaw	410,719	Sept. 10	909	244	48	1449
Axle lubricator. Carriage-	J. A. Wilson	408,155	July 30	3215	{839 / 840	48	654
Axle nut. Carriage-	A. E. Herman	409,681	Aug. 27	2254	593	48	1133
Axle. Self-lubricating car-	F. J. Seymour	407,256	July 16	1864	486	48	360
Axle. Vehicle-	A. E. Herman	409,380	Aug. 27	2253	593	48	1133
Axle. Vehicle-	H. F. Kartowitz	406,101	July 2	112	33	48	24
Axle. Vehicle-	J. G. Kenyon	409,362	Aug. 20	1773	467	48	1035
Axle. Vehicle-	C. F. Milburn	407,541	July 23	2312	594	48	475
Axle. Vehicle-	J. T. Miller	408,839	Aug. 13	975	259	48	874
Axle washer. Vehicle-	C. C. Jerome	409,790	Aug. 27	2421	633	48	1164
Back-band hook	J. A. Elliott	410,081	Aug. 27	2839	745	48	1243
Back-band hook	D. D. Nolley	410,206	Sept. 10	1048	280	48	1479
Back-band hook	F. A. Yost	410,998	Sept. 10	1320	356	48	1583
Bag: *See* Cloth bag. Paper bag. Feed-bag. Traveling-bag. Life-preserving buoyant bag.							
Bag frame. Traveling-	O. Zimmer	410,478	Sept. 3	531	142	48	1372
Bag-holder	J. Feess	409,946	Aug. 27	2637	692	48	1206
Bag-holder	E. K. Wilson	411,701	Sept. 24	2365	626	48	1733
Bag-holder or bill-file	J. S. Jones	406,047	July 2	35	10	48	10
Bag or satchel frame	W. Roemer	406,594	July 9	846	228	48	175
Bag-string cutter	R. A. Bauer	407,567	July 23	2338	605	48	453
Bag-tie	A. Maffett	410,179	Sept. 3	49	13	48	1276
Bag-tying device	M. C. Kimball	410,978	Sept. 10	1293	349	48	1528
Bags, satchels, &c. Catch for	R. C. Jenkinson	411,445	Sept. 24	1987	527	48	1675
Bags, satchels, &c. Spring-catch for	R. C. Jenkinson	411,446	Sept. 24	1989	527	48	1675
Bagging apparatus	T. B. Jones	406,218	July 2	268	74	48	53
Bagasse-furnace	F. Cook	408,587	Aug. 6	586	153	48	792
Bagasse-furnace	F. Cook	408,588	Aug 6	588	153	48	792
Bagasse-furnace	W. W. Sutcliffe	407,703	July 23	2520	{651 / 652	48	518
Baking-pan	J. J. Seifert	410,936	Sept. 10	1227	330	48	1514
Balancing apparatus for wheels, &c.	T. A. Griffin	407,589	July 23	2366	613	48	488
Bale covering. Cotton-	R. M. Walsh	410,387	Sept. 3	386	{102 / 103	48	1345
Bale-tie machine. Wire-	W. A. Laidlaw	408,114	July 30	3159	826	48	644
Baling or bundling machine	D. D. Brown	411,422	Sept. 24	1956	520	48	1669
Baling-press	Z. J. Anderson	407,315	July 23	1945	507	48	405
Baling-press	W. M. Denman	408,069	July 30	3097	{811 / 812	48	634
Baling-press	L. S. Flatau	406,206	July 2	254	70	48	51
Baling-press	J. H. Gardner	407,290	July 16	1912	498	48	389
Baling-press	W. Hillman and J. F. Ripple	411,501	Sept. 24	2061	545	48	1690
Baling-press	J. W. Hunter	406,048	July 2	34	10	48	9
Baling-press	E. P. Jaqua	410,102	Aug. 27	2879	755	48	1251
Baling-press	W. A. Laidlaw	408,115	July 30	3163	{826 / 827	48	644
Baling-press	J. Price	409,335	Aug. 20	1735	456	48	1028
Baling-press	E. C. Sooy	410,679	Sept. 10	832	224	48	1437
Baling-press	T. Tebow	410,046	Aug. 27	2777	{730 / 731	48	1233
Baling-press	A. D. Thomas	411,558	Sept. 24	2144	{568 / 569	48	1707
Baling-press	W. E. Walter	406,680	July 9	988	{965 / 966	48	201
Baling-press	H. L. Whitman	410,473	Sept. 3	523	141	48	1371
Ball: *See* Twine ball.							
Ball-and-socket joint	W. Buchanan	406,561	July 9	802	{217 / 218	48	167

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Ball-and-socket joint for steam-pipe connections	T. Curley	409,277	Aug. 20	1650	435	48	1012
Ballot-box. Registering and canceling	L. M. Foster	406,093	July 30	3107	813	48	635
Ballot. Envelope-	J. R. Gathright	411,142	Sept. 17	1544	412	48	1586
Ballots. Canceling	S. J. Howell	406,922	Aug. 6	637	165	48	802
Band. Covered elastic endless	J. Ashworth	409,001	Aug. 13	1216	321	48	920
Band-cutter and feeder	L. Close	406,084	July 30	3090	810	48	632
Band-cutter and feeder	H. C. Cook	410,785	Sept. 10	1018	273	48	1473
Band-cutter and feeder	H. L. Earle	409,461	Aug. 20	1916	{507 / 508	48	1065
Band-cutter and feeder	D. West	407,803	July 30	2679	{695 / 696	48	551
Bar: *See* Clothes-bar. Grate-bar. Fire-engine grate-bar. Horseshoe-bar.							
Barber-shop indicator	B. R. Dudley and A. B. Cosby	411,281	Sept. 17	1745	466	48	1626
Barber's chair	F. Heine	408,236	Aug. 6	56	13	48	669
Barber's chair	H. A. Schneckloth	410,296	Sept. 3	242	63	48	1316
Barbing-machines. Automatic stop for	A. M. Munson	408,737	Aug. 13	893	{217 / 218	48	843
Barrel	J. W. Wheatley	408,277	Aug. 6	110	28	48	701
Barrel-brander	M. Wolf	411,561	Sept. 24	2149	569	48	1708
Barrel-cover	J. Moosbrugger. (Reissue)	11,027	Aug. 27	2940	773	48	1362

Bone-grinding machine	F. W. Mann and C. H. Farrington	409,480	Aug. 20	1939	513	48	1070
Book. Account	J. Rogers	406,478	July 9	671	188	48	144
Book and index. Combined	H. E. Pratt	406,260	Aug. 6	89	22	48	697
Book-binding	L. Brainard	409,624	Aug. 27	2472	646	48	1173
Book-binding	H. J. Ries	406,476	July 9	669	187	48	144
Book. Black-leaf check	T. McDowell	410,003	Aug. 27	2713	712	48	1220
Book. Blank	R. A. W. Winzenburg	407,886	July 30	2802	730	48	577
Book, calendar, &c. Combined memorandum	G. E. Matthews	407,363	July 23	2036	528	48	421
Book-case	E. Yager	406,496	July 9	709	195	48	150
Book-case. Revolving	J. B. Zettler	406,555	July 9	795	215	48	166
Book-keeper's. Posting or copying guide for	H. H. Love	409,363	Aug. 20	1775	468	48	1026
Book. Manifold memorandum	W. Bertsch	409,768	Aug. 27	2381	625	48	1157
Book. Manifold sales	T. W. Lawson	406,845	July 9	1238	328	48	240
Book or music holder	S. M. Perkins	408,498	Aug. 6	340	88	48	745
Book. Renewable memorandum	J. G. Bast	409,383	Aug. 20	1808	{475 / 476}	48	1041
Book rest and easel	J. Ducker	411,493	Sept. 24	2051	542	48	1687
Book. Stub envelope	W. A. Raborg	408,224	Aug. 6	175	44	48	713
Books. Machine for folding leaves for	E. G. Thorp	409,076	Aug. 13	1335	{352 / 353}	48	943
Boot	C. C. Houghton	411,032	Sept. 17	1389	367	48	1552
Boot. Felt	M. N. Drake	407,774	July 30	2625	681	48	545
Boot-jack	H. W. Farley	410,929	Sept. 10	1277	329	48	1485
Boot or shoe last	G. A. Reynolds	408,524	Aug. 6	486	128	48	774

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Boot or shoe nail	C. W. Glidden	408,173	July 30	3240	846	48	650
Boot or shoe riveting machine	T. Brining	409,347	Aug. 20	1753	460, 461	48	1031
Boot or shoe sole protector	J. G. Dickson	409,938	Aug. 27	2627	6-9	48	1204
Boots and shoes. Lasting	W. C. Cross	406,336	July 2	442	123	48	80
Boots and shoes. Manufacture of sewed	G. W. Willey	406,379	July 2	501	140	48	100
Boots or shoes. Machine for feeding and attaching rands to	F. F. Raymond, 2d	408,895	Aug. 13	1064	281	48	891
Boots or shoes. Machine for treating	W. C. Evans	406,296	July 9	1210	322	48	243
Boots or shoes. Machine for uniting soles and uppers of	S. W. Robinson and S. P. Watt	410,927	Sept. 10	1215	327, 328	48	1512
Boots or shoes. Making heels for	H. C. Hart	410,833	Sept. 10	1082	290	48	1496
Boots or shoes. Tacking-tool for	T. Brining	406,160	July 30	3223	843	48	656
Boring and trimming slats. Machine for	J. Colville	410,784	Sept. 10	1015	272, 273	48	1471
Boring-bit	J. C. Middleton	407,868	July 30	2773	721	48	572
Boring-machine	A. D. Pentz	408,259	Aug. 6	86	20, 21, 22	48	696
Boring-machine. Multiple	C. A. Stark	411,359	Sept. 17	1857	497	48	1646
Bosom-board	T. J. Jackson	409,684	Aug. 27	2258	594	48	1134
Bottle-cooler	L. Levy	409,293	Aug. 20	1675	441	48	1016
Bottle or similar article	G. Leuchs and F. Meiser	411,157	Sept. 17	1570	418	48	1591
Bottle-stopper	R. Bloeser	407,157	July 16	1704	445	48	349
Bottle-stopper	T. J. Cain	411,277	Sept. 17	1741	465	48	1625
Bottle-stopper	J. H. Christmann	409,922	Aug. 27	2601	681	48	1199
Bottle-stopper	F. Y. Clark	409,924	Aug. 27	2603	682	48	1200
Bottle-stopper	J. W. Collins	407,169	July 16	1723	450	48	353
Bottle-stopper	J. B. Cosgrave	408,872	Aug. 13	1031	273	48	885
Bottle-stopper	G. P. Goulding	406,832	July 9	1222	324	48	245
Bottle-stopper	B. F. Greene	410,668	Sept. 10	816	219	48	1434
Bottle-stopper	H. Lightwardt, Jr., and C. F. Bachler	410,421	Sept. 3	447	119	48	1356
Bottle-stopper	J. J. Sands	409,374	Aug. 20	1794	472	48	1039
Bottle-stopper	J. A. Traut	408,364	Aug. 6	235	59	48	724
Bottle-stopper. Alarm	R. M. Devereaux	410,730	Sept. 10	929	249	48	1453
Bottle-stopper fastening	A. Leforestier	408,419	Aug. 6	327	84	48	742
Bottle-trap	R. Clarke	408,215	Aug. 6	19	4	48	681
Bottle-washer	P. F. McCarty and R. Seyter	409,113	Aug. 13	1309	369	48	955
Bottle-wrapper	C. G. Biedinger	411,371	Sept. 17	1873	500	48	1649
Bottles. Label-holder for	J. H. Carmichael	408,212	Aug. 6	16	5	48	681
Bottles. Means for capping and sealing milk	H. P. and S. L. Barnhart	411,368	Sept. 17	1870	500	48	1648
Bottles. Packing case for	S. G. Curtice	410,496	Sept. 3	557	150	48	1377
Bottles. Sponge-holder for mucilage	J. W. Carter	409,770	Aug. 27	2267	626	48	1157
Bougie	G. Morlot	408,425	Aug. 6	336	87	48	745
Box: *See* Axle-box, Ballot-box, Blacking-box, Card and check box, Card or ticket box, Cigar-box, Cock-box, Connection-box, File-box, Fire-alarm box, Flower-box, Folding box, Journal-box, Letter-box, Mailing-box, Merchandise-box, Miter-box, Money-box, Neck-wear box, Paper box, Phonogram-receiving box, Powder-box, Shaft cooling-box, Signal-box, Soap-box, Stuffing-box, Tobacco-box, Tobacco and pipe box, Valve-stuffing box, Watch-movement box.							
Box	M. Benas	409,661	Aug. 27	2213	599	48	1126
Box-blocker	C. Gail	409,743	Aug. 27	2343	615, 616	48	1150
Box-catch	W. C. Lipe	406,173	July 2	212	59	48	42
Box-covering machine	A. G. Potter	410,920	Sept. 10	1204	325	48	1510
Box for tobacco, &c	D. C. Ripley	409,804	Aug. 27	2441	649	48	1168
Box-nailing machine	L. F. Grammes	409,145	Aug. 13	1444	379	48	965
Box-nailing machine	J. H. Swift	408,764	Aug. 13	861	229, 230	48	852
Box-nailing machine	J. H. Swift	408,765	Aug. 13	863	231	48	852
Box or canister	S. E. Cornell	408,954	Aug. 13	1149	304	48	908
Box or crate	C. E. Parks	409,699	Aug. 27	2281	609	48	1139
Box-pull	M. G. Porter	409,064	Aug. 13	1318	349	48	939
Box-staying machine	G. L. Jaeger	410,522	Sept. 3	592	159	48	1384
Boxes. Machine for applying fastening-strips to	G. L. Jaeger	406,736	July 9	1065	283, 285	48	214
Boxes. Metal corner-piece for	J. C. Weir	406,156	July 2	186	50	48	38
Boxes. Wire band for	C. W. Evans	406,893	July 16	1316	345	48	273
Brace: *See* Fence or gate post brace, Gardener's and cotton-picker's brace, Rail-brace, Trestle-brace.							
Bracelet	W. B. Ballou	407,566	July 23	2338	604	48	483
Bracket: *See* Desk-bracket, Fence-bracket, Holding-bracket, Ladder platform-bracket, Lamp-bracket, Plumber's adjustable bracket, Railway-bracket.							
Braid-roll and small-spool feeder	J. H. Morrison	408,187	July 30	3275	835	48	664

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Brake: *See* Air-brake, Baggy-brake, Car-brake, Carriage-brake, Hemp-brake, Lathe-spindle brake, Locomotive-brake, Railway-brake, Rotary brake, Sled-brake, Vehicle-brake, Velocipede-brake, Wagon-brake.							
Brake	W. Schmid	408,756	Aug. 13	851	226	48	859
Brake-adjuster. Automatic	E. D. Eames	410,079	Aug. 27	2637	745	48	1243
Brake-adjuster. Automatic	E. D. Eames	410,960	Sept. 10	1259	339	48	1521
Brake-beam	E. W. M. Hughes	406,021	July 30	3011	765	48	616
Brake-beam	E. W. M. Hughes	406,095	July 30	3014	767	48	617
Brake-block	J. A. Jewell	407,075	July 16	1567	412	48	322
Brake coupling. Automatic air	P. G. Roquemore	407,839	July 30	2728	709	48	563
Brake mechanism	O. W. Ischamm	407,615	July 23	2400	623	48	495
Brake-operating device	G. W. Cisco	407,576	July 23	2347	608	48	485
Brake-shoe	J. Pollock	410,989	Sept. 10	1310	353	48	1531
Brakes. Pipe-connection for pneumatic	L. Blatt	411,006	Sept. 17	1334	350	48	1545
Branding-chute	E. A. Leinard and G. W. Sheets	406,920	July 16	1351	354	48	290
Brass kettles. Manufacturing	W. R. Walton	407,501	July 23	2238	.....	48	461
Breech-loading small-arm	T. F. Wurts	411,704	Sept. 24	2271	699	48	1754
Brewing ale, beer, and porter	P. T. Godsal	411,145	Sept. 17	1548	413	48	1567
Brick. Burning	L. Frisch	411,242	Sept. 17	1686	451	48	1615
Brick-drying pallet	J. M. Jamerson	410,245	Sept. 3	164	43	48	1300
Brick-kiln	C. T. Fitch	409,948	Aug. 27	2639	692	48	1207
Brick-kiln	V. Nielsen	410,788	Sept. 10	1094	275	48	1474
Brick-kiln	C. D. Page	411,726	Sept. 24	2396	634	48	1760
Brick-machine	J. C. Anderson	406,463	July 9	651	183, 184	48	140
Brick-machine	W. Burkman	406,414	July 9	559	157	48	121
Brick-machine	W. R. Cunningham	406,562	July 9	805	218, 219	48	167
Brick-machine	T. Kirk and C. H. Horton	409,348	Aug. 20	1757	462	48	1032
Brick-machine	S. G. Leyson and H. Thomas	409,593	Aug. 20	2103	554, 555, 705, 706	48	1100
Brick-machine	H. W. Mead	409,988	Aug. 27	2689	706	48	1216
Brick-machine	J. W. and R. C. Penfield	406,754	July 9	1101	292	48	222
Brick-machine	G. Van Deventer	411,296	Sept. 17	1760	471	48	1629
Brick-machine	B. C. White	411,232	Sept. 17	1674	448	48	1613
Brick-machine	O. L. Dieckmann	406,682	July 9	990	266, 267, 268	48	201
Brick-machine. Reciprocating	E. B. Carter	411,645	Sept. 24	2220	606	48	1736
Brick-mold	A. H. Newton	408,213	Aug. 6	17	4	48	681
Brick-mold-sanding machine	G. E. Smith	407,030	July 16	1507	394	48	310
Brick-mold-sanding machine	W. R. Cunningham	411,228	Sept. 17	1669	446	48	1612
Brick or other clay products. Machine for cutting	J. C. Anderson	411,546	Sept 24	2127	562, 563, 564	48	1704
Brick. Ornamental	J. C. Anderson	407,145	July 16	1668	.....	48	346
Brick. Ornamental	J. C. Anderson	407,146	July 16	1669	.....	48	346
Brick. Ornamental	J. C. Anderson	407,147	July 16	1690	.....	48	346
Brick. Paving	H. B. Camp	411,010	Sept. 17	1339	360	48	1546
Bricks, &c. Enameling or incrusting	J. C. Anderson	406,688	July 9	1005	.....	48	204
Bricks. Manufacturing ornamental	J. C. Anderson	406,687	July 9	1004	269	48	203
Bridge	G. H. Pegram	409,700	Aug. 27	2283	600	48	1139
Bridge. Draw	C. R. Brothwell	408,370	Aug. 6	344	92	48	726
Bridge-gate	C. King	409,407	Aug. 20	1840	485	48	1048
Bridge guard	J. Ayres	406,064	July 30	3068	802	48	628
Bridge. Ponton	S. N. Stewart	407,421	July 23	2128	549	48	439
Bridge. Ponton	S. N. Stewart	407,422	July 23	2129	549	48	439
Bridge. Suspension	W. H. C. Greer	411,499	Sept. 24	2057	545	48	1689
Bridges. Beat for suspension	E. E. Runyon	410,201	Sept. 3	110	28	48	1290
Bridges. Floating draw for	S. N. Stewart	407,710	July 23	2515	654	48	517
Bridges. Safety-gate for swing	N. Schlesser	407,967	July 30	2926	762	48	601
Bridgeway	N. Kent and N. C. Vought	408,805	Aug. 13	920	247	48	885
Bridle-bit	A. F. Gerald	406,705	Aug. 13	784	206	48	836
Brine. Apparatus for making and filtering	B. B. Quinn	409,234	Aug. 20	1378	417	48	998
Broom band or clasp. Adjustable	A. W. Ottignon	406,850	July 9	1247	330	48	249
Broom-corn-sizing machine	C. E. Lipe	410,840	Sept. 10	1093	292	48	1488
Broom-supporter	R. Kinney	409,152	Aug. 13	1458	385	48	967
Brush	J. Repetti	410,991	Sept. 10	1312	353	48	1531
Brush and pad. Hat	M. J. Sanderlin	407,261	July 16	1810	488	48	381
Brush and scraper. Combined crumb	B. M. Woodard	410,476	Sept. 3	529	142	48	1373
Brush attachment. Shoe	H. Heine	406,279	July 2	350	96	48	71
Brush-block-boring machine	C. A. Mahle	411,346	Sept. 17	1643	492	48	1643
Brush. Electric	H. P. Pratt	407,115	July 16	1653	432	48	330
Brush for washing windows	H. and J. W. Dixon and H. S. Kopp	406,128	July 2	148	44	48	31
Brush-holding cabinet	S. Hall	407,524	July 23	2266	567	48	467
Brushes. Making metallic	D. J. Ahern	410,479	Sept. 3	531	142	48	1373
Brushes. Manufacture of	J. A. Read	407,900	July 30	2922	734, 735	48	581
Bucket-bail and lid-fastener. Combined	J. M. Stukes and O. P. Reid	410,044	Aug. 27	2775	730	48	1236
Bucket. Grab	A. E. Brown	407,102	July 16	1712	447	48	351
Bucket or tub	J. L. Krauser	407,019	July 16	1494	390	48	307
Buckle	W. Blum	407,919	July 30	2257	744	48	587
Buckle	J. Kennedy	410,892	Sept. 10	1150	318	48	1504
Buckle	A. H. Lemen	411,457	Sept. 24	2063	532	48	1678
Buckle	C. A. Mann	406,635	July 30	3019	790	48	619
Buckle	G. C. Paine	406,403	July 2	541	151	48	106
Buckle	W. A. Marsh	411,291	Sept. 17	1755	499	48	1626
Buckle. Back-band	S. J. Webb	410,340	Sept. 3	324	84	48	1331
Buckle. Bale-tie							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Buckle. Suspender	W. T. Finney	408,834	Aug. 13	969	257	48	573
Buckle. Suspender	E. A. Hill	411,101	Sept. 17	1486	394	48	1574
Buckle. Suspender	J. Lauferty	407,407	July 23	2099	542	48	433
Buckles. Machine for attaching tongues to	A. Samson	410,770	Sept. 10	991	266 / 267	48	1466
Buffer	A. W. Rogers	407,246	July 16	1840	482	48	377
Buffer	F. Winslow	407,270	July 16	1883	491	48	384
Buffers. Abrading-covering for	A. W. Rogers	407,245	July 16	1847	482	48	377
Buffers. Abrading-covering for	A. W. Rogers	407,247	July 16	1859	483	48	377
Buffers. Abrading-covering for	A. W. Rogers	407,248	July 16	1853	483	48	378
Buffers. Abrading-covering for	A. W. Rogers	407,249	July 16	1854	483	48	378
Buggy-boot	J. K. Loreo	406,664	Aug. 6	705	182	48	814
Buggy-brake. Automatic	J. J. Christie	406,817	July 9	1200	319	48	241
Buggy-spring	J. D. Whipple	410,471	Sept. 3	522	140	48	1371
Buggy-top rest	H. H. Allen	407,049	July 16	1536	403	48	315
Building	P. W. Anderson	411,516	Sept. 24	2084	550	48	1695
Building-blocks. Machine for making	J. C. Anderson	411,413	Sept. 24	1941	517	48	1647
Buildings. Metallic finishing for	L. L. Sagendorph	406,668	July 9	971	262	48	198
Bulk-head	W. T. Sylven	408,146	July 30	3201	836	48	652
Bullets. Machine for forming	L. P. Garcin	407,343	July 23	1995	518 / 519	48	414
Bundle-dropper	E. Pridmore	406,535	July 9	772	210	48	162
Bung	M. Delker	411,239	Sept. 17	1682	450	48	1614
Bung	W. H. Sunday	406,602	July 9	864	233	48	178
Bung. Barrel	W. H. Sunday	409,713	Aug. 27	2305	605	48	1142
Bung-borer	J. Swan	410,863	Sept. 10	1128	303	48	1495
Bung-extractor	O. Winkler	411,179	Sept. 17	1598	425	48	1596
Bureau	O. D. Miles and E. F. Scollay	409,853	Aug. 27	2509	656	48	1179
Burglar-alarm	G. Arter	411,639	Sept. 24	2261	601	48	1732
Burglar-alarm	E. M. Carhart	410,653	Sept. 10	840	225	48	1439

Can: *See* Creaming-can. Oil-can. Measuring-can. Shipping-can. Milk delivery and shipping can. Spouted can.							
Can	H. E. Wright	409,264	Aug. 20	1694	439	48	1007
Can-capping machine	T. Van Kannel and G. E. Lockwood	411,695	Sept. 24	2356	612	48	1751
Can cover. Milk	J. C. Vail	407,975	July 30	2937	764	48	603
Can ending and crimping machine	E. Norton	406,354	Aug. 6	78	18	48	694
Can-filler	E. C. Seals	407,328	July 16	1859	483	48	379
Can-filling machine	G. L. Merrell	406,986	July 16	1361	357	48	292
Can-filling machine	F. M. Nichols	407,943	July 30	2890	752 / 753	48	594
Can-filling machine	S. Norris	408,353	Aug. 6	218	56	48	722
Can for coffee, grain, &c	S. A. French	408,657	Aug. 6	696	180	48	812
Can-heading mechanism	E. E. Angell	410,341	Sept. 3	325	85	48	1321
Can-holding device. Fruit	J. Haller	409,148	Aug. 13	1450	381	48	966
Can nozzle. Oil	C. B. Underhill	409,811	Aug. 27	2458	643	48	1170
Can-opener	G. H. Perkins	406,961	July 16	1396	367	48	290
Can or box	E. C. Chagnon and M. Virnoche	406,911	Aug. 13	1090	287	48	896
Cans. Machine for testing tin	R. Steegmuller	410,300	Sept. 3	253	66	48	1317
Canner. Steam fruit	T. P. Cordrey	409,374	Aug. 20	1641	434	48	1010
Canning food	J. H. J. Haines	411,436	Sept. 24	1975	524	48	1673
Canceling and registering device	A. J. Miller	407,543	July 23	2308	595	48	475
Candle	A. F. Baumer	407,051	July 16	1536	403	48	316
Candle-holder and cap-nipper. Combined	S. T. Harrington	406,441	July 9	603	160	48	130
Candlestick	J. Heller	408,973	Aug. 13	1182	313	48	914
Candlestick. Miner's	D. B. James	410,160	Sept. 3	44	11	48	1277
Candlestick. Miner's	H. M. Mixter	410,909	Sept. 10	1042	279	48	1478
Candlestick. Miner's	A. B. Purington	410,021	Aug. 27	2735	719	48	1295
Cane and camp-stool. Combined	A. Leblanc	406,630	Aug. 6	648	168	48	804
Cane mill. Sugar							
Canister: *See* Gunpowder-canister.							
Cannon. Apparatus for adjusting, pointing, or training	H. S. Maxim	407,457	July 23	2220	573 / 574	48	457
Cannon. Making	J. P. Lavigne	408,452	July 9	899	170	48	136
Cant-hook	C. Nygaard	408,227	July 2	376	103	48	76
Cant-hook	A. Sanford	408,755	Aug. 13	980	228	48	850
Canvas. Machine for folding and stitching the edges of	B. A. Kennedy and J. F. Steward	410,946	Sept. 3	165	43, 44	48	1300
Cap	H. Schwarz	408,934	Aug. 13	1122	296	48	908
Car	S. T. Jenkins	407,219	July 16	1791	469	48	366
Car bearings. Machine for lining railway	G. McCulloch	410,602	Aug. 27	2719	712	48	1289
Car berths. Step for sleeping	J. J. Greenough	410,788	Sept. 10	1035	277	48	1476
Car-brake	H. A. Butterfield	410,874	Sept. 10	1141	307	48	1497
Car-brake	G. W. Cisco	407,575	July 23	2346	607	48	485
Car-brake	J. H. Clark	406,794	Aug. 13	909	243	48	861
Car-brake	P. F. de Forests	410,881	Sept. 10	1146	310	48	1498
Car-brake	G. H. Fletcher	408,877	Aug. 13	1039	275	48	898
Car-brake	H. Gallager	410,513	Sept. 3	579	158	48	1382
Car-brake	J. W. Harvey	410,891	Sept. 10	1169	315	48	1502
Car-brake	J. W. Hurst	409,663	Aug. 27	2257	594	48	1134
Car-brake	B. Kellogg	410,780	Sept. 10	979	263	48	1463
Car-brake	J. Lawitzka	408,916	Aug. 13	1096	289	48	908
Car-brake	L. P. Lawrence	408,998	Aug. 13	1198	314	48	916
Car-brake	A. P. Massey	409,326	Aug. 20	1725	453	48	1026
Car-brake	T. P. Randall	407,033	July 16	1513	396	48	311
Car-brake	C. V. Rote	406,958	July 16	1406	369 / 370	48	291
Car-brake	W. R. Zeigler	409,396	Aug. 20	1636	430	48	1007
Car-brake	A. B. Arnold	406,362	July 2	504	141	48	101
Car brake and starter	A. M. Vereker and S. M. Yeates	410,326	Sept. 3	284	102	48	1344
Car brake and starter	C. L. Ames	408,567	Aug. 6	581	147	48	787
Car-brake. Automatic	J. F. Durkin	411,547	Sept. 24	2131	564	48	1704
Car-brake. Automatic	A. B. Allen	407,450	July 23	2186	564	48	450
Car-coupling	J. Allen and E. Hackett	409,343	Aug. 20	1748	459	48	1030
Car-coupling	D. L. Barnes	407,980	July 30	3090	808	48	636
Car-coupling	J. C. Biggerstaff	410,142	Sept. 3	3	1	48	1269
Car-coupling	W. J. Bonner	406,368	July 2	515	142	48	103
Car-coupling	J. Bielke	407,430	July 23	2140	558	48	441
Car-coupling	W. H. Burwell	407,164	July 16	1716	448	48	351
Car-coupling	D. Cooper	411,236	Sept. 17	1678	449	48	1614
Car-coupling	C. W. Courtney	410,579	Sept. 10	675	180	48	1407
Car-coupling	A. H. S. Davis	406,284	July 16	1300	341	48	270
Car-coupling	J. E. Davis, Jr.	408,588	Aug. 6	595	155	48	793
Car-coupling	J. A. Dean	407,996	July 30	2973	774 / 775	48	609
Car-coupling	R. H. Dowling	411,216	Sept. 17	1655	442	48	1606
Car-coupling	J. H. Duffins	410,542	Sept. 3	615	165	48	1389
Car-coupling	E. P. Eastwick, Jr	410,543	Sept. 3	616	165	48	1389
Car-coupling	D. P. Edgar	407,821	July 30	2706	702	48	550
Car-coupling	R. J Edwards	410,544	Sept. 3	617	166	48	1390
Car-coupling	P. J. Egan	410,060	Aug. 27	2738	745	48	1243
Car-coupling	J. V. D. Eldredge	406,203	July 2	250	69	48	59
Car-coupling	A. Elliott	406,699	Aug. 13	774	203	48	833
Car-coupling	H. H. Everett	406,630	July 9	934	259	48	191
Car-coupling	E. Ferren	410,667	Sept. 10	815	210	48	1423
Car-coupling	J. A. Fleming	406,344	July 2	448	124 / 125	48	90
Car-coupling	E. Ghirardi	408,606	Aug. 6	613	158	48	797
Car-coupling	E. Ghirardi	410,753	Sept. 10	964	250	48	1460
Car-coupling	E. Ghirardi	410,754	Sept. 10	965	250	48	1460
Car-coupling	E. Ghirardi	410,755	Sept. 10	966	250	48	1460
Car-coupling	A. J. Gunn	408,345	Aug. 6	208	53	48	720

Car-coupling	P. T. Madigan	411,460	Sept. 24	2066	533	48	1679
Car-coupling	C. B. Marvin	407,361	July 23	2034	527	48	421
Car-coupling	J. P. McDowell	410,374	Sept. 3	369	98	48	1342
Car-coupling	E. E. Miller	406,930	July 16	1369	359	48	284
Car-coupling	C. D. Moore	409,855	Aug. 27	2511	657	48	1179
Car-coupling	J. S. Morgan and E. M. Beanblossom.	406,933	July 16	1375	360	48	285
Car-coupling	J. B. Motter and E. B. Todd	411,466	Sept. 24	2014	{534 535}	48	1680
Car-coupling	A. S. Neal	407,231	July 16	1825	477	48	373
Car-coupling	N. Newman	409,420	Aug. 20	1857	490	48	1053
Car-coupling	J. L. Ordner	407,605	July 23	2288	619	48	492
Car-coupling	A. Paul	409,229	Aug. 20	1573	415	48	997
Car-coupling	J. W. Pemberton	407,446	July 23	2169	559	48	447
Car-coupling	J. A. Perdue	407,679	July 23	2486	643	48	511
Car-coupling	W. A. Post	406,305	July 2	394	107	48	79
Car-coupling	A. P. Prevost	410,649	Sept. 10	781	{211 212}	48	1428
Car-coupling	J. W. Roberts	411,227	Sept. 17	1668	446	48	1611
Car-coupling	A. Romain	410,928	Sept. 10	1217	328	48	1512
Car-coupling	W. T. Sims	409,875	Aug. 27	2538	665	48	1186
Car-coupling	J. H. Smith, J. F. Knuth, G. Thompson, and J. Ewald.	409,431	Aug. 20	1873	494	48	1056
Car-coupling	C. T. Thompson	406,970	July 16	1427	374	48	294
Car-coupling	T. H. and N. R. H. Wash	406,072	July 2	70	21	48	16
Car-coupling	W. C. Watson	411,175	Sept. 17	1591	423	48	1595
Car-coupling	W. C. Watson	411,176	Sept. 17	1594	{423 424}	48	1595
Car-coupling	F. E. Williamson	407,712	July 23	2531	655	48	520
Car coupling and brake combined	J. S. Bashaw	411,567	Sept. 24	2159	{571 572}	48	1710
Car-coupling link	C. W. Ferguson	408,962	Aug. 13	1169	307	48	910
Car-coupling-link holder	H. C. Miller	410,554	Sept. 3	631	169	48	1392
Car-coupling pins. Device for operating	R. Gunn	407,070	July 16	1561	410	48	321
Car-coupling tool	O. D. Woodruff	410,061	Aug. 27	2795	736	48	1236
Car-door	J. H. McIntyre	410,766	Sept. 10	966	265	48	1464
Car-door	E. L. Phipps	411,298	Sept. 17	1763	474	48	1630
Car-door	E. L. Phipps	411,677	Sept. 24	2328	616	48	1746
Car-door	C. Trier	409,077	Aug. 13	1336	353	48	943
Car-door fastener	T. G. Ruffhead	410,807	Sept. 10	1049	281	48	1479
Car door. Freight-	J. Montgomery	410,694	Sept. 10	857	230	48	1442
Car door. Street-	S. E. Owen	409,492	Aug. 20	1950	518	48	1073
Car. Dumping-	J. Duff	409,394	Aug. 20	1822	{484 485}	48	1045
Car. Dumping-	J. Duff	409,395	Aug. 20	1825	{484 485}	48	1045
Car. Dumping-	J. H. Gearhart	408,954	Aug. 27	2645	694	48	1208
Car. Dumping-	F. J. Gibbs	411,718	Sept. 24	2386	630	48	1758
Car. Electric and cable railway	S. A. Bemis and L. Pfingst	410,671	Sept. 10	1136	300	48	1496
Car extension-step. Railway-	T. A. Fite	411,495	Sept. 24	2053	543	48	1688
Car for testing railway-track scales. Weighing-	S. M. Taylor	411,269	Sept. 17	1726	461	48	1622
Car for transmission of specie	G. T. Yost	409,894	Aug. 27	2566	671	48	1191
Car. Hand-	T. S. Barwis	406,696	July 2	1014	271	48	205
Car. Hand-	W. H. Engels	408,225	Aug. 6	35	8	48	684
Car-heater	J. Zimmerman	406,120	July 2	138	40, 41	48	29
Car heater. Railway-	F. Kranwenkal and W. Kelley	408,113	July 30	3158	835	48	643
Car-heating apparatus	I. T. Dyer	409,275	Aug. 20	1651	436	48	1012
Car-heating apparatus	C. F. Murdock	406,756	July 9	1104	292	48	223
Car-heating apparatus	J. E. Sague	409,306	Aug. 20	1685	446	48	1020
Car-heating apparatus. Coupling for steam-pipes for railway-	E. A. Leland	407,671	July 23	2476	641	48	508
Car label-holder. Freight-	D. R. Proctor	411,471	Sept. 24	2025	536	48	1683
Car motor. Street-	W. H. Patton	409,115	Aug. 13	1401	{369 370}	48	955
Car motor. Street-	W. H. Patton	409,116	Aug. 13	1403	370	48	956
Car motor. Street-	W. S. Salisbury	408,754	Aug. 13	847	{225 226}	48	848
Car-mover	J. Skinner and C. B. Wallace	406,240	July 2	298	69	48	60
Car-oiling apparatus. Mine-	J. F. Beattie	410,530	Sept. 3	600	161	48	1386
Car or other chair	O. E. Michaud	410,845	Sept. 10	1100	{294 295}	48	1490
Car-propelling apparatus	W. Main	407,094	July 16	1612	{422 423}	48	332
Car. Railway-	D. L. Barnes	409,002	Aug. 13	1217	{321 322}	48	930
Car. Railway-	M. A. Garrett	408,611	Aug. 6	618	160	48	798
Car. Railway-	C. W. M. Smith. (Reissue)	11,023	Aug. 13	1476	389	48	971
Car. Railway stock-	J. H. Kimball	411,340	Sept. 17	1635	466	48	1641
Car-replacer	P. W. Hynes	409,103	Aug. 13	1379	364	48	951
Car-roof	J. Marthaler	408,731	Aug. 13	818	215	48	842
Car-roof attachment	W. P. Settles	408,139	July 30	3190	834	48	650

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Car-seal	L. A. Foote	408,474	Aug. 6	408	106	48	750
Car-seal	T. Saunders	406,113	July 2	125	37	48	26
Car-seals. Press for	T. Saunders	406,114	July 2	126	37	48	26
Car-seat	A. R. Machlin	407,022	July 16	1497	392	48	308
Car-seat	J. T. Westwood	409,654	Aug. 20	2195	577	48	1116
Car-seats. Ticket-casing for	R. J. Smith	409,879	Aug. 27	2544	666	48	1187
Car signal. Railway-	M. E. Campany	407,278	July 16	1895	493	48	366
Car signal. Railway-	A. A. Robinson	408,672	Aug. 6	714	186	48	816
Car. Sleeping-	C. L. Arnold	407,563	July 23	2334	{603 604}	48	462
Car. Sleeping-	L. Keller	407,353	July 23	2022	{523 524}	48	418
Car-spring. Graduated	T. M. Bell	406,607	July 9	1014	272	48	205
Car-starter	H. A. Kingaland	411,341	Sept. 17	1637	{490 491}	48	1642
Car-starter	J. H. Palmer	407,369	July 23	2042	529	48	422
Car starter and brake	J. J. Hooker	411,594	Sept. 24	2305	{586 587}	48	1730
Car starter and brake	C. A. Shank	411,688	Sept. 24	2347	{620 621}	48	1750
Car. Steam hand-	T. Morrissey and J. Doyle. (Reissue.)	11,021	Aug. 13	1473	388	48	970
Car step and platform safety-bar	J. C. F. Schenck	406,960	July 16	1409	370	48	291
Car step. Railway-	F. W. Jones	406,626	Aug. 6	643	167	48	803
Car. Stock-	J. M. Burton	408,691	Aug. 13	756	198	48	830
Car. Stock-	A. C. Mather	411,462	Sept. 24	2008	533	48	1679
Car. Stock-	S. P. Tallman	411,908	Sept. 17	1642	{436 437}	48	1605
Car-wheel	H. W. Libbey	406,104	July 2	115	34	48	24
Car-wheel	H. W. Libbey	406,105	July 2	116	34	48	25
Car-wheel	H. F. Mann	408,890	Aug. 13	1058	279	48	890
Car-wheel	H. F. Mann	408,891	Aug. 13	1060	279	48	890
Car-wheel	H. F. Mann	410,334	Sept. 3	309	78	48	1327
Car-wheel	W. M. Morgan	409,210	Aug. 20	1558	412	48	994
Car-wheel	J. Rigby	406,553	July 9	1251	331	48	249
Car-wheel	J. Rigby	411,354	Sept. 17	1851	495	48	1645
Car-wheel	W. E. Smith	408,366	Aug. 6	97	24	48	696
Car-wheel chill	F. E. Canda	408,458	Aug. 6	382	100	48	754
Car-wheel grinder	P. H. Griffin	411,244	Sept. 17	1689	{451 452}	48	1615
Car-wheels. Constructing	J. Rigby	409,708	Aug. 27	2297	{603 604}	48	1141
Car-wheels. Making wrought-iron	S. M. Vanclain	408,056	July 30	3035	800	48	696
Car-wheels. Thrust-receiving plate for	S. W. Tanner	411,309	Sept. 17	1913	511	48	1655
Cars. Apparatus for operating cable	J. Williams, Jr	409,022	Aug. 20	2132	{565 566}	48	1109
Cars. Apparatus for transferring packages to moving	W. H. Elliot	406,343	July 2	447	124	48	90
Cars. Automatic braking and coupling mechanism for railway-	W. Keast	410,322	Sept. 3	294	{76 77 78}	48	1326
Cars. Automatic coupling and valve-controlling mechanism for the steam or air pipes of	J. D. Bagg	407,148	July 16	1690	441	48	346
Cars. Bolster-beam for	E. W. M. Hughes	408,023	July 30	3012	786	48	617
Cars. Buffer-brake for railway-	H. S. Richards. (Reissue)	11,026	Aug. 20	2204	580	48	1119
Cars. Card-holder for	W. E. Thurber	408,054	July 30	3053	799	48	696
Cars. Center-bearing plate for railway-	C. T. Schoen	408,757	Aug. 13	852	227	48	850
Cars. Center plate for railway-	E. W. M. Hughes	408,022	July 30	3018	789	48	619
Cars. Combined stake and pocket for	E. W. M. Hughes	408,028	July 30	3016	788	48	618
Cars. Coupling for steam-pipes of railway-	R. I. Hampton	410,869	Sept. 10	1166	314	48	1502
Cars. Coupling for the steam-pipes of railway-	R. I. Hampton	406,397	July 2	533	149	48	106
Cars. Detachable coupler for connecting supply-pipes of steam-heating apparatus for railway-	J. Loftus	409,109	Aug. 13	1390	366	48	953
Cars. Driving-gear for	E. Samuel	408,931	Aug. 13	1116	293	48	902
Cars. Electric lighting of railway-	T. M. Foote	410,586	Sept. 10	684	{183 184}	48	1409
Cars. Electric motor for street-	W. S. Salisbury	408,753	Aug. 13	845	225	48	848
Cars. Gangway for loading or unloading stock-	J. W. and J. N. McIver	409,222	Aug. 20	1566	413	48	995
Cars. Grain-door for	E. A. Hill	406,399	July 2	537	149	48	107
Cars. Grip and appliance for cable-road	A. Campbell	408,892	Aug. 13	758	{199 200}	48	830
Cars of inclined railways. Safety-catch for	W. C. D. Body	407,947	July 30	2900	755	48	596
Cars. Pedestal for railway-	E. W. M. Hughes	408,029	July 30	3016	788	48	618
Cars. Pilot or wheel guard for street-	G. H. Bahrs	409,901	Aug. 27	2575	675	48	1193
Cars. Pipe-connection for	R. H. Searle	409,130	Aug. 13	1407	371	48	956
Cars. Regulating device for electric-railway	W. M. Schlesinger	406,961	July 16	1410	370	48	292
Cars. Safety attachment for railway-	R. G. Riera	409,707	Aug. 27	2296	603	48	1141
Cars. Safety-crank for hand-	J. Murphy, Jr	406,935	July 16	1377	361	48	286
Cars. Safety-guard for	C. H. Ohm	409,861	Aug. 27	2518	659	48	1181
Cars. Safety-guard for street-	M. J. Goodwin	408,192	Aug. 20	1520	403	48	987
Cars. Safety-heater for railway-	E. H. Edson	407,726	July 23	2549	660	48	523
Cars. Sand-box for railway-	E. W. Davis	409,602	Aug. 20	2119	558	48	1103
Cars. Sand-box for railway-	H. W. Jordan, G. W. Mills, and L. Jordan.	408,178	July 30	3246	848	48	660
Cars. Shot-proof cage for railway-	A. W. Mitchell	407,832	July 30	2790	706	48	561
Cars. Sill-plate for railway-	E. E. Jacobs	409,404	Aug. 20	1837	484	48	1048
Cars. Station-indicator for railway-	E. Verpillier	409,812	Aug. 27	2453	643	48	1170
Cars. System for heating	J. F. McElroy	410,177	Sept. 3	55	14	48	1279
Cars. Ticket-holder for railway-	C. W. McMurran	406,591	July 9	842	227	48	174
Caramel-package	G. V. Frye and C. H. Kleinbeck	411,430	Sept. 24	1968	522	48	1672
Carbon filaments. Joint for	H. Lemp	410,168	Sept. 3	45	12	48	1277
Carbon filaments. Manufacture of	T. A. Edison	411,016	Sept. 17	1344	362	48	1547
Carbon filaments. Manufacture of	T. A. Edison	411,020	Sept. 17	1348	.....	48	1548
Carbons for incandescent electric lamps. Manufacture of	J. S. Sellon	411,474	Sept. 24	2029	537	48	1684
Carbons. Kiln for the manufacture of	P. P. Nungesser	409,469	Aug. 20	1954	517	48	1072

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Carbons. Manufacturing	P. P. Nungesser	409,490	Aug. 20	1956	518	48	1073
Carbonizing-flask	T. A. Edison	411,017	Sept. 17	1345	369	48	1548
Carboy-stand	J. F. Stevenson	411,229	Sept. 17	1672	447	48	1612
Carbureting air. Apparatus for	E. D. Debontteville and L. P. C. Malandin.	407,998	July 30	2975	775	48	609
Carburetor	J. Elder	409,570	Aug. 20	2064	544	48	1093
Card and check box	B. Dreyfuss	407,855	July 30	2755	716	48	568
Card-cylinder	K. L. Krausse	411,105	Sept. 17	1493	396	48	1575
Card-grinding machine	F. L. Richmond	406,537	July 9	774	210, 211	48	162
Card-holder	J. Clayton and J. Abraham	406,196	July 2	243	67	48	48
Card or ticket box	J. Stovel and J. W. Corley	406,965	July 16	1419	373	48	293
Card-stamping machine for Jacquard machines	W. P. Uhlinger	411,401	Sept. 17	1915	511, 512	48	1656
Cards, circulars, or other like matter. Apparatus for delivering	A. Tabour	410,045	Aug. 27	2776	730	48	1232
Carding-cylinder cleaner	C. H. Foss	407,189	July 16	1750	460	48	360
Carding-engine	G. and E. Ashworth	406,965	July 16	1449	380	48	299
Carding-engine flats. Apparatus for controlling the grinding of	J. M. Hetherington	409,462	Aug. 20	1918	508	48	1065
Carding-engines. Condensing mechanism for	G. Layng	409,211	Aug. 20	1549	409, 410	48	992
Carding-engines. Means for fastening card-clothing to the top-flats of	E. Tweedale	410,048	Aug. 27	2780	731	48	1233
Carding-machine	G. A. Allison	411,367	Sept. 17	1866	499	48	1648
Carding-machine	F. H. Carpenter	409,918	Aug. 27	2595	680	48	1198
Carding-machine	J. K. Proctor	407,743	July 23	2578	668	48	530
Carding-machine	G. E. Taft	410,864	Sept. 10	1129	303, 304	48	1495
Carding-machine feeding device	J. Batty	407,150	July 16	1694	441	48	347
Carding-machine for making mottled rovings	W. Denton	410,823	Sept. 10	1070	287	48	1484
Carding-machines. Top-flat cleaner for	C. H. Whitten	407,312	July 16	1938	504	48	395
Carpet-beating machine	C. T. Story	406,485	July 9	689	191	48	147
Carpet binding and fastener	D. Lange	406,451	July 9	628	176	48	136
Carpet-fastener	H. W. Atwater	406,866	July 16	1275	335	48	265
Carpet-stretcher	S. C. Harlan	407,823	July 30	2709	703	48	559
Carpet-stretcher	O. F. Henshaw, J. W. Puterbaugh, A. A. Brower, and S. W. Hurlbut.	409,966	Aug. 27	2665	699	48	1211
Carpet-stretcher	T. H. Maley	407,540	July 23	2301	594	48	474
Carpet-stretcher	H. McCornack	409,647	Aug. 20	2165	576	48	1114
Carpet-stretcher	M. B. Sneden	407,377	July 23	2055	532	48	425
Carpet-stretcher and tack-driver combined	S. L. Troupe	411,270	Sept. 17	1727	462	48	1622
Carpet tacking and stretching machine	J. Albin	411,543	Sept. 24	2121	559	48	1703
Carpets or other fabrics. Machine for cleaning and purifying	T. and A. S. Warsop	407,309	July 16	1934	503, 504	48	394
Carriage attachment. Child's	P. Austin	406,330	July 2	433	119	48	87
Carriage. Baby	R. McMakin	410,804	Sept. 10	1049	280	48	1479
Carriage-body	F. N. Young and F. E. Thompson	410,477	Sept. 3	529	142	48	1372
Carriage-bow	G. V. Montgomery	407,950	July 30	2916	760	48	599
Carriage-bow socket	R. H. Pfaff	410,561	Sept. 3	644	171	48	1395
Carriage-brake	I. Whaler	410,721	Sept. 10	912	245	48	1450
Carriage brake. Baby	E. T. Hawkins	406,167	July 2	200	56	48	41
Carriage. Child's	M. M. Bear	406,872	July 16	1286	337, 338	48	267
Carriage. Child's	T. K. Forman	409,677	Aug. 27	2250	592	48	1132
Carriage. Child's	A. Woodward	407,916	July 30	2852	748	48	586
Carriage-curtain fastening	H. C. Sageman and J. Seibold	406,773	July 9	1129	299	48	228
Carriage-curtain fastening	S. P. Scott	409,069	Aug. 13	1394	349	48	941
Carriage. Folding baby	J. Ellis	410,963	Sept. 10	1264	340, 341	48	1522
Carriage-jack	L. S. Monk	407,869	July 30	2774	724	48	572
Carriage-jack	A. Zimmerman	406,381	July 2	504	140	48	100
Carriage motor. Land	C. R. and L. H. Cowley	410,536	Sept. 3	607	163	48	1367
Carriage-spring	G. Langbein	409,688	Aug. 27	2263	595	48	1135
Carriages. Canopy-support for children's	F. J. D. Chappell	406,389	July 2	518	144	48	104
Carriages. Parasol for baby	G. W. Travers	409,435	Aug. 20	1877	493	48	1057
Carriages. Recoil-spring for baby	W. L. Fay	410,583	Sept. 10	679	185	48	1408
Carrier: *See* Artist's wet-canvas carrier. Cash-carrier. Cash and package carrier. Contact-carrier. Grain-carrier. Hay-carrier. Lathe-carrier. Perfume-carrier.							
Carrying apparatus	N. Weeks, Jr.	410,817	Sept. 10	1061	284, 285	48	1462
Cart. Coal	J. R. Sagle	407,121	July 16	1662	434	48	341
Cart. Coal	M. Toulmin	409,620	Aug. 20	2150	564, 565	48	1108
Cart. Road	G. W. Brabb and L. M. Smith	409,663	Aug. 27	2215	585	48	1126
Cart. Road	J. A. Dibley	407,725	July 23	2548	666	48	523
Cart. Road	W. B. Dodge	410,501	Sept. 3	563	150	48	1379
Cart. Road	E. W. Doolittle	410,353	Sept. 3	340	88	48	1305
Cart. Road	J. G. Gay	411,284	Sept. 17	1748	467	48	1627
Cart. Road	H. H. Gibbs	408,969	Aug. 13	1176	310	48	913
Cart. Road	J. W. Vorwick	411,114	Sept. 17	1506	400	48	1578
Cart-seat	J. M. Lee	411,597	Sept. 24	2210	582	48	1721
Cart. Self-loading	J. C. Keleher	409,793	Aug. 27	2424	638	48	1164
Carts. Seat-back for road	J. D. Hough	409,402	Aug. 20	1835	485	48	1047
Cartridge. Blasting	J. P. Todd, J. S. Welch, and L. M. McLendon.	406,154	July 2	184	50	48	38
Cartridge-capping machine	W. B. Place	406,466	July 9	658	184, 185	48	141
Cartridge-loader	E. G. Dorchester	411,590	Sept. 24	2196	580, 581	48	1718
Cartridge. Metallic	A. Martin	408,917	Aug. 13	1097	298	48	898

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Cartridge-shell	W. R. Lindsey	406,246	Aug. 6	67	16	48	692
Carving-machine	W. A. N. Long	407,736	July 23	2564	664	48	527
Carving-machine	S. F. Moore	409,695	Aug. 27	2274	598	48	1137
Case: *See* Artist's field and material case. Book-case. Cigarette-case. Clock-case. Lock-case. Packing-case. Piano-case. Pigeon-hole case. Shipping-case. Show-case. Spectacle-case. Tobacco and match case. Watch-case.

Ceiling. Metallic	W. R. Kinnear	406,049	July 2	36	11	48	10
Cellar-bottom	E. S. Vaughan	407,500	July 23	2237	578	48	461
Cement, &c. Composition of matter for	C. Straub	407,135	July 16	1678	.....	48	344
Centering device	F. A. Seaver	407,617	July 23	2402	624	48	495
Centrifugal lubricator	P. M. Sharples	408,959	Aug. 13	1068	266	48	880
Centrifugal machine	J. P. Boettiger	408,822	Aug. 13	951	253	48	870
Centrifugal machine	C. Steffen	410,942	Sept. 10	1233	332	48	1516
Centrifugal machines. Gearing for driving	J. Laidlaw	409,964	Aug. 27	2685	704, 705	48	1215
Centrifugal separator	C. L. Cairns	408,791	Aug. 13	906	248	48	860
Cereals. Scouring and decorticating	W. Ager	408,043	July 30	3066	802	48	628
Cereals. Scouring and decorticating	W. Ager	411,316	Sept. 17	1788	481	48	1635
Chain	W. H. Brock	411,575	Sept. 24	2173	576	48	1713
Chain. Conveyer	C. S. Wells	406,186	July 2	230	62	48	46
Chain. Drive	T. F. Hall	407,655	July 23	2457	636	48	505
Chain-link	I. Brown	411,321	Sept. 17	1803	462	48	1636
Chain. Ornamental	J. E. Crook	407,723	July 23	2545	659	48	523
Chain-wrench	J. D. Moran	406,662	July 9	962	260	48	196
Chains. Apparatus for making solid-link	J. Kinder	410,712	Sept. 10	887	239, 240, 241	48	1446

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Chains. Making solid-link	J. Kinder	410,711	Sept. 10	881	236, 237, 238, 239	48	1446
Chair: *See* Barber's chair. Car or other chair. Child's adjustable chair. Dental chair. Dentist's chair. Folding chair. Invalid-chair. Rail-chair. Railway-chair. Swinging chair. Window-cleaning chair.							
Chair	G. E. Lord	408,118	July 30	3169	828, 829	48	646
Chair	J. Nichols	410,567	Sept. 3	653	173	48	1397
Chair-rocker	C. M. Jacoby	406,400	July 2	538	150	48	107
Chairs or analogous articles of furniture. Guard for rocking-	A. F. Baumann	409,444	Aug. 20	1890	500	48	1060
Chalk-holder	C. Duisd'cker	408,297	Aug. 6	138	35	48	706
Chamfer-cutter	C. Mattison	411,506	Sept. 24	2070	547	48	1692
Chandeliers. Folding joint for	M. F. Gale	406,094	July 2	101	30	48	22
Charcoal apparatus	J. Scherffius	409,873	Aug. 27	2535	664	48	1185
Chart. Dress-	J. Penley	410,695	Sept. 10	858	230, 231	48	1442
Chart for drafting garments	H. P. Fike	409,184	Aug. 20	1510	400	48	985
Check-row wire-reel attachment	W. H. and G. Wertz	411,699	Sept. 24	2360	624	48	1752
Check. Service, cash, and pass	G. D. Smith	409,877	Aug. 27	2541	665	48	1186
Checks, tickets, &c. Implement for separating	A. H. Cridge	406,199	July 2	246	68	48	49
Checking and recording device	F. Sultzer	410,814	Sept. 10	1058	283, 284	48	1481
Checkrein-hook	C. H. Dow	410,824	Sept. 10	1071	288	48	1484
Cheese. Device for turning	M. V. Carr	408,792	Aug. 13	907	242	48	861
Chemical reactions. Facilitating	H. Bower	410,067	Aug. 27	2801	738	48	1237
Chenille fabric	J. Crabtree	409,931	Aug. 27	2612	684	48	1201
Chest: *See* Flour-chest.							
Child's adjustable chair	C. P. Gifford and C. A. Allen	408,612	Aug. 6	620	160	48	799
Chill. Contracting-	J. N. Barr	411,369	Sept. 17	1871	500	48	1649
Chimney-cowl	I. J. Turner	410,660	Sept. 10	799	216	48	1431
Chimney-cowl and ventilator	C. B. Loveless	409,990	Aug. 27	2691	706	48	1216
China, porcelain, &c. Ornamenting	V. J. Kuess	406,745	July 9	1083	288	48	219
Chopper: *See* Cotton-chopper. Meat and vegetable chopper.							
Chuck. Drill-	E. Moyle	410,601	Sept. 10	702	188	48	1412
Chuck. Drill-	L. Reder	406,112	July 2	123	36	48	26
Chuck. Drill-	C. and G. B. Taylor	407,554	July 23	2322	600	48	479
Chuck for rods or tubes	H. Rung	410,738	Sept. 10	940	252	48	1455
Chuck. Lathe-	C. R. Mead	408,985	Aug. 13	1195	315	48	916
Chuck. Nipple-holding	T. R. Leighton	409,168	Aug. 13	1389	366	48	953
Chuck. Pulley-	W. J. Muncaster	409,483	Aug. 20	1947	515, 516	48	1071
Chuck. Shafting-	W. S. Rogers	411,731	Sept. 24	2404	637	48	1762
Churn	C. T. Carnes	411,322	Sept. 17	1804	482	48	1636
Churn	S. D. Cherry	410,492	Sept. 3	552	148	48	1376
Churn	J. M. Curtice	409,020	Aug. 13	1251	330, 331	48	927
Churn	M. J. Dow	411,328	Sept. 17	1811	484	48	1637
Churn	M. R. Fakes	410,356	Sept. 3	343	90	48	1336
Churn	J. P. Ferrenburg	410,884	Sept. 10	1153	311	48	1499
Churn	F. H. Haman	410,888	Sept. 10	1165	313, 314	48	1502
Churn	H. E. Hawk, W. Smith, and J. F. Fox	408,480	Aug. 6	413	108	48	761
Churn	P. Kallen	410,103	Aug. 27	2880	755	48	1251
Churn	W. F. Little	411,667	Sept. 24	2313	613	48	1743
Churn	E. Michaels	409,997	Aug. 27	2703	710	48	1218
Churn	B. Mitchum	408,126	July 30	3178	831	48	647
Churn	J. W. Parrish	410,437	Sept. 3	476	127	48	1361
Churn	D. Stephens	406,791	July 9	1159	306	48	233
Churn	A. L. Stout	408,818	Aug. 13	947	252	48	869
Churn	W. Walter	409,533	Aug. 20	2014	530	48	1083
Churn	S. Whitney	410,949	Sept. 10	1245	335	48	1518
Churn-dasher	J. E. Gibbs	406,395	July 2	529	147	48	106
Churn-dasher	L. M. Littlefield	407,672	July 23	2477	641	48	509
Churn-dasher	I. A. Sabin	406,308	July 2	398	108	48	80
Churn-motor	S. Giles	408,801	Aug. 13	924	246	48	864
Chute. Coke-	G. A. McIlhenny	410,005	Aug. 27	2716	713, 714	48	1221
Chute. Coke-	G. A. McIlhenny	410,006	Aug. 27	2717	714	48	1221
Cider mill and press	J. G. Harris	406,347	July 2	454	127	48	91
Cigar	J. H. Stevens and J. E. H. Hyde	408,442	Aug. 6	354	......	48	749
Cigar-box	J. H. Horwitz	407,009	July 16	1483	387	48	305
Cigar-box opener	G. D. Woodworth	408,565	Aug. 6	558	146	48	787
Cigar-bunch-wrapping machine	J. E. Schmalz	411,304	Sept. 17	1777	475, 476	48	1632
Cigar-bunches. Device for slitting the ends of	E. Martyn	407,097	July 16	1023	425	48	333
Cigar-bunching machine	J. H. Abraham	406,329	July 2	430	118, 119	48	87
Cigar-bunching machine	J. W. Coughtry	410,268	Sept. 3	108	53	48	1308
Cigar-bunching machine	J. De la Mar	410,959	Sept. 10	1255	338, 339	48	1520
Cigar-bunching machine	F. A. Grab	409,575	Aug. 20	2075	547, 548	48	1095
Cigar-bunching machine	F. E. Kelsey and G. D. Woodworth	407,733	July 23	2557	662	48	525

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cigar-bunching machine	F. A. Schutz	409,807	Aug. 27	2415	641, 642	48	1169
Cigar-bunching machine	F. C. Smalstig	411,736	Sept. 24	2410	639	48	1763
Cigar-cutter	J. M. King	407,220	July 16	1805	472	48	368
Cigar-machine	M. Greensfelder	409,785	Aug. 27	2412	631	48	1162
Cigar-machines. Apron for	J. J. Becker	408,067	July 30	3072	803	48	629
Cigar-moistener	C. A. Allen	406,076	July 2	76	22	48	17
Cigar-perforator	L. Lattan and H. Tripp	407,358	July 23	2028	525	48	419
Cigar-selling machine. Automatic	P. Schneider	408,932	Aug. 13	1117	294, 295	48	902
Cigars. Packing	W. F. Lang	410,553	Sept. 3	630	168	48	1392
Cigarette-case	F. S. Kinney	406,652	July 9	950	257	48	194
Cigarette-machine	O. W. Allison	406,610	July 9	877	236, 237	48	180
Cigarette-machine	O. W. Allison	406,611	July 9	881	237, 238	48	180
Cigarette-machine	O. W. Allison	406,612	July 9	885	238, 239	48	181
Cigarette-machine	O. W. Allison	406,613	July 9	887	239	48	181
Cigarette-machine	A. B. Biggs	410,231	Sept. 3	143	37, 38	48	1296
Cistern-cleaner	J. H. Duncan and F. A. Hale	410,159	Sept. 3	33	9	48	1275
Cistern-cleaner	W. A. Palmer	409,862	Aug. 27	2521	659	48	1182
Clam-baker	T. C. Avery	410,703	Sept. 10	869	234	48	1444
Clamp: *See* Bench-clamp. Cabinet-clamp. Dental-bit clamp. Fly-paper clamp. Hoof-clamp. Hoop-clamp. Pipe-clamp. Screw-clamp. Sewing-machine button-hole clamp. Soldering-clamp.							
Clamping-frame	T. Steinert	407,698	July 23	2513	649	48	516
Clamping-plate for timber structures	G. W. Zeigler	409,546	Aug. 20	2032	535	48	1087
Clamping-plate for timber structures	G. W. Zeigler	409,547	Aug. 20	2032	536	48	1087
Clamping-plate for timber structures	G. W. Zeigler	409,548	Aug. 20	2033	536	48	1087
Clarionet	C. G. Conn	410,072	Aug. 27	2831	743	48	1241
Clasp: *See* Belt-clasp. Corset-clasp. Necklace-clasp. Pencil-clasp. Ribbon-roll clasp. Rope-clasp.							
Clasp	J. H. Bley	406,021	July 2	4	2	48	2
Clasp	S. B. Ferris	409,779	Aug. 27	2400	629	48	1160
Clasp	J. Wenger	408,332	Aug. 6	193	49	48	717
Clay for ballast. Burning	C. M. Snyder	411,069	Sept. 17	1433	381	48	1564
Clay for ballast. Burning	J. Stubbs	408,860	Aug. 13	1009	266	48	881
Clay-grinding machine	D. Kennedy, Jr.	407,219	July 16	1804	472	48	368
Clay. Machine for separating gravel from	S. Friend	409,186	Aug. 20	1513	401	48	985
Clay. Separating gravel from	S. Friend	409,187	Aug. 20	1514	401	48	985
Clay-washing machine	H. Woodcock	410,819	Sept. 10	1064	285, 286	48	1483
Clay-working machine	W. R. Cunningham	408,337	Aug. 6	199	51	48	718
Cleaner: *See* Boiler-cleaner. Carding-cylinder cleaner. Cistern-cleaner. Corn-cleaner. Flue-cleaner. Intestine-cleaner. Knife-cleaner. Pen-cleaner. Seed-cleaner. Type-writing-machine cleaner.							
Clevis	E. M. McVicker	406,761	July 9	1111	295	48	224
Clevis. Plow-	W. E. Sefton	408,857	Aug. 13	1006	265	48	880
Clip: *See* Hame-clip. Whiffletree-clip.							
Clip-mold	J. McLean	406,295	July 2	373	101	48	75
Clip or saddle rake-tooth holder	L. W. O'Brian	408,128	July 30	3179	831	48	648
Clock	E. M. and M. Moulton	408,665	Aug. 6	706	183	48	814
Clock. Calendar-	A. F. Wells	407,977	July 30	2939	765, 766	48	603
Clock-case	J. M. Durward	410,825	Sept. 10	1072	288	48	1484
Clock. Electric pendulum	A. L. Parcelle	410,013	Aug. 27	2726	716, 717	48	1223
Clock for use in exposed places. Electric	A. Speer	407,945	July 30	2894	754	48	595
Clock. Musical	J. Sprangers	408,903	Aug. 13	1077	283	48	894
Clock-pendulum	W. D. Davis	408,955	Aug. 13	1150	304	48	909
Clock-pendulum	G. P. Reed	409,705	Aug. 27	2294	603	48	1141
Clock. Recording thermometer-	W. F. Brewster	410,664	Sept. 10	809	218	48	1433
Clock system. Electric-	C. H. Carter	411,138	Sept. 17	1539	410, 411	48	1585
Clocks. Gong-striking mechanism for synchronized.	C. H. Pond	411,168	Sept. 17	1583	421	48	1593
Closet: *See* Dry closet. Siphon-closet. Water-closet.							
Cloth bag. Bias	J. L. Seymour	408,858	Aug. 13	1007	266	48	880
Cloth-calendering roll	W. S. Granger	407,818	July 30	2750	717	48	569
Cloth-cutting machine	F. W. Nevens. (Reissue)	11,019	Aug. 6	732	190	48	819
Cloth-pressing machine	D. Gessner	411,143	Sept. 17	1544	412	48	1586
Cloth-pressing machine	D. Gessner	411,144	Sept. 17	1545	413	48	1586
Cloth-steaming apparatus	A. Waszkiewicz	406,775	Aug. 13	881	235	48	856
Clothes-bar. Revolving	J. E. Armson	409,442	Aug. 20	1887	498, 499	48	1060
Clothes-drier	G. L. Gerard	408,342	Aug. 6	205	52	48	719
Clothes-drier	J. L. Jones	406,100	July 2	111	33	48	24
Clothes-drier	W. H. Little	409,642	Aug. 20	2180	574	48	1113
Clothes-drier	A. J. Peirce	407,678	July 23	2485	643	48	511
Clothes-drier	J. B. Story	408,362	Aug. 6	232	59	48	724
Clothes-drier	L. R. Studley	409,809	Aug. 27	2449	642	48	1170

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Clothes-hanger	H. Hennig	409,839	Aug. 27	2493	651	48	1176
Clothes-horse and ironing-board. Combined	L. Fairweather	408,471	Aug. 6	403	105	48	778
Clothes-line attachment	H. Maeurer	409,327	Aug. 20	1723	453	48	1026
Clothes-line holder for windows	H. A. Denman	410,787	Sept. 10	1024	275	48	1474
Clothes-line stretcher	S. Dobbs	408,339	Aug. 6	202	51	48	719
Clothes-line stretcher	H. Hennig	409,840	Aug. 27	2494	651	48	1176
Clothes-line support and holder	J. H. Garand	407,193	July 16	1763	402	48	361
Clothes-pin	J. A. Stewart	409,880	Aug. 27	2545	666	48	1167
Clothes-pounder	T. Maitland	408,311	Aug. 6	155	39	48	710
Clothes-pounder	J. Woolridge	407,807	July 30	2689	697	48	556
Clothes-reel	H. G. Miller	411,162	Sept. 17	1576	419	48	1592
Club. Policeman's	C. R. Adams	411,705	Sept. 24	2372	629	48	1735
Clutch	W. E. Clifford	411,237	Sept. 17	1679	449	48	1614
Clutch	W. H. Johnson	408,881	Aug. 13	1044	276	48	887
Clutch for rods	R. Hadfield	410,275	Sept. 3	213	56	48	1311
Clutch. Friction	W. D. Gray	408,012	July 30	2998	782	48	614
Clutch. Friction	H. W. Hill and L. J. Hirt	409,586	Aug. 20	2092	{551 552	48	1098
Clutch. Friction	J. G. Moomy	410,764	Sept. 10	983	264	48	1464
Clutch. Friction	A. Nelson	406,109	July 2	121	35, 36	48	25
Clutch. Friction	E. Savoral	409,871	Aug. 27	2532	{662 663	48	1184
Clutch. Friction	W. B. Tatro	407 748	July 23	2588	670	48	532
Coal and discharging the same in piles. Apparatus for conveying	J. M. Dodge	408,957	Aug. 13	1152	305	48	909
Coal-bucket	G. L. Stuebner	407,553	July 23	2321	600	48	479
Coal. Chain conveyer for forming and removing piles of	J. M. Dodge	408,958	Aug. 13	1155	{305 306	48	909
Coal-conveyer	W. N. Page	410,185	Sept. 3	75	18, 19	48	1282
Coal. Conveyer for piling	J. M. Dodge	409,604	Aug. 20	2120	558	48	1103
Coal-cutting machine	J. C. Robertson	409,870	Aug. 27	2531	662	48	1184
Coal discharging and conveying apparatus	C. S. Schenck	409,872	Aug. 27	2533	663	48	1184
Coal-drill	D. Giese	406,040	July 2	27	8	48	8
Coal or analogous material. Piling	J. M. Dodge	409,636	Aug. 20	2173	{572 573	48	1112
Coal or ore bins. Discharge apparatus for	W. Dunbar	407,432	July 23	2145	554	48	442
Coal or rock drill	J. L. and T. H. Williams	408,567	Aug. 13	1022	271	48	883
Coal. Removing piles of	J. M. Dodge	409,568	Aug. 20	2062	544	48	1092
Coal-screen. Revolving	W. O. Gunckel	410,515	Sept. 3	583	157	48	1383
Coal-tub	G. Focht	406,164	July 2	197	55	48	40
Coaster	J. P. Newburg	411 255	Sept. 17	1708	{456 457	48	1619
Coat-holder	W. D C. Pattyson	410,439	Sept. 3	479	128	48	1362
Cock and fire-extinguisher. Blow-off	L. E. Michell	408 919	Aug. 13	1099	290	48	898
Cock. Automatic ratchet	J. J. Powers	408 431	Aug. 6	343	89	48	746
Cock box. Stop	C. F. Bingham	406 253	July 2	313	86	48	63
Cock for self-lighting gas-fuel burners	L. P. Willing and C. F. Kiefer	407 884	July 30	2799	729	48	577
Cock. Gage	D. H. Roberts	406 956	July 16	1403	369	48	250
Cock. Gage	A. Worthington	408 263	Aug. 20	1622	429	48	1007
Cock or valve	J. Powell	408,330	Aug. 6	172	43	48	713
Cock or valve	J. Powell	409,334	Aug. 20	1734	456	48	1027
Cock. Self-closing stop	J. F. Larkin	408 418	Aug. 6	326	84	48	742
Cock. Supply and waste	C. Hay	408 617	Aug. 6	628	162	48	801
Cockeye. Rope-trace	W. H. Willson and S. Conover	411,481	Sept. 24	2037	539	48	1685
Cocoanut-shells. Machine for cutting	J. H. Vavasseur	410 385	Sept. 3	383	101	48	1344
Coffee. Apparatus for cooling, stoning, and bagging	R. Burns	411 710	Sept. 24	2377	631	48	1756
Coffee. Compound for settling	M. P. R. Tilton	411,075	Sept. 17	1441	.....	48	1566
Coffee-pot	H. Goodrich	408,707	Aug. 13	787	207	48	836
Coffee-pot. Automatic fountain	H. C. Green	411,656	Sept. 24	2298	610	48	1740
Coffee-pots. Percolator for	J. M. Chadwick	408,081	July 30	3067	809	48	632
Coffin	J. H. Dunn	408,109	July 30	3234	844	48	657
Coffin-fastener	B. Van Horn and J. E. Lathe	409,436	Aug. 20	1878	495	48	1057
Coffin-lid fastener	L. E. Woodard	410,009	Aug. 27	2794	735	48	1935
Coiling apparatus. Metal	F. Bracken	407,277	July 16	1894	493	48	385
Coin. Machine for disclosing articles in exchange for a	P. Everitt	411 549	Sept. 24	2133	565	48	1705
Coin-operated machine	A. W. Roovers	407 039	July 16	1524	399	48	313
Coke. Apparatus for the manufacture of	R. de Soldenhoff	409,567	Aug. 20	2060	543	48	1092
Coke-furnace	A. Weber	409.081	Aug. 13	1341	{354 355 356	48	944
Coke-handling device	J. Watts	407,556	July 23	2325	601	48	480
Coke-oven	T. Baner	406,986	July 16	1451	380	48	300
Coke-oven	A. Weber	407,879	July 30	2793	{726 727 728	48	575
Collar. Cape	N. E. Powers	408,847	Aug. 13	988	{261 262	48	877
Collar. Cape	N. E. Powers	408,848	Aug. 13	989	262	48	877
Collar. Cape	N. E. Powers	408,849	Aug. 13	991	{262 263	48	877
Collar fastener. Horse	J. F. Glidden	409,144	Aug. 13	1443	379	48	964
Collar fastener. Horse	J. N. Kellerman	409,044	Aug. 13	1287	340	48	934
Collar fastener. Horse	A. P. Porter	406,369	July 2	484	135	48	96
Collar fastener. Horse	J. T. Roundtree	411,110	Sept. 17	1502	398	48	1577
Collar fastening. Horse	P. T. Bradley	411,373	Sept. 17	1676	502	48	1650
Collar. Horse	J. B. Connolly	409,158	Aug. 13	1472	388	48	970
Collar. Horse	W. Murr	409,418	Aug. 20	1855	490	48	1032
Collar iron. Breast	G. Van Wagenen	406,069	July 2	68	20	48	16
Collar. Woolen-shirt	F. R. Whitcomb	411,178	Sept. 17	1597	425	48	1596
Collars. Making apparel	J. F. Fellows	409,179	Aug. 20	1502	398	48	983
Collars. Making cape	N. E. Powers	408,850	Aug. 13	993	263	48	877
Color. Red	T. Sandmeyer	406,669	July 9	972	.....	48	198
Color. Yellow	T. Sandmeyer	406,670	July 9	973	.....	48	198

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Colter-plow	L. Walker	410,055	Aug. 27	2791	735	48	1235
Colter. Roller	S. Cook	407,062	July 16	1552	407	48	319
Colter. Rolling	T. C. Belding	407,568	July 23	2339	605	48	483
Column. Compound fire-proof	W. H. Drake	409,852	Aug. 27	2484	649	48	1174
Comb: *See* Curry-comb.	J. D. Craig	408,795	Aug. 13	910	243	48	861
Combination-lock	A. R. Peck	408,355	Aug. 6	220	57	48	723
Combination-lock	J. F. Thompson	407,262	July 16	1871	488	48	391
Combination-lock	F. J. Pratt and J. H. Lane	406,666	July 9	966	261	48	197
Combination-wrench	D. P. Norris	411,053	Sept. 17	1396	374	48	1557
Combing machine. Wool	F. G. Lange	410,420	Sept. 3	444	{117 118	48	1356
Combing wool, &c. Machine for	M. H. Day	406,339	July 2	444	.....	48	89
Combustible substance	T. C. Joyce	409,590	Aug. 20	2099	533	48	1099
Commode	J. W. Stowell	410,813	Sept. 10	1036	293	48	1491
Commode. Earth-closet	F. O. Blackwell	410,265	Sept. 3	193	50	48	1307
Commutator-brush	O. P. Loomis	407,325	July 16	1816	475	48	371
Commutator-brush holder	V. Sperle	409,518	Aug. 20	1992	526	48	1080
Composing-stick	M. L. Deering	408,222	Aug. 6	29	.....	48	683
Composition of matter	C. T. Lee	409,985	Aug. 27	2687	.....	48	1215
Composition of matter	J. H. Valle	406,317	July 2	412	113	48	82
Compound engine	J. H. Eickershoff	407,184	July 16	1748	457	48	358
Compound engine. Single-acting	G. Metzger	411,252	Sept. 17	1703	155	48	1618
Compressor. Compound	G. O. Dickinson	406,535	July 9	925	{249 250	48	189
Concentrating and amalgamating machine	A. E. Carey and E. Latham	409,560	Aug. 20	2051	541	48	1090
Concrete, &c. Machine for making	E. L. Ransome	410,292	Sept. 3	238	62	48	1315
Concrete-mixing machine	D. M. Hyland	411,505	Sept. 24	2208	{5 7 588	48	1720
Conduit. Underground	T. Wallace	406,978	July 16	1439	377	48	297
Conduit. Underground	P. Knorpp and G. A. Mayer	407 935	July 30	2877	749	48	591
Confectionery. Machine for making	J. A. Powers	406,469	July 9	662	186	48	142
Connection-box	C. J. Van Depoele	407,749	July 23	2590	670	48	532
Contact-arm. Extensible upward-pressure	C. J. Van Depoele	408,638	Aug. 6	660	172	48	806
Contact-arm for electric-railway motor-cars	J. C. Love	408,984	Aug. 13	1194	315	48	916
Contact-carrier for electric railways	J. Merriman	406,937	July 16	1365	357	48	283
Converters. Constructing lead-lined	G. W. McCaslin	409,330	Aug. 20	1728	454	48	1036
Conveyer	G. W. McCaslin	409,612	Aug. 20	2133	{560 561	48	1105
Conveyer	F. H. C. Mey	408,733	Aug. 13	819	216	48	842
Conveyer. Sectional screw	W. H. Cornell	409,454	Aug. 20	1905	504	48	1063
Cooking edibles	H. Fricker	411,378	Sept. 17	1982	503	48	1651
Cooking utensil	W. Ward	410,920	Sept. 10	736	199	48	1419
Cooler: *See* Bottle-cooler. Water-cooler.	P. Fogarty	410,511	Sept. 3	577	155	48	1381
Coop. Folding	G. Muir	410,602	Sept. 10	703	188	48	1412
Copy-holder	H. H. Potter	407,239	July 16	1839	481	48	375
Copy-holder	F. G. Wiunek	406,340	July 2	502	140	48	100
Copy-holder	J. V. Berry	407,314	July 16	1940	505	48	396
Copy-holder and line-indicator. Automatic	A. Erdmann	406,576	July 9	827	224	48	171
Copying-press	J. P. McPherson	411,467	Sept. 24	2020	535	48	1682
Copying-press	W. E. Trufant	411,559	Sept. 24	2147	569	48	1707
Copying-press	H. W. Brown	409,926	Aug. 27	2473	.....	48	1173
Copying-sheet	M. M. M. Slattery	407,618	July 23	2403	624	48	495
Core for converters	A. R. Weisz	408,557	Aug. 6	541	143	48	583
Cork-branding device	F. Metz	406,225	July 2	278	77	48	56
Cork-machine	H. La Casse and S. Wile	406,450	July 9	617	{173 174 175 176	48	133
Corkscrew	E. T. Pollard and F. J. Ludington	406,304	July 2	392	107	48	79
Corn and fertilizer dropper	J. P. Birmingham	411,005	Sept. 17	1332	358	48	1545
Corn-cleaner	J. B. Cornwall	411,759	Sept. 24	2441	{646 647	48	1769
Corn-cutter	B. F. Moore	410,371	Sept. 3	365	97	48	1341
Corn-cutting knife	J. P. Wood	409,723	Aug. 27	2315	609	48	1144
Corn-husker and feed-cutter	F. L. Collis	406,090	July 2	97	24	48	21
Corn husker and sheller	L. R. Whiting	407,710	July 23	2528	654	48	519
Corn-husking implement	R. W. Hubbard	409,788	Aug. 27	2419	633	48	1163
Corn-husking machine	H. R. Stickney	407,423	July 23	2130	{549 550	48	439
Corn-sheller	H. Lippold, Jr.	407,929	July 30	2716	705	48	561
Corn-sheller	A. H. Patch	407,549	July 23	2317	598	48	478
Corn sheller and grinder	N. Brennan	410,399	Sept. 3	407	108	48	1348
Cornstalk-cutter	J. D. Mercer	410,369	Sept. 3	362	96	48	1340
Cornstalk cutter or harvester	E. F. Scholder	407,419	July 23	2124	548	48	438
Cornet	J. Heald	408,972	Aug. 13	1181	{311 312	48	914
Corns. Remedy for	A. Larochelle	408,488	Aug. 6	427	.....	48	763
Corset and breast-pad. Combined	M. A. Williams	406,491	July 9	697	193	48	148
Corset-clasp	W. F. Brooks	407,770	July 30	2621	679	48	544
Corset-clasp	A. H. Dean	407,983	July 16	1902	495	48	387
Corset-clasp	C. J. Van Depoele	408,410	Aug. 20	1843	487	48	1050
Corset-clasp	L. Wilzin	407,630	July 23	2421	628	48	498
Corset-clasp	S. S. Williamson	410,131	Aug. 27	2928	769	48	1260
Corset-fastening	J. G. Smith	408,141	July 30	3196	835	48	651
Cot. Folding	G. H. Wilson	407,757	July 23	2603	673	48	535
Cot frame. Folding	J. S. Angell	406,157	July 2	187	53	48	38
Cotton-chopper	A. Chambers	409 771	Aug. 27	2388	626	48	1158
Cotton-chopper	W. P. Clark	407,512	July 23	2251	581	48	463
Cotton-chopper	J. C. McCollum	406,589	July 9	840	227	48	174
Cotton-chopping machine	G. E. Hugnley and J. T. Chambers, Jr.	411,102	Sept. 17	1487	395	48	1574

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Cotton chopping, planting, and cultivating machine	D. W. Piland	411,470	Sept. 24	2024	536	48	1682
Cotton cleaner and distributer. Seed	J. W. Elliott	410,962	Sept. 10	1262	340	48	1521
Cotton-cleaning apparatus, &c. Trunk for	J. C. Potter	410,443	Sept. 3	484	129	48	1363
Cotton-gin	C. Young	408,566	Aug. 6	559	146	48	767
Cotton-gin roller	R. Y. Kirkland	407,016	July 16	1491	389	48	307
Cotton-gins. Feeding mechanism for	V. Davis	406,889	July 16	1306	{342 343	48	271
Cotton. Machine for opening and cleaning	H. A. Davis and H. C. Perham	406,034	July 2	20	6.7	48	7
Cotton-openers, &c. Evening mechanism for	J. C. Potter	411,350	Sept. 17	1847	493	48	1644
Cotton-opening machine	R. Kitson	406,050	July 2	40	12	48	11
Cotton-scraper	J. L. Peter and J. Y. James	411,297	Sept. 17	1761	471	48	1629
Cotton-scraper and chopper	J. C. White	408,779	Aug. 13	885	236	48	857
Counter for facilitating the transfer of money	J. S. Key	407,759	July 23	2605	674	48	585
Counting mechanisms. Testing device for	P. C. Illgen	407,932	July 30	2674	748	48	590
Coupling: *See* Brake-coupling. Car-coupling. Electric coupling. Friction-coupling. Furniture-coupling. Hose-coupling. Hose or pipe coupling. Insulating-coupling. Pipe-coupling. Pipe and hose coupling. Pump-rod coupling. Railway-rail coupling. Shaft-coupling. Signal rod coupling. Sink-coupling. Stove-pipe coupling. Thill-coupling. Timber-coupling.							
Coupling	W. and W. A. Wilcox	407,046	July 16	1533	402	48	315
Coupling and uncoupling stick	F. W. Beall	408,158	July 30	3221	841	48	655
Cover for cooking-vessels	C. H. Crosby and H. W. Cook	411,185	Sept. 17	1607	427	48	1598
Cover for vessels. Self-adjusting	S. F. Green	409,354	Aug. 20	1765	465	48	1033
Cracker-cutting die	C. Herrmann	407,929	July 30	2871	747	48	589
Cradle	A. M. Christensen	406,125	July 2	144	43	48	30
Cradle	J. H. Wiggers	409,260	Aug. 20	1618	428	48	1006
Cranberry-picker	B. F. Bee	410,397	Sept. 3	400	106	48	1347
Cranberry-picker	J. R. Jenney	408,414	Aug. 6	323	83	48	741
Cranberry-sorter	A. S. Prickitt	408,323	Aug. 6	175	44	48	713
Crane	H. M. Barnhart	410,870	Sept. 10	1135	305	48	1496
Crane	W. H. Ridgway	411,681	Sept. 24	2335	618	48	1747
Crank-pin	H. D. Gordon	406,275	July 2	344	94	48	60
Crate	S. C. Seaman	409,118	Aug. 13	1405	371	48	956
Crate. Folding	J. W. Brook	409,366	Aug. 20	1812	{476 477	48	1042
Crate. Fruit or vegetable	T. B. Ashford	411,740	Sept. 24	2415	640	48	1764
Cream-separator. Centrifugal	S. Jönsson	411,038	Sept. 17	1377	369	48	1553
Creaming-can	P. S. Fowler	409,951	Aug. 27	2642	693	48	1207
Crib. Folding	F. Fay	411,653	Sept. 24	2291	609	48	1738
Crib or cradle	P. Agger	409,896	Aug. 27	2569	672	48	1192
Crimping-machine	R. Marshall	406,175	July 2	215	59	48	43
Crocheting-machine	G. D. Munsing	411,046	Sept. 17	1386	372	48	1555
Crocks and jars. Cover for	J. A. Silva	406,542	July 9	781	212	48	163
Cross-head	L. H. Kenyon	409,200	Aug. 20	1673	441	48	1016
Crossing and switch. Combined	C. Partington	410,560	Sept. 3	642	171	48	1395
Crossing and switch. Combined	F. C. Weir	409,537	Aug. 20	2018	532	48	1084
Crossing and switch. Combined	F. C. Weir	409,538	Aug. 20	2021	533	48	1085
Crozing-machine	L. M. Reed	409,235	Aug. 20	1580	417	48	998
Crupper	L. S. Ellis	406,340	Aug. 6	203	51	48	719
Crusher: *See* Grinding-mill crusher. Harrow and clod crusher. Ore-crusher. Seed-crusher.							
Crusher	W. Johnston	410,641	Sept. 10	773	209	48	1426
Crushing and grinding mill	J. F. Winchell	408,448	Aug. 6	363	95, 96	48	751
Crushing and grinding mills. Feeding-crusher for	J. F. Winchell	407,885	July 30	2800	730	48	577
Crushing bones, minerals, &c. Mill for	C. C. Phillips	408,515	Aug. 6	474	125	48	772
Crushing-mill	A. E. Roe	411,614	Sept. 24	2239	594	48	1737

Cryptographic apparatus	A. Von Simon	407,425	July 23	2132	550	48	439
Cuff-holder	H. J. Dalo	410,750	Sept. 10	959	258	48	1459
Cuff-holder	M. Eiseman and J. Kaiser	409,833	Aug. 27	2485	649	48	1174
Cuff-holder	J. C. Emerson	406,435	July 9	396	107	48	128
Cuff-holder	W. E. Terry and E. K. Hanley	407,705	July 23	2523	652	48	519
Cuff-holder	H. B. Williams	408,679	Aug. 6	729	189	48	813
Culinary utensil	C. Bickerg	410,632	Sept. 10	762	206	48	1424
Culinary utensil	W. J. Burnett	410,489	Sept. 3	547	147	48	1375
Cultivator	R. Allstatter	407,273	July 16	1867	491	48	384
Cultivator	R. H. Avery	407,766	July 30	2617	678	48	543
Cultivator	D W. Bash	406,418	July 9	564	159	48	122
Cultivator	J. C. Bentholl	406,619	July 9	896	242	48	183
Cultivator	W. H. Bonwell	406,422	July 9	572	160	48	124
Cultivator	J. Clare	408,694	Aug. 13	765	200	48	832
Cultivator	F. P. Craig	408,589	Aug. 6	589	153	48	792
Cultivator	A. Ellis	409,605	Aug. 20	2122	558	48	1103
Cultivator	H D. Kipp	410,596	Sept. 10	697	186	48	1411
Cultivator	E. Poole	410,648	Sept. 10	780	211	48	1428
Cultivator	M. Sattley	406,856	July 9	1257	332	48	250
Cultivator	H. Wiard and J. L. Judd	407,628	July 23	2415	627	48	497
Cultivator and harrow	J. Stoate	410,615	Sept. 10	731	197	48	1418
Cultivator and planter	W. C. McTyeire	407,029	July 16	1505	394	48	310
Cultivator and planter. Combined	J. D. Stobaugh	410,996	Sept. 10	1317	355	48	1532
Cultivator and seeder	L. S. Flatan	406,205	July 2	252	70	48	50
Cultivator and seeder	J. S. Rowell	410,768	Sept. 10	989	266	48	1465
Cultivator. Hand garden	J. A. Shrock	410,774	Sept. 10	1000	268	48	1468
Cultivator. Listing	W. A. Kerschner	411,451	Sept. 24	1996	529	48	1677

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Cultivator-tooth. Spring	J. S. Rowell	410,769	Sept. 10	990	266	48	1466
Cultivator. Wheel	H. O. Sanders	411,733	Sept. 24	2407	638	48	1762
Cultivators. Shovel-standard for	M. L. Kissell	407,580	July 30	2636	683	48	547
Cultivators. Spring-tooth fastener for	E. P Atherholt	409,817	Aug. 27	2461	645	48	1172
Cup. *See* Grease-cup. Oil-cup.							
Cup for receiving condensed milk or marmalade packages	L. Kohns	406,841	July 9	1234	327	48	247
Curb Pavement	I. L. Landis	409,469	Aug. 20	1923	510	48	1067
Curbing-section. Metallic	H. W. White	408,057	July 30	3056	800	48	626
Curling-iron	S. Hawkridge	407,439	July 23	2157	537	48	445
Current motor. Alternating	C. J. Van Depoele	408,641	Aug. 6	668	174	48	808
Curry-comb	L. M. Devore	409,458	Aug. 20	1913	506	48	1064
Curry-comb	J. Du Shane	407,313	July 16	1939	505	48	396
Curry-comb	F. W. Hoefer	410,971	Sept. 10	1282	347	48	1526
Curry comb	F. G. Kent	410,167	Sept. 3	44	12	48	1277
Curry-comb	C. A. Mable	411,345	Sept. 17	1841	492	48	1643
Curry-combs. Machine for making wooden	M. Sweet	409,522	Aug. 20	1998	527	48	1061
Curry-combs. Machine for riveting	J. C. Teepe	407,949	July 30	2834	737	48	583
Curtain-drying frame	F. H. Bassett	411,765	Sept. 24	2450	649	48	1771
Curtain-fixture	F. H. Bassett	411,766	Sept. 24	2451	649	48	1771
Curtain-fixture	J. Shinn	409,700	Aug. 27	2371	622	48	1155
Curtain-fixture	A. Nordlund	406,592	July 9	843	228	48	174
Curtain-rollers. Machine for manufacturing	L. B. Harkness	407,592	July 23	2370	614	48	489
Curtain supporter and adjuster	P. I. Peirce	410,252	Sept. 3	174	46	48	1302
Cuspidor	F. D. Clark and F. Rice	406,877	July 16	1293	339	48	269
Cut-off. Automatic	J. Miller	406,847	July 9	1243	329	48	248
Cut-off Automatic	R. A. Weidman	408,777	Aug. 13	862	236	48	856
Cut-off for water-gages. Automatic	H. W. Knight	410,597	Sept. 10	696	187	48	1411
Cut-off. Rain-water	S. C. C. Currie	406,268	July 2	234	99	48	67
Cut-out	L. F. Furlong	410,545	Sept. 3	618	166	48	1390
Cut-out	F. G. A. Heller	411,390	Sept. 17	1867	504	48	1651
Cut-out	A. Johnston	407,826	July 30	2712	704	48	560
Cutlery-handles. Making	H. C. Hart	410,634	Sept. 10	1083	291	48	1486
Cutlery. Manufacture of	A. Johnston	408,307	Aug. 6	151	38	48	709
Cutter: *See* Bag-string cutter. Band-cutter. Bean-cutter. Butter-cutter. Chamfer-cutter. Cigar-cutter. Corn-cutter. Cornstalk-cutter. Feed-cutter. Fodder-cutter. Fruit or ice cutter. Meat-cutter. Mining-machine cutter. Molding-cutter. Paper-cutter. Pipe-cutter. Sod-cutter. Stalk-cutter. Straw-cutter. Weed-cutter.							
Cutter, pulverizer, drag, and roller. Combined	A. J. Casey	409,391	Aug. 20	1819	479	48	1044
Cutting boards from logs. Machine for	T. S. Crane	410,403	Sept. 3	414	{110 111	48	1350
Cutting cloth and patterns. Machine for	D. H. Cunningham	406,821	July 9	1205	320	48	242
Cutting curved surfaces. Machine for	S. M. Dixon	409,024	Aug. 13	1257	332	48	989
Cutting out concavo-convex shells or dishes. Machine for	C. Spofford	410,209	Sept. 3	250	65	48	1317
Cutting paper, trimming shades, &c. Tool for	C. T. Ridgley	408,193	July 30	3284	858	48	665
Cutting webbing. Machine for	E. W. H. Rase	411,415	Sept. 24	1944	518	48	1668
Cutting wooden dishes. Machine for	D. H. Brenner	409,909	Aug. 27	2563	676	48	1195
Dado-guide	W. S. Comstock	410,348	Sept. 3	334	88	48	1333
Damper for boiler-furnaces. Automatic	F. E. Shank	409,247	Aug. 20	1598	422	48	1001
Damper for hot-air flues	G. W. Schwinn	408,856	Aug. 13	1005	265	48	880
Damper. Pipe	M. J. Liddell	407,062	July 16	1577	414	48	324
Damper Stove	W. C. Metzner	410,646	Sept. 10	779	211	48	1428
Damper. Stove or furnace	A. M. Mohrmann	411,003	Sept. 24	2218	590	48	1723
Damper. Stove-pipe	C. D. Bosworth and J. F. Foster	406,022	July 2	5	2	48	3
Damper. Stove-pipe	L. M. Devore	409,459	Aug. 20	1914	{506 507	48	1065
Dating and cutting machine. Combined	G. J. Hill	410,970	Sept. 10	1281	346	48	1525
Dead centers. Device for overcoming	R. L. Ramsay	411,678	Sept. 24	2329	617	48	1746
Decorating base metals, glass, &c., with precious metals	F. Roessler	407,305	July 16	1931	.....	48	393
Decorticator for ramie, &c	M. J. Lenth	409,847	Aug. 27	2503	654	48	1178
Decoy	W. H. Jencks	410,523	Sept. 3	593	159	48	1385
Defecating pan	M. Swenson	411,112	Sept. 17	1504	398	48	1578
Dental-bib clamp	J. D. Enues	410,063	Aug. 27	2642	746	48	1243
Dental chair	D. D. Hepburn and E. Gardner	406,349	July 2	457	{127 128	48	92
Dental-drill attachment	J. H. Moyer and J. P. Stansell	408,923	Aug. 13	1104	291	48	890
Dental engine	L. T. Sheffield	408,439	Aug. 6	351	91	48	748
Dental engines. Stop-motion for	A. R. Cooke	407,950	July 30	2906	757	48	597
Dental file	C. E. Palmer	408,926	Aug. 13	1108	292	48	900
Dental forceps	A. G. Nyblin	408,739	Aug. 13	827	218	48	844
Dental instrument	R. B. Donaldson	410,158	Sept. 3	32	9	48	1275
Dental instrument. Electric	F. Vernette	409,437	Aug. 20	1879	496	48	1057
Dental jaw-prop	R. H. Daintree	410,665	Sept. 10	812	218	48	1433
Dental plate	J. J. Stedman	411,538	Sept. 24	2113	557	48	1700
Dental plugger	S. Lacavalerie and C. Doroit	408,863	Aug. 13	1048	277	48	878
Dental plugger	F. Schmidt	410,935	Sept. 10	1226	330	48	1514
Dental plugger	D. M. Small	408,899	Aug. 13	1073	282	48	893
Dental surgery. Steam-conduit for	J. O Keller and D. D. Weisell	411,449	Sept. 24	1994	529	48	1676
Dental vulcanizer	E. R. Maguire	411,461	Sept. 24	2007	533	48	1679
Dentist's bench-block	C. Rauhe	410,674	Sept. 10	823	221	48	1435
Dentist's chair	H. M. Caldwell	406,700	July 9	1017	.....	48	206
Deodorant and disinfectant	W. E. Chapman	411,214	Sept. 17	1652	{440 441	48	1608
Derrick	L. S Deuling	411,585	Sept. 24	2186	580	48	1716

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol	Official Gazette. Page.
Derrick	J. Thompson	410,997	Sept. 10	1319	355	48	1533
Derrick. Portable	M. C. Bullock	407,993	July 30	2967	771 772	48	607
Desk. Adjustable school	F. T. Selander	406,120	July 2	222	60, 61	48	44
Desk attachment	H. E. Adams	406 121	July 2	140	41	48	29
Desk attachment. Writing	E. Lemberger	411 456	Sept. 24	2002	531	48	1678
Desk-bracket	G P. Davis	408,067	July 30	3095	811	48	633
Desk. School	T. S. Manning	411,533	Sept. 24	2140	567	48	1706
Desk. School	C. B. Towle	409,884	Aug 27	2550	667 668	48	1188
Desk. Writing	A. L. Gorham	407 589	July 23	2365	612	48	488
Desks. Device for actuating the slides or rests of	F. D and E. F. Pooley	407,415	July 23	2108	545	48	435
Dial. Teacher's	A. M. Edwards	407,163	July 16	1747	457	48	357
Die: *See* Cracker-cutting die. Sole-cutting die Screw-cutting die. Wire-drawing die.							
Die-bearing disk	M. M. Shellaberger	409,309	Aug. 20	1700	447	48	1021
Die-press	N. C. Stiles	410 746	Sept. 10	952	236	48	1457
Digester	W. O and W. P. Crocker	406,826	July 16	1302	341	48	270
Digger: *See* Post-hole digger. Potato-digger.							
Dip-net frame	C. E. Wheeler	407,979	July 30	2947	767	48	604
Direct-acting engine	H. C. Sergeant	407,258	July 16	1866	487	48	380
Dish-drier	A. J. Wilson	410,818	Sept. 10	1064	285	48	1463
Dishes to the tables of steamships. Means for securing	F. Ezell	407,477	July 23	2207	569	48	455
Disinfectant	C. F. Boud	408,454	Aug. 6	375	.....	48	753
Disinfectant	I. L. Roberts and H. L. Brevoort	406,062	July 2	60	.....	48	14
Disinfecting-tank. Automatic	J. J. Powers	408,432	Aug. 6	344	89, 90	48	746
Display-rack	R. Faries	406,163	July 2	196	55	48	40
Display-rack	R. Faries	407,340	July 23	1993	517	48	413
Display-stand	W R. Wootten	411,482	Sept. 24	2037	539	48	1685
Distance-instrument	W. Barton	407,767	July 30	2617	678	48	544
Distance-instrument	A. B Melhouse	407 786	July 30	2644	685	48	549
Distilling anhydrous ammonia. Apparatus for	J. E. Holmes	410,244	Sept. 3	161	42, 43	48	1300
Distilling-column	E. Bolton	410 634	Sept. 10	765	207	48	1425
Distilling crude petroleum. Apparatus for	W H. Pitt	411 394	Sept. 17	1905	508	48	1654
Distributer	H. O. King	406 449	July 9	615	173	48	133
Distributer for cards or other articles. Automatic	W. Fischer	409 571	Aug. 20	2065	545	48	1093
Ditcher. Tile	H. L. Potter	409,494	Aug. 20	1962	402	48	1054
Door-check	E. I. Blount	406 621	July 9	899	243	48	184
Door-check	C. H Dixson	409,735	Aug. 27	2332	613	48	1148
Door-check	W. H. Fouts	406,509	July 9	730	201	48	153
Door-check	L. W. Hardy	409,194	Aug. 20	1522	404	48	987
Door-check	G. R. G. Jones	406,840	July 9	1232	327	48	247
Door-check	W. D. Scarborough	411,557	Sept. 24	2144	568	48	1707
Door-check. Pneumatic	T. Goodenough	409 961	Aug. 27	2659	697	48	1210
Door-fastener	C. L. Ward	407 140	July 16	1684	440	48	345
Door-fastening	E N. Warner	406,980	July 16	1441	378	48	297
Door-hanger	P. H. Murphy	409,999	Aug 27	2766	710	48	1210
Door-hanger track	J. G. Lane	407,357	July 23	2028	525	48	410
Door-mat	W. J. Myers	410,556	Sept. 3	837	170	48	1304
Door-plate	C. R. Harris	406 729	July 9	1057	282	48	213
Door. Screen and storm	C. Loetscher	409 750	Aug 27	2352	619	48	1152
Door. Sliding	J. H. Morley	408 502	Aug. 6	452	119	48	708
Door-spring	E. A. Calahan	406 025	July 2	8	3	48	4
Door-spring	F. W. Hoefer	409,587	Aug. 20	2095	532	48	1098
Door-spring	F. W. Tobey	410,047	Aug. 27	2779	731	48	1233
Doubletree attachment	S. Martin	410,910	Sept. 10	1190	322	48	1507
Doubling-machine	J. H. Shearn	408 140	July 30	3191	834	48	650
Doubling-machines. Stop mechanism for	R. Dawson	408,574	Aug. 13	1033	273 274	48	885
Dough-machine	G. H. Cross	410 350	Sept. 3	336	88	48	1334
Dough. Machine for forming loaves of	F. Westerman	407,978	July 30	2943	766 767	48	604
Dough-raising tray	B. Z. Dampierre	411,279	Sept 17	1743	465	48	1626
Draft attachment for vehicles	J. D. Miller	406,755	July 9	1103	293	48	223
Draft attachment for vehicles. Spring	H. Barber Jr	410,230	Sept. 3	142	36, 37	48	1296
Draft-equalizer	W. Lewis	408,727	Aug. 13	814	214	48	841
Draft-equalizer	C. W. Phelps	409,497	Aug 20	1965	520	48	1074
Draft-regulator	W. E Haxtun	411 668	Sept 24	2453	650	48	1772
Draft-regulator	J. Hopson, Jr	406,138	July 2	160	47	48	33
Draft-regulator for hot-water boilers. Automatic	W. P Powers	410,717	Sept. 10	902	243	48	1448
Draft-regulator. Thermostatic	S F. Collins and G. S. Slack	406,704	July 9	1024	274	48	207
Draft-spring for vehicles	J. A. Robson	408,437	Aug. 6	349	91	48	747
Drafting apparatus for enlarging or reducing pictures	J. E Ulber	406,796	July 9	1165	308	48	234
Drafting-board	E. A Haldeman	408,970	Aug. 13	1177	311	48	913
Draftsman's protractor	W. W. Duffield	407,515	July 23	2256	583	48	464
Drain and soil pipe	W. S. Clark	409 014	Aug. 13	1243	328	48	925
Drain-tester	B Meriam	406,527	July 9	759	206	48	159
Dramatic performances. Producing	C. L Barry and G B. Upham	406,252	July 2	312	86	48	62
Drapery-trimming	P. Gumbinner	409,400	Aug. 20	1833	483	48	1047
Draw-bar attachment	J. Tuner	411 477	Sept. 24	2032	538	48	1684
Drawer	E. J. Brown	410 068	Aug 27	2804	738	48	1237
Drawer-pull	C. F. Mosman	407,027	July 16	1503	393	48	310
Drawer-pull	G. S. Pearson	406,664	July 9	964	260	48	196
Drawing-board	E. A. Newman	408,315	Aug. 6	162	41	48	711
Drawing-frames, &c. Electric stop-motion for	V. I. Cumnock	408 829	Aug 13	902	255	48	872
Drawing in perspective. Device for	A. Brix	406,083	July 2	85	25	48	19
Drawing-instrument	L. F. Rondinella	411 617	Sept 24	2243	596	48	1728
Drawing-knife	J. R. Finley	406 392	July 2	525	146	48	105
Drag-body	H W. Case	410,491	Sept. 3	551	148	48	1376
Dredging apparatus	A. B. Bowers	411 183	Sept. 17	1602	426	48	1597
Dredging apparatus. Hydraulic	J. M. Miller	410,801	Sept. 10	1041	279	48	1478

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume Spec.	Monthly volume Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Dredging-machine	W. P. Humphreys	410,759	Sept. 10	977	262	48	1462
Dredging-machine. Hydraulic	J. H. Von Schmidt	407,044	July 16	1529	400 401	48	314
Dress-extender. Folding	J. W. and L. A. Weeks	406,155	July 2	185	53	48	38
Dress-form	R. L. Dodge	411,428	Sept. 24	1905	522	48	1671
Dress-form	J. B. Stone	410,962	Sept. 10	1126	304	48	1494
Dress-form	W. Vogler	408,769	Aug. 13	868	233	48	853
Dress-form	W. Vogler	408,770	Aug. 13	870	233	48	854
Dress-form	W. Vogler	408,771	Aug. 13	871	233	48	854
Dress-form	M. E. Crandal and E. B. Reeme	409,173	Aug. 20	1497	397	48	922
Dress-shield	J. O. De Caracena	408,594	Aug. 6	597	155	48	794
Dress-waist	L. Shannon	406,239	July 2	297	82	48	59
Dresses. Attachment for							
Drier: *See* Clothes-drier. Grain-drier. Dish-drier.							
Drier	J. B. Johnson	409,359	Aug. 20	1770	466 467	48	1034
Drill: *See* Coal-drill. Grain-drill. Coal or rock drill. Ratchet-drill. Electric drill. Rock-drill. Expansion-drill.							
Drill	A. Renetzky	407,688	July 23	2490	640	48	512
Drill-machine	A. Knüpfer	410,692	Sept. 10	854	220	48	1441
Drill stocks. Fastening for mining	E. Smith	406,782	July 9	1146	303	48	230
Drills. Apparatus for operating rotary	M. T. Chapman	409,272	Aug. 20	1634	432 433	48	1009
Drills. Machine for back-clearing twist	J. D. Cox, Jr	407,517	July 23	2349	608 609	48	485
Drills. Mechanism for back-clearing twist	J. D. Cox, Jr	407,721	July 23	2542	658	48	522
Drilling-machine	U. and H. E. Eberhardt	407,319	July 23	1989	517	48	413
Drilling-machine	F. W. Luscomb and D. A. Corey	410,762	Sept. 10	982	263	48	1463
Drilling-machine	C. W. McDaniel	410,803	Sept. 10	1043	279 280	48	1478
Drilling-machine	W. S. Rogers	411,616	Sept. 24	2242	596	48	1738
Drilling-machines. Tapping attachment for	U. Eberhardt	408,698	Aug. 13	770	202 203	48	833
Drinking-vessel. Electric	F. W. Flint	408,697	Aug. 6	614	159	48	797
Drip-pan	B. McCaughey	411,670	Sept. 24	2320	615	48	1744
Driving or stop mechanism	O. W. Schmidt	409,068	Aug. 13	1323	349	48	940
Dropper: *See* Bandle-dropper.							
Drum	E. J. Cubley	407,579	July 23	2352	609	48	486
Dry closet	A. M. Coyle	408,086	July 30	3094	811	48	633
Dry-kiln furnace	W. Ketcham	408,724	Aug. 13	809	213	48	840
Drying apparatus	J. F. Gent	410,085	Aug. 27	2843	746 747	48	1244
Drying fabrics. Machine for	I. E. Palmer	409,615	Aug. 20	2140	562 563	48	1106
Drying-frame for knitted drawers	M. Clemins and C. A. Tice	409,630	Aug. 20	2166	570	48	1111
Drying-machine	J. H. Knowles and J. K. Proctor	410,110	Aug. 27	2892	759	48	1233
Drying or evaporating apparatus	A. Herr	408,660	Aug. 6	700	181	48	813
Drying or evaporating apparatus	J. B. Seaman	411,397	Sept. 17	1909	509 510	48	1635
Drying or otherwise treating materials. Apparatus for	E. M. Cook	408,217	Aug. 6	21	5	48	682
Drying starch refuse, brewer's grains, &c. Apparatus for	F. M. F. Cazin	408,824	Aug. 13	953	253 254	48	870
Drying warps, piece goods, &c. Device for	F. Haskell	408,235	Aug. 6	55	13	48	689
Dulcetina	G. C. Marsters	411,554	Sept. 24	2141	567	48	1706
Dummy or motor engine	J T. Van Gestel	410,049	Aug. 27	2781	732	48	1233
Dumping apparatus	G. W. Patnoe	406,404	July 2	542	151 152	48	108
Dumping platform	E. Burns	409,813	Aug. 27	2589	678	48	1186
Duplex engine	H. F. Gaskill	411,497	Sept. 24	2055	543 544	48	1688
Dust-collector	J. S. Ash	408,787	Aug. 13	901	241	48	859
Dust-collector	J. B. Barnes	407,392	July 23	2074	536 537	48	428
Dust-collector	W. F. Boehning	408,285	Aug. 6	121	30	48	703
Dust-collector	E. Bretney	408,074	July 30	3081	806	48	630
Dust-collector	J. M. Case	407,949	July 30	2904	756 757	48	597
Dust-collector	W. A. Cockrell	410,152	Sept. 3	20	6, 7	48	1272
Dust-collector	R. L. Downton	409,025	Aug. 13	1261	333	48	929
Dust-collector	N. W. Holt	409,465	Aug. 20	1923	509	48	1067
Dust-collector	O. Kutsche	407,598	July 23	2378	616	48	490
Dust-collector	B. F. Miesenhelder and C S. McCoy	411,662	Sept. 24	2216	590	48	1722
Dust-collector	O. M. Morse	408,987	Aug. 13	1198	316	48	917
Dust-collector	O. M. Morse	409,482	Aug. 20	1945	515	48	1071
Dust-collector	J. A. and E. F. Woodbury	408,907	Aug. 13	1081	284	48	895
Dust-collector attachment	I. E. Baker	409,638	Aug. 27	2208	581	48	1125
Dust-pan	W. F. Spurgin	407,133	July 16	1676	438	48	344
Dye. Blue	D. E. Huguenin	411,149	Sept. 17	1536	.....	48	1588
Dye. Compound	C. S. Bedford	409,364	Aug. 20	1810	.....	48	1042
Dye. Compound orcin	R. Greville-Williams. (Reissue)	11,016	July 30	3317	.....	48	671
Dye. Making a violet	R. Geigy	410,733	Sept. 10	943	.....	48	1453
Dye. Making orcine	R. Greville Williams	410,057	Aug. 27	2792	.....	48	1235
Dye. Making orcine	R. Greville Williams	410,058	Aug. 27	2793	.....	48	1235
Dyeing apparatus	I. E Palmer	408,388	Aug. 6	274	67	48	732
Dyeing apparatus	J. Smith	406,784	July 9	1148	303	48	231
Dyeing apparatus	A. A. Sprague	410,744	Sept. 10	949	235	48	1457
Dyeing artificial silk	H. de Chardonnet	410,404	Sept. 3	419	.....	48	1351
Dyeing or scouring machine	C L. Klauder	411,504	Sept. 24	2065	546	48	1691

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Dyeing yarn in cops. Hollow spindle for	I. F. Peck	406,667	Aug. 6	709	182	48	815
Dyeing yarn in cops. Hollow spindle for	W. L. Peck	406,668	Aug. 6	709	184	48	815
Dynamo	W. S. Andrews and T. Spencer	406,415	July 9	561	158	48	121
Dynamo. Alternating-current	G. Pfannkuche	407,875	July 30	2786	734	48	574
Dynamo. Self-regulating	J. J. Wood	406,493	July 9	700	{193 194}	48	149
Dynamos. Brush-holder for	J. M. McClellan	409,646	Aug. 20	2185	572	48	1114
Dynamos. Determining the shape of pole-pieces for	J. G. Statter	410,656	Sept. 10	791	{214 215}	48	1430
Dynamos or other electrical apparatus. Regulator for shunt-wound	L. S. Harris	411,551	Sept. 24	2136	566	48	1706
Dynamos. Regulation of coupled	O. P. Loomis	410,170	Sept. 3	47	12	48	1278
Ear-ring	C. P. Pike	411,509	Sept. 24	2075	544	48	1693
Easel	J. F. Bluche	410,191	Sept. 3	85	21	48	1284
Easel	J. H. White	410,226	Sept. 3	136	33	48	1295
Easel	J. Phelps	406,233	July 2	291	80	48	58
Eaves-gutter for roofs	C. M. Brion	411,574	Sept. 24	2172	573	48	1712
Eaves-trough	J. H. McEwen	408,738	Aug. 13	896	214	48	843
Eccentric-connection	J. E. Foss	406,133	July 2	154	43	48	33
Edge-burnishing tool	F. W. Cook	410,315	Sept. 3	281	72, 73	48	1323
Edger. Gang	E. J. Muller	406,458	July 9	641	{180 181}	48	138
Effervescing drinks. Apparatus for dispensing	W. Gee	410,514	Sept. 3	580	156	48	1382
Egg-beater	J. L. Kirby	406,653	July 9	951	257	48	194
Egg-beater	J. Richardson	409,616	Aug. 20	2145	563	48	1107
Eggs. Composition for coating	J. F. Timmons	406,549	July 9	789	.....	48	165
Elastic webbing	E. Lamb	410,839	Sept. 10	1092	290	48	1488
Electric-arc lights. Globe-frame for	W. Jones	411,448	Sept. 24	1963	522	48	1676
Electric battery	C. A. Hussey	406,168	July 2	201	56	48	41
Electric battery	C. A. Hussey	406,169	July 2	202	56	48	41
Electric cables. Air-tight covering for	D. Brooks, Jr.	410,953	Sept. 10	1249	330	48	1519
Electric-circuit cut-out	W. S. Hill	406,906	July 16	1332	349	48	276
Electric conductors. Device for suspending	T. E. Adams	408,334	Aug. 6	195	50	48	717
Electric conductors. Pole for supporting	S. H. Short	411,204	Sept. 17	1638	{432 433}	48	1605
Electric conductors. Safety-fuse for	W. S. Bishop	409,628	Aug. 20	2165	570	48	1111
Electric conduit	H. A. Chase	410,150	Sept. 3	16	5, 6	48	1272
Electric conduit. Underground	E. H. Phippe	407,447	July 23	2170	569	48	447
Electric cords. Terminal plug attachment for flexible	S. C. Lafferty	411,153	Sept. 17	1563	416	48	1589
Electric coupling and circuit-closer	W. H. Baker	406,331	July 2	434	108	48	87
Electric cut-out	J. L. Kimball and H. C. Wirt	407,077	July 16	1570	412	48	323
Electric cut-out	A. T. Smith	407,455	July 23	2181	{562 563}	48	449
Electric drill	I. E. Storey	408,269	Aug. 6	100	25	48	690
Electric fixture	J. C. Hollings	407,593	July 23	2371	614	48	489
Electric generation and distribution for railway-cars. System of	E. E. Rice	411,301	Sept. 17	1767	{474 475}	48	1631
Electric generator	C. E. Buel	407,327	July 23	1967	512	48	409
Electric-light fixture	J. C. Hollings	410,689	Sept. 10	850	220	48	1441
Electric-light fixture. Incandescent	P. H. Klein, Jr	411,452	Sept. 24	1997	529	48	1677
Electric-light-shade holder	H. H. Sawyer	411,396	Sept. 17	1908	500	48	1655
Electric lighting. Carbon for	C. A. J. H. Schroeder	408,358	Aug. 6	225	.....	48	723
Electric-lighting system	F. E. Kinsman	407,895	July 30	2815	733	48	540
Electric lock	L. Huebner and R. Busse	408,484	Aug. 6	423	111	48	762
Electric machine	E. H. Bennett, Jr.	407,154	July 16	1699	{443 444}	48	348
Electric machine. Dynamo	H. R. Boissier	408,206	Aug. 6	4	1	48	679
Electric machine. Dynamo	S. Z. de Ferranti	408,403	Aug. 6	302	75, 76	48	737
Electric machine. Dynamo	S. Z. de Ferranti	408,404	Aug. 6	305	76, 77	48	738
Electric machine. Dynamo	S. Z. de Ferranti	409,349	Aug. 20	1758	{462 463}	48	1032
Electric machine. Dynamo	W. L. Silvey	406,599	July 9	859	221	48	177
Electric machine. Dynamo	N. Tesla	406,968	July 16	1434	374	48	294
Electric machine. Dynamo	J. T. Van Geetel	408,768	Aug. 13	867	202	48	853
Electric machine. Magneto	A. S. Fitch	410,964	Sept. 10	1267	341	48	1522
Electric machine. Magneto	A. S. Fitch	410,965	Sept. 10	1270	342	48	1523
Electric machine. Magneto	A. S. Fitch	410,966	Sept. 10	1272	{342 343}	48	1523
Electric machine or motor. Dynamo	F. J. Patten	410,987	Sept. 10	1304	352	48	1530
Electric-machine regulator. Dynamo	H. R. Boissier	408,205	Aug. 6	3	1	48	679
Electric-machine regulator. Dynamo	J. M. Bradford	410,663	Sept. 10	806	217	48	1432
Electric-machine regulator. Dynamo	J. J. Wood	406,494	July 9	704	{194 195}	48	149
Electric machines. Brush-holder for dynamo	C. D. Jenney	410,670	Sept. 10	818	219	48	1434
Electric machines. Commutator for	S. H. Short	408,265	Aug. 6	96	24	48	698
Electric machines or motors. Commutator-brush for dynamo	R. Hoffmann	410,896	Sept. 10	1175	{316 317}	48	1504
Electric main joint	S. Z. de Ferranti	409,183	Aug. 20	1509	400	48	984
Electric meter	S. Z. de Ferranti	408,295	Aug. 6	135	34, 35	48	706
Electric meter	T. A. Edison	406,824	July 9	1207	321	48	243
Electric meter	T. A. Edison	406,825	July 9	1209	321	48	243
Electric meter	E. R. Knowles	408,016	July 30	3004	783	48	615
Electric meter	E. R. Knowles	408,017	July 30	3006	784	48	615
Electric meter	H. W. Kolle	411,042	Sept. 17	1382	{370 371}	48	1555
Electric meter	W. McKinney	407,414	July 23	2108	545	48	435
Electric meter	M. M. M. Slattery	407,619	July 23	2104	{924 925}	48	495
Electric meter	M. M. M. Slattery	410,860	Sept. 10	1124	302	48	1494
Electric meters. Recording apparatus for	G. W. Walker	406,678	July 9	983	{264 265}	48	200
Electric motor	J. Buckley	406,674	July 16	1289	338	48	965
Electric motor	S. C. C. Currie	408,590	Aug. 6	591	{153 154}	48	792

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Electric motor	G. W. Mansfield	406,922	July 16	1356	355	48	222
Electric motor	L. G. Woolley	407,272	July 16	1885	491	48	384
Electric motor. Alternating-current	E. Thomson	407,844	July 30	2737	712	48	565
Electric motor and blower. Combined	C. J. Hirlimann	411,030	Sept. 17	1365	366	48	1551
Electric-motor governor	G. H. Whittingham	408,333	Aug. 6	194	49	48	717
Electric motor. Inductional	C. J. Van Depoele	408,642	Aug. 6	672	175	48	808
Electric-motor regulation	D. Higham	407,293	July 16	1915	498	48	390
Electric-motor regulator	J. F. Kelly and P. H. Brangs	407,014	July 16	1469	{3-8 389}	48	306
Electric motors. Operating	F. J. Patten	410,988	S pt. 10	1307	352	48	1530
Electric motors. System for synchronizing	R. H. Read	411,611	Sept 24	2211	593	48	1726
Electric motors. System for synchronizing	R. H. Read	411,612	Sept. 24	2206	594	48	1726
Electric projector	J. J. Wood	407,914	July 30	2842	{740 741}	48	584
Electric propulsion. System of	H. D. Dibble	406,391	July 2	523	{145 146}	48	104
Electric signal	G. McIntosh	407,490	July 23	2236	575	48	458
Electric switch	T. F. Gaynor	406,897	July 16	1320	346	48	274
Electric switch	H. T. Rigge	408,104	July 30	3285	836	48	606
Electric switch	W. Thompson	408,678	Aug. 6	726	189	48	816
Electric wires. Underground conduit for	G. A. Wheeler	411,539	Sept. 24	2115	558	48	1701
Electric wiring	F. R. Chinnock	406,994	July 16	1403	363	48	302
Electrical apparatus. Forming cores for	A. Schmid	406,859	July 9	1262	333	48	251
Electrical apparatus. Forming laminated cores for	A. Schmid	406,858	July 9	1260	332	48	251
Electrical apparatus. Laminated core for	A. Schmid	406,776	July 9	1133	300	48	228
Electrical circuits. Automatic regulation of	W. W. Griscom	407,006	July 16	1480	386	48	304
Electrical conductors. Apparatus for applying sheathing to	C. Q. Goodwin	410,410	Sept. 3	426	113	48	1352
Electrical conductors. Underground conduit for	G. W. Cook	406,818	July 9	1201	319	48	211
Electrical distribution by secondary generators	R. Kennedy	407,294	July 16	1913	499	48	390
Electrical distribution. Multiple-wire system of	J. A. Lightlipe	407,485	July 23	2218	573	48	457
Electrical distribution. System of	C. S. Bradley	409,449	Aug. 20	1896	501	48	1061
Electrical distribution. System of	C. S. Bradley	409,450	Aug. 20	1898	{501 502}	48	1061
Electrical distribution. System of	D. Higham	407,204	July 16	1782	467	48	364
Electrical distribution. System of	R. Kennedy. (Reissue)	11,031	Sept. 24	2460	651	48	1774
Electrical distribution. System of	F. L. Perry	408,513	Aug. 6	470	124	48	771
Electrical energy. Distribution of	S. Z. de Ferranti	409,192	Aug. 20	1504	400	48	984
Electrical energy. Distribution of	S. Z. de Ferranti	409,565	Aug. 20	2058	{542 543}	48	1092
Electrical energy. Distribution of	S. Z. de Ferranti	409,566	Aug. 20	2059	543	48	1092
Electrical indicator	E. R. Knowles	408,018	July 30	3007	784	48	616
Electrical indicator	E. R. Knowles	409,207	Aug. 20	1543	406	48	991
Electrical lock	P. Schwenke	409,508	Aug. 20	1980	523	48	1077
Electrical resistance	E. M. Bentley	409,135	Aug. 13	1431	376	48	961
Electrical resistance	F. O. Blackwell	408,647	Aug. 6	681	176	48	809
Electrical switch	J. A. Powers	406,468	July 9	661	185	48	142
Electrical wire conduit	C. C. Dashiell	411,427	Sept. 24	1963	522	48	1671
Electrically-controlled elevator	C. E. Ongley	410,180	Sept. 3	58	15, 16	48	1280
Electrically-controlled elevator	C. E. Ongley	410,182	Sept. 3	65	16, 17	48	1281
Electrically-controlled elevator	C. E. Ongley	410,183	Sept. 3	69	17	48	1282
Electrically-controlled elevator	C. E. Ongley	410,184	Sept. 3	72	18	48	1282
Electricity by gas-batteries. Generating	O. Dahl	411,496	Sept. 24	1962	521	48	1670
Electricity. Conductor for conveying	S. Z. de Ferranti	409,181	Aug. 20	1506	{399 400}	48	984
Electro-dynamic machine	G. F. Card	408,910	Aug. 13	1087	{285 286 287}	48	896
Electro-magnetic separator	W. A. Anthony	411,414	Sept. 24	1943	518	48	1667
Electro-therapeutic device	H. P. Pratt	407,116	July 16	1654	433	48	339
Electrode for galvanic batteries. Zinc	J. B. Williams	408,279	Aug. 6	113	28	48	701
Electrode for secondary batteries	W. P. Kookogey	409,106	Aug. 13	1383	365	48	952
Electrode for secondary batteries	A. V. Meserole	408,809	Aug. 13	934	249	48	867
Electrode for therapeutic body-wear	H. P. Pratt	406,306	July 2	395	108	48	79
Electrode. Secondary-battery	C. H. Carter	410,136	Aug. 27	2934	770	48	1261
Electrode. Secondary-battery	J. F. McLaughlin	410,007	Aug. 27	2718	714	48	1222
Electrode. Secondary battery	A. L. Riker	406,771	July 9	1127	299	48	227
Electrode. Secondary battery	F. H. Smith	410,037	Aug. 27	2702	725	48	1230
Electrolytic apparatus. Diaphragm for	G. Kerner and J. Marx	410,976	Sept. 10	1288	{348 349}	48	1537
Electromotor	A. S. Kissell	411,150	Sept. 17	1557	415	48	1588
Elevator: *See* Electrically-controlled elevator. Hand-elevator. Harvester-elevator. Hay-elevator. Hose-elevator. Hydraulic elevator. Invalid-elevator. Sawdust-elevator. Sucker-rod elevator. Tronsera-elevator. Water-elevator.							
Elevator	C. E. Ongley	410,181	Sept. 3	63	16	48	1281
Elevator	R. C. Smith	410,212	Sept. 3	120	30, 31	48	1292
Elevator	R. J. Walker	407,626	July 23	2413	627	48	497
Elevator alarm-indicator	E. Axthelm	408,399	Aug. 6	290	72	48	735
Elevator-doors. Device for operating	W. E. Nickerson	408,509	Aug. 6	465	{122 123}	48	770
Elevator-lock	E. E. Angell	411,274	Sept. 17	1735	463	48	1624
Elevator safety attachment	J Cowie	406,630	July 9	912	216	48	187
Elevator safety device	E. Lamesse	406,743	July 9	1236	327	48	247
Elevator safety device	N. Walker	410,339	Sept. 3	323	84	48	1331
Elevator-well. Device for operating doors for	W. E. Nickerson	407,110	July 16	1644	{430 431}	48	338
Elevators. Controlling device for	W. E. Nickerson	406,296	July 2	374	{101 102}	48	75
Elevators. Fluid speed-regulator for	W. E. Nickerson	407,677	July 23	2184	{642 643}	48	510
Elevators. Indicator and signal for	W. E. Hall	407,590	July 23	2367	613	48	488

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Elevators. Safety-cushion for	W. E. Nickerson	409,486	Aug. 20	1951	516	48	1072
Elevators. Safety-cushion for	W. E. Nickerson	409,487	Aug. 20	1952	517	48	1072
Elevators. Signaling apparatus for	J. F. Bower	406,423	July 9	574	161	48	124
Elevators. Speed-controlling device for	T. H. Melrose	409,995	Aug. 27	2699	709	48	1218
Embossed work. Making decorative	W. S. Morton	407,603	July 23	2385	619	48	492
Embossing, filling, and backing-out machine. Wood	W. W. Krutsch	407,223	July 16	1813	474	48	370
Embossing machine. Thimble	J. Browning	407,637	July 23	2432	630	48	501
Embroidering-machine	J. Irish	407,352	July 23	2008	521	48	416
Embroidery-frame	J. H. White	406,119	July 2	137	41	48	29
Emery-wheel	R. W. Hardie	409,837	Aug. 27	2489	650	48	1175
End-gate	T. B. Burr	411,578	Sept. 24	2176	570	48	1713
End-gate and scoop-board. Combined	L. W. Bayliss	407,507	July 23	2247	590	48	463
End-gate. Wagon	S. J. Mason	409,413	Aug. 20	1849	488	48	1051
Enfleurage	G. D. Nellenstyn	409,859	Aug. 27	2516	658	48	1180
Engine: *See* Carding-engine. Compound engine. Dental engine. Direct-acting engine. Duplex engine. Expansion-engine. Gas-engine. Gas-motor engine. Gas or oil motor-engine. Hydrocarbon-engine. Locomotive-engine. Motor-engine. Pulp-engine. Pulp-beating engine. Pumping-engine. Rotary engine. Rotary steam-engine. Steam-engine. Traction-engine.							
Engines. Adjustment of gibs of cross-heads of steam-	G. H. Corliss	406,091	July 2	98	29	48	21
Engines. Automatic lubricator for steam-	J. H. Siegrist, Jr	410,035	Aug. 27	2759	725	48	1229
Engines. Automatic stop mechanism for steam-	W. H. Pyott	411,530	Sept. 24	2103	553	48	1698
Engines. Base-frame for	B. A. Stevens	410,811	Sept. 10	1054	281	48	1480
Engines. Bed-plate for steam-	M. Hastings	409,198	Aug. 20	1526	405	48	988
Engines. Condenser-head for the exhaust-pipes of steam-	A. M. Doane	406,296	Aug. 6	137	35	48	700
Engines. Fuel-injector for explosive	E. Capitaine	408,461	Aug. 6	385	101	48	755
Engines. Igniting apparatus for gas or oil motor-	N. A. Otto	406,762	July 9	1112	295	48	225
Engines in steamships. Indicator for the motions of the	J. G. Alison	407,503	July 23	2240	579	48	461
Engines. Stock or tool holder for direct-acting	G. A. Barth	409,659	Aug. 27	2209	581	48	1125
Engraver's tool	G. A. Mason	408,498	Aug. 6	446	117	48	767
Engraving-machine	W. S. Eaton	409,026	Aug. 13	1263	331	48	930
Envelope-damping machine	H. J. H. Schuett	411,355	Sept. 17	1853	490	48	1645
Envelope-machine	J. Ball	409,624	Aug. 20	2155	566	48	1109
Envelope-machine	A. D. Tyrrel	408,300	July 30	3292	869	48	667
Envelope moistening and sealing apparatus	N. Matte and C. Montminy	411,601	Sept. 24	2215	586	48	1722
Envelopes. Seal for	H. F. McDermott	406,056	July 2	47	13	48	12
Eraser. Blackboard-	W. F. Jones	406,650	July 9	947	255	48	193
Eraser-holder	C. A. Holmes	408,305	Aug. 6	148	37	48	708
Eraser holder	K. Parke	407,607	July 23	2390	630	48	493
Etching or engraving on glass, &c	F. Winterhoff	411,560	Sept. 24	2148	.....	48	1708
Evaporating apparatus	A. Chapman	411,011	Sept. 17	1349	360	48	1546
Evaporating apparatus	J. Foster and J. Campbell	407,398	July 23	2025	536	48	430
Evaporating apparatus	A. Miller	410,715	Sept. 10	896	240	48	1147
Evaporating apparatus. Vacuum	A. Chapman	411,012	Sept. 17	1340	361	48	1546
Evaporating liquids. Apparatus for	T. Gaunt	409,572	Aug. 20	2067	546	48	1094
Evaporating liquids. Device for	J. U. Lloyd	406,453	July 9	629	177	48	136
Evaporator	W. and W. A. Wilcox	407,048	July 16	1335	402	48	315
Evaporator	W. and W. A. Wilcox	408,365	Aug. 6	236	60	48	725
Evener. Four-horse	J. C. Boehm	411,707	Sept. 24	2274	620	48	1735
Excelsior-machine	F. Abel	411,412	Sept. 24	1939	516	48	1667
Excelsior-machine	C. G. Smith	410,564	Sept. 3	648	172	48	1396
Exerciser. Hand-	G. H. Bidwell	410,778	Sept. 10	1007	270	48	1470
Exercising-machine	J. P. Nichols	408,251	Aug. 6	73	17	48	693
Exhaust-ventilator	C. T. Murray	407,488	July 23	2224	574	48	458
Exhibitor	C. H. Bacon	409,160	Aug. 20	1482	391	48	979
Exhibitor for wall-paper or other goods	H. Michaels	409,218	Aug. 20	1557	412	48	993
Expansion-bolt	I. Church	406,565	July 9	810	210	48	168
Expansion-bolt device	I. Church	406,564	July 9	809	210	48	168
Expansion-drill	M. T. Chapman	410,311	Sept. 3	270	70	48	1321
Expansion-engine	F. M. Wheeler	410,722	Sept. 10	913	245	48	1450
Explosive. Nitro-gelatine	F. A. Abel and J. Dewar	409,549	Aug. 20	2034	.....	48	1087
Explosives. Producing high	H. Maxim	411,197	Sept. 17	1526	.....	48	1583
Extension joint or splice	L. A. Tarring	407,795	July 30	2669	693	48	553
Extension-table	W. Blankner	409,662	Aug. 27	2213	583	48	1126
Extension-table	W. H. Burk	409,911	Aug. 27	2586	677	48	1196
Extractor: *See* Bung-extractor. Butter-extractor. Juice-extractor. Lemon-juice extractor. Nail-extractor. Staple or nail extractor. Stump-extractor.							
Eye-bars. Apparatus for upsetting	W. Cooke and D. Carlough	406,501	July 9	715	197	48	151
Eye-bars. Apparatus for upsetting	W. R. Webster	406,552	July 9	792	215	48	165
Eye-bars. Die for making	J. F. Kingsley (Reissue)	11,025	Aug. 20	2202	579	48	1117

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Eyeglass-frame. Self-adjusting	F. W. Nolte	407,789	July 30	2650	666	48	550
Eyeglass-holder	S. R. Stibgen	408,268	Aug. 6	99	25	48	699
Eyeglass nose-pad	J. P. Molitor	411,164	Sept. 17	1578	420	48	1592
Eyeglasses	J. L. Borsch	410,233	Sept. 3	147	39	48	1297
Eyeglasses	R. C. Kennedy	408,109	July 30	3143	822	48	612
Eyeglasses	H. Welcker	408,151	July 30	3309	837	48	633
Eyeglasses. Electric	C. C. Smith and H. W. Martin	411,689	Sept. 24	2348	621	48	1750
Eyeglasses. Electric attachment for							
Fabric: *See* Chenille fabric. Knitted fabric. Metal fabric. Non-heat-conducting fabric. Pile fabric. Sulphur fabric. Twilled woven fabric.							
Fabric-turfing implement	M. L. Connett	409,139	Aug. 13	1436	377	48	903
Fabrics. Device for guiding the edges of	J. J. Schofield	408,758	Aug. 13	853	227	48	850
Fabrics. Machine for brushing and napping	J. Worrall and J. Kershaw	406,187	July 2	232	63	48	46
Fagot	T. Meikle	411,748	Sept. 24	2427	643	48	1765
Fan attachment	A. W. McComas and H. A. Fitzhugh	406,055	July 2	45	13	48	12
Fan blades. Attachment for rotary	D. Whitlock	411,312	Sept. 17	1792	480	48	1634
Fan. Exhaust-	A. W. McComas and H. A. Fitzhugh	408,297	Aug. 6	228	72	48	734
Fan for rocking furniture	W. H. Curtice	408,188	July 30	3276	855	48	664
Fan. Portable	C. E. Waldeck	410,497	Sept. 3	558	150	48	1378
Fans. Appliance for rotary	T. M. Bales	408,555	Aug. 6	542	143	48	783
Fanning-mill	F. B. Brownell	410,869	Sept. 10	1134	305	48	1496
Fare-box attachment	H. R. Coffey	408,076	July 30	3083	807	48	631
Fare-register	T. A. Tweedy	410,558	Sept. 10	674	180	48	1407
Farm-gate	H. L. Zimmerman	409,716	Aug. 27	2107	606	48	1143
Farm-gate	F. W. Starr	406,545	July 9	784	213	48	164
Fastener. Double-pointed corrugated	P. J. Miller	411,045	Sept. 17	1385	371	48	1557
Fastener for envelopes, boxes, &c	F. W. Starr	406,544	July 9	783	213	48	164
Fastener or binding-strap	M. C. Somborn	410,038	Aug. 27	2762	726	48	1230
Fastening device	V. A. Weaver	407,708	July 23	2526	653	48	519
Fastening strips	A. R. Brandly	408,687	Aug. 13	748	195	48	898
Faucet	G. W. Mahlmann	409,691	Aug. 27	2370	597	48	1136
Faucet	W. H. Shaw	407,495	July 23	2231	576	48	459
Faucet	F. E. Totten	407,321	July 23	2061	533	48	426
Faucet and faucet-bushing	C. T. Emerson	408,831	Aug. 13	965	276	48	872
Faucet. Coin-controlled measuring-	C. O. White	410,948	Sept. 10	1243	335	48	1518
Faucet. Self-acting	P. E. Everett	408,701	Aug. 13	778	205	48	835
Faucet. Self-closing	P. E. Everett	406,273	July 2	340	93	48	68
Faucet. Self-closing	G. Woodall	410,306	Sept. 3	263	69	48	1319
Faucet. Self-closing	E. Haas	411,026	Sept. 17	1359	365	48	1550
Faucet. Syrup-	J. Chabanel	406,161	July 2	193	54	48	30
Fecal matters. Apparatus for separating, filtering, and disinfecting	O. D. McClellan	408,506	Aug. 6	459	120	48	769
Feculent receiver	B. T. Harris	409,838	Aug. 27	2492	651	48	1175
Feed-bag	D. Frese	406,896	July 16	1318	346	48	274
Feed-cutter	M. Voice	406,976	July 16	1437	377	48	296
Feed-cutter	J. A. McAnulty	409,329	Aug. 20	1736	454	48	1026
Feed-regulator	W. Andrus	408,569	Aug. 6	563	147	48	799
Feed-trough	G. D. Burton	406,425	July 9	577	152	48	125
Feed-trough	E. Graham and J. Doolittle	406,511	July 9	732	201	48	153
Feed-trough	H. C. Seward	410,563	Sept. 3	646	172	48	1395
Feed-trough	V. H. McConnell	407,104	July 16	1635	428	48	335
Feed-water for steam-boilers. Heating and purifying	W. H. Burk	406,625	July 9	906	244	48	185
Feed-water heater	A. de Beaumont	410,139	Aug. 27	2939	772	48	1262
Feed-water heater	M. Hecking	410,517	Sept. 3	595	157	48	1383
Feed-water heater	J. J. Hoppes	406,512	July 9	733	201	48	154
Feed-water heater	J. Willenbrink	407,141	July 16	1685	440	48	345
Feed-water heater and condenser	G. B. Field	408,605	Aug. 6	611	158	48	797
Feed-water heater and purifier	E. Holthause	406,982	July 2	353	97	48	72
Feed-water heater and purifier	J. S. Stephens	407,378	July 23	2056	532	48	425
Feed-water heater and purifier	G. H. Watson	408,865	Aug. 13	1018	269	48	982
Feed-water heating and circulating apparatus	R. Fraser	407,435	July 23	2149	555	48	443
Feed-water purifier	F. V. Medynski	407,364	July 23	2036	528	48	421
Feed-water purifier for boilers	L. H. Thielmann	409,862	Aug. 27	2517	667	48	1187
Feed-water purifier for steam-boilers	H. Hackney	410,413	Sept. 3	432	115	48	1354
Feeder. Automatic	C. N. McFarland	409,341	Aug. 20	1731	455	48	1027
Feeder. Fowl or stock	B. Walton	411,627	Sept. 24	2255	599	48	1731
Feeding stock. Device for	G. Black	409,162	Aug. 20	1488	393	48	980
Felly. Boiler-	J. W. Tamplin and B. F. Holt	410,467	Sept. 3	517	130	48	1370
Felly support. Wheel-	L. Harris	408,103	July 30	3130	819	48	640
Felt for hats, &c. Treating fur or wool	T. Sealy	409,651	Aug. 20	2192	.....	48	1116
Fence	M. J. Barrow	406,695	July 9	1013	271	48	205
Fence	J. H. Crain	410,494	Sept. 3	555	149	48	1377
Fence	J. Higgins and J. Sullivan	406,645	July 9	940	254	48	192
Fence	H. E. Macrea	406,657	July 9	956	258	48	195
Fence	J. T. Mayhew	406,925	July 16	1361	356	48	282
Fence	J. D. Miller	410,912	Sept. 10	1192	302	48	1507
Fence	P. H. Robbins	410,926	Sept. 10	1214	327	48	1512
Fence	W. V. Russell	409,243	Aug. 20	1505	421	48	1000
Fence	E. Truslow	409,078	Aug. 13	1338	353	48	943
Fence-bracket	A. O. Corell	409,172	Aug. 20	1496	396	48	982
Fence-building machine	J. B. Kline	410,363	Sept. 3	353	93, 94	48	1338
Fence looms. Register for slat-	W. M. Gray and W. M. White	410,587	Sept. 10	667	184	48	1409
Fence-machine	W. S. Barker	410,482	Sept. 3	537	143	48	1373
Fence-machine	W. S. Barker	411,635	Sept. 24	2264	602	48	1733
Fence-machine	G. J. Cline	407,061	July 16	1551	407	48	318

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fence-machine	I. R. Esig	410,706	Sept. 10	873	225	48	1445
Fence-machine	E. Hughes and B. F. Williams	406,912	July 16	1341	330	48	278
Fence-machine	T. G. and M. R. Simpson	410,654	Sept. 10	787	214	48	1429
Fence-machine	M. J. Young and L. A. Watts	411,365	Sept. 17	1864	490	48	1647
Fence machine. Picket	E. Redmond	410,650	Sept. 10	783	213	48	1428
Fence-machine tension device	A. J. Forsythe and G. L. Gwinn	411,122	Sept. 17	1520	404	48	1582
Fence machine. Wire	A. C. Bette	410,263	Sept. 3	188	49, 50	48	1305
Fence machine. Wire	J. Decker	408,164	July 30	3230	843	48	657
Fence machine. Wire	L. C. Lowden	409,477	Aug. 20	1827	513	48	1060
Fence-making implement	C. H. Fisher	411,429	Sept. 24	1966	522	48	1671
Fence-making machine	T. L. Armstrong, E. Clark, and G. Cottrell.	406,516	July 9	740	203	48	155
Fence-making machine	C. W. Bush	407,329	July 23	1969	512	48	409
Fence or gate post brace	G. W. Clark	407,330	July 23	1970	513	48	410
Fence-picket-crimping machine	M. M. Shellaberger	410,611	Sept. 10	723	193, 194	48	1416
Fence. Portable	P. M. Mishler	406,053	July 2	44	13	48	11
Fence-post	F. L. Fairchild	409,396	Aug. 20	1828	499	48	1046
Fence-post	S. J. Miller	407,365	July 23	2037	532	48	421
Fence-post. Clay	W. H. Heindel	411,027	Sept. 17	1361	366	48	1550
Fence-post. Metallic	W. M. Pressler	410,020	Aug. 27	2734	711	48	1225
Fence. Wire	D. H. Allen	408,282	Aug. 6	117	29	48	702
Fence. Wire	M. D. Kilmer	406,221	July 2	271	73	48	51
Fence. Wire	T. I. Ruebton	409,242	Aug. 20	1592	428	48	1000
Fence-wire holder and stretcher	B. Doud	410,077	Aug. 27	2836	744	48	1242
Fence-wire tightener	S. J. Miller	407,365	July 23	2037	532	48	421
Fence-wire-twisting device	W. H. H. Yount	410,951	Sept. 10	1247	330	48	1519
Fences. Device for attaching pickets to wire	R. F. Wilcox	406,490	July 9	695	193	48	148
Fences. Machine for making picket	G. W. Wickes	407,711	July 23	2529	654	48	520
Fences. Tension-machine for use in constructing	W. W. Hightree	411,029	Sept. 17	1364	366	48	1551
Ferrule	S. W. Evans, Jr	410,228	Sept. 10	1076	289	48	1485
Ferrule for umbrellas and canes	J. A. Furman	408,965	Aug. 13	1165	309	48	911
Ferrule for umbrellas, canes, &c	C. S. Smith	407,375	July 23	2053	534	48	424
Fertilizer	J. A. Lightball	408,491	Aug. 6	431	113	48	764
Fertilizer-distributer	E. P. Lewis	408,885	Aug. 13	1050	277, 278	48	888
Fertilizer. Phosphatic	N. B. Powter	407,240	July 16	1841	.....	48	376
Fertilizer. Phosphatic	N. B. Powter	407,241	July 16	1842	.....	48	376
Fertilizers. Making	C. C. Peck	409,230	Aug. 20	1574	.....	48	997
Fibrous lubricator	J. Williams, Jr	409,721	Aug. 27	2313	606	48	1144
Field-roller	A. G. Barton	406,078	July 2	78	23	48	18
Fifth-wheel. Vehicle	P. Andersen	411,564	Sept. 24	2152	570	48	1708
Fifth-wheel. Vehicle	A. O. and R. N. Clemons, 2d	409,133	Aug. 27	2330	610	48	1147
Fifth-wheel. Vehicle	J. Woods	407,984	July 30	2953	766	48	605
Figure. Automatically-moving	A. F. Ball	407,565	July 23	2337	604	48	483
File and binder combined with perforating device. Letter	S. M. Scheen	406,596	July 9	848	220	48	175
File-box	M. R. Jewell	408,978	Aug. 13	1187	312	48	915
File-box	M. R. Jewell	408,979	Aug. 13	1189	314	48	915
File-box	I. S. Smith, Sr	410,257	Sept. 3	182	47	48	1304
File. Clamp	A. Dorn	409,142	Aug. 13	1441	370	48	964
File. Document	R. S. Rich	409,236	Aug. 20	1581	410	48	996
File holder. Letter	L. F. Hurd	407,011	July 16	1485	385	48	305
File or holder. Paper	J. B. Brown	409,730	Aug. 27	2325	602	48	1146
File. Paper	R. G. Hearne	406,444	July 9	607	171, 172	48	131
Filter	H. F. Clayton and G. H. Holdroyd	409,273	Aug. 20	1640	434	48	1010
Filter	P. Laughlin	409,210	Aug. 20	1548	402	48	992
Filter	C. H. Parmenter and G. V. Blackman	407,112	July 16	1648	431, 432	48	338
Filter	O. Pierce	410,767	Sept. 10	987	265	48	1465
Filter. Continuous	J. Sutton	406,603	July 9	865	223, 224	48	178
Filter for rain-water	J. Dornbirer	407,854	July 30	2753	716	48	568
Filter. Oil	D. R. Ellis	410,319	Sept. 3	200	55	48	1325
Filter-press	F. Kleemann	407,221	July 16	1806	472, 473	48	369
Filter. Siphon	T. Slevin	409,071	Aug. 13	1327	350	48	941
Filter system	J. J. Murphy	409,611	Aug. 20	2132	560	48	1105
Filter. Water	F. W. Baker	406,189	July 2	235	64	48	46
Filter. Water	J. J. Curran	406,126	July 2	145	37	48	31
Filtering apparatus	G. W. Goetz	411,743	Sept. 24	2420	641	48	1765
Filtering medium. Water	J. B. and J. F. Ziegler	409,495	Aug. 27	2368	.....	48	1192
Filtering system and plant	J. Rigby	407,036	July 16	1517	397	48	312
Filtration	J. W. Hyatt	409,970	Aug. 27	2671	701	48	1213
Finger-guard	E. H. Chesterton	408,912	Aug. 13	1091	287	48	896
Finger-nail guard or protector	J. J. Stoll	408,052	July 30	3051	788	48	625
Finger-ring holder	C. A. Kron	407,668	July 23	2473	646	48	508
Fire-alarm box	J. Speicher	408,762	Aug. 13	859	225	48	851
Fire-alarm system	W. L. Denio	410,318	Sept. 3	286	75	48	1324
Fire-arm	D. A. Draper and A. Tonks	410,235	Sept. 3	148	39	48	1297
Fire-arm. Breech-loading	W. H. Davenport	406,031	July 2	17	6	48	6
Fire-arm. Breech-loading	P. Manser	406,924	July 16	1358	356	48	282
Fire-arm lock	E. L. Pupke	409,701	Aug. 27	2293	603	48	1140
Fire-arm. Magazine	J. M. and M. S. Browning	409,599	Aug. 20	2111	556, 557	48	1101
Fire-arm. Magazine	J. M. and M. S. Browning	409,600	Aug. 20	2114	557	48	1102
Fire-arm. Magazine	J. M. Reams and W. L. Horne	406,667	July 9	908	241	48	197
Fire-arm. Magazine	M. F. Richardson and C. A. Woodbury.	410,609	Sept. 10	719	193	48	1415
Fire-arm. Magazine	J. J Speed	406,787	July 9	1152	304, 305	48	231
Fire-arm. Magazine	C. P. N. Weatherby	409,889	Aug. 27	2557	675	48	1189

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Fire-arm. Magazine	C. P. N. Weatherby	410,621	Sept. 10	737	199, 200	48	1419
Fire-arm. Magazine or repeating	F. J. Petry	407,238	July 16	1836	479, 480	48	375
Fire-arm. Revolving	H. M. Caldwell	408,457	Aug. 6	381	100	48	754
Fire-back. Adjustable	H. O. Jeglum and S. H. Leikvold	406,401	July 2	539	150	48	107
Fire-curtain	H. G. Miller	411,163	Sept. 17	1517	419	48	1582
Fire-engine grate-bar	R. Rose	410,929	Sept. 10	1217	332	48	1512
Fire-escape	C. A. Butler	406,257	July 2	319	88	48	64
Fire-escape	O. P. Furman	406,831	July 9	1221	334	48	345
Fire-escape	J. M. Glenn	407,196	July 16	1767	468	48	361
Fire-escape	J. F. Guthrie	407,200	July 16	1774	465	48	363
Fire-escape	A. W. Lennier	411,106	Sept. 17	1494	396	48	1576
Fire-escape	L. Slough	409,511	Aug. 20	1984	521	48	1078
Fire-escape	G. C. Waterhous	407,752	July 23	2498	672	48	534
Fire-escape and ladder	F. Baker	406,617	July 9	892	241, 242	48	182
Fire-extinguisher	M. Magaldi	409,796	Aug. 27	2432	637	48	1166
Fire-extinguisher	H. A. Mansfield	406,174	July 2	214	58	48	42
Fire-extinguisher	T. R. Roeler	410,931	Sept. 10	1221	329	48	1513
Fire-extinguisher	S. H. Timmons	409,312	Aug. 20	1703	447	48	1022
Fire-extinguisher. Automatic	J. R. Gray	408,302	Aug. 6	144	37	48	707
Fire-extinguisher. Automatic	D. C. Stillson	407,701	July 23	2517	650	48	517
Fire-extinguisher. Chemical	J. Haslam	409,097	Aug. 13	1277	336	48	932
Fire-extinguisher. Electrical	T. R. Dosse	406,341	July 2	445	123, 124	48	89
Fire-extinguishers. Discharge-cock for	J. M. Miller	408,423	Aug. 6	354	96	48	744
Fire extinguishing apparatus	C. B. Harris	411,192	Sept. 17	1615	420	48	1599
Fire-extinguishing apparatus. Automatic	J. Clapp	408,089	July 2	93	27	48	21
Fire-extinguishing apparatus. Automatic	O. B. Hall	408,615	Aug. 6	696	161	48	800
Fire-extinguishing apparatus. Chemical	J. Haslam	409,038	Aug. 13	1278	337	48	932
Fire-extinguishing apparatus. Chemical	C. R. Macomber	411,552	Sept. 24	2138	566, 567	48	1708
Fire-extinguishing composition	C. Mayr	410,326	Sept. 3	305	.....	48	1322
Fire-hydrant	J. W. Ramsey	407,417	July 23	2121	547	48	437
Fire in buildings. Appliance for controlling and preventing	A. J. Goostree	410,359	Sept. 3	347	91	48	1336
Fire-kindler	A. and W. H. Brubaker	410,488	Sept. 3	546	147	48	1375
Fire-kindling composition	A. Rimpan	410,925	Sept. 10	1213	.....	48	1512
Fire-lighter	W. Harlee	411,335	Sept. 17	1823	486	48	1630
Fire-place	J. H. Dozier	407,181	July 16	1745	456	48	357
Fire-place	T. J. Suggs	407,702	July 23	2519	650, 651	48	517
Fire-place and open grate. Ventilating	H. P. K. Peck	411,393	Sept. 17	1903	507	48	1654
Fire-place attachment. Open	D. P. Lewis	410,169	Sept. 3	46	12	48	1277
Fire-place for burning gaseous fuel	R. Young	409,765	Aug. 27	2377	624	48	1156
Fire-proof materials. Making	A. Feldmann	406,714	July 9	1039	.....	48	210
Fires, giving alarms, &c. Apparatus for extinguishing	J. H. Radcliffe	408,325	Aug. 6	176	44, 45	48	714
Fireman's hat	J. R. Hopkins	407,209	July 16	1789	468	48	366
Fireman's mask	T. E. Richet	409,428	Aug. 20	1869	493	48	1055
Fish plate and joint	J. N. Valley	408,940	Aug. 13	1129	298	48	904
Fish-spear	W. Taber	406,546	July 9	786	213	48	164
Fishing-rod	J. Pepper	406,465	July 9	656	184	48	142
Fishing-snood	F. Hubbard	408,347	Aug. 6	211	53	48	720
Flanging apparatus	I. B. Coleman	408,586	Aug. 6	585	152	48	791
Flash-light. Compound for producing	A. Hemsley	407,351	July 23	2006	.....	48	416
Flat-iron heater	J. D. Klous	407,355	July 23	2025	524	48	419
Floor-beam connection	T. Edwards, Sr	407,076	July 16	1558	409	48	330
Floor-jack	J. Dix	411,589	Sept. 24	2194	583	48	1718
Floor-jack	W. W. Irwin	409,403	Aug. 20	1836	484	48	1047
Flooring, roofing, and other purposes. Composition for	C. A. Catlin	406,563	July 9	808	.....	48	166
Flooring-strip	A. M. Schilling	411,684	Sept. 24	2239	619	48	1746
Floral letter or design	W. C. Krick	408,416	Aug. 6	325	83	48	742
Florist's figure	A. T. Cefrey	407,331	July 23	1972	513	48	410
Flour-bin	E. P. Ellis	408,038	July 2	25	8	48	8
Flour bin and sifter	J. A. McClellan	411,671	Sept. 24	2321	615	48	1744
Flour-bolt	W. M. Lucas	407,601	July 23	2361	617, 618	48	491
Flour-chest	B. N. Rethey	408,928	Aug. 13	1111	292	48	901
Flour chest and sifter. Combined	E. B. Wilsey	408,780	Aug. 13	880	236	48	857
Flour-mill	N. Cornelius	410,878	Sept. 10	1144	308	48	1490
Flour-mill	N. Cornelius	410,879	Sept. 10	1146	309	48	1490
Flower-box	A. Cleland	409,925	Aug. 27	2405	632	48	1200
Flower-pot	J. H. Thayer	411,739	Sept. 24	2414	640	48	1764
Flowers. Device for preserving cut	T. W. Moore	408,735	Aug. 13	822	217	48	843
Flue-cleaner	J. Ehrlich	407,656	July 30	2756	716	48	569
Flue scraper. Boiler	W. T. Coggeshall	411,324	Sept. 17	1807	483	48	1636
Fluid-compressor	E. Hill	407,205	July 16	1783	467	48	365
Fluid-releaser. Automatic electrical	B. S. Molyneux	409,364	Aug. 20	1776	468	48	1036
Flushing device. Soil or sewer pipe	J. J. Wade	406,977	July 16	1438	377	48	296
Flushing-tank	J. Greenhalgh	409,147	Aug. 13	1448	380, 381	48	965
Flushing-tank	A. Rosewater	410,930	Sept. 10	1218	328, 329	48	1513
Fly-paper clamp. Sticky	O. Thum	407,706	July 23	2524	652	48	519
Fodder-cutter	P. Meyer and W. Schrage	406,660	July 9	950	250	48	196
Fodder-cutter	D. Swanger. (Reissue)	11,010	July 2	556	156	48	112
Fodder-cutting machine. Corn	P. J. Jordan	407,627	July 30	2714	704	48	560
Foil. Welding metal	J. H. J. Haines	407,309	July 23	2087	540	48	431
Folding box or crate	J. C. and W. L. Thompson	408,563	Aug. 20	1999	528	48	1061
Folding chair	A. B. Albert	407,714	July 23	2533	655	48	520
Folding-machine	J. C. Fowler and E. A. Henkle	408,095	July 30	3113	815, 816, 817	48	696

Alphabetical list of inventions, July to September, inclusive—Continued.

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Folding-machine	C. F. Hintze	410,098	Aug. 27	2874	754	48	1250
Food from starch refuse. Obtaining cattle	P. H. Grimm	406,166	July 2	199	.....	48	41
Foot-warmer	C. E. Blosfeld and C. Schnur	411,162	Sept. 17	1601	426	48	1597
Foot-warmer	H. N. Dawson	408,956	Aug. 13	1151	304	48	999
Forge. Blacksmith's	W. J. Ptorney	406,767	July 9	1119	297	48	226
Forge. Portable	A. E. Dain	411,760	Sept. 24	2443	647	48	1769
Forge. Portable	C. Hammelmann	410,161	Sept. 3	37	10	48	1276
Fork: *See* Hay-fork.							
Fork	D. J. Huckins	406,735	July 9	1064	283	48	214
Fork-blank	F. Silliman and W. H. Cowdery	406,480	July 9	674	179	48	144
Fountain: *See* Soda-fountain.							
Fowls. Drinking-fountain for	W. F. Hewes	406,095	July 2	103	30	48	22
Frame: *See* Bag-frame. Bag or satchel frame. Bed-frame. Clamping-frame. Cot-frame. Curtain-drying frame. Dip-net frame. Drying-frame. Embroidery-frame. Eyeglass-frame. Globe-frame. Grindstone-frame. Hay-frame. Mower-frame. Plate-washing frame. Quilting-frame. Sewing-machine quilting-frame. Slate-frame. Spinning frame. Stretching-frame. Tent-frame. Truck-frame.							
Freight. Apparatus for loading or unloading	T. H. Ross	410,737	Sept. 10	938	251	48	1455
Friction-coupling	R. C. Borchers	410,232	Sept. 3	146	38	48	1297
Friction. Magnetically reducing	M. W. Dewey	408,465	Aug. 6	391	102	48	756
Frog. Spring	F. C. Weir	409,539	Aug. 20	2022	535	48	1085
Fruit-box head	B. Shunk	410,034	Aug. 27	2758	724	48	1229
Fruit-cleaning machine	L. Phelps and D. P. Burdon	409,754	Aug. 27	2359	620	48	1153
Fruit-driers. Heating-drum for	N. C. and J. I. Clement	408,083	July 30	3089	810	48	632
Fruit-gatherer	C. J. Bloom	411,007	Sept. 17	1335	350	48	1545
Fruit-gatherer	A. C. Howes	406,097	July 2	104	30	48	23
Fruit-gatherer	J. Kriner	406,744	July 9	1081	287	48	219
Fruit or ice cutter	H. T. King	410,900	Sept. 10	1181	{310	{48	1504
Fruit-picker	S. Brazee	409,907	Aug. 27	2581	676	48	1194
Fruit-picker	J. B. Marshall	409,296	Aug. 20	1679	442	48	1017
Fruit-picker	H. M. Rabun	406,768	July 9	1120	297	48	226
Fruit-pitting machine	J. Rosasco	407,965	July 30	2924	766	48	601
Fruit. Transporting-package for	J. T. Mott	410,429	Sept. 3	466	125	48	1359
Fuel. Artificial	R. J. Schimper	408,854	Aug. 13	999	.....	48	879
Fuel-cartridge	W. Daly	408,220	Aug. 6	27	6	48	683
Fuel-controller. Thermostatic	E. R. Ware	411,311	Sept. 17	1589	419	48	1633
Fuel. Device for feeding fluid	W. B. Wright	409,724	Aug. 27	2316	609	48	1145
Fuel. Machine for twisting straw, &c., for	L. Sullivan	406,153	July 2	180	47	48	37
Fumes. Refining	F. L. Bartlett	406,868	July 16	1277	336	48	266
Funnel	C. F. Sautter	407,253	July 16	1860	485	48	379
Furnace: *See* Bagasse-furnace. Boiler-furnace. Boiler or other furnace. Coke-furnace. Dry-kiln furnace. Gas-furnace. Gas-generating furnace. Glass-furnace. Heating-furnace. Hot-air furnace. Metallurgical furnace. Ore-roasting furnace. Petroleum-furnace. Pot-furnace. Refuse-furnace. Retort and muffle furnace. Smelting-furnace. Smoke and gas consuming furnace. Steam-boiler furnace. Steel-furnace. Tire-heating furnace.							
Furnace	E. W. Jones	409,792	Aug. 27	2423	634	48	1164
Furnace	W. R. Roney	409,650	Aug. 20	2190	577	48	1115
Furnace	J. J. Sights and E. R. Walker	407,372	July 23	2049	530	48	423
Furnace for burning bone-black	A. Weber	407,912	July 30	2839	{738 {739	{48	584
Furnace for the desiccation, incineration, and carbonization of precipitants, &c., resulting from sludge, &c.	R. de Soldenhoff	409,022	Aug. 13	1254	{351 {352	{48	927
Furnace-grate	G. L. Allen	409,657	Aug. 27	2207	581	48	1125
Furnace-grate	O. P. and G. O. Eltcrich	407,002	July 16	1476	385	48	304
Furnace-grate	E. N. Gates	407,344	July 23	1999	519	48	414
Furnace-grate	M. H. Moskovits	407,873	July 30	2782	723	48	573
Furnace-grate	W. R. Roney	409,305	Aug. 20	1693	445	48	1020
Furnace hearth or basin. Undulating	A. Barker	410,343	Sept. 3	327	86	48	1332
Furnace or other door	G. E. Wilbur	407,980	July 30	2948	767	48	605
Furnace-pipe	E. A. Eversman and D. Wagner	411,652	Sept. 24	2289	608	48	1738
Furnaces. Apparatus for charging and drawing	S. T. Wellman	408,152	July 30	3209	{837	{48	653
Furnaces. Apparatus for maintaining combustion in secondary chambers of boiler or other	J. Wilson and A. Mason	406,684	July 9	999	268	48	202
Furnaces. Condensing fumes from metallurgic	F. P. Dewey	411,014	Sept. 17	1343	361	48	1547
Furnaces. Fire-pot for hot-air	S. Darling	410,880	Sept. 10	1147	309	48	1498
Furnaces. Hydrocarbon-burner for	A. Lentz	411,385	Sept. 17	1891	505	48	1652
Furnaces. Relighting the flame in hydrocarbon	C. L. Goodridge	411,243	Sept. 17	1688	451	48	1615
Furnaces. Smoke-preventer for	S. E. Flint	406,393	July 2	526	146	48	105
Furniture-coupling	L. E. Harvie	406,731	July 9	1060	282	48	214
Furniture. Knockdown	A. White	408,278	Aug. 6	111	28	48	701
Furniture. School	J. Pearl	408,134	July 30	3185	833	48	649
Fuses. Cap for	W. H. Frazer	408,096	July 30	3121	817	48	638

Gage: *See* Gas-pressure gage. Measuring-gage. Micrometer-gage. Pressure-gage. Railway-gage. Recording-gage. Saw-gage. Steam-gage. Surface, scratch, and depth gage.							
Gage for marking spouting	L. S. Fletcher	407,288	July 16	1910	497	48	389
Gage-glass tubes. Device for protecting	E. Engels	409,280	Aug. 20	1653	436	48	1013
Gage-knife	W. E. Brock	409,629	Aug. 20	2168	579	48	1111
Gage-knife	F. W. Lowe	409,649	Aug. 27	2505	655	48	1178
Gage-knife	C. F. Spery	409,633	Aug. 20	1875	495	48	1057
Gage-knife	G. E. Lincoln	407,530	July 23	2300	593	48	474
Galley	C. W. Waldron and G. E. Jones	407,382	July 23	2062	533	48	426
Galley	P. B. Delany	406,997	July 16	1466	383	48	302
Galvanic battery	M. Dougana	406,636	July 9	927	250	48	189
Galvanic battery	H. Groswith	406,726	July 9	1054	281	48	213
Galvanic battery	C. J. Hirlimann	407,931	July 30	2873	748	48	590
Galvanic battery	W. P. Kookogey	407,781	July 30	2637	683	48	547
Galvanic battery	J. E. Lee	406,223	July 2	276	76	48	55
Galvanic battery	F. Lots	406,636	July 9	955	238	48	195
Galvanic battery	W. C. Thompson	411,400	Sept. 17	1914	511	48	1656
Galvanic battery	G. C. Ward	409,259	Aug. 20	1617	428	48	1005
Game apparatus	F. B. Dunham	406,632	July 9	913	{246 {247	{48	187
Game apparatus	H. S. Kenney	409,977	Aug. 27	2679	703	48	1214
Game apparatus	M. Virnoche	411,402	Sept. 17	1918	512	48	1657
Game apparatus	V. W. Wilson	407,713	July 23	2532	635	48	530
Game apparatus	C. F. M. Zill	408,869	Aug. 13	1025	{271 {272	{48	882
Game-board	J. H. Dumont	406,342	July 2	446	124	48	90
Game-board	J. Snell	409,251	Aug. 20	1607	434	48	1003
Game-board	C. Gooch	411,291	Sept. 17	1662	444	48	1610
Game board or apparatus	C. M. Crandall	410,956	Sept. 10	1252	337	48	1500
Game or puzzle	J. D. McKinney	406,663	July 9	964	260	48	196
Garlic from wheat. Machine for separating	A. Herr	408,619	Aug. 6	632	{164 {165	{48	801
Garlic from wheat. Separating	A. Herr	408,618	Aug. 6	629	{162 {163 {164	{48	801
Garment-pattern. Adjustable	J. Couteau	406,197	July 2	244	67	48	48
Garment-protector	P. R. Hanebury	410,416	Sept. 3	439	116	48	1355
Garter	J. Katzenberg	408,179	July 30	3048	818	48	661
Gas and air mixer and governor	C. F. Hovey	410,418	Sept. 3	441	116	48	1355
Gas and air mixing machine	L. B. White	409,719	Aug. 27	2310	607	48	1143
Gas and electric light fixture. Combined	T. J. Pierce	409,498	Aug. 20	1966	520	48	1075
Gas. Apparatus for manufacturing	H. S. Battin	410,220	Sept. 10	1066	286	48	1483
Gas. Apparatus for manufacturing non-luminous heating	A. Kitson	410,286	Sept. 3	225	59	48	1313
Gas. Apparatus for scrubbing and washing	K. M. Mitchell	407,025	July 16	1500	{392 {393	{48	309
Gas. Apparatus for the manufacture of	J. M. Critchlow	408,819	July 9	1202	319	48	241
Gas. Apparatus for the manufacture of	V. L. Elbert	411,022	Sept. 17	1350	363	48	1548
Gas. Apparatus for the manufacture of	F. D. Moses	410,174	Sept. 3	51	13	48	1278
Gas. Apparatus for the manufacture of	J. M. Rose	408,533	Aug. 6	501	133	48	776
Gas. Apparatus for the manufacture of	J. M. Rose	408,536	Aug. 6	512	134	48	777
Gas. Apparatus for the manufacture of	J. M. Rose	408,674	Aug. 6	719	187	48	816
Gas. Apparatus for the manufacture of	W. T. Stewart	409,761	Aug. 27	2371	622	48	1155
Gas. Apparatus for the manufacture of fuel	G. S. Dwight	406,637	July 9	928	{250 {251	{48	190
Gas. Apparatus for washing and scrubbing	S., Sr., S., Jr., and J. Chandler	406,124	July 2	143	42	48	30
Gas. Automatic safety-lock for	A. H. McClure and H. Holland	410,001	Aug. 27	2709	712	48	1219
Gas-batteries. Obtaining electricity from	L. Mond and C. Langer	409,366	Aug. 20	1781	469	48	1037
Gas-battery	L. Mond and C. Langer	409,365	Aug. 20	1777	{468 {469	{48	1037
Gas-burner	C. J. Hamilton	407,291	July 16	1913	498	48	389
Gas-burner	A. P. Jacob	406,584	July 9	833	226	48	172
Gas-burner for lighting, cooking, and heating purposes	J. H. Keyser	410,566	Sept. 3	652	173	48	1396
Gas-burner for stoves or fire-places	T. McSweeney	406,229	July 2	284	79	48	57
Gas-burner for stoves or fire-places	J. Smithley	406,860	July 9	1303	333	48	252
Gas-burner. Heating	S. Stewart	407,134	July 16	1677	438	48	344
Gas-burner. Incandescent	E. C. Davidson	410,540	Sept. 3	612	{164 {165	{48	1389
Gas-burner. Incandescent	C. B. Harris	410,549	Sept. 3	624	167	48	1391
Gas-burner. Incandescent	J. L. Stewart	408,051	July 30	3049	798	48	625
Gas-burner. Incandescent	J. L. Stewart	409,520	Aug. 20	1994	{526 {527	{48	1080
Gas-burner. Multiple heating	A. J. Doty	411,648	Sept. 24	2283	607	48	1737
Gas-burner. Regulating	J. G. Hawkins and J. Barton	407,656	July 23	2458	{636 {637	{48	505
Gas-burners. Automatic cock or cut-off for	C. H. Barnett	411,566	Sept. 24	2158	571	48	1709
Gas-burners. Heating attachment for	C. Long	411,126	Sept. 17	1525	407	48	1563
Gas-burners. Making incandescing elements for	C. B. Harris	409,667	Aug. 20	2126	559	48	1104
Gas-burning device	J. F. Barker	407,323	July 23	1957	510	48	407
Gas. Charging liquids with	C. A. Catlin	407,818	July 30	2701	701	48	556
Gas-engine	C. W. Baldwin	407,320	July 23	1952	{508 {509	{48	406
Gas-engine	C. W. Baldwin	407,321	July 23	1954	509	48	407
Gas-engine	C. W. Baldwin	408,663	Aug. 13	740	{193 {194	{48	827
Gas-engine	L. T. Cornell	406,263	July 2	336	90, 91	48	66
Gas-engine	J. Matthies	411,668	Sept. 24	2314	614	48	1743
Gas-engine	D. S. Regan	408,356	Aug. 6	223	57	48	723

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Gas-engine	C. White and A. R. Middleton	406,807	July 9	1184	314 315	48	238
Gas-engine and carburetor. Combined	L. F. McNett	407,061	July 30	2920	861	48	600
Gas-engine starting-gear	E. D. Debouttéville and L. P. C. Malandin.	411,644	Sept. 24	2278	605	48	1735
Gas engines. Atomizer for petroleum	E. Capitaine	408,460	Aug. 6	384	101	48	754
Gas engines. Igniting device for petroleum	E. Capitaine	408,459	Aug. 6	383	100	48	754
Gas-engines. Ignitor for	I. F. Allman	411,211	Sept. 17	1648	538	48	1606
Gas-engines. Operating	H. Hoellies	408,483	Aug. 6	418	109 110	48	762
Gas-fitting	G. H. Gregory	409,577	Aug. 20	2078	649	48	1066
Gas from gas-wells. Accelerating the flow of natural	E. A. Cook	408,652	Aug. 6	690	177	48	811
Gas from petroleum-oil. Apparatus for generating	A. Weyer	407,267	July 16	1879	490	48	383
Gas-furnace	R. S. Franz	407,269	July 16	1911	197	48	389
Gas-furnace	J. Zellweger	409,090	Aug. 13	1357	350	48	947
Gas-furnaces. Burner-carriage for	H. J. Bell	409,625	Aug. 20	2160	549	48	1110
Gas-generating furnace. Cupola	M. A. Morse	410,846	Sept. 10	1102	297	48	1490
Gas generator and burner	J. G. Street	410,944	Sept. 10	1235	333	48	1516
Gas generator. Fuel	J. R. Peters	409,062	Aug. 13	1311	346	48	938
Gas-governor	H. J. Bell	408,071	July 30	3078	805	48	629
Gas governor or regulator	W. H. Downing	407,645	July 23	2445	633	48	503
Gas-heater	J. Johnson and E. H. Packer	408,980	Aug. 13	1190	314	48	915
Gas-heater	J. Johnson and E. H. Packer	411,447	Sept. 24	1991	568	48	1676
Gas-heating burner	H. J. Bell	408,073	July 30	3080	805 806	48	630
Gas-heating burner	A. J. Doty	411,647	Sept. 24	2282	607	48	1736
Gas-incandescent	C. A. von Welsbach	409,528	Aug. 20	2005	.....	48	1062
Gas-incandescents. Manufacture of	C. A. von Welsbach	409,531	Aug. 20	2009	.....	48	1063
Gas-leak detector	J. F. Stark	406,241	July 2	229	62	48	60
Gas-lighter	S. B. Battey	409,737	Aug. 27	2319	610	48	1145
Gas-lighter. Electric	T. J. Zoeller	408,785	Aug. 13	898	240	48	859
Gas-lime. Revivifying	J. Bell	406,192	July 2	239	.....	48	47
Gas mains or pipes. Cross for	J. C. Conroy	408,896	Aug. 13	959	255	48	871
Gas. Manufacture of	J. M. Rose	408,535	Aug. 6	508	133 134	48	777
Gas. Manufacturing	J. M. Rose	408,532	Aug. 6	497	132	48	776
Gas. Manufacturing	J. M. Rose	408,534	Aug. 6	505	133	48	777
Gas-meter	J. W. Culmer	409,275	Aug. 20	1642	434 435	48	1010
Gas-mixer	W. S. Payne	407,237	July 16	1835	479	48	375
Gas-motor	E. Capitain	406,160	July 2	191	54	48	39
Gas-motor engine	J. J. Purnell	408,137	July 30	3188	833 834	48	640
Gas or oil motor-engine. Compound	W. J. Crossley	406,706	July 9	1026	274 275	48	207
Gas-pipe deposits. Solvent for	M. E. Waldstein	411,478	Sept. 24	2033	.....	48	1684
Gas-pressure gage and regulator	G. B. Fearnley	406,894	July 16	1317	345	48	273
Gas-pressure indicator	R. L. Simons	409,375	Aug. 20	1796	472 473	48	1039
Gas-pressure regulator	G. W. Crozier	408,873	Aug. 13	1032	273	48	885
Gas. Process of and apparatus for manufacturing	M. A. Morse and T. G. Springer	411,369	Sept. 17	1896	506	48	1653
Gas-regulator	W. C. Rosaney	411,062	Sept. 17	1400	377	48	1500
Gas-regulator	W. C. Rosaney	411,063	Sept. 17	1410	377	48	1500
Gas through mains. Apparatus for forcing	J. S. Fish	406,718	July 9	1043	279	48	211
Gas trap and sink. Sewer	W. Wallace	406,919	July 16	1440	377	48	297
Gas-washing apparatus	E. Ledig	407,936	July 30	2879	750	48	591
Gases. Apparatus for treating solids with	C. Langer	409,409	Aug. 20	1842	486 487	48	1049
Gate: *See* Bridge-gate. Railway-gate. End-gate. Road-gate. Farm-gate. Swinging gate.							
Gate	E. O. Aldrich	407,986	July 30	2956	769	48	606
Gate	A. Allen	409,094	Aug. 13	1367	360	48	949
Gate	W. F. Bradley	407,570	July 23	2342	605 606	48	484
Gate	D. C. Chaddock	408,825	Aug. 13	938	254	48	871
Gate	A. W. Chilcott	407,060	July 16	1550	406 407	48	318
Gate	C. M. Cochran	406,703	July 9	1023	273 274	48	206
Gate	W. P. Elliott and A. Farrar	406,577	July 9	825	253	48	171
Gate	A. Fawcett	408,601	Aug. 6	607	157	48	796
Gate	M. W. Forster	409,185	Aug. 20	1512	401	48	985
Gate	W. L. Haas	407,951	July 30	2907	757	48	597
Gate	C. Hansen	411,437	Sept. 24	1976	524	48	1673
Gate	F. Hopkins	407,602	July 23	2465	638	48	506
Gate	C. L. Hudler	407,010	July 16	1481	387	48	305
Gate	E. Kelsey	408,028	Aug. 6	646	168	48	804
Gate	J. E. Little	408,117	July 30	3168	828	48	645
Gate	R. M. and L. P. Lively	410,644	Sept. 10	777	210	48	1427
Gate	L. W. Loughary	408,351	Aug. 6	315	55	48	721
Gate	W. H. Reed	409,067	Aug. 13	1322	349	48	940
Gate opening and closing device. Swing	W. C. Hooker	409,969	Aug. 27	2670	700	48	1212
Gear-cutting machine	G. W. Drumheller and C. H. North	409,776	Aug. 27	2306	628	48	1150
Gear. Reversing-belt	H. E. Smith	411,738	Sept. 24	2413	640	48	1764
Gearing. Belt	J. A. Longa	410,367	Sept. 3	360	96	48	1340
Gearing. Compensating	R. S. Matthews	410,425	Sept. 3	456	122	48	1357
Gearing. Frictional	A. Robinson	408,477	July 9	669	169	48	144
Gelatine. Making	F. W. P. and L. P. Swinborne	408,549	Aug. 6	534	139	48	781
Gelatinous matter from hides or skins. Preparing	F. W. P. and L. P. Swinborne	408,548	Aug. 6	532	139	48	781
Gelatinous product	F. W. P. and L. P. Swinborne	408,636	Aug. 6	656	171	48	806

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Generator: *See* Calelectric generator. Electric generator. Gas-generator. Hot-water generator. Steam-generator. Vapor-generator. Vinegar-generator.							
Gigging-machine	C. Woelfel	406,326	July 2	424	116 117	48	85
Glass: *See* Opera or field glass							
Glass-beveling machine	A. Langlais	408,796	Aug. 13	812	214	48	841
Glass-cutting apparatus	C. W. Werner	411,764	Sept. 24	2449	649	48	1770
Glass. Device for molding articles from	W. S. Fox	406,165	July 2	198	55	48	40
Glass-furnace	E. de La Chapelle and J. Pearce. (Reissue)	11,018	Aug. 6	731	190	48	819
Glass-furnace	A. Ferrari	407,187	July 16	1755	459	48	359
Glass. Manufacture of window	M. W. Griswold	410,546	Sept. 3	619	166	48	1390
Glass-melting pot	A. G. Neville	409,368	Aug. 20	1786	470	48	1038
Glass panels. Making ornamental	J. Endres and E. Schoellig	409,634	Aug. 27	2486	650	48	1175
Glassware. Apparatus for ornamenting open-ended	T. B. Atterbury	406,693	July 9	1011	271	48	204
Glassware. Apparatus for reheating	H. Schulze-Berge	411,132	Sept. 17	1532	409	48	1584
Glassware. Furnace for heating	H. Schulze-Berge	411,131	Sept. 17	1530	409	48	1583
Glassware. Mold for	M. H. Hagerty	407,349	July 23	2004	520	48	416
Glassware. Ornamenting open-ended	T. B. Atterbury	406,692	July 9	1009	270	48	204
Glazier's diamond	J. Urbanek	408,055	July 30	3055	800	48	636
Globe-frame	D. Hyman	411,443	Sept. 24	1984	526 527	48	1674
Glove	P. Buckley and E. H. Decker	408,650	Aug. 6	688	177	48	812
Glove	A. M. Young	410,999	Sept. 10	1320	356	48	1534
Glove-fastener	E. J. Kraetzer	407,295	July 16	1917	499	48	390
Glue-cutting apparatus	C. Keller and J. Conly	407,865	July 30	2768	730	48	570
Glue-heater	S. H. Mosher	410,765	Sept. 10	984	264	48	1466
Gold surfaces. Ornamenting	L. Jagielky	407,953	July 30	2910	758	48	598
Gong. Electric	J. H. Phalan	410,189	Sept. 3	83	20	48	1284
Governor	G. S. Agee	409,063	Aug. 13	1306	360	48	948
Governor	S. Quast	411,056	Sept. 17	1490	375	48	1538
Governor. Steam-engine	F. E. Gaylord	406,510	July 9	731	201	48	153
Governor. Steam-engine	R. Hoffmann	410,997	Sept. 10	1176	317	48	1504
Governor. Steam-engine	E. F. Williams	408,153	July 30	3212	838 839	48	658
Grader. Road	M. H. Walworth	410,388	Sept. 3	387	103	48	1345
Grain-adjuster	T. B. Kirkwood	410,979	Sept. 10	1294	350	48	1528
Grain and seed separator	N. J. Vinyard	409,256	Aug. 20	1614	427	48	1005
Grain-binder	J. A. Graham	407,069	July 16	1560	410	48	320
Grain-binder	G. Greenlee, Jr	411,025	Sept. 17	1356	364 365	48	1549
Grain-binder	W. M. Holmes	406,907	July 16	1334	349	48	276
Grain-binder	S. D. Maddin	409,795	Aug. 27	2498	636 637	48	1165
Grain-binder	S. D. Maddin	410,424	Sept. 3	450	119 120 121 122	48	1357
Grain-binder	L. Miller	410,427	Sept. 3	459	123 124	48	1358
Grain-binder	J. F. Steward	406,374	July 2	480	137	48	98
Grain-binder knotting device	K. C. and A. A. Kunkle	407,734	July 23	2550	662 663	48	525
Grain-binders. Needle-arm for	W. M. Holmes	406,908	July 16	1336	349	48	277
Grain-carrier	W. H. Knapp	410,526	Sept. 3	507	160	48	1385
Grain-conveyer	S. B. Hart	411,439	Sept. 24	1978	525	48	1674
Grain. Device for separating weevil and weevil-dust from	T. E. Ferguson and A. H. Blanchard	409,180	Aug. 20	1504	397	48	964
Grain-drier	G. H. Immendorf	409,267	Aug. 20	1609	439 440	48	1015
Grain-drill	C. F. Lawrence and M. Rueckert	407,359	July 23	2029	525 526	48	420
Grain-drill	P. P. Mast	410,325	Sept. 3	303	79	48	1327
Grain-drill	W. W. and F. M. Mullen	411,528	Sept. 24	2100	554	48	1693
Grain-drill	F. R. Packham	410,436	Sept. 3	474	127	48	1361
Grain-drill	C. E. Patrie and F. R. Packham	410,438	Sept. 3	477	128	48	1361
Grain-drill shoe	C. L. Fowle	411,141	Sept. 17	1543	412	48	1586
Grain dump and elevator	M. F. Seeley	410,336	Sept. 3	317	82.83	48	1330
Grain from elevators. Apparatus for drawing off and mixing the	W. H. Sprague	407,907	July 30	2830	737	48	582
Grain-grader	G. H. Rich	410,377	Sept. 3	372	99	48	1342
Grain-heater	A. Wassmund	408,556	Aug. 6	543	143	48	783
Grain hulling and reducing machine	G. A. Buchbols	408,077	July 30	3084	807 808	48	631
Grain-mill safety device	L. Wagner	411,404	Sept. 17	1990	513	48	1657
Grain-scourer	H. A. Barnard	406,285	July 2	511	142	48	102
Grain-scourer	J. M. Case	410,069	Aug. 27	2805	738	48	1237
Grain-scourer	J. M. Case	410,070	Aug. 27	2807	739	48	1238
Grain-scourer	G. S. Cranson	407,578	July 23	2351	609	48	486
Grain-scourer	G. S. Cranson	407,722	July 23	2544	659	48	522
Grain-scourer	A. Moore	406,931	July 16	1371	359	48	284
Grain-separator	J. R. Beynon	407,052	July 16	1539	404	48	316
Grain-separator	W. F. Kehm	407,956	July 30	2914	759	48	599
Grain-separator	A. M. Mecklem	407,542	July 23	2363	594 595	48	475
Grain-separator	J. Payer	411,256	Sept. 17	1709	457	48	1619
Grain-separator	H. O. Triplett	410,776	Sept. 10	1003	269	48	1468
Grain-separator elevator attachment	S. B. Hart	411,438	Sept. 24	1977	524	48	1673
Graphophone-tablets. Repreparing	D. W. Brown	408,649	Aug. 6	684	176 177	48	810

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Grate	W. J. Owens	411,391	Sept. 17	1901	507	48	1654
Grate	T. T. Rockett	408,526	Aug. 6	488	129	48	775
Grate	H. P. Tallmadge	407,379	July 23	2058	532 533	48	425
Grate-bar	E. J. Gordon	411,379	Sept. 17	1885	504	48	1651
Grate-bar	L. Hall and O. J. Barth	410,669	Sept. 10	817	219	48	1434
Grate. Fire-place	J. C. Barry	407,989	July 30	2002	770	48	607
Grate for refuse-burners	P. Keene	410,104	Aug. 27	2281	756	48	1251
Grate or fire-place front	J. M. Seymour	411,202	Sept. 17	1715	459	48	1621
Grater and slicer	A. C. Becker	411,568	Sept. 24	2160	572	48	1710
Grating for illuminating-tiles	T. Sharts	411,134	Sept. 17	1535	409	48	1584
Grease and oil separator	E. H. Murphy	409,698	Aug. 27	2279	599	48	1138
Grease-cup	E. Lunkenheimer	410,423	Sept. 3	450	119	48	1357
Grease-cup	W. F. Mattes and J. F. Lewis	407,226	July 16	1817	475	48	371
Grease from water. Apparatus for extracting	H. Pindar	410,291	Sept. 3	237	61	48	1315
Griddle. Cake	M. Shaeffer	411,619	Sept. 24	2245	597	48	1729
Gridiron	W. C. Perkins	408,136	July 30	3188	833	48	649
Grinder. Roll	P. F. Dooley	411,095	Sept. 17	1475	391	48	1572
Grinding and crushing mill	J. F. Winchell	408,781	Aug. 13	887	237	48	857
Grinding and polishing cutlery. Machine for	H. A. Axtell	410,259	Sept. 3	184	48	48	1304
Grinding-mill	C. A. Bergtold	411,571	Sept. 24	2164	573	48	1711
Grinding-mill	F. C. Hall	406,522	July 9	753	205	48	157
Grinding-mill	R. Kent	406,651	July 9	948	256 257	48	194
Grinding-mill	A. Lamberton	406,355	July 2	466	130	48	94
Grinding-mill	J. Schweitzer	406,779	July 9	1138	302	48	229
Grinding-mill crusher	T. Roberts	409,669	Aug. 27	2529	602	48	1183
Grinding reaper-cutters. Tool for	C. H. Mallory	407,023	July 16	1499	392	48	309
Grinding sheaves, &c. Machine for	H. C. Stifel	409,254	Aug. 20	1610	425 426	48	1004
Grinding-tool	H. J. Distin	408,876	Aug. 13	1038	274	48	886
Grindstone-frame	R. Kirk	408,662	Aug. 6	703	182	48	814
Grindstone tool-holder	A. H. Dick	411,217	Sept. 17	1657	442	48	1609
Grip	W. Johnson	407,441	July 23	2159	557	48	445
Grip-tester or similar device. Coin-controlled	P. Beetz	411,569	Sept. 24	2161	573	48	1710
Gripper. Wire-guy	J. Gibson	410,687	Sept. 10	848	223	48	1440
Guano-distributer	A. Conkle, Jr.	411,545	Sept. 24	2126	561	48	1703
Guard: *See* Bridge-guard. Cattle-guard. Finger-guard. Finger-nail guard. Key-hole guard. Poison-guard. Rein-guard. Saw-guard. Stove-guard.							
Gun. Air	C. J. Hamilton	408,971	Aug. 13	1179	311	48	913
Gun and projectile for high explosives	S. H. Emmens	409,943	Aug. 27	2634	691	48	1206
Gun-barrels. Means for attaching fore-end stocks to	J. E. Gage	409,188	Aug. 20	1515	402	48	985
Gun-barrels. Ornamenting	G. A. Sachs	410,678	Sept. 10	831	223	48	1437
Gun. Breech-loading	G. S. Boesch	408,453	Aug. 6	373	98	48	753
Gun. Breech-loading	H. Comstock	409,017	Aug. 13	1245	329	48	926
Gun-carriage	J. B. G. A. Canet	410,968	Sept. 10	1275	343 344 345 346	48	1524
Gun-carriage	H. A. Ramsay	408,746	Aug. 13	834	220 221	48	846
Gun-carriages. Hydraulic buffer for siege and other	P. L. A. De Montgolfier	411,715	Sept. 24	2383	632	48	1757
Gun for throwing externally-applied projectiles	S. H. Emmens	410,320	Sept. 3	292	76	48	1325
Gun. Magazine	S. H. Roper	409,429	Aug. 20	1670	493	48	1056
Gun. Magazine	J. J. Speed	407,552	July 23	2319	599 600	48	478
Gun-mounting having a disappearing action	H. Schneider	407,418	July 23	2123	548	48	437
Gun. Pneumatic	D. Dudley	407,476	July 23	2205	569	48	454
Gun. Pneumatic piston	D. Dudley	407,475	July 23	2204	568	48	454
Gun-sight	B. Long	410,422	Sept. 3	448	110	48	1356
Gun. Transportable or field	M. Dreger	411,329	Sept. 17	1812	484	48	1637
Guns. Compressing air for pneumatic	D. Dudley	407,474	July 23	2204	568	48	453
Guns. Wind-gage sight for	J. W. Soule	410,039	Aug. 27	2763	726	48	1230
Gunpowder-canister	J. J. Stopple and E. Harigel	410,463	Sept. 3	512	137	48	1369
Gunstocks. Mechanism for fastening barrels to	W. H. Davenport	406,632	July 2	18	6	48	6
Gutta-percha. Substitute for	C. A. A. H. Siebert	411,171	Sept. 17	1586	.....	48	1594
Hair curling and crimping device	I. W. Heysinger	411,028	Sept. 17	1361	366	48	1550
Hair dye and tonic	E. A. Vogt	406,071	July 2	70	.....	48	16
Halter	J. H. Philpott	409,867	Aug. 27	2586	661	48	1163
Hame	W. V. Kay	406,351	July 2	462	129	48	92
Hame attachment	D. J. Martin	410,909	Sept. 10	1190	321	48	1507
Hame attachment	A. B. Rowell	409,505	Aug. 20	1976	522	48	1077
Hame-clip	P. Penner	407,834	July 30	2722	707	48	562
Hame-fastener	L. Anderson	406,497	July 9	710	196	48	150
Hame-fastener	W. S. Sherman	406,541	July 9	780	212	48	163
Hame-rings. Machine for attaching eyebolts to	A. Samson	410,771	Sept. 10	994	267	48	1466
Hame staple and clip	J. L. Ream	406,370	July 2	485	135	48	97
Hame-strap fastener	R. M. Dillard	407,893	July 30	2812	732	48	580
Hammer	L. D. Balfour	411,633	Sept. 24	2262	601	48	1732
Hammer. Drop	E. Hammesfahr	409,836	Aug. 27	2487	650	48	1175
Hammock and seat support	J. J. Johnson	410,796	Sept. 10	1037	277	48	1476
Hammocks. Making	J. Brayshaw	408,207	Aug. 6	7	2	48	680
Hand-elevator	G. W. Cannon	408,693	Aug. 13	764	200	48	832
Hand-hold	P. F. Crafts	406,995	July 16	1464	383	48	302
Hand-rake	J. Paxson	409,494	Aug. 20	1961	518	48	1074
Handle: *See* Latch-handle. Non-heat-conducting handle. Saw-handle. Tool-handle.							
Handle	G. A. Byor	406,496	July 9	578	162	48	135

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Handle	E. P. Nobbs	407,898	July 30	2820	734	48	581
Handle	H. L. Palmer	410,672	Sept. 10	820	220	48	1434
Handle	N. R. Streeter	411,693	Sept. 24	2354	622	48	1753
Handle	G. Vogl and J. Hess	406,670	July 2	69	20	48	16
Handle	O. S. Gandy	410,686	Sept. 10	847	227	48	1440
Handle for buckets or fruit-baskets	A. Kessler	407,015	July 16	1490	389	48	307
Handle for canes, umbrellas, and parasols							
Hanger: *See* Clothes hanger. Door-hanger. Picture-hanger. Pipe-hanger. Pulley-hanger. Shaft-hanger.							
Harmonica-holder	A. B. Clark	411,374	Sept. 17	1877	502	48	1650
Harness	G. G. Cramberg and J. H. Ranck	407,852	July 30	2750	715	48	567
Harness attachment	L. D. Saxton	410,029	Aug. 27	2749	722	48	1322
Harness-D	J. R. Kennett	408,661	Aug. 6	702	182	48	813
Harness for vicious horses. Safety	R. M. Reid	408,436	Aug. 6	348	91	48	747
Harness-loop	J. N. Barr	409,792	Aug. 27	2318	609	48	1145
Harness-loop	S. W. Shirk	411,257	Sept. 17	1856	496	48	1645
Harness-loop press	C. Pellesier	410,015	Aug. 27	2728	717	48	1224
Harness-stuffing machine	H. Leibe	408,429	Aug. 6	428	112	48	763
Harrow	A. Callander	411,009	Sept. 17	1337	360	48	1546
Harrow	M. J. Frank	409,951	Aug. 27	2344	603	48	1208
Harrow	J. T. Hamilton	408,234	Aug. 6	55	12	48	680
Harrow	M. E. Hunt	408,717	Aug. 13	799	211	48	839
Harrow	C. La Dow	411,199	Sept. 17	1637	433 434	48	1603
Harrow	D. McHugh	410,004	Aug. 27	2714	713	48	1220
Harrow	C. L. Powell	409,233	Aug. 20	1517	417	48	997
Harrow	S. Rothschild	408,930	Aug. 13	1115	293	48	901
Harrow	L. Smith	408,816	Aug. 13	945	251	48	869
Harrow	A. T. Van Slyke	407,846	July 30	2741	712	48	566
Harrow	L. B. Phelps	407,791	July 30	2652	687	48	550
Harrow and clod-crusher	J. S. Hind	407,206	July 16	1785	466	48	365
Harrow and cultivator. Combined	S. Ritte	409,238	Aug. 20	1569	419	48	999
Harrow attachment. Disk	J. T. Bell	409,818	Aug. 27	2461	646	48	1172
Harrow-disk	H. D. Blakemore	410,573	Sept. 10	667	178	48	1405
Harrow. Disk	M. Daley	411,376	Sept. 17	1880	503	48	1650
Harrow. Disk	C. S. Ruef	408,196	July 30	3287	858	48	606
Harrow. Disk	J. R. Hicks	407,658	July 23	2461	637	48	506
Harrow. Rotary	G. W. Ansley and J. H. Boyd	407,463	July 23	2192	565	48	451
Harrow. Rotary or disk	W. M. Brinkerhoff	406,256	July 2	318	87	48	64
Harrow spring-tooth	F. Van Patten	407,138	July 16	1681	439	48	344
Harrow-tooth	C. E. Bement	410,141	Sept. 3	2	1	48	1209
Harrow-tooth seat	J. J. Rogers and O. S. Kennedy	406,147	July 2	174	50	48	35
Harrows. Seeding attachment for disk	H. F. Crandall	407,063	July 16	1554	407 408	48	319
Harvester	J. W. Latimer	408,244	Aug. 6	66	15	48	632
Harvester	H. E. Pridmore	407,742	July 23	2574	666 667	48	529
Harvester	D. Best	410,307	Sept. 3	264	69	48	1319
Harvester and thrasher. Combined	E. Houts	410,100	Aug. 27	2876	755	48	1251
Harvester attachment	J. Armstrong	408,947	Aug. 13	1136	300 301	48	906
Harvester. Corn	J. Armstrong	409,443	Aug. 20	1868	499	48	1069
Harvester. Corn	T. Boggs	407,633	July 23	2426	632	48	499
Harvester. Corn	L. A. Davis	410,500	Sept. 3	569	152	48	1379
Harvester. Corn	L. A. Davis	410,530	Sept. 3	611	164	48	1388
Harvester. Corn	B. B. Leedy	409,987	Aug. 27	2683	705	48	1216
Harvester. Corn	S. M. Stevens and G. A. Harvey	411,268	Sept. 17	1722	460 461	48	1622
Harvester. Corn	S. C. Van Buren and S. C. Shoup	409,079	Aug. 13	1339	354	48	946
Harvester. Corn	R. B. Robbins	407,244	July 16	1845	482	48	377
Harvester. Corn and cane	J. J. Singley	407,944	July 30	2892	753	48	584
Harvester. Corn or sorghum	J. F. Cunningham, Sr	406,266	July 2	331	91, 92	48	67
Harvester. Cotton	A. E. Hughes	409,040	Aug. 13	1279	337 338	48	933
Harvester. Cotton	S. D. T. Manning	407,360	July 23	2031	526 527	48	490
Harvester. Cotton	W. H. Knapp	410,527	Sept. 3	597	160	48	1385
Harvester-elevator	O. Cooley and E. Pridmore	408,163	July 30	3298	842	48	656
Harvester. Grain-binding	C. D. Towne	408,999	Aug. 13	1214	330	48	920
Harvester-reel	O. Cooley, E. Pridmore, and H. M. Johnston	406,502	July 9	716	197	48	151
Harvester. Self-binding	J. S. Davis	406,654	Aug. 6	693	179	48	812
Harvesters. Carrier-belt for	M. B. Stambaugh	409,377	Aug. 20	1800	473	48	1040
Harvesters. Elevator attachment for	J. S. Davis	407,734	July 23	2546	659 660	48	523
Harvesters. Grain-conveyer for	P. J. Sprague and J. M. McCraw	406,789	July 9	1154	306	48	232
Harvesters. Grain retarder and regulator for	J. W. Latimer	407,509	July 23	2379	616	48	491
Harvesters. Raising and lowering device for	C. A. Ashley	406,614	July 9	869	239 240	48	181
Harvesters. Raising and lowering mechanism for	H. F. Crandall	408,463	Aug. 6	387	101 102	48	735
Harvesters. Reel-adjusting mechanism for	G. H. Bonte	407,634	July 23	2429	629	48	500
Harvesters. Roller-tension for self-binding	J. H. Pitkin and J. F. Steward	409,063	Aug. 13	1314	347	48	930
Harvesters. Supporting-frame for self-binding	J. H. Adamson	408,398	Aug. 6	229	72	48	734
Harvesting-machine	J. A. Norton	411,728	Sept. 24	2398	635	48	1700
Harvesting machine. Corn	J. F. Steward	408,792	July 9	1160	307	48	223
Harvesting-machines. Canvas-stretcher for	J. S. Woodhouse	408,645	Aug. 6	676	176	48	809
Harvesting machines. Knotter for grain	W. A. Firatbrook	406,895	July 16	1318	345	48	273
Hasp-fasteners. Sealing device for	E. Knight	411,383	Sept. 17	1890	505	48	1652
Hasp-lock	T. J. Manning	411,387	Sept. 17	1894	506	48	1653
Hat and coat holder	J. M. Owen and J. R. Roberts	406,532	July 9	767	208	48	160
Hat and coat rack	C. E. Keator	411,663	Sept. 24	2309	612	48	1742
Hat-bodies. Finishing	C. E. Keator	411,662	Sept. 24	2307	612	48	1741
Hat-bodies. Machine for finishing							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Hat-bodies. Machine for settling and planking felt	J. and O. Oldham	406,948	July 16	1395	366, 367	48	289
Hat-bodies. Machine for starting	W. P. Mahoney	406,658	July 9	957	258	48	195
Hat-brim press	W. G. Harsin	406,214	July 2	264	73	48	53
Hat-holder	E. A. Newman	411,672	Sept. 24	2322	615	48	1744
Hat-molding machine	J. Hedges	410,969	Sept. 10	1220	346	48	1525
Hat-packing support	C. S. Peck and E. S. Davis	406,111	July 2	123	36	48	96
Hat. Padded	J. H. Moyer	409,417	Aug. 20	1854	490	48	1052
Hat sizing or shrinking machine	C. H. Merritt	406,456	July 9	638	179	48	137
Hat-stay	S. T. Newman	407,108	July 16	1640	430	48	337
Hat-stay	S. T. Newman	407,109	July 16	1642	430	48	337
Hat sweat and lining. Detachable	F. W. Lewis	411,155	Sept. 17	1564	416	48	1560
Hats made from felted materials. Treating	J. H. Neave	408,925	Aug. 13	1106	292	48	990
Hats. Making	H. Partrick	408,512	Aug. 6	469	124	48	771
Hats. Rest for packing	J. W. Seymour	406,673	July 9	975	262	48	198
Hatchway	E. J. Herman	407,526	July 23	2268	587	48	467
Hatchway	E. J. Herman	408,713	Aug. 13	796	210	48	838
Hatchway	E. J. Herman	410,278	Sept. 3	217	56, 57	48	1311
Hatchway	P. O. Wirth	410,950	Sept. 10	1246	335	48	1518
Hatchway-covers, &c. Device for operating	J. E. Briggs	410,727	Sept. 10	923	248	48	1452
Hatchways. Device for operating elevator	W. Bardsley and W. K. Crofford	407,849	July 30	2746	714	48	566
Hay-binder	E. R. Kugler	409,963	Aug. 27	2685	704	48	1315
Hay-carrier	A. P. Boyer	409,164	Aug. 20	1489	394	48	980
Hay-carrier	J. A. Cross	407,994	July 30	2802	746	48	588
Hay-carrier hook	T. J. Hitchcock	408,690	Aug. 6	636	165	48	892
Hay. Device for sampling	T. B. Draper	408,223	Aug. 6	30	6	48	683
Hay-distributer	A. McCollum	409,858	Aug. 27	2514	658	48	1180
Hay-elevator	W. Rodham	409,303	Aug. 20	1686	444	48	1019
Hay-fork	J. S. Gochnauer	411,220	Sept. 17	1661	444	48	1610
Hay-fork	S. K. Lucky	409,478	Aug. 20	1938	513	48	1069
Hay-fork. Horse	H. Burgess and J. A. Helms	410,147	Sept. 3	11	4	48	1271
Hay-frame, stock-frame, and spring-seat combined	J. T. Woods	409,764	Aug. 27	2376	623, 624	48	1156
Hay-loader	H. L. Botsford	406,699	July 9	1010	272	48	205
Hay or straw burner	W. H. and G. W. Harris	407,203	July 16	1720	467	48	364
Hay-press	J. H. Gardner	410,237	Sept. 3	152	40	48	1298
Hay-press	C. D. McNeill	410,329	Sept. 3	307	79, 80	48	1328
Hay-press. Automatic	F. X. Maurer	406,455	July 9	631	177, 178, 179	48	136
Hay-presses. Anchor for portable	M. McCulla	408,924	Aug. 13	1105	291	48	899
Hay-rack	A. Rutherford and J. Ranch	407,614	July 23	2399	623	48	494
Hay-rake	L. W. Freeman	409,032	Aug. 13	1271	335	48	931
Hay-rake	W. R. Mann and G. Keith	406,363	July 2	479	133	48	96
Hay rake and loader. Combined	H. C. Long and I. B. Walker	408,494	Aug. 6	439	115	48	766
Hay-rake. Horse	H. A. Alden	406,864	July 16	1271	335	48	265
Hay-rake. Horse	S. Pettit and W. Lottridge	411,607	Sept. 24	2226	591	48	1725
Hay-rake. Side-delivery	M. Rew	410,608	Sept. 10	718	193	48	1415
Hay raking and loading device. Combined	L. H. Dwelley	408,799	Aug. 13	919	245	48	863
Hay-sling	J. G. Archer	407,316	July 23	1946	507	48	405
Hay-stacker	W. Nightingale	406,531	July 9	765	208	48	160
Hay-stacker	A. E. Platt	408,429	Aug. 6	341	88	48	745
Head-light signal attachment	W. O. Fine	406,717	July 9	1041	279	48	210
Head-protector	H. G. Morrow	411,348	Sept. 17	1845	493	48	1643
Head-rest	J. W Campbell	409,389	Aug. 20	1816	478	48	1043
Head-rest for chairs	T. J. Carrick	408,923	Aug. 13	952	253	48	870
Header and thrasher	B. Holt	408,412	Aug. 6	318	81	48	740
Heat from steam-engines and similar apparatus. Apparatus for utilizing waste	H. S. Robinson	407,838	July 30	2726	708	48	562
Heater:							
See Air-heater.							
Barrel-heater.	Hot-air and hot-water heater.

Heater	C. R. Nelson	407,107	July 16	1639	429	48	337
Heating apparatus	L. Achor and T. Hamilton	411,541	Sept. 24	2120	559	48	1702
Heating apparatus	P. Fox	408,301	Aug. 6	143	36	48	707
Heating apparatus	A. N. Martin	410,844	Sept. 10	1100	296	48	1490
Heating apparatus	E. W. Olin	410,736	Sept. 10	936	251	48	1454
Heating apparatus	C. A. Sawin	408,263	Aug. 6	93	23	48	697
Heating apparatus	E. R. Ware	411,310	Sept. 17	1766	478, 479	48	1633
Heating apparatus. Device for automatically regulating combustion in hot-water and hot-air	J. C. F. Atsatt	406,018	July 2	1	1	48	3
Heating apparatus. Regulator for hot-water	E. Major	407,784	July 30	2641	684	48	548
Heating apparatus. Steam-	J. Agate	411,631	Sept. 24	2260	601	48	1732
Heating apparatus. Steam-	H. Parsons	406,950	July 16	1397	367	48	290
Heating apparatus. Water-	N. A. Boynton	408,455	Aug. 6	376	98, 99	48	753
Heating apparatus. Water-	J. Fries	408,008	July 30	2991	779, 780	48	612
Heating apparatus. Water-	L. M. Woodcock	406,685	July 9	1000	268, 269	48	202
Heating buildings. Device for	C. M. Taylor	408,444	Aug. 6	359	93, 94	48	750
Heating furnace. Sheet-	E. J. Francis and C. Banfield	406,475	Aug. 6	407	106	48	759
Heating hot-houses. Apparatus for	J. Reilly	411,531	Sept. 24	2104	535	48	1698
Heating system. Automatic return steam-	T. J. Kieley	406,220	July 2	270	75	48	54
Heddle-making machine	J. Bénazet	407,325	July 23	1963	511, 512	48	409
Hedge	P. M. Mishler	410,914	Sept. 10	1194	323	48	1507

Hoop-driving machine	G. W. Packer	409,297	Aug. 20	1680	442	48	1017
Hopples. Cast-off device for	H. D. McKinney	408,040	July 30	3030	799	48	631
Horse-blanket	J. L. Coburn	409,392	Aug. 20	1820	479	48	1044
Horse-blanket	J. E. Foster	409,352	Aug. 20	1763	464	48	1033
Horse-boot	A. McKay	411,049	Sept. 17	1391	373	48	1556
Horse-checking device	P. A. Bowen	407,054	July 16	1542	404	48	317
Horse-detacher	D. R. Brown	411,709	Sept. 24	2376	630	48	1756
Horse-detacher	G. C. Frisbie	407,191	July 16	1702	461	48	360
Horse-detacher	C. D. Hill	410,097	Aug. 27	2871	753	48	1249
Horse-detacher	H. J. Kennedy	410,797	Sept. 10	1037	278	48	1477
Horse-disconnector. Electric	G. A. Coulter	406,929	July 9	911	246	48	187
Horse-rake	J. A. Johnson and N. O. Starks	407,215	July 16	1798	471	48	367
Horse-tail band	A. W. Cash	406,123	July 2	142	42	48	30
Horses' feet. Device to prevent interference of	C. F. Powell	407,113	July 16	1649	432	48	339
Horses' feet. Poultice or sponge holder for	C. P. Dacey	409,633	Aug. 20	2170	571	48	1112
Horses from kicking. Device for preventing	H. W. Sisson	411,513	Sept. 24	2079	540	48	1694
Horseshoe	W. E. Carmont	410,781	Sept. 10	1011	271	48	1471
Horseshoe	W. Ziedler	410,625	Sept. 10	748	203	48	1421
Horseshoe-bar	H. C. Magnusson	409,850	Aug. 27	2506	653	48	1178
Horseshoe-bending machine	W. Eynon and W. Seaman	406,713	July 9	1037	{277 278}	48	209
Horseshoe-blank-cutting machine	E. Firth	408,226	Aug. 6	36	9	48	685
Horseshoe-blanks. Roll for rolling	W. Eynon and W. Seaman	406,711	July 9	1035	277	48	209
Horseshoe-calk. Removable	J. E. Lesueur	408,963	Aug. 13	1193	315	48	916
Horseshoe-calks. Shield for	S. T. Bane	407,506	July 23	2246	580	48	463
Horseshoe-machine	J. H. Taylor and C. Povey	408,329	Aug. 6	184	47	48	715
Horseshoe-nails. Machine for forging	D. F. Williams	409,890	Aug. 27	2559	{669 670}	48	1190
Horseshoe-nails. Manufacturing	H. A. Wills	410,624	Sept. 10	747	203	48	1421
Horseshoes. Blacksmith's device for finishing	A. R. Murphy	408,504	Aug. 6	457	120	48	769
Horseshoes. Plant of machinery for the manufacture of	W. Eynon and W. Seaman	406,712	July 9	1036	277	48	209
Horseshoes. Removable calk for	J. Neuss, Sr	410,008	Aug. 27	2720	715	48	1222
Hose-coupling	W. W. Hanscom	408,409	Aug. 6	313	79	48	730
Hose-coupling	C. Parent	408,256	Aug. 6	82	19	48	695
Hose-coupling	J. Pringle	408,434	Aug. 6	346	90	48	747
Hose-coupling	S. W. Ravenel	409,066	Aug. 13	1320	348	48	940
Hose-coupling	C. L. Smith	409,512	Aug. 20	1985	524	48	1078
Hose-coupling	G. B. Williams	407,456	July 23	2183	563	48	449
Hose coupling. Brake	E. A. Leland	408,116	July 30	3166	827	48	645
Hose-elevator over railway-tracks	T. McHenry	411,725	Sept. 24	2394	634	48	1759
Hose-holder	W. C. Willits	408,058	July 30	3057	800	48	626
Hose. Knit fabric for	H. F. Herkner	408,384	Aug. 6	265	66	48	731
Hose or pipe coupling	O. P. Hix	410,417	Sept. 3	439	116	48	1355
Hose, pipes, &c. Coupling for	G. A. and D. R. Stedman	406,964	July 16	1417	372	48	293
Hose reel or support. Fire	C. R. Robinson	407,118	July 16	1657	433	48	340
Hose-supporter	M. W. Bruce	407,810	July 30	2692	709	48	557
Hot-air and hot-water heater	F., M. J., and H. B. Farquhar	409,740	Aug. 27	2338	{614 615}	48	1149
Hot-air furnace	J. Baker	410,281	Sept. 3	186	49	48	1305
Hot-water generator	P. G. Van Wie	407,878	July 30	2791	736	48	575
House:

Hub. Vehicle	E. L. Rowe	410,026	Aug. 27	2744	721	48	1227
Hydrant	J. Schuster	406,149	July 2	176	51	48	36
Hydrant. Self-closing	C. G. Ette	408,091	July 30	3102	{812 813}	48	634
Hydraulic elevator	G. W. Clayton	410,583	Sept. 3	604	162	48	1387
Hydraulic elevator	W. F. Toothaker	408,149	July 30	3206	837	48	652
Hydraulic jack	F. I. Joyce	407,217	July 16	1801	471	48	368
Hydraulic packing-presses. Apparatus for	E. L. Bellhouse	406,193	July 2	230	65	48	47
Hydraulic press	C. D. Davis	408,653	Aug. 6	691	{178 179}	48	811
Hydraulic presses. Packing-disk for	E. H. Garcin	407,478	July 23	2208	589	48	455
Hydrocarbon-burner	S. Bennett	408,284	Aug. 6	119	30	48	703
Hydrocarbon-burner	C. H. Phelps and E. A. Edwards	407,660	July 23	2488	643	48	511
Hydrocarbon-burner	E. Rost	411,200	Sept. 17	1713	458	48	1630
Hydrocarbon-engine	M. V. Schilts	406,540	July 9	778	211	48	163
Hydrocarbon fuel. Burner and burner-tank for	J. H. Bullard	407,639	July 23	2436	631	48	501
Hydrocarbons as fuel. Apparatus for burning	A. G. Purchas and J. E. Friend	410,193	Sept. 3	89	21	48	1285
Ice-breaker	J. H. Bullard	407,638	July 23	2434	631	48	501
Ice-cream freezer	A. H. Austin	406,694	July 9	1012	271	48	205
Ice-cream freezer	E. L. Drake	407,064	July 16	1555	406	48	319
Ice-cream freezers. Self-sealing bung for	C. G. Shepard and P. Adams	410,772	Sept. 10	998	268	48	1467
Ice-creeper	M. R. Maher	410,980	Sept. 10	1040	278	48	1477
Ice-creeper	B. Pope	407,448	July 23	2171	550	48	447
Ice-creeper fastening	C. N. Shannon	411,519	Sept. 24	2078	549	48	1694
Ice-machines. Ammonia-condenser for	W. W. and E. F. Preston	410,331	Sept. 3	310	80	48	1329
Ice-scraper	P. Steck	409,072	Aug. 13	1328	350	48	941
Incandescent lights and other electrically-controlled devices. Safety-switch for	J. E. Robertson	408,853	Aug. 13	998	264	48	878
Incrustation in steam-boilers. Means for preventing	O. S. Bussmann	411,423	Sept. 24	1958	520	48	1679
Incrustation-preventive	S. G. Cabell	409,136	Aug. 13	1434	377	48	998
Incrustation-preventive	D. R. Boogher	406,698	July 9	1016	.....	48	205
Incrustation-preventive	D. R. Boogher	411,320	Sept. 17	1803	.....	48	1636
Incrustation-preventive	T. Harris and C. Day	410,516	Sept. 3	584	.....	48	1383
Index	H. A. Stephenson	408,361	Aug. 6	230	58	48	724
Index-circular	R. R. Williams	411,315	Sept. 17	1796	481	48	1635
Index device. Ledger-	K. Buland	411,577	Sept. 24	2175	576	48	1712
Indicator:

Inkstand	R. S. Thain	410,219	Sept. 3	130	33	48	1293
Inkstand. Pocket	E. Ehnlich	411,021	Sept. 17	1349	363	48	1548
Insect-destroyer	G. S. Chase	407,574	July 23	2345	607	48	484
Insect-destroyers. Can for distributing	R. S. Peyton	408,514	Aug. 6	473	124	48	771
Insect-screen	J. W. Boughton	411,640	Sept. 24	2278	604	48	1734
Insecticide	B. Smith and F. Howard	410,038	Aug. 27	2761	.....	48	1230
Insecticide	R. M. Stephens	408,904	Aug. 13	1078	.....	48	894
Insulated electric wire	H. W. Johns, Jr	406,984	July 2	357	97	48	72
Insulated nippers and cutting-instrument	F. M. Casey	409,097	Aug. 13	1370	361	48	949
Insulating composition	F. Marquard	407,896	July 30	2817	.....	48	580
Insulating composition	F. Marquard	407,938	July 30	2882	.....	48	592
Insulating coupling for pipes	E. E. Erickson	408,600	Aug. 6	606	157	48	795
Insulating material into underground conduits. Introducing molten	D. Brooks, Jr	408,574	Aug. 6	568	149	48	780
Insulating-plate for secondary batteries	S. C. C. Currie	408,367	July 2	333	92	48	67
Insulation for electric conductors	C. T. Snedeker	408,901	Aug. 13	1075	283	48	893
Insulator	W. M. Davis	410,637	Sept. 10	768	208	48	1425
Insulator. Electric	L. McCarthy	411,749	Sept. 24	2428	643	48	1766
Insulator for electric wires	J. C. Gill	406,041	July 2	28	8	48	8
Insulator. Line-wire	C. G. Graham	408,383	Aug. 6	264	66	48	730
Integrating apparatus	H. Hollerith	408,106	July 30	3135	821	48	641
Intestine-cleaner	W. Bachnick	407,505	July 23	2244	{579 580}	48	462
Invalid-chair	L. M. Hoffman	410,591	Sept. 10	691	185	48	1410
Invalid-chair	W. Smith	405,313	July 2	406	{110 111}	48	81

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Invalid elevator and conveyer	T. L. Holton	408,716	Aug. 13	798	211	48	838
Iron:							
See Collar-iron. Soldering-iron. Curling-iron. Tuyere-iron. Sad-iron.							
Iron in blast and puddling furnaces. Compound for purifying	N. Booth, Sr	407,921	July 30	2860	.....	48	587
Iron into malleable iron or steel. Converting crude	G. L. Robert	407,117	July 16	1656	433	48	340
Iron. Making strap or hoop	D. Larkin	409,047	Aug. 13	1291	341	48	935
Iron or steel. Converting crude iron into malleable	J. W. Bookwalter	411,418	Sept. 24	1949	519	48	1668
Iron or steel. Converting crude iron into malleable	J. W. Bookwalter	411,419	Sept. 24	1952	519	48	1669
Iron. Refining	J. W. Bookwalter	411,417	Sept. 24	1947	518	48	1668
Ironing-board	P. Hires	407,523	July 23	2270	588	48	468
Ironing-board	J. D. Smith	409,515	Aug. 20	1987	525	48	1079
Ironing-board and table	D. Fetters	409,047	Aug. 27	2638	692	48	1207
Ironing-table and step-ladder	S. L. Strong	409,521	Aug. 20	1996	527	48	1080
Ironing-table. Folding	J. D. Pace	407,790	July 30	2652	686	48	550
Ivory, &c. Substitute for	F. Greening	408,344	Aug. 6	207	.....	48	730
Jack:							
See Boot-jack. Lifting-jack. Carriage-jack. Thill-coupling jack. Floor-jack. Wagon-jack. Hydraulic jack.							
Jacquard apparatus	S. Holdsworth	411,338	Sept. 17	1829	489	48	1640
Jail. Revolving	E. Rowe	407,677	July 30	2790	735, 736	48	575
Jar:							
See Self-sealing jar.							
Jars. Forming the necks of fruit-	C. F. and C. Leng	411,043	Sept. 17	1383	371	48	1555
Jaw-trap	T. Donlon	406,202	July 2	249	69	48	50
Joiner's set	H. Focken	408,473	Aug. 6	405	105	48	759
Joint:							
See Ball-and-socket joint. Pipe-joint. Rail-joint. Electric-main joint. Railway-rail joint. Extension-joint. Universal joint. Lock-joint							
Journal-box	T. E. Hayes and A. J. Read	408,659	Aug. 6	699	181	48	813
Journal-box. Anti-friction	J. Brewer	408,288	Aug. 6	125	31	48	704
Journal-box. Anti-friction	W. S. Sharpneck	409,307	Aug. 20	1698	446	48	1020
Journal-box for planing-machines	E. F. Autenrieth	408,421	Aug. 13	950	253	48	870
Journal-boxes. Cage for	W. S. Sharpneck	409,308	Aug. 20	1699	446	48	1021
Jug-cover	S. J. Scott	406,238	July 2	297	82	48	59
Jug-top	A. W. Paull	409,864	Aug. 27	2522	660	48	1182
Juice-extractor	C. H. Reed	411,610	Sept. 24	2221	593	48	1736
Jute-slivering machines. Making rollers for	H. P. Garland	407,194	July 16	1764	462	48	361
Kaleidoscope	J. W. Lovibond	407,937	July 30	2881	750	48	592
Kettle. Steam-	J. Petterson	410,852	Sept. 10	1112	299	48	1492
Kettles, pans, &c. False bottoms for boiling	T. A. Kimmell	410,348	Sept. 3	169	14	48	1301
Key:							
See Telegraph-key.							
Key-fastener	E. C. Townsend	411,076	Sept. 17	1442	383	48	1566
Key-holder	C. E. Van Norman	409,255	Aug. 20	1613	427	48	1005
Key-hole guard	F. Eiche	410,506	Sept. 3	571	154	48	1320
Key-seat-cutting machine	O. C. and A. M. Little	408,525	July 9	756	206	48	158
Keying wheels	H. Grafton	408,835	Aug. 13	970	257	48	873
Kiln:							
See Brick-kiln. Limekiln.							
Kiln for burning bone-black	A. Weber	407,976	July 30	2937	765	48	603
King-bolt socket	W. S. Reeder	410,853	Sept. 10	1113	300	48	1492
Kitchen-cabinet	G. E. Miller	408,125	July 30	3177	831	48	647
Kitchen-cabinet	S. and L. Pecord	406,766	July 9	1118	296	48	226
Kitchen-cabinet	J. M. Skipper	406,543	July 9	782	212	48	163
Kite-cord stick	C. Schultze	406,672	July 9	974	262	48	199
Knife:							
See Corn-cutting knife. Gage-knife. Drawing-knife. Pocket-knife.							
Knife-cleaner	H. E. Fowler	409,742	Aug. 27	2341	615	48	1150
Knife for cutting corn, &c	J. W. Calef	407,571	July 23	2343	606	48	484
Knitted drawers. Making blanks for	D. P. Mills	410,600	Sept. 10	701	187	48	1412
Knitted fabric	H. Pulster	409,425	Aug. 20	1865	492	48	1054
Knitted web. Narrowed	R. W. Scott	410,031	Aug. 27	2751	723	48	1222
Knitted webs. Narrowing	R. W. Scott	410,858	Sept. 10	1119	301	48	1493
Knitting-machine	J. S. Crane	410,495	Sept. 3	556	149	48	1377
Knitting-machine	E. Murby	407,960	July 30	2917	760	48	599
Knitting-machine	A. E. Sanborn and O. L. Merrow	411,303	Sept. 17	1775	474, 475	48	1631
Knitting-machine	R. W. Scott	410,859	Sept. 10	1121	301, 302	48	1493
Knitting-machine and needle therefor	R. W. Scott	407,616	July 23	2401	623	48	495
Knitting machine. Circular-	C. E. Bean	407,917	July 30	2853	742, 743, 744	48	586
Knitting machine. Circular-	W. D. Butz	408,952	Aug. 13	1145	362, 363	48	908
Knitting machine. Circular-	W. L. and A. T. Cathcart	410,071	Aug. 27	2808	740, 741, 742, 743	48	1238
Knitting machine. Circular-	J. L. Eck	410,505	Sept. 3	569	153, 154	48	1320
Knitting machine. Circular-	C. Frederick	408,170	July 30	3235	844, 845	48	658

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Knitting machine. Circular-	C. Frederick and J. C. Egley	408,007	July 30	2989	779	48	612
Knitting machine. Circular-	E. E. Kilbourn	408,110	July 30	3144	822, 823	48	642
Knitting machine. Circular-	E. E. Kilbourn	408,111	July 30	3150	822, 823, 824, 825	48	643
Knitting machine. Circular-	E. E. Kilbourn	408,180	July 30	3248	848, 849, 850, 851	48	661
Knitting machine. Circular-	E. E. Kilbourn	408,181	July 30	3262	851, 852, 853	48	662
Knitting machine. Circular-	J. Polleycutt	410,854	Sept. 10	1114	300	48	1492
Knitting machine. Circular-	J. H. Reed	408,582	Aug. 6	483	127	48	774
Knitting machine. Circular-	J. H. Reed	408,583	Aug. 6	485	128	48	774
Knitting machine. Circular-	H. C. Rightmire	410,118	Aug. 27	2906	762, 763, 764	48	1255
Knitting machine. Circular-rib-	R. Schofield	411,685	Sept. 24	2341	619	48	1748
Knitting machine. Circular warp	W. Start	410,040	Aug. 27	2765	726, 727, 728	48	1231
Knitting machine for making figured knit goods. Straight-	E. Tiffany	408,271	Aug. 6	102	25, 26	48	699
Knitting machine. Straight-	G. Templeman	411,113	Sept. 17	1505	399, 400	48	1578
Knitting machine. Straight-	F. Wilcomb	408,560	Aug. 6	549	144	48	784
Knitting machine. Straight-	F. Wilcomb	408,561	Aug. 6	551	145	48	785
Knitting machine. Straight-	F. Wilcomb	408,562	Aug. 6	553	145	48	785
Knitting-machine. Combined thread-guide and latch-opener for	H. A. Church	406,626	July 9	907	245	48	186
Knitting machines. Falling bar for straight-	E. Tiffany	408,363	Aug. 6	223	59	48	724
Knitting-machines. Looping attachment for	E. Murby	409,856	Aug. 27	2512	657	48	1180
Knitting-machines. Needle-picking tool for	R. W. Scott	407,125	July 16	1666	435	48	349
Knitting-machines. Needle-picking tool for	R. W. Scott	407,126	July 16	1667	436	48	342
Knitting machines. Sinker-supporting device for straight-	E. Tiffany	408,270	Aug. 6	101	25	48	699
Knitting machines. Welt or hem forming device for straight-	E. Tiffany	408,272	Aug. 6	103	26	48	700
Knob alarm. Door-	H. R. Stickney and G. W. Way	409,762	Aug. 27	2373	622	48	1155
Knob attachment	F. A. Hollenbeck	407,661	July 23	2464	638	48	506
Knob attachment	J. Schade	407,902	July 30	2896	735	48	582
Knob attachment. Door-	C. E. Steller	410,216	Sept. 3	127	32	48	1293
Knob. Door-	C. O. Case	409,010	Aug. 13	1274	326	48	963
Knobs. Making parts of hollow door-	C. O. Case	407,817	July 30	2701	701	48	558
Knockdown bench for dogs, &c	C. A. Cruft	408,464	Aug. 6	389	102	48	756
Knockdown table	E. A. and C. P. Cornillie	409,930	Aug. 27	2611	683	48	1201
Label or card holder	J. J. Gould	408,009	July 30	3124	818	48	638
Labeling machine. Can-	M. B. Chambers	408,580	Aug. 6	577	150, 151	48	790
Lace-curtains. Device for stretching and drying	D. Eastman	410,790	Sept. 10	1027	276	48	1474
Lace or other fabrics. Machine for finishing	L. Lindley	408,492	Aug. 6	432	113, 114	48	764
Ladder	W. G. Sickles	409,711	Aug. 27	2302	605	48	1142
Ladder and clothes-rack combined. Step-	G. R. Richardson	411,472	Sept. 24	2027	536	48	1683
Ladder. Extensible	J. B. Parry	406,765	July 9	1116	296	48	225
Ladder. Extension-	C. Frizell	408,610	Aug. 6	617	159, 160	48	798
Ladder. Extension-	G. L. Wright	408,281	Aug. 6	115	29	48	702
Ladder. Extension step-	W. Soper	410,612	Sept. 10	727	196	48	1417
Ladder. Fire-	W. Winkless	409,722	Aug. 27	2314	608	48	1144
Ladder, ironing-board, and stand. Combined step-	R. Hoover	406,734	July 9	1063	283	48	214
Ladder platform-bracket	L. B. Laskey	407,079	July 16	1574	413	48	323
Ladder. Sectional	C. C. Pierson	411,730	Sept. 24	2403	636	48	1761
Ladles. Nozzle for steel	C. S. Price	410,192	Sept. 3	86	21	48	1295
Lamp	A. Annibale	406,983	July 16	1447	379	48	208
Lamp	C. D. Aria	411,318	Sept. 17	1801	481	48	1635
Lamp	W. Benner	407,153	July 16	1696	442, 443	48	347
Lamp	J. E. Bissell	411,212	Sept. 17	1650	439	48	1607
Lamp	T. Gordon	409,353	Aug. 20	1764	464, 465	48	1033
Lamp	F. Rhind	409,706	Aug. 27	2296	603	48	1141
Lamp	H. E. Shaffer	407,969	July 30	2929	763	48	602
Lamp	C. P. Thayer	411,771	Sept. 24	2459	651	48	1773
Lamp	W. H. Wilder	409,086	Aug. 13	1350	357	48	946
Lamp. Arc	F. R. Boardman	411,088	Sept. 17	1464	389	48	1570
Lamp. Arc	R. D. Carson	409,390	Aug. 20	1817	478, 479	48	1044
Lamp. Arc	F. P. Cox	411,713	Sept. 24	2389	632	48	1757
Lamp. Arc	J. A. Lighthipe	408,887	Aug. 13	1053	278	48	829
Lamp. Argand	L. J. Atwood and F. W. Tobey	411,517	Sept. 24	2065	551	48	1695
Lamp. Argand	W. C. Homan	408,306	Aug. 6	150	38	48	706
Lamp attachment	C. S. Walker	409,887	Aug. 27	2355	609	48	1149
Lamp attachment. Miner's	W. C. Rockwell	410,502	Sept. 3	645	172	48	1395
Lamp bracket. Electric-	J. S. Merrill	409,852	Aug. 27	2508	656	48	1179
Lamp-burner	W. Notley	409,614	Aug. 20	2139	561, 562	48	1106
Lamp-burner	L. R. Oakes	408,510	Aug. 6	467	123	48	770
Lamp-burner. Argand	F. Rhind	407,492	July 23	2229	575	48	459
Lamp-burner attachment	W. Holmes	409,401	Aug. 20	1834	483	48	1047
Lamp. Car-vestibule	A. Rapp	407,611	July 23	2395	622	48	494

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Lamp. Central-draft	A. W. Paull	409,863	Aug. 27	2521	660	48	1182
Lamp. Central-draft	E. H. Peck	408,135	July 30	3186	833	48	649
Lamp-chimney holder	F. Hanson	410,548	Sept. 3	623	167	48	1391
Lamp. Electric-arc	W. H. Barker	408,948	Aug. 13	1139	301	48	107
Lamp. Electric-arc	R. L. Cohen	410,493	Sept. 3	554	148 / 149	48	1377
Lamp. Electric-arc	F. E. Kinsman	411,267	Sept. 17	1751	466	48	1627
Lamp-extinguisher	W. Notley	407,232	July 16	1895	477	48	373
Lamp filaments. Manufacture of incandescent	T. D. Bottome	408,286	Aug. 6	122	30	48	703
Lamp. Focusing arc	J. J. Wood	407,915	July 30	2846	741 / 742	48	585
Lamp. Hanging	W. S. McLewee	406,530	July 9	764	207	48	160
Lamp. Incandescent	C. A. Backstrom	406,498	July 9	711	196	48	150
Lamp. Incandescent gas	H. J. Bell	408,068	July 30	3073	844	48	629
Lamp. Incandescent gas	H. J. Bell	408,069	July 30	3075	844	48	629
Lamp. Incandescent gas	H. J. Bell	408,072	July 30	3079	845	48	630
Lamp. Incandescent gas	H. J. Bell	409,554	Aug. 20	2039	536	48	1068
Lamp. Incandescent gas	C. A. von Welsbach	409,530	Aug. 20	2008	530	48	1062
Lamp. Inverted gas	D. W. Sugg	407,622	July 23	2407	625 / 626 / 673 / 674	48	496
Lamp. Moderator or carcel	C. D. Aria	409,899	Aug. 27	2572	673	48	1193
Lamp or lantern lighting device	L. Gerhardt	410,238	Sept. 3	154	40	48	1298
Lamp. Regenerative	J. F. E. W. Schmidt	408,197	July 30	3289	859	48	666
Lamp. Revolving-stand	J. Kintz	409,154	Aug. 13	1459	385	48	967
Lamp-shade holder	C. G. Perkins	411,107	Sept. 17	1495	396	48	1576
Lamp socket. Incandescent-electric	J. W. Collier	409,929	Aug. 27	2060	533	48	1201
Lamp-standard	O. Luetke	409,214	Aug. 20	1553	411	48	993
Lamp-standard	C. Maschmeyer	406,107	July 2	119	34	48	25
Lamp. Standard	J. C. Miller	407,100	July 16	1627	426	48	334
Lamp. Street	W. G. Oliver	408,988	Aug. 13	1199	316	48	917
Lamp support. Electric	A. T. Thompson	407,973	July 30	2933	764	48	603
Lamp. Vapor	P. J. Fitzgerald	410,407	Sept. 3	422	112	48	1352
Lamp. Velocipede	H. Lucas	407,409	July 23	2101	543	48	433
Lamp-wick holder	G. E. Messer	408,313	Aug. 6	158	40	48	710
Lamps above streets. Structure for supporting	J. S. Adams	410,626	Sept. 10	749	203	48	1421
Lamps. Air-distributer for Argand	J. Jauch	409,466	Aug. 20	1924	500	48	1067
Lampe. Burner for central-draft	Z. Davis	408,592	Aug. 6	594	154	48	793
Lampe. Filament for incandescent electric	A. F. Oppermann	408,740	Aug. 13	828	218 / 219	48	844
Lamps. Manufacture of incandescent electric	T. A. Edison	406,130	July 2	150	44	48	32
Lamps. Manufacture of incandescent electric	T. A. Edison	411,018	Sept. 17	1346	362	48	1548
Lamps. Manufacture of incandescent electric	T. A. Edison	411,019	Sept. 17	1347	362	48	1548
Lamps. Measuring apparatus for filling street	E. W. Cooke	411,375	Sept. 17	1478	502	48	1620
Lamps or lanterns. Signal attachment for	A. L. France and A. E. Yelton	409,320	Aug. 20	1714	450	48	1024
Lampe. Shield and reflector for incandescent electric	G. Gibbs	408,478	Aug. 6	411	107	48	760
Lampe. Suspension device for	W. C. Homan	408,197	July 30	3138	821	48	641
Lampe. Suspension device for	W. C. Homan	408,575	Aug. 13	1183	312	48	914
Lampe. Wick-raiser for central-draft	E. L. Bryant	409,910	Aug. 27	2585	676	48	1195
Lampe. Wick-raiser for central-draft	Z. Davis	408,591	Aug. 6	593	154	48	793
Lance. Tubular	W. Lorenz	406,526	July 9	759	206	48	159
Land-roller	J. M. Fellows	407,520	July 23	2260	584 / 585	48	465
Lantern	H. G. Griffith	408,614	Aug. 6	622	161	48	799
Lantern	O. Haudeland	411,222	Sept. 17	1662	444	48	1610
Lantern	A. M. Schilling	409,506	Aug. 20	1977	522	48	1077

Latch	J. Brown	410,728	Sept. 10	926	248	48	1452
Latch	J. Hope, Jr	406,648	July 9	944	255	48	193
Latch	W. Kneen	407,405	July 23	2097	542	48	433
Latch	P. May	407,227	July 16	1819	476	48	371
Latch	D. J. and D. G. Millemann	406,588	July 9	839	227	48	174
Latch	C. C. Van Brocklin	408,551	Aug. 6	541	142	48	763
Latch	E. R. Wetherell	407,268	July 16	1861	490	48	383
Latch. Gate	J. G. Dalebohn	406,931	July 2	25	7	48	8
Latch. Gate	M. M. Moore	409,797	Aug. 27	2433	638	48	1166
Latch. Gate	C. M. and J. H. Sanders	410,934	Sept. 10	1224	330	48	1514
Latch. Gate	J. J. Wright	406,485	July 9	708	195	48	149
Latch handle. Door	H. Hoffman, Jr	408,974	Aug. 13	1182	312	48	914
Lathe-carrier	J. M. Klein	407,666	July 23	2470	639	48	507

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Lathe-dog	C. W. Shartle	411,620	Sept. 24	2246	597	48	1729
Lathe having a supplemental drill-spindle. Turret	J. Hartness	409,786	Aug. 27	2415	631 / 632	48	1162
Lathe-spindle brake	E. P. Bullard	408,291	Aug. 6	130	32	48	705
Lathe. Turret	C. L. Libby	406,413	July 2	553	154 / 155 / 156	48	111
Lathes. Center-rest for	J. Klingensmith	410,901	Sept. 10	1182	309	48	1505
Lathes. Feeding mechanism for	H. M. Darling	409,456	Aug. 20	1908	505 / 506	48	1063
Lathes. Tool holder and rest for	L. S. Springer	407,972	July 30	2932	763	48	602
Lathes. Tool-post for	J. A. Myers	409,484	Aug. 20	1949	516	48	1071
Lathing. Metal	I. S. Elkins	408,509	Aug. 6	605	156	48	795
Laundry-iron attachment	J. J. Weber	407,557	July 23	2326	601	48	490
Laundry-machine	A. R. Gustafson	407,199	July 16	1771	464 / 465	48	362
Laundry-press	A. Otte	408,132	July 30	3183	832	48	648
Laundry work. Embossing device for	E. Holm, M. Joransson, and E. Anderson	410,351	Sept. 3	627	168	48	1391
Leaching tan-bark	E. F. Smith	409,876	Aug. 27	2539	665	48	1186
Lead and base bullion from slag, &c. Separating	W. B. Devereux	407,337	July 23	1985	516	48	412
Lead. Apparatus for comminuting and corroding	E. A. Webster and L. O. Gibbe	406,378	July 2	499	130	48	99
Lead or bullion in smelting from slags, mattes, or speiss. Apparatus for separating	W. B. Devereux	407,335	July 23	1979	515	48	412
Lead press	H. B. Cobb	408,375	Aug. 6	252	63	48	728
Lead-press	H. B. Cobb	408,377	Aug. 6	256	64	48	728
Lead-smelting. Apparatus for separating slags, mattes, and speiss and lead or base bullion in	W. B. Devereux	407,336	July 23	1982	516	48	412
Leaf-turner	M. Botello	410,486	Sept. 3	542	146	48	1375
Leaf-turner	C. P. Brown	410,779	Sept. 10	1008	270	48	1470
Leaf-turner	T. J. Parkinson	409,370	Aug. 20	1789	471	48	1038
Leaf-turner	A. Sommer	408,360	Aug. 6	228	.....	48	724
Leather and making the same. Water-proof	L. Rappe	409,336	Aug. 20	1738	.....	48	1028
Leather and preparing the same. Chrome-tanned	H. A. Webster	407,310	July 16	1936	504	48	395
Leather-cleaning machine	W. E. Harter	406,901	July 16	1325	.....	48	275
Leather. Dressing	G. Langenhagen	406,102	July 2	113	.....	48	24
Leather-polish	W. Schweickhardt	408,896	Aug. 13	1069	281	48	892
Leather-working machine	W. L. Snyder	409,311	Aug. 20	1702	447	48	1021
Leg. Artificial	J. T. Sykes	406,861	July 9	1265	333	48	252
Leg. Artificial	J. L. Easley	410,749	Sept. 10	1026	276	48	1474
Lemon-juice extractor	J. P. Manny	406,121	July 30	3173	830	48	646
Lemon-juice extractor	C. Engel	407,433	July 23	2147	554	48	442
Lemon-squeezer	J. J. Rausch	407,990	July 30	2963	770	48	607
Lens-blocking	L. Ehrlich	409,027	Aug. 13	1266	343	48	930
Letter-box	E. D. Moore and T. C. Chappell	407,870	July 30	2775	721	48	572
Letter-box	E. M. Noble	407,303	July 16	1929	502	48	393
Letter-box	D. Rosenthal	410,379	Sept. 3	375	100	48	1343
Letter-box	M. J. Dolphin	408,405	Aug. 6	307	78	48	738
Letter feeding and separating machine	H. W. Campbell and J. P. Davies	411,758	Sept. 24	2444	646	48	1760
Letter-press	H. A. and H. A. House, Jr	409,356	Aug. 20	1767	465 / 466	48	1034
Leveling attachment for tripod-heads	W., H., and J. Chambers	406,793	Aug. 13	908	243	48	861
Life-boats, &c. Collapsible bulwark for	A. B. Bird	408,686	Aug. 13	746	195	48	828
Life-insurance policy	E. Maynard	411,161	Sept. 17	1576	419	48	1592
Life-line. Floating	S. M. y Valdivielso	407,625	July 23	2412	626	48	496
Life-preserving buoyant bag							
Lifter: *See* Transom-lifter. Wagon-body lifter.							
Lifter for jars, bottles, or other articles	C. F. Sautter	407,254	July 16	1861	285	48	379
Lifting-jack	W. R. Andrews	406,669	July 9	1006	270	48	204
Lifting-jack	H. H. Clever	408,373	Aug. 6	248	63	48	727
Lifting-jack	L. J. Crecelius	407,173	July 16	1730	452	48	354
Lifting-jack	L. J. Crecelius	407,174	July 16	1732	452	48	354
Lifting-jack	L. J. Crecelius	410,074	Aug. 27	2432	743	48	1242
Lifting-jack	J. P. Hays	406,923	July 9	754	205	48	157
Lifting-jack	L. Miller	407,788	July 30	2647	685 / 686	48	549
Lifting-jack	M. A. Stewart	410,995	Sept. 10	1316	355	48	1532
Lifting-jack	J. T. Weatherly	410,702	Sept. 10	868	234	48	1444
Light: *See* Signal-light. Vault-light. Stove-door light.							
Light-tower	J. W. Davy	406,432	July 9	590	166	48	127
Lighting device	W. H. and H. P. Wilder	407,883	July 30	2799	729	48	577
Lighting device. Hydrocarbon	T. Schuls and F. A. Cody	411,170	Sept. 17	1585	422	48	1594
Lighting system	J. H. Hunter	407,210	July 16	1789	469	48	366
Lightning-arrester	H. Lemp	409,629	Aug. 27	2354	595	48	1135
Lightning-arrester	J. W. See	407,454	July 23	2178	562	48	449
Lightning-rod	J. H. C. Watts	406,681	July 9	989	266	48	201
Lightning. System of protection from	C. F. Hill	407,660	July 23	2463	637	48	506
Limb. Artificial	F. H. Fairchild	411,377	Sept. 17	1661	503	48	1651
Limekiln	J. and J. Druecker	406,434	July 9	592	166	48	128
Limekiln	F. Krans	407,406	July 23	2098	542	48	433
Limestone. Preparing and hardening	G. J. Randall	410,607	Sept. 10	717	.....	48	1415
Liner for machinery	W. V. Fischer	409,676	Aug. 27	2249	592	48	1132
Liniment	J. S. Schrack	407,551	July 23	2319	.....	48	478
Linting-machine	T. J. Dieuzet	411,139	Sept. 17	1540	411	48	1585
Liquids at different boiling-points. Apparatus for separating	L. E. A. Prangey	407,114	July 16	1650	432	48	330
Lister and drill. Combined	W. A. Longhry	407,664	July 16	1579	414	48	324
Lithographic press	G. Heinsius	410,708	Sept. 10	878	236	48	1446
Lobster-trap	G. Hurst	411,746	Sept. 24	2425	642	48	1708

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Lock: *See* Bed-lock. Nut-lock. Combination-lock. Permutation-lock. Electric lock. Safe-lock. Electrical lock. Seal-lock. Elevator-lock. Time-lock. Fire-arm lock. Wagon-seat lock. Hasp-lock.							
Lock	O. B. Haglund	407,479	July 23	2209	570	48	455
Lock	W. A. Martin	407,738	July 23	2367	666	48	527
Lock	G. Neubrand	407,547	July 21	2313	597	48	477
Lock	M. Riedinger	410,610	Sept. 10	721	194	48	1416
Lock	C. J. A. Sjoberg	409,119	Aug. 13	1406	371	48	956
Lock	T. Taylor	408,147	July 30	3203	836	48	652
Lock	W. H. Taylor	406,487	July 9	692	182	48	147
Lock	O. Volkerts	408,447	Aug. 6	361	95	48	751
Lock and latch combined	C. W. Folsom and A. B. Davis	407,926	July 30	2865	{740 741}	48	588
Lock-case	C. M. Burgess	408,688	Aug. 13	749	195	48	829
Lock-joint for beams	R. Wray	409,893	Aug. 27	2565	673	48	1191
Locks. Rod-handle for	W. H. Taylor	408,550	Aug. 6	534	{139 140}	48	781
Locks. Rod-handle for	H. R. Towne	408,552	Aug. 6	537	{139 140}	48	782
Locks. Rose for	A. A. Severance	409,246	Aug. 20	1598	422	48	1001
Locking a series of drawers. Device for	J. H. Rodeheaver	410,378	Sept. 3	373	99	48	1343
Locking and registering mechanism. Coin-controlled	A. B. Nicholson	408,811	Aug. 13	937	250	48	867
Locomotive	E. M. Boynton	409,006	Aug. 13	1224	{324 325}	48	922
Locomotive	J. Des Brisay	409,936	Aug. 27	2621	{686 687}	48	1203
Locomotive-brake	F. Lansberg	406,844	July 9	1237	328	48	247
Locomotive-cylinders. Drip-cock for	H. H. Riggin	410,448	Sept. 3	491	129	48	1364
Locomotive-engine	M. N. Forney	408,004	July 30	2984	771	48	611
Locomotive. Multiple-motor electric	C. J. Van Depoele	408,640	Aug. 6	666	175	48	807
Locomotive-spring	J. A. Wendlick and P. Lynch	410,668	Sept. 10	1133	304	48	1495
Locomotives. Exhaust apparatus for	J. Y. Smith	406,484	July 9	686	181	48	147
Locomotives. Exhaust-muffler for	A. S. Vogt	407,139	July 16	1662	430	48	345
Locomotives. Smoke-box for	F. Gandy	409,033	Aug. 13	1272	335	48	931
Locomotives. Triple-expansion blast or exhaust apparatus for	J. Y. Smith	406,483	July 9	680	180	48	145
Log-boom	W. H. Roan	408,046	July 30	3037	794	48	622
Log-conveyer	E. S. Jones	409,361	Aug. 20	1772	467	48	1035
Log lifting and turning machine	F. Simonson	408,760	Aug. 13	857	226	48	851
Loom	E. Herzig	406,281	July 2	352	96, 97	48	71
Loom	C. H. Knowlton and B. F. Meyer	407,597	July 23	2376	{615 616}	48	490
Loom for weaving tufted fabrics, &c	W. Adams	409,550	Aug. 20	2035	536	48	1068
Loom for weaving tufted fabrics	A. C. H. Sallandrouze	410,096	Aug. 27	2668	{752 753}	48	1249
Loom for weaving tufted fabrics	A. Siret	411,067	Sept. 17	1423	{379 380}	48	1502
Loom for weaving tufted fabrics	H. Wyman and J. G. Gale	411,410	Sept. 17	1934	515	48	1660
Loom for weaving wire	C. F. Wickwire	409,813	Aug. 27	2154	644	48	1171
Loom. Hand-	J. Scherer	410,772	Sept. 10	996	267	48	1467
Loom heald or Leddle	J. Yeadon	409,725	Aug. 27	2217	600	48	1145
Loom heddle. Jacquard	G. W. Stafford	407,620	July 23	2405	645	48	496
Loom Jacquard attachment	G. W. Stafford and S. D. Barrett	410,215	Sept. 3	125	31	48	1293
Loom Jacquard mechanism	H. Wyman	411,409	Sept. 17	1933	515	48	1659
Loom let-off and take-up mechanism	W. C. Taucke	411,172	Sept. 17	1587	422	48	1594
Loom let-off mechanism	C. Hirst	410,635	Sept. 10	1084	291	48	1487
Loom. Narrow-ware	G. C. Moore	407,872	July 30	2778	{722 723}	48	572
Loom-picker	E. H. Archibald	408,416	July 9	562	150	48	121
Loom picker-check	T. Norton	411,556	Sept. 24	2143	568	48	1707
Loom picker-staff check	T. Hall and D. Young	409,580	Aug. 20	2065	530	48	1097
Loom picker-sticks. Lug-strap for	C. C. Follett	408,703	Aug. 13	782	206	48	835
Loom picking-motion	J. Monk	408,501	Aug. 6	451	118	48	768
Loom. Pile-fabric	R. B. Leynd	410,323	Sept. 3	300	78	48	1327
Loom-shedding mechanism	R. L. Hattersley and J. Hill	409,787	Aug. 27	2416	{632 633}	48	1163
Loom shedding mechanism	G. F. Hutchins	410,734	Sept. 10	934	250	48	1453
Loom-shedding mechanism	E. Pont	410,442	Sept. 3	482	129	48	1362
Loom shedding mechanism	V. Royle	410,718	Sept. 10	905	{242 244}	48	1449
Loom shedding mechanism	G. W. Stafford	406,790	July 9	1157	305	48	233
Loom shedding mechanism	H. Wyman	411,753	Sept. 24	2435	645	48	1768
Loom-shuttle	S. A. Dudley	411,187	Sept. 17	1609	427	48	1599
Loom-shuttle	J. Elsas and H. Weissenburger	411,097	Sept. 17	1478	392	48	1573
Loom-shuttle	F. J. Hall	407,201	July 16	1775	465	48	363
Loom-shuttle	P. T. Litchfield	407,958	July 30	2915	760	48	599
Loom-shuttle	G. C. Moore	407,871	July 30	2776	731	48	572
Loom-shuttle	C. G. Petzold	409,232	Aug. 20	1576	416	48	997
Loom shuttle-binder	E. Earnshaw	408,470	Aug. 6	401	105	48	758
Loom shuttle-box-locking device	G. F. Hutchins	411,197	Sept. 17	1625	432	48	1602
Loom shuttle-box mechanism	H. Wyman	411,408	Sept. 17	1926	514	48	1659
Loom shuttle-box mechanism	H. Wyman	411,752	Sept. 24	2432	644	48	1767
Loom shuttle-box-operating device	E. E. Orrell	410,850	Sept. 10	1107	293	48	1491
Loom shuttle-motion	J. T. Cree	406,508	July 9	725	189	48	152
Loom shuttle-supplying mechanism	J. M. Evans and J. M. Shay	409,282	Aug. 20	1657	437	48	1013
Loom-shuttles. Tension-regulating device for	G. Goodline	406,135	July 2	158	46	48	33
Loom shuttles. Tension-regulating device for	G. C. Moore	407,411	July 23	2104	543	48	434

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Loom take-up mechanism	R. Rickenbacher	408,202	Aug. 6	92	23	48	697
Loom take-up mechanism	F. K. Wright	406,327	July 2	425	117	48	86
Loom-temple	J. B. Newell	409,369	Aug. 20	1787	470	48	1039
Loom-temple	T. Norton	408,354	Aug. 6	220	56	48	722
Loom-temple	J. E. Prest	407,032	July 16	1511	393	48	311
Loom weft-stop mechanism	J. Paterson and T. Brook	407,236	July 16	1833	479	48	374
Looms. Braking mechanism for	H. A. Remington	406,473	July 9	696	186	48	143
Looms. Cloth-roll support for	H. A. Remington	406,472	July 9	695	186	48	143
Loome. Dobby and Jacquard machine for	A. Insinger	408,485	Aug. 6	424	111	48	763
Looms. Heddle-frame for	C. P. Ledd and W. Muir	407,078	July 16	1572	413	48	323
Loome. Means for lubricating picking-tappets of weaving	B. Berry and D. B. Briggs	411,490	Sept. 24	2046	541	48	1636
Looms. Pin for pattern-chains for	G. W. Stafford	407,621	July 23	2406	625	48	496
Loome. Self-threading shuttle for	M. Virnoche	411,403	Sept. 17	1919	512	48	1657
Looping-machine attachment	R. E. Ellenwood	406,638	July 9	883	232	48	191
Looping-machines. Trimming attachment for	N. H. Bruce	408,575	Aug. 6	569	149	48	769
Lotion	P. Grosbéty	411,657	Sept. 24	2300	.....	48	1740
Lubricant	W. J. Corder	406,803	July 16	1399	.....	48	270
Lubricator: *See* Axle-lubricator. Pulley-lubricator. Centrifugal lubricator. Sight-feed lubricator. Fibrous lubricator. Spinning-machinery lubricator.							
Lubricator	R. M. Beck	409,660	Aug. 27	2211	582	48	1195
Lubricator	B. A. Burgess	406,813	July 9	1194	317	48	240
Lubricator	W. J. Faul	408,833	Aug. 13	963	257	48	873
Lubricator	C. H. Parshall, Sr	408,316	Aug. 6	198	49	48	712
Lubricator	D. M. Perine	406,665	July 9	965	260	48	167
Lubricator	J. Powell	408,927	Aug. 13	1109	292	48	900
Lubricator	C. F. L. Sörensen	406,675	July 9	979	263	48	199
Lubricators. Speed-reducing mechanism for	W. S. Beeman	406,419	July 9	565	150	48	122
Magnetic body-wear	G. A. Scott	410,652	Sept. 10	785	213	48	1429
Magnetic from non-magnetic particles. Separating	G. Conkling	410,876	Sept. 10	1142	{307 308}	48	1497
Magnetic separator	G. Conkling	406,337	July 2	441	122	48	89
Magnetic separator	G. Conkling. (Reissue)	11,012	July 16	1942	{505 506}	48	306
Magnetic separator	G. Conkling	410,877	Sept. 10	1143	308	48	1497
Magnets. Neutralizing the residual magnetism in electro-	F. and O. Haenichen	410,276	Sept. 3	213	56	48	1311
Mail-bag deliverer	A. P. Hause	410,095	Aug. 27	2867	{751 752}	48	1249
Mail-bag fastener	L. Crepe	407,853	July 30	2751	716	48	568
Mail-bag fastening	S. M. Moore	408,039	July 30	3029	792	48	621
Mail-bag fastening	J. A. Roosevelt	410,450	Sept. 3	494	132	48	1365
Mail-bag rack and distributing-table	S. Strange	408,966	July 16	1490	{372 373}	48	293
Mail-box attachment	R. B. Lewis	410,905	Sept. 10	1186	320	48	1506
Mail-dispatch apparatus. Pneumatic	J. L. Given and G. B. Kelly	411,333	Sept. 17	1817	{486 487}	48	1636
Mail-pouch	C. W. Miller	406,598	July 9	761	207	48	159
Mailing-box	E. B. Hillman	409,039	Aug. 13	1279	337	48	932
Mailing device for newspapers, &c	L. P. Bardwell	410,395	Sept. 3	397	106	48	1347
Mailing-machine	E. Woodward	408,302	July 30	3299	{862 863 864 865}	48	668
Mailing-sheet list	M. B. Church	407,640	July 23	2439	632	48	502
Malt-mashing device	H. Pietsch	410,019	Aug. 27	2733	716	48	1225
Malting and germinating apparatus	J. F. Gent	409,956	Aug. 27	2647	{694 695}	48	1206
Malting apparatus. Pneumatic	E. Kasten	409,151	Aug. 13	1454	{384 385}	48	966
Mandrel. Blacksmith's	J. W. Cheney	407,851	July 30	2750	715	48	567
Mangle	G. K. Geiger	408,477	Aug. 6	409	107	48	760
Mantel	W. Anderson	409,594	Aug. 20	2107	555	48	1101
Mantel for stoves	O. P. and G. O. Eiterich	407,003	July 16	1477	385	48	304
Mantles for incandescent uses. Regenerating	C. A. von Welsbach	409,529	Aug. 20	2006	.....	48	1069
Mantles. Production of incandescent	F. L. and W. S. Rawson	407,963	July 30	2922	.....	48	600
Marker. Corn-row	S. T. Boatman	407,158	July 16	1706	445	48	349
Marker. Land-	I. Ivey	409,971	Aug. 27	2673	701	48	1213
Marking pad. Indelible	J. R. Smith	411,364	Sept. 17	1718	459	48	1621
Mash machine and grain remover	G. Rieseck	410,198	Sept. 3	103	27	48	1289
Mast-arm	W. H. O'Beirne	410,559	Sept. 3	642	171	48	1394
Mat: *See* Burglar-alarm electric mat. Door-mat. Wire mat.							
Match-box-filling machine. Slide	J. D. Mantion, G. H. Millen, and A. Decurion	409,481	Aug. 20	1941	{513 514}	48	1070
Match-machine	F. Bommarius and G. Staunton	407,718	July 23	2536	{656 657}	48	521
Match-machine	J. H. White	410,622	Sept. 10	739	{200 201 202}	48	1419
Match-safe	E. P. Hasbrouck	410,568	Sept. 10	688	184	48	1409
Match-safe	W. B. Mitchell	409,055	Aug. 13	1301	343	48	936
Matches. Apparatus for winding flexible lighting	F. Bommarius	407,716	July 23	2535	656	48	521
Matches. Preparing flexible	F. Bommarius	407,717	July 23	2536	.....	48	521
Matrix-making machine	C. S. Partridge	407,608	July 23	2491	{620 621}	48	493
Mattress	J. Blocher	410,133	Aug. 27	2930	769	48	1289
Mattress bed-bottom. Wire	J. B. Ryan	411,302	Sept. 17	1774	474	48	1631
Mattress. Woven-wire	W. S. Seymour	410,937	Sept. 10	1228	331	48	1514
Measure. Ale or beer	O. Mayer	406,176	July 2	217	59	48	43

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drf.	Official Gazette. Vol.	Official Gazette. Page.
Measure. Lumber	A. Cruikshank	407,175	July 16	1738	453	48	355
Measuring can or canister	S. B. Estabrook and J. P. Ashey	407,650	July 23	2452	635	48	504
Measuring gage. Threshold	D. W. Mackey	408,496	Aug. 6	444	116	48	786
Measuring instrument. Electric	J. A. Barrett	408,157	July 30	3218	840	48	655
Measuring machine. Cloth	B. R. Bond	410,485	Sept. 3	540	145 / 146	48	1374
Measuring-vessel	A. De Witt	409,023	Aug. 13	1256	332	48	928
Measuring-vessel	J. Freytag	406,641	July 9	936	252 / 253	48	191
Measuring-vessel	W. S. Reynolds	410,333	Sept. 3	313	81	48	1329
Measuring-vessel for liquids	J. P. Müller	406,366	July 2	491	134	48	96
Meat and vegetable chopper	I. M. Berry	410,693	Sept. 10	839	225	48	1479
Meat-cutter	G. V. Brecht	409,906	Aug. 27	2582	676	48	1195
Meat-cutter	P. H. Brodeseer and P. J. Ternes	407,056	July 16	1544	405	48	317
Meat-tenderer. Rotary	J. G. Schmidt	411,169	Sept. 17	1584	421	48	1504
Mechanical motor	E. S. Harpst	406,440	July 9	602	169	48	130
Mechanical movement	W. W. Griscom	409,193	Aug. 20	1521	403	48	987
Mechanical movement	J. P. Stiles	408,546	Aug. 6	530	138	48	780
Mechanical movement	G. W. Thomas	407,136	July 16	1679	438	48	344
Mechanical movement	R. Wehrle	409,082	Aug. 13	1344	356	48	944
(Medicine.) Cough-sirup	F. M. Jaques	408,486	Aug. 6	436	.....	48	763
(Medicine.) Liver and kidney remedy	A. H. Ramey	407,687	July 23	2496	.....	48	519
Merchandise-box	G. E. Raymond	410,990	Sept. 10	1311	353	48	1531
Merchandise. Receptacle for	P. E. McDonald	409,485	Aug. 20	1950	516	48	1072
Mercury. Preventing the flouring of	F. A. Luckenbach	410,171	Sept. 3	48	13	48	1278
Merry-go-round	J. R. Applegate	409,898	Aug. 27	2571	673	48	1192
Merry-go-round	D. G. Johnson	409,972	Aug. 27	2674	701	48	1213
Merry-go-round	W. C. Tyler	410,301	Sept. 3	256	67	48	1318
Message and time recorder	J. C. Wilson	406,809	July 9	1189	315	48	239
Metal. Attaching composition of matter to	C. T. Lee	409,986	Aug. 27	2687	.....	48	1216
Metal bars or rails. Manufacture of	E. Norton and J. G. Hodgson	406,946	July 16	1391	365 / 366	48	288
Metal fabric	R. F. Snow	406,786	July 9	1150	304	48	231
Metal-forming machine	M. T. Durkin	407,516	July 23	2256	583	48	465
Metal-forming tool	A. S. Patton	410,606	Sept. 10	716	193	48	1415
Metal-foundery patterns. Making	H. Tabor	408,677	Aug. 6	725	189	48	817
Metal. Machine for finishing and ornamenting	H. M. Quackenbush	408,521	Aug. 6	462	127	48	773
Metal. Ornamenting surfaces with molten	W. H. Marshall	406,923	July 16	1357	355	48	282
Metal pile or fagot	H. W. Borntraeger	410,134	Aug. 27	2931	769	48	1260
Metal plate. Rolled	W. J. Lewis	409,050	Aug. 13	1296	342	48	935
Metal rolls	J. T. Hastings	409,679	Aug. 27	2252	592	48	1133
Metal rolls	J. T. Hastings	409,746	Aug. 27	2346	617	48	1151
Metal rolls	J. T. Hastings	409,747	Aug. 27	2347	617	48	1151
Metal rolls. Making	C. M. Schwab	410,651	Sept. 10	784	212	48	1429
Metal-sawing machine	C. C. Newton	410,009	Aug. 27	2720	715	48	1222
Metal-shears	L. C. North	411,727	Sept. 24	2307	635	48	1760
Metal-shears and tire-upsetter. Combined	M. C. Malone	411,386	Sept. 17	1803	506	48	1652
Metal surfaces. Decorating	N. C. Duncombe	406,999	July 16	1469	384	48	302
Metal ties. Making	H. Aiken	411,117	Sept. 17	1511	402 / 403	48	1560
Metal wheel	L. J. Crecellus	406,705	July 9	1025	274	48	207
Metal wheel	J. R. Little	409,475	Aug. 20	1935	512	48	1069
Metal with natural gas. Treating molten	F. L. Slocum and H. W. Lash	411,205	Sept. 17	1639	.....	48	1605
Metal-working. Electric	M. W. Dewey	408,575	Aug. 13	1034	274	48	885
Metals from their ores. Bath or solution for separating	J. C. Wiswell	407,386	July 23	2067	535	48	427
Metals from their ores. Solution for use in separating	J. C. Wiswell	410,228	Sept. 3	140	36	48	1296
Metals. Galvanizing	T. Midgley and W. B. Nye	406,365	July 2	480	134	48	96
Metals while in a heated condition. Preventing the oxidation of	G. W. Cummins and J. H. Coleman	409,276	Aug. 20	1648	435	48	1012
Metals with zinc or other metals. Apparatus for coating	F. W. Koffler	407,222	July 16	1809	473 / 474	48	369
Metallic circuit	H. F. Campbell	411,137	Sept. 17	1537	410	48	1585
Metallic wheel	G. H. Everson	409,944	Aug. 27	2636	691	48	1206
Metallic wheel	G. H. Everson	409,945	Aug. 27	2637	691	48	1206
Metallic wheel	J. A. Johnson	407,596	July 23	2375	615	48	490
Metallurgical furnace	C. Peifer	411,226	Sept. 17	1667	446	48	1611
Meter: *See* Electric meter. Gas-meter. Piston-meter. Rotary meter.							
Methyl alcohol from wood-pulp lyes. Obtaining	E. Meyer	407,442	July 23	2160	.....	48	446
Micrometer-gage	F. Holland	410,163	Sept. 3	41	11	48	1276
Micrometer-gage	F. Schlatter	407,903	July 30	2927	736	48	592
Micrometer-gage	L. S. Starrett and C. P. Fay	411,336	Sept. 24	2111	557	48	1700
Microscope	S. Frost	407,192	July 16	1763	461	48	360
Middlings-purifiers. Dust-collector for	J. M. Case	407,948	July 30	2901	756	48	596
Milk. Centrifugal machine for creaming	C. F. Larsen	406,746	July 9	1084	288	48	220
Milk-cooling device	J. W. Wagner	408,943	Aug. 13	1133	299	48	905
Milk delivery and shipping can	C. E. Hinman and T. E. McCracken	407,207	July 16	1786	468	48	365
Milk. Preparing flour from curd of	W. Gerbel	411,717	Sept. 24	2386	.....	48	1758
Mill: *See* Cane-mill. Cider-mill. Crushing and grinding mill. Fanning-mill. Flour-mill. Grinding-mill. Grinding and crushing mill. Pulverizing-mill. Rolling-mill. Saw-mill. Windmill.							
Mill	C. F. Walters and W. N. Gartside	407,751	July 23	2597	672	48	533
Mill appliance	J. Kennedy and S. Forter	410,108	Aug. 27	2887	758 / 759	48	1253
Mill for treating fiber-yielding materials	J. D. Stanley	408,142	July 30	3197	835	48	651
Mill-signal	W. H. Donner	410,502	Sept. 3	565	152	48	1379

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drf.	Official Gazette. Vol.	Official Gazette. Page.
Milling-cutters. Making	C. C. Tyler	408,446	Aug. 6	360	95	48	750
Millstone	C. J. Potter	406,954	July 16	1401	368	48	290
Millstone-dress	J. Boehnlein	407,326	July 23	1986	512	48	489
Mining-machine	A. J. Cooper	409,772	Aug. 27	2389	627	48	1158
Mining-machine and apparatus for operating the same	F. M. Lechner	411,200	Sept. 17	1630	434	48	1603
Mining machine. Coal	H. C. Sergeant	411,305	Sept. 17	1780	476 / 477	48	1632
Mining-machine cutter	E. E. Carter	409,138	Aug. 13	1436	377	48	963
Mirror	J. N. Richardson	410,994	Sept. 10	1212	327	48	1512
Mirror-stand	J. Kintz	409,153	Aug. 13	1459	385	48	967
Mirrors or similar objects. Adjustable support for	J. R. Perkins	408,534	July 9	770	209	48	161
Miter-box and picture-frame clamp. Combined	H. C. Marsh	408,248	Aug. 6	69	16	48	692
Miter-machine	J. J. Cowell	409,455	Aug. 20	1906	504 / 505	48	1063
Mitten, &c	J. Arbuckle	406,690	July 9	1007	270	48	204
Moistener-pad	C. A. Pratt	408,580	Aug. 6	480	126	48	773
Mold: *See* Brick-mold. Clip-mold.							
Mold-forming device	J. J. Carr	409,666	Aug. 27	2225	584	48	1128
Molds. Machine for making sand	J. J. Carr	409,667	Aug. 27	2226	585 / 586 / 587	48	1128
Molding	J. J. Carr	408,579	Aug. 6	576	150	48	790
Molding-cutter	E. Benjamin	410,572	Sept. 10	666	177	48	1405
Molding-machine	C. L. Goehring	410,887	Sept. 10	1161	312 / 313	48	1501
Molding machine. Sand	F. G. Leeder	409,471	Aug. 20	1931	511	48	1068
Molding machine. Sand	M. R. Moore	408,386	Aug. 6	270	67	48	731
Molding plastic materials. Machine for	F. C. Daum	406,707	July 9	1027	275 / 276	48	207
Molding sash-weights, &c. Apparatus for	A. S. Hodges	411,441	Sept. 24	1981	525 / 526	48	1674
Molding sheaves	E. Riley	409,117	Aug. 13	1404	370	48	956
Molding-strip. Metallic	L. L. Sagendorph	407,694	July 23	2509	648	48	515
Moldings. Machine for coating and embossing	H. Zitzewitz	407,847	July 30	2743	713	48	566
Money-box	M. Emanuel	409,778	Aug. 27	2389	622	48	1160
Monument	J. H. Webb	408,776	Aug. 13	881	233	48	656
Mooring. Electro-magnetic	H. P. Wellman	408,778	Aug. 13	883	236	48	856
Mop	C. A. Bacon and H. F. Low	408,571	Aug. 6	565	148	48	788
Mop-grip	J. H. Ware	406,410	July 2	550	154	48	110
Mop-head	H. F. Low	408,495	Aug. 6	443	116	48	766
Mop-wringer	W. P. Tracy	406,550	July 9	790	214	48	165
Mortar from freezing. Compound for preventing	G. Garrell	409,397	Aug. 20	1829	.....	48	1046
Mosquito-canopy	I. E. Palmer	406,178	July 2	220	60	48	44
Mosquito-net frame and sham-pillow holder	W. Tennison	411,073	Sept. 17	1430	383	48	1565
Motion. Apparatus for reversing rotary	G. Layng	406,586	July 9	936	226	48	172
Motion. Brake for controlling rotary	F. W. Kless	407,550	July 23	2318	599	48	478
Motion. Mechanism for converting	A. Kaiser	409,149	Aug. 13	1450	381 / 382 / 600 / 601	48	966
Motion. Mechanism for converting and reversing	T. C. Thomas	407,555	July 23	2323	599	48	479
Motive power	J. P. Schmucker	411,065	Sept. 17	1413	377	48	1560
Motive power. Transforming heat energy into	J. J. McTighe	411,605	Sept. 24	2221	591	48	1734
Motor: *See* Car-motor. Churn-motor. Current-motor. Electric motor. Gas-motor. Hydrocarbon-motor. Mechanical motor. Railway-motor. Sewing-machine motor. Spring-motor. Steam-motor. Toy motor. Vehicle-motor. Water-motor.							
Motor	H. Keller	410,105	Aug. 27	2882	756	48	1252
Motor	E. B. Newcomb	407,942	July 30	2898	752	48	593
Motor	J. R. Peck and M. Rozselle	409,231	Aug. 20	1576	416	48	997
Motor-engine worked by the combustion of spray of petroleum	N. A. Otto	407,234	July 16	1830	478	48	374
Movement-cure apparatus	H. L. Hopkins	407,071	July 16	1502	411	48	321
Mower	A. B. Graham	408,100	July 30	3125	818	48	639
Mower attachment. Lawn	D. Johnson	410,836	Sept. 10	1066	291	48	1487
Mower-frame	J. H. Jones	406,738	July 9	1060	285	48	215
Mower. Lawn	L. S. Brown	407,163	July 16	1715	447	48	351
Mower. Lawn	A. Graham	411,496	Sept. 24	2056	544	48	1689
Mower. Lawn	W. A. Loud	410,366	Sept. 3	358	95	48	1339
Mower. Lawn	C. A. Olcott	408,426	Aug. 6	337	87	48	745
Mower. Lawn	L. Wennega	408,558	Aug. 6	545	143	48	784
Mowers. Attachment for lawn	F. A. De Land	406,433	July 9	591	166	48	128
Mowers. Grass-catching attachment for lawn	G. C. Miller	408,653	Aug. 13	1299	343	48	936
Mowing-machine	C. M. Brown	411,276	Sept. 17	1737	464	48	1625
Mowing-machine	L. O. Drew	411,591	Sept. 24	2199	584 / 585	48	1719
Mowing-machine	J. Garfield	406,520	July 9	747	204 / 205	48	156
Mowing-machine	G. R. Parker	408,133	July 30	3184	832	48	649
Mowing-machine	J. F. Steward	408,050	July 30	3048	797 / 796	48	624
Mowing-machine-knife grinder	O. H. Jones	411,245	Sept. 17	1692	452	48	1616
Mowing-machine-knife grinder	C. A. Kellogg	406,739	July 9	1071	285	48	216
Muff-block	G. F. Carter	406,260	July 2	323	89	48	65
Music-book holder	W. D. Newman	411,295	Sept. 17	1759	471	48	1620
Music-holder	O. S. Donnell	411,280	Sept. 17	1743	465	48	1636
Music-leaf turner	G. Bettini	408,908	Aug. 13	1083	284 / 285	48	895
Music-leaf turner	L. N. Frymire and F. S. Derr	411,431	Sept. 24	1968	523	48	1672
Music-leaf turner	W. B. Jackson	408,977	Aug. 13	1186	312	48	914
Music-leaf turner	J. E. Nightingale	411,052	Sept. 17	1395	374	48	1557

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Music-rack. Knockdown	J. A. Lohagen	406,921	July 16	1354	355	48	221
Music-stand	A. W. Sibley	411,111	Sept. 17	1503	398	48	1577
Musical instrument	C. W. Burgess	409,315	Aug. 20	1707	449	48	1022
Musical instrument	J. C. Deagan and J. Carroll	406,655	Aug. 6	694	179	48	812
Musical instrument. Mechanical	M. Gally	409,678	Aug. 27	2251	592	48	1133
Musical instruments. Making barrels of	C. C. Carpenter, 3d, and L. A. Brott	410,875	Sept. 10	1141	307	48	1497
Musical instruments. Touch-regulating device for	W. H. Ivers	406,913	July 16	1343	352	48	220
Musician's exercising device	E. S Bonelli	410,748	Sept. 10	957	257 / 258	48	1458
Mustache-protector	J. O. Hibbard	408,013	July 30	3000	782	48	614
Nail: *See* Boot or shoe nail. Shoe-nail. Heel-nail.							
Nail-blank plate	M. Chase	411,278	Sept. 17	1742	465	48	1625
Nail-extractor	A. Rosenberger	407,371	July 23	2048	530	48	423
Nail-extractor and box-opener. Combined	D. C. Hawkins	409,355	Aug. 20	1766	465	48	1033
Nail for trunks, &c	G. Crouch	407,468	July 23	2198	567	48	453
Nail or spike blank sharpener	J. T. Jones	408,348	Aug. 6	211	54	48	721
Neck-wear box	E. R. Procter	409,703	Aug. 27	2291	602	48	1140
Necklace-clasp	A. Keller	408,308	Aug. 6	151	38	48	709
Neckscarf	E. T. Howard	406,649	July 9	946	256	48	193
Neckscarf-fastener	E. J. Friedland	410,732	Sept. 10	932	250	48	1453
Necktie	M. W. Bruce	407,811	July 30	2693	699	48	557
Necktie-fastener	H. W. Atwater	411,001	Sept. 17	1323	357	48	1543
Necktie-fastener	A. Beauland	407,508	July 23	2248	580	48	463
Necktie-fastener	E. Swem	411,136	Sept. 17	1537	410	48	1585
Needle	J. Cook	411,325	Sept. 17	1808	483	48	1637
Needle-threader and thread-cutter combined							
Needles. Machine for polishing the eyes of	P. M. Beers	407,324	July 23	1958	510 / 511	48	408
Negative. Stripped	F. Schmalz	409,507	Aug. 20	1960	523	48	1077
Nest or coop. Hen's	P. Culp	408,828	Aug. 13	961	255	48	871
Net. Fish-landing	C. E. White	407,709	July 23	2367	633	48	519
Nickel. Refining	P. Manhes	409,992	Aug. 27	2694	.....	48	1217
Nipple-holder	J. F. Guthrie, Jr	406,834	July 9	1226	325	48	246
Nipple-holder	H. D. Harmer	407,292	July 16	1914	498	48	280
Nipple-holder	J. C. Williams	406,411	July 2	550	154	48	110
Nipple-holder	H. M. Hanmore	406,644	July 9	940	254	48	192
Non-heat-conducting fabric	H. L. Palmer	410,671	Sept. 10	819	220	48	1434
Non-heat-conducting handle	E. K. Rea	406,061	July 2	59	18	48	14
Nose-ring for cattle	J. K. Griffith	411,519	Sept. 24	2087	551	48	1695
Nozzle. Tap	C. H. Davids	410,958	Sept. 10	1254	338	48	1590
Numbering device	J. R. Carter	409,920	Aug. 27	2598	681	48	1198
Numbering machine. Paper							
Numbering of checks, tickets, &c. Apparatus for the consecutive	J. Phillips	410,673	Sept. 10	821	220 / 221	48	1434
Nut for vehicles. Top-prop	C. L. Baker	407,564	July 23	2236	604	48	482
Nut-lock	J. L. Arnold and G. W. Goldinger	409,766	Aug. 27	2279	624	48	1156
Nut-lock	A. Aymond and H. La Rue	407,317	July 23	1947	507	48	405
Nut-lock	C. E. Jenkins	409,204	Aug. 20	1534	400	48	989
Nut-lock	H. Kleman	411,125	Sept. 17	1524	407	48	1583
Nut-lock	H. H. Kurtz	406,842	July 9	1235	327	48	247
Nut-lock	W. N. Offutt	411,674	Sept. 24	2324	616	48	1745
Nut-lock	A. J. Perry	406,953	July 16	1400	367	48	220
Nut-lock	W. A. Preston	407,686	July 23	2495	645	48	512
Nut-lock	A. Reed	410,445	Sept. 3	488	130	48	1363
Nut-lock	N. T. Scott	406,150	July 2	177	51	48	36
Nut-lock	A. Spear	411,265	Sept. 17	1719	460	48	1621
Nut-lock	D. Steiner	411,306	Sept. 17	1783	477	48	1633
Nut-lock	A. D. Van Bibber	406,245	July 2	305	84	48	61
Nut-lock	S. Winsor, W. G. Holt, and P. B. Gilbert	406,074	July 2	72	21	48	16
Nut. Top-prop	A. Searls	407,904	July 30	2928	736	48	582
Nut-washing machine	J. J. Phillips	410,016	Aug. 27	2730	717	48	1224
Nut-wrench	J. B. Meier	410,965	Sept. 10	1303	351	48	1529
Nuts, grain, &c. Apparatus for drying	J. J. Phillips	410,017	Aug. 27	2731	718	48	1224
Nuts, &c. Means for cleaning and drying	J. J. Phillips	410,018	Aug. 27	2732	718	48	1224
Nuts. Treating	A. H. Pratt	407,684	July 23	2402	644	48	511
Oar	H. F. Hicks	406,482	Aug. 6	417	106	48	761
Obstetrical instrument	C. D. Bobo	411,572	Sept. 24	2165	573	48	1711
Oil. Apparatus for vaporizing	H. Cottrell	406,503	July 9	719	187 / 188	48	151
Oil-burner	J. Bragg	409,556	Aug. 20	2043	536 / 538	48	1069
Oil-burner. Injector	W. N. Edson	407,065	July 16	1556	409	48	319
Oil-can	A. A. Arnold	410,342	Sept. 3	326	85	48	1332
Oil-can	A. B. Shaw	410,238	Sept. 10	1229	331	48	1515
Oil-cup	E. Lunkenheimer	409,315	Aug. 20	1554	411	48	993
Oil purifying and refining apparatus	C. Dorn and E. Noppel	411,646	Sept. 24	2281	603	48	1736
Oil. Refining mineral	J. K. Field	408,472	Aug. 6	404	.....	48	759
Oil. Vaporizing	H. Cottrell	406,504	July 9	722	188 / 189	48	152
Oil-wells. Operating	M. Lytle	406,362	July 2	476	130	48	95
Oils. Apparatus for burning hydrocarbon	E. F. Edgar	410,226	Sept. 10	1074	289	48	1485
Oils. Apparatus for burning hydrocarbon	J. S. Hull	411,163	Sept. 17	1488	395	48	1574
Oils. Refining	J. A. Dubbs	407,182	July 16	1746	.....	48	357
Oiling cartridge. See	A. H. Walker	409,886	Aug. 27	2554	669	48	1189
Oiling rocket. See	A. H. Walker	411,479	Sept. 24	2034	539	48	1684
Ointment	H. G. Turley	411,077	Sept. 17	1443	.....	48	1566
Opera-glass holder	G. Isley	406,217	July 2	267	74	48	53
Opera-glass holder	E. B. Meyrowitz	411,527	Sept. 24	2099	554	48	1697
Opera or field glass	A. B Clements	409,927	Aug. 27	2607	689	48	1200
Optical instruments. Astigmatic eye-piece for	J. Kornblum, J. A. Brashear, and P. Painter	406,725	Aug. 13	810	213	48	840
Order-holder	J. F. Brown	409,827	Aug. 27	2474	645	48	1173

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Ordnance. Breech-loading	H. T. J. Thronsen	408,637	Aug. 6	657	171 / 172	48	806
Ordnance. Operating	A. C. Koerner	407,018	July 16	1492	390	48	307
Ordnance. Training mechanism for	A. C. Koerner	408,882	Aug. 13	1046	276 / 277	48	868
Ore-concentrator	M. B. Dodge	406,201	July 2	247	68, 69	48	49
Ore-concentrator	S. Porter	411,609	Sept. 24	2229	593	48	1725
Ore-concentrator belt	J. M. Adams	409,091	Aug. 13	1364	359	48	948
Ore-concentrator belt	J. M. Adams	409,092	Aug. 13	1365	359	48	948
Ore concentrator. Dry	G. T. Chaudefosse	406,333	July 2	438	121 / 122	48	88
Ore concentrator. Dry	C. F. Jacobson	409,589	Aug. 20	2097	553	48	1099
Ore-crusher	G. W. Weller	409,084	Aug. 13	1348	356	48	945
Ore-roasting furnace	D. R. S. Galbraith	408,476	Aug. 6	408	106	48	759
Ore-separator	S. E. Griscom	409,099	Aug. 13	1375	363	48	950
Ore-separator	J. Jenkins	407,531	July 23	2274	589	48	469
Ores. Reducing metallic	M. Graff and J. Johnson	406,210	July 2	258	.....	48	52
Ores. Smelting	F. L. Bartlett	406,870	July 16	1221	336 / 337	48	266
Organ. Mechanical	E. S. Votey	407,601	July 30	2676	695	48	554
Organ-pedal	G. L. Foster	407,005	July 16	1479	385	48	304
Organ. Reed	E. S. Votey	407,600	July 30	2673	694	48	554
Organ. Reed	M. S. Wright	409,814	Aug. 27	2457	645	48	1171
Organ stop-action. Reed	J. Lane	411,453	Sept. 24	1998	530	48	1677
Organs. Driving and governing mechanism for	E. S. Votey	407,602	July 30	2677	695	48	554
Organs. Reed and fine pipe for	J. Stafford	411,135	Sept. 17	1536	410	48	1585
Ornament and advertising device	G. W. Browne	407,636	July 23	2471	630	48	500
Ornamenting open-mesh woven materials with plastics.	J. H. Harding	408,710	Aug. 13	790	208	48	837
Oven. Baker's	G. E. Bailey	411,180	Sept. 17	1599	425	48	1596
Oven. Baking	C. F. Hubbard	406,910	July 16	1338	350 / 351	48	277
Oven. Baking	J. H. Miller	410,913	Sept. 10	1193	322 / 323	48	1507
Oven. Cooking	C. F. Hubbard	406,911	July 16	1340	351	48	278
Oyster-opener	J. P. Huppmann	411,361	Sept. 17	1887	504	48	1651
Oyster-opening implement	G. W. Thompson	408,939	Aug. 13	1123	297	48	904
Ozone apparatus	H. A. B. H. de Vars	409,903	Aug. 27	2577	675	48	1194
Package. Utility	A. R. Waller	407,910	July 30	2835	738	48	583
Packing	J. Allan	411,502	Sept. 24	2150	569	48	1708
Packing and refrigerating vessel	J. Barker	410,481	Sept. 3	535	143	48	1373
Packing and sales case	A. E. Berlin and P. Wright	407,918	July 30	2856	744	48	587
Packing-case	G. W. Banker	408,664	Aug. 13	742	194	48	898
Packing-case	H. A. Moos	406,145	July 2	171	49	48	35
Packing for stuffing-boxes	C. H. Ensign and P. B. Wright	408,407	Aug. 6	311	79	48	730
Packing. Journal	H. B. Devlan	411,396	Sept. 17	1809	.....	48	1637
Packing. Piston	L. P. Lawrence	408,981	Aug. 13	1191	314	48	916
Packing. Piston	E. F. Peacock	407,370	July 23	2046	530	48	423
Packing. Piston-rod	F. G. Kellogg	407,533	July 23	2277	590	48	469
Packing. Piston-rod	H. H. Philper	410,918	Sept. 10	1302	325	48	1509
Packing-ring	J. J. Sullivan	410,127	Aug. 27	2994	767	48	1259
Packing-rings. Constructing spring	F. M. Metcalf	410,486	Sept. 3	457	122	48	1358
Packing. Rod	C. C. Jerome	409,791	Aug. 27	2421	634	48	1164
Packing. Steam-pipe	C. T. Lee	411,384	Sept. 17	1891	505	48	1652
Packing-vessels. Cover for	L. L. Frierson	410,512	Sept. 3	578	155	48	1382
Pad: *See* Eyeglass nose-pad. Moistener-pad. Hoof-pad. Ventilated pad. Marking-pad.							
Paddle hydro-motor	E. Pombas	411,167	Sept. 17	1561	421	48	1593

Paddle-wheel. Feathering	J. Williamson	409,440	Aug. 20	1862	497	48	1058
Padlock	M. Rueckert	411,054	Sept. 17	1396	375	48	1557
Padlock	A. Richards, Sr	410,024	Aug. 27	2741	721	48	1226
Padlock	M. Rueckert	410,027	Aug. 27	2747	722	48	1226
Pail, Shipping	H. Howe	408,108	July 30	3142	821	48	642
Paint compound	N. R. Bonner and I. L. Burlingame	409,904	Aug. 27	2578	.....	48	1194
Pan: *See* Baking-pan. Drip-pan. Defecating-pan. Dust-pan.							
Panel	H. A. Benedict	406,618	July 9	874	242	48	163
Paper-bag and twine holder	C. A. Lowry	409,213	Aug. 20	1552	410	48	992
Paper-bag holder	H. T. Hart	406,044	July 2	32	9	48	9
Paper-bag machine	H. C. Burdick	407,813	July 30	2695	699	48	557
Paper-bag machine	E. E. Claussen and G. Mortson	411,544	Sept. 24	2122	560 / 561	48	1703
Paper-bag machine	W. A. Lorens	410,843	Sept. 10	1098	295 / 296	48	1489
Paper-bag machine	W. A. Lorens and E. E. Claussen	410,841	Sept. 10	1094	292 / 293 / 294	48	1488
Paper-bag machine	W. A. Lorens and W. H. Honiss	410,842	Sept. 10	1097	294 / 295	48	1488
Paper-bag machine	F. M. McCulla	407,300	July 16	1923	501	48	391
Paper-bag machine	C. B. Stilwell	410,126	Aug. 27	2923	767	48	1259
Paper-bag machinery	C. B. Stilwell	407,794	July 30	2656	688 / 689 / 690 / 691 / 692 / 693	48	551
Paper-bag machinery	C. B. Stilwell	410,122	Aug. 27	2919	766	48	1257
Paper-bag machinery	C. B. Stilwell	410,123	Aug. 27	2920	766	48	1258
Paper-bag machinery	C. B. Stilwell	410,124	Aug. 27	2921	767	48	1258

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Paper-bag machinery	C. B. Stilwell	410,125	Aug. 27	2922	767	48	1258
Paper bags. Making	W. A. Lorenz	411,288	Sept. 17	1752	469	48	1628
Paper bags. Manufacture of	H. C. Burdick	407,814	July 30	2697	706	48	558
Paper barrels. Manufacture of	A. Brab	410,726	Sept. 10	922	247 / 246	48	1452
Paper box	H. Roensch	407,964	July 30	2923	761	48	600
Paper box	C. Schwartz	407,494	July 23	2230	576	48	459
Paper box	P. O. Soper	411,398	Sept. 17	1912	516	48	1655
Paper-box-making machine	H. Henschel	408,712	Aug. 13	794	206 / 210	48	898
Paper-box-making machine	I. L. Sheldon and G. F. Bailey	410,033	Aug. 27	2752	724	48	1228
Paper-calendering machine	J. McLaughlin	411,051	Sept. 17	1393	374	48	1557
Paper-clip for writing-tablets	W. K. Crofford	410,580	Sept. 10	676	181	48	1407
Paper-coating machine	J. Prasch	410,921	Sept. 10	1205	325 / 326	48	1510
Paper-cutter	L. Ehrlich	407,518	July 23	2258	584	48	465
Paper-cutter	L. Ehrlich	407,519	July 23	2259	584	48	465
Paper-cutting machines. Cutting-stick for	J. E. Hamilton	407,861	July 30	2761	716	48	569
Paper-fastener	G. W. McGill	406,759	July 9	1109	294	48	224
Paper-feeding machine	R. Barnet	408,309	Aug. 6	10	3	48	680
Paper. Finishing	Z. Crane, Jr.	406,505	July 9	724	199	48	152
Paper-folding machine	J. C. Kneeland	411,151	Sept. 17	1558	415	48	1589
Paper for cigarettes or other purposes. Machinery for cutting and winding strips of	L. Lacroix, Fils	409,408	Aug. 20	1840	485 / 486	48	1049
Paper-hanger's folding table	H. W. Allen	411,366	Sept. 17	1865	490	48	1648
Paper-hanging machine	K. L. Jones	410,642	Sept. 10	774	210	48	1421
Paper-hangings. Composition for the treatment of	N. W. Helme, R. Stockdale, and R. N. Helme.	407,008	July 16	1462	.....	48	305
Paper holder and cutter. Roll	L. Ehrlich	408,598	Aug. 6	604	156	48	795
Paper holder and cutter. Roll	L. Ehrlich	409,028	Aug. 13	1267	330	48	980
Paper holder and cutter. Roll	E. Hotchkiss	408,621	Aug. 6	636	165	48	802
Paper holder and cutter. Roll	A. Q. Ross	408,752	Aug. 13	844	225	48	848
Paper holder and cutter. Roll	W. H. Tivy and L. Ehrlich	408,551	Aug. 6	536	140	48	781
Paper holder and cutter with printing attachment	C. J. McRae and H. C. Baker	407,105	July 16	1636	439	48	336
Paper holder and printer. Combined wrapping	E. B. Weston	406,318	July 2	413	111	48	83
Paper holder, cutter, and printing device. Combined	L. A. McCord	407,489	July 23	2225	574	48	458
Paper holder, cutter, stamper, and measurer. Combined roll-	C. R. Williamson	408,563	Aug. 6	555	149	48	786
Paper holder, printer, and cutter. Roll wrapping	G. L. Kennedy	410,504	Sept. 10	695	186	48	1410
Paper holder. Toilet	W. E. Gibbons	407,345	July 23	2000	519	48	415
Paper inimitable. Rendering	A. Rimanoczy	411,059	Sept. 17	1405	.....	48	1559
Paper-jogger	W. Reiffel	411,750	Sept. 24	2429	643	48	1767
Paper-machine	J. Kingsland, Jr.	407,534	July 23	2277	590	48	469
Paper. Machine for coating continuous strips of	O. and H. O. Woodworth	409,892	Aug. 27	2563	671	48	1191
Paper-making machine	J. Hatch	409,201	Aug. 20	1530	405	48	988
Paper-making machine	C. and F. Symons	411,207	Sept. 17	1641	433	48	1605
Paper-making machines. Dandy-roll for	R. Brown	407,992	July 30	2966	770	48	607
Paper. Manufacture of waxed	E. G. Sparks	410,610	Sept. 10	1052	272	48	1480
Paper. Manufacturing bundles of toilet	O. H. Hicks	411,193	Sept. 17	1616	449	48	1600
Paper or other sheets from a pile. Mechanism for feeding	E. Woodward	407,985	July 30	2954	768	48	606
Paper-ornamenting machine	C. A. Dean and F. H. Robie	410,154	Sept. 3	94	7	48	1273
Paper-ornamenting machine	C. A. Dean and F. H. Robie	410,155	Sept. 3	96	8	48	1274
Paper. Printing-holder for roll wrapping	G. L. Kennedy	410,505	Sept. 10	696	180	48	1411
Paper-pulp. Beating-engine for	E. Conley	407,641	July 23	2439	632	48	502
Paper-pulp screen	C. H. Campbell	407,095	July 30	2971	773 / 774	48	608
Paper-reel	E. J. and C. E. Pope	411,608	Sept. 24	2227	582	48	1725
Paper-roll holder and printer	G. L. Kennedy	410,503	Sept. 10	694	180	48	1410
Paper. Shell for winding	G. B. Farrington and N. Curtis	411,140	Sept. 17	1542	412	48	1586
Paper tubes. Machine for crimping the ends of	R. K. Hill and H. C. Foote	410,518	Sept. 3	586	177	48	1383
Paper vessel	W. Foglesong	411,654	Sept. 24	2293	609	48	1739
Parer. Cocoanut	A. W. Lewis	411,598	Sept. 24	2211	583 / 589	48	1721
Paring and coring machine	S. Lyon	409,111	Aug. 13	1394	367 / 368	48	954
Passenger-register	H. Kershaw and T. Sutcliffe	406,142	July 2	166	46	48	34
Paste. Dry flour	J. H. Day	406,631	July 9	913	.....	48	187
Paste. Making dry flour	J. H. Day	406,270	July 2	337	.....	48	68
Pasteboard boxes. Blank for	T. Remus	407,493	July 23	2230	576	48	459
Pattern: *See* Garment-pattern.							
Patterns and models. Producing garment	E. Stahl	410,383	Sept. 3	379	101	48	1344
Patterns for garments. System of laying out	C. Schubert	411,686	Sept. 24	2343	619 / 620	48	1749
Pavement. Flag-stone and cement	C. Kuhl	406,289	July 2	361	99	48	73
Pavement. Vulcanite	W. C. Murdock	408,250	Aug. 6	71	.....	48	6 3
Paving composition	C. Richardson	409,504	Aug. 20	1975	.....	48	1076
Pawl-and-ratchet mechanism	H. H. Dillie	408,090	July 30	3089	822	48	634
Pea-hulling machine	W. E. Jones	408,627	Aug. 6	644	167	48	803
Pedals. Stop for	S. T. White	407,269	July 16	1882	491	48	384
Pegging-machine	J. E. Bickford	409,739	Aug. 27	2324	611 / 612	48	1146
Pelts, &c. Machine for removing water-hairs from	A. Hedbavny	408,879	Aug. 13	1042	275	48	867
Pen-cleaner	R. W. Pope	410,919	Sept. 10	1203	325	48	1509
Pen. Fountain	J. D. Bray	408,909	Aug. 13	1085	285	48	893
Pen. Fountain	D. C. Demarest	407,999	July 30	2977	775	48	610
Pen. Fountain	D. C. Demarest	408,000	July 30	2979	776	48	610
Pen. Fountain	A. M. Fox	409,952	Aug. 27	2643	693	48	1207
Pen. Fountain	J. Friedmann	407,585	July 23	2262	612	48	468
Pen. Fountain	J. Friedmann	407,586	July 23	2263	612	48	468
Pen. Fountain	J. Morris	407,412	July 23	2105	544	48	434
Pen. Fountain	C. Stockmann	408,375	July 2	402	107	48	98
Pen-holder	J. P. Egan	407,517	July 23	2257	583	48	465

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pen-holder. Electric	W. C. Holmes	409,908	Aug. 27	2669	709	48	1212
Pens. Manufacture of	J. T. Foster	410,272	Sept. 3	209	55	48	1310
Pencil-clasp	G. H. Kent	411,450	Sept. 24	1996	529	48	1677
Pencil-sharpener	W. H. Lamson	411,526	Sept. 24	2098	533	48	1697
Pencil-sharpener	E. G. Phillips	409,202	Aug. 27	2446	630	48	1106
Pencil-sharpener	B. T. Whitehouse	409,360	Aug. 20	1502	474	48	1041
Pencil-sharpener	A. Thurber	411,173	Sept. 17	1598	422	48	1595
Pencil-sharpener and paper-weight. Combined	E. Hambujer	406,900	July 16	1324	347	48	274
Pencil sharpener. Slate	H. Kienth	411,596	Sept. 24	2209	588	48	1721
Percolator	A. E. La Roe	410,643	Sept. 10	776	210	48	1427
Perforating machine. Paper	W. Fallon	407,068	July 16	1560	409	48	320
Perforating-tool	O. Armbruster	407,464	July 23	2194	565	48	452
Perfume-carrier	S. C. Munro	406,459	July 9	646	181 / 182	48	139
Permutation-lock	J. M. Pfaum	409,496	Aug. 20	1902	519	48	1074
Petroleum and other hydrocarbons. Apparatus for vaporizing and burning	J. Wilson and A. Mason	408,644	Aug. 6	676	175	48	808
Petroleum. Apparatus for burning	J. Wilson and A. Mason	408,643	Aug. 6	674	175	48	808
Petroleum-burner	F. G. Lilly	408,245	Aug. 6	67	16	48	692
Petroleum-distillates. Purifying and deodorizing	H. R. Angus	407,274	July 16	1888	492	48	384
Petroleum-furnace	J. A. S. Gray	409,576	Aug. 20	2077	548	48	1095
Phonogram-blank	T. A. Edison	406,569	July 9	815	220	48	169
Phonogram-blank	T. A. Edison	406,576	July 9	894	223	48	170
Phonogram-blank	T. A. Edison	406,571	July 9	816	221	48	169
Phonogram-blanks. Treating	W. B. Tattersall	408,998	Aug. 13	1213	320	48	980
Phonogram-cylinder	H. F. Searle	407,127	July 16	1603	436	48	342
Phonogram-receiving box	T. A. Edison	406,568	July 9	814	220	48	169
Phonograph	T. A. Edison	406,570	July 9	815	221	48	169
Phonograph	T. A. Edison	406,572	July 9	817	221	48	169
Phonographs. Automatic determining device for	T. A. Edison	406,573	July 9	819	222	48	170
Phonographs. Automatic determining device for	T. A. Edison	406,574	July 9	821	222	48	170
Phonographs. Automatic determining device for	T. A. Edison	406,575	July 9	822	223	48	170
Phonographs. Automatic determining device for	T. A. Edison	407,728	July 23	2551	661	48	534
Photographer's portable compartment for transferring plates.	S. Green	407,275	July 16	1890	492	48	385
Photographic camera	E. B. Barker	407,567	July 23	2364	612	48	488
Photographic camera	W. H. Fuller	409,874	Aug. 27	2537	664 / 665	48	1185
Photographic camera	G. Shorkley	408,451	Aug. 6	309	96, 97	48	752
Photographic cameras. Roll-holder for	E. B. Barker	409,618	Aug. 20	2140	.....	48	1107
Photographic developing-bath	C. Spiro	406,460	July 9	647	182	48	139
Photographic films. Support for	R. McNeill	409,981	Aug. 27	2683	704	48	1215
Photographic lens	H. E. Krogmann	406,299	July 2	378	103	48	76
Photographic-light apparatus	L. C. Overpeck	411,253	Sept. 17	1704	455 / 456	48	1618
Photographic negatives. Apparatus for holding and washing	W. K. Moody	407,050	July 16	1536	403	48	316
Photographic paper-roll holder	E. B. Barker	406,065	July 2	87	26	48	20
Photographic-plate holder	G. H. Carlisle	407,647	July 23	2447	634	48	503
Photographic roll-holder	G. Eastman	406,909	July 2	336	92	48	68
Photographic washing apparatus	J. W. Dalrymple	407,695	July 23	2510	648	48	515
Piano	F. Schaaf	409,325	Aug. 20	1730	452	48	1025
Piano-action	H. L. Hone	411,248	Sept. 17	1695	453	48	1617
Piano-action	H. Kranich and J. Bach	406,405	July 2	544	152	48	109
Piano-action	S. R. Perry	407,035	July 16	1516	396	48	312
Piano-action. Shifting	C. M. Richards	408,852	Aug. 13	997	264	48	878
Piano action. Upright	A. Richter	409,513	Aug. 20	1985	524	48	1078
Piano-case	H. W. Smith	410,293	Sept. 3	134	34	48	1294
Piano. Divisible upright	W. Umland	409,810	Aug. 27	2450	642 / 643	48	1170
Pianos. Device for cutting damper-felts for	J. Swenson	408,868	Aug. 13	1024	271	48	883
Pianos. Music-rack attachment for upright	H. Ziegler	407,053	July 16	1541	404	48	316
Pick	J. T. Boen	408,471	July 9	664	186	48	142
Picker: *See* Fruit-picker.							
Picture-exhibitor	J. Reits	406,255	July 2	316	87	48	62
Picture-hanger	W. M. Brinkerhoff	406,023	July 9	903	244	48	185
Picture-hanger	W. M. Brinkerhoff	409,644	Aug. 20	2163	575	48	1114
Picture-hanger. Adjustable	L. Messer	406,654	July 9	652	257	48	194
Pie-turner	W. E. Locke	408,053	July 30	3052	799	48	625
Pigeon-hole	W. H. Taylor	407,098	July 16	1624	425	48	334
Pigeon-hole case	D. C. Meehan	408,230	Aug. 6	47	11	48	687
Pigeon-hole case. Rotating	G. A. Goodrich	408,001	July 30	2990	776	48	612
Pigeon-holes. Metallic bottom plate for	I. L. Dunn	406,871	July 16	1263	337	48	987
Pigment. Apparatus for the manufacture of	F. L. Bartlett	409,620	Aug. 27	2464	.....	48	1172
Pigment-resist	J. Bracewell	406,809	July 16	1278	336	48	266
Pigments. Manufacturing	F. L. Bartlett	411,085	Sept. 17	1460	388	48	1569
Pile fabric	W. H. Balmforth	409,342	Aug. 20	1746	459	48	1029
Piles. Machine for cutting off	E. J. Weston	407,776	July 30	2632	682	48	546
Pillow. Folding	A. W. Harrison	411,351	Sept. 17	1649	494	48	1644
Pillow-sham adjuster	J. B. Pugh	407,307	July 16	1933	503	48	304
Pillow-sham holders. Combined bracket and clamp for	G. S. Tompkins and C. Whittingham.						
Pin: *See* Clothes-pin. Crank-pin. Rolling-pin. Safety-pin.							
Pincushion	W. O. Day	406,340	July 2	444	123	48	89
Pine fiber	W. Latimer	409,608	Aug. 20	2128	.....	48	1104
Pinion-holder for pinion-polishing machines	G. Nutting	410,558	Sept. 3	640	170	48	1394
Pipe: *See* Blow-pipe. Drain and soil pipe. Furnace-pipe. Sewer-pipe. Sheet-metal pipe. Stand-pipe. Tobacco-pipe.							
Pipe-bender	E. L. Burgoin	406,992	July 16	1461	382	48	301
Pipe. Bending and coiling	H. E. Fowler	408,005	July 30	2986	777 / 778	48	611

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Pipe-bending device. Metal	H. M. Brigham	411,756	Sept. 24	2439	646	48	1768
Pipe casing or conduit	A. and E. L. Wyckoff	409,265	Aug. 20	1625	430	48	1007
Pipe-clamp	W. Walker and J. B. Davis	410,816	Sept. 10	1060	284	48	1462
Pipe-coupler	C. F. Murdock	409,697	Aug. 27	2277	599	48	1138
Pipe-coupling	E. Beck	407,151	July 16	1694	442	48	347
Pipe-coupling	W. M. Brown, Jr	407,922	July 30	2860	745	48	587
Pipe-coupling	S. R. Dresser	406,035	July 2	22	7	48	7
Pipe-coupling	D. Kennedy, Jr	410,532	Sept. 3	628	168	48	1392
Pipe-coupling	D. Lippy	409,473	Aug. 20	1933	512	48	1068
Pipe-coupling	F. C. Rockwell	410,293	Sept. 3	240	62	48	1316
Pipe-coupling	E. U. Scoville	410,032	Aug. 27	2751	723	48	1288
Pipe-coupling	J. C. Sturgeon	409,121	Aug. 13	1408	372	48	957
Pipe-coupling	J. C. Sturgeon	409,122	Aug. 13	1411	373	48	958
Pipe-coupling	W. T. Taggart	409,127	Aug. 13	1419	373	48	959
Pipe coupling and branch. Combined detachable	I. B. Potts	407,682	July 23	2490	644	48	511
Pipe coupling and branch. Combined detachable	I. B. Potts	407,683	July 23	2491	644	48	511
Pipe-coupling. Detachable	I. B. Potts	406,060	July 2	58	16	48	14
Pipe coupling. Steam	F. Hanson	410,547	Sept. 3	631	{166 167}	48	1390
Pipe-coupling. Valved	H. Trask and W. N. Carmichael	408,273	Aug. 6	105	28	48	700
Pipe coupling. Waste	W. H. H. Davis	406,888	July 16	1305	342	48	271
Pipe-covering	I. P. Wendell	411,115	Sept. 17	1507	400	48	1579
Pipe-cutter	A. V. Anderson	406,077	July 2	76	22	48	17
Pipe elbow or section	C. B. Cooper	409,631	Aug. 20	2167	571	48	1111
Pipe-elbows. Making	C. B. Cooper	410,534	Sept. 3	605	162	48	1387
Pipe-expander	J. and P. Jardine	410,262	Sept. 3	232	58	48	1313
Pipe-forming machine	C. E. Ashworth	410,630	Sept. 10	750	205	48	1423
Pipe-hanger	J. Collis	411,318	Sept. 24	2087	551	48	1695
Pipe-holder	P. McCauley	406,949	July 9	1246	330	48	949
Pipe-joint	H. Johnson	406,719	Aug. 13	803	212	48	839
Pipe-joint. Ball-and-socket	J. C. Sturgeon	409,124	Aug. 13	1414	373	48	958
Pipe-joint. Detachable	I. B. Potts	407,681	July 23	2489	644	48	511
Pipe-joint. Flexible	D. W. Magee	409,216	Aug. 20	1555	411	48	993
Pipe. Machine for bending and coiling	H. E. Fowler	408,006	July 30	2387	{776 778}	48	612
Pipe. Machine for making curved	P. J. Fish	411,023	Sept. 17	1352	363	48	1549
Pipe. Machine for making curved lead	G. W. Wicks	407,384	July 23	2064	534	48	426
Pipe-making machine. Curved	H. B. Camp	410,531	Sept. 3	602	160	48	1386
Pipe. Making square metal	W. B. Sandford	410,203	Sept. 3	113	29	48	1291
Pipe or boiler covering. Steam	P. Carey	411,091	Sept. 17	1470	390	48	1571
Pipe or hose coupling	J. C. Sturgeon	409,123	Aug. 13	1413	373	48	958
Pipe or tube	J. C. Bayles	406,332	July 2	435	120	48	87
Pipe. Rolls for the manufacture of square	W. B. Sandford	410,202	Sept. 3	111	29	48	1291
Pipe-thread-cutting machine	T. McFadden and D. Rosser	407,413	July 23	2106	{544 545}	48	434
Pipe-threading machine	R. P. Curtis	406,092	July 2	99	29	48	22
Pipe-wrench	J. A. Giles	408,479	Aug. 6	412	107	48	760
Pipe-wrench	J. D. Hodge	411,502	Sept. 24	2063	546	48	1690
Pipe-wrench	M. W. Morehouse and N. S. Kellogg	406,177	July 2	218	58	48	43
Pipe-wrench	O. C. Stanley	411,266	Sept. 17	1720	460	48	1621
Pipes. Anti-freezing device for water	C. Miller	410,693	Sept. 10	895	239	48	1442
Pipes. Apparatus for testing and disinfecting drain or soil	W. S. Clark	409,013	Aug. 13	1241	328	48	925
Pipes. Glass or porcelain lined metal T-piece or elbow for	R. Morant	409,112	Aug. 13	1398	369	48	955
Pipes. Laying submarine	G. H. Breymann	409,008	Aug. 13	1230	325	48	923
Pipes. Machine for expanding the ends of	G. Matheson	409,994	Aug. 27	2697	709	48	1217
Pipes. Machine for expanding the ends of	G. Matheson	410,000	Aug. 27	2707	711	48	1219
Pipes or tubes for coupling. Preparing	J. Robertson	407,038	July 16	1363	{360 369}	48	313
Piston-meter	W. T. Fox	410,408	Sept. 3	423	111	48	1352
Piston-rod guide	M. Hastings	409,199	Aug. 20	1527	403	48	988
Piston-rods and piston-heads in cylinders. Device for adjusting	L. Finlay	408,381	Aug. 6	262	69	48	730
Pitcher. Ice	E. Playter	409,423	Aug. 20	1861	491	48	1053
Plaiting apparatus	M. E. Cartwright	406,086	July 2	89	23	48	20
Plaiting-machine	G. C. Parker	409,974	Aug. 27	2676	703	48	1213
Plane. Bench	G. Karrmann	410,710	Sept. 10	880	234	48	1446
Plane. Carpenter's	R. T. Torkelson	406,605	July 9	870	234	48	178
Plane. Molding	E. D. Johnson	409,405	Aug. 20	1838	484	48	1048
Plane. Rasping	C. S. Snowden	410,809	Sept. 10	1051	281	48	1480
Planers. Device for setting the tool-carriers of	J. W. Nist	410,290	Sept. 3	235	61	48	1315
Planing gear-teeth. Machine for	G. B. Grant	407,437	July 23	2132	558	48	444
Planing-machine	A. B. Hutchinson and E. F. Autenrieth	406,583	July 9	832	{220 221}	48	172
Planing-machine	S. A. Woods and J. R. Thomas	411,540	Sept. 24	2115	558	48	1701
Planing machine. Blind-slat	F. H. Van Houten	408,863	Aug. 13	1014	{268 269}	48	882
Planing-machine. Rotary	V. V. Lawrence	406,587	July 9	838	220	48	173
Plant-protector	L. B. Moore and M. S. Love	411,347	Sept. 17	1844	486	48	1643
Plant-protector	I. E. Sherman and W. T. Crouch	410,653	Sept. 10	786	212	48	1429
Plant-protector	C. M. Yarborough	409,133	Aug. 13	1428	376	48	961
Plant-setting machine	N. M. Chew	406,336	July 2	440	122	48	88
Plants. Removing vermin or scales from	E. P. Fowler	408,608	Aug. 6	615	.....	48	797
Planter	J. C. Lloyd	407,021	July 16	1406	372	48	306
Planter	L. Scofield	411,203	Sept. 17	1635	435	48	1604
Planter	A. S. Tragethon	411,626	Sept. 24	2253	{596 599}	48	1730
Planter and fertilizer-distributer. Combined seed	H. J. Davis, Jr	406,127	July 2	147	41	48	31
Planter and fertilizer-distributer. Seed	J. A. Childs and W. E. Muir	411,215	Sept. 17	1653	441	48	1608
Planter and seed-drill. Potato	W. L. Coffin	408,565	Aug. 6	583	152	48	791
Planter. Check-row corn	G. L. Banks	410,140	Sept. 3	1	1	48	1269
Planter. Check-row corn	D. H. Dillon	407,179	July 16	1741	{435 436}	48	356
Planter. Check-row corn	S. D. Reynolds	409,502	Aug. 20	1972	521	48	1076

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Planter. Corn	R. H. Avery	407,848	July 30	2745	713	48	566
Planter. Corn	G. J. Cline	407,168	July 16	1722	449	48	352
Planter. Corn	G. H. Evans, Jr	411,282	Sept. 17	1745	466	48	1626
Planter. Corn	J. G. Harris	410,707	Sept. 10	875	235	48	1445
Planter. Corn	J. C. Hart	410,890	Sept. 10	1167	314	48	1502
Planter. Corn	C. Letot	410,904	Sept. 10	1185	320	48	1505
Planter. Cotton and corn	W. Watson	411,696	Sept. 24	2359	623	48	1732
Planter. Double-lister corn	C. W. Freyer	408,097	July 30	3121	817	48	638
Planter. Potato	C. Wright	406,811	July 9	1191	316	48	240
Planter. Potato or seed	W. F. Cummings and H. C. McDuffee	408,378	Aug. 6	258	64, 65	48	729
Planter. Seed	A. C. Smith	406,962	July 16	1413	371	48	292
Planter. Seed	B. O'Donnell	410,665	Sept. 10	715	192	48	1414
Planters. Marking and dropping attachment for corn	S. E. Gross	407,622	July 30	2708	703	48	559
Planting. Seed	I. C. Hart	406,215	July 2	265	.....	48	53
Plastering compound	A. T. Woodward	407,271	July 16	1884	.....	48	384
Plastic compound	J. L. Hastings	409,584	Aug. 20	2069	.....	48	1098
Plastic mineral composition	E. B. Barker	411,487	Sept. 24	2042	540	48	1686
Plate-washing frame							
Platform: *See* Dumping-platform.	W. H. Bradshaw	406,022	July 2	5	2, 3	48	3
Plow	A. I. Gale	408,906	Aug. 13	1166	308	48	911
Plow	J. B. Hawley	409,202	Aug. 20	1531	406	48	989
Plow	J. E. Holler	407,422	July 23	2213	571	48	438
Plow	J. P. Kirk	408,341	Aug. 6	63	14	48	691
Plow	J. W. Leas	411,342	Sept. 17	1838	491	48	1642
Plow	M. L. Rinehart	409,709	Aug. 27	2299	604	48	1141
Plow	C. C. Smalley	407,259	July 16	1867	487	48	381
Plow	W. H. and H. Smith	410,121	Aug. 27	2917	766	48	1257
Plow	G. B. St. John	410,659	Sept. 10	796	215	48	1431
Plow	I. W. Sylvester	410,218	Sept. 3	129	32	48	1253
Plow	J. O. Tigner and B. O. Hill	410,409	Sept. 3	519	139	48	1370
Plow	A. J. Ventzki	408,331	Aug. 6	191	48, 49	48	717
Plow	M. Wilson	407,029	July 23	2418	638	48	497
Plow	H. H. Sater	407,450	July 23	2172	560	48	447
Plow attachment	N. W. Williams	409,923	Aug. 20	2154	566	48	1109
Plow-beam	A. B. and T. A. Voelkerding	410,946	Sept. 10	1236	324	48	1517
Plow, Gang	H. G. Anderson	410,490	Sept. 3	533	143	48	1373
Plow or cultivator	J. Drader	411,650	Sept. 24	2285	608	48	1737
Plow, Rotary	W. L. Sexton	410,381	Sept. 3	377	100	48	1343
Plow-shovel	C. M. Herrey	406,733	July 9	1062	283	48	214
Plow, Sulky	E. A. Raaths	410,022	Aug. 27	2737	719	48	1226
Plow, Sulky	H. D. Terrell	406,677	July 9	982	264	48	200
Plows. Making heel-scrapers for	W. D. Lindsley	406,360	July 2	472	132	48	93
Plows. Seeding attachment for	B. A. Baker	408,283	Aug. 6	118	30	48	702
Plows. Stalk-cutter wheel for sulky	M. J. Kallaher and J. Mulrooney	407,955	July 30	2913	750	48	599
Plugs. Extension box and key for street gas or water	J. M. Cameron	409,917	Aug. 27	2594	680	48	1197
Plumb-bob	P. E. Hall, Sr	410,414	Sept. 3	434	115	48	1354
Plumber's adjustable bracket	H. Lilley	408,184	July 30	3271	854	48	663
Plumbers' hooks. Machine for making	R. and C. McAlpine	407,941	July 30	2887	751	48	593
Plumbers' use. Saw for	P. Kennedy, Jr	406,446	July 9	612	172	48	132
Pneumatic dispatch-tubes. Pneumatic switch for	P. Kennedy, Jr	406,447	July 9	613	173	48	132
Pneumatic dispatch-tubes. Switch for	W. Brede	407,055	July 16	1543	404	48	317
Pocket-knife	H. C. Hunt	407,863	July 30	2763	719	48	570
Pocket-knife	H. B. Weaver	410,390	Sept. 3	390	104	48	1345
Poison-guard	C. A. Danals	411,238	Sept. 17	1681	450	48	1614
Pole-changer. Automatic	J. Klotz and F. Kuschel	407,017	July 16	1491	389	48	307
Pole coupling. Carriage	J. G. Engliah	408,961	Aug. 13	1161	307	48	910
Pole crab. Carriage	J. P. Kline	408,242	Aug. 6	64	15	48	691
Pole or shafts for vehicles. Safety	J. H. Cunningham	408,379	Aug. 6	260	65	48	729
Pole. Sectional metal	A. Colburn	410,749	Sept. 10	959	238	48	1459
Polishing-wheel	T. C. Devlin	409,537	Aug. 27	2625	{688 689}	48	1204
Pool-register. Automatic	R. A. Paine	409,060	Aug. 13	1308	345	48	937
Pool-table	W. Earley	408,469	Aug. 6	400	105	48	758
Portable heater	A. Edwards	407,284	July 16	1903	495	48	388
Portfolio							
Post: *See* Fence-post. Hitching-post.							
Post-hole digger	J. C. Duclos	410,640	Sept. 10	772	209	48	1426
Post-hole digger	W. D. A. Gray and J. D. Klepper	411,295	Sept. 17	1749	467	48	1627
Post-office lock-boxes. Frame for doors of	B. H. Camp	409,559	Aug. 20	2049	540	48	1090
Post, rail-tie, beam, &c	O. A. Stempel	411,360	Sept. 17	1856	497	48	1646
Postal packet	M. Newiklaf	411,508	Sept. 24	2073	548	48	1693
Postmarking and canceling machine. Letter	A. Bertram	408,401	Aug. 6	294	73	48	736
Pot: *See* Coffee-pot. Tea or coffee pot. Flower-pot. Tinner's fire-pot. Glass-melting pot.							
Pot-furnace	M. V. Smith	410,742	Sept. 10	945	{253 254}	48	1456
Potato-bug catcher	G. F. Reynolds	410,197	Sept. 3	102	27	48	1288
Potato-digger	C. Brick	407,465	July 23	2194	566	48	452
Potato-digger	F. M. Burger	408,208	Aug. 6	8	2	48	690
Potato-digger	D. Y. Hallock	407,928	July 30	2870	747	48	589
Potato-digger	D. Levarn	409,472	Aug. 20	1932	511	48	1068
Potato-digger	J. A. Lewis	409,293	Aug. 20	1676	441	48	1017
Potato-digger	A. Rigby	408,670	Aug. 6	711	184	48	815
Potato-digger	O. Simons	410,210	Sept. 3	118	30	48	1291
Potato-digger	I. W. Hoover	406,096	July 2	103	30	48	23
Potato screen and separator	C. C. Thompson	409,075	Aug. 13	1234	332	48	943
Pottery-dipping tub	S. P. Jackson	406,350	July 2	460	128	48	92
Pottery. Mold or outside ring for	G. B. Adams	409,159	Aug. 20	1491	391	48	979
Pouch or bag	W. C. Williams	408,248	July 2	908	85	48	62
Poultry-fattening machine	G. W. Schroeder	406,778	July 9	1136	301	48	229
Poultry-house	J. E. Roeder	407,449	July 23	2171	560	48	447
Powder-box							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Powder-separator	E. F. Ward	409,258	Aug. 20	1616	428	48	1005
Power-converter	G. W. and E. B. Wilsey	407,385	July 23	2066	534	48	427
Power. Transmitting	W. Main	407,089	July 16	1598	419	48	328
Power-transmitting connection for vehicles	W. Main	407,086	July 16	1583	415, 416	48	325
Power-transmitting device	W. Main	407,085	July 16	1579	414, 415	48	324
Power-transmitting device	W. Main	407,087	July 16	1589	417, 418	48	326
Power-transmitting device	W. Main	407,088	July 16	1595	419	48	328
Power-transmitting device	W. Main	407,090	July 16	1600	420	48	329
Power-transmitting device	W. Main	407,091	July 16	1603	420	48	330
Power-transmitting device	W. Main	407,092	July 16	1607	420	48	331
Power-wrench	T. F. Wells	410,129	Aug. 27	2926	768	48	1259
Precious metals from their ores. Extracting	J. S. MacArthur	411,047	Sept. 17	1388	......	48	1556
Press: *See* Baling-press. Butter-press. Copying-press. Die-press. Filter-press. Harness-loop press. Hat-brim press. Hay-press. Hydraulic press. Laundry-press. Lead-press. Letter-press. Lithographic press. Printing-press.

Press for knitted or woven fabrics	W. D. Butz	408,578	Aug. 6	574	150	48	789
Pressure-gage	G. M. Williams	409,087	Aug. 13	1352	357, 358	48	946
Pressure-gage and safety-valve. Combined	J. D. Bowman	406,990	July 16	1457	381	48	300
Pressure-gages. Apparatus for graduating and testing	A. C. Meady and C. B. Bosworth	408,808	Aug. 13	933	248, 249	48	866
Pressure or damper regulator. Steam-	J. J. Lowden	408,889	Aug. 13	1057	279	48	890
Pressure-regulator	T. Backlejan	408,788	Aug. 13	902	241	48	850
Pressure-regulator	M. Hastings	409,200	Aug. 20	1529	405	48	988
Pressure-regulator	J. F. McElroy	410,178	Sept. 3	56	14	48	1280
Pressure regulator. Gas-	H. J. Bell	409,626	Aug. 20	2161	569	48	1110
Pressure regulator. Gas-	H. J. Bell	409,627	Aug. 20	2163	569, 570	48	1111
Pressure regulator. Steam-	N. Curtis	406,029	July 2	12	5	48	5
Pressure regulator. Water-	H. B. Williams	407,981	July 30	2950	767	48	605
Primer-tube for dynamite cartridges	G. Smith	411,206	Sept. 17	1641	436	48	1605
Printer and cutter. Combined paper	L. Ehrlich	406,597	Aug. 6	604	156	48	795
Printer. Station and want	M. D. Porter	407,416	July 23	2110	545, 546, 547	48	435
Printer's stand	S. W. Rathbun	408,747	Aug. 13	836	221	48	846
Printing	G. L. Jaeger	410,521	Sept. 3	590	158	48	1384
Printing and delivery mechanism. Web	S. D. Tucker	408,394	Aug. 6	283	71	48	733
Printing aniline-black	J. Bracewell	409,821	Aug. 27	2466	......	48	1172
Printing-cylinders. Imposing forms upon	S. D. Tucker	408,393	Aug. 6	282	70	48	733
Printing dark-blue colors	J. Bracewell	409,906	Aug. 27	2580	......	48	1194
Printing device. Automatic	N. D. Barradall and A. J. Bradley	407,631	July 23	2422	628	48	498
Printing device for wrapping-paper rolls	E. B. Weston	406,319	July 2	415	114	48	83
Printing-machine	J. H. Buxton, D. Braithwaite, and M. Smith	407,393	July 23	2077	537, 538	48	429
Printing-machine	J. C. Fowler and E. A. Henkle	408,094	July 30	3109	814, 815	48	636
Printing-machine	J. R. Rankin	407,034	July 16	1514	396	48	312
Printing-machine	M. Umbdenstock	409,885	Aug. 27	2553	668	48	1188
Printing-machine. Cylinder	G. P. Fenner	407,652	July 23	2454	635	48	504
Printing-machine dampening and feeding mechanism	W. Scott	411,535	Sept. 24	2109	556, 557	48	1699
Printing-machine delivery apparatus. Web-	S. D. Tucker	408,389	Aug. 6	275	68, 69	48	732
Printing-machine delivery mechanism	S. D. Tucker	408,390	Aug. 6	277	69	48	733
Printing-machine inking mechanism	S. D. Tucker	408,392	Aug. 6	281	70	48	733
Printing-machine. Rotary	J. J. Clause	410,576	Sept. 10	671	179	48	1406
Printing-machine. Rotary	J. L. Firm	410,271	Sept. 3	205	54, 55	48	1309
Printing-machine sheet-counting mechanism	S. D. Tucker	408,391	Aug. 6	279	70	48	733
Printing-machine sheet-delivery apparatus	G. P. Fenner	406,716	July 9	1040	278	48	210
Printing-machine. Stop-cylinder	C. B. Cottrell	407,172	July 16	1728	451, 452	48	353
Printing machine. Ticket-	J. A. and C. H. Milliken, and E. D'Amour.	410,555	Sept. 3	632	169, 170	48	1392
Printing-machines. Bed-operating mechanism for cylinder	S. Whitlock	406,320	July 2	416	114	48	83
Printing-machines. Gripper-motion for	G. P. Fenner	408,603	Aug. 6	609	157	48	796
Printing on aniline-black	J. Bracewell	409,823	Aug. 27	2470	......	48	1173
Printing or embossing fabrics, &c. Machine for	J. Farmer	408,913	Aug. 13	1092	287, 288	48	897
Printing-plates. Apparatus for graining	J. G. Harris	406,398	July 2	536	149	48	107
Printing-press	F. Van Wyck	410,302	Sept. 3	257	67	48	1318
Printing-press hand-protector	C. Reussenzehn	411,258	Sept. 17	1711	458	48	1620
Printing-presses. Automatic feeder for	J. Schaefer	407,840	July 30	2731	709, 710	48	563
Printing-presses. Feed-gage for	E. L. Megill	408,122	July 30	3174	830	48	647
Printing-presses. Feeder for power	L. Orser	406,058	July 2	50	14, 15	48	12
Printing-presses. Feeder for treadle	L. Orser	406,059	July 2	54	16, 17, 18	48	13
Printing pyroxyline compounds	C. F. Brady	409,345	Aug. 20	1751	......	48	1031
Printing signs. Device for	E. A. Bishop	406,812	July 9	1193	317	48	240
Prints, &c. Transferring	J. J. Fox	406,519	July 9	745	......	48	156
Prints, &c. Transferring	J. J. Fox	406,720	July 9	1046	......	48	211
Projectile	R. Cail	406,334	July 2	437	121	48	88
Projectile	H. S. Halford and W. E. Metford	406,728	July 9	1057	281	48	213

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Projectile for smooth-bore guns	S. H. Emmens	407,648	July 23	2450	634	48	504
Projectile. Lubricating-	S. A. Day	407,890	July 30	2807	731	48	578
Projectiles. Manufacturing	G. Kynoch and H. A. Schlund	407,536	July 23	2289	591	48	470
Propeller for boats. Hand-	J. S. Lamar	410,365	Sept. 3	355	94, 95	48	1339
Propeller. Screw-	M. Vogelgesang	408,864	Aug. 13	1017	269	48	882
Propeller-wheel	W. H. Daniels	406,708	July 9	1030	276	48	208
Propelling and ventilating ships. Device for	F. Johnson	407,214	July 16	1796	470	48	367
Propelling by reaction. Apparatus and means for	A. Ciuren	407,394	July 23	2079	538	48	429
Propelling mechanism. Water-power vessel-	H. Lobdell	408,310	Aug. 6	154	39	48	709
Protector: *See* Boot or shoe sole protector. Garment-protector. Head-protector. Mustache-protector. Plant-protector. Printing-press hand-protector. Sole-protector. Tree-protector. Wall-paper protector.							
Protractor	C. E. W. Dow	411,741	Sept. 24	2416	641	48	1764
Pruning-shears	D. B. Bentley	406,690	July 9	898	243	48	184
Pruning-shears and fruit-picker	B. Jennings	406,524	July 9	755	206	48	158
Puller: *See* Stump-puller.							
Pulley	P. V. Lawson and W. L. Field	407,866	July 30	2770	720	48	571
Pulley	H. E. Ludwig	406,361	July 2	474	133	48	95
Pulley	P. McNaughton	407,367	July 23	2040	529	48	422
Pulley	J. T. Mitchell	408,632	Aug. 6	651	169	48	805
Pulley	A. E. Preston	408,261	Aug. 6	90	22	48	607
Pulley	N. P. Smith	409,878	Aug. 27	2543	666	48	1186
Pulley	W. A. Woodward	407,388	July 23	2069	535	48	428
Pulley. Belt-	J. G. Moomy	410,763	Sept. 10	982	264	48	1464
Pulley-block	C. T. Segar	408,814	Aug. 13	943	251	48	868
Pulley blocks. Roller-bearing for	H. A. Rooke	407,603	July 23	2508	647	48	515
Pulley. Cable-guide	J. Crowther	406,820	July 9	1203	320	48	242
Pulley. Drive-	G. C. Cowles. (Reissue)	11,020	Aug. 6	734	190, 191	48	819
Pulley. Friction-clutch	G. L. Rollins	406,063	July 2	61	18	48	15
Pulley-hanger	E. R. Hyde and R. C. Horner	407,954	July 30	2910	758	48	598
Pulley lubricator. Loose-	W. J. Faul	410,406	Sept. 3	421	111	48	1351
Pulley-molding machine	J. C. McDermott	411,390	Sept. 17	1898	507	48	1653
Pulley. Split	J. B. Cornwall and H. A. Barnard	409,140	Aug. 13	1139	378	48	964
Pulley. Split	M. O. Reeves	409,427	Aug. 20	1868	493	48	1055
Pulley. Split	E. F. Schneider	406,237	July 2	296	81	48	59
Pulley. Split band-	A. Kehler	406,287	July 2	359	98	48	73
Pulley. Wood split	D. A. Sprinkle	406,067	July 2	66	19	48	15
Pulley. Wooden	J. G. Moomy	406,402	July 2	540	151	48	108
Pulley. Wooden	M. O. Reeves	409,426	Aug. 20	1867	492	48	1055
Pulley. Wooden-rim split	G. T. Eames	411,651	Sept. 24	2288	608	48	1737
Pulleys. Yielding connection for	W. E. Davis	407,997	July 30	2974	775	48	609
Pulp-beating engine	E. R. Marshall	411,251	Sept. 17	1700	454, 455	48	1618
Pulp-engine	A. Hempel	406,136	July 2	159	46	48	33
Pulp-engines. Roll for Jordan	E. W. Barton	407,276	July 16	1893	492	48	385
Pulp. Machine for forming bodies from successive layers of	H. Fairbanks and H. Parker	408,092	July 30	3105	813	48	635
Pulp-molding machine	F. E. Keyes	410,977	Sept. 10	1290	349	48	1528
Pulverizing-mill	E. C. Griffin	410,756	Sept. 10	967	260, 261	48	1460
Pulverizing-mill	E. C. Griffin	410,757	Sept. 10	971	261	48	1461
Pulverizing-mill	E. C. Griffin	410,758	Sept. 10	974	262	48	1462
Pulverizing-mill	J. K. Griffin	409,579	Aug. 20	2082	549, 550	48	1096
Pump	F. Bauer	410,396	Sept. 3	398	106	48	1347
Pump	W. Boekel	409,163	Aug. 20	1478	393	48	980
Pump	F. W. Shuls	410,456	Sept. 3	505	135	48	1367
Pump	A. Siebert	410,457	Sept. 3	506	135	48	1367
Pump	A. Siebert	410,458	Sept. 3	507	135	48	1367
Pump	F. Steinmann	410,462	Sept. 3	511	137	48	1368
Pump	J. Stevens	407,699	July 23	2514	650	48	516
Pump	I. C. N. Sweet	408,547	Aug. 6	530	138	48	780
Pump	A. Thiéry	411,625	Sept. 24	2251	598	48	1730
Pump. Air-	J. C. Kennedy	409,844	Aug. 27	2499	653	48	1177
Pump. Air or vapor	H. Von Bayer	410,052	Aug. 27	2787	734	48	1234
Pump and siphon	J. G. Brewer	408,648	Aug. 6	682	176	48	810
Pump attachment	A. Holeman	406,137	July 2	159	46	48	33
Pump bucket. Chain-	A. D. Crosby	409,562	Aug. 20	2054	541	48	1091
Pump. Centrifugal	J. J. Forcier	406,394	July 2	527	147	48	105
Pump. Disk	J. Bowns	410,308	Sept. 3	266	69	48	1320
Pump. Double-acting	R. L. Sherman	411,263	Sept. 17	1717	459	48	1621
Pump. Double-acting force-	J. Schrankel	411,261	Sept. 17	1713	459	48	1620
Pump. Force-	E. K. Hayes	406,442	July 9	604	170	48	130
Pump. Force-	J. M. Winger	408,564	Aug. 6	557	146	48	786
Pump. Gas-pressure	W. H. and S. B. Castor	406,261	July 2	324	90	48	65
Pump-governor	J. T. Pine	409,500	Aug. 20	1968	520	48	1075
Pump. Hand force-	P. Kohns	408,183	July 30	3270	854	48	663
Pump-piston	B. H. Wells	410,867	Sept. 10	1132	304	48	1495
Pump-rod coupling	C. J. Hamilton	406,276	July 2	345	94	48	70
Pump. Rotary	C. M. Young	410,747	Sept. 10	955	257	48	1457
Pump spouts. Means for securing	J. G. Taylor	406,791	July 9	1162	307	48	234
Pump. Steam-	E. C. Johnson	406,098	July 2	105	31, 32	48	23
Pump. Steam-	E. C. Johnson	406,099	July 2	109	32	48	23
Pump. Steam and vacuum	J. McFarlane	406,590	July 9	841	227	48	174
Pump. Vacuum-	J. W. Packard	406,110	July 2	122	36	48	25
Pumps. Automatic air-compressor for	H. A. Daniels	410,075	Aug. 27	2833	744	48	1242
Pumps. Device for automatically manipulating the valves of high-vacuum	E. B. Nicolaus	406,231	July 2	288	79	48	58
Pumps. Hydraulic governor for steam-	C. H. Atkins	406,615	July 9	890	240	48	182

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pumps. Steam-motor for	H. O. Beatty	408,400	Aug. 6	291	73	48	735
Pumps. Strainer for suction-pipes of	O. H. Jewell	406,467	Aug. 6	426	113	48	763
Pumps. Valve for steam	A. A. and C. H. Tripold	408,606	July 9	672	233	48	179
Pumping-engine	H. Davey	407,580	July 23	2354	610	48	486
Pumping-engine	F. M. Wheeler	411,177	Sept. 17	1596	424	48	1596
Pumping-engine. High-service	A. J. L. Loreta	411,724	Sept. 24	2392	634	48	1759
Pumping-machine	J. Richards	411,680	Sept. 24	2332	617	48	1747
Punch	J. Draper	411,402	Sept. 24	2040	540	48	1687
Punch	J. E. Quinn	407,242	July 16	1643	435	48	376
Punch	J. Clark	407,167	July 16	1721	410	48	359
Punch. Check	E. L. Liedke	407,867	July 30	2772	739	48	571
Punch. Check	F. J. Lockwood	409,291	Aug. 20	1677	442	48	1017
Punching machine. Check	R. Gaiger	408,658	Aug. 6	697	189	48	812
Punching machine. Check	W. W. Guptill	411,744	Sept. 24	2422	{641 642}	{48}	1765
Pyrotechnic compounds. Preparing	A. Del Grande	411,714	Sept. 24	2389	.....	48	1757
Pyroxyline. Apparatus for the manufacture of	R. C. Schupphaus and M. T. White	406,597	July 9	852	229	48	176
Pyroxyline compound	C. R. Schüpphaus	410,204	Sept. 3	114	.....	48	1291
Pyroxyline compound	C. R. Schüpphaus	410,207	Sept. 3	116	.....	48	1291
Pyroxyline compound	C. R. Schüpphaus	410 209	Sept. 3	117	.....	48	1291
Pyroxyline compound	C. R. Schüpphaus	410,205	Sept. 3	114	.....	48	1291
Pyroxyline varnish	C. R. Schüpphaus	410,206	Sept. 3	115	.....	48	1291
Pyroxyline varnish	C. R. Schüpphaus	410,208	Sept. 3	116	.....	48	1291
Queen-rearing chamber	G. L. Tinker	406,972	July 16	1431	375	48	295
Quicksilver-catcher	E. A. Dodge	410,076	Aug. 27	2835	744	48	1242
Quilting-frame	U. E. Miller	406,929	July 16	1367	{358 359}	{48}	284
Race-course. Automatic	F. N. Lang	410,981	Sept. 10	1297	330	48	1529
Rack. *See* Display-rack; Hat and coat rack; Hay-rack; Mail-bag rack; Music-rack; Towel-rack; Whip-rack.							
Rack for displaying dry goods	E. C. Fain	406,131	July 2	151	44, 45	48	32
Rack for papers, &c	S. J. Beighel	410,571	Sept. 10	665	177	48	1405
Radiator	P. J. Kennedy	406,741	July 9	1074	286	48	216
Radiator	J. Liedl	408,420	Aug. 6	328	84	48	742
Radiator	B. F. Sturtevant	411,476	Sept. 24	2031	{357 358}	{48}	1684
Radiator-cover	T. T. Rockett	406,773	July 9	1128	299	48	227
Radiator foot-rest	G. C. Felter	406,640	July 9	935	252	48	191
Radiator. Hot-water	E. S. Manny	407,785	July 30	2644	694	48	548
Radiator. Portable steam	J. C. Mackey	411,156	Sept. 17	1574	418	48	1592
Radiator-sections. Coupling for	J. J. Hogan	411,031	Sept. 17	1366	367	48	1551
Radiator. Steam and hot-water	T. C. Joy	410,691	Sept. 10	853	229	48	1441
Radiators. Foot-rest for steam	J. A. Sohn	410,213	Sept. 3	123	31	48	1292
Rail-brace	F. C. Weir and C. Partington	407,753	July 23	2509	672	48	534
Rail-chair	E. Samuel	410,452	Sept. 3	497	133	48	1365
Rail-joint	R. M. Agee and E. Lane	411,542	Sept. 24	2120	559	48	1702
Rail-joint	J. W. Cloud	410,151	Sept. 3	18	6	48	1272
Rail-joint	B. F. Davis	406,038	July 2	19	6	48	6
Rail-joint	M. C. Niles	407,301	July 16	1925	501	48	392
Rail-joint	M. C. Niles	407,302	July 16	1927	502	48	392
Rail-joint	H. B. Potter	410,096	Sept. 10	859	231	48	1443
Rail-joint	A. E. Rutter	410,028	Aug. 27	2748	722	48	1228
Rail-joint	H. W. and A. H. Scheele	411,064	Sept. 17	1412	377	48	1560
Rail-joint	R. H. Soule	408,543	Aug. 6	523	136	48	779
Rail-joint. Expansion	F. C. Weir	411,302	Sept. 17	1861	498	48	1647
Rail-joint. Lock	P. C. Dockstader	411,186	Sept. 17	1607	427	48	1598
Rail-joint. Locking	P. C. Dockstader	407,644	July 23	2442	633	48	502
Rail-sawing machine	E. C. Smith	410 298	Sept. 3	249	65	48	1317
Rail-support	H. T. Moody	408,892	Aug. 13	1060	280	48	891
Rails. Machine for reducing	W. Scholl and T. G. Wolf	408,933	Aug. 13	1121	{295 296}	{48}	903
Railway	D. G. Weems	406,802	July 9	1177	311	48	236
Railway. Aerial cable	J. R. Perry and J. Mackenzie	407,835	July 30	2723	707	48	562
Railway-bracket. Combination	G. Waterman	406,863	July 9	1267	334	48	253
Railway-brake	A. Watson	409,536	Aug. 20	2016	532	48	1064
Railway brake. Cable	O. Cope	407,171	July 16	1726	{450 451}	{48}	353
Railway. Cable	J. D. Davies	411,762	Sept. 24	2445	648	48	1770
Railway. Cable	J. H. Pendleton and A. Bryson, Jr	406,303	July 2	390	107	48	79
Railway. Cable or electric street	L. M. Clement and G. C. Watriss	409,926	Aug. 27	2606	682	48	1300
Railway-chair	G. W. Rittersbach	411,250	Sept. 17	1719	458	48	1620
Railway chock or stop-block	T. B. Rogers	406,855	July 9	1255	331	48	250
Railway circuit. Electric	J. L. Blackwell	406,421	July 9	569	160	48	123
Railway. Conduit electric	B. Jennings	409,104	Aug. 13	1380	364	48	951
Railway cross-tie	E. Samuel	410,933	Sept. 10	1223	330	48	1514
Railway crossing. Electric	E. E. Ries	409,756	Aug. 27	2363	621	48	1154
Railway-crossing signal	D. H. Irwin	410,690	Sept. 10	851	{228 229}	{48}	1441
Railway crossing. Street	E. Samuel	406,309	July 2	399	{106 109}	{48}	80
Railway-crossings. Danger-signal for	A. J. McDonald	406,937	July 16	1360	361	48	286
Railway-crossings. Derailing mechanism for	M. B. Mills	408,840	Aug. 13	977	259	48	874
Railway. Electric	S. Z. de Ferranti	409,775	Aug. 27	2395	628	48	1159
Railway. Electric	S. D. Field	407,188	July 16	1756	460	48	360
Railway. Electric	G. B. Fraley	411,496	Sept. 24	2054	543	48	1688
Railway. Electric	W. H. Knight	406,743	July 9	1076	287	48	217
Railway. Electric	W. M. Schlesinger	408,855	Aug. 13	999	{264 265}	{48}	879
Railway. Electric	D. G. Weems	406,804	July 9	1179	{312 313}	{48}	237
Railway. Electric	D. G. Weems	406,805	July 9	1180	{313 314}	{48}	237

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railway. Electric	D. G. Weems	406,806	July 9	1182	314	48	238
Railway. Electrical	S. H. Short	407,496	July 23	2232	576	48	480
Railway. Electrical	S. H. Short	407,745	July 23	2284	669	48	531
Railway. Elevated	L. J. Cody	410,577	Sept. 10	672	{179 180}	{48}	1406
Railway. Elevated	J. N. Valley	408,941	Aug. 13	1131	298	48	905
Railway-frog	O. S. Hawyer	406,278	July 2	340	95	48	70
Railway frogs and crossings. Filling for	F. C. Weir	407,754	July 23	2660	672	48	534
Railway-gage and tie-grip	A. F. Washburn and E. E. Krengel	406,801	July 9	1176	311	48	236
Railway-gate	J. T. Barlow	406,417	July 9	563	158	48	121
Railway-gate	J. Bowser	406,387	July 9	2177	577	48	1713
Railway-gate	J. B. Carey	411,520	Sept. 24	1500	397	48	983
Railway-gate	R. C. Douglass	409,177	Aug. 20	1381	362	48	987
Railway-gate	A. J. McDonald and R. B. Brent	406,938	July 16	1195	323	48	1508
Railway-gate	F. M. Montellus	410,915	Sept. 10	790	214	48	165
Railway-gate	G. Vassar, Jr	406,551	July 9	1	1	48	77
Railway grip. Cable	J. H. Pendleton and A. Bryson, Jr	406,301	July 2	383	{104 105}	{48}	805
Railway guard-rail	J. Waterhouse	408,906	Aug. 13	1080	284	48	177
Railway motor. Electric	F. J. Sprague	406,600	July 9	859	{231 232}	{48}	235
Railway motors. Mechanism for controlling electric	C. J. Van Depoele	406,798	July 9	1169	302	48	1306
Railway plow. Electric	F. O. Blackwell	410,964	Sept. 3	190	50	48	969
Railway. Pneumatic	W. L. Judson	409,205	Aug. 20	1335	{466 467}	{48}	1643
Railway-rail	H. W. Libbey	411,344	Sept. 17	1841	492	48	1371
Railway-rail and wheel therefor	C. White	410,472	Sept. 3	523	140	48	1532
Railway-rail chairs. Making	E. Samuel	410,993	Sept. 10	1314	354	48	91
Railway-rail coupling and bolt	D. P. Henninger	406,348	July 2	456	127	48	1271
Railway-rail joint	J. S. Chadbourne and L. C. Stuckey	410,149	Sept. 3	15	5	48	631
Railway-rail. Reversible	R. B. Burns	408,078	July 30	3085	808	48	288
Railway-rails. Apparatus for manufacturing	E. Norton and J. G. Hodgson	406,944	July 16	1388	{363 364}	{48}	960
Railway-rails. Brace-chair for	J. B. Wettergreen	409,131	Aug. 13	1426	375	48	955
Railway-rails. Interlocking brace-chair for	P. O'Connell	409,114	Aug. 13	1400	369	48	1294
Railway rolling-stock rerailing device and bridge-guard for safety	B. E. Tilden	410,222	Sept. 3	133	33, 34	48	505
Railway-signal	C. A. Finley	407,653	July 23	2455	636	48	1745
Railway-signal	A. B. Fisk	411,742	Sept. 24	2417	641	48	874
Railway-signal	C. T. Hallowell	408,837	Aug. 13	973	259	48	1115
Railway-signal	R. W. Norwood	409,648	Aug. 20	2186	576	48	815
Railway-signal	J. W. Riggs	408,671	Aug. 6	712	{184 185}	{48}	965
Railway-signal	W. F. Grassler	409,146	Aug. 13	1447	380	48	78
Railway-signal. Electric	J. H. Pendleton and A. Bryson, Jr	406,302	July 2	388	{105 106}	{48}	1570
Railway structure. Cable	A. Boucher	411,089	Sept. 17	1465	389	48	7
Railway-switch	J. F. Duggan	406,036	July 2	23	7	48	1339
Railway-switch	W. N. Knight	410,364	Sept. 3	355	94	48	1531
Railway-switch	J. T. Rigney	410,992	Sept. 10	1313	{353 354}	{48}	15
Railway-switch	W. Spielman	406,066	July 2	64	19	48	60
Railway-switch	J. B. Suffern	406,244	July 2	363	83, 84	48	1329
Railway-switch	I. Randolph	410,332	Sept. 3	311	80	48	402
Railway-switch appliance	J. T. Argo	407,504	July 23	2242	{578 579}	{48}	1521
Railway-switch. Automatic	R. S. Eastman	410,961	Sept. 10	1261	340	48	123
Railway-switch. Automatic	B. C. Rowell	410,200	Sept. 3	109	28	48	1290
Railway-switch. Automatic	F. O. Blackwell	406,420	July 9	568	159	48	279
Railway switch. Electric	W. L. Judson	406,915	July 16	1345	353	48	869
Railway switch. Pneumatic street	C. Aikins	408,920	Aug. 13	949	252	48	991
Railway switch-stand	H. Brown and J. Gough	409,168	Aug. 20	1493	395	48	1043
Railway-switches. Safety attachment for	W. H. Caine	409,388	Aug. 20	1614	477	48	779
Railway-switches. Safety-lock and shackle for	F. J. Sprague	408,544	Aug. 6	524	{137 138}	{48}	998
Railway system. Electric	E. E. Ries	409,237	Aug. 20	1582	{418 419}	{48}	1157
Railway system. Electrical	M. Bodefeld	409,709	Aug. 27	2362	{625 626}	{48}	236
Railway system. Pneumatic	D. G. Weems	406,803	July 9	1178	311	48	271
Railway systems. Carrier for electric	M. W. Dewey	406,8 0	July 16	1307	343	48	1727
Railway systems. Electric heating apparatus for	A. L. Riker	411,613	Sept. 24	2238	594	48	1298
Railway systems. Trolley for electric	A. B. Filch	410,236	Sept. 3	150	39	48	91
Railway-tie	L. Haas	406,346	July 2	433	196	48	1279
Railway-tie	J. R. McCartey	410,176	Sept. 3	54	14	48	1181
Railway-tie	A. C. Nickley	409,860	Aug. 27	2518	650	48	695
Railway-tie	C. B. Palmer	406,255	Aug. 6	81	19	48	1439
Railway-tie	B. W. Ellicott	410,684	Sept. 10	842	226	48	31
Railway-tie. Metal	T. R. Dunning	406,129	July 2	149	44	48	911
Railway-tie. Metallic	W. T. Forbes and R. C. Kerr	408,964	Aug. 13	1164	308	48	910
Railway-tie. Metallic	P. H. Dudley	408,960	Aug. 13	1160	306	48	168
Railway-tie plate	P. H. Dudley	406,566	July 9	811	220	48	663
Railway-ties. Preserving	D. S. Moore	408,186	July 30	3274	855	48	1433
Railway-track layer	E. P. Edwards	410,666	Sept. 10	813	218	48	477
Railway-tracks. Foot-guard for	J. T. Odell and T. J. De Lamere	407,548	July 23	2215	{597 598}	{48}	335
Railway-train indicator	N. S. Mussey	407,103	July 16	1631	{426 427 428}	{48}	1096
Railway-trains. Safety-pilot for	J. Gresham	409,578	Aug. 20	2079	540	48	622
Railways. Applying sand to rails of	A. Pferdner	408,043	July 30	3033	794	48	428
Railways. Automatic signal for cable	G. H. Wright	407,329	July 23	2070	{535 536}	{48}	1006
Railways. Automatic signal for crossings of cable	D. W. Binns and C. Wolff	409,268	Aug 20	1626	430	48	
Railways. Automatic switch for horse							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railways. Circuit for electric	H. H. Cutler	407,470	July 23	2200	567	48	453
Railways. Closed slotted conduit for electric	C. J. Van Depoele	406,797	July 9	1166	308	48	234
Railways. Curve and crossing device for cable	A. Martinez	406,752	July 9	1099	291, 292	48	222
Railways. Device for depressing cables at the street-crossings of cable	G. H. Wright	410,062	Aug. 27	2796	736	48	1236
Railways. Double suspended conductor system for electric	C. J. Van Depoele	409,156	Aug. 13	1462	386, 387	48	968
Railways. Overhead frog for electric	M. J. Wightman	411,313	Sept. 17	1793	480	48	1634
Railways. Overhead frog for electric	M. J. Wightman	411,314	Sept. 17	1795	480	48	1634
Railways. Semaphore-signal for	C. H. Koyl	410,598	Sept. 10	699	187	48	1411
Railways. Semaphore-signal for	C. H. Koyl	410,599	Sept. 10	701	187	48	1411
Railways. Stationary switch for horse-	A. L. Plimpton and E. Harrington	408,744	Aug. 13	832	220	48	845
Railways. System of electrical distribution for	W. J. McElroy	409,752	Aug. 27	2353	620	48	1152
Railways. Tension device for the cables of cable	W. H. Paine	411,675	Sept. 24	2325	616	48	1745
Railways. Traction-gripper for cable	M. A. Michales	406,928	July 16	1366	357	48	263
Railways. Trolley for electric	J. G. and R. Dickson and P. Snyder	409,603	Aug. 20	2119	558	48	1103
Railways. Tubular conductor for electric	L. Daft	410,498	Sept. 3	559	150, 151	48	1378
Railways. Underground conduit for electric	E. E. Ries	409,757	Aug. 27	2365	621	48	1154
Railways. Underground conduit for electric	C. J. Van Depoele	408,639	Aug. 6	663	172, 173	48	807
Rake: *See* Hand-rake. Horse-rake. Hay-rake.							
Rand-forming machine	F. P. Arnold	406,865	July 16	1273	335	48	265
Range and position of distant objects. Finding	B. A. Fiske	406,830	July 9	1218	323	48	245
Range-finder	B. A. Fiske	406,829	July 9	1216	323	48	244
Raspe. Forming teeth of	P. S. Stokes	408,936	Aug. 13	1124	296, 297	48	903
Ratchet-drill	D. Kidney and A. Verboort	411,664	Sept. 24	2310	613	48	1742
Ratchet mechanism	C. Stevenson	408,545	Aug. 6	529	138	48	780
Razor-sharpening machine	A. Dey	411,587	Sept. 24	2191	582	48	1717
Razor-strop	J. R. Torrey	409,715	Aug. 27	2307	606	48	1143
Reactive and induction coil	E. Thomson and E. W. Rice, Jr	410,468	Sept. 3	518	139	48	1370
Reapers, mowers, &c. Finger-bar for	A. Womack	407,387	July 23	2068	535	48	427
Reaping and mowing machines. Apparatus for sharpening the cutters and fingers of	R. McGregor	411,048	Sept. 17	1389	372, 373	48	1556
Receipt-blank. Stub-identification	T. S. Quincey	411,057	Sept. 17	1402	375	48	1558
Recorder: *See* Message and time recorder. Telegraphic recorder. Time-recorder. Speed-recorder.							
Recording-gage. Electric	J. Wills	409,891	Aug. 27	2562	671	48	1191
Reel: *See* Bolting-reel. Paper-reel. Clothes-reel. Yarn-reel. Harvester-reel.							
Reel-carriage	J. F. Miller	408,499	Aug. 6	447	117	48	767
Reel or swift	H. Epple	410,405	Sept. 3	420	111	48	1351
Reflector. Artificial-light	M. B. Parkinson	410,186	Sept. 3	77	19	48	1283
Refractory compound	J. L. Hastings	409,563	Aug. 20	2068	.....	48	1098
Refractory compounds. Producing	J. L. Stewart and J. L. Hastings	410,042	Aug. 27	2769	.....	48	1211
Refrigerating apparatus	F. A. Walin	407,045	July 16	1531	401	48	314
Refrigerative apparatus	P. R. and P. R. Gray, Jr	406,345	July 2	450	125, 126	48	90
Refrigerator	G. W. Bullis	407,059	July 16	1549	406	48	318
Refrigerator	R. R. Graf	409,635	Aug. 13	1274	336	48	9:2
Refrigerator	M. Knickerbocker	411,665	Sept. 24	2310	613	48	1742
Refrigerator	N. D. Mertz	410,911	Sept. 10	1191	322	48	1307
Refrigerator	W. A. Preston	407,685	July 23	2493	645	48	512
Refrigerator	F. C. H. Strasburger	406,905	Aug. 13	1059	284	48	994
Refrigerator-car	J. F. Hanrahan	407,802	July 30	2762	719	48	570
Refuse-ejector	J. S. Wallace	408,201	July 30	3297	861	48	668
Refuse-furnace	H. W. Whiting	408,559	Aug. 6	548	144	48	784
Regenerative burner	R. Wallwork	407,750	July 23	2593	671	48	533
Register: *See* Cash-register. Passenger-register. Fare-register. Pool-register.							
Register and automatic stop	C. J. Hartley	410,942	Sept. 3	158	42	48	1299
Registering apparatus. Autographic	J. B. Thies	410,616	Sept. 10	732	197	48	1418
Registering apparatus. Electric	J. A. Lannert	406,172	July 2	208	57, 58	48	42
Registering-machine	C. W. Fowler	409,950	Aug. 27	2640	693	48	1207
Registering machine. Ticket and cash	I. Pforzheimer	409,640	Aug. 20	2188	576, 577	48	1115
Registering mechanism	P. Ford	410,885	Sept. 10	1154	311	48	1499
Registering-wheel	F. W. Smith	406,312	July 2	405	110	48	81
Regulator: *See* Draft-regulator. Pressure-regulator. Electric-machine regulator. Pressure or damper regulator. Electric-motor regulator. Scale-regulator. Feed-regulator. Valve-regulator. Gas-pressure regulator. Water-regulator.							
Regulator and cut-off	O. S. King and H. H. Swaney	411,041	Sept. 17	1380	370	48	1554
Rein-fastening	C. H. Bagley	410,260	Sept. 3	185	48	48	1305
Rein-guard	W. P. Young	411,484	Sept. 24	2040	539	48	1685
Rein-holder	T. H. Bolls	411,639	Sept. 24	2271	604	48	1734
Rein-holder	E. Welch	410,225	Sept. 3	135	34	48	1295
Reseaving-machine	E. Fischer	411,098	Sept. 17	1479	392, 393	48	1573
Respirations of the body. Apparatus for recording the	K. M. Tata	408,938	Aug. 13	1126	297	48	904

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Respirator. Nasal	S. H. Guyot	406,580	July 9	828	224	48	171
Retort and muffle furnace	J. T. Haase and H. M. Vacherot	406,732	July 9	1061	282	48	214
Retort-charging device	J. H. Walker	406,409	July 2	547	153	48	109
Retort for distilling wood and making charcoal	F. S. Clark	407,166	July 16	1719	449	48	352
Reversing mechanism	N. A. Otto	410,012	Aug. 27	2725	716	48	1223
Revolving signal	J. W. Warren and S. H. Radford	409,534	Aug. 20	2015	531	48	1084
Rheobathometer	H. Flad	409,780	Aug. 27	2401	629	48	1160
Ribbon-roll clasp	D. H. Darby and G. R. Chittenden	406,517	July 9	743	203	48	155
Rice-hulling machine	A. A. Bourgeois	409,905	Aug. 27	2579	675	48	1194
Rifle-barrels. Machine for grinding and polishing	O. M. Grimes	406,643	July 9	938	253, 254	48	192
Ring: *See* Ear-ring. Packing-ring. Lap-ring. Yoke-ring. Nose-ring.							
Rings or tires. Manufacturing rolled	J. Manton	410,604	Sept. 10	714	192	48	1414
Rivet	J. J. Unbehend	411,174	Sept. 17	1580	422	48	1595
Riveting-machine	L. Delaloe and A. Piat	409,393	Aug. 20	1921	480	48	1045
Riveting-machine	A. G. Digen	409,939	Aug. 27	2628	689	48	1204
Rock-drill	T. Doup, Jr	408,697	Aug. 13	769	202	48	836
Rock-drill. Steam	C. A. Case	408,372	Aug. 6	247	63	48	737
Rock-drill. Steam	E. A. Rix	410,334	Sept. 3	314	81	48	1329
Rock-drill support	J. C. Githens	408,878	Aug. 13	1040	275	48	887
Rock-drills. Tripod-support for	H. C. Sergeant	407,257	July 16	1805	487	48	380
Rock-drilling machine	A. J. Sypher	407,704	July 23	2522	652	48	516
Rock for paving, roofing, and building purposes. Bituminous sand-	H. B. Utter	411,078	Sept. 17	1443	384	48	1566
Rockers. Spring and bracket connection for platform-	W. Patterson and E. Groat	409,493	Aug. 20	1960	.....	48	1074
Rod: *See* Fishing-rod. Lightning-rod.	G. J. Shults	409,509	Aug. 20	1961	523	48	1078
Roll	C. J. Curtin	408,219	Aug. 6	26	6	48	683
Roll-holder indicator	G. Eastman	407,396	July 23	2092	538	48	430
Roller: *See* Cotton-gin roller. Road-roller. Land-roller.							
Roller	S. E. Davis	408,338	Aug. 6	200	51	48	718
Roller and seed-sower. Combined	T. A. Butler	410,673	Sept. 10	1140	307	48	1497
Roller-mills. Feed-regulator for	J. W. Wilson	408,156	July 30	3216	840	48	655
Roller-stud	S. Arnold	410,569	Sept. 10	663	177	48	1405
Rollers. Covering for	C. Halstead	409,101	Aug. 13	1378	363	48	951
Rolling apparatus	L. D. York	410,724	Sept. 10	917	246, 247	48	1451
Rolling axles	J. R. Jones	408,720	Aug. 13	804	212	48	839
Rolling bars into sheets. Rolls for	E. D. Wassell	410,258	Sept. 3	183	48	48	1304
Rolling drive-screws. Die for	C. D. Rogers	408,528	Aug. 6	490	130	48	775
Rolling flanged beams	J. Kennedy and H. Aiken	410,107	Aug. 27	2885	757, 758	48	1252
Rolling flanged beams. Mill for	J. Kennedy and H. Aiken	410,106	Aug. 27	2883	757, 758	48	1252
Rolling girder-rails. Machine for	F. Colley	410,821	Sept. 10	1067	286, 287	48	1484
Rolling iron or steel	A. J. Moxham	408,844	Aug. 13	982	260, 261	48	875
Rolling metal	W. J. Lewis	409,049	Aug. 13	1295	342	48	935
Rolling-mill	R. A. Carter	406,701	July 9	1018	273	48	206
Rolling-mill for hoop or strap iron	D. Larkin	409,048	Aug. 13	1293	341	48	935
Rolling-mill plant	F. H. Daniels	407,177	July 16	1737	454, 455	48	355
Rolling mill. Wire-rod	F. H. Daniels	407,176	July 16	1735	453, 454	48	355
Rolling-pin. Adjustable	L. Curtis	409,564	Aug. 20	2057	549	48	1092
Rolling sheet metal from fluid metal. Apparatus for	E. Norton	406,947	July 16	1394	306	48	280
Rolling side-bearing rails. Rolls for	F. Colley	410,855	Sept. 10	1251	337	48	1319
Rolling steel or iron	A. J. Moxham	408,843	Aug. 13	981	260	48	875
Roof-covering	J. T. Henthorn	408,304	Aug. 6	147	37	48	708
Roofing, ceiling, or siding. Sheet-metal	W. B. Curtis and W. H. Huntley	407,772	July 30	2623	680	48	544
Roofing composition. Packing	C. S. Bushnell	408,951	Aug. 13	1143	302	48	906
Roofing. Machine for the manufacture of	G. W. McGraw. (Reissue)	11,017	July 30	3318	866, 867	48	671
Roofing. Metal	J. D. Burton	406,024	July 2	8	3	48	4
Roofing. Metallic	H. Klebe	407,535	July 23	2279	590	48	409
Roofing. Metallic	L. L. Sagendorph	411,683	Sept. 24	2338	618	48	1748
Roofing. Metallic	J. W. Beaumont	408,066	July 30	3070	803	48	628
Roofing or sheathing	M. Ehret, Jr	407,582	July 23	2360	611	48	487
Roofing-paper roll	C. M. Garrison	407,195	July 16	1766	462	48	361
Roofing-sheet	S. Slocombe	409,510	Aug. 20	1983	523	48	1078
Roofing. Sheet-metal	L. L. Sagendorph	407,966	July 30	2925	762	48	601
Roofing-sheet. Metallic	L. H. Bohn	410,066	Aug. 27	2800	737	48	1237
Roofing-sheets. Machine for edging	L. L. Sagendorph	410,294	Sept. 3	241	62	48	1316
Roofing, siding, &c. Metallic	C. Burkelman	409,912	Aug. 27	2586	677	48	1196
Roofing-tank apparatus. Portable	A. Blank	409,096	Aug. 13	1369	351	48	949
Roofing. Water-proof and fire-proof material for	J. S. Powell	408,891	Aug. 13	1044	280	48	891
Rope attachment	M. Campbell	407,573	July 23	2244	607	48	484
Rope-clasp	M. Furst	407,522	July 23	2263	585, 586	48	466
Rope-making machine	I. E. Palmer	409,227	Aug. 20	1572	415	48	996
Ropes. Hitching device for	J. B. Cornwall	409,632	Aug. 20	2168	571	48	1112
Rotary bolt	J. H. Walsh	410,861	Sept. 10	801	216	48	1432
Rotary bolt	W. S. Johnston	407,665	July 23	2469	630	48	507
Rotary brake	J. J. Bentley	406,060	July 2	79	23, 24	48	19
Rotary engine	W. M. Griscom	408,101	July 30	3128	819	48	630
Rotary engine	T. E. Keavy	409,591	Aug. 20	2100	553	48	1099

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rotary engine	J. McCaskey and C. P. Shaw	410,431	Sept. 3	468	125	48	1359
Rotary engine	F. D. Owen	409,800	Aug. 27	2436	638, 639	48	1167
Rotary engine	J. E. Studley and R. C. Berry	410,043	Aug. 27	2770	729	48	1231
Rotary meter	W. Willis, J. and W. H. Smith	411,700	Sept. 24	2361	624, 625, 626	48	1753
Rotary shears	C. Thomas and J. W. Haviland	411,074	Sept. 17	1440	383	48	1566
Rotary steam-engine	J. H. Dow. (Reissue)	11,028	Sept. 3	657	174, 175	48	1397
Roundabout	W. A. Dodge	408,798	Aug. 13	918	245	48	863
Routing and wood-working machine	H. M. Albee	408,366	Aug. 6	237	60, 61	48	725
Rubber. Apparatus for washing and separating	N. C. Mitchell	408,424	Aug. 6	335	86	48	744
Rubber coats. Pocket for	H. J. Miller	407,024	July 16	1500	392	48	309
Rubber. Machine for cleaning refuse	C. Mayer	409,693	Aug. 27	2272	597, 598	48	1137
Rubber. Mill for grinding and sheeting	N. C. Mitchell	408,734	Aug. 13	821	216	48	842
Rubber-shoe attachment	J. Van Ausdall and B. A. Dolan	409,717	Aug. 27	2309	606	48	1143
Rubber-shoe fastening	F. S. Hand and E. Richardson	407,525	July 23	2267	587	48	467
Rubber-vulcanizing apparatus	L. K. Scotford	407,255	July 16	1862	485, 486	48	379
Rule, calipers, dividers, &c. Combined carpenter's	W. A. Delmage	409,934	Aug. 27	2619	685, 686	48	1203
Rule. Flexible	H. B. Williams	407,756	July 23	2602	673	48	535
Ruler	W. J. Wright	407,144	July 16	1687	441	48	346
Ruler. Parallel-	J. J. Hamilton	407,350	July 23	2005	521	48	416
Ruler. Perspective-	J. Varley	410,050	Aug. 27	2784	733	48	1234
Ruling machine. Paper-	W. McNab	406,940	July 16	1383	362	48	287
Ruling slates. Frame for	O. Ortell and W. Rottmann	408,387	Aug. 6	273	67	48	732
Running-gear	U. E. Miller	406,226	July 2	281	78	48	57
Sack-holder	J. B. Harman	409,195	Aug. 20	1523	404	48	987
Sad-iron	J. H. Dubrow	408,168	July 30	3234	844	48	657
Sad-iron	S. M. Nickerson and C. J. Holman	406,943	July 16	1386	363	48	287
Sad-iron	S. Waterman	406,608	July 9	875	236	48	179
Sad-iron polishing and waxing stand	H. H. Hull	411,523	Sept. 24	2094	552	48	1697
Saddle. Harness-	C. J. Cooper	408,827	Aug. 13	960	255	48	871
Saddle. Harness-	J. L. Richards	410,253	Sept. 3	176	46	48	1303
Saddle. Riding-	S. Haiukel	409,323	Aug. 20	1717	451	48	1025
Saddle. Riding-	J. S. Sullivan	411,072	Sept. 17	1438	383	48	1565
Saddle-tree	C. F. Bustin	408,577	Aug. 6	573	149	48	789
Saddle tree. Side-	M. J. Mohan	406,108	July 2	120	35	48	25
Saddles. Connecting-bar for riding-	W. W. Lewis	409,848	Aug. 27	2504	655	48	1178
Safe	J. J. Brown	406,122	July 2	141	41	48	30
Safe. Fire-proof	M. Mosler and M. S. Goldsmith	406,848	July 9	1241	329	48	248
Safe. Flour or meal	L. A. Haight	411,435	Sept. 24	1974	524	48	1673
Safe-lock	J. C. Harris	407,775	July 30	2626	681	48	545
Safety-pin	E. McConnell	406,367	July 2	482	134	48	96
Sale-slip	T. J. A. Macdonald	407,299	July 16	1922	500	48	391
Sand-band	F. Werner and R. Oehmigen	406,073	July 9	71	21	48	16
Sand-blast apparatus	J. E. Mathewson	409,751	Aug. 27	2353	619	48	1152
Sand-paper holder	T. L. Prevost	408,433	Aug. 6	345	90	48	746
Sand-screen	P. Drendul	410,078	Aug. 27	2836	745	48	1242
Sash and belt. Combined	T. J. Flagg	410,510	Sept. 3	576	155	48	1381
Sash-balance	A. W. Biddle	406,987	July 16	1453	381	48	300
Sash-balance	L. W. Doren	409,569	Aug. 20	2064	544	48	1093
Sash-balance	N. J. Skaggs	409,376	Aug. 20	1799	473	48	1040
Sash-cord fastener	E. W. Abbe	411,486	Sept. 24	2042	540	48	1686
Sash-cord fastener	R. Fagan	409,030	Aug. 13	1269	334	48	931
Sash-cord guide	W. G. Shedd	410,741	Sept. 10	944	252, 253	48	1436
Sash-fastener	G. Fitch and R. W. Williams	408,228	Aug. 6	44	10	48	686
Sash-fastener	H. B. Hebert	406,903	July 16	1328	348	48	275
Sash-fastener	H. S. and H. E. Klein	410,837	Sept. 10	1088	291	48	1487
Sash-fastener	W. Livingstone	408,493	Aug. 6	437	115	48	765
Sash-fastener	H. H. Meyer	411,128	Sept. 17	1526	407	48	1583
Sash-fastener	C. H. Miller and S. A. McDonald	408,920	Aug. 13	1101	290	48	899
Sash-fastener	E. Reed	410,115	Aug. 27	2900	761	48	1255
Sash-fastener	H. Staggs	410,382	Sept. 3	378	100	48	1344
Sash-holder	D. Easton	411,330	Sept. 17	1813	485	48	1637
Sash-holder	S. E. Harrington	407,952	July 30	2908	758	48	597
Sash-holder	E. C. Pruitt	406,234	July 2	292	80	48	58
Sash-lift	G. Hasenpflug	409,582	Aug. 20	2087	551	48	1097
Satchel attachment. Lady's	H. S. Craus	406,996	July 16	1466	383	48	302
Sausage-stuffer	F. W. Wilder	408,945	Aug. 13	1134	299, 300	48	906
Saw	G. W. Prescott	408,669	Aug. 6	710	184	48	815
Saw	G. F. Sellstrom	411,475	Sept. 24	2030	537	48	1684
Saw. Circular	S. P. Grey	411,189	Sept. 17	1611	428	48	1599
Saw-filing machine	W. H. Penrose	409,866	Aug. 27	2525	660	48	1182
Saw-gage	H. Saunders	406,774	July 9	1130	300	48	228
Saw-gin	W. L. Ellis	410,082	Aug. 27	2840	746	48	1243
Saw-grinding machine	W. J. Perkins	411,729	Sept. 24	2401	635, 636	48	1761
Saw guard. Band-	A. P. Hyde	407,211	July 16	1790	469	48	366
Saw guide. Band-	H. D. Fields	411,241	Sept. 17	1684	450	48	1615
Saw-gummer	J. F. Brower	409,825	Aug. 27	2472	646	48	1173
Saw-gummer	J. W. Mixter	406,228	July 2	283	78	48	57
Saw gummer. Gin-	E. W. Thompson and L. W. Haskell	406,315	July 2	409	111, 112	48	82
Saw gumming and sharpening machine	H. T. Basim	406,079	July 2	79	23	48	18
Saw-handle	J. A. Corey	407,333	July 23	1974	514	48	410
Saw-mill	H. D. Wickes	410,474	Sept. 3	525	141	48	1371
Saw mill. Band-	W. M. Wilkin	406,322	July 2	418	115	48	84
Saw mill. Band-	W. M. Wilkin	406,323	July 2	421	115	48	84

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Saw-mill carriages. Feed mechanism for	A. E. Hoffman	409,464	Aug. 20	1921	509	48	1066
Saw mill. Circular	E. C. Wiley	409,261	Aug. 20	1619	428, 429	48	1006
Saw-mill dog	G. M. Hinkley	411,195	Sept. 17	1621	431	48	1601
Saw-mill dog	B. J. Kelley	411,503	Sept. 24	2063	546	48	1691
Saw-mill feed	S. T. Reamy	411,679	Sept. 24	2330	617	48	1746
Saw mill. Gang-	T. S. Wilkin	410,623	Sept. 10	745	202	48	1421
Saw mill. Gang-	W. M. Wilkin	406,324	July 2	422	116	48	85
Saw-mill head-block	S. R. Smith and E. Myers	409,517	Aug. 20	1989	525, 526	48	1079
Saw-mill head-blocks. Dogging device for	S. R. Smith	409,516	Aug. 20	1988	525	48	1079
Saw mill. Reciprocating gang-	W. E. Mann	408,807	Aug. 13	931	248	48	866
Saw-mill set-works	F. W. Cook	410,349	Sept. 3	335	88	48	1334
Saw-mill set-works	A. Cunningham and E. J. Muller	407,234	July 23	1975	514, 515	48	410
Saw-mill set-works	G. W. Huckabay	407,664	July 23	2467	638	48	507
Saw-mills. Mechanism for governing the feed of	H. B. Strong	410,337	Sept. 3	321	83	48	1330
Saw-mills. Power-feed mechanism for log-carriages of	C. F. Thompson	409,883	Aug. 27	2548	667	48	1187
Saw-regulating attachment for band sawing-machines	E. S. Gilmore	406,209	July 2	257	71	48	52
Saw-set	M. H. Gross	407,438	July 23	2155	537	48	444
Saw-set	P. Ryan	409,805	Aug. 27	2443	640	48	1168
Saw-set	S. Shoup	408,759	Aug. 13	856	227	48	851
Saw-sharpening device	W. Ruttan	408,357	Aug. 6	224	57	48	723
Saw-sharpening machine	A. F. Radant	410,414	Sept. 3	486	130	48	1363
Saw-swage	J. W. Mixter	406,227	July 2	282	78	48	57
Saw-tooth. Removable	P. Cardiff	409,271	Aug. 20	1633	432	48	1000
Saw-tooth swage	C. O. and A. D. Porter	411,055	Sept. 17	1399	375	48	1557
Saws. Automatic balancing device for swing-	J. Ross	410,199	Sept. 3	107	28	48	1290
Saws. Device for jointing the teeth of band-	J. E. Miles	410,647	Sept. 10	780	211	48	1428
Sawdust-burner	H. L. Hildreth	409,285	Aug. 20	1667	439	48	1015
Sawdust-elevator	W. Frey	411,332	Sept. 17	1816	486	48	1638
Sawing beams. Apparatus for hot-	C. M. Schwab	410,119	Aug. 27	2914	765	48	1256
Sawing-machine	J. Fensom	406,274	July 2	342	94	48	69
Sawing-machine. Band	E. S. Gilmore	406,396	July 2	530	148	48	106
Sawing machine. Gang circular	J. O. Butler	408,790	Aug. 13	904	242	48	860
Sawing-machine. Self-acting	A. Greg	407,523	July 23	2264	586, 587	48	466
Sawing machine. Slab-	D. S. Abbott	410,777	Sept. 10	1004	269	48	1468
Scaffold	E. Brooksmith	409,167	Aug. 20	1492	395	48	981
Scaffold	T. E. Williams	411,363	Sept. 17	1862	498	48	1647
Scale. Automatic grain-	W. A. Bradley	406,254	July 2	314	87	48	63
Scale. Automatic grain-	K. H. Schaper	410,857	Sept. 10	1118	301	48	1493
Scale-regulator. Grain-	C. H. Cooley	409,669	Aug. 27	2235	587	48	1130
Scale regulator. Grain-	C. H. Cooley	410,138	Aug. 27	2938	772	48	1261
Scale regulator. Grain-	F. H. Richards	410,116	Aug. 27	2902	761, 762	48	1255
Scale regulator. Grain-	F. H. Richards	410,117	Aug. 27	2904	762	48	1255
Scale. Spring-	E. F. Bergman	406,499	July 9	712	196	48	150
Scale. Spring-	E. F. Bergman	410,952	Sept. 10	1248	336	48	1519
Scale. Spring-	C. Forschner	406,518	July 9	744	204	48	156
Scale. Weighing-	T. H. Herndon	411,336	Sept. 17	1825	488	48	1640
Scales. Automatic weighing-	J. Conmee	407,170	July 16	1725	450	48	353
Scales for suspension-tramways. Weighing-	W. J. Miller	411,507	Sept. 24	2070	548	48	1692
Scales. Medicine or postal	W. R. Watt	409,080	Aug. 13	1340	354	48	944
Scales. Price-indicating attachment for weighing-	L. L. Wands	410,389	Sept. 3	388	103	48	1345
Scales. Stop-motion register for grain-	F. H. Richards	408,192	July 30	3280	856, 857	48	665
Scales. Weighing-	R. E. Glover	409,191	Aug. 20	1519	403	48	986
Scales. Weighing-	G. L. Phelps	408,319	Aug. 6	169	42, 43	48	712
Scales. Weighing-	W. H. Stewart	407,747	July 23	2586	670	48	531
Scarfing-machine	E. B. Rich	409,337	Aug. 20	1740	457	48	1028
Scissors attachment	J. H. Norrell	410,375	Sept. 3	370	99	48	1342
Scoop for clay or ore mills	E. J. Mildren	411,463	Sept. 24	2010	533	48	1679
Scourer: *See* Grain-scourer.							
Scourer and cleaner	R. Steel	409,652	Aug. 20	2193	577	48	1116
Scouring and washing machine	S. Hodgson	410,519	Sept. 3	587	157, 158	48	1383
Scow. Dumping-	J. Edwards	408,298	Aug. 6	139	35, 36	48	706
Scow. Dumping-	J. Edwards	409,942	Aug. 27	2632	690, 691	48	1205
Scraper	P. V. Egbert	406,093	July 2	100	29	48	22
Scraper and bell-pull. Combined shoe or boot	T. Böhm and L. Eichelberg	410,633	Sept. 10	763	206	48	1424
Scraper or self-loading cart. Wheeled	C. H. Sawyer	407,451	July 23	2173	560, 561	48	448
Scraper. Road-	F. T. Lomont	410,249	Sept. 3	169	44, 45	48	1301
Scraper. Wheeled	A. Brown	411,119	Sept. 17	1514	403	48	1580
Scraper. Wheeled	C. H. Sawyer	407,452	July 23	2176	561, 562	48	448
Screen: *See* Coal-screen. Insect-screen. Paper-pulp screen. Potato-screen. Sand-screen. Window-screen.							
Screw	G. P. Rose	411,202	Sept. 17	1634	435	48	1604
Screw-blanks and screws. Machine for cutting	J. P. Berkholz	410,484	Sept. 3	539	144	48	1374
Screw-blanks. Machine for dressing the ends of	G. E. Witherell	409,441	Aug. 20	1883	497, 498	48	1056
Screw-caps. Forming	G. Schrader and J. Schmitt	406,479	July 9	673	188	48	144
Screw clamp. Hand-	G. A. Waterhouse	410,303	Sept. 3	258	68	48	1318
Screw-cutting die	A. Saunders	406,857	July 9	1258	332	48	251
Screw-cutting die-stock	J. H. Sternbergh and R. Pemberton	409,253	Aug. 20	1609	424	48	1004
Screw-cutting head	A. B. Landis	409,208	Aug. 20	1544	408	48	991
Screw-cutting machine	E. P. Bullard	410,146	Sept. 3	10	3	48	1270

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Screw. Drive	C. D. Rogers	410,698	Sept. 10	862	232	48	1443
Screw-heads. Machine for slotting	J. A. Bidwell	407,155	July 16	1701	444	48	349
Screw. Lag	G. P. Rose	408,751	Aug. 13	843	224	48	848
Screw machine. Metal	G. A. Fairfield and G. E. Witherell	409,674	Aug. 27	2240	589	48	1131
Screw-swaging machine	C. D. Rogers	408,529	Aug. 6	492	130	48	775
Screw-swaging machine	C. D. Rogers	408,673	Aug. 6	716	196	48	816
Screw-threads on articles of sheet metal. Machine for forming	W. F. Lewis	411,156	Sept. 17	1565	416	48	1500
Screw-threads upon screws. Forming	C. D. Rogers	408,530	Aug. 6	495	132	48	776
Screw. Wood	C. D. Rogers	408,531	Aug. 6	497	132	48	776
Screw. Wood	C. D. Rogers	410,697	Sept. 10	860	231	48	1443
Screws, &c. Device for removing broken	M. Cahn	410,760	Sept. 10	1010	270	48	1470
Screws. Machine for making	G. Landmann	407,537	July 23	2282	592	48	470
Screws. Machine for rolling threads on	J. Sheldon	408,048	July 30	3040	795	48	623
Scrubbing-machine	J. Hebert	408,802	Aug. 13	925	246	48	864
Scythe-sharpening apparatus	J. E. Parmentier	409,753	Aug. 27	2357	630	48	1153
Scythe-snath fastening	A. D. Myers	408,505	Aug. 6	457	120	48	769
Sea sounder. Electric registering deep	A. J. Cooper and E. E. Wigzell	410,786	Sept. 10	1020	274	48	1473
Seal for mail-packages, &c	E. J. Brooks	407,057	July 16	1546	405	48	317
Seal-lock	C. E. Davis. (Reissue)	11,011	July 9	1368	334	48	253
Seal-lock	R. W. Gillespie	409,034	Aug. 13	1573	335	48	931
Seal-lock	G. W. Lewis	408,826	Aug. 13	1059	276	48	889
Seal-lock	O. S. Winans	406,810	July 9	1190	316	48	239
Sealing-disk for jars, &c	D. W. Johnson	408,177	July 30	3245	847	48	660
Seam-finishing machine	P. A. and J. Cerpal	410,636	Sept. 10	766	207	48	1425
Seaming machine. Metal	J. Solter	411,071	Sept. 17	1436	382	48	1564
Seaming machine. Roofing double	S. Y. Buckman	407,466	July 23	2196	566	48	452
Seaming tin boxes. Machine for	H. P. F. Ewers	411,331	Sept. 17	1814	485	48	1638
Seaming, trimming, and overseaming machine. Combined	H. H. Fefel	407,286	July 16	1907	496	48	388
Seat: *See* Bicycle-seat. Car-seat. Cart-seat. Harrow-tooth seat. Vehicle-seat. Vehicle jump-seat. Water-closet seat.							
Secondary battery	N. B. Aldrich	408,367	Aug. 6	240	61	48	726
Secondary battery	T. D. Bottome	408,287	Aug. 6	124	31	48	703
Secondary battery	C. S. Bradley	409,448	Aug. 20	1893	501	48	1061
Secondary battery	H. E. Dey	406,822	July 9	1206	320	48	242
Secondary battery	V. H. Ernst	408,002	July 30	2981	776	48	611
Secondary battery	C. A. Faure	409,178	Aug. 20	1501	399	48	983
Secondary battery	W. W. Griscom	406,439	July 9	601	160	48	129
Secondary battery	I. Kitsee	406,916	July 16	1347	353	48	290
Secondary battery	J. F. McLaughlin	408,666	Aug. 6	707	183	48	814
Secondary battery	C. H. Thompson	406,969	July 16	1498	374	48	294
Secondary battery	J. T. Van Gestel	410,680	Sept. 10	836	224	48	1438
Secondary-battery plates. Apparatus for filling	H. G. Morris and P. G. Salom	408,986	Aug. 13	1197	315	48	916
Sectional boiler	J. Bond	407,920	July 30	2838	745	48	587
Seed cleaner. Cotton	R. H. Collyer	408,085	July 30	3092	810	48	633
Seed crusher. Cotton	G. W. Simmons	407,373	July 23	2050	530	48	494
Seed-crushing machine	J. A. J. Gibson	407,346	July 23	2001	519	48	415
Seed from pulp. Machine for separating	L. Ladd	408,243	Aug. 6	65	18	48	692
Seed. Machine for delinting cotton	G. H. Croker	408,796	Aug. 13	916	244	48	892
Seed. Machine for delinting cotton	J. H. McCormick	411,294	Sept. 17	1758	470	48	1629
Seeder	W. D. Arnett	410,064	Aug. 27	2798	737	48	1236
Seeder and fertilizer-distributer	G. F. Strawson	411,692	Sept. 24	2353	620	48	1751
Seeder and harrow. Combined	A. F. Brown	408,290	Aug. 6	128	31.32	48	704
Seeder and harrow. Combined	J. B. Coon	406,881	July 16	1297	340	48	269
Seeder. Broadcast	F. J. Henrichsen	407,657	July 23	2459	637	48	505
Seggar	T. A. Bell	408,369	Aug. 6	242	61	48	726
Self-oiling wheel	N. D. Helmick	407,777	July 30	2633	686	48	546
Self-sealing jar	J. W. Bulger	409,169	Aug. 20	1493	396	48	982
Selling-machine	J. M. O'Kelly	406,563	July 9	844	220	48	175
Selling-machine. Automatic	J. W. Vaughn	407,946	July 30	2996	786	48	595
Semaphore-signal	J. W. Hancock	406,836	July 9	1227	320	48	246
Separator: *See* Centrifugal separator. Electro-magnetic separator. Grain-separator. Grain and seed separator. Grease and oil separator. Magnetic separator. Ore-separator. Powder-separator.							
Separator	L. A. Palmar	407,225	July 16	1832	472	48	374
Sewer-pipe	J. A. Misend	407,102	July 16	1631	426	48	335
Sewer-sheathing. Driving-head for	N. E. Green	407,348	July 23	2003	540	48	415
Sewing knit fabrics. Trimming attachment for machines for	E. H. Brown	406,424	July 9	576	151	48	124
Sewing looped fabrics. Trimming attachment for machines for	A. L. Traver	410,720	Sept. 10	910	242	48	1449
Sewing-machine	P. A. Darracq	406,431	July 9	585	165	48	126
Sewing-machine	H. H. Fefel	407,186	July 16	1754	459	48	359
Sewing-machine	B. Fischer	408,227	Aug. 6	41	9,10	48	686

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Sewing-machine	T. C. Harris	410,277	Sept. 3	215	56	48	1311
Sewing-machine	T. F. Hart and G. S. Hill	406,277	July 2	316	85	48	70
Sewing-machine	A. M. Leslie	406,019	July 30	3008	784	48	616
Sewing-machine	S. O'Connor	410,011	Aug. 27	2723	716	48	1223
Sewing-machine	R. Otto	406,427	Aug. 6	339	87	48	745
Sewing machine. Broom	G. F. McCombs	407,741	July 23	2569	665	48	598
Sewing-machine. Button-hole	F. H. Bennett and J. Dowling	409,728	Aug. 27	2330	610	48	1146
Sewing-machine button-hole attachment	D. Mills	408,500	Aug. 6	448	611	48	767
Sewing-machine button-hole attachment	C. J. A. Sjoberg	406,115	July 2	127	117	48	87
Sewing-machine button-hole attachment	W. Wallick	406,799	July 9	1171	309	48	235
Sewing-machine button-hole attachment	W. Wallick	406,800	July 9	1174	310	48	236
Sewing-machine button-hole clamp	C. J. Woodward	411,703	Sept. 24	2389	628	48	1754
Sewing-machine cording attachment	E. J. Toof	410,618	Sept. 10	734	029	48	1418
Sewing-machine feeding device	M. Marcil	407,296	July 16	1921	198	48	391
Sewing-machine feeding mechanism	F. N. Cookson	411,491	Sept. 24	2046	500	48	1687
Sewing-machine motor	J. M. Bröslus	407,058	July 16	1547	541	48	317
Sewing-machine. Multiple	F. Kern	411,104	Sept. 17	1490	406	48	1575
Sewing-machine. Overseaming	J. C. Goodwin	408,009	July 30	2993	395	48	613
Sewing-machine plaiting attachment	C. M. Hine	407,400	July 23	2089	780	48	431
Sewing-machine presser-foot	C. Timm	408,767	Aug. 13	866	540	48	853
Sewing-machine quilting-frame	J. E. Gibbs	409,143	Aug. 13	1442	232	48	853
Sewing-machine ruffler	E. J. Toof	410,619	Sept. 10	735	379	48	904
Sewing machine. Shoe	A. Eppler, Jr.	409,281	Aug. 20	1655	198	48	1418
Sewing machine. Shoe-welt	J. S. Turner	407,974	July 30	2934	436	48	1013
Sewing-machine shuttle	J. F. McKenney	406,368	July 2	483	764	48	603
Sewing-machine shuttles. Raceway for rotary	D. E. Marsh	411,290	Sept. 17	1754	734	48	96
Sewing machine. Sole	J. E. Bertrand	409,161	Aug. 20	1488	469	48	1628
Sewing machine. Straw-braid	M. Marcil	407,297	July 16	1919	391	48	979
Sewing-machine thread-slackening device	C. J. Woodward	411,702	Sept. 24	2366	392	48	391
Sewing-machine treadle	H. K. House	410,099	Aug. 27	2776	393	48	1753
Sewing-machine treadle	W. F. Otis	408,131	July 30	3181	409	48	1250
Sewing-machine trimming device	A. C. Campbell	407,572	July 23	2344	754	48	648
Sewing-machine tuck-folder	L. J. Pearsall	406,258	Aug. 6	84	606	48	484
Sewing-machine tuck-marker	F. Henry	409,841	Aug. 27	2495	20	48	696
Sewing-machine tucking-guide	H. L. Nick	408,190	July 30	3279	652	48	1176
Sewing-machines. Feed-operating mechanism for	J. Tripp	409,129	Aug. 13	1424	856	48	664
Sewing-machines. Rotary shuttle-actuating mechanism for	H. W. Hadley	406,042	July 2	29	375	48	960
Sewing-machines. Separator-plate for	M. G. Turner	406,316	July 2	410	9	48	8
Sewing-machines. Thread-controlled stop mechanism for	A. J. Hart	409,963	Aug. 27	2961	112	48	82
Sewing shoes. Machine for	H. H. Buffum	410,145	Sept. 3	6	113	48	1210
Shackle	W. D. Duncan	407,582	July 23	2359	698	48	1270
Shade-fastener	P. A. Harris	408,410	Aug. 6	314	611	48	487
Shade-holder	H. J. Bell	408,070	July 30	3077	80	48	740
Shade or globe holder	B. L. Coe	409,928	Aug. 27	2608	804	48	920
Shade-roller fixture	H. W. Simms	406,481	July 9	676	683	48	1200
Shade supporter. Window	W. S. Reynolds	406,474	July 9	667	189	48	145
Shaft and belt-tightener. Counter	P. H. Kroncke	408,417	Aug. 6	325	187	48	143
Shaft-bearings. Lubricator for	J. Comer	407,771	July 30	2922	84	48	742
Shaft cooling-box	H. Kleman	408,663	Aug. 6	704	679	48	544
Shaft-coupling	J. Chivill	408,953	Aug. 13	1148	182	48	814
Shaft-coupling	W. D. Gray	408,011	July 30	2997	304	48	908
Shaft-coupling	J. H. Hebblethwaite	406,798	July 9	1220	781	48	813
Shaft-coupling	J. A. Chapman	409,732	Aug. 27	2329	326	48	946
Shaft coupling. Vehicle	E. A. Newman	411,673	Sept. 24	2323	618	48	1147
Shaft coupling. Vehicle	W. W. Rankin	406,536	July 9	773	615	48	1745
Shaft coupling. Vehicle	M. D. Strait	408,819	Aug. 13	948	210	48	102
Shaft gearing. Vehicle	T. E. Golden	407,347	July 23	2001	252	48	689
Shaft-hanger	G. Rieseck	408,680	Aug. 6	730	520	48	415
Shaft supporter. Vehicle	H. F. Welch	409,621	Aug. 20	2158	189	48	818
Shafts. Machine for straightening, rounding, and condensing	G. F. Simonds	407,843	July 30	2736	190	48	1108
Shaping-machines. Dirt-guard for	U. Eberhardt	409,941	Aug. 27	2630	711	48	585
Sharpening device	C. Everding	407,651	July 23	2452	690	48	1205
Shears: *See* Animal-shears. Metal-shears. Pruning-shears.					635	48	504
Shears. Attachment for	J. W. Emmert	406,039	July 2	26	8	48	8
Sheave. Carrying	A. Mill	410,986	Sept. 10	1303	351	48	1530
Sheet-metal articles. Machinery for polishing	F. W. Perry	410,851	Sept. 10	1111	299	48	1492
Sheet-metal elbow	A. O. Kittredge	407,356	July 23	2027	545	48	419
Sheet-metal-making apparatus	E. Norton and J. G. Hodgson	406,945	July 16	1360	364	48	986
Sheet-metal pipe	H. L. Gates	410,409	Sept. 3	425	365	48	1332
Sheet-metal pipe	C. L. Hart	409,196	Aug. 20	1524	113	48	987
Sheet-metal-shaping machine	H. Aiken	411,116	Sept. 17	1508	404	48	1570
Sheet-metal-shaping machine	T. W. Irwin	407,530	July 23	2273	401	48	486
Sheet-metal structure	W. Orr and P. S. Brown	407,111	July 16	1646	569	48	336

Shirt	M. Cohen	409,016	Aug. 13	1244	329	48	925
Shirt	S. Miller	410,398	Sept. 3	307	79	48	1398
Shirt	E. Oppenheim	410,376	Sept. 3	371	99	48	1342
Shirt. Woolen	S. Marens	410,964	Sept. 10	1302	351	48	1529
Shock-compressor	W. W. Harter	411,721	Sept. 24	2390	633	48	1759
Shock or bundle tyer	W. W. Huffman	411,033	Sept. 17	1370	367	48	1552
Shoe	W. J. McKinney	406,769	July 9	1110	294	48	224
Shoe-beading machine	S. Rose, Jr.	408,537	Aug. 6	516	135	48	778
Shoe-burnishing machine	S. Rose, Jr.	409,240	Aug. 20	1591	419	48	999
Shoe. Galvanic	J. S. Mellon	407,673	July 23	2478	641	48	509
Shoe-nail. Wire	A. Briggs	408,159	July 30	3222	841	48	655
Shoe-string fastener	J. Driscoll	408,167	July 30	3233	844	48	657
Shoe-tying machine	A. E. Ayer	411,565	Sept. 24	2154	570 571	48	1709
Shoe-uppers. Machine for cutting	T. Brining	407,159	July 16	1707	445 446	48	350
Shoe-wiper	J. and F. Rennie	411,532	Sept. 24	2106	555	48	1699
Shoes or slippers. Manufacture of wigwam	H. L. Larrabee and D. Putnam	411,454	Sept. 24	1999	530	48	1677
Shot. Apparatus for producing	F. S. Köhler	406,353	July 2	463	129 130	48	93
Shot-canister	E. Harigel	411,123	Sept. 17	1521	406	48	1582
Shovel: *See* Plow-shovel.							
Shovel	J. Pfeifer	411,257	Sept. 17	1710	457	48	1620
Shovels, scoops, &c. Making	T. F. Stevenson	406,817	Aug. 13	946	252	48	860
Show-card	J. W. Davies	407,282	July 16	1901	495	48	387
Show-case	J. Buckmaster	409,009	Aug. 13	1232	326	48	923
Show-case. Cabinet	E. Pfferling	406,517	Aug. 6	477	126	48	772
Shutter-fastener	T. Thorn	407,845	July 30	2741	712	48	565
Shutter-fastener	A. Van Wie	407,308	July 16	1934	503	48	394
Shutter-fastener	L. Whitehouse	409,436	Aug. 20	1880	496	48	1058
Shutter-worker	G. S. Elliott	411,548	Sept. 24	2132	564 565	48	1704
Shutter-worker	R. W. Jorres	409,406	Aug. 20	1839	484 485	48	1049
Shutter-worker	D. H. Royer	407,119	July 16	1658	433 434	48	340
Sifter and coal-scuttle. Ash-	K. E. Sheppard	408,815	Aug. 13	943	251	48	868
Sifter and dumper. Ash-	E. T. Brown and S. Page	410,575	Sept. 10	670	179	48	1406
Sifter. Ash-	J. W. Love	406,224	July 2	277	77	48	55
Sifter. Ash-	C. L. Porter	411,529	Sept. 24	2102	554	48	1698
Sifter. Flour-	R. Olp	409,491	Aug. 20	1958	518	48	1073
Sight-feed lubricator	W. Woodward	407,805	July 30	2683	696	48	555
Sign. Street-lamp	J. Stewart	408,199	July 30	3291	859	48	667
Signal: *See* Car-signal. Railway-crossing signal. Electric signal. Revolving signal. Mill-signal. Semaphore-signal. Railway-signal. Time-signal.							
Signal	W. H. Donner	410,270	Sept. 3	205	54	48	1309
Signal appliance	W. J. Barnes	406,558	July 9	799	216	48	166
Signal apparatus. Municipal	J. C. Wilson	411,407	Sept. 17	1925	513	48	1658
Signal-box. Electric	D. A. Palmer	408,042	July 30	3032	793	48	621
Signal-light	J. F. Ridenour	406,539	July 9	776	211	48	162
Signal-operating mechanism	J. T. Hambay	408,616	Aug. 6	627	165	48	800
Signal or alarm transmitter and time-indicator	A. J. Reams	406,769	July 9	1121	297 298	48	226
Signal-receiving instrument. Electric	S. D. Field	409,673	Aug. 27	2246	591	48	1132
Signal-rod coupling	J. T. Hambay	406,811	July 2	259	71, 72	48	52
Signaling apparatus	W. R. Cole	411,120	Sept. 17	1516	404	48	1581
Signaling apparatus	G. F. Milliken	407,101	July 16	1628	429	48	335
Signaling apparatus. Electric	W. Eddy	406,224	Aug. 6	31	7	48	C84
Signaling apparatus. Marine	A. Taylor	409,074	Aug. 13	1333	351 352	48	942
Signaling apparatus. Nautical	T. Smith	409,250	Aug. 20	1606	421	48	1003
Signaling apparatus. Train-	M. E. Campany	407,879	July 16	1897	494	48	396
Signaling device. Electric	J. C. O. Nell	406,057	July 2	48	14	48	12
Signaling device for time-service. Automatic	C. H. Pond	408,846	Aug. 13	966	261	48	876
Silk-reeling machinery	E. W. Serrell, Jr	406,508	July 9	854	230	48	176
Silverware-cases. Clip for	H. and W. Siebert	408,935	Aug. 13	1123	299	48	903
Sink and kitchen-cabinet. Combined	J. H. Rice	411,352	Sept. 17	1850	494	48	1644
Sink-back	T. F. Coyne	406,198	July 2	245	67, 68	48	49
Sink-coupling	L. J. Euvrard	406,272	July 2	339	92	48	68
Siphon	L. Meyer	408,918	Aug. 13	1099	299	48	898
Siphon	M. Sierszdorfer	407,971	July 30	2831	763	48	602
Siphon-closet	H. C. Weeden	409,341	Aug. 20	1744	458	48	1029
Sirup for soda-water	F. L. Smith	406,783	July 9	1147	.....	48	231
Sizing compound	R. D. Buncke	407,510	July 23	2250	.....	48	463
Skate	J. H. Young	406,699	July 9	976	256	48	179
Skelping or tube-welding. Apparatus for	J. A. Simpson	407,206	July 16	1932	503	48	393
Slat-fastener	A. Frans	406,438	July 9	600	166	48	129
Slate, &c. Machinery for grinding the edges of a series of slabs of	S. Lloyd	407,408	July 23	2100	542 543	48	433
Sled	S. L. Allen	408,681	Aug. 13	737	193	48	827
Sled	A. Tode	407,796	July 30	2676	694	48	553
Sled. Bob-	W. J. Blackinton	406,560	July 9	801	217	48	167
Sled. Bob-	J. A. Johnson	407,595	July 23	2373	615	48	490
Sled-brake	J. P. Tadder	410,466	Sept. 3	316	130	48	1369
Sled. Coasting-	A. I. Gallaway	406,723	July 9	1050	280	48	212
Sled-propeller	J. D. Thomas	410,220	Sept. 3	131	33	48	1294
Sled-runner. Shoe for	J. R. Campbell	409,317	Aug. 20	1710	449	48	1023
Sleigh	S. C. Felt	410,584	Sept. 10	681	182	48	1408
Sleigh	W. D. Rumsey	407,120	July 16	1660	434	48	341
Sleigh. Bob-	G. A. Bain	406,867	July 16	1276	335	48	266
Sleigh. Bob-	C. W. Creesap	406,028	July 2	12	4	48	5
Sleigh-knee	H. P. Titus	409,376	Aug. 20	1800	474	48	1040
Sleighs. Arm-rail for	A. Searls	407,905	July 30	2829	736	48	582
Slicer. Vegetable-	J. Enoch	410,592	Sept. 10	678	181	48	1408
Slivers from gill-boxes. Apparatus for drawing	T. H. Ackroyd and A. Broadley	407,291	July 23	2073	536	48	428
Slotting-machine. Device for tilting the tool of a	J. C. Caldwell	409,451	Aug. 20	1900	502	48	1002
Smelting-furnace	J. J. Williams	409,541	Aug. 20	2024	534	48	1086
Smoke and gas consuming furnace	A. Fickett	407,287	July 16	1909	497	48	389
Smoke-box front door	E. W. M. Hughes	408,026	July 30	3014	787	48	617
Smoke-consumer	G. McDowell	406,757	July 9	1106	293 294	48	223
Smoke-consuming apparatus	J. G. Mohn and A. Yelles	407,026	July 16	1502	393	48	309
Smoke-house	E. C. Ford	409,319	Aug. 20	1719	450	48	1083
Smoke-stack. Ventilator	O. R. Kuehne	410,113	Aug. 27	2308	761	48	1254
Snap-hook	H. Hulvel	411,442	Sept. 24	1983	526	48	1674
Snap-hook	C. A. Mann	407,096	July 16	1622	424	48	313
Snap-hook	H. McPherson	407,545	July 23	2311	597	48	477
Snap-hook	L. P. Riley	408,813	Aug. 13	942	250	48	868
Snow and cleaning roadways. Apparatus for removing	A. Hentschel	410,895	Sept. 10	1174	316	48	1503
Snow and ice. Apparatus for melting	W. Briscoe	408,333	July 2	436	120	48	88
Snow-plow	W. H. Deadman	407,513	July 23	2252	581 582	48	464
Snow-plow. Railway	L. E. Truesdell	406,117	July 2	135	39	48	26
Soap-box. Folding	I. B. Jones	407,076	July 16	1569	416	48	322
Soap. Machine for stamping and molding	C. P. Oldham	407,233	July 16	1896	477 478	48	373
Sod-cutter	L. T. Price	409,868	Aug. 27	2598	661	48	1183
Soda apparatus. Hot-	C. C. Morian	411,293	Sept. 17	1757	470	48	1620
Soda-fountain	J. G. Low	408,888	Aug. 13	1055	278	48	890
Soda-water, &c. Apparatus for dispensing	W. Gee	409,955	Aug. 27	2646	694	48	1208
Soda-water fountains. Apparatus for charging	F. S. Waldo	406,276	Aug. 6	109	27	48	700
Solar bath	S. D. Evans	407,434	July 23	2148	555	48	443
Solder rings. Machine for hemming can-caps with sheet-	J. G. Hodgson and E. Norton	406,317	Aug. 6	165	41, 42	48	711
Soldering caps on fruit-cans. Machine for	E. De Cew and A. E. Carpenter	407,773	July 30	2624	669	48	545
Soldering-clamp for eaves-troughs and spouts	H. C. Atkinson	406,616	July 9	891	240	48	192
Soldering-iron	T. W. Eversole	406,406	Aug. 6	312	79	48	739
Soldering-iron	J. H. Ferns	410,064	Aug. 27	2842	746	48	1243
Soldering-iron	C. L. Wagandt	408,772	Aug. 13	873	234	48	854
Soldering-iron	J. S. Hull	409,357	Aug. 20	1768	466	48	1034
Soldering-irons, lead-melting pots, &c. Device for heating	J. N. Sanger	406,310	July 2	400	109	48	80
Soldering-machine	J. G. Hodgson	406,238	Aug. 6	60	13	48	699
Soldering-machine	A. W. Livingston and G. Wilcox	410,761	Sept. 10	940	253	48	1463
Soldering machine. Can-	W. D. Brooks	407,161	July 16	1710	446	48	350
Soldering machine. Can-	W. Hipperling	406,647	July 9	942	255	48	193
Soldering machine. Can-	J. Selter	411,070	Sept. 17	1431	381 382	48	1564
Soldering machine. Can-cap-	E. Norton	406,252	Aug. 6	75	17	48	693
Soldering machine. Can-cap-	E. Norton and J. G. Hodgson	406,316	Aug. 6	163	41	48	711
Soldering metal pipes	W. A. Henderson	407,778	July 30	2634	682	48	546
Soldering vent-holes. Machine for	E. Norton	406,253	Aug. 6	77	17	48	694
Sole and heel trimmer	C. H. Trask	406,974	July 16	1433	375 376	48	295
Sole and heel trimmer	C. H. Trask	407,263	July 16	1876	489	48	361
Sole-cutting die	J. B. Keaney	410,984	Sept. 3	224	58	48	1313
Sole-cutting machine	H. Loewer and B. L. Blair	407,735	July 23	2561	663	48	508
Sole-edge trimmers. Manufacture of cutting-wheels for	E. E. Bean	409,506	Aug. 20	2110	556	48	1101
Sole-marking machine	P. Cox	410,316	Sept. 3	284	73, 74	48	1324
Sole-protector	J. F. Pratt	407,009	July 23	2393	621	48	493
Sole-shaping machine	T. A. Bresnahan	409,269	Aug. 20	1629	431	48	1008
Sole-trimming machine	C. W. Glidden	410,069	Aug. 27	2855	749	48	1246
Soles. Apparatus for molding spring-heels of	P. Cox	410,317	Sept. 3	285	74	48	1324
Soot and spark arrester	J. B. Z. Dumais	406,710	July 9	1034	277	48	208
Sounds. Apparatus for the record and reproduction of	G. Bettini	409,004	Aug. 13	1220	323	48	921
Sounds. Apparatus for the record and reproduction of	G. Bettini	409,005	Aug. 13	1222	324	48	921
Sounds. Recording and reproducing	G. Bettini	409,003	Aug. 13	1219	323	48	921
Sower and clod-crusher. Combined seed-	J. W. Self	409,070	Aug. 13	1325	349 350	48	941
Sower. Broadcast seed-	H. W. Ru Ton and H. A. Gore	409,373	Aug. 20	1793	472	48	1039

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drf.	Official Gazette. Vol.	Official Gazette. Page.
Sewer. Broadcast seed	S. Smoker	408,542	Aug. 6	522	136	48	779
Spacing or marking wheel	F. C. Vibert	409,718	Aug. 27	2310	607	48	1143
Spark-arrester	J. B. Barnes	409,344	Aug. 20	1749	459	48	1030
Spark-arrester	J. Q. Donnald	411,327	Sept. 17	1810	463	48	1637
Spark-arrester	W. J. Ussery	406,488	July 9	693	192	48	148
Spark-conductor	E. J. Brandt	406,622	July 9	901	243	48	184
Spark-conductor	K. H. Carper	411,323	Sept. 17	1805	482 / 483	48	1636
Spectacle-case	W. W. Brilhart	410,234	Sept. 3	148	39	48	1297
Spectacle-case	C. R. Loug	410,798	Sept. 10	1038	278	48	1477
Spectacle-case	J. J. Bleich and J. F. Sarratt	411,118	Sept. 17	1513	403	48	1580
Spectacle-case holder	J. A. Maloney	411,160	Sept. 17	1575	419	48	1592
Speculum	J. I. Thornycroft	409,324	Aug. 20	2001	528	48	1061
Speed-measurer	F. Richard	410,023	Aug. 27	2738	719 / 720	48	1226
Spelling-stick	A. F. Smith	407,374	July 23	2052	541	48	494
Spindle: *See* Spinning-spindle. Winding-spindle.							
Spindle-driving bands. Tension-regulating device for	A. McDonald	408,189	July 30	3278	855	48	664
Spindle-driving bands. Tension-regulating device for	A. Netherwood	409,799	Aug. 27	2435	638	48	1167
Spinning frame. Ring	W. E. Sharples	410,255	Sept. 3	179	47	48	1303
Spinning-frames, &c. Support for the rollers of	E. Tweedale	408,275	Aug. 6	108	27	48	709
Spinning-frames. Thread-separator for	W. E. Sharples	407,420	July 23	2125	548 / 549	48	438
Spinning hemp, &c. Machine for	J. F. W. Stairs	406,601	July 9	863	223 / 224	48	177
Spinning-machine	E. Gessner	409,958	Aug. 27	2654	690	48	1209
Spinning-machine	E. Gessner	409,959	Aug. 27	2655	697	48	1209
Spinning-machine	E. Gessner	409,960	Aug. 27	2657	697	48	1209
Spinning-machine	P. Smith, Jr., and J. Lund	408,900	Aug. 13	1074	285 / 286	48	893
Spinning machine. Ring	E. Gessner	409,957	Aug. 27	2651	690	48	1209
Spinning machines. Flexible support for rings of ring-	H. F. Shaw	410,256	Sept. 3	181	47	48	1304
Spinning-machines. Saddle for top rolls of	W. T. Carroll	408,292	Aug. 6	131	33	48	705
Spinning-machines. Spindle-driving mechanism for	C. W. Jones	408,804	Aug. 13	927	247	48	865
Spinning-machines, &c. Spindle-holder for	A. W. Allen	410,392	Sept. 3	392	104	48	1346
Spinning-machines. Tension-regulating device for driving-bands of	E. Maertens	409,412	Aug. 20	1847	488	48	1051
Spinning-machines. Top drawing-roll for	W. T. Kellogg	406,740	July 9	1073	280	48	216
Spinning-machinery lubricator	L. B. Sanford and T. G. Grisenthwaite	407,122	July 16	1663	433	48	341
Spinning-mule	E. Hilton	409,266	Aug. 20	1668	430	48	1015
Spinning-mule	J. Lowe	407,783	July 30	2639	685 / 686	48	547
Spinning-mule	O. Schimmel	408,540	Aug. 6	518	134 / 135	48	778
Spinning-mule	E. Wright	411,062	Sept. 17	1448	375 / 376 / 377	48	1567
Spinning-spindle	J. E. Tyman	408,862	Aug. 13	1012	263	48	881
Spinning-spindle and support therefor	C. A. Pratt	408,812	Aug. 13	940	244	48	868
Spinning-spindle bearing	J. W. Wattles	408,866	Aug. 13	1030	270	48	882
Spinning-spindle. Compound	J. Lees	410,969	Sept. 10	1299	339	48	1529
Spinning-spindle step	O. B. Parker and G. T. Esten	410,014	Aug. 27	2727	717	48	1224
Spinning-spindle support	C. H. Chapman	408,581	Aug. 6	578	151	48	790
Spinning-spindle support	C. H. Chapman	408,582	Aug. 6	580	151	48	791
Spinning-spindle support	G. O. Draper	408,165	July 30	3231	845	48	657
Spinning-spindle support	G. O. Draper	410,354	Sept. 3	341	90	48	1335
Spinning-spindle support	G. O. Draper	410,355	Sept. 3	342	90	48	1335
Spinning-spindle support	W. F. Draper	406,823	July 9	1207	321	48	243
Spinning-spindle support	W. F. Draper	408,166	July 30	3232	849	48	657
Spinning-spindle support	B. N. Goodale	409,638	Aug. 20	2176	573	48	1113
Spinning-spindle support	J. J. Heywood	410,279	Sept. 3	218	57	48	1312
Spinning-spindle support	G. Jaquith	410,974	Sept. 10	1285	340	48	1527
Spinning-spindle support	T. H. Logan	408,185	July 30	3272	854	48	663
Spinning-spindle support	F. Seymour	408,264	Aug. 6	95	23	48	698
Spinning-spindle support	H. Thrasher	408,330	Aug. 6	189	47, 48	48	716
Spinning-spindle support	R. W. Jorres	406,219	July 2	259	74, 75	48	54
Spiral grooves. Machine for forming ornamental	E. J. Colby	406,069	July 2	95	28	48	21
Spirometer. Coin-released	H. D. Terrell	409,881	Aug. 27	2546	666	48	1187
Spoke and felly fastening	H. D. Melendy	408,732	Aug. 13	818	216	48	848
Spool	J. Blaszkaye	406,159	July 2	190	54	48	39
Spool-holder	A. W. Sawyer	410,699	Sept. 10	863	232	48	1443
Spool-holder	H. W. Steiner	408,328	Aug. 6	184	46	48	715
Spool-holder	E. P. Brownell	409,665	Aug. 27	2218	584	48	1127
Spool-machine	W. P. McAllister	410,175	Sept. 3	53	14	48	1279
Spool-stand. Revolving	P. Maloney and G. Robertson	410,908	Sept. 10	1189	321	48	1506
Spout for vessels	E. F. Dietericha	409,350	Aug. 20	1761	464	48	1033
Spouted can	N. R. Deppe	408,068	July 30	3096	811	48	633
Spreader	J. H. Day	410,822	Sept. 10	1069	287	48	1484
Spreading viscous substances. Machine for							
Spring: *See* Bed-spring. Locomotive-spring. Buggy-spring. Vehicle-spring. Car-spring. Wagon-spring. Carriage-spring. Wagon bolster-spring. Door-spring. Watch-case spring. Draft-spring.							
Spring-motor	T. P. Cook	410,137	Aug. 27	2935	771	48	1261
Spring-motor	P. J. and E. H. Gates	411,099	Sept. 17	1481	382 / 384	48	1573
Spring-motor	W. J. Gordon, E. D. Gilbert, and D. M. Pfaute	408,175	July 30	3242	846 / 847	48	659
Spring-motor	L. Melchior and G. Haas	407,899	July 30	2883	750	48	592
Springs. Machine for making side-bar	M. D. L. Williams	407,913	July 30	2842	740	48	584

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drf.	Official Gazette. Vol.	Official Gazette. Page.
Sprinkler: *See* Water-sprinkler.							
Sprinkling apparatus	A. Mayer and H. G. Stiebel	408,631	Aug. 6	649	169	48	804
Square, level, protractor, &c. Combined	C. Easminger	407,385	July 16	1905	496	48	368
Squirrel-poisoning machine	W. J. Howard	406,909	July 16	1337	350	48	277
Stack-fastener	W. L. Murdy	409,657	Aug. 27	2514	658	48	1169
Stack. Reducing	C. J. Eames	407,000	July 16	1473	384	48	303
Staging	G. W. Zeigler	411,273	Sept. 17	1734	453	48	1624
Stair-rod fastener	A. D. Field	408,627	July 9	1213	323	48	244
Stair-rod securer	M. Rush	406,959	July 16	1407	370	48	291
Stairway	L. G. Souder	406,314	July 2	407	111	48	82
Stake-pocket	W. Evans	410,731	Sept. 10	931	249	48	1453
Stalk cutter and mower	W. I. Knox	409,979	Aug. 27	2681	703	48	1214
Stalk-cutter and rake. Combined	A. T. Boykin	406,082	July 2	83	24, 25	48	16
Stamp canceling and postmarking machine	G. W. Iley	408,411	Aug. 6	315	80	48	740
Stamp-canceling device	F. Horn	409,640	Aug. 20	2178	574	48	1113
Stamp. Hand	M. L. Luebben	411,158	Sept. 17	1571	418	48	1591
Stamp. Hand	D. C. Stover	410,464	Sept. 3	513	138	48	1369
Stamp. Hand	D. C. Stover	410,465	Sept. 3	515	138	48	1369
Stamp. Hand	D. M. Bloch	407,509	July 23	2248	581	48	463
Stamp holder. Postage	C. C. Hill	409,394	Aug. 20	1718	452	48	1025
Stamp. Perforating	B. B. Hill	410,589	Sept. 10	989	184	48	1409
Stamp. Self-inking time and dating	J. H. Hager	409,283	Aug. 20	1660	438	48	1014
Stamps. Device for carrying and applying postage	H. Helland and F. Matzow	411,593	Sept. 24	2203	586	48	1720
Stamping apparatus. Envelope	Z. W. Smith	406,785	July 9	1149	304	48	231
Stanchion							
Stand: *See* Boiler-stand. Printer's stand. Carboy-stand. Sad-iron polishing and waxing stand. Display-stand. Mirror-stand. Spool-stand. Music-stand. Switch-stand.							
Stand and pad or tablet. Combined	H. H. Unz	409,340	Aug. 20	1743	458	48	1029
Stand-pipe and fire-escape	F. W. Barker	407,392	July 23	1955	510	48	407
Staple-driver	A. White	406,075	July 2	73	21, 22	48	17
Staple forming, setting, and clinching machine	J. Chantrell	407,431	July 23	2141	552 / 553 / 554	48	441
Staple or nail extractor	O. Rickolson	406,538	July 9	775	211	48	192
Stapling implement	H. F. White	409,540	Aug. 20	2023	533 / 543	48	1065
Stapling-machine	E. P. Donnell	406,891	July 16	1310	344	48	272
Starch. Manufacturing	A. Behr	409,019	Aug. 13	1249	330	48	927
Starching-machine	J. G. Crawford	407,502	July 23	2239	578	48	461
Starching-machine	D. B. Young	406,170	July 2	204	56, 57	48	41
Station and street indicator	C. H. Jenne	410,994	Sept. 10	1315	354	48	1532
Stave-dressing machine	C. Sommer	410,954	Sept. 10	1250	336	48	1519
Stay and fastener. Combined dress	L. K. Buchanan	11,009	July 2	585	156	48	112
Stay. Garment	E. C. Bowling. (Reissue)	407,674	July 23	2170	641	48	509
Stays. Package for dress	C. Mosher	411,642	Sept. 24	2274	605	48	1735
Steam and hot-water boiler. Combined	H. M. Chapman	410,304	Sept. 3	304	105	48	1346
Steam-boiler	G. H. Aslre	410,065	Aug. 27	2799	737	48	1236
Steam-boiler	O. Bellman	410,309	Sept. 3	967	70	48	1339
Steam-boiler	S. Braggins	407,868	July 30	2804	730	48	578
Steam-boiler	J. A. Caldwell	411,094	Sept. 17	1474	391	48	1571
Steam-boiler	J. Dick	408,343	Aug. 6	206	52, 53	48	720
Steam-boiler	W. M. Glasson	411,434	Sept. 24	1973	523	48	1673
Steam-boiler	A. Grant	408,303	Aug. 6	146	37	48	708
Steam-boiler	H. Hackney	411,191	Sept. 17	1613	428 / 429	48	1599
Steam-boiler	P. Hanres	409,504	Aug. 20	2106	555	48	1100
Steam-boiler	F. Kitten	407,538	July 23	2209	593	48	474
Steam-boiler	D. T. Lawson	406,235	July 3	292	80, 81	48	58
Steam-boiler	R. S. Rodie	407,251	July 16	1856	484	48	376
Steam-boiler	P. Rohan	407,300	July 16	1869	487	48	381
Steam-boiler	A. Stirling	408,996	Aug. 13	1210	319	48	919
Steam-boiler	T. L. Sturtevant	406,220	Aug. 6	114	28, 29	48	701
Steam-boiler	G. P. Wilson	410,227	Sept. 3	138	35	48	1295
Steam-boiler	J. E. Wilson	409,313	Aug. 20	1704	446	48	1022
Steam-boiler	R. R. Zell	407,744	July 23	2580	668 / 669	48	530
Steam-boiler. Sectional	J. and W. Rowbotham	411,706	Sept. 24	2373	630	48	1755
Steam-engine	A. T. Bemis	409,563	Aug. 20	2055	542	48	1091
Steam-engine	J. Curtis	409,155	Aug. 13	1460	386	48	966
Steam-engine	C. R. Dellenbaugh	409,457	Aug. 20	1912	506	48	1004
Steam-engine	J. W. Dennis and F. A. Shoemaker	407,338	July 23	1967	516	48	412
Steam-engine	J. G. Downie	409,672	Aug. 27	2238	588 / 589	48	1130
Steam-engine	N. H. Edgerton	408,704	Aug. 13	782	206	48	836
Steam-engine	A. J. and H. A. Foulds	410,412	Sept. 3	430	114	48	1353
Steam-engine	J. A. Groshon	409,284	Aug. 20	1661	438 / 439	48	1014
Steam-engine	M. W. Hall	410,525	Sept. 3	595	160	48	1385
Steam-engine	W. E. Jones	408,490	Aug. 6	429	112 / 113	48	764
Steam-engine	G. W. Lewis	410,432	Sept. 3	470	126	48	1300
Steam-engine	E. T. McKaig	410,190	Sept. 3	84	20	48	1264
Steam-engine	W. A. Pitt	410,451	Sept. 3	495	132	48	1365
Steam-engine	F. S. Ruttmann	406,607	July 9	874	235	48	179
Steam-engine	W. A. Vreeland	410,866	Sept. 10	1130	304	48	1495
Steam-engine	J. T. Warner	408,154	July 30	3214	839	48	654
Steam-engine	S. S. Williams	410,411	Sept. 3	428	113 / 114	48	1353
Steam-engine. Direct-acting	J. A. Groshon	411,510	Sept. 24	2076	548	48	1692
Steam-gage	C. H. Riley						

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Steam-gage	C. Winther	407,963	July 30	2952	788	48	605
Steam. Generating	A. Poggendorff, C. and F. Brede	406,467	July 9	660	185	48	141
Steam-generator	W. M. Brown	409,664	Aug. 27	2216	583	48	1127
Steam-generator	H. M. Clark, J. Taylor, and J. B. Henshaw.	410,267	Sept. 3	196	52	48	1308
Steam-generator	G. D. Cooper	407,395	July 23	2081	538	48	430
Steam-generator	S. R. Crowner	407,460	July 23	2199	567	48	453
Steam-generator	D. W. Fletcher	409,781	Aug. 27	2406	630	48	1161
Steam-generator	O. F. Gilbert and G. W. Farrar	406,613	Aug. 6	621	160	48	799
Steam-generator	E. F. Gordon and H. Hobbs	408,708	Aug. 13	788	{207 / 208}	48	836
Steam-generator	T. F. Morrin	407,940	July 30	2885	751	48	592
Steam-generator	T. L. and T. J. Sturtevant	408,095	Aug. 13	1209	319	48	919
Steam-motor	T. J. Frazier	408,229	Aug. 6	45	10	48	687
Steam or water trap	H. F. Leland	407,294	July 16	1815	475	48	371
Steam-trap	C. A. Carleton	406,875	July 16	1291	338	48	268
Steam-trap	C. Cornwell	406,964	July 2	323	91	48	66
Steam-trap	G. J. Graebert	408,176	July 30	3244	847	48	660
Steam. Utilizing exhaust	W. Schmidt	406,372	July 2	486	{135 / 136}	48	97
Steam-washer	W. Klahr	411,924	Sept. 17	1665	445	48	1611
Steamer	E. Dimmick	410,752	Sept. 10	963	259	48	1459
Steamer and boiler	A. H. Storms	406,793	July 9	1161	307	48	231
Steamer. Grain	L. Atkins	408,682	Aug. 13	739	193	48	927
Steaming food for stock. Device for	G. F. C. Kloeppinger	411,525	Sept. 24	2097	553	48	1697
Steel. Basic process of making	E. Bertrand	408,572	Aug. 6	506	.....	48	788
Steel direct from the ore by the use of natural gas. Making	W. F. M. McCarty	410,430	Sept. 3	467	.....	48	1350
Steel-furnace	L. G. Laureau and F. W. Gordon	407,600	July 23	2380	617	48	491
Steel. Manufacture of	T. S. Blair, Jr	407,156	July 16	1703	444	48	349
Steel. Recarbonizing	J. H. Darby	406,430	July 9	584	165	48	126
Steeping-tub for steeping barley or other grains	F. Susemihl	406,486	July 9	690	191	48	147
Steering apparatus. Steam	F. C. Lang	409,749	Aug. 27	2350	618	48	1151
Stereotype-block	J. C. Merritt	410,714	Sept. 10	896	242	48	1447
Stereotype-matrices. Backing compound for	J. F. Frey	410,830	Sept. 10	1078	.....	48	1485
Stereotype or electrotype plates. Block for	H. Fietsch, Jr	406,928	July 9	1215	322	48	244
Stereotype-plate and base	F. D. Thomason	406,262	July 9	1206	333	48	252
Stereotype-plates. Means for securing	D. Reid	410,922	Sept. 10	1211	327	48	1511
Stereotype-plates which are cast separately from their beds. Means for securing	E. D. Rogers	406,371	July 2	486	135	48	97
Stills. Sectional roof for	J. G. Mitchell	409,908	Aug. 27	2704	710	48	1218
Stilt	J. M. Porter	408,518	Aug. 6	479	126	48	773
Stilt. Walking	G. R. Nado	407,546	July 23	2312	597	48	477
Stirrup	J. Bull	409,558	Aug. 20	2048	540	48	1090
Stirrup	J. Bull	411,757	Sept. 24	2440	646	48	1769
Stirrup	E. G. Sellors	410,939	Sept. 10	1220	332	48	1515
Stirrup. Reversible safety	J. C. Welcome	406,944	Aug. 13	1134	299	48	906
Stock marker. Live	A. Casper and A. Jacobson	410,782	Sept. 10	1012	271	48	1471
Stoker. Mechanical	W. Leach	410,735	Sept. 10	935	250	48	1454
Stone. Artificial	O. E. C. Guelick	410,688	Sept. 10	849	.....	48	1441
Stone fences. Mold for artificial	J. and H. Jessen	408,623	Aug. 6	638	166	48	802
Stone grinding and polishing machine	J. McEnerney	409,419	Aug. 20	1856	490	48	1052
Stone, &c. Implement for reducing	J. W. Maloy	409,051	Aug. 13	1297	342	48	935
Stone, &c. Implement for reducing	J. W. Maloy	409,052	Aug. 13	1297	342	48	936
Stone-planing machine	E. Smallwood	409,249	Aug. 20	1604	423	48	1003
Stone. Producing artificial	G. M. Breinig	410,635	Sept. 10	765	.....	48	1425
Stone. Quarrying	J. H. Jacobs	410,165	Sept. 3	43	11	48	1277
Stone-sawing machine	G. Dalrymple	408,293	Aug. 6	133	33, 34	48	705
Stone-sawing machine	G. A. Davidson	409,670	Aug. 27	2236	588	48	1130
Stone-sawing machine	G. A. Davidson	409,774	Aug. 27	2394	627	48	1159
Stone-sawing machine	J. C. Ferguson	410,385	Sept. 10	683	182	48	1408
Stone-sawing machine	T. A. Jackson	410,419	Sept. 3	442	{116 / 117}	48	1356
Stone-setting machine	C. Reynolds	408,326	Aug. 6	178	45, 46	48	714
Stone. Stamping-machine for molding artificial	J. Winkler	409,542	Aug. 20	2027	534	48	1066
Stool and bucket. Combined milking	J. H. Stewart	410,658	Sept. 10	797	215	48	1431
Stool. Camp	J. W. Oulton and D. A. Meister	408,741	Aug. 13	829	219	48	844
Stool. Piano	W. Heap	409,585	Aug. 20	2090	551	48	1098
Stopper: *See* Bottle-stopper.							
Store-service apparatus	G. R. Elliott	409,098	Aug. 13	1370	{361 / 362}	48	949
Store-service apparatus	J. H. Goodfellow	410,239	Sept. 3	155	40, 41	48	1299
Store-service apparatus	N. Nowman	406,942	July 16	1386	363	48	287
Store-service apparatus	M. C. Swezey	409,126	Aug. 13	1417	373	48	950
Stove	A. M. Blakesley	410,143	Sept. 3	4	2	48	1269
Stove	N. J. Engler	406,204	July 2	251	69	48	50
Stove	E. Lofts	411,459	Sept. 24	2004	532	48	1679
Stove attachment. Gas	B. G. Dosch and F. C. Sawhill	410,504	Sept. 3	568	153	48	1320
Stove burner. Gas	H. R. Gammer	410,092	Aug. 27	2263	751	48	1248
Stove. Cooking	V. M. Barrett	407,149	July 16	1692	441	48	347
Stove. Cooking	W. Lamb	406,051	July 2	42	12	48	11
Stove-door light	J. T. Fleehearty	408,963	Aug. 13	1164	307	48	911
Stove-doors. Pin for hinges of	D. C. Kuhn	411,152	Sept. 17	1562	415	48	1589
Stove for heating purposes. Oil	A. F. Zimmerling	407,390	July 23	2072	536	48	428
Stove. Gas	A. J. Doty	411,649	Sept. 24	2284	607	48	1737
Stove. Gas	J. Gibbone	410,792	Sept. 10	1029	276	48	1475
Stove. Gas	L. Ketchum	407,938	July 30	2875	{748 / 749}	48	590
Stove. Gas	W. Swindell	409,763	Aug. 27	2375	623	48	1156
Stove-grate	W. J. Andrews	411,317	Sept. 17	1800	481	48	1635
Stove-grate	J. F. Brayer	411,184	Sept. 17	1604	426	48	1597
Stove-grate	W. C. Metzner	407,727	July 30	2646	685	48	549
Stove-guard	G. W. Slawson	411,735	Sept. 24	2409	639	48	1763

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Stove. Heating	C. C. Augustine	410,229	Sept. 3	141	36	48	1296
Stove. Heating	J. L. Collins and H. C. Burgie	409,452	Aug. 20	1901	{502 / 503}	48	1062
Stove. Heating	O. P. and G. O. Elterich	407,001	July 16	1474	384	48	303
Stove. Heating	C. O. Graves	406,521	July 9	752	205	48	157
Stove. Heating	L. W. Hagey	409,036	Aug. 13	1275	336	48	932
Stove. Heating	F. W. Rider	406,955	July 16	1402	366	48	290
Stove. Heating	S. S. Wales	408,773	Aug. 13	874	234	48	854
Stove. Heating	J. W. Broer	406,991	July 16	1459	382	48	301
Stove. Lamp	W. H. Wilder	411,909	Sept. 17	1644	457	48	1606
Stove. Lamp	C. Truesdale	410,138	Aug. 27	2925	768	48	1230
Stove-lining	C. H. Boeck	407,560	July 23	2341	605	48	484
Stove. Oil	A. H. Calkins	408,210	Aug. 6	11	3	48	680
Stove. Oil	A. H. Calkins	408,211	Aug. 6	15	3	48	681
Stove. Oil	J. De Mooy, Jr	410,638	Sept. 10	760	208	48	1436
Stove. Oil	J. Goldstein and I. Block	411,719	Sept. 24	2387	633	48	1758
Stove. Oil	A. C. West	411,406	Sept. 17	1923	513	48	1658
Stove. Oil	S. C. Davidson	408,402	Aug. 6	300	74	48	737
Stove or air-heating apparatus	S. L. West	410,391	Sept. 3	321	104	48	1346
Stove or furnace door	J. Orr	408,191	July '30	3220	856	48	665
Stove-ovens. Door for	J. B. Leach	408,884	Aug. 13	1049	277	48	898
Stove-pipe attachment	A. J. Robinson	411,130	Sept. 17	1529	408	48	1584
Stove-pipe coupling	J. Lindenmayer	408,020	July 30	3010	784	48	616
Stove-pipe fastener	W. J. and S. H. Young and Z. U. Knode.	411,485	Sept. 24	2041	540	48	1686
Stove-pipe shelf	W. H. Wilder	407,882	July 30	2797	{738 / 739}	48	576
Stove range. Oil	I. J. Miller and H. A. Drake	407,602	July 23	2384	618	48	491
Stove. Straw-burning	G. Laube	409,209	Aug. 20	1547	409	48	991
Stove. Straw-burning cook	J. S. Butler	408,079	July 30	3008	800	48	631
Stove. Vapor	G. B. McClelland	409,221	Aug. 20	1565	413	48	995
Stove. Vapor-burner	J. B. Curl	410,537	Sept. 3	606	{163 / 164}	48	1388
Stove. Vapor-burning	S. S. Utter	407,707	July 23	2524	653	48	519
Stoves, &c. Adjustable pipe-opening in	A. G. Sargent	410,453	Sept. 3	498	133	48	1365
Stoves. Automatic oil-feeder for oil	F. S. Moore	406,932	July 16	1373	360	48	285
Stoves or lamps for burning oil. Feeder for	W. H. Clemes	406,027	July 2	10	4	48	5
Stoves. Wick-tube for oil	A. Thomson. (Reissue)	11,015	July 23	2609	675	48	536
Strainer. Milk	W. J. Pierpont	409,499	Aug. 20	1967	520	48	1075
Strap for packing-boxes	H. Baker	407,319	July 23	1949	508	48	406
Straw-binding machine	C. Crook	407,467	July 23	2197	586	48	458
Straw-board-lining-cutter machine	W. E. Davis	408,221	Aug. 6	98	6	48	683
Straw-cutter	J. F. Gaumer	409,398	Aug. 20	1630	482	48	1046
Straw-stacker	P. J. Sprague	406,788	July 9	1154	305	48	232
Straw-stacker	H. Heltman	410,550	Sept. 3	925	{167 / 168}	48	1301
Street or station indicator	J. B. Arci	408,646	Aug. 6	679	176	48	809
Street-washer	G. F. Stengel	410,745	Sept. 10	951	256	48	1457
Stretching-frame	F. A. Widger	410,475	Sept. 3	587	141	48	1379
Striking apparatus	H. Cooper	409,453	Aug. 20	1902	{503 / 504}	48	1062
Striking-machine. Coin-freed	A. Felldin	406,602	Aug. 6	606	157	48	796
String stretching and tuning device	F. H. Cilley	411,013	Sept. 17	1342	361	48	1547
Structures. Construction of metallic	L. D. Copeland	406,882	July 16	1299	341	48	270
Stuffing-box	J. H. Terry	406,795	July 9	1163	{307 / 308}	48	234
Stump-extractor	O. A. Kleits	407,667	July 23	2471	640	48	508
Stump-puller	J. B. Gerber	406,725	July 9	1053	{280 / 281}	48	212
Submarine boat	H. Knox	408,415	Aug. 6	324	83	48	741
Sucker-rod elevator	H. E. Niese	409,333	Aug. 20	1732	{455 / 456}	48	1027
Sugar. Refining	H. P. Weldig	407,311	July 16	1937	.....	48	395
Sulphur fabric	E. D. Babbitt	406,204	Aug. 6	1	1	48	679
Sun and vapor bath							
Supporter: *See* Abdominal supporter. Hose-supporter. Shade-supporter. Broom-supporter. Shaft-supporter. Curtain-supporter.							
Surface, scratch, and depth gage. Combined	T. E. Cassidy	409,921	Aug. 27	2600	681	48	1199
Surgeon's silk or catgut. Package of	R. W. Johnson	408,625	Aug. 6	642	167	48	803
Surgical pump for transfusion of blood	E. E. Allen	409,000	Aug. 13	1215	320	48	920
Suspender attachment	J. P. Rummel	408,536	Aug. 6	516	135	48	778
Suspender-end	E. B. Stimpson	409,338	Aug. 20	1741	457	48	1029
Suspender-straps. Attaching device for	H. E. Messimer	409,694	Aug. 27	2272	598	48	1137
Suspenders	M. Rubin	410,855	Sept. 10	1116	300	48	1492
Suspension-hook	L. F. Roller	409,239	Aug. 20	1590	419	48	999
Swaging and rolling apparatus	H. H. Warren	411,480	Sept. 24	2036	538	48	1685
Swaging-machine	W. H. Dayton	408,294	Aug. 6	134	34	48	705
Swing	S. W. Parsons	408,742	Aug. 13	831	219	48	845
Swing	G. W. Zeigler	409,545	Aug. 20	2030	535	48	1067
Swinging chair or hammock	H. W. Messer	407,099	July 16	1696	425	48	334
Swinging gate. Vertically	L. G. Knowles	411,565	Sept. 24	2068	547	48	1692
Switch: *See* Electric switch. Railway-switch. Electrical switch.							
Switch and signal apparatus	J. T. Hambay	406,213	July 2	263	72, 73	48	52
Switch and signal interlocking apparatus	J. T. Hambay	406,212	July 2	261	72	48	52
Switch-stand	N. O. Goldsmith	408,174	July 30	2241	646	48	550
Switch-stand	F. C. Weir and N. O. Goldsmith	407,755	July 23	2601	673	48	534
Switch-stand	N. W. Boyd	406,500	July 9	714	196	48	159
Switch-stand. High-signal	H. M. Norton	410,916	Sept. 10	1196	324	48	1508
Switches. Mechanism for operating three-throw	J. W. Dunlap, Sr	408,468	Aug. 6	396	104	48	757
Switching apparatus. Magneto-electric individual	H. B. Thompson	410,221	Sept. 3	132	33	48	1294
Swivel for flag-halyards							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Syringe	J. W. Kirkwood	407,934	July 30	2876	749	48	590
Table: *See* Extension-table. Turn-table. Ironing-table. Type-table. Knockdown table. Veterinary operating-table. Pool-table.							
Table	S. and M. Henry	407,924	July 30	2710	703	48	580
Table	L. Stockman	407,908	July 30	2833	737	48	583
Table and chair. Combined	W. O. Whitney	408,439	Aug. 20	1681	496	48	1058
Table-leaf support	T. G. Bugbee	407,812	July 30	2694	699	48	557
Table-leaf support	J. G. Garretson	408,967	Aug. 13	1168	308	48	912
Table-leaf support	E. Helm	410,892	Sept. 10	1171	315	48	1503
Table-leaves. Machine for rabbeting	R. W. Woodman	406,686	July 9	1002	269	48	203
Tack-driver	N. Newman	407,444	July 23	2162	558	48	446
Tackle-block	J. Dunn	411,240	Sept. 17	1683	450	48	1614
Tag	W. D. Smith	408,359	Aug. 6	226	58	48	723
Tally-sheet	B. F. McMillan	409,223	Aug. 20	1567	413	48	995
Tan-liquor. Apparatus for heating	O. F. Carley	407,281	July 16	1900	494, 495	48	387
Tan-liquor. Heating	O. F. Carley	407,280	July 16	1899	494	48	387
Tank: *See* Disinfecting-tank. Water-closet tank. Flushing-tank. Watering-tank. Water-tank. Weighing oil-tank.							
Tank-heater	G. Armstrong	407,988	July 30	2859	770	48	606
Tanning apparatus	G. S. Tunstead	408,395	Aug. 6	285	71	48	734
Tap and bushing for barrels	G. W. Jackson	409,288	Aug. 20	1670	440	48	1016
Tap and drill. Machine	C. Steiner	410,614	Sept. 10	730	197	48	1418
Tap and faucet. Automatic ale	H. D. Northrup	409,059	Aug. 13	1306	345	48	937
Tap. Collapsible	A. B. Babbitt	408,570	Aug. 6	564	147, 148	48	788
Tape-measure	E. G. Soltmann	406,065	July 2	64	19	48	15
Target-trap	W. T. Best	407,429	July 23	2138	551, 552	48	441
Tea or coffee pot	L. S. Wright	411,483	Sept. 24	2089	539	48	1685
Teaseling-machine	F. Jopp	409,975	Aug. 27	2677	702	48	1214
Teeth. Fastening artificial	G. M. Weirich	411,272	Sept. 17	1733	463	48	1624
Telegraph. Autographic	J. H. Robertson	407,092	July 23	2504	647	48	514
Telegraph. Automatic	F. Anderson	406,942	July 16	1444	378	48	298
Telegraph. Automatic	F. Anderson	407,460	July 23	2187	564	48	450
Telegraph-key	A. E. Johnson	411,198	Sept. 17	1626	433	48	1602
Telegraph-key	H. S. Tebbs, N. C. Lane, and V. Coombs.	411,770	Sept. 24	2458	651	48	1773
Telegraph-key	H. A. Waldo	406,489	July 9	604	192	48	148
Telegraph-pole	C. M. Russell	406,406	July 2	545	152	48	108
Telegraph. Printing	C. L. Healy	407,729	July 23	2552	661	48	504
Telegraph. Printing	C. L. Healy	407,730	July 23	2553	661	48	525
Telegraph. Selecting	M. W. Dewey	407,581	July 23	2356	610, 611	48	486
Telegraphs. Relay for quadruplex	C. L. Healy	407,480	July 23	2211	570	48	455
Telegraphic apparatus. Mechanical	A. Cazalis	408,214	Aug. 6	18	4	48	681
Telegraphic recorder. Automatic	F. Anderson	407,463	July 23	2190	565	48	450
Telegraphy. Automatic	F. Anderson	407,461	July 23	2188	564, 565	48	450
Telegraphy. Harmonic	F. Van Ryselberghe	409,157	Aug. 13	1469	367	48	969
Telegraphophone	M. Wheless	410,305	Sept. 3	261	68	48	1319
Telephone	T. A. Edison	406,567	July 9	613	158	48	168
Telephone	J. Trowbridge and S. Sheldon	407,799	July 30	2671	694	48	553
Telephone. Acoustic	L. V. Elliott	410,791	Sept. 10	1028	276	48	1475
Telephone-holder	C. T. Dickson	411,586	Sept. 24	2192	566	48	1717
Telephone. Mechanical	W. H. Eastman	411,767	Sept. 24	2452	650	48	1771
Telephone. Mechanical	C. M. Radford	411,058	Sept. 17	1404	370	48	1559
Telephone receiving-instrument	R. D'Unger	409,736	Aug. 27	2333	613	48	1148
Telephone-switch system	C. C. Gould	409,574	Aug. 20	2072	547	48	1095
Telephone system	J. R. Smith	408,327	Aug. 6	180	46	48	714
Telephones	J. J. Wolf	410,059	Aug. 27	2794	735	48	1235
Telephones. Adjustable elbow-rest for	W. Gray	408,709	Aug. 13	789	206	48	837
Telephones. Coin-controlled apparatus for	N. S. Flak	407,004	July 16	1478	387	48	304
Telephonic apparatus	J. A. Boyce	408,335	Aug. 6	197	50	48	718
Tellurian	H. N. Felkel	408,900	Aug. 13	923	240	48	863
Tellurian	O. McCullough	408,352	Aug. 6	217	55, 56	48	722
Tenoning-machine	W. Chadd	410,783	Sept. 10	1014	271	48	1471
Tent	G. W. Zeigler	407,427	July 23	2134	553	48	440
Tent-frame	J. T. Stoll	410,812	Sept. 10	1056	283	48	1481
Terret	H. F. Beimling	411,570	Sept. 24	2164	577	48	1710
Testing device	C. E. Buzby	406,084	July 2	86	25, 26	48	19
Testing-machine	E. J. Colby	411,494	Sept. 24	1959	521	48	1670
Testing machine. Coin-controlled blow	J. F. Kingwill	411,769	Sept. 24	2455	650, 651	48	1772
Textile fabrics. Apparatus for treating	J. H. Lorimer	406,143	July 2	168	44	48	35
Theatrical appliance	E. W. Emerson	406,271	July 2	338	91	48	68
Thermometer	J. Hopson, Jr.	406,139	July 2	162	47	48	34
Thermometer	J. D. Ward	409,379	Aug. 20	1801	474	48	1040
Thermometer. Metallic	T. L. Sturtevant	406,152	July 2	179	51	48	37
Thermometric indicator	M. Meyer	409,996	Aug. 27	2702	709	48	1218
Thermostat	A. M. Butz	409,316	Aug. 20	1708	449	48	1023
Thill-coupling	T. Brinson	407,160	July 16	1709	448	48	350
Thill-coupling	W. J. Card	406,388	July 2	517	143, 144	48	104
Thill-coupling	R. G. W. Foster	409,741	Aug. 27	2340	618	48	1149
Thill-coupling	L. D. Haskell, Jr	411,661	Sept. 24	2306	611	48	1741
Thill-coupling	H. J. Ilse	408,976	Aug. 13	1185	313	48	914
Thill-coupling	F. J. Miller	411,044	Sept. 17	1384	371	48	1555
Thill-coupling	A. J. Obrist	410,849	Sept. 10	1106	295	48	1491

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr's.	Official Gazette. Vol.	Official Gazette. Page.
Thill-coupling jack	J. H. Miller	408,921	Aug. 13	1102	291	48	899
Thill-coupling jack	J. M. Smith	407,131	July 16	1674	437	48	342
Thills into couplings. Device to assist in the insertion of vehicle-	F. J. Porter	409,300	Aug. 20	1683	443	48	1016
Thimbles. Thread-cutter for	O. Cady	407,719	July 23	2540	657	48	502
Thioparatolnidine	W. Pfitsinger	406,932	July 16	1460	.....	48	290
Thrasher. Traveling	B. Holt and J. Draper	406,413	Aug. 6	320	82	48	741
Thrashing-machine	A. L. Gill	406,388	Aug. 6	263	66	48	709
Thrashing-machines. Adjusting attachment for	J. D. Burkhart	407,511	July 23	2250	581	48	463
Thrashing-machines. Band-cutter and feeder for	W. H. Alston	409,897	Aug. 27	2570	672	48	1192
Thrashing-machines. Shoe attachment for	L. M. Wilson	409,069	Aug. 13	1336	358	48	947
Thread and winding the same on shuttle-bobbins. Machine for waxing	D. H. Campbell	409,270	Aug. 20	1631	431, 432	48	1009
Ticket. Railway	L. D. Heusner	409,203	Aug. 20	1532	406	48	989
Tide-power. Device for utilizing	J. Ringen	406,585	Aug. 6	487	128, 129	48	774
Tidy-holder	F. A. Gira and J. H. Gfell	411,188	Sept. 17	1610	428	48	1590
Tie: *See* Bag-tie. Railway cross-tie. Railway-tie.							
Tie-bars and switch-rails. Bracket for connecting	F. C. Weir and C. Partington	410,056	Aug. 27	2799	725	48	1235
Tights. Bicycle-	R. G. Roper	406,436	Aug. 6	250	91	48	748
Tile-cutting machine	T. Somerville, Jr	411,080	Sept. 24	2349	621	48	1750
Tile-machine	W. D. Sherman	410,455	Sept. 3	501	134	48	1386
Tile or brick cutting table	J. Bensing	411,638	Sept. 24	2200	603	48	1734
Tile. Roofing	R. Liddell	411,006	Sept. 24	2311	613	48	1748
Tile. Roofing	J. Rapp	411,299	Sept. 17	1764	472	48	1630
Timber-coupling for framed structures	M. F. Rockwell and G. W. Pearsall	408,750	Aug. 13	842	224	48	818
Time and wage indicator	J. T. Rice	409,503	Aug. 20	1973	521, 522	48	1076
Time-detectors. Station-box for watchmen's electric	J. E. Richard	409,755	Aug. 27	2361	621, 622	48	1153
Time-indicator	P. G. Giroud	410,907	Sept. 10	1274	343	48	1521
Time-lock	L. F. Manger	409,220	Aug. 20	1561	412	48	994
Time-piece escapement	A. Kaiser	409,150	Aug. 13	1451	382, 383, 384	48	966
Time-recorder. Workman's	A. Dey	411,586	Sept. 24	2186	580, 581, 582	48	1716
Time-signal	N. H. Borgfeldt	406,969	July 16	1456	381	48	300
Tinner's fire-pot	J. S. Hull	409,358	Aug. 20	1709	456	48	1034
Tinning copper sheets. Machine for	D. Evans	408,632	Aug. 13	966	256, 257	48	872
Tire-bender	I. L. Anwerter	406,984	July 16	1448	379	48	299
Tire-heating apparatus	J. W. Foisey	406,719	July 9	1045	279	48	211
Tire-heating furnace	J. Kiefer	408,349	Aug. 6	212	54	48	721
Tire-setting machine	D. R. Miller	407,720	July 23	2538	665	48	527
Tire-tightener	A. Knox	407,838	July 30	2715	704	48	560
Tire-truing machine	T. J. Reid	408,044	July 30	2835	736	48	582
Tire. Wheel-	J. H. Klipstein	406,742	July 9	1075	286	48	217
Toaster	F. W. Uram	410,338	Sept. 3	323	84	48	1331
Toaster or broiler	C. T. Tarpenning	406,547	July 9	787	213	48	166
Tobacco and match case. Combined	F. E. Elliott	409,029	Aug. 13	1368	334	48	931
Tobacco and pipe box. Combined	F. R. Kaldenberg	406,286	July 2	358	98	48	73
Tobacco-box	J. M. Brosius	407,625	July 23	2430	630	48	500
Tobacco-box	O. Bejach	408,789	Aug. 13	903	241	48	860
Tobacco-moistening cabinet	H. C. W. Emery and E. Christian	408,341	Aug. 6	204	52	48	719
Tobacco-pipe	C. L. Nesler	406,941	July 16	1385	363	48	287
Tobacco-pouch	J. R. McLaren, Jr	406,939	July 16	1382	362	48	287
Toboggan	C. H. Emerson	406,892	July 16	1312	344, 345	48	273
Toboggan. Coasting	J. A. Baughman	407,768	July 30	2819	679	48	544
Toe-weight	A. J. Wood	406,554	July 9	794	215	48	166
Tongs for handling merchandise	T. James	409,843	Aug. 27	2497	650, 653	48	1176
Tongs. Furnace	T. B. Beeson	411,755	Sept. 24	2438	645	48	1768
Tongs. Roofing	A. Koehler	406,515	July 9	739	202	48	155
Tongue attaching device. Wagon	M. L. Horner	406,283	July 2	355	97	48	72
Tongue-support	W. W. Mayne	408,312	Aug. 6	156	40	48	710
Tongue support. Vehicle	R. Lynn, Sr	410,799	Sept. 10	1039	278	48	1477
Tongue support. Wagon	J. P. Johnson	407,604	July 30	2767	719	48	570
Tongue. Vehicle	T. Andress	406,188	July 2	234	63	48	46
Tongues. Safety-tip for vehicle	J. T. Carter and W. Koepke	406,993	July 16	1462	382	48	301
Tool. Combination	W. R. Van Vliet	411,679	Sept. 17	1444	381	48	1566
Tool. Combination	A. Schuermann	407,842	July 30	2735	711	48	564
Tool-driver	N. Linsley	409,969	Aug. 27	2691	706	48	1216
Tool-handle	F. Müller	407,230	July 16	1894	477	48	373
Tool-holder	R. E. Breed	408,336	Aug. 6	198	50	48	713
Tool-socket	D. M. Small	408,898	Aug. 13	1072	282	48	893
Tooth. Apparatus for allaying the sensibility of a	S. B. Dewey	409,671	Aug. 27	2237	588	48	1130
Tooth-crown. Artificial	L. W. O'Brian	410,435	Sept. 3	472	127	48	1360
Tooth-holder. Right-angle	K. M. Hellwig	410,794	Sept. 10	1035	.....	48	1476
Tooth-pick. Antiseptic	B. T. Mason	407,262	July 23	2035	527	48	421
Tooth-pick. Combination	J. T. Redington	408,435	Aug. 6	347	90	48	747
Toothed wheel	E. A. Tripp	406,183	July 2	227	62	48	45
Top-lift holder	E. A. Tripp	406,184	July 2	228	62	48	45
Top-lift holder	C. W. Glidden	409,783	Aug. 27	2411	631	48	1162
Top-lift plate	G. Fischer	407,521	July 23	2292	585	48	485
Top. Musical	J. T. Meats	411,366	Sept. 17	1895	506	48	1653
Top-roll clearers. Guide for	W. E. Robinson	406,749	Aug. 13	641	234	48	849
Top. Spinning	W. C. Beckwith	409,902	Aug. 27	2576	675	48	1194
Torpedo. Railway	T. M. Dile	406,998	July 16	1468	384	48	302
Towel-rack	I. Gates	411,432	Sept. 24	1970	523	48	1672

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Toy	W. S. How	410,101	Aug. 27	2877	755	48	1251
Toy	G. W. Nusbaum	409,421	Aug. 20	1859	491	48	1033
Toy	J. S. O'Brien	410,010	Aug. 27	2722	716	48	1222
Toy	H. L. Phillips	409,701	Aug. 27	2286	600	48	1139
Toy	G. E. Throop	408,148	July 30	3205	836	48	652
Toy	C. Wobito	407,142	July 16	1666	440	48	346
Toy. Automatic	F. Noecker	409,488	Aug. 20	1953	517	48	1027
(Toy.) Automatic pneumatic instructor	J. Seyberth	407,128	July 16	1670	436	48	342
Toy building-blocks	A. F. C. Garben	409,744	Aug. 27	2344	616	48	1150
Toy cannon	G. W. Nash	410,433	Sept. 3	471	126	48	1360
Toy. Coin-operated	F. O. Claflin	409,923	Aug. 27	2602	682	48	1199
Toy figures. Mechanism for operating dancing, acrobatic, and other	G. F. Luttieke	410,907	Sept. 10	1188	321	48	1506
Toy gun	T. Adams	408,062	July 30	3065	802	48	627
Toy gun	G. W. Nash	410,434	Sept. 3	471	126	48	1360
Toy gun	G. H. Weston	409,085	Aug. 13	1349	357	48	945
Toy locomotive	G. F. Luttieke	409,991	Aug. 27	2693	707	48	1216
Toy motor	H. B. Schureman	409,806	Aug. 27	2443	640	48	1168
Toy. Musical	F. A. Sommer	408 635	Aug. 6	655	170	48	805
Toy race-track	W. N. McManus	407,674	July 30	2784	724	48	573
Toy. Swing-figure musical	F. A. Sommer	407,697	July 23	2513	649	48	516
Trace	A. W. Bricken	409,166	Aug. 20	1491	394	48	981
Trace	G. W. Fail	406,436	July 9	527	168	48	129
Trace-holder	G. L. Hydorn	408,239	Aug. 6	61	14	48	690
Track-jack. Ratchet	T. R. Gabel	411,411	Sept. 17	1935	515	48	1600
Track. Suspension	C. Carr	406,195	July 2	242	66	48	48
Track-sweeper. Electric	W. H. Knight	406,917	July 16	1349	354	48	280
Traction-engine and digging-machine. Combined	F. J. Burrell	406,194	July 2	241	65, 66	48	48
Tramway. Aerial	A. H. De Camp	411,584	Sept. 24	2163	{579 / 580}	48	1715
Transom-lifter	C. C. Mitchell	411,465	Sept. 24	2013	534	48	1660
Transom-lifter	A. Twyman	407,624	July 23	2411	626	48	496
Transplanter	J. K. Nissley, J. S. Mumma, J. Hostetter, and J. W. Harrie.	411,225	Sept. 17	1666	445	48	1611
Transplanting implement	R. Foster	409,949	Aug. 27	2640	692	48	1207
Transportation. System of	B. S. Henning	406,711	Aug. 13	792	209	48	837
Trap: *See* Animal-trap. Ant-trap. Bottle-trap. Gas-trap. Hog-trap. Jaw-trap. Lobster-trap. Steam-trap. Steam or water trap. Target-trap.							
Trap	C. F. Parker	411,606	Sept. 24	2225	591	48	1724
Traps. Making lead	A. A. Robinson	406,146	July 2	172	49	48	35
Traveling-bag	G. W. Strattan	407,642	July 16	1567	400	48	313
Tray	Z. T. Hall	408,102	July 30	3129	819	48	639
Tray. Jewelry	L. Burt	408,576	Aug. 6	572	149	48	789
Treadle	J. H. Whitney	407,804	July 30	2681	696	48	554
Treadle-motion	W. H. Doughty	407,472	July 23	2201	568	48	433
Tree-protector	H. F. Juette	407,532	July 23	2276	590	48	469
Trestle	G. W. Zeigler	409,544	Aug. 20	2029	535	48	1067
Trestle-brace	G. W. Zeigler	409,543	Aug. 20	2028	534	48	1066
Tricycle	G. Johnson	408,624	Aug. 6	640	166	48	803
Tricycle	F. W. Pool	408,745	Aug. 13	833	220	48	845
Trimmer: *See* Heel-trimmer. Sole and heel trimmer.							
Trimming for fabrics	J. D. Morley	409,416	Aug. 20	1853	489	48	1052
Trimming for the edges of fabrics	J. D. Morley	410,428	Sept. 3	464	125	48	1359
Trimming the edges of fabrics. Machine for	E. T. Smith	410,655	Sept. 10	788	214	48	1429
Trolley-track	J. H. Morley	408,503	Aug. 6	455	119	48	768
Trough: *See* Eaves-trough. Feed-trough.							
Trousers and boots combined	J. G. Gladding	411,433	Sept. 24	1972	528	48	1672
Trousers-elevator	S. W. Brock	410,704	Sept. 10	870	234	48	1444
Trousers-stretcher	J. F. Duhamel	409,777	Aug. 27	2398	628	48	1169
Trousers. Waistband for	J. E. Leavitt	411,250	Sept. 17	1696	454	48	1617
Truck	E. W. M. Hughes	408,027	July 30	3015	787	48	618
Truck	E. W. M. Hughes	408,034	July 30	3019	790	48	619
Truck	E. W. M. Hughes	410,164	Sept. 3	42	11	48	1277
Truck	J. W. King	407,354	July 23	2024	524	48	419
Truck	E. F. Scholder. (Reissue)	11,022	Aug. 13	1475	{388 / 389}	48	971
Truck and carrier. Combined	F. P. Keiler	407,218	July 16	1802	472	48	308
Truck. Barrel	J. P. Hill	406,646	July 9	541	234	48	192
Truck. Car	M. G. Hubbard	407,402	July 23	2091	541	48	431
Truck. Car	B. F. Manier	409,993	Aug. 27	2695	{707 / 708}	48	1217
Truck. Car	W. H. H. Sisum	411,068	Sept. 17	1431	381	48	1563
Truck. Car	S. W. Tanner	411,751	Sept. 24	2431	644	48	1767
Truck. Elevating	C. B. De Weese	410,157	Sept. 3	31	9	48	1274
Truck-end plate	E. W. M. Hughes	408,030	July 30	3017	788	48	618
Truck. Fire-ladder	J. E. Furry	409,835	Aug. 27	2486	650	48	1175
Truck for carrying brick-pallets	J. R. Craven	406,885	July 16	1301	341	48	270
Truck for railway-carriages	E. W. M. Hughes	408,022	July 30	3011	{785 / 786}	48	616
Truck for rolling vehicles	E. W. M. Hughes	408,033	July 30	3018	789	48	619
Truck-frame	E. W. M. Hughes	408,024	July 30	3013	786	48	617
Truck. Hand	B. Riddell	411,353	Sept. 17	1850	494	48	1644
Truck. Hook-and-ladder	J. Schmidlapp	409,759	Aug. 27	2369	622	48	1154
Truck. House-moving	G. Gary	411,024	Sept. 17	1354	364	48	1547
Truck. Pressed-steel	E. W. M. Hughes	408,031	July 30	3017	789	48	618
Truck. Pressed-steel	E. W. M. Hughes	408,119	July 30	3171	829	48	646
Truck. Six-wheeled car	W. A. Scott	406,993	Aug. 13	1206	{318 / 319}	48	918

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Truck. Stove	G. W. Amos	408,568	Aug. 6	562	147	48	798
Truck. Weighing hand	J. N. Brown	411,576	Sept. 24	2174	576	48	1713
Trucks. Bolster for car	L. K. Jewett	409,686	Aug. 27	2260	584	48	1134
Trunk	P. Carpelos	408,462	Aug. 6	386	101	48	755
Trunk	R. D. McGee	406,756	July 9	1108	294	48	204
Trunk	W. Roemer	406,585	July 9	847	229	48	175
Trunk stay or brace	S. H. Davenport	407,178	July 16	1740	455	48	356
Trunk tray and cover	J. J. Pelton	408,299	Aug. 20	1662	443	48	1018
Truss	L. Roth	409,941	Aug. 20	1592	420	48	1000
Truss-hoop							
Tub: *See* Bath-tub. Coal-tub. Pottery-dipping tub. Steeping-tub.							
Tube: *See* Boiler-tube.							
Tube-bending machine	J. F. McNutt and H. F. Grimmesey	407,675	July 23	2480	642	48	509
Tubes. Apparatus for the manufacture of metal	J. Robertson	411,060	Sept. 17	1405	376	48	1559
Tubes. Attaching plates to	S. R. Wilmot	407,982	July 30	2951	768	48	695
Tubes. Device for slotting	C. H. Wiesing	410,723	Sept. 10	915	246	48	1450
Tubes. Making flattened	S. R. Wilmot	408,050	July 30	3056	801	48	627
Tubes. Mechanism for the manufacture of	J. Robertson	411,109	Sept. 17	1496	{307 / 308}	48	1577
Tubes or pipes. Coupling	J. Robertson	407,037	July 16	1519	398	48	313
Tubing	A. H. Limont	408,728	Aug. 13	815	215	48	841
Tubing composed of plastic materials. Incasing	H. B. Cobb	408,374	Aug. 6	250	63	48	727
Tubing. Making duplex	A. H. Limont	408,729	Aug. 13	816	215	48	841
Tubing. Manufacturing	H. B. Cobb	408,376	Aug. 6	254	64	48	728
Tubing. Single-ply spiral	E. K. Coes	409,171	Aug. 20	1495	396	48	982
Tubular articles. Mold for	J. Kinzer	410,325	Sept. 3	224	59	48	1313
Tug. Hame	H. P. Jensen	407,013	July 16	1498	398	48	306
Tug. Hame	J. H. McKenzie	406,529	July 9	763	207	48	160
Tug loop. Harness	S. D Harris	406,104	July 30	3131	819	48	640
Tunnel for railways, &c. Buoyant subaqueous	E. J. Reed	408,748	Aug. 13	837	{221 / 222 / 223 / 224}	48	846
Turfing implement	M. C. Ayer	409,900	Aug. 27	2574	674	48	1193
Turn-buckles. Making	J. H. Simpson	410,190	Aug. 27	2916	765	48	1457
Turn-table. Cable-railway	J. C. H. Stut	408,443	Aug. 6	355	92, 93	48	749
Turning-machine	F. E. Keyes	406,514	July 9	737	202	48	156
Turning-off machines. Trimming and brushing attachment for	N. H. Bruce	409,557	Aug. 20	2044	{539 / 540}	48	1029
Tuyere. Forge	J. Malquist	408,120	July 30	3172	822	48	646
Tuyere-iron	F. G. Koehler	410,903	Sept. 10	1184	319	48	1505
Twilled woven fabric	B. Barraclough	409,767	Aug. 27	2380	{624 / 625}	48	1157
Twine ball	C. P. Mitchell	408,842	Aug. 13	980	260	48	875
Twine-holder. Automatic	W. N. Candee	409,137	Aug. 13	1435	377	48	963
Twine. Manufacturing binder	J. Lyall	408,947	Aug. 6	60	.....	48	692
Twine package	C. P. Mitchell	408,841	Aug. 13	979	259	48	875
Twisting and covering cords, &c. Machine for	W. Clerer	408,696	Aug. 13	767	{201 / 202 / 63 / 64 / 65}	48	832
Twisting and doubling machine	J. W. Shepherd, W. Ayrton, and R. Clegg.	410,297	Sept. 3	243	64	48	1316
Type	A. D. Reed	408,195	July 30	3286	858	48	666
Type-distributing apparatus	L. K. Johnson and A. A. Low	409,748	Aug. 27	2348	617	48	1151
Type-distributing apparatus	A. A. Low	409,690	Aug. 27	2266	{595 / 596 / 597}	48	1135
Type. Elastic-faced	E. A. Leland	407,670	July 23	2474	640	48	508
Type-plates. Manufacture of	C. H. Perry	407,902	July 30	2921	761	48	690
Type-table and galley-rack. Combined	J. Jehle	407,403	July 23	2093	541	48	432
Type-writer cabinet	L. G. Billings	411,003	Sept. 17	1327	{357 / 358}	48	1544
Type-writer cabinet	L. G. Billings	411,004	Sept. 17	1330	358	48	1544
Type-writer cabinet	J. Kiefer	408,385	Aug. 6	267	66, 67	48	731
Type-writer cabinet	C. H. Tyler	410,470	Sept. 3	590	140	48	1370
Type-writer desk	C. H. Tyler	408,553	Aug. 6	530	142	48	782
Type-writer. Electrical	M. W. Dewey	406,390	July 2	519	{144 / 145}	48	104
Type-writing machine	D. Allen, Jr	410,627	Sept. 10	751	204	48	1422
Type-writing machine	G. K. Anderson	410,628	Sept. 10	754	204	48	1423
Type-writing machine	H. L. Arnold	410,629	Sept. 10	756	205	48	1423
Type-writing machine	J. W. Barnes	411,498	Sept. 24	2043	540	48	1686
Type-writing machine	G. C. Blickensderfer	410,662	Sept. 10	803	{216 / 217}	48	1432
Type-writing machine	E. I. Blount, D. E. Kempster, J. H. Currier, and B. Dore.	410,966	Sept. 3	194	51, 52	48	1307
Type-writing machine	A. T. Brown	411,421	Sept. 24	1955	520	48	1669
Type-writing machine	F. Burns	409,914	Aug. 27	2590	{678 / 679}	48	1197
Type-writing machine	W. Cahoon, Jr	410,490	Sept. 3	548	{147 / 148}	48	1376
Type-writing machine	H. E. Curtis	411,583	Sept. 24	2182	579	48	1715
Type-writing machine	J. H. Day and C. Spofford	406,507	July 9	787	200	48	153
Type-writing machine	I. B. Dodson	407,180	July 16	1763	456	48	357
Type-writing machine	W. H. Elling	407,185	July 16	1750	{458 / 459}	48	358
Type-writing machine	F. Felt and I. W. Archibald	406,437	July 9	588	168	48	129
Type-writing machine	F. E. Gladwin	409,655	Aug. 20	2196	578	48	1116
Type-writing machine	W. F. Judy	411,339	Sept. 17	1831	{489 / 490}	48	1641
Type-writing machine	J. F. McLaughlin	406,292	July 2	365	100	48	74

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Dr'g.	Official Gazette. Vol.	Page.
Type-writing machine	I. A. Salmon	406,064	July 2	62	19	48	15
Type-writing machine	S. J. Seifried	411,066	Sept. 17	1415	378, 379	48	1261
Type-writing machine	W. G. Spiegel	410,941	Sept. 10	1232	332	48	1515
Type-writing machine	A. W. Steiger	411,023	Sept. 24	2249	598	48	1730
Type-writing machine	D. C. Stover	409,073	Aug. 13	1329	351	48	942
Type-writing machine	C. E. Tilton	409,128	Aug. 13	1420	374	48	959
Type-writing machine	F. X. Wagner	411,361	Sept. 17	1860	497	48	1646
Type-writing machine	G. W. M. Yost	408,061	July 30	3062	801	48	627
Type-writing-machine cleaner	A. T. Brown	406,873	July 16	1283	338	48	268
Type-writing machine. Electrical	J. F. McLaughlin	406,291	July 2	363	99	48	74
Type-writing machines. Aligner for	C Spiro	410,743	Sept. 10	947	255	48	1456
Type-writing machines. Cam-motion for	F. L. Twiss	408,150	July 30	3207	837	48	653
Type-writing machines. Ink-ribbon mechanism for	J. F. McLaughlin	409,613	Aug. 20	2136	561	48	1105
Type-writing machines. Printing mechanism for	A. I. Jacobs	409,289	Aug. 20	1671	440	48	1016
Type-writing machines. Ribbon movement for	L. A. Brott	408,289	Aug. 6	127	31	48	704
Umbrella. Folding	E. J. Preston	410,114	Aug. 27	2899	761	48	1255
Umbrella-holder	S. R. Haskell	411,521	Sept. 24	2091	552	48	1696
Umbrella or parasol	E. B. Gaze	410,273	Sept. 3	211	55	48	1310
Umbrella or parasol	H. A. L. C. Kahle and F. W. Kirchhoff.	408,721	Aug. 13	805	212	48	840
Umbrella ribs and stretchers. Joint for	H. R. Kemp and H. E. Marsden	408,722	Aug. 13	806	213	48	840
Umbrella-runner	G. Josepha and E. I. O'Neill	407,216	July 16	1800	471	48	367
Umbrella-sticks. Machine for slotting	J. B. Jesson and J. K. Weed	410,975	Sept. 10	1286	348	48	1527
Umbrella-tree	J. Haight	407,967	July 30	2868	747	48	589
Umbrellas. Flexible drip-cup for	G. A. Beach	406,020	July 2	3	1	48	3
Umbrellas or parasols. Detachable cover for	A. J. Robinson	411,682	Sept. 24	2337	618	48	1748
Universal joint	S. Arnold	410,570	Sept. 10	664	177	48	1405
Valve	J. Fornirasco	409,031	Aug. 13	1270	334	48	931
Valve	J. Galvin	411,283	Sept. 17	1747	466, 467	48	1626
Valve	W. and W. A. Wilcox	407,047	July 16	1534	402	48	315
Valve attachment for gage-cocks. Safety-	F. Mears	409,217	Aug. 20	1556	411	48	993
Valve. Automatic	J. Clapp	406,067	July 2	90	27	48	20
Valve. Automatic air-	C. Jenkins	409,685	Aug. 27	2259	594	48	1134
Valve. Back-pressure	G. M. Davis and A. Bement	410,538	Sept. 3	610	164	48	1388
Valve. Balance-	C. A. Southwick	406,116	July 2	133	38, 39	48	28
Valve. Balanced	W. T. Reaser	407,304	July 16	1930	502	48	393
Valve. Balanced slide-	J. C. Askren	411,754	Sept. 24	2437	645	48	1768
Valve. Balanced slide-	J. B. Barnes	406,557	July 9	798	216	48	166
Valve. Balanced slide-	F. D. Patten	406,229	July 2	290	80	48	58
Valve. Cut-off	M. J. Heaphy	406,443	July 9	606	171	48	131
Valve. Double-seated	A. F. Nagle	407,678	July 23	2492	642	48	509
Valve. Electric	M. C. Wheeler and A. M. Clark	409,170	Aug. 20	1494	396	48	982
Valve. Flushing-	C. H. Dillon	410,541	Sept. 3	614	165	48	1389
Valve. Flushing-	G. Michaud	408,124	July 30	3176	830	48	647
Valve for car-heaters. Safety-	C. F. Murdock	406,290	July 2	362	99	48	73
Valve for steam or water	S. T. Hall	409,100	Aug. 13	1377	363	48	951
Valve-gear	M. E. Hall	406,635	July 9	1296	325	48	246
Valve-gear	C. Hartung	409,197	Aug. 20	1595	404	48	988
Valve-gear	G. H. Helvey	406,904	July 16	1330	348	48	275
Valve-gear	D. W. Payne	407,031	July 16	1509	394, 395	48	311
Valve-gear. Engine	J. McLaren	409,058	Aug. 13	1306	344	48	937
Valve-gear. Engine	R. N. Percy	409,061	Aug. 13	1310	345, 346	48	938
Valve-gear for engines	E. J. Woolf and J. Peebles	407,806	July 30	2685	697	48	555
Valve-gear for engines. Cut-off	I. F. Thompson	410,775	Sept. 10	1001	268	48	1468
Valve-gear for gas-engines	E. Capitaine	410,729	Sept. 10	927	249	48	1452
Valve-gear for multiple-cylinder engines	E. Kaselowsky, K. Gramm, and G. Kürbitz.	408,915	Aug. 13	1095	289	48	897
Valve-gear for pumping-engines	M. Misic and E. Schweizer	409,854	Aug. 27	2510	656, 657	48	1179
Valve-gear for steam-engines	A. Blaha	408,452	Aug. 6	372	97	48	752
Valve-gear for steam-engines	C. W. Hunt	410,709	Sept. 10	879	236	48	1446
Valve-gear for steam-hammers	M. B. Kirker	409,845	Aug. 27	2501	653	48	1177
Valve-head for blowing-engines	C. L. Moore	410,372	Sept. 3	366	97	48	1341
Valve. Needle-bath water-supply	B. C. Smith	406,761	Aug. 13	858	228	48	851
Valve. Piston-	A. Loomis	410,906	Sept. 10	1187	321	48	1506
Valve. Pop safety-	M. McNeil	411,254	Sept. 17	1707	456	48	1619
Valve regulator. Thermostatic-	C. F. Sautter	406,775	July 9	1132	300	48	228
Valve. Safety check-	M. Warren	407,911	July 30	2836	736	48	583
Valve. Screw and slide	D. Davis	410,499	Sept. 3	561	151	48	1378
Valve-seat blanks. Die for compressing	J. Powell	408,322	Aug. 6	174	43	48	713
Valve. Slide-	B. Carley	406,258	July 2	320	88	48	64
Valve. Steam-actuated	E. A. Marsh	409,851	Aug. 27	2506	655	48	1178
Valve. Steam-actuated	W. L. G. Williams	411,234	Sept. 17	1675	448, 449	48	1613
Valve. Steam-engine	M. C. Bullock	407,994	July 30	2969	772, 773	48	606
Valve. Steam-engine	T. H. Haberkorn	407,894	July 30	2813	732	48	580
Valve. Steam-engine	J. H. Williams	409,720	Aug. 27	2312	607	48	1144
Valve. Stop-	R. S. Gilleapie	408,706	Aug. 13	785	207	48	836
Valve. Straight-way	W. Porteous	406,179	July 2	221	60	48	44
Valve stuffing-box	R. T. Crane	411,425	Sept. 24	1961	521	48	1670
Valve. Three-way	C. W. Johnson	406,141	July 2	163	47	48	34
Valve. Throttle-	W. W. St. John	406,145	July 30	3200	836	48	651
Valve. Wasteway-	J. Powell	408,321	Aug. 6	173	43	48	713
Valves. Safety-nut for	J. H. Beckman	409,553	Aug. 20	2038	537	48	1068
Vapor-burner	H. S. Belden	407,632	July 23	2424	629	48	488
Vapor-burner	C. H. Childs. (Reissue)	11,024	Aug. 20	2201	579	48	1117
Vapor-burner	G. S. Grimston	407,198	July 16	1770	464	48	362
Vapor-generator	G. W. Clark	411,712	Sept. 24	2379	631	48	1756
Vaporizer and burner. Hydrocarbon-oil	J. S. Semon	408,198	July 30	3290	859	48	667

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Dr'g.	Official Gazette. Vol.	Page.
Vaporising and burning hydrocarbon oils. Apparatus for	E. F. Edgar	410,627	Sept. 10	1075	289	48	1485
Vaporizing hydrocarbon oil and burning the same. Device for	A. Doney	410,639	Sept. 10	770	208	48	1486
Vaporising oil and water and superheating and burning the same. Apparatus for	N. Rogers and J. A. Wharry	407,901	July 30	2824	735	48	581
Vault-light	C. H. Ross	410,380	Sept. 3	376	100	48	1343
Vault or safe	J. H. Myers	411,669	Sept. 24	2316	614	48	1743
Vehicle	F. A. Huntington	411,196	Sept. 17	1623	432	48	1602
Vehicle	W. Johnson	410,594	Sept. 3	594	159	48	1395
Vehicle attachment	D. M. and T. H. Parry	406,851	July 9	1249	330	48	249
Vehicle bodies. Steadying device for	G. Johnson	411,036	Sept. 17	1374	368	48	1553
Vehicle-brake	M. Cooney	406,698	July 9	909	245	48	186
Vehicle-brake	J. Maul	408,421	Aug. 6	329	85	48	743
Vehicle-brake	J. C. Morton	408,736	Aug. 13	823	217	48	843
Vehicle-brake	J. N. Valley	408,942	Aug. 13	1132	298	48	905
Vehicle brake. Wheeled-	G. B. Hamlin	410,094	Aug. 27	2866	751	48	1248
Vehicle. Buckboard-	J. Walters	410,304	Sept. 3	250	66	48	1319
Vehicle-curtain fastener	R. N. Allen	409,815	Aug. 27	2450	645	48	1171
Vehicle. Electrically-propelled	J. A. Chapman	409,731	Aug. 27	2327	613	48	1147
Vehicle-gear	A. E. Harrell	409,581	Aug. 20	2066	550	48	1097
Vehicle hand-motor	F. G. Davis	409,141	Aug. 13	1440	378	48	964
Vehicle. Jump-seat	W. W. Griscom	408,233	Aug. 6	53	12	48	688
Vehicle-motor	J. Potter	408,430	Aug. 6	342	89	48	746
Vehicle-motor	W. Main	407,095	July 16	1618	423, 424	48	333
Vehicle-propulsion	W. Main	407,093	July 16	1609	421, 422	48	332
Vehicle-propulsion by electric motors	C. A. Blume and F. N. Armstrong	411,372	Sept. 17	1674	501	48	1649
Vehicle running-gear	J. H. Ferguson	406,604	Aug. 6	609	158	48	796
Vehicle running-gear	J. H. Harvey	409,965	Aug. 27	2663	699, 699	48	1211
Vehicle running-gear	H. E. Olmstead	406,298	July 2	377	102	48	76
Vehicle running-gear	F. B. Parker	409,298	Aug. 20	1681	443	48	1018
Vehicle running-gear	L. W. Sheets and J. M. Walker	406,373	July 2	488	136	48	97
Vehicle running-gear	C. S. Beebe	409,445	Aug. 20	1890	500	48	1060
Vehicle-seat	F. C. Straub	406,188	July 2	225	61	48	45
Vehicle-seat	H. P. Wells and J. Spofford, Jr	411,060	Sept. 17	1445	384	48	1567
Vehicle-seat	W. T. and W. Angus	410,393	Sept. 3	393	105	48	1346
Vehicle-seat. Convertible	E. Cliff	408,871	Aug. 13	1030	273	48	884
Vehicle. Spring-	H. A. Moyer	410,647	Sept. 10	1104	297	48	1490
Vehicle. Spring-	G. Bardonner	410,262	Sept. 3	187	49	48	1305
Vehicle-spring	E. H. Carpenter	410,705	Sept. 10	871	234	48	1444
Vehicle-spring	E. Jarrell	411,286	Sept. 17	1750	466	48	1627
Vehicle-spring	G. Norwood	410,716	Sept. 10	901	243	48	1448
Vehicle-spring	N. B. Phelps	407,899	July 30	2821	734	48	581
Vehicle-spring	W. E. Powers	408,519	Aug. 6	480	126	48	773
Vehicle-spring	A. Waggoner	406,406	July 2	547	153	48	109
Vehicle storm-apron	P. J. Gibbons and D. B. Shelly	411,592	Sept. 24	2202	586	48	1719
Vehicle. Two-wheeled	G. Beebe	407,715	July 23	2534	656	48	1031
Vehicle. Two-wheeled	K. A. Brigham	409,346	Aug. 20	1752	460	48	1031
Vehicle. Two-wheeled	G. Geddes	409,321	Aug. 20	1715	451	48	1024
Vehicle. Two-wheeled	R. W. Hare	411,720	Sept. 24	2388	633	48	1758
Vehicle. Two-wheeled	H. G. M. Howard and B. J. Healy	409,588	Aug. 20	2096	552	48	1099
Vehicle. Two-wheeled	W. Lauria	406,919	July 16	1351	354	48	289
Vehicle. Two-wheeled	J. R. Parks and J. Kimball	409,422	Aug. 20	1660	491	48	1053
Vehicle. Two-wheeled	E. P., B. F., and W. H. Settles, Jr.	410,454	Sept. 3	500	133	48	1366
Vehicle. Two-wheeled	W. J. Wayne	410,294	Sept. 3	135	34	48	1294
Vehicle. Two-wheeled	E. Batlle	411,469	Sept. 24	2045	541	48	1686
Vehicle-wheel	R. Bean	407,769	July 30	2620	679	48	544
Vehicle-wheel	J. W. Brook	411,347	Sept. 3	333	87	48	1333
Vehicle-wheel	W. C. Hednett	407,779	July 30	2635	682	48	546
Vehicle-wheel	S. C. Mead	410,645	Sept. 10	778	210	48	1427
Vehicle-wheel	A. R. Miller	409,610	Aug. 20	2130	560	48	1104
Vehicle-wheel	D. S. West	407,266	July 16	1578	420	48	283
Vehicle-wheel	G. Johnson	408,240	Aug. 6	62	14	48	691
Vehicle wheel and axle	W. H. Chafey	410,310	Sept. 3	269	70	48	1320
Vehicles by secondary batteries. Means for propelling	W. W. Griscom	406,833	July 9	1223	324, 325	48	245
Vehicles by secondary batteries. Means for propelling	W. W. Griscom	408,231	Aug. 6	48	11	48	687
Vehicles by secondary batteries. Means for propelling	W. W. Griscom	408,232	Aug. 6	51	11, 12	48	688
Vehicles. Shifting rail for	S. Burdsall	408,651	Aug. 6	689	177	48	811
Vehicles. Spring bearing-block for	F. Selle	409,245	Aug. 20	1597	421	48	1001
Veil-fastener	P. N. Tryon	408,445	Aug. 6	360	94	48	750
Velocipede	G. H. Davis	410,751	Sept. 10	900	258, 259	48	1450
Velocipede	O. Hanson and A. Fyrberg	406,581	July 9	839	224, 225	48	171
Velocipede	T. B. Jeffery	406,445	July 9	606	172	48	131
Velocipede	T. B. Jeffery	408,014	July 30	3000	782, 783	48	614
Velocipede	T. B. Jeffery	411,035	Sept. 17	1372	368	48	1532
Velocipede	O. Neubauer	410,179	Sept. 3	58	15	48	1320
Velocipede	A. H. Overman	406,461	July 9	648	169	48	140
Velocipede	W. Phillips and R. W. Smith	406,516	Aug. 6	475	125	48	773
Velocipede	W. H. Rudy	406,634	Aug. 6	654	170	48	805
Velocipede	J. D. Ballmann and G. Eckenroth	406,148	July 2	175	50	48	36
Velocipede	G. Schloemer and E. Hausknecht	409,758	Aug. 27	2368	621	48	1154
Velocipede	J. L. Watkins	410,661	Sept. 10	837	225	48	1436
Velocipede	A. H. Overman	406,462	July 9	650	183	48	140
Velocipede-brake	J. E. Robinson	407,676	July 30	2789	725	48	574
Velocipede. Ice-	T. B. Jeffery	408,718	Aug. 13	801	211	48	839
Velocipede-saddle	W. B. Turner and J. Asbury	408,661	Aug. 13	1012	267	48	661
Velocipede-saddle							

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Velocipede-sled	S. J. Talbott	407,623	July 23	2410	626	48	496
Vending apparatus	T. Bergmann	408,870	Aug. 13	1026	272	48	884
Vending apparatus	C. F. De Redon	406,633	July 9	916	247	48	187
Vending apparatus	C. F. De Redon	406,634	July 9	920	247 248 249	48	188
Vending apparatus	W. C. Doubleday	408,959	Aug. 13	1157	306	48	910
Vending apparatus	P. Reiner	408,851	Aug. 13	994	263	48	877
Vending apparatus. Coin-operated	C. Dreimiller and J. Bove	408,466	Aug. 6	393	103	48	756
Vending-machines. Apparatus for preventing fraud in	E. P. Appleyard and J. Johnson	407,428	July 23	2136	551	48	440
Veneer	E. H. Balmforth	411,634	Sept. 24	2263	601	48	1732
Ventilated pad	M. Hansen and F. Roepert	406,837	July 9	1228	326	48	246
Ventilating apparatus	L. J. and J. T. Hope	411,522	Sept. 24	2001	552	48	1696
Ventilator: *See* Exhaust-ventilator. Window-ventilator.							
Ventilator	O. B. Grant	407,859	July 30	2759	718	48	509
Ventilator	W. Y. Ober	409,294	Aug. 20	1569	414	48	985
Ventilator	B. M. Turnbull	409,525	Aug. 20	2002	529	48	1002
Vermifuge	W. Dawson	409,175	Aug. 20	1498	.....	48	983
Vessel. Ice transportation and storage	R. Rich	411,201	Sept. 17	1633	434	48	1604
Vessels. Apparatus for loading or unloading	J. D. Fiske	408,702	Aug. 13	780	205	48	835
Vessels. Raising sunken	J. Wanner	409,257	Aug. 20	1615	427	48	1005
Veterinary operating-table	D. R. Price	407,610	July 23	2294	601	48	493
Veterinary parturition-instrument	A. P. Shearburn	411,621	Sept. 24	2217	307	48	1729
Vinegar generator and filter	R. H. Herder	406,905	July 16	1331	348	48	276
Violin	J. D. Loppentien	406,750	July 9	1096	291	48	222
Violin-support and garment-protector. Combined	F. P. Hoelscher	409,842	Aug. 27	2496	652	48	1176
Vise	C. A. Chandler	406,815	July 9	1197	318	48	240
Vise	W. Lorey	407,486	July 23	2219	573	48	457
Vise	C. H. Robinson	406,957	July 16	1404	369	48	291
Vulcanizer	E. B. Crane	410,073	Aug. 27	2831	743	48	1343
Wagon-body corner	H. S. Fairbanks	410,508	Sept. 3	573	151	48	1361
Wagon-body lifter	R. L. Keith	406,352	July 2	402	120	48	93
Wagon bolster-spring	W. Cole and V. C. Dillmann	406,879	July 16	1295	339	48	269
Wagon-box fastener	A. J. Adamson	410,735	Sept. 10	920	247	48	1451
Wagon-brake	W. W. Atteberry	410,631	Sept. 10	761	205	48	1429
Wagon-brake	S. Kauffman	408,015	July 30	3004	783	48	615
Wagon-brake	W. M. Mason	409,602	Aug. 27	2271	597	48	1136
Wagon-brake. Automatic	J. W. Bruce	410,400	Sept. 3	408	109	48	1349
Wagon. Dumping	W. E. Welch	409,083	Aug. 13	1347	356	48	945
Wagon-gear	M. Conrad and C. Hotz	409,829	Aug. 27	2475	647 648	48	1173
Wagon-jack	W. J. Hollenbeck	407,529	July 23	2271	589	48	468
Wagon. Lumber	W. and J. H. Leonhardt	409,411	Aug. 20	1845	487	48	1050
Wagon or cart. Child's	H. H. Higham	409,682	Aug. 27	2255	593	48	1134
Wagon running-gear. Road	C. W. Saladee	411,473	Sept. 24	2027	537	48	1683
Wagon-seat lock	D. D. Whitney	407,627	July 23	2414	627	48	497
Wagon. Skeleton	S. Toomey	407,390	July 23	2060	533	48	426
Wagon-spring	B. Smith	410,211	Sept. 3	119	30	48	1291
Wagons. Spring-platform for road	C. W. Saladee	411,732	Sept. 24	2405	637	48	1702
Wagon-standard	N. R. Deppe	409,935	Aug. 27	2521	666	48	1203
Waistband-fastener	J. Ewig	408,300	Aug. 6	141	36	48	707
Walking and running. Apparatus to facilitate	N. Yagn	406,328	July 2	427	117 118	48	86
Walking-beam	J. Bly	409,385	Aug. 20	1811	476	48	1062
Wall-decorating material	W. S. Morton	407,604	July 23	2386	619	48	492
Wall-paper protector	F. W. Woodhull	407,143	July 16	1686	440	48	346
Wall-socket plate for building-timbers	W. H. Drake	409,831	Aug. 27	2483	649	48	1174
Walls. Covering for interior	T. W. Burger	407,993	July 30	2362	745	48	589
Walls, &c. Material for the treatment of	J. B. King	406,585	July 9	835	.....	48	173
Walls. Molded facing for	J. Klee	406,448	July 9	615	173	48	133
Walls or other surfaces. Manufacture of material for covering	T. J. Palmer	406,464	July 9	655	184	48	141
Walls. Ornamentation of	M. B. Church	409,019	Aug. 13	1240	.....	48	925
Ware. Die for forming flat or hollow	A. E. Hobson	410,280	Sept. 3	219	57	48	1312
Ware. Die for forming flat or hollow	A. E. Hobson	410,281	Sept. 3	220	58	48	1312
Warp-dressing machines. Striping attachment for	H. Gildard	407,758	July 23	2003	674	48	535
Warps. Machine for linking	C. Denn	407,514	July 23	2253	563	48	464
Wash-bench	E. J. Whitlow	406,898	July 9	1186	315	48	239
Wash-bench. Folding	J. B. Mersman	408,123	July 30	3175	830	48	647
Wash-boards. Compound for the scrubbing-surfaces of	J. R. Cluxton	406,427	July 9	579	162	48	125
Wash-boiler	H. Farewell	407,727	July 23	2550	660	48	524
Wash-boiler	A. P. Thissell and G. S. Bradstreet	408,766	Aug. 13	865	232	48	853
Washer: *See* Axle-washer. Steam-washer. Bottle-washer. Street-washer.							
Washing and starching machine	F. M. Watkins	409,535	Aug. 20	2016	531	48	1084
Washing-fluid	J. H. Stewart	410,657	Sept. 10	796	.....	48	1431
Washing-machine	J. W. Baker	406,556	July 9	796	216	48	166
Washing-machine	G. M. Beck	407,152	July 16	1695	442	48	347
Washing-machine	C. C. Burton and D. H. Benjamin	408,690	Aug. 13	750	196 197 198	48	829
Washing-machine	T. H. Carson	407,816	July 30	2700	701	48	559
Washing-machine	J. Chambers	408,062	July 30	3069	809	48	632
Washing-machine	W. S. Cronk	408,797	Aug. 13	918	244	48	862
Washing-machine	E. A. Egelston	411,494	Sept. 24	2052	542	48	1689
Washing-machine	H. H. Gifford	409,399	Aug. 20	1832	483	48	1047
Washing-machine	F. D. Harding	411,638	Sept. 24	2009	611	48	1740
Washing-machine	F. D. Harding	411,639	Sept. 24	2003	611	48	1740
Washing-machine	L. L. Kellogg	410,302	Sept. 3	351	93	48	1336
Washing-machine	H. O. Kelsey and D. H. Gibson	409,794	Aug. 27	2426	635	48	1165

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Washing-machine	B. Kingsley	409,105	Aug. 13	1382	364 365	48	838
Washing-machine	J. P. Knisley	410,109	Aug. 27	2490	720	48	1253
Washing-machine	J. Knoble	410,902	Sept. 10	1163	310	48	1505
Washing-machine	J. L. Knoll	406,918	July 16	1350	354	48	280
Washing-machine	H. W. Kriete	410,960	Sept. 10	1295	350	48	1528
Washing-machine	J. Lee, Jr.	407,484	July 23	2217	572	48	457
Washing-machine	G. M. Miller	407,228	July 16	1890	476	48	371
Washing-machine	H. Nadorff	411,349	Sept. 17	1846	493	48	1644
Washing-machine	H. Netzell	406,230	July 2	286	79	48	57
Washing-machine	H. H. and S. D. Palmer	409,236	Aug. 20	1571	414	48	996
Washing-machine	L. E. Palmer	406,764	July 9	1115	296	48	225
Washing-machine	A. Rammoser	409,501	Aug. 20	1970	521	48	1078
Washing-machine	P. W. Rodecker	408,527	Aug. 6	489	129 130	48	775
Washing-machine	D. Savage	407,453	July 23	2177	562	48	448
Washing-machine	D. D. Shannon	407,130	July 16	1673	437	48	343
Washing-machine	L. B. Warren	411,333	Sept. 17	1675	448	48	1613
Washing-machine	W. White	407,881	July 30	2796	738	48	576
Washing-machine	W. Scott	408,897	Aug. 13	1071	283	48	892
Waste-pipe connection	C. T. Mason	406,364	July 2	490	133	48	96
Watch. Anti magnetic	J. Logan	406,655	July 9	653	258	48	194
Watch-balances and hair-springs. Apparatus for testing	C. H. Meylan	410,327	Sept. 3	305	79	48	1328
Watch-barrel	J. W. Allen	409,957	Aug. 20	1627	430	48	1006
Watch. Cane or parasol	E. C. Chappotte	406,816	July 9	1198	318	48	241
Watch-case	C. Dubois	408,830	Aug. 13	964	256	48	872
Watch-case	W. C. Taft and P. J. Morand	410,945	Sept. 10	1237	333	48	1516
Watch-case	W. W. Bradley	411,490	Sept. 24	1953	519	48	1689
Watch-case pendant	J. D. Ewing	409,739	Aug. 27	2337	614	48	1149
Watch-case spring	H. R. Gaul	409,745	Aug. 27	2345	616	48	1150
Watch-case spring	G. Schelker	410,808	Sept. 10	1050	281	48	1490
Watch-cases. Picture-holder attachment for	F. Lautermilch	406,356	July 2	467	121	48	94
Watch-makers' lathes. Split-chuck for	J. A. Miller	406,037	July 30	3036	792	48	630
Watch-maker's tweezers	G. Hunter. (Reissue)	11,014	July 23	2607	675	48	536
Watch-movement	G. A. and A. C. Moeckel	410,370	Sept. 3	364	97	48	1341
Watch-movement box	H. Heidenreich	407,481	July 23	2212	571	48	456
Watch-movement holder	W. T. Graesale	410,831	Sept. 10	1079	290	48	1466
Watch-pendant winding and setting device	C. E. Monfort	410,173	Sept. 3	50	13	48	1278
Watch-pivot	E. Heuer	411,148	Sept. 17	1532	414	48	1568
Watch. Repeating	E. K. Boyd	408,573	Aug. 6	567	148	48	788
Watch. Stem winding and setting	C. Dinichert	407,642	July 23	2441	632	48	509
Watch. Stem winding and setting	O. F. Guns	411,146	Sept. 17	1550	414	48	1567
Watch. Stem winding and setting	O. F. Guns	411,147	Sept. 17	1551	414	48	1567
Watch. Stem winding and setting	G. F. Johnson	406,513	July 9	736	202	48	154
Watch. Stem winding and setting	H. Rempe	407,943	July 16	1844	481	48	376
Watch. Stem winding and setting	A. Troller	406,274	Aug. 6	106	27	48	700
Watch. Stem winding and setting	W. N. Clifford	406,702	July 9	1020	273	48	206
Watch-winding mechanism	H. Sandoz	407,640	July 16	1525	399	48	313
Watches. Box for repeating	S. Jenkins	409,789	Aug. 27	2420	633	48	1163
Watches. Hair-spring stud for	E. J. Roux	406,307	July 2	397	106	48	80
Watches. Hand-setting mechanism for	H. H. Sporton and E. White	410,214	Sept. 3	194	31	48	1292
Water, &c. Apparatus for recording automatically the flow of	J. Keith	409,041	Aug. 13	1281	338	48	932
Water-boiler. Sectional	J. Keith	409,042	Aug. 13	1283	339	48	933
Water-boiler. Sectional	J. Keith	409,043	Aug. 13	1285	339	48	933
Water-boiler. Sectional	M. Havey	406,902	July 16	1326	347	48	275
Water-circulating heater	A. F. Biesch	411,067	Sept. 17	1462	386	48	1569
Water-closet	W. Bunting, Jr.	408,371	Aug. 6	246	62	48	726
Water-closet	H. H. Craigie	410,269	Sept. 3	202	53, 54	48	1309
Water-closet	J. Guy	408,536	Aug. 13	971	256	48	873
Water-closet	E. Hammann	411,520	Sept. 24	2090	551	48	1696
Water-closet	L. Lattan, H. Tripp, and J. Faulkner.	411,455	Sept. 24	2001	531	48	1678
Water-closet	G. D. Moffat	408,038	July 30	3027	792	48	621
Water-closet	W. Scott	407,041	July 16	1526	399	48	313
Water-closet, &c.	D. Wellington	407,558	July 23	2227	602	48	481
Water-closet attachment	G. V. Eldridge	407,397	July 23	2064	549	48	430
Water-closet bowl	W. Scott	406,780	July 9	1141	302	48	239
Water-closet bowls. Coupling for	T. McHugh	410,648	Sept. 10	1106	297	48	1491
Water-closet flushing-valve	J. W. Stevens	407,748	July 23	2585	669	48	531
Water-closet seat. Portable	H. H. Tittmann	406,904	July 9	969	234	48	178
Water-closet tank	H. H. Craigie	408,218	Aug. 6	24	5	48	682
Water-closet valve	E. L. Knight. (Reissue)	11,029	Sept. 3	659	175	48	1398
Water coil boiler	R. W. Applegarth and E. D. Moore	409,134	Aug. 13	1429	376	48	961
Water coil boiler	E. D. Moore	409,056	Aug. 13	1302	343 344	48	936
Water-cooler	M. S. Foye	407,190	July 16	1760	461	48	309
Water cooler and filter. Combined	L. W. Mozingo	406,054	July 2	45	13	48	12
Water-elevating apparatus	N. A. Conklin	406,880	July 16	1296	340	48	269
Water-elevating apparatus	I. T. Dyer	409,279	Aug. 20	1659	436	48	1012
Water-elevator	A. H. Elfers	406,406	Aug. 6	309	78, 79	48	730
Water elevator and carrier	W. S. Talley	406,967	July 16	1423	373	48	294
Water-falls. Apparatus for utilizing the force of	S. H. Hamilton	407,007	July 16	1481	386 387	48	305
Water-heater	N. P. Andrus	410,529	Sept. 3	509	161	48	1386
Water-heater	G. C. Blackmore	409,314	Aug. 20	1706	448	48	1022
Water-heater	N. A. Boynton	407,850	July 30	2747	714 715	48	567
Water-heater	J. Hacker, L. W. Colby, and J. W. Helton.	406,727	July 9	1055	281	48	213
Water-heater	T. G. G. Mouat	408,949	Aug. 6	70	17	48	692
Water-heater	T. G. G. Mouat and L. Burt	408,693	Aug. 13	1062	280	48	891
Water-heater	F. Wilson	407,561	July 23	2231	602 603	48	481

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Water heater and condenser	J. E. Crawley	406,265	July 2	330	91	48	66
Water-heater. Electric	D. W. Smith	411,737	Sept. 24	2412	639	48	1764
Water heating and purifying apparatus	A. P. Creque	407,*19	July 30	2703	701	48	559
Water-indicators. Electrical circuit closer for	F. M. Dunn, A. Petticord, and J. H. King.	409,460	Aug. 20	1915	507	48	1065
Water-lifting apparatus. Solar	A. L. Reynolds	408,929	Aug. 13	1112	293	48	901
Water-meters. Apparatus for constructing	L. H. Nash	408,508	Aug. 6	463	121 / 122	48	770
Water-meters. Case for rotary	L. H. Nash	408,507	Aug. 6	462	121	48	770
Water-motor	H. Brown	408,075	July 30	3082	806 / 807	48	631
Water-motor	F. Johnson	407,213	July 16	1794	470	48	366
Water-motor	L. P. Santy	407,123	July 16	1664	435	48	341
Water-motor	J. Smith	409,514	Aug. 20	1966	594	48	1078
Water-motor	H. A. Strong	406,676	July 9	980	263 / 264	48	199
Water-motor	L. R. Witherell	410,132	Aug. 27	2929	760	48	1260
Water or steam, or both. Apparatus for maintaining a supply of boiling	C. Jones	409,360	Aug. 20	1771	467	48	1035
Water-proof composition for pipe-joints, &c. Non-conductive and elastic	B. Overlack	406,949	July 16	1397	.....	48	229
Waterproofing compound	T. Manahan	409,479	Aug. 20	1939	.....	48	1069
Waterproofing textile fabrics. Apparatus for	T. F. Wiley	411,081	Sept. 17	1447	384	48	1567
Waterproofing textile materials. Composition for	J. Welti	407,264	July 16	1878	.....	48	383
Waterproofing textile materials. Composition for	J. Welti	407,265	July 16	1878	.....	48	383
Water-purifier and scale-arrester	B. F. Field	410,509	Sept. 3	574	158	48	1321
Water-purifying apparatus	F. H. Moore	411,292	Sept. 17	1756	470	48	1628
Water-purifying apparatus	H. Roeske	407,250	July 16	1855	483	48	378
Water regulator and accumulator for house purposes.	A. J. L. Loretz	407,630	July 30	2718	703	48	561
Water-sprinkler	W. S. Kisinger	409,978	Aug. 27	2680	703	48	1214
Water tank or cistern	R. H. Mason	409,609	Aug. 20	2130	550	48	1104
Water-tube boiler	J. Taylor	406,376	July 2	493	138	48	98
Water-tube boiler	J. Wood, Jr	408,060	July 30	3060	801	48	627
Water-wheel	H. J. Adams	411,210	Sept. 17	16-8	438	48	1606
Water-wheel	L. A. Pelton	409,865	Aug. 27	2523	650	48	1182
Water-wheel. Turbine	H. Broomell	410,487	Sept. 3	544	146	48	1375
Waterer. Stock-	J. M. Dewey	410,882	Sept. 10	1149	310	48	1499
Watering-tank heater. Stock-	C. Fishbaugh	410,357	Sept. 3	344	90	48	1336
Watering tank. Stock-	M. Lynch	407,410	July 23	2103	543	48	434
Wax. Tool for applying sealing-	W. A. Porterfield and J. B. Shannofelt, Jr.	410,330	Sept. 3	310	80	48	1328
Weather-strip	J. Burnham	408,949	Aug. 13	1141	301 / 302	48	907
Weather-strip	O. B. Hathaway	408,346	Aug. 6	210	53	48	720
Weather-strip	R. C. Miller	407,443	July 23	2161	554	48	446
Weaving gauzes. Heddle for	J. H. and T. W. Bentley	410,483	Sept. 3	538	144	48	1373
Weed-cutter	E. A. Hermann	406,280	July 2	351	90	48	71
Weeder. Lawn-	M. A. Stebbins	409,619	Aug. 20	2150	564	48	1107
Weigher. Automatic grain-	C. J. Hartley	410,241	Sept. 3	157	41	48	1299
Weigher. Automatic grain-	C. J. Hartley	410,243	Sept. 3	160	42	48	1299
Weigher. Automatic grain-	E. A. Hoover	409,326	Aug. 20	1721	453	48	1025
Weigher. Automatic grain-	T. J. Underwood	411,763	Sept. 24	2448	649	48	1770
Weighing and putting up package-tea, &c. Apparatus for	O. A. Gill	410,896	Sept. 10	1156	318	48	1500
Weighing and registering machine. Grain	A. H. W. Droste	408,467	Aug. 6	395	103 / 104	48	757
Weighing apparatus. Automatic grain or oil	R. Strain, Jr.	409,808	Aug. 27	2448	642	48	1169
Weighing apparatus. Grain-	D. Wilde	411,514	Sept. 24	2080	549 / 550	48	1694
Weighing-machine	E. Roche	409,302	Aug. 20	1685	444	48	1018
Weighing machine. Automatic grain-	E. L. Wells	407,383	July 23	2063	536	48	426
Weighing-machine. Coin-controlled	J. C. J. C. Favre	406,132	July 2	153	40	48	32
Weighing-machine. Coin-freed	H. Knight	407,463	July 23	2214	573 / 574	48	456
Weighing machine. Grain-	H. M. Fulwider	406,722	July 9	1048	249	48	211
Weighing machine. Grain-	H. Pooley and J. Parkinson	409,702	Aug. 27	2287	601 / 602	48	1140
Weighing oil-tank	E. N. Bachelder and F. E. Lovejoy	408,450	Aug. 6	367	95	48	751
Welding compound	W. H. Cutbirth and J. Summers	406,267	July 16	1304	.....	48	271
Welding compound	H. G. Hicks	407,659	July 23	2462	.....	48	506
Welding. Device for preparing tubes for	H. Jeffrey	409,641	Aug. 20	2179	574	48	1113
Welding. Electric	C. L. Coffin	409,015	Aug. 13	1243	328	48	925
Well-boring apparatus	J. E. Day	406,300	July 2	246	67	48	49
Well-boring implement	L. B. Hart	411,660	Sept. 24	2304	611	48	1741
Well-drilling tool	H. H. McLane	407,028	July 16	1504	393	48	310
Well packing and anchor. Combined	W. A. Donnell	406,162	July 2	194	55	48	40
Wells. Apparatus for drilling and pumping oil or other	M. Harold	407,302	July 16	1776	466 / 467	48	363
Wells. Compressed air and steam apparatus for sinking	H. K. Goodrich	406,298	July 16	1322	346	48	274
Wells. Means for sinking tube-	F. W. Miller	406,457	July 9	639	169	48	138
Wells. Sinking	H. W. Blaisdell	409,446	Aug. 20	1891	500	48	1060
Welt and upper guide. Combined	G. Amborn, Jr.	407,987	July 30	2957	769	48	606

Wheel	S. Ritty	407,613	July 23	2396	623	48	494
Wheel	H. M. Wright	411,364	Sept. 17	1864	498	48	1647

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Wheel-molding machine	A. Delaney	410,156	Sept. 3	27	8	48	1274
Wheels. Manufacture of metal	J. R. Little	406,747	July 9	1046	288	48	220
Wheels. Manufacturing metal	J. R. Little	409,474	Aug. 20	1934	512	48	1069
Wheelbarrow	B. H. Barr	411,319	Sept. 17	1602	492	48	1636
Wheelbarrow	C. W. Stambaugh and V. L. Ney	408,904	Aug. 13	1207	319	48	918
Whiffletree	S. J. Arnold	406,691	July 9	1009	270	48	204
Whiffletree	L. S. Flatau	406,207	July 2	255	70	48	51
Whiffletree	J. B. Howell	410,520	Sept. 3	590	158	48	1384
Whiffletree	I. T. McIntyre	409,057	Aug. 13	1305	344	48	937
Whiffletree	M. M. McKinnon	409,796	Aug. 27	2434	636	48	1167
Whiffletree	A. E. Quidort	407,491	July 23	2227	575	48	459
Whiffletree	G. Reiter	407,836	July 30	2724	707	48	569
Whiffletree	L. W. Smith	410,661	Sept. 10	1125	302	48	1494
Whiffletree	W. W. Burson	408,629	Aug. 13	749	196	48	629
Whiffletree-clip	W. H. Cutbirth and J. Summers	409,174	Aug. 20	1498	397	48	982
Whiffletree-hook	G. Reiter	407,837	July 30	2725	708	48	569
Whiffletrees and draft-bars. Manufacture of	E. K. Warren	411,628	Sept. 24	2256	589	48	1731
Whip	J. L. Cavanaugh	406,876	July 16	1292	339	48	268
Whip and rein holder	D. T. Wilson and F. C. Rheubottom.	407,560	July 23	2330	602	48	421
Whip-rack	E. Ring	407,690	July 23	2500	646 / 647	48	513
Whip-rolling machine	E. Ring	407,691	July 23	2502	647	48	514
Whip-rolling machine	J. R. Eldridge	407,067	July 16	1559	409	48	320
Whistle	E. S. Russell	408,539	Aug. 6	517	135	48	778
Whistle	C. D. Lynch	406,454	July 9	630	177	48	136
Whistle. Steam-	C. P. Goodspeed	409,639	Aug. 20	2177	573	48	1113
Wick-adjusting mechanism	H. E. Shaffer	407,970	July 30	2930	763	48	602
Wick-raiser	L. Schembeck	410,740	Sept. 10	943	252	48	1456
Wind-instrument	H. C. Block	409,447	Aug. 20	1892	500	48	1061
Winding bandages, &c. Device for	S. S. Rumberg	410,254	Sept. 3	177	46	48	1302
Winding mechanism	J. E. Tynan	408,396	Aug. 6	267	71	48	734
Winding-spindle	B. Saunders	407,124	July 16	1665	435	48	342
Windlass. Ship-	F. S. Manton	406,144	July 2	170	49	48	35
Windmill	A. R. Carpenter	406,259	July 2	321	89	48	64
Windmill	A. J. Corcoran	411,581	Sept. 24	2180	578	48	1714
Windmill	J. W. Currie	409,932	Aug. 27	2613	684 / 685	48	1201
Windmill	E. F. Haberlein	411,550	Sept. 24	2134	565 / 566	48	1705
Windmill	B. F. Ham	410,360	Sept. 3	348	91	48	1337
Windmill	S. Harbaugh	410,361	Sept. 3	349	92	48	1337
Windmill	P. P. Mast and H. Croft, Jr	408,422	Aug. 6	332	85, 86	48	743
Windmill	A. T. Winchell	407,457	July 23	2184	563	48	449
Windmill	R. Worsley	408,946	Aug. 13	1135	300	48	906
Windmill	L. J. M. Neff	407,106	July 16	1638	427	48	336
Windmill-posts. Anchor attachment for	C. B. Putnam	406,470	July 9	663	186	48	142
Windmill-tower	G. Wallenbeck	406,679	July 9	987	265	48	200
Windmill-tower	P. D. Corrigan	410,535	Sept. 3	606	163	48	1367
Window	J. E. Roeder	411,615	Sept. 24	2240	595	48	1727
Window	C. A. Sigle	409,310	Aug. 20	1701	447	48	1021
Window-cleaning apparatus	A. Lange	411,154	Sept. 17	1563	416	48	1580
Window-cleaning chair	S. H. Crook	410,957	Sept. 10	1253	337	48	1520
Window-guard	E. C. G. Von Pein	411,306	Sept. 17	1784	478	48	1633
Window-guard	E. C. G. Von Pein	411,309	Sept. 17	1786	478	48	1633
Window-holder	E. E. De Kalb	409,635	Aug. 20	2172	572	48	1112
Window-screen	A. Archambault	408,786	Aug. 13	900	240	48	859
Window-screen	A. L. Benedict	409,555	Aug. 20	2041	538	48	1069
Window-screen	L. W. Braun	411,008	Sept. 17	1335	359	48	345
Window-screen	A. H. Cleaveland	406,878	July 16	1294	339	48	269
Window-screen	F. and A. Leduc	407,669	July 23	2473	640	48	508
Window-screen	J. W. Pease	409,601	Aug. 27	2438	639	48	1168
Window-screen	D. Stone	410,217	Sept. 3	128	32	48	1293
Window-screen attachment	W. J. Horton	407,072	July 16	1564	411	48	321
Window. Swinging	E. E. De Kalb	409,634	Aug. 20	2171	571 / 572	48	1112
Window-ventilator	T. Bury	407,328	July 23	1969	513	48	409
Wire. Apparatus for coiling galvanized	J. Coffin	410,314	Sept. 3	275	71, 72	48	1321
Wire cables for fences, &c. Machine for making	H. C. Sieg and J. T. Wiley	409,248	Aug. 20	1600	422	48	1002
Wire-connecting instrument. Line-	W. H. Coughlin	411,093	Sept. 17	1472	390	48	1571
Wire. Continuously annealing and plating	J. Coffin	410,313	Sept. 3	274	71	48	1321
Wire-drawing die	H. H. Sawyer	406,671	July 9	973	262	48	198
Wire-drawing machine	F. H. Daniels	406,030	July 2	14	5	48	5
Wire-fastener	B. T. Barret and R. Nussbeck	408,065	July 30	3070	803	48	628
Wire-forming machine	F. B. Manville	409,643	Aug. 20	2181	574 / 575	48	1114
Wire hook or hanger	I. J. Turner	411,307	Sept. 17	1783	477	48	1633
Wire machine. Barb-	A. J. Bates	406,190	July 2	236	64	48	47
Wire. Manufacture of	E. Martin	410,368	Sept. 3	361	96	48	1340
Wire mat	S. Rogers	408,047	July 30	3038	795	48	623
Wire mat. Woven-	R. R. Pease and H. Roberts	407,760	July 23	2606	674	48	536
Wire ropes. Splicing	T. C. Batchelor and A. Latch	411,637	Sept. 24	2268	603	48	1734
Wire-splicing tool	W. S. Leanon	407,789	July 30	2938	683	48	547
Wire-stitching machine	J. F. Daggett	409,630	Aug. 27	2479	648 / 649	48	1174
Wire-stretcher	V. Arnold and W. L. Yergin	409,597	Aug. 20	2108	556	48	1101
Wire-stretcher	W. G. Frost	406,642	July 9	937	253	48	191
Wire-stretcher	D. H. Lunn	411,600	Sept. 24	2214	589	48	1722
Wire-stretching device	S. Taft	408,997	Aug. 13	1211	320	48	919
Wire-tightener	J. S. Guyton	409,322	Aug. 20	1716	451	48	1024
Wire tightener and splicer	S. P. R. Taylor, W. T. Sharman, and J. L. Jamison.	409,434	Aug. 20	1876	495	48	1057
Wire-tightening device	J. McDougall	410,557	Sept. 3	638	170	48	1384

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drs.	Official Gazette. Vol.	Official Gazette. Page.
Wire-working apparatus	D. Rawson	407,612	July 23	2397	622	48	404
Wood-filler	G. M. Breinig	410,144	Sept. 3	6	.....	48	1270
Wood-grinding apparatus	F. H. Schmidt	411,734	Sept. 24	2408	638	48	1763
Wooden hoop. Flat	J. F. Rich	410,446	Sept. 3	488	130	48	1364

INDEX TO THE DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS IN PATENT CASES.

DIGEST OF DECISIONS OF THE COMMISSIONER OF PATENTS AND OF THE UNITED STATES COURTS IN PATENT CASES.

INDEX OF PATENTS AND PATENTEES FOR THE QUARTER YEAR, OCTOBER TO DECEMBER, 1889.

ERRATA.

412,777, page 302, in claim, line 2, for "bore" read *bar*.

412,796, page 307, third claim, second line, for "the teeth" read *ten teeth*.

412,908, pape 336, in title, name of assignee, for "George H. Nelson" read *Edwin H. Nelson*.

413,167, page 420, in title, name of assignee, for "Erwin G. Boynton" read *Ervin G. Boynton*.

413,616, 413,617, 413,618, and **413,619,** pages 549 and 550, in title, assignment, after "assignors to" insert *said Albert Domeier and*.

413,622, page 550, in title, after "deceased" insert *assignor to the Long Spring Truss Joint Company, of Illinois*.

413,821, page 615, in title, name of assignee, for "William L. Merrow" read *William L. Morrow*.

414,286, page 769, in title, name of inventor, for "John A. Carmichoel" read *John A. Carmichael*.

414,360, page 792, in title, names of inventors, for "Augustus N. Makepiece" read *Augustus N. Makepeace*.

414,546, page 852, title of invention, for "Expansion-Box and Key for Water and Gas Plugs" read *Extension-Box and Key for Water or Gas Plugs*.

414,676, page 900, strike out all after number—title, drawing, and claims—and insert WITHDRAWN.

414,774, page 926, in title, name of inventor, for "Gains L. Merrell" read *Gaius L. Merrell*.

415,545, page 1163, in title, after residence of inventor, insert *assignor to The Mather Bleaching and Kier Company, Wilmington, Del.*

416,229, page 1390, in title, residence of last named assignee, for "Shelby County" read *Shelby*.

416,255, page 1398, second, third, fourth, and fifth claims, lines 1–2, after "suspending-cord" insert a comma and the words *the drum*, and line 2, same claims, strike out the words "the drum" before "provided."

416,289, page 1409, in title, date of filing, for "Dec. 13" read *Nov. 13*.

416,561, page 1492, in title, residence of inventor, for "Howard, Mass." read *Harvard, Mass.*

417,127, page 1665, in title, name of assignee, for "John Emerson" read *John Emerson Lavely*.

417,151, page 1672, in title, name of inventor, for "Sebem A. Cooney" read *Sebern A. Cooney*.

417,206, page 1688, second claim, line 6, after "torpedo-bow" insert *engaging said grooves*, and same claim, line 7, for "bow" read *bolt*.

417,471, page 1772, first claim, line 9, insert a comma after the word "each" and for "valve" read *valves*.

417,661, page 1828, in title, assignment, insert after "mesne assignments, to" *The R. E. Dietz Company and*.

418,640, page 2142, in title, names of assignees, for "Thomas Kees Bartling" read *Thomas Rees Bartling*.

11,038, (reissue,) page 889, strike out all after number—title, drawings, and claims—and insert CANCELED.

11,048, (reissue,) page 1980, first and second claims, line 4, for "felly" read *fellow*.

Changes in Classification.

(ORDER No. 578.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 2, 1889.

The following changes are directed in Division IV:

New Class 189, Iron Structures, and sub-classes thereunder are established, as follows:

1. Jails.
2. Buildings.
3. Grilles.
4. Metallic ceilings.

The following sub-classes are established:

In Class 14, Bridges:
11. Flooring.
12. Truss, Bow-string.

In Class 108, Roofing:
8. Flashing.

In Class 150, Fire Escapes and Ladders:
20. Fluid-check.
21. Fly-check.
22. Escapement-check.
23. Governor-check.

ROBERT J. FISHER,
Acting Commissioner.

Additional Sub-Classes.

(ORDER No. 579.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 3, 1889.

The following additional sub-classes are hereby established in Division XXVI:

In Class 171, Electricity, Generation:
121. Inductoriums—
122. Induction-coils.
123. Transformers, Rotary.
124. Transformers, Stationary.
125. Pyro-magneto-electric devices.

In Class 172, Electricity, Motive-Power:
126. Motors, Reciprocating.

ROBERT J. FISHER,
Acting Commissioner.

Attorneys.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., September 13, 1889.

SIR: The Secretary of the Interior has ordered that J. M. D. Miller, of Iuka, Miss., be not recognized after this date as attorney or agent in the prosecution of any claim or other matter before this Department or any bureau thereof.

Very respectfully, E. M. DAWSON,
Chief Clerk.

The Commissioner of Patents.

DESIGNS.

19,332.—HOOK-RACK.—*James W. Campbell*, Germantown, assignor to *The Ferguson Brothers*, New York, N. Y. Application filed August 20, 1889. Serial No. 321,409. Term of patent 3½ years.

19,333.—DOOR-LOCK CASE.—*Rudolphe W. E. Christesen*, New Britain, Conn., assignor to *The Russell & Erwin Manufacturing Company*, same place. Application filed August 27, 1889. Serial No. 322,068. Term of patent 14 years.

19,334.—CURTAIN OR COVER.—*Josef Daubek*, Vienna, Austria-Hungary, assignor to *Mills & Gibb*, New York, N. Y. Application filed August 20, 1889. Serial No. 321,410. Term of patent 3½ years.

19,335.—PIANO-STOOL.—*Elvin B. Dungan* and *James G. Ramsdell*, Philadelphia, Pa. Application filed August 21, 1889. Serial No. 321,530. Term of patent 3½ years.

19,336 and 19,337.—COOKING-STOVE.—*James Dwyer*, Detroit, Mich. Applications filed August 10, 1889. Serial Nos. 320,414 and 320,415. Term of patents 7 years.

19,338.—LAMP OR GAS SHADE.—*Andrew Howard*, Pittsburg, Pa. Application filed August 13, 1889. Serial No. 320,641. Term of patent 3½ years.

19,339.—ELECTRIC-LIGHT SHADE.—*Andrew Howard*, Pittsburg, Pa. Application filed August 13, 1889. Serial No. 320,642. Term of patent 3½ years.

19,330 and 19,331.—CURTAIN OR COVER.—*Heinrich Hackl*, Vienna, Austria-Hungary, assignor to *Mills & Gibb*, New York, N. Y. Applications filed August 14, 1889. Serial Nos. 320,758 and 320,759. Term of patents 3½ years.

19,332.—END-STICK FOR LOCKING UP TYPE.—*Joseph Philip Kerr*, San Jacinto, Cal. Application filed August 16, 1889. Serial No. 321,023. Term of patent 14 years.

19,333.—RUG.—*Giulio Marchetti*, Halifax, county of York, England, assignor to *John Crossley & Sons*, New York, N. Y., and London, England. Application filed September 2, 1889. Serial No. 322,792. Term of patent 3½ years.

19,334.—BACK OF A BRUSH.—*Frank Mauser*, North Attleborough, Mass. Application filed August 21, 1889. Serial No. 321,516. Term of patent 3½ years.

19,335 and 19,336.—RUG.—*Adolph Petzold*, Philadelphia, Pa., assignor to *John Bromley & Sons*, same place. Applications filed August 19, 1889. Serial Nos. 321,177 and 321,178. Term of patents 3½ years.

19,337.—SPOON-HANDLE.—*Frederick E. Prétat*, Waterbury, Conn., assignor to *The Rogers & Hamilton Company*, same place. Application filed August 26, 1889. Serial No. 322,082. Term of patent 7 years.

19,338.—METALLIC FINISHING-PLATE.—*Longley Lewis Sagendorph*, Cincinnati, Ohio, assignor of one-half to *Charles N. Harder*, Philmont, N. Y. Application filed August 17, 1889. Serial No. 321,149. Term of patent 14 years.

19,339.—FLOWER-POT.—*John G. Whilldin*, Philadelphia, Pa., assignor to *The Whilldin Pottery Company*, same place. Application filed August 31, 1889. Serial No. 322,621. Term of patent 7 years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 8,191 and upward are registered under the act of March 3, 1881.]

17,071.—WOOD PULP AND ARTICLES MADE FROM THE SAID PULP AND METAL.—*Konga Aktiebolag*, Konga Tingaryd, Sweden. Application filed August 20, 1889. Used since May 13, 1889.

"The representation of a crowned head."

17,072.—PACKED BUTTER, LARD, OLEOMARGARINE, TALLOW, AND GREASE.—*Belle C. Daily*, Philadelphia, Pa. Application filed April 20, 1889. Used since February 6, 1886.

"The letters 'D. P. Co.'"

17,073.—WOVEN AND KNIT FABRICS OF ALL KINDS.—*Wm. Donaldson & Co.*, Minneapolis, Minn. Application filed November 26, 1888. Used since January 1, 1878.

"The words 'GLASS BLOCK.'"

17,074.—MEDICAL COMPOUND FOR THE TREATMENT OF CATARRH AND HAY-FEVER.—*The J. M. Harding Manufacturing Company*, New York, N. Y. Application filed August 8, 1889. Used since April, 1889.

"Two bust pictures of a man arranged side by side."

17,075.—KNIT WOOLEN, SILK, AND COTTON FABRICS.—*Louis Hermsdorf*, Chemnitz, Saxony, Germany. Application filed August 20, 1889. Used since July 9, 1889.

"The representation of a faceted diamond and radiating rays."

17,076.—GRANULATED SOAP.—*Thomas Hersom*, New Bedford, Mass. Application filed July 1, 1889. Used since November 10, 1884.

"The word 'SAPONE,' with so much of the picture of a kitchen scene, which it surmounts, as is made up by a stove, a wash-tub, and a woman seated in a rocker holding up and looking at a package of Sapone and saying: 'ISN'T THIS NICE! MY WASHING GOING ON ALL THE SAME.'"

17,077.—CHOCOLATE AND CHOCOLATE PREPARATIONS.—*Huyler's*, New York, N. Y. Application filed June 13, 1889. Used since July, 1887.

"The words 'MEXICAN CHOCOLATE' associated with a representation of a medallion having on its face the Mexican coat of arms."

17,078.—MEDICAL PREPARATION FOR PURIFYING THE BLOOD.—*I. G. Kiesow*, Augsburg, Bavaria, Germany. Application filed August 20, 1889. Used since August 23, 1879.

"A heraldic coat of arms, comprising a shield or panel on which three trefoils are arranged, symmetrical scrolls at both sides of said shield, a helmet above the same, and the upper part of the body of a boy above said helmet."

17,079.—MEDICAL COMPOUND FOR EXTERNAL AND INTERNAL USE.—*Monroe & Myers*, Chicago, Ill. Application filed April 1, 1889. Used since January, 1889.

"The word-symbol 'CHICKASAW INDIAN PUL-KER.'"

17,080.—TOKAYER WINE.—*Anton Stein*, New York, N. Y. Application filed July 23, 1889. Used since January, 1880.

"The word 'MEDICINAL,' together with the figure of a man clad in the attire of a Hungarian holding up a glass of wine in his right hand, his left hand thrust in the pocket of his trousers."

17,081.—PUZZLES.—*William E. Taylor* and *George W. Turner*, New York, N. Y. Application filed August 29, 1889. Used since August 1, 1889.

"The word-symbol 'BLOCKS OF FIVE.'"

17,082.—TEA.—*Joseph Tetley & Co.*, London, England. Application filed August 19, 1889. Used since July 10, 1889.

"The representation of an elephant's head and two cases or packages suspended from the trunk."

17,083.—MEDICINE FOR THE CURE OF HEADACHE AND LIVER TROUBLES AND A COUGH CURE.—*Larkin Vanderpool*, Dufur, Oregon. Application filed August 20, 1888. Used since January, 1879.

"The letters 'S. B.'"

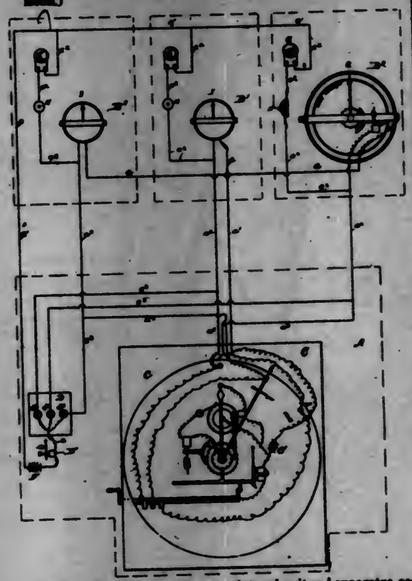
LABELS.

6,025.—Title: "BILLER'S SPEEDY CURE." (For a medicine.)—*Hiram N. Biller*, Akron, Ohio. Application filed August 19, 1889.

6,026.—Title: "REVERSIBLE CIRCULAR MIRROR."—*Thomas B. Hicks*, Richmond, Va. Application filed September 7, 1889.

6,027.—Title: "ASH-WALNUT BRAND." (For sheathing-paper.)—*Margaret E. Manahan*, New York, N. Y. Application filed August 21, 1889.

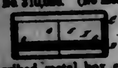
6,028.—Title: "MONTGOMERY'S COMPOUND TAR CONDITION POWDERS."—*G. S. Montgomery & Co.*, Atlantic, Iowa. Application filed September 9, 1889.



6,029.—Title: "THE MAGIC MOSQUITO BITE CURE AND INSECT EXTERMINATOR."—*Mary F. Sallade*, New York, N. Y. Application filed August 16, 1889. (Trade-Mark Registered.)

6,030.—Title: "ADMINISTRATION PUZZLE."—*William E. Taylor*, Passaic Bridge, N. J., and *George W. Turner*, Brooklyn, N. Y. Application filed August 22, 1889.

PATENTS



GRANTED OCTOBER 1, 1889.

411,772. HOTEL ELECTRICAL ANNUNCIATOR-CIRCUIT. CHAS G. ANDERSON, Englewood, Ill., assignor to the New Haven Clock Company, New Haven, Conn. Filed July 1, 1889. Serial No. 316,173. (No model.)

Claim.—A system of hotel-annunciator circuit and apparatus, consisting of the combination of a central indicator-box C, its battery C', an annunciator-box in each chamber, in which the circuit stands open when the same is not in operation, individual wires a' from said boxes to the central indicator, a common or base wire d from all of said boxes to said central indicator, the wires d' d^2 d^3, the switch-board D, the wire e, and the battery F, the normally-closed switch or push button H in each room, and the buzzer B, between the switch-board D and battery F, substantially as specified.

411,773. METAL BOX. WILLIAM H. ATTERBURY, Brooklyn, N. Y. Filed May 8, 1888. Serial No. 310,026. (No model.)

Claim.—The herein-described metal box, consisting of the cup-shaped body B, the collar I, fitting within the body, with its ends 4 5 abutting, and its upper edge extending above the body and held in place by a bead 6, which produces frictional engagement between the body and collar, and the cover C, also cup-shaped and adapted to fit over the upwardly-projecting edge of said collar, substantially as described.

411,774. BOLDBACK. RUSSELL C. BABB, Chipley, Fla. Filed Feb. 21, 1888. Serial No. 300,091. (No model.)

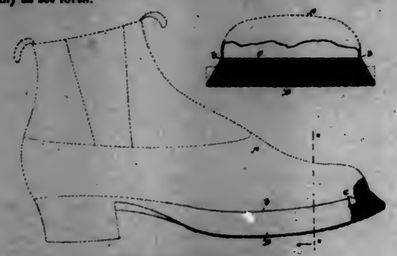
Claim.—1. The combination, with the boldback provided with the curved horn, of the curved arm pivoted to the end of the horn and provided with a hook bent to correspond with the curve of the horn, and a double-acting spring secured to the boldback under the said horn and bearing against the extreme end of the hook for holding the curved arm up or down, substantially as set forth.

2. The combination, with the boldback provided with the curved recessed horn having its end bifurcated, of the curved arm pivoted in the said bifurcated end and provided with a hook fitting inside the hollow in the horn, and a spring secured to the boldback under the horn for retaining the hook in the said hollow, substantially as and for the purpose set forth.

3. The combination, with the boldback provided with the curved horn and the hole under the horn, of the curved arm pivoted to the horn and provided with a hook, and a spring secured to the boldback under the horn and provided with a double-acting curved portion engaging with the end of the said hook through the said hole in the boldback, substantially as and for the purpose set forth.

4. The combination, with the boldback provided with the curved horn and the hole under the horn, of the curved arm pivoted to the horn and provided with a hook, and a spring secured to the boldback at one end and provided with a double-acting curved portion projecting through the hole in the boldback and engaging with the end of the said hook, and a stop upon its free end engaging with the edge of the said hole, substantially as and for the purpose set forth.

411,775. ROLLER-SHADE HOLDER. ELIAS BRAND, Chicago, Ill., assignor to the Wyant Manufacturing Company, same place. Filed Apr. 12, 1889. Serial No. 306,948. (No model.)



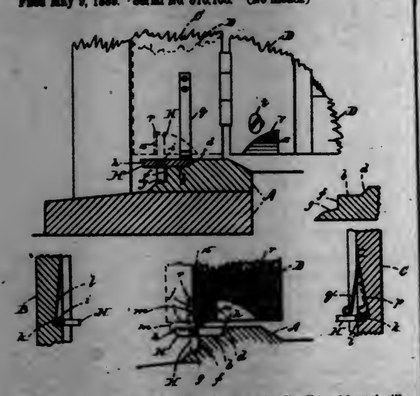
Claim.—1. The sheet-metal roller-shade holder made semicircular, so as to conform to the surface of the roller, and provided at its central portion with stiffening-indentations, substantially as specified.

2. The sheet-metal clamp for roller-shades, made semicircular, so as to conform to the surface of the roller, and provided with central transverse indentations, whereby the longitudinal center of the clamp is rendered stiffer than the edges thereof, substantially as specified.

411,776. BOOT OR SHOE. SAMUEL BEATTIE, Cleveland, Ohio. Filed Sept. 20, 1888. Serial No. 285,927. (No model.)

Claim.—The combination, with upper and substantially square-edge insole, the outer edges of the latter resting against the inner

face of the upper, of the broad sole, the upper outer edge of which is worked up against the upper to a point approximately opposite the upper face of the insole, so as to leave no appreciable ridge projecting beyond the upper or channel between the upper and sole, substantially as set forth.

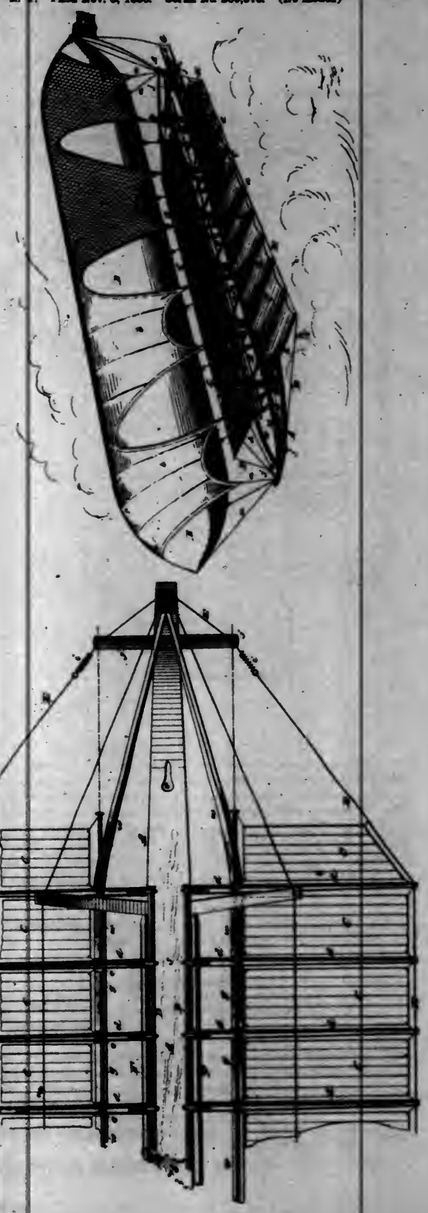


411,777. BUCKLE. FREDERICK D. BOSTWICK, Ripon, Ohio. Filed Dec. 21, 1888. Serial No. 294,234. (No model.)

Claim.—1. The herein-described buckle, comprising the U-shaped side bars B B, connected at their front and rear ends, respectively, by the bars C and C', the transverse bar C^2, arranged below the bar C' and thereby forming a transverse slot *c*, and the transverse bars D, D', and D^2, connecting the horizontal portions of the side bars, the side bar between the bars D and D^2 and the bar D being provided, respectively, with the cuts K and K', all substantially as and for the purpose specified.

2. As an improved article of manufacture, the buckle A, having upturned ends and provided with a transverse slot C at one end and the parallel transverse bars D D' D^2, substantially as and for the purpose specified.

411,778. WEATHER-STRIP. EDWARD BOOTHBY, Watton, Mass. Filed May 9, 1888. Serial No. 310,100. (No model.)



Claim.—1. The combination of a longitudinally-rabbeted sill, a weather-strip pivoted in the door-casing to enter said rabbets, a spring on the casing projecting into the path of said strip, a socket for the spring, a door having a strip-groove in its bottom, a stud for depressing said spring, and a socket in its outer edge having a curved rear wall engaging a stud on the weather-strip when the door is closing, substantially as described.

2. The casings B C and sill A, provided with the rabbets *b f*, in combination with the door D and weather-strip H, pivoted in said casing and provided with the stud *m*, substantially as described.

3. The casings B C, provided with the slots *p l*, sockets *k*, and spring *q*, in combination with the sill A, having the rabbets *b f*, the door D, and the strip H, pivoted in said sockets and provided with the stud *m*, substantially as described.

4. The combinations of the casings B C, having the sockets *k* and slots *l p*, the spring *q*, the strip H, provided with the stud *m*, the sill A, having rabbets *b f*, and the door D, provided with the grooves *r j*, arranged to operate substantially as described.

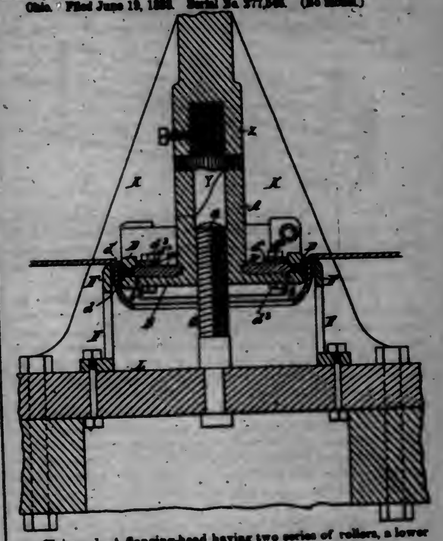
411,779. FLYING-MACHINE. NICHOLAS H. BORNFELDT, Brooklyn, N. Y. Filed Nov. 3, 1888. Serial No. 289,978. (No model.)

Claim.—1. In a flying-machine, the combination of a car-body with a series of laterally-projecting flexible rods *d d*, and a series of wings C C, arranged between said rods, each of said wings being attached to one of said rods only, substantially as and for the purpose described.

2. In a flying-machine, the combination of the laterally-extending flexible rods *d* with the series of sails $b\ b^1\ b^2$, &c., arranged between said rods to constitute wings C, each of said sails being fastened, on a line parallel to said rods *d*, directly to one of the rods *d* only and along one longitudinal edge only, all for the purpose of enabling the sails to overlap and open alternately, and also to bulge, substantially as specified.

3. The combination of the car-body A with the laterally-projecting flexible rods *d d*, the handle-bars D, and outer continuous flexible braces E, with the wings C, placed between said rods *d*, each wing being fastened to one of the two rods only between which it is placed, substantially as herein shown and described.

4. The wing C, composed of sails $b\ b^1\ b^2$, &c., and of the cords $l\ l^1\ l^2$, &c., each sail having a single loop *n* at the outer end and several loops *o o* at the inner end, substantially as herein shown and described.



5. The combination of the flexible wing-rods *d d*, with their connecting-bar D, at the inner ends connecting-rope E, at the outer ends connecting-brace *h*, near their outer end sails $b\ b^1\ b^2$, &c., their end loops *n o o*, inner rod *p*, for connecting with the loops *o o*, and springs *q*, holding the rod *p*, substantially as and for the purpose described.

6. The wing C, composed of sails $b\ b^1\ b^2$, &c., that are held along one longitudinal edge only, in combination with the springs *q* at the inner ends of said sails, acting longitudinally on the same, as described.

7. The combination of the wings C, each having for its base one straight flexible rod *d*, which is hinged to the car-body, with the car-body and with the outer continuous flexible brace E, that connects with the rods *d* and with the car-body, as described.

8. The pivoted wing-rods *d d*, combined with the car-body A and with the outer flexible brace E, whose ends are joined to the car-body at points aligned with the hinge-centers *e* of the rods *d*, as specified.

411,780. FLANGING-MACHINE. JOHN B. BROWNELL, Dayton, Ohio. Filed June 19, 1888. Serial No. 277,548. (No model.)

Claim.—1. A flanging-head having two series of rollers, a lower series describing a lesser circle and an upper series describing a larger circle, substantially as and for the purposes specified.

2. A flanging-head having a series of rollers mounted horizontally and a series of rollers mounted vertically, substantially as and for the purposes specified.

3. A flanging-head having two series of rollers, the upper series projecting out further than the lower series, substantially as and for the purposes specified.

4. A flanging-head having two series of rollers, the lower series describing a smaller circle and the upper series describing a larger circle, the rollers of the upper series being more beveled or rounded than those of the lower series, substantially as and for the purposes specified.

5. A flanging-head provided with the vertical rollers D and the horizontal rollers E, substantially as and for the purposes specified.

6. A flanging-head having the stem A, plate B, arms D', rollers D, and clamps holding the arms D' in place, substantially as and for the purposes specified.

411,779.

7. A flanging-head having the stem A, plate B, arms D', received in recesses in the stem A, rollers D, and clamps holding the arms D' in place, substantially as and for the purposes specified.

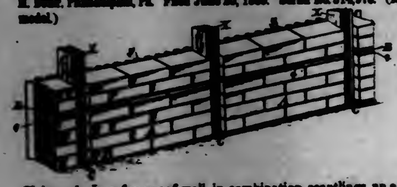
8. A flanging-head having the stem A, plate B, arms D', received in recesses in the stem A, rollers D, plates d^3, and bolts d^4, substantially as and for the purposes specified.

9. A flanging-head having the stem A, plate B, lugs C, and vertical rollers E, attached to lugs C, substantially as and for the purposes specified.

10. A flanging-head having the stem A, plate B, lugs C, angles c^4, provided with arms c' and c^2 and attached to lugs C, and rollers E, pivoted to arm c', substantially as and for the purposes specified.

11. A flanging-head having the stem A, plate B, arms D', rollers D, the axes of said rollers being set in advance of the radii of the plate B and parallel to the said radii, and clamps holding arms D' in place, substantially as and for the purposes specified.

12. In a flanging-machine, the head having rollers D, whose respective axes are placed in advance of the radii or diameter of said head and parallel thereto, substantially as and for the purposes specified.



13. In a flanging-machine, the head having rollers E, whose axes are respectively located in advance of the diameter of said head and parallel thereto, substantially as and for the purposes specified.

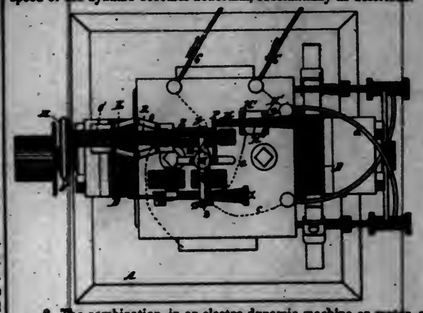
14. In a flanging-machine, the head having rollers D and E, whose axes are respectively located in advance of the diameter of said head and parallel thereto, substantially as and for the purposes specified.

15. In a flanging-machine, the head having stem A, plate B, lugs C, angles c^4, rollers E, arms D', rollers D, and clamps for arms D', substantially as and for the purposes specified.

16. In a flanging-machine, the combination of the flanging-head provided with a female screw and the two series of rollers, the screw G, and support F, substantially as and for the purposes specified.

411,781. CONSTRUCTION OF FIRE-PROOF BUILDINGS. GEORGE H. BUZZ, Philadelphia, Pa. Filed June 20, 1888. Serial No. 314,973. (No model.)

Claim.—1. In a fire-proof wall, in combination, scantlings, an exterior metallic surface secured to said scantlings, an inner wall of brick or other suitable material, said wall projecting beyond said scantlings, and mortar or other suitable material filled in the space in the wall formed by said scantlings.



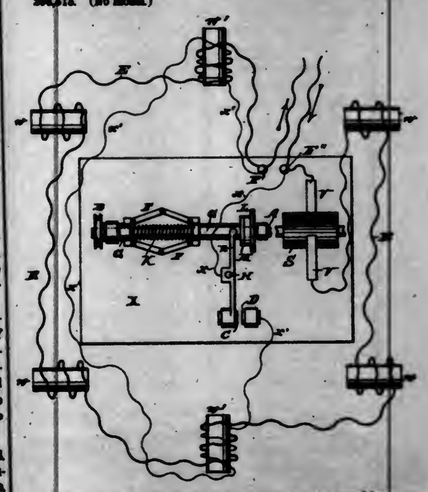
2. In a fire-proof wall, in combination, scantlings, an exterior metallic surface secured to said scantlings, an inner wall of brick or other suitable materials, stretchers placed between said scantlings at intervals in said wall and to which the exterior metallic surface may be secured, the wall projecting beyond said scantlings and stretchers, and mortar or other suitable material filled in the space in the wall formed by said scantlings and stretchers.

3. In a fire-proof wall, in combination, an exterior corrugated metallic surface secured to said scantlings, an inner wall of brick or other suitable material, said wall projecting beyond said scantlings, and mortar or other suitable material interposed between the inner wall and the corrugated metallic exterior surface, and mortar or other suitable material filled in the spaces in the interior wall formed by said scantlings.

4. In a fire-proof wall, in combination, scantlings, an exterior corrugated metallic surface secured to said scantlings, an inner wall of brick or other suitable material, stretchers placed between said scantlings at intervals in said wall and to which the exterior metallic surface may be secured, the wall projecting beyond said scantlings and stretchers, and mortar or other suitable material filled in between the interior wall and the corrugated metallic exterior surface and in the spaces in the interior wall formed by said scantlings.

411,782. GOVERNOR FOR ELECTRO-DYNAMIC MACHINES. GEORGE F. CARD, Covington, Ky., assignor to the George F. Card Manufacturing Company, Cincinnati, Ohio. Filed Oct. 20, 1888. Serial No. 288,264. (No model.)

Claim.—1. The combination, in an electro-dynamic machine or motor, of the driving-circuit, the normally-open low-resistance differential circuit having two pairs of rheophores at its terminals, one of each pair of rheophores being movable and the other relatively stationary, the centrifugal speed-regulator, and connections between the same and the movable rheophores, whereby the respective pairs of rheophores will be caused to contact with variable degrees of pressure and thereby vary the resistance of the differential circuit when the speed of the dynamo becomes abnormal, substantially as described.

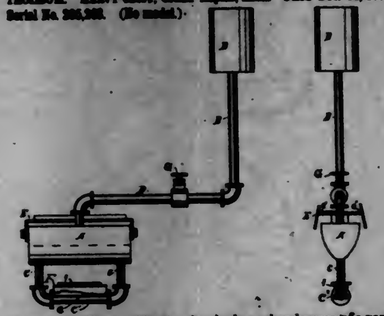


2. The combination, in an electro-dynamic machine or motor, of the driving-circuit, the normally-open differential circuit having the carbon rheophores at its terminals, one of which is movable, and the centrifugal speed-governor connected to the movable carbon rheophore, and thereby adapted to vary the resistance of the differential circuit at abnormal speeds, substantially as described.

3. In an electro-dynamic machine or motor, the combination of the armature, the centrifugal speed-governor revolable synchronously therewith, the field-magnets having the differential circuit wound in the reverse direction to the drive-circuit, said differential circuit having the vibrating terminal connected to and operated by the governor, and the opposing relatively stationary terminals on opposite sides of the vibrating terminal, substantially as described.

4. In an electro-dynamic machine or motor, the combination of the centrifugal speed-governor, the field-magnets having the differential circuit wound in the reverse direction to the drive-circuit, said differential circuit having the vibrating terminal operated by the governor, and the opposing terminals on opposite sides thereof, and the gage to limit the play of the vibrating terminal, substantially as described.

411,788. GOVERNOR FOR ELECTRO-DYNAMIC MACHINES. GEORGE F. CARD, Covington, Ky., assignor to the George F. Card Manufacturing Company, Cincinnati, Ohio. Filed Feb. 1, 1889. Serial No. 298,318. (No model.)

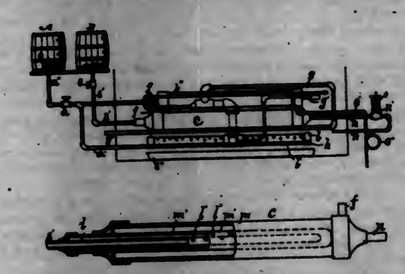


Claim.—1. In a governor for an electro-dynamic machine or motor, the combination, with a differential neutralizing circuit, of an elastically-pivoted lever and two carbon points for making or breaking the differential circuit, so arranged that a velocity of the machine beyond the maximum fixed moves the lever and closes the circuit through the carbon points until the velocity is reduced, substantially as and for the purpose described.

2. In a governor for an electro-dynamic machine or motor provided with a differential or neutralizing circuit, the carbons C D, one of which is stationary and the other attached to a lever E, said lever pivoted at or near its center and actuated by the regulator F to govern the speed of the machine, substantially as and for the purpose described.

3. The lever E, elastically pivoted at or near its center, in the manner described, in combination with a centrifugal regulator operating to close the differential circuit at speeds above the maximum, substantially as and for the purpose described.

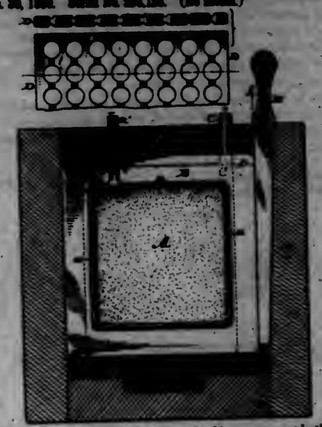
4. In a governor for an electro-dynamic machine or motor provided with a differential or neutralizing circuit, the regulator F, in combination with the collar G' and non-conducting disk M, and lever E, carrying the carbon C, substantially as and for the purpose described.



411,784. APPARATUS FOR VAPORIZING AND BURNING PETROLEUM. HARVY CLOSE, Grand Rapids, Mich. Filed Dec. 31, 1888. Serial No. 295,263. (No model.)

Claim.—1. The combination, in a hydrocarbon-burner, of a vaporizer provided with an oil-conductor pipe, an oil-tank, a valve, and a depending vapor-pipe having a small orifice for the escape of vapor with an adjustable bonnet fitting snugly to the vapor-pipe, open at the ends, and provided with a slot for the passage of the burning vapor, substantially as and for the purpose set forth.

2. The combination, in a hydrocarbon-burner, of a vaporizer, an oil-tank, an oil-pipe, a valve, and a depending vapor-pipe having a small hole for the escape of vapor with an adjustable bonnet upon the vapor-pipe, arranged to be thrown from side to side and having a slot for the passage of the burning vapor, and a bonnet pivoted to the ends of the vaporizer, provided with depending wings and long narrow apertures, substantially as and for the purpose set forth.

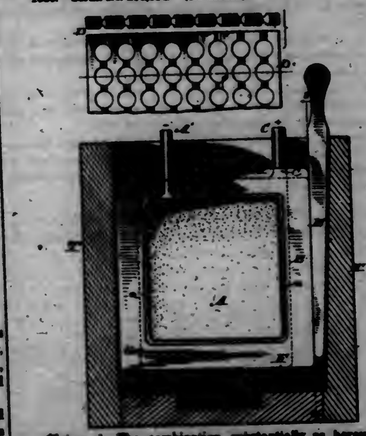


411,785. APPARATUS FOR VAPORIZING AND BURNING CRUDE OIL. GEORGE W. CRAWFORD and WILLIAM A. REED, Kenton, Ohio. Filed Oct. 25, 1888. Serial No. 288,154. (No model.)

Claim.—1. In a hydrocarbon generator and burner, the retorts for supplying superheated steam, consisting of the outside cylinder, the two inside perforated cylinders d m', and the pipe f and pipes n, in combination with the automatic spring-valve o s', all as shown and described.

2. In a hydrocarbon generator and burner for use in a stove, and having oil and water reservoirs connected therewith, the combination of the superheating steam-retort c with internal concentric perforated cylinders d m', and pipe f with diminished nozzle f', and pipe n with automatic spring-valve o s', the oil-retort c' with pipe g', and pipe o' with trap o'', and the air-supply pipe g, mixer h, down-pipe g'', and burners with connecting supply-pipes, all constructed and arranged as shown and described.

411,786. METHOD OF FORMING PLATES FOR SECONDARY BATTERIES. SAMUEL C. C. CURRIE, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester City, N. J. Filed Jan. 30, 1888. Serial No. 262,122. (No model.)



Claim.—1. The hereinbefore-described improvement in the method of forming elements of electrical accumulators, which consists in converting the plates into the peroxide state while confined against expansion, substantially as set forth.

2. The hereinbefore-described improvement in the method of forming elements of electrical accumulators, which consists in converting the plates into the peroxide state while they are confined at their edges against expansion, substantially as set forth.

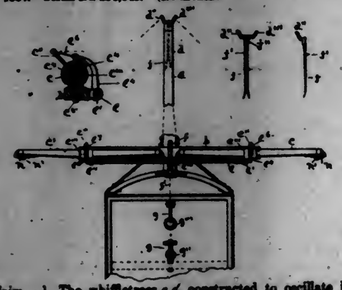
3. The hereinbefore-described method of making plates or elements for electrical accumulators, which consists in reducing the metal to a soft spongy state and then forming it while confined against expansion, substantially as set forth.

4. The hereinbefore-described method of making plates or elements for electrical accumulators, which consists in condensing the mass constituting the body of the plate by the force exerted by the expansive action of the forming process itself, in contradistinction to external mechanical pressure.

411,787. APPARATUS FOR FORMING SECONDARY-BATTERY PLATES. SAMUEL C. C. CURRIE, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester City, N. J. Filed Jan. 31, 1888. Serial No. 262,304. (No model.)

Claim.—1. The combination, substantially as hereinbefore set forth, of the plate of active material, its inclosing-rim, the closely-fitting detachable inclosing-frame, and the electrical circuit-connections constituting it an electrode, whereby the plate may be removed or inserted without affecting the electrical contents of the elements.

2. The combination, substantially as hereinbefore set forth, of a



series of compound negative elements consisting of plates of active material, their rims, and inclosing-frames with interposed plain plates constituting the positive elements of the accumulator.

2. An accumulator separating-plate constructed, as described, of insulating material with transverse perforations and vertical longitudinal grooves to permit of free circulation of fluids and gases.

4. The combination, substantially as hereinbefore set forth, of the compound negative plates, the positive plates, and the interposed grooved and perforated insulating-plates.

5. The accumulator-plate-forming apparatus herein set forth, consisting of the combination of the cell or tank, the elements or plates, their insulating-plates, and the wedges for locking the removable parts in position.

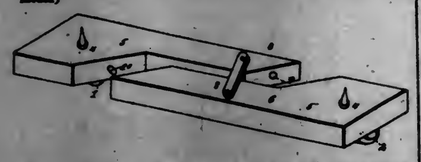
411,788. WAGON. ALFRED B. DALE, Rhinebeck, N. Y. Filed Dec. 15, 1887. Serial No. 258,068. (No model.)

Claim.—1. The whiffletrees *c c'*, constructed to oscillate in the ring-bolts c^3 by the levers c'', in combination with the partially-rotary rod *e*, attached to the evener *b*, the ends of the rod being provided with the crank-arms e^1, connected to the levers c'', and with the lever *f*, by which the rod is partially rotated, the said device detaching the harness-traces from the whiffletrees, as set forth.

2. A wagon-tongue provided with a slip-rod *j*, with spring divisions on its socket end and with holdback-loops on its outer end, whereby a retention of the rod in its socket is had, as set forth.

3. A wagon-tongue provided with a slip-rod *j* at its outer end, in combination with the tenon j^x and with the slot j^w in the ferrule d', whereby the rod is prevented from rotation.

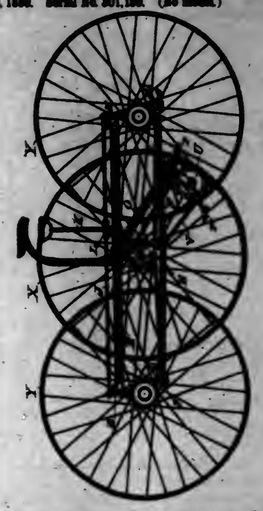
4. The holdback-rod *j*, constructed in two halves, one half for each horse of a double team, there being disconnected loops on the outer ends of each half for the breast-strap of each horse, and the rod connected when in the socket and falling apart when the rod is out of the socket.



5. The lever *g* and its connecting strap, cord, or rod f', in combination with the lever *f*, rod *e*, cranks e^1, and oscillatory whiffletrees, as set forth.

6. The hook-shaped socket *a* in the lever *f*, provided with the spring a', whereby the lever is adapted to the ready attachment and detachment of cord, chain, or rod, as set forth.

7. In a single-horse vehicle, the lever *g* and its chain, strap, or rod f', in combination with the lever e^4, rod or connecting link and lever e^5, and partially-rotating whiffletrees, as set forth.



8. The rod *g* and ring g', attached to the driver's seat, in combination with the lever *g* and connecting rod, cord, or chain f', whereby the means is provided for the ready operation of the detaching device, as set forth.

411,789. DETACHABLE AND ADJUSTABLE ROLLER. JOHN L. DELANY, Tyler, Tex. Filed July 30, 1888. Serial No. 318,162. (No model.)

Claim.—In a device of the character described, the combination, with the sections 5 and 6, arranged parallel to each other and adapted to have a combined longitudinal and lateral motion with reference to each other, as described, rollers located upon the under side of said sections, and the spurs on the upper faces at each end, of the braces 7 and 8, located, respectively, upon the lower and upper faces of the device and diagonally across the same, and pivoted at each end to said sections 5 and 6, the openings 9 provided on said sections, and the dowels 10 on said sections opposite to the openings 9, and adapted to enter the same when the sections are closed, for the purposes specified.

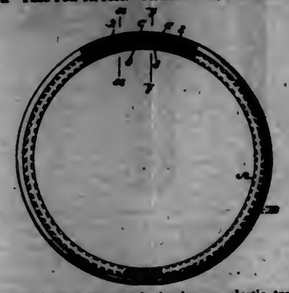
411,790. TRICYCLE. ALLEMUS G. DOWDS, Charlevoix, Mich. Filed Feb. 18, 1889. Serial No. 301,160. (No model.)

Claim.—1. A tricycle having a frame composed of the pieces A, B, D, and O, a driving mechanism consisting of a driving-shaft C, separated into two sections by a compensating or differential gear in which a spherical universal joint is used, said driving-shaft C having the track-wheel X solidly attached to one end and the section *a* of the telescopic crank-arm H to the other, a telescopic crank H, composed of the sections *a* and *b*, the section *b* being provided with a spherical or globe bearing *c*, and thereby attached to the connecting-rod F, a connecting-rod F, communicating with the shaft C by means of the telescopic crank-arm H, said rod F being provided with a spherical journal-box to receive the globe-bearing *c*, and being connected pivotally at either end with a journal-box or ball-bearing journal-case *g*, inclosing the crank-axles G G, crank-axles G G, journaled in the steering-forks E E and having solidly attached to them outside of E E the steering track-wheels Y Y, three track-wheels of equal diameter X and Y Y being respectively solidly attached to the shaft C and the axles G G, all being driven, a steering mechanism consisting of the arms M M, solidly attached to the steering-forks E E, but extending in opposite directions, the rod J, connecting said arms, and the steering-standard K, solidly attached to the ratchet-wheel L, which is adapted to engage a ratchet-face upon J, all substantially as and for the purpose above specified.

2. In a tricycle, three track-wheels of equal diameter X and Y Y, the wheels Y Y being also steering-wheels, and all being adapted to be driven by means of the shaft C, the crank H, and the connecting-rod F, substantially as and for the purpose above specified.

3. In a tricycle, the use of a connecting-rod F, pivotally attached to journal-boxes or ball-bearing cases *g g*, which inclose the journals of the axles G G, and provided with a spherical journal-box *d*, adapted to receive the globe-bearing *c*, substantially as and for the purpose above specified.

4. In a tricycle, a universal-joint connection between the rod F and the axles G G, consisting of the forked ends of F, fastened pivotally to the journal-boxes or ball-bearing cases *g g* by the pins *f* and *f'* at right angles to the axles G G, the pin *f* having a screw-thread and adapted to be locked in any suitable manner, as by the set-screw *r*, the journal-boxes *g g*, adapted to inclose the axles G G, adapted to receive the ends of the pins *f* and *f'*, substantially as and for the purpose above specified.



5. In a tricycle, the combination of the connecting-rod F, the universal joint formed by the pivotal connection of F with the journal-box *g*, the steering-forks E E, and the steering track-wheels Y Y, substantially as and for the purpose above specified.

6. A telescopic crank H, consisting of the sections *a* and *b*, *b* having a globe-bearing *c*, substantially as and for the purpose specified.

7. In a tricycle, the combination of the shaft C, the telescopic crank H, and the connecting-rod F, as and for the purposes above specified.

8. A spherical universal joint consisting of the spherical journal *h*, perforated by the double-V-shaped slot *l* in the axis of the shaft R, adapted to receive and work upon the pin *m*, the pin *m* rectangular in section and tapering from end to end with conical sections at either end, adapted to be journaled in the caps *n n* and adjusted by the set-screws *o o*, the spherical journal-box of sections A and A', A being attached to the shaft Q and A' being provided with an aperture *q* of any desired diameter, the two sections A and A' being adapted to be fastened together, as by bolts or screws *i i*, with a compensating or differential gear consisting of the mesh or friction gears S S, or equivalents, upon a secondary shaft R, journaled at one end in fixed journal-boxes T and connecting with a main shaft Q, substantially as and for the purpose above specified.

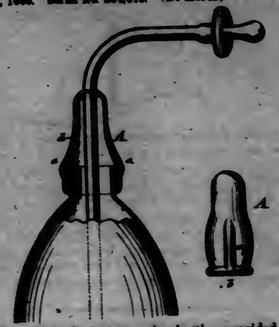
411,791. VEHICLE-WHEEL TIRE. HOWARD M. DU BOIS, Philadelphia, Pa. Filed Feb. 13, 1889. Serial No. 300,312. (No model.)

Claim.—1. A tire for a vehicle, having an elastic tread with a sectional band within the same, the ends of the sections having loops and the sides of the tire having coincident openings, and keys passing through loops and openings, said parts being combined substantially as described.

2. In a vehicle-tire, an elastic tread having a strap, band, or ring of metal or other material within the same, and keys which are passed through the tire proper and the ends of said band, substantially as described.

3. An elastic tread having a ring inclosed or embedded therein, the ends of said band being provided with loops to receive keys, whereby said ends may be brought together and the tread contracted, substantially as described.

4. A channeled tire and an elastic tread, in combination with a ring inclosed or embedded in said tread, and keys passing through the tire, the tread, and the ends of said ring, whereby the tread may be firmly held on the tire, the parts named being combined substantially as described.



411,792. RUBBER SYRINGE. ANTON C. BOEHME, New York, assignor to the Ideal Rubber Company, Brooklyn, N. Y. Filed Dec. 19, 1888. Serial No. 294,078. (No model.)

Claim.—1. A rubber syringe composed of an elastic bulb having a contracted neck, an elastic cap made integral with the neck of the bulb, and a discharge-tube inserted into said neck, substantially as set forth.

2. A rubber syringe composed of an elastic bulb having a contracted neck, an elastic cap made integral with said neck, said neck being extended below the top of the cap, and a discharge-tube inserted into said neck, substantially as set forth.

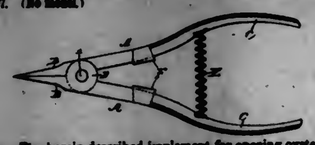
411,798. NURSING-BOTTLE NIPPLE. ANTON C. BOEHME, New York, assignor to the Ideal Rubber Company, Brooklyn, N. Y. Filed Dec. 27, 1888. Serial No. 294,618. (No model.)

Claim.—A nipple for nursing-bottles, provided with an exterior rib extending upwardly from the rim of the nipple, a vent-passage in said rib, and a flap-valve at the upper and inner end of the vent-passage, said valve being made integral with the nipple, substantially as set forth.

411,794. NURSING-BOTTLE NIPPLE. ANTON C. BOEHME, New York, assignor to the Ideal Rubber Company, Brooklyn, N. Y. Filed Dec. 27, 1888. Serial No. 294,620. (No model.)

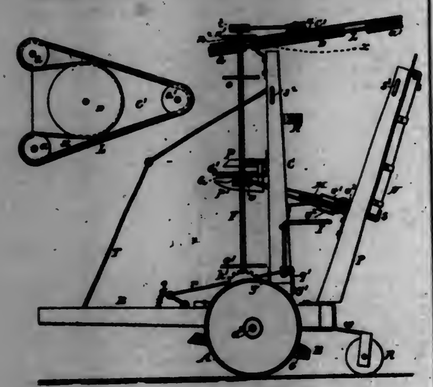
Claim.—A nipple for nursing-bottles, provided with an exterior elastic cap, an interior tubular stopper, and a vent-passage passing through said stopper and provided with a valve at the inner end of the vent-passage, said valve being made integral with the nipple, substantially as set forth.

411,795. WATER-BOTTLE STOPPER. ANTON C. BOEHME, New York, assignor to the Ideal Rubber Company, Brooklyn, N. Y. Filed Mar. 8, 1889. Serial No. 302,502. (No model.)



Claim.—The combination, with the interiorly-threaded neck of a combined rubber fountain and water-bottle, of a stopper having a hollow exteriorly-threaded cheek, an interiorly-threaded discharge-nozzle above the head of the cheek, a link or bail pivoted to said head, and a screw-plug fitting into the nozzle and provided with a headed shank that is guided in the perforated upper end of the pivot link or bail, substantially as set forth.

411,796. PRIMER. STEPHEN H. RUSSELL, London, England. Filed May 16, 1888. Renewed Feb. 11, 1889. Serial No. 299,893. (No model.)



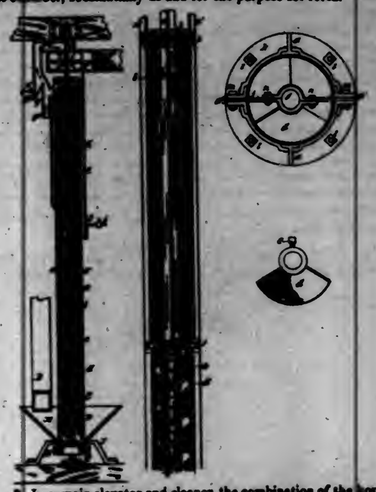
Claim.—In combination with the customary cup containing the fulminate, the within-described anvil part in the form of a sleeve embracing said cup, and having rigid internal fingers with sharp edges to penetrate the fulminate, substantially as hereinbefore specified.

411,797. IMPLEMENT FOR OPENING OYSTERS OR CLAMS. ANDREW F. FARRELL, Albany, N. Y. Filed Mar. 30, 1889. Serial No. 304,697. (No model.)

Claim.—The herein-described implement for opening oysters and other bivalves, the same comprising a pair of arms which are pivoted together near one end in such manner that a closing movement at one end of said arms will reciprocally produce an opening movement at the opposite end of the same, said arms having at one end a pair of chisel-pointed jaws, and at the opposite end a pair of handles by which said implement is operated, said handles being provided with oppositely-located cutters, and said cutters and jaws located at opposite sides of the pivotal center, and an interposed spring arranged to normally hold said jaws in a closed condition, substantially as herein specified.

411,798. CANE OR CORN HARVESTING MACHINE. HENRY FAHS, Middletown, Ind. Filed July 6, 1889. Serial No. 316,719. (No model.)

Claim.—1. In a harvesting-machine for corn and cane, the combination, with a frame, of a platform provided with a cutter formed of two blades, one of which is pivoted, a vertical rotative shaft provided with two cranks, one of which is connected with said pivoted blade, a trigger formed of a bent rod which extends over the cutter and is connected with one of said cranks and with the platform, a mutilated gear-wheel on said rotative shaft, and mechanism to engage the same, substantially as and for the purposes described.



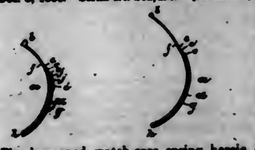
2. The combination, with a platform provided with the cutter having a fixed blade *b* and a pivoted blade *b'*, of the trigger *f*, a vertical shaft *d*, provided with two cranks *c c'*, one of which is connected with the trigger and the other with said pivoted blade, a mutilated gear-wheel *d'* on shaft *d*, and driving mechanism to engage said gear-wheel, substantially as set forth and described.

3. The combination, with rope L and a frame provided with pulleys D, *a*, and *a'*, of an elevator provided with an endless carrying-belt and an intervening reel which is adapted to transfer stalks from said frame to the elevator, substantially as set forth and described.

411,799. GRAIN ELEVATOR AND CLEANER. ANTON FELP, Cedar Rapids, Iowa. Filed May 7, 1889. Serial No. 309,982. (No model.)

Claim.—1. In a combined grain elevator and cleaner, the combination of a vertical spiral elevator, an inclosing-cylinder perforated near the lower end for the admission of air and near the upper end for the escape of dust, the middle portion being imperforate, a hopper at the lower end of said cylinder and elevator for the admission of grain thereto, and a suitable outlet at the top, substantially as described.

2. The combination, in a grain elevator and cleaner, of an elevator-column and worm, substantially as described, a hopper communicating with said elevator at the bottom, a dust-chamber surrounding the upper perforated portion of the elevator-column, an outlet near the top thereof for the grain and an outlet for dust near the bottom, and a suction-fan communicating with the upper portion of said dust-chamber, substantially as and for the purpose set forth.



3. In a grain elevator and cleaner, the combination of the hopper A, elevator-column C, composed of perforated sections at the top and bottom and intermediate imperforate sections, worm or conveyer D, fan F, and dust-chamber G, having trap-doors *h h'*, outlets *g g' g''*, and air-passage *g'''*, all substantially as and for the purpose set forth.

4. In a grain elevator and cleaner, the herein-described column, composed of sections suitably bolted together, the lower and upper sections being perforated for the admission of air, and the upper one also perforated for the escape of dust, and the middle one imperforate, each section being composed of a cylindrical drum secured to posts of angle-iron *a a* and *a' a'*, and these posts to terminal coupling-rings *k*, substantially as and for the purpose set forth.

5. The combination, in an elevator and cleaner, substantially as described, of the cylindrical tube or drum *b c*, posts *a a'*, terminal rings *k k*, and transversely-mounted box *j*, all substantially as and for the purpose set forth.

411,800. WATCH-CASE SPRING. JAMES H. FLEMING, Newark, N. J. Filed Dec. 3, 1888. Serial No. 292,490. (No model.)

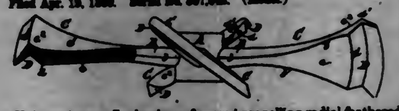
Claim.—1. The improved watch-case spring herein described, consisting of a sheet of spring metal doubled as described, one end being soldered to the face of said spring and the other being provided with a laterally-projecting lip or spur, substantially as and for the purpose set forth.

2. The improved watch-case spring herein described, consisting of a strap of sheet metal doubled on itself and forming a longitudinal slot to receive the holding-pin, one end of said spring being provided with a lip or spur, and the opposite end being soldered to the face of said spring, substantially as and for the purposes set forth.

3. The improved watch-case spring herein described, consisting of a spring-metal strap bent on itself, one end being corrugated and soldered to the face of said strap and the other end being provided with a lip or spur, substantially as and for the purposes set forth.

4. The improved watch-case spring herein described, consisting of parts *d f*, forming a longitudinal slot, the part *d* having a series of corrugations forming with the part *f* pin-receptacles, substantially as and for the purposes set forth.

5. The improved watch-case spring herein described, consisting of parts *d f*, one of which is provided with a lip *b*, and the other of which is bent, as at *e*, and soldered to the first, substantially as and for the purposes set forth.



411,801. WIRE HOLDER AND INSULATOR. JOHN B. FLEMMER, Dayton, Ohio. Filed Mar. 16, 1889. Serial No. 303,649. (No model.)

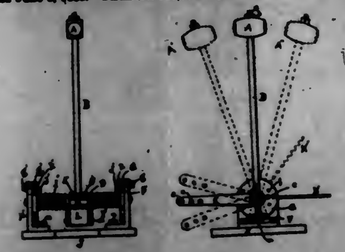
Claim.—1. As a new article of manufacture, the wire-holder comprising a body with a longitudinal groove to receive insulators and the screw as integral part thereof, and the binding-screws *f f*, substantially as shown and described.

2. The metallic holder A, with groove and screw, in combination with the insulating blocks B C, provided with transverse notches, substantially as set forth.

411,802. SCREW-PROPELLER. DAVID FERRIS, Philadelphia, Pa. Filed Apr. 19, 1889. Serial No. 307,962. (Model.)

Claim.—A propeller having a forward propelling radial feathered or spiral surface *c*, terminated by a spiral furrowed end formation D, and a backward propelling radial spiral surface *c'*, terminated with a spiral reserved surface *c''*, substantially as and for the purpose described.

411,803. THRASHING-MACHINE. JOSEPH GALLAHER, Mansfield, Ohio, assignor to The Aultman & Taylor Company, same place. Filed Jan. 7, 1889. Serial No. 295,693. (No model.)



Claim.—1. The combination, with the straw-carrier of a thrashing-machine and the straw-cutting cylinder and its concave, of the steeply-inclined toothed feeder fixing the carrier and receiving therefrom the crank-shaft connected to the upper end thereof, to give a forward and downward movement to the feeder for causing it to grasp the straw coming from the carrier and to crowd the same into the bite of the cutting-cylinder, substantially as described.

2. The combination, with the straw-carrier and the straw-cutting cylinder B and its concave, of the steeply-inclined reciprocating toothed feeder fixing the cylinder and carrier, the crank-shaft connected with the upper end of said feeder for actuating it, and inclined ways for guiding the lower end of said feeder, whereby it is made to move forward and downward in its operative stroke for adapting it to seize and force the straw to the action of the cutting-cylinder, as described.

3. The combination, with the straw-carrier and the straw-cutting cylinder B, of the steeply-inclined reciprocating toothed feeder D, fixing the cylinder and carrier, and the crank-shaft, inclined ways, and spring for actuating and giving the desired movement to said feeder, substantially as described.

411,804. BELL-STRIKING APPARATUS. THOMAS F. GAYNOR, Louisville, Ky., assignor to the Gaynor Electric Company, same place. Filed June 6, 1889. Serial No. 313,207. (No model.)

Claim.—1. In a bell-striking apparatus, the combination of an angle-shaped hammer-lever to one end of which a hammer is secured, and said lever being provided with a pivot-shaft, a base-plate provided with two standards each having a bearing for said pivot-shaft and each having a concentric adjusting-slot therein, and two spiral tension-springs axially arranged around said pivot-shaft, one end of each of which impinges against said hammer-lever, the other end of each of which is provided with an adjustable bolt-connection in one of said standards to each standard, substantially as specified.

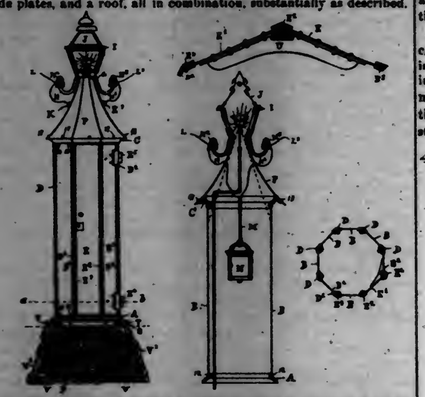
2. In a bell-striking apparatus, the combination of an angle-shaped hammer-lever to one end of which a hammer is secured, and being provided with a pivot-shaft, a base-plate provided with two standards, each having a bearing for one of the ends of said pivot-shaft and each having a concentric adjusting-slot, and two tension-springs arranged axially around said pivot-shaft, one end of each of which impinges against said hammer-lever, the other end of each of which is provided with an adjusting-disk which is secured thereto, and which is pivoted upon a hub on one of said standards, and having a concentric bolt adjustment in the adjusting-slots in said standards, substantially as specified.

3. In a bell-striking apparatus, the combination of an angle-shaped hammer-lever to one end of which a hammer is secured, said lever being provided with a spring-pin, and being also provided with a pivot-shaft, two spiral springs, each provided with a loop end and a straight end, the latter being adapted to impinge against the spring-pin aforesaid, and being arranged axially upon the aforesaid pivot-shaft, two adjusting-disks, each of which is provided with a spring-bolt hole, adjusting-bolt holes, and a central bearing-hole, spring-holes adapted to secure the spiral tension-springs through their looped ends to the aforesaid disks through the bolt-holes therein, a base-plate having two standards secured thereto, each of which is provided with a bearing for the aforesaid pivot-shaft, and which is also provided with a hub-bearing adapted to fit the central bearing-hole of one of the aforesaid disks, and each of which is also provided with a concentric adjusting-bolt-hole slot, two adjusting-bolts, one of which extends through the slot in one of the aforesaid standards, and the other bolt similarly arranged with the other standard, and by means of which one of the aforesaid disks is adjustably secured to said standard, and an adjusting-lever adapted to fit holes in the peripheries of said adjusting-disks, substantially as specified.

4. In a bell-striking apparatus, the combination of an angle-shaped hammer-lever to one end of which a hammer is secured, and being provided with a pivot-shaft, two adjusting tension-springs, a base-plate having two standards, each of which has a bearing for the aforesaid pivot-shaft and also a concentric adjusting-slot, and two combined spring and adjusting bolts, one of which is adapted to adjustably secure the outer end of one of the aforesaid tension-springs through the concentric slot in one of the said standards to such standard, and the other to similarly secure the other spring, substantially as specified.

5. In a bell-striking apparatus having a hammer-lever to which a hammer is secured, and provided with a pivot-shaft, which shaft is mounted in two bearing-standards, in combination therewith, two spiral hammer-lever springs arranged axially around said pivot-shaft, and which are provided with a radial bolt adjustment upon said standards, substantially as specified.

6. In a bell-striking apparatus having a hammer-lever to which a hammer is secured, and provided with a pivot-shaft, which shaft is mounted in two bearing-standards, in combination therewith, two spiral hammer-lever springs arranged axially around said pivot-shaft, the outer end of each of which projects outwardly from the shaft, so as to admit of being secured to an adjusting-disk having an adjustable-bolt connection with a standard, substantially as described.

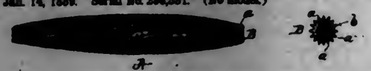


411,805. BOOTH FOR SIGNALING PURPOSES. THOMAS F. GAYNOR, Louisville, Ky., assignor to the Gaynor Electric Company, same place. Filed June 10, 1889. Serial No. 313,806. (No model.)

Claim.—1. A booth consisting of a bed-plate, standards provided with adjusting-bolts, a base-plate, a sill-plate, side plates, binding-posts, a door hinged to one of said side plates, a roof-plate, a roof provided with an opening at its apex, through which the light of a lamp may be admitted, and also provided with a collar to which a lamp-supporting frame and insulator-brackets may be secured, and a lamp, all in combination, substantially as described.

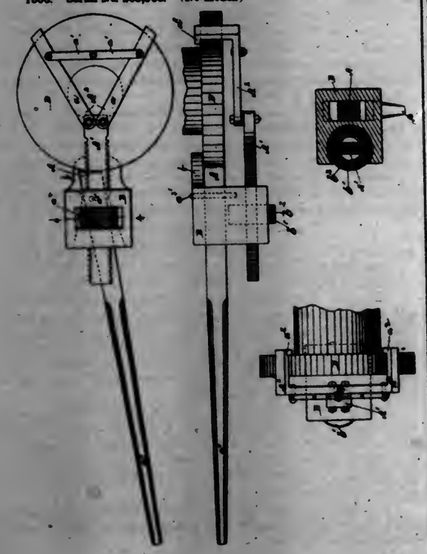
2. A booth consisting of a sill-plate, side plates, binding-posts, a door hinged to one of said side plates, a roof-plate, a roof provided with an opening at its apex, through which the light of a lamp may be admitted, and also provided with a collar to which a lamp-supporting frame and insulator-brackets may be secured, and a lamp, all in combination, substantially as described.

3. A booth provided with a roof having a light-admitting aperture at its apex, in combination with a lamp supported above the roof, substantially as described.



4. A booth having a sill-plate, a roof-plate, side plates connected with said sill-plate and roof-plate, separable binding-posts adapted to cover the joints between said side plates, a door provided with a separable binding-post, jamb-posts, and braces and hinged to one of said side plates, and a roof, all in combination, substantially as described.

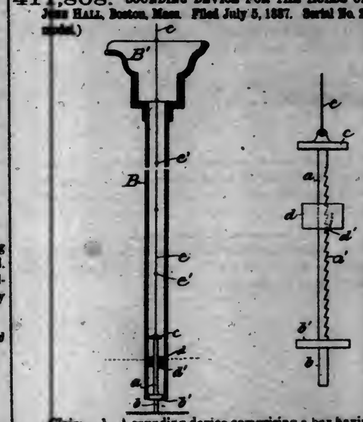
5. In combination with the roof of a booth, a lamp-supporting and an insulator-bracket-supporting collar, substantially as described.



6. In combination with the base-plate and the foundation-standards of a booth, the adjusting-bolts and adjusting-wedges, substantially as described.

411,806. CIGAR. GEORGE GRUNWEDTHER, Cincinnati, Ohio. Filed Jan. 14, 1889. Serial No. 296,231. (No model.)

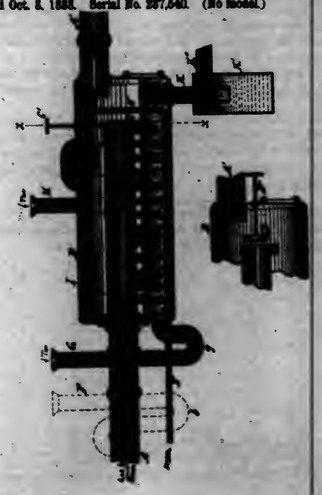
Claim.—An improved article of manufacture consisting of a cigar the tip of which is removed, a perforated paper disk having points around its periphery, said disk being pasted on the severed end of the cigar, with the points secured to its body and the disk being coated with a tasteless and insoluble substance, whereby it is rendered saliva-proof, as set forth.



411,807. FLANGE-WRENCH. JAMES F. GUTHRIE, Jr., Somerville, assignor of one-half to Thomas C. Ashley, Boston, Mass. Filed Aug. 23, 1888. Serial No. 283,586. (No model.)

Claim.—1. The herein-described combination of jaw A, carrier B, jaw-carrier A', and jaw A^2, jaw A being fulcrumed in carrier B, and jaw-carrier A' being mounted in carrier B, and jaw A^2 being provided with one or more sidewise projections a^2, all arranged to grip a flange between the inner end of the jaw A and the sidewise projections a^2, all substantially as and for the purpose set forth.

2. The herein-described combination of jaw A, carrier B, jaw-carrier A', jaw A^2, and nut b', jaw A being fulcrumed in the carrier B, in which is mounted jaw-carrier A' and nut b', the jaw-carrier A' passing through the nut b', and the jaw A^2 being provided with one or more sidewise projections a^2, all arranged to grip a flange between the inner end of the jaw A and the sidewise projections a^2, all substantially as and for the purpose set forth.

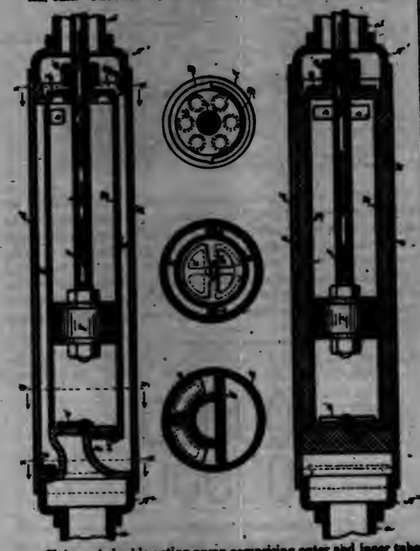


411,808. SOUNDING DEVICE FOR THE HOLDS OF VESSELS. JOHN HALL, Boston, Mass. Filed July 5, 1887. Serial No. 243,422. (No model.)

Claim.—1. A sounding device comprising a bar having flanges or centering devices at or near its upper and lower ends, combined with a float guided upon and movable along the said bar between its ends, and an engaging device which permits upward movement, but prevents downward movement, of the float along the bar, substantially as and for the purpose set forth.

2. A sounding device comprising a bar having a flange near its lower end and a foot projecting below said flange, and a flange at its upper end, combined with a float movable along the said bar and an engaging device, whereby said float is retained at the height to which it is raised on the said bar, substantially as and for the purpose set forth.

411,809. GAS-ENRICHER. EUGENE W. HANLIN, Wilmington, Ohio. Filed Oct. 3, 1888. Serial No. 287,540. (No model.)

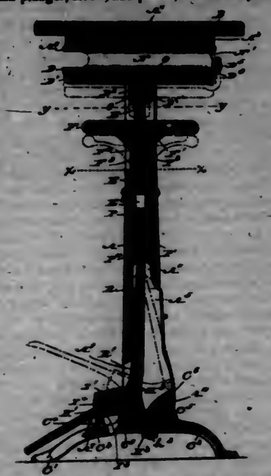


Claim.—1. In a gas-enricher, the combination of a receptacle adapted to contain tar in its lower portion, a gas-induction pipe having an opening into said receptacle above the normal level of said tar, a valve in said opening, branches connected to the gas-induction pipe and dipping below the normal level of said tar, a steam-heating pipe extending through the lower portion of said receptacle, a tar-feed pipe, and tar-pan on top of the induction-pipe and below the tar-pipe, and a gas-exit pipe from the upper portion of said receptacle, arranged in the manner above described.

2. In a gas-enricher, the combination of the receptacle adapted to contain tar in its lower portion, the gas-induction pipe having an opening into said receptacle above the normal level of said tar, a valve in said opening, branches connected to the gas-induction pipe and dipping below the normal level of said tar, a steam-heating pipe extending through the lower portion of said receptacle, a tar-feed pipe, and a gas-exit pipe from the upper portion of said receptacle, arranged and combined substantially as and in the manner described.

3. In a gas-enricher, the combination of a receptacle adapted to contain tar in its lower portion, a gas-induction pipe having an opening into said receptacle above the normal level of said tar, a valve in said opening, branches connected to the gas-induction pipe and dipping below the normal level of said tar, a tar-feed pipe, and a gas-exit pipe from the upper portion of said receptacle, arranged and combined substantially as and in the manner described.

411,810. DOUBLE-ACTING PUMP. CASPER HARWIG, Canal Fulton, Ohio. Filed June 3, 1889. Serial No. 312,916. (No model.)



Claim.—A double-acting pump comprising outer and inner tubes, partitions dividing the annular space between the tubes into compartments respectively for induction and eduction purposes, heads fitting the bore of the outer tube and abutting the ends of the inner tube, one of said heads having a valve opening upwardly for the admission of water to the induction-compartment, a valve opening downwardly for the discharge of water into the eduction-compartment, and a valve for the admission of water to the pump-barrel, the other head having valves for the discharge of water from the pump-barrel above the piston, screw-caps engaging the outer tube and abutting each heads, and the caps connecting respectively with the suction and discharge-pipes of the pump, substantially as set forth.

411,811. COPYING-PRESS. ISAAC W. HEYBURN, Philadelphia, Pa. Filed May 14, 1888. Serial No. 310,411. (No model.)

Claim.—1. In a letter-copying press, in combination with the hollow column A, having foot C, vertical branching arms A' A', and top plate A^2, the plunger P, adapted to reciprocate in said hollow column, screw-shank E, supported upon said plunger, hand-wheel F, operating said screw-shank, platen D, supported upon the same, and toggle R R' H^3, supported upon rigid bearing C^3, together with foot-lever H, adapted to operate said toggle, substantially as described.

2. In combination with the hollow column A, supported upon foot C, having branching arms A' A' above and connecting top A^2, the plunger P, adapted to reciprocate in said hollow column, said plunger having internal vertical opening P', angular in cross-section, open above, and screw-shank E, having angular head E^2, adapted to reciprocate in the vertical opening P' of said plunger without rotation, together with hand-wheel F, working upon said screw-shank and supported upon the top of the said plunger, said hand-wheel adapted by its rotation to raise or lower the said screw E, and the platen D, supported upon the end of the said screw and adjustable toward said top A^2 by said hand-wheel F, and the toggle-lever R H, adapted to engage with and operate said plunger, screw, and platen, substantially as described.

3. In a toggle-lever press, in combination with the platen D and the foot-lever H, adapted by downward pressure to operate the toggle R R' H^3 C^3 and platen D, the said toggle held under tension by the pivot R' passing over the line of thrust and support I^{2a} H^3, the supplemental foot-lever I, attached to the said foot-lever H by pivot I^4 and having support I^3 against bearing C^3 in front of said pivot I^4, said supplemental lever adapted to stand elevated by impingement of support I^3 against bearing C^3 when said foot-lever H is depressed and said toggle locked, and by pressure upon said supplemental lever to reverse the said foot-lever H and release the said toggle, substantially as described.

4. In a toggle-lever press, in combination with the locking-lever H, the supplemental releasing-lever I, pivoted to said locking-lever and operating by a separate fulcrum against a fixed support to release the same, substantially as described.

5. In a toggle-lever press, the hollow column A, having opening A^{10} in front, near the lower part thereof, and thrust-support A^{10} H^3 C^3, A^9 in front, near the lower part thereof, and thrust-support A^{10} H^3 C^3, extending across the bottom of the said hollow column, the toggle supported in open bearing H^3, having pivot R', thrust-bar R, foot-lever H, reciprocating plunger P, notched at P^4 and supported upon said bar R, platen D, supported by said plunger P, and flat top A^9, against which said platen faces and is reciprocated by the operation of said toggle, substantially as described.

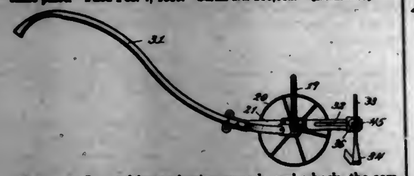
6. In a foot-press adapted to stand upon the floor, the toggle H^3 H^2 R' R, placed near the bottom thereof and supported upon fixed bearings C^3, foot-lever H, hollow plunger P, supported upon thrust-bar R of said toggle, screw-shank E, vertically adjustable in said hollow plunger by screw-threaded hand-wheel F, platen D, supported upon the upper end of said screw E, together with foot C, hollow column A, branching arms A' A', and transverse top A^9, the whole constructed to operate substantially as and for the purposes shown and described.

7. In a foot-press, in combination with the hollow column A, branching arms A' A', connecting top A^9 and foot C, the thrust-support A^{10} C^3, extended across the lower end of said hollow column and toggle-support H^3, adapted to operate in bearing C^3 thereof, pivot R', thrust-bar R, and operating-lever H, the hollow plunger P, supported by bearing P^4 upon the upper end of said bar R, said plunger having angular internal opening P' from above downward, screw-shaft E, having angular head E^2, adapted to reciprocate in said opening P', screw-threaded hand-wheel F P^5, operating upon said screw-shaft and adapted to rest upon the upper end of said plunger during its reciprocation by said toggle and raise or lower the said screw, together with platen D, supported upon the upper end of said screw E, oper-

ated by said toggle, and adjustable to different thicknesses of material by said hand-wheel, substantially as described.

8. In a letter-press, the platen D, supported upon the screw E, said platen having elongated collar D^3, provided with vertical central opening D^4 beneath, in combination with the flexible sleeve O, forcibly interposed between the sides of screw E and inside D^4 of collar D^3, the whole adapted to maintain said platen D in a horizontal position and admit of flexibility under irregular compression, substantially as described.

9. In a letter-press, the platen D, having raised fingers D^5 at its rear side and transverse groove D^6 along the rear margin within the line of said fingers, substantially as and for the purpose described.



10. In a letter-press having foot C, top A^2, platen D, lever H, and mechanism for operating said platen, the hollow column A, resting upon foot C in a position inclined backward from the vertical and from below upward, substantially as and for the purpose described.

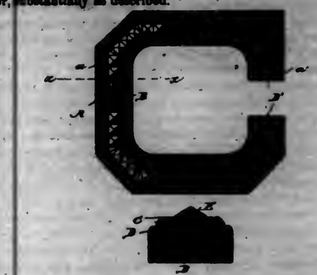
11. In combination with a letter-copying press having top A^2, stiffening-ribs A^3 A^4 upon its upper surface, and attached cover B, supported upon said ribs, a rack consisting of a shelf or the like M and supporting frame-work J J K^2, said frame-work having projecting arms K K, adapted to be inserted into the spaces between said top A^2 and said cover B in the interspace between the ribs A^3 A^4, and thereby support said rack upon said press, substantially as described.

12. In a letter-copying press, the platen D, screw E, and adjusting hand-wheel F, all adapted to reciprocate together, said hand-wheel supported upon the top of reciprocating plunger P, in combination with toggle-lever mechanism beneath adapted to cause the said plunger to be reciprocated, so as to bring said platen under compression against top plate A^2 or release the same, substantially as described.

13. As an article of manufacture, a combined toggle and screw press having hollow column A, branching arms A' A', top plate A^2, support-block A^{10} C^2, and opening A^5, all formed in a single construction, foot-piece consisting of foot C C C^2 and central recessed support C^3, adapted to receive the lower end of column A, rigidly bolted thereto, supplemental wooden cover B, attached to top A^2, platen D, moving vertically between arms A' A' and guided thereby, screw-shaft E, seated at its upper end in packed collar D^3 of said platen, screw-centered hand-wheel F, operating said screw-shaft E, fitted to and supported upon upper end of hollow plunger P, the lower end of said screw-shaft E adapted to reciprocate in vertical opening P' of said hollow plunger, bearing P^4 beneath said hollow plunger, toggle H^2, adapted to operate through suitable connection against said plunger and reciprocate the same, and foot-lever H' H, projecting forward through said opening A^5 and adapted to be operated by pressure upon foot-plate H, substantially as described.

411,812. CULTIVATOR. MARSHALL B. BUSH, Davenport, Iowa, assignor of one-half to Hiram P. Goodwin and Adam M. Dedrick, both of same place. Filed Feb. 7, 1889. Serial No. 299,022. (No model.)

Claim.—1. In a cultivator having an axle and wheels, the combination therewith of two beams cross-grooved at the axle and with slotted forward extensions, the perforated concave plates 23, and sleeves 26, fitted upon the axle having vertical standards 27, and pivots 30, whereby each beam may have independent movement upon the axle, substantially as described.



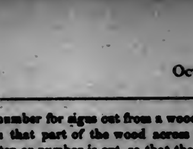
2. The combination, with the frame or axle, of the grooved and slotted beams, the plates 23, sleeves 26, with standards 27 and pivots 30, and the plates 28, recessed to embrace an arched axle, whereby one beam may be made rigid with the axle while the other may rotate freely thereon, substantially as described.

3. The combination of the axle and wheels, the beams having longitudinal slots at their front ends for exchangeable cultivating-tools and with cross-slots at their rear ends, and the handles vertically adjustable on the beams, substantially as shown and described.

411,818. LETTER OR NUMBER FOR SIGNS. DUDLEY H. LANTON, Chicago, Ill. Filed May 13, 1889. Serial No. 309,942. (Model.)

Claim.—1. The method of forming letters and numbers for signs, which consists in embedding a dowel or dowels in the blank from which the letter is to be cut and across the grain of the wood, and then cutting the letter in such manner that the dowel or dowels shall fall within the narrow part or parts of the letter or number, substantially as set forth.

2. A letter or number for signs cut from a wooden blank, having dowels embedded in that part of the wood across the grain thereof from which the letter or number is cut, so that the dowel or dowels shall fall within the narrow cross-grained parts of the letter or number, substantially as described.



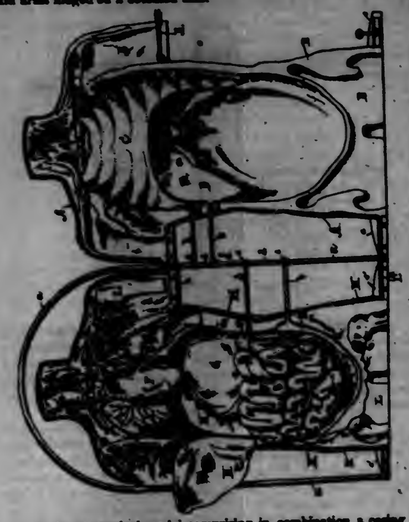
3. A letter or number for signs, formed of wood and having a dowel or dowels embedded in the narrow cross-grained parts thereof, the face of said letter being grooved and being provided with a waterproof plastic composition within the grooved portion serving to strengthen and ornament the letter or number, substantially as described.

411,814. PIT-FURNACE. LOUIS G. LAUREAU, Philadelphia, Pa. Filed Apr. 22, 1889. Serial No. 308,126. (No model.)

Claim.—In a pit-furnace, the combination, substantially as set forth, of a furnace substantially rectangular in plan, a regenerator structure at each end of the furnace, combustion-nozzles leading from the regenerator structures to the furnace, a longitudinal wall disposed centrally in the furnace and extending from the floor to the roof thereof, and a series of arch-walls arranged in the chambers at each side of said longitudinal wall at right angles to said wall, and springing therefrom and from the side walls of the furnace and extending to the roof of the furnace.

411,815. PREPARING MEDICINAL PLASTERS. FRED L. LEAVITT, Auburn, Me. Filed Apr. 5, 1889. Serial No. 306,096. (No specimens.)

Claim.—1. The process of forming medicinal plasters, which consists in placing a suitable amount of a medicinal substance upon a piece of rubber tissue, which rests upon a piece of cloth, covering these with another piece of cloth, and joining the three thicknesses into one at the boundary-line of the plaster by the combined effect of heat and pressure, all as set forth.



2. The process of forming a compound sheet of medicinal plasters, which consists in placing a sheet of rubber tissue upon a sheet of stronger flexible material, placing upon the rubber tissue separate portions of the medicinal substance, covering with a sheet of cloth, and then uniting the three layers at and near a line surrounding each separate portion of the medicinal substance by pressing with a heated iron, all as set forth.

411,816. ANATOMICAL MODEL. DAVID T. LEE, St. John's Wood, County of Middlesex, England. Filed July 14, 1888. Serial No. 279,572. (No model.) Patented in England July 14, 1888, No. 10,591.

Claim.—1. An anatomical model composed of separate parts hinged upon one common axis.

2. An anatomical model composed of separate parts, in combination with hinged arms supporting said parts in their relative positions, all said arms being hinged on one common axis.

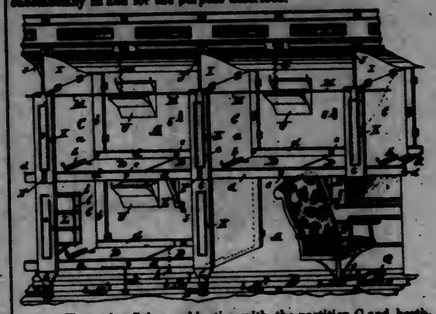
3. An anatomical model comprising, in combination, a frame, being a portion of said model, movable parts, being portions of said model, and arms supporting said parts in their relative position, all said arms hinged on a common axis.

4. An anatomical model comprising, in combination, a casing in two hinged parts, being a portion of said model, a number of separate parts, being portions of said model, and arms supporting said parts in their relative position, said arms being hinged on a common axis with the casing.

5. An anatomical model comprising, in combination, a base-plate, a rod on said base-plate, a casing in two parts, being a portion of said model and hinged on said rod, a number of separate parts, being portions of said model, and arms supporting said parts in their relative position and hinged on said rod.

6. An anatomical model comprising, in combination, a base-plate, a rod standing perpendicularly from said base-plate, a casing in two parts, being portions of the model, hinged on said rod, separate parts, being portions of said model, and arms supporting said parts in their relative position and hinged upon said rod.

7. An anatomical model comprising, in combination, a base-plate, a rod standing perpendicularly from said base-plate, a casing in two parts, being the exterior portions of the model, hinged on said rod, separate parts, being interior portions of said model and supported in relative position thereto, sockets in said parts, arms hinged upon said rod, and pintles on said arms engaging in said sockets for supporting said separate parts, for the purpose set forth.



8. An anatomical model comprising, in combination, a main stationary portion, a base therefor, a rod arranged vertically on one side of said portion, passing over the same and descending vertically on the other side of said portion, inner movable parts, arms pivoted on one side of said rod and supporting said inner parts in their relative position, distance-sleeves on said rod between the arms, outer parts forming coverings in detachable halves, pivoted on the one side of said rod each in two pieces, flanges on the lower edges thereof adapted to meet when said parts are closed, and a lock in said flanges remote from the pivots of the parts, for the purpose set forth.

411,817. COMBINED SLEEPING AND PARLOR CAR. HOSEA W. LIBBEY, Boston, Mass. Filed Nov. 11, 1886. Serial No. 218,573. (No model.)

Claim.—1. The combination of the partitions C, hinged to the side of the car, the end pieces c being finished to correspond with the side walls of the car, with berth-bottoms D, hinged to the partitions C, the bottom of the berths on one side being finished to correspond to the side walls of the car, so that when closed up the partition will stand longitudinally against the side of the car and occupy the space of a window and also conform to the general appearance of the walls of the car, substantially as set forth.

2. In a combined parlor and sleeping car, the partitions C C, divided in the center of their height, and having half-berth bottoms hinged on each side, each half of the partition being capable of being folded against the side of the car, so that either the upper or lower, or both, series can be opened out for use, substantially as shown and described.

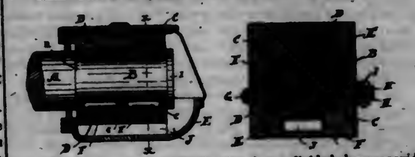
3. The combination of the filling-in piece I and the partition C, said filling-in piece being capable of being folded upon the partition and the partition capable of being folded against the side of the car, substantially as and for the purpose described.

4. The spring S, in combination with the partition C and berth-bottom D, for assisting to raise the latter to a vertical position, substantially as shown and described.

5. The folding bracket E, consisting of a T-shaped furcated arm g, hinged to the side of the car in a groove f, a bar A, the upper end of which is hinged to the outer end of the arm g and its lower end to a block i, held in but free to work in the groove f, so that it will support the two half-berth bottoms in the center when in use, and capable of being folded flush with the side of the car when not in use, substantially as shown and described.

6. The flush hook or catch K, in combination with the partitions C and side of the car A, substantially as and for the purposes set forth.

7. The folding ladder L, in combination with the partition C and berths, substantially as shown and described.



8. In combination with the folding ladder L, the bar m, slide n, and guides p, substantially as and for the purposes set forth.

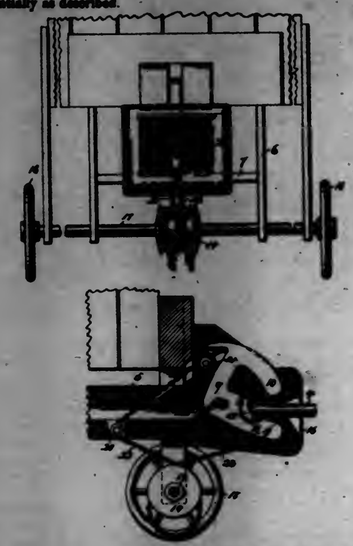
9. The curtain-rods M, divided in the center and provided with a slide q, in combination with the partitions C, substantially as shown and described.

10. The spring N, secured to the roof of the car, in combination with the curtain-bars M, substantially as and for the purposes set forth.

11. In combination with a sleeping-car, the folding pockets U, consisting of solid front pieces and flexible sides, and provided with studs or standards s, substantially as shown and described.

411,818. ANTI-FRICTION BEARING. HOSEA W. LIBBEY, Boston, Mass. Filed Dec. 17, 1888. Serial No. 293,792. (No model.)

Claim.—1. In an anti-friction bearing, a divided sleeve provided with slots and rings or round projections on its outer circumference, in combination with friction-rollers, and a divided outer brass having recesses to receive the rings on the sleeve, substantially as and for the purpose set forth.



2. In an anti-friction bearing, the sleeve C, formed in two parts and provided with slots a, and rings or circular projections c, in combination with the brass D, formed in two parts and provided with recesses d, the friction-rollers F, and box E, substantially as shown and described.

3. An anti-friction bearing for car-axles, consisting of the divided sleeve C, rollers F, and brass D, in combination with an axle-box divided into two parts horizontally, whereby the anti-friction bearing can be placed around the axle, substantially as shown and described.

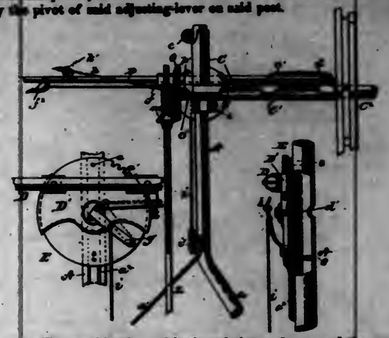
411,819. CAR-COUPLING. DANIEL F. MACCARTEY, St. Paul, Minn. Filed July 23, 1888. Serial No. 318,245. (No model.)

Claim.—1. The combination, with a coupler-head, of a coupling-latch pivoted therein above its medial line, having a slotted pivot-hole allowing forward and backward movement of the latch in the head, and having a downwardly-projecting hook for engaging the coupling-link, and a forwardly-projecting arm beneath said hook, arranged when the latch is raised to be interposed in front of the opening in the coupling-head and to be struck by an entering link, a socket in the coupler-head to receive the end of said arm and support it in its raised

position, and a spring arranged behind said latch and bearing upon the same, and adapted to force said latch forward in the coupler-head, substantially as described.

2. In a car-coupler, the combination, with the coupler-head 2, provided with a suitable recess and a vertical longitudinal slot through the same, of the latch 9, pivoted in said recess above the center of the head, having an elongated pivot-hole and provided with the hook 10, and the arm 11, having the shoulder 12, the recess 16, arranged in the front wall of the interior of the coupler-head beneath the link-opening and adapted to receive the arm 11, and the spring 15, secured to the interior rear wall of the coupler-head and bearing against said latch, substantially as and for the purposes set forth.

3. The combination, with a coupler-head having a suitable vertically-slotted interior recess, and socket 16 in the front wall thereof beneath the link-opening, of the pivoted latch 9, having the elongated pivot-hole 14, the hook 10, the arm 11, and the shoulder 12, the spring 15, arranged in the rear of the coupler-head recess and bearing against said latch, the drum-carrying shaft 17, arranged transversely underneath the draw-bar, and the chains 22 and 23, each secured by one end to said drum and wound oppositely thereupon, and having their other ends secured, respectively, to the hook 10 on the arm 11 of the coupling-latch, substantially as described



4. The combination, with a coupler-head having a vertically-swinging pivoted latch adapted to engage a coupling-link and by its pressure upon the end of said link to raise and lower the projecting end of the link to any desired angle, of a drum-carrying shaft journaled transversely underneath the draw-bar, chains running from said drum to said latch and adapted as the drum is rotated in one direction to raise the latch, and when rotated in the opposite direction to lower said latch, substantially as described.

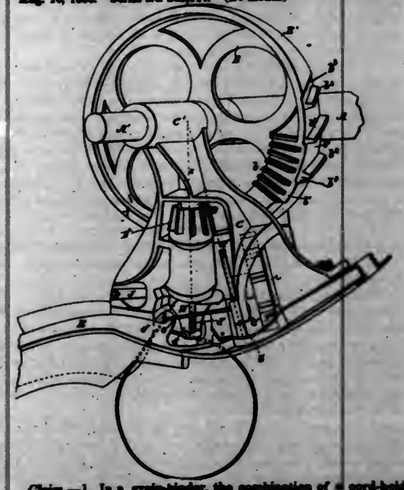
5. The combination, with a coupler-head, of a latch loosely pivoted therein having a downwardly-projecting link-hook, and a forwardly-projecting arm underneath said hook provided with a shoulder arranged to be interposed in front of the link-opening in the coupler-head when the latch is in its raised position, a spring adapted to force said latch forward in the head, and a socket in said head to receive and support said arm as forced forward by said spring, by means of which an entering link will strike upon the shoulder of said arm and force said arm backward from the socket, bringing the hook into engagement with the link, which by its pressure upon the same supports the outer end of said link at any desired angle, substantially as described.

411,820. HARVESTER-REEL. LEWIS MILLER, Akron, Ohio. Filed Nov. 26, 1887. Serial No. 256,262. (No model.)

Claim.—1. The combination, with the reel-post and a reel adjustable thereon, of a reel-lifting lever connected to said reel and moving in a vertical plane substantially parallel with the axis of the reel-shaft.

2. In a harvesting-machine, the combination, with the reel-post and reel, of a reel-adjusting lever pivoted on said post and moving in a vertical plane parallel with the reel-shaft, and a reel-bracket sliding by the pivot of said adjusting-lever on said post.

3. The combination, with the tubular reel-post and the reel, of the adjustable slotted reel-bracket sliding on said post and having a slotted arm in which the reel-shaft is journaled and a reel-adjusting lever pivoted on said post and engaging said slotted arm, the slot in the bracket permitting the latter to pass the pivot of the lever, substantially as and for the purpose described.



4. The combination, with the tubular reel-post and the reel, of the adjustable slotted reel-bracket sliding on said post and having a slotted arm in which the reel-shaft is journaled, a reel-adjusting lever pivoted on said post to move in a transverse vertical plane parallel with the reel-shaft and engaging said slotted arm, and a rib on the tubular post, the slot in the reel-bracket engaging said rib for preventing the rotation of the slotted reel-bracket and permitting the latter to pass the pivot of the lever, substantially as described.

5. The combination of a reel-post, a reel, and a reel-lifting lever fulcrumed on the reel-post and connected with the reel and moving in a plane parallel, or nearly so, with the axis of the reel-shaft.

6. The combination, with the reel-post, of a reel, a reel-adjusting lever pivoted on said post, a reel-bracket sliding on said post and having a slotted arm in which the reel-shaft is journaled and with which the lever engages for raising and lowering the reel, substantially as described.

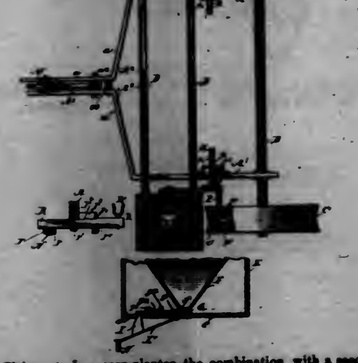
7. The combination, with the reel-post, of a reel-bracket adjustable on said post and having a slotted arm or sleeve in which the reel-shaft is journaled, a reel, a reel-adjusting lever pivoted on said post and engaging said arm for adjusting the reel, and means, substantially as described, for preventing the reel-bracket from rotating on the reel-post.

411,821. GRAIN-BINDER. LEWIS MILLER, Akron, Ohio. Filed Aug. 14, 1888. Serial No. 282,917. (No model.)

Claim.—1. In a grain-binder, the combination of a cord-holder disk, a pinion rigid on the shaft of said disk, the knotter, and a wheel giving motion to said knotter and disk and having a broad flat periphery covering the outer ends of two adjoining teeth of the pinion and acting thereon as a delay-surface, and provided with a peripheral depression having teeth for giving an intermittent rotary movement to the pinion and cord-holder disk, substantially as described.

2. In a grain-binder, the combination, with the rotating knotter, of a slotted knotter breast-plate provided with two rigid spurs or fingers projecting into the cord-slot within the circle described by the knotter, one for upholding the cord in front of the knotter and over which the cord is carried by the revolution of the knotter, and the other in rear of the knotter for holding the cord leading to the holder until the latter is grasped by the knotter, which in its revolution then carries the cord past said finger, substantially as described.

3. The combination of the knotter, the cord-holder-actuating pinion, a driving-wheel common to both and having a broad flat periphery acting on the ends of two adjoining teeth of said pinion, the knotter-actuating shaft, the slotted knotter breast-plate, and an upright cord-holder disk rigid with said pinion, crossing obliquely the vertical plane of the slot in the breast-plate, and inclined to the axial line of the knotter-shaft in a plane intersecting said line in the knotter-actuating shaft, substantially as described.

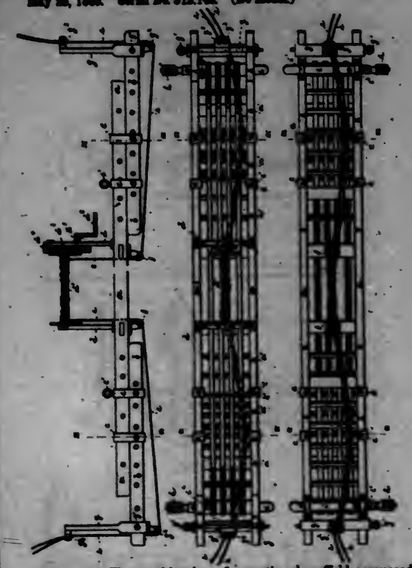


411,822. MOP. WILLIAM H. MILLER, Chelsea, Mass. Filed Apr. 23, 1889. Serial No. 308,093. (No model.)

Claim.—1. In a floor-mop, a handle provided with a clamp and a vertical chamber opening therethrough, in combination with a sleeve-shaped mop-cloth having openings adapted to register with the mouth of said chamber, a rod fitted to slide therein and provided with a cross-bar, and a spring-catch for detachably securing said rod in the handle-chamber, substantially as described.

2. In a floor-mop, a handle chambered vertically in its lower end, a spring-catch projecting into said chamber, a rod fitted to slide therein, having a cone-shaped head and a cross-bar on its outer end, a clamp on said handle, through which said rod passes, and a sleeve-shaped mop-cloth secured in said clamp and provided with a series of holes for said rod, substantially as described.

411,823. CORN-PLANTER. VINCENT MEER, Chicago, Ill. Filed Mar. 12, 1888. Serial No. 266,972. (No model.)



Claim.—1. In a corn-planter, the combination, with a seed-box, of a slotted feed-slide, a cam working in the slot of said feed-slide, and a pivot-bar whereon said cam is mounted, and an operating-lever for moving said pivot-bar, substantially as described.

2. In a corn-planter having provision for one or more seed-boxes, the combination, with a seed-box having a seed-slide, of a vertically-vibrating lever, a cam operated by the lever for moving the slide, and a drive-wheel provided with trip-arms for vibrating the lever, substantially as described.

3. In a corn-planter having provision for one or more seed-boxes, the combination, with a seed-box having a seed-slide, of a vertically-vibrating lever for operating the slide formed with a laterally-movable hinged portion, and a drive-wheel provided with trip-arms for engaging the hinged portion of the lever, whereby the same is vibrated, substantially as described.

411,824. SCAFFOLD. ABNER MILLER, Brooklyn, N. Y. Filed May 25, 1889. Serial No. 312,142. (No model.)

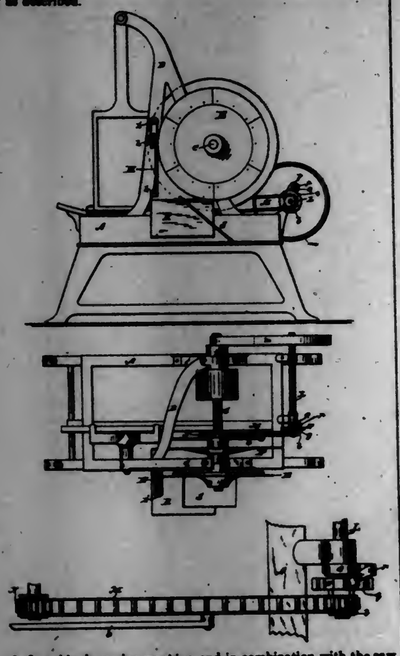
Claim.—1. The combination of a sectional scaffold composed of central section *a* and sliding end sections *b*, with a winch mounted on section *a*, and with the frames *g*, secured to sections *b*, and with the downwardly-projecting pulleys *f f'*, and a rope *c*, passing from the winch first downward, thence around pulleys *f*, thence beneath sections *a b*, and thence around pulleys *f'*, substantially as specified.

2. The combination of section *a*, carrying winch and pulleys *f*, with sections *b*, hooks *c*, and pins *c'*, and with the end frames *g*, having pulleys *f'* and perforations *g'*, and with rope *c*, passing from the winch over pulleys *f f'*, and through perforations *g'*, substantially as specified.

3. The combination of the following elements: a central section *a*, adjustable end sections *b*, perforated frames *g*, secured to sections *b* by bolts *g'*, pulleys *f f'*, a winch, a rope *c*, and friction-rollers *h*, secured to adjustable bars *i*, substantially as specified.

411,825. SHINGLE-SAWING MACHINE. JOSEPH A. MURPHY, Hantsport, Nova Scotia, Canada. Filed Oct. 22, 1887. Serial No. 253,112. (No model.)

Claim.—1. In a shingle-sawing machine, the combination, with the block-carrying carriage and the saw, of a jointer mounted on the saw-arbor and a swinging carriage for holding the shingles while being jointed, substantially as described.



2. In a shingle-sawing machine, the combination, with the block-carrying carriage and saw, of a balance-wheel mounted on the saw-arbor having a jointing-saw secured to its periphery and a swinging carriage for holding the shingles while being presented to the jointing-saw, substantially as described.

3. In a shingle-sawing machine, the combination, with the saw and the pivoted block-carrying carriage free to swing in one direction, of the endless chain running over suitable guide and power pulleys, and a connection between said chain and pivoted block-carrying carriage, whereby the latter is caused to swing with relation to the saw, substantially as described.

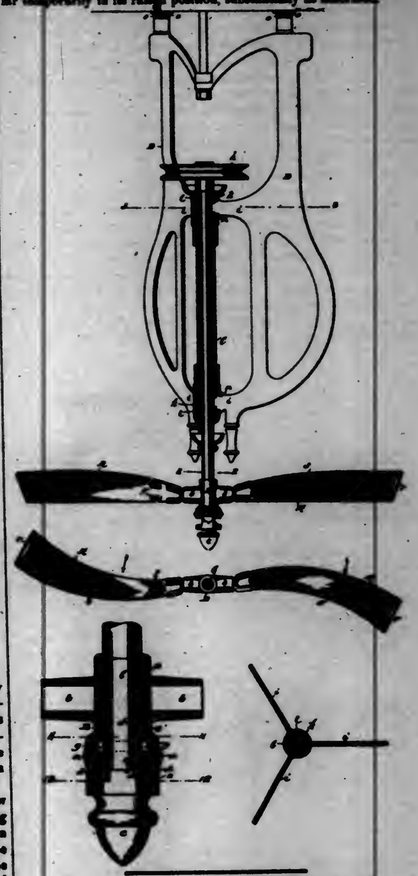
4. In a shingle-sawing machine, the combination, with the saw and a reciprocating block-carrying carriage free to move in one direction, of an endless chain running over suitable guide and power pulleys connected to said block-carrying carriage by a pitman, whereby the said carriage is caused to reciprocate with relation to the saw, substantially as described.

5. In a shingle-sawing machine, the combination, with the saw and reciprocating block-carrying carriage, of an endless chain running over suitable guide and power pulleys connected to said block-carry-

ing carriage by a pitman and a clutch-connection between said power-pulley and its driving-shaft, whereby the carriage is caused to move toward the saw, but is free to move in the opposite direction, substantially as described.

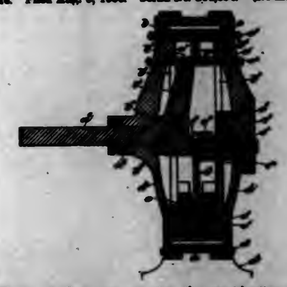
6. In a shingle-sawing machine, and in combination with the saw and block-carrying carriage, a continuous chain running over sprocket-wheels and connected to said carriage, one of said sprocket-wheels being connected rigidly to a ratchet-wheel, and a pawl mounted rigidly on the power-shaft for engaging said ratchet-wheel, whereby the carriage is moved positively in one direction, but is free to move in the opposite direction, substantially as described.

7. In a shingle-sawing machine, and in combination with the saw and reciprocating-block-carrying carriage, a mechanism for causing the reciprocation of said carriage, consisting of a continuous chain connected therewith and running over suitable sprocket-wheels, one of which is connected to a ratchet-wheel and loosely mounted on the power-shaft, and a pawl mounted on said shaft for engaging said ratchet-wheel and causing its rotation in one direction, but leaving it free to rotate in the opposite direction, substantially as described.



411,826. POWER-FAN. PETER MURRAY, Jr., Newark, N. J. Filed Nov. 30, 1887. Serial No. 256,468. (No model.)

Claim.—1. In a power-fan, the combination, with the main shaft C, of the radial blades A, set obliquely to the shaft and provided with air-passages *r*, opening at the ends of the blades, and with openings *p*, communicating with said passages and opening through the sides of the blades which act upon the air when the fan is in motion, substantially as described.

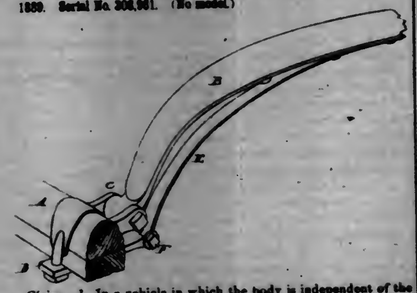


2. In a power-fan, the combination, with the main shaft C, of the radial blades A, set obliquely to the shaft, so as to throw the air in the direction of the length of the shaft, and also bent in the direction of their length to throw the air laterally, and provided with air-passages *r*, opening outward at the ends of the blades, and with openings *p*, communicating with said passages and opening through the sides of the blades which act upon the air when the fan is in motion, substantially as described.

3. In a fan-hanger, the combination, with the arms *i*, having studs at their ends, of the washers *e*, fitting loosely on said studs and made thicker at one side than at the other, substantially as described.

4. The combination, with the rotating shaft C and the hub B, turning freely on the shaft, said shaft and hub having the locking-pin *f* and recess *e*, of the head *e*, secured to the shaft and having the incline *d*, the loose collar *a*, interposed between the head *e* and hub B, and having the incline *d*, said inclines being provided with the projection 2 and recess 3, for engaging with each other to arrest the collar temporarily in its raised position, substantially as described.

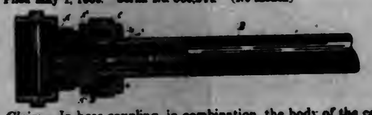
411,827. ROTARY MOTOR. ANDREW MCFARLAND, Thomaston, Me. Filed Aug. 3, 1889. Serial No. 319,854. (No model.)



Claim.—1. In a rotary motor, the combination, with a shell or cylinder provided with an inlet and exhaust port, of a rotary piston therein consisting of concentric rings *b b'*, connected by a web b^2 and provided with a series of substantially radial slots, a block or abutment d^2, secured to the said shell, a main shaft to which the said concentric rings are connected, and a series of sliding abutments or wings b^3, connected to a hub eccentrically mounted with relation to the said piston, substantially as described.

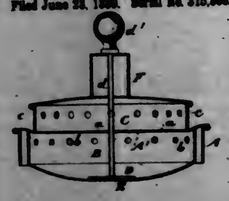
2. In a rotary motor, the combination, with the shell or cylinder composed of the ring *a* and heads a^2 a^3, provided with the annular projections c^1 and having an inlet and exhaust port, and a block or abutment d^2, secured to said annular projections, of a rotary piston consisting of concentric rings *b b'* on opposite sides of the said block or abutment, a web b^2, connecting said rings and forming with the said annular projections steam-spaces, a main shaft to which the said rings are connected, a series of substantially radial slots in said rings, and a series of sliding abutments or wings b^3, fitted into said slots and connected to a hub eccentrically mounted with relation to the said main shaft, substantially as described.

3. In a rotary motor, the combination, with the shell or cylinder composed of the ring *a* and heads a^2 a^3, provided with the annular projections c^1 and having an inlet and exhaust port, and a block or abutment d^2, secured to said annular projections, of a rotary piston consisting of concentric rings *b b'* on opposite sides of the said block or abutment and provided with substantially radial slots, ears b^{10}, secured to the ring *b'*, a web b^2, connecting said rings and forming with the said annular projections steam-spaces, a main shaft to which the said rings are connected, and a series of sliding abutments or wings fitted into said radial slots and connected to a hub eccentrically mounted with relation to the said main shaft, substantially as described.



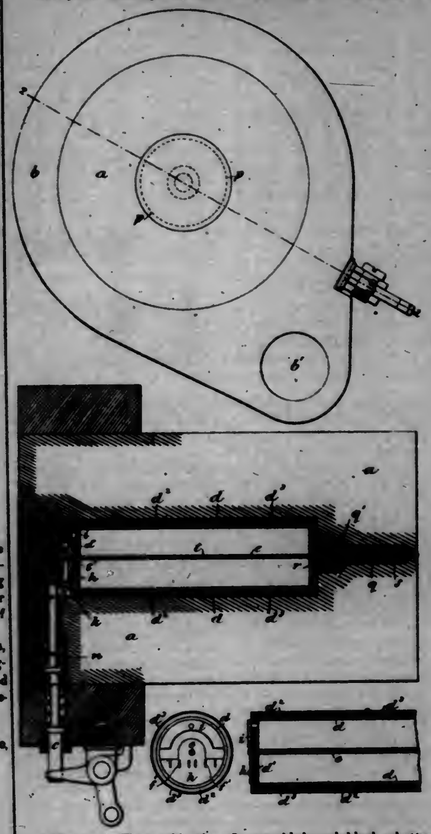
411,828. SHAFT-SUPPORT. DANIEL MCVAW, Louisville, Ky., assignor of one-half to William F. Brewer, same place. Filed Apr. 29, 1889. Serial No. 308,961. (No model.)

Claim.—1. In a vehicle in which the body is independent of the shafts, the combination, with axle A, of the shafts B, connected therewith by a coupling C, a plate D, secured to the axle, and projecting in advance thereof, a spring E, secured at its forward end to the under side of the shafts, and a bolt F, pivotally connecting the rear end of the spring with the plate D, all substantially as shown.



2. In a vehicle in which the body is independent of the shafts, the combination, with axle A, shafts B, and coupling C, of a spring-arm E, secured at its forward end to the under side of the shafts and at its rear end to the axle, and provided with a joint at a point between its ends, all substantially as shown and described.

411,829. HOSE-COUPLING. JOHN F. MACHTAMER, Cleveland, Ohio. Filed May 1, 1889. Serial No. 309,344. (No model.)



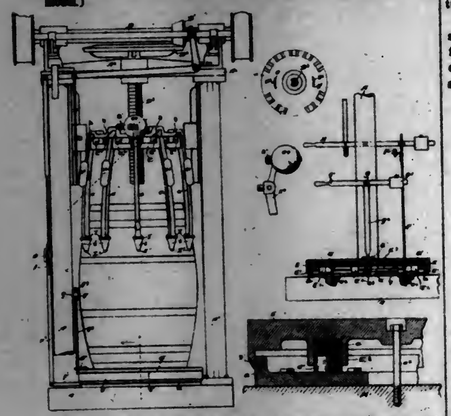
Claim.—In hose-coupling, in combination, the body of the coupling having a nozzle for entering the hose, and having an external screw-threaded section, a cap for clamping the hose, cut rings mounted on the hose opposite the nozzle, the body of the coupling and the cap having, respectively, opposing conical seats adapted to embrace and compress the cut rings by screwing the cap home, whereby the compression of the rings clamps the hose on the nozzle, substantially as set forth.

411,830. COVER FOR COOKING-VESSELS. CHRISTIAN HEILMAN, Atlantic, Iowa. Filed June 28, 1889. Serial No. 315,269. (No model.)

Claim.—A boiler-cover having a bottom apertured and downwardly inclining toward the middle, a valve to cover said aperture, a chamber B, perforated at the side to admit the boiling water, an upper chamber C, side-perforated to admit the air, and the perforated partition A' between said chambers, substantially as shown and described.

411,831. ELECTRIC FIRING MECHANISM FOR BREECH-LOADING GUNS. THOMAS HORSFIELD, Westminster, England, assignor to the Maxim-Nordenfelt Guns and Ammunition Company, (Limited,) same place. Filed Apr. 24, 1889. Serial No. 308,264. (No model.)

Claim.—1. The combination of a movable breech-block, a battery contained therein, and mechanism for closing the circuit of this battery through the electric fuse of the cartridge.



2. The combination of a breech-block turning in a ring pivoted to the gun, a battery contained within the block, a contact-maker at the fore end of the block making contact either directly or through another contact-maker with the electric fuse of the cartridge, a contact-maker radial to the block, and firing mechanism carried by the ring, the radial contact-maker being so placed that its outer end comes opposite to the firing mechanism, by which it is actuated and the circuit closed when the breech is completely shut.

3. The combination of a breech-block, a battery contained within the block, a tube passing through the battery and connected to one of the plates thereof, a contact-making pin passing through the said tube, one end of the pin making contact either directly or through a contact-maker with the electric fuse of the cartridge, and mechanism for operating the other end of the pin and closing the circuit.

4. The combination of a breech-block turning in a ring pivoted to the gun, a battery contained within the block, a tube passing through the battery and connected to one of the plates thereof, a contact-making pin passing through the said tube, the fore end of the pin making contact with the rear end of a contact at the front of the

block, the fore end of which makes contact with the electric fuse of the cartridge, a flap connected to the other plate of the battery and running against the rear end of the pin, but insulated therefrom, a contact-maker radial to the block and in contact with and actuating the flap, and firing mechanism carried by the ring and coming opposite to the radial contact-maker when the breech is completely shut.

411,832. MACHINE FOR DRIVING BARREL-HOOPS. John S. Oran, Cleveland, Ohio. Filed Jan. 13, 1888. Serial No. 260,702. (No model.)

Claim.—1. In a machine for driving hoops, the combination, with a movable table and springs for yieldingly supporting same, of bolts for partially depressing the table and springs and holding them depressed, substantially as set forth.

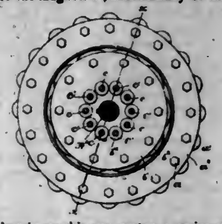
2. In a machine for driving hoops, the combination, with a movable table, springs for yieldingly supporting same, and bolts for partially depressing the table and springs and holding them depressed, of drivers acting in a direction opposite to the direction of pressure of the springs, substantially as set forth.

3. The combination, with depressible table, substantially as indicated, of plate or false top supported by and adapted to turn on such table, a hand-lever connected with the plate for turning the same on its axis, a counterbalance connected with such lever for reversing the plate, substantially as set forth.

4. The combination, with a series of gravity driver-arms and cam-ring for engaging and distending such arms in opposition to the gravity of such arms, of a driver-arm having a universal fulcrum, a link connecting such arm with the cam-ring, whereby a lateral movement of this arm rotates the cam-ring and causes distention of the other driver-arms, substantially as set forth.

5. The combination, with a series of gravity driver-arms acting in vertical radial planes, a cam-ring for distending and elevating such arms, of arms c^3, having a universal fulcrum, such arm being connected by a link with the cam-ring and having a counter-balance located above and outside the fulcrum thereof, whereby such counter-balance by gravity moves this arm toward the barrel when such arm is in its depending position, substantially as set forth.

6. The combination, with driver-arms, substantially as indicated, of drivers connected with the free ends of these arms, such drivers consisting, essentially, of metal plates set edgewise to and approximately fitting the barrel, each driver having a groove on the under side thereof extending to and parallel with the adjacent edge of the driver, such groove being adapted to receive the edge of the hoop, substantially as set forth.

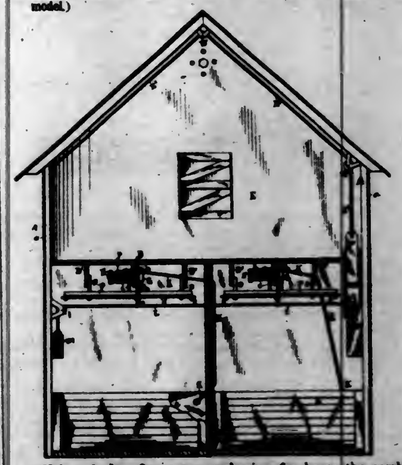


7. The combination of driver-arms, drivers, and removable and adjustable conical guides located below the drivers, substantially as set forth.

411,833. ELECTRIC MOTOR. Charles C. Peck, Middlebury, Vt., assignor to the Giant Electric Motor Company, Kittery, Me. Filed Sept. 23, 1888. Serial No. 286,319. (No model.)

Claim.—1. In an electric machine or motor, a series of fixed electro-magnets and a second series of electro-magnets movable about an axis parallel to its own magnetic axis, and having its surface adjacent to the fixed electro-magnet made eccentric to the axis of revolution but more nearly concentric with its own magnetic mass, one series of magnets being wound, substantially as described, to produce reversals of polarity in each of its magnets as each magnet of the other series is revolved by each magnet of the first series of magnets, substantially as described.

2. In an electric machine or motor, a series of magnets having two sets of pole-pieces forming peripheral surfaces concentric with the axis of revolution, and a second set of magnets arranged to revolve on the axis of revolution, and having the surfaces of its pole-pieces adjacent to the first set of magnets eccentric to the said peripheral surfaces, combined with a commutator consisting of contact-pieces b^{13}, connected to said magnets and provided with a groove, and pins, as c c', having spherically-shaped ends fitted into said groove, and means, substantially as described, to maintain said pins in electrical connection with the said contact-pieces, substantially as set forth.



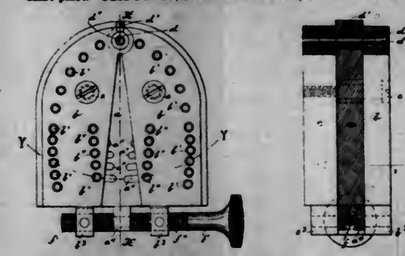
3. In an electric motor, the combination, with the frame A, the shaft A^1, disks b b', mounted thereon, and magnets c', attached to said frame, of magnets b^3, having the outer periphery of their pole-pieces eccentric to the inner periphery of the poles of the magnets c', and supports A A' for the magnets b^3, substantially as described.

4. In an electric machine or motor, a series of magnets having two sets of pole-pieces forming peripheral surfaces concentric with the axis of revolution, combined with a second set of magnets arranged within the first set of magnets to revolve on the axis of revolution, and having the surfaces of its pole-pieces adjacent to the outer set of magnets eccentric to the said peripheral surfaces, the outer set of magnets being wound, substantially as described, to produce reversals of polarity in each of the said outer magnets as each inner magnet is revolved by each of the said outer magnets, substantially as described.

5. In an electric machine or motor, a series of magnets having two sets of pole-pieces forming peripheral surfaces concentric with the axis of revolution, a second set of magnets arranged within the first set of magnets to revolve on the axis of revolution, and having the surfaces of its pole-pieces adjacent to the outer set of magnets eccentric to the said peripheral surfaces, the outer set of magnets being wound, substantially as described, to produce reversals of polarity in each of the said outer magnets as each inner magnet is revolved by each of the said outer magnets, combined with the commutator consisting of contact-pieces b^{13} and pins c c', co-operating therewith, substantially as described.

411,834. FIRE-ESCAPE MECHANISM FOR BARNS. J. Wilson Peters, Galloway, Ohio. Filed May 3, 1889. Serial No. 309,442. (No model.)

Claim.—1. In a fire-escape mechanism for barns, the combination, with the frame-work, the swinging doors F, pivotally connected at their rear ends with the frame-work above the stalls and having pins A, projecting upwardly therefrom and through keepers G, secured to the joists B, and halter-ropes K, looped over the upper ends of said pins A, of the hanging triggers g, the latter detachably supporting said swinging doors, as described, rope L, supporting weights m N, and wires o, connecting said rope L and triggers g, substantially as described.



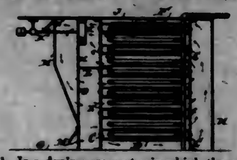
2. In a fire-escape mechanism for barns, the combination, with the frame-work, the swinging doors F, pivotally connected at their rear ends with the frame-work above the rear ends of the stalls, pins A, projecting upwardly through keepers G on said upper frame-work, halter-ropes K, looped over the upper ends of said pins, stationary reels H, their brake-blocks p, and ropes i, the latter connecting with the doors F, of the hanging triggers g, detachably supporting the front ends of said doors, as described, rope L, running over pulleys and supporting weights N and M, and wires o, connecting said rope and triggers, substantially as and for the purpose set forth.

3. In a fire-escape mechanism for barns, the combination, with the frame-work of a barn, stable-door P, door-frame Q, and locking-link q, passing through said door and frame, of a padlock clasped to the outer end of said link, locking-pin r, chain r', connected with said locking-pin, rope L, supporting, as described, weights N and m, and wire r^2, connecting said rope L and chain r', substantially as and for the purpose specified.

4. In a fire-escape mechanism for barns, the combination, with the frame-work of a barn, door P, and arms S, depending from joists in front of the rear side of said door and supporting pulleys t and U, of the horizontal sliding arm s, supported in the lower ends of said arms S, pulley s', pivoted in the outer ends of said arm s, weight T, rope u, passing over pulley U and supporting said weight, and chain s^2, secured at one end to the frame-work above arm s and at its remaining end to the weight T and passing over pulleys s' and t, substantially as and for the purpose set forth.

5. In a fire-escape mechanism for barns, the combination, with the frame-work of a barn, of swinging doors F, pivotally supported at their rear ends above the rear ends of the stalls b and detachably supported at their forward ends on hanging triggers g, rope L, supported from the barn frame-work on pulleys, weights m and N, supported by said rope, wires o, connecting said rope L and triggers g, and block M, over which said rope passes, the rope E, having one end secured to the frame-work of the hay-mow and passing over pulleys suspended from said frame-work, and sharpened weight w, suspended by said rope E within an opening formed in the floor of the mow and above the block M, substantially as set forth.

411,835. NAIL-DIE FOR HEELING-MACHINES. Joseph H. Pope, Brockton, Mass., assignor to the American Heeling Machine Company, same place. Filed Feb. 23, 1889. Serial No. 300,859. (No model.)



Claim.—1. A nail-die for a heeling-machine, consisting of a middle stationary die-plate having a series of slots, movable top and bottom die-plates each having a series of nail-holes, respectively, coincident with the slots, and adjusting and holding devices for adjusting the movable die-plates and holding them in fixed positions relative to each other, said slots of the stationary die-plate registering with the nail-holes in the movable die-plates under all adjustments of the latter, substantially as described.

2. A nail-die for a heeling-machine, consisting of a middle stationary die-plate having a series of slots, a series of movable top and bottom die-plates arranged upon each side of the stationary die-plate and each having a series of nail holes and adjusting and holding devices for simultaneously adjusting the movable die-plates and holding them in fixed positions relatively to each other, substantially as described.

3. The improved nail-die, as described, consisting of the stationary slotted middle part a, and the upper and lower perforated expansive dies b b c c, pivoted to a tube d, secured to said middle part, combined with the set-screws e e, for holding said middle and expansive dies together, and the right-and-left-handed screw F, journaled in a bearing on the middle die a and working in nuts pivoted to the expansive dies b b c c, substantially as and for the purpose set forth.

411,836. DRYING-MACHINE. Josiah K. Prosser and John H. Knowles, Philadelphia, Pa., assignors to the Philadelphia Textile Machinery Company. Filed Dec. 13, 1888. Serial No. 293,465. (No model.)

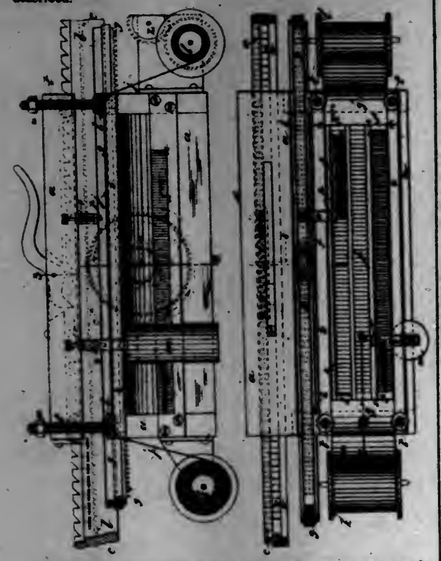
Claim.—1. In a drying apparatus in which the material or goods to be treated traverse or are moved in a circuitous course, the combination of rollers or drums for guiding the material or goods through the drying-room in a circuitous course, with a fan to circulate the air through the room, a deflector located within said room to cause the air-currents being circulated to pass horizontally through or across the moving material in one direction on one side of the deflector, and to return in an opposite direction on the other side of the deflector, and a passage opening from the room and leading to the fan, for the purpose of enabling a recirculation of the air.

2. In a drying apparatus, the combination of a closed air-chamber, through which the material or goods to be treated are passed in a circuitous course, provided with openings for the entrance and exit of said materials or goods, rollers or drums for guiding the material through said chamber in a circuitous course, inlet and outlet passages in said chamber for the entrance of dry and the discharge of damp air, a fan to circulate air through said chamber, and a deflector located within said chamber to cause the air being circulated to pass horizontally through or across the moving material in one direction on one side of the deflector and to return in an opposite direction on the other side of the deflector, and a passage opening from the room and leading to the fan, for the purpose of enabling a recirculation of the air.

3. In a drying apparatus, the combination of a closed air-chamber, through which the material or goods to be treated are passed in a circuitous course, provided with openings for the entrance and exit of said material or goods, rollers or drums for guiding the material through said chamber in a circuitous course, inlet and outlet passages in said chamber for the entrance of dry and the discharge of damp air, provided with doors by adjusting which the temperature and humidity of the air may be regulated, radiators about which the material to be treated passes in traversing said chamber, a fan to circulate the air through said chamber, and a deflector located within said chamber to cause the air being circulated to pass horizontally through or across the moving material in one direction on one side of the deflector and to return in an opposite direction on the other side of the deflector, and a passage from said chamber leading to the fan, for the purpose of enabling a recirculation of the air.

411,837. RECORDING DEVICE FOR WEIGHING-SCALES. Isaac B. Sager, East St. Louis, Ill. Filed Mar. 22, 1888. Serial No. 304,262. (No model.)

Claim.—1. In a recording-scale, the combination of a scale-beam, a poise arranged thereon, a sliding bar mounted on the poise, a punch mounted on the sliding bar, and gearing which connects the sliding bar with the scale-beam, substantially as and for the purposes described.



2. In a recording-scale, the combination, with the scale-beam having a tooth-rack thereon, of a poise arranged on the beam and provided with ways, a sliding rack-bar mounted in said ways and carrying a recording device, a shaft journaled on said poise, and gear-wheels secured to the shaft, one of said gear-wheels engaging the rack on the scale-beam and the other the sliding rack-bar on the poise, substantially as and for the purposes described.

3. In a recording-scale, the combination of a scale-beam, a graduated poise arranged thereon, a sliding bar mounted on the graduated poise, gearing which connects the sliding bar with the scale-beam, a punch mounted on the sliding bar, a second poise arranged on the graduated poise, and a second punch mounted on the second poise, substantially as and for the purposes described.

4. In a recording-scale, the combination of a scale-beam, a graduated poise arranged thereon, a sliding bar mounted on the graduated poise, a punch mounted on the sliding bar, gearing which connects the scale-beam and sliding bar, and a table arranged on the graduated counterpoise parallel with the sliding bar and beneath the punch thereon, substantially as and for the purposes described.

5. In a recording-scale, the combination of a scale-beam, a graduated poise arranged thereon, a sliding bar carried by the graduated poise, a punch mounted on the sliding bar, a second poise mounted on the graduated poise, a punch mounted on the second poise, and a punch-table arranged on the graduated poise parallel with the sliding

bar and beneath the two punches, substantially as and for the purpose described.

6. In a recording-scale, the combination of a scale-beam, a graduated poise arranged thereon, a sliding bar mounted on the graduated poise, a punch mounted on the sliding bar, gearing which connects the scale-beam and sliding bar, a table arranged on the graduated counterpoise parallel with the sliding bar and beneath the punch thereon, and strip-rollers journaled in brackets on the scaled counterpoise, substantially as and for the purposes described.

7. In a recording-scale, the combination of a scale-beam, a poise mounted thereon and provided with a recording device, a spring actuated or retracting platen arranged over the recording device, a locking-lever for locking the scale-beam, and mechanism for actuating the spring-platen or retracting-platen from the locking-lever, substantially as and for the purposes described.

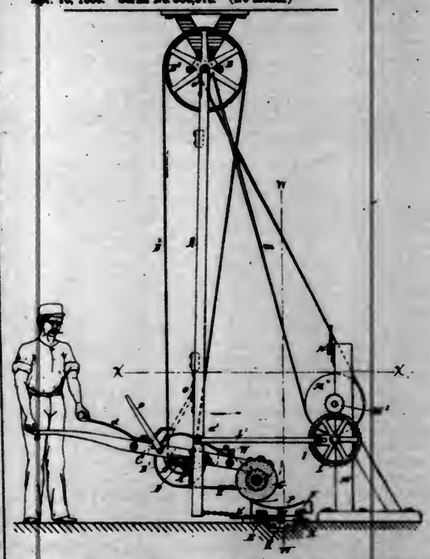
8. In a recording-scale, the combination, with the scale-beam, of a poise arranged thereon and provided with a recording device, a table mounted on the poise and having a cavity in its face, a spring-bolt mounted in guides on the poise and registering with said cavity, a spring actuated or retracting platen for controlling the recording device and spring-bolt, a locking-lever for locking the scale-beam, and mechanism for actuating the retracting-platen from the locking-lever, substantially as and for the purposes described.

9. In a recording-scale, the combination of a scale-beam, a counterpoise arranged thereon, a table arranged on the counterpoise, strip-rolls journaled on the counterpoise, a paper strip supported on said table and provided at intervals with holes in line with a cavity in the table, a spring-bolt adapted to enter said opening and stop the passage of said paper strip, a locking-lever for locking the scale-beam, and mechanism for actuating said spring-bolt from the locking-lever, substantially as and for the purposes described.

10. In a recording-scale, the combination, with the scale-beam, of a poise arranged thereon and provided with a recording device, a table mounted on the poise and having a cavity in its face, a spring-bolt mounted in guides on the poise and registering with said cavity, said bolt having collars above and below said guides, a spring actuated or retracting platen provided with spring-catches adapted to engage the collars on the bolt and control the action of said bolt, a locking-lever for locking the scale-beam, and mechanism for actuating the retracting-platen from the locking-lever, substantially as and for the purposes described.

11. In a recording-scale, the combination, with the scale-beam, of a poise arranged thereon, a table mounted on the poise, a vertically-movable spring-actuated platen arranged horizontally above the table, a spring-supported bar arranged above and parallel with said platen, cam-levers fulcrumed to stationary supports, and a scale-beam-locking lever connecting said cam-levers for operating said cams to depress the spring-supported bar and platen, substantially as and for the purposes described.

411,838. PULP-DIGESTER. CHARLES C. STEPHENS, Boston, Mass. Filed Jan. 7, 1889. Serial No. 296,660. (No model.)



Claim.—1. In a boiler or digester for the manufacturing of pulp, the combination, with the boiler-shell, of an acid-resisting lining therefor consisting of blocks or tiles, and a backing or covering for each tile composed of lead or acid-resisting metal having side flaps, the flaps of the coverings of adjacent tiles being sealed together to effect a liquid-tight joint and maintain the lining of tiles intact within the boiler, substantially as described.

2. In a boiler or digester for the manufacturing of pulp, the combination, with the boiler-shell, and a layer of sheet-lead next to the boiler-shell, of an acid-resisting lining therefor consisting of blocks or tiles, and a backing or covering for each tile composed of lead or acid-resisting metal having side flaps, the flaps of the coverings of adjacent tiles being sealed together to effect a liquid-tight joint and maintain the lining of tiles intact within the boiler, substantially as described.

3. In a boiler or digester for the manufacturing of pulp, the combination, with the boiler-shell and a layer of sheet-lead next to the boiler-shell, of an acid-resisting lining consisting of blocks or tiles, and a backing or covering for each tile composed of sheet-lead having side flaps, and a cushion of asbestos or yielding acid-resisting material interposed between the backings or coverings and the layer of lead, the flaps of the coverings of the adjacent tiles being sealed together to effect a liquid-tight joint and maintain the lining of tiles intact within the boiler, substantially as described.

411,839. MACHINE FOR GRINDING AND POLISHING ROAD-SCRAPER BLADES, &c. GEORGE W. TAFT, Kennett Square, Pa. Filed Apr. 10, 1889. Serial No. 306,676. (No model.)

Claim.—1. In a machine for the purpose specified, the combination of the swinging bars, a centrally-pivoted upwardly and downwardly yielding grinder-carrier disposed between the lower ends thereof, and an intermittently-movable work-supporting carriage mounted on tracks that extend laterally beneath the end of said carrier, with feed mechanism actuated from said swing-bars for advancing said carriage synchronously with the vibrations of the swinging grinder, substantially as set forth.

2. In a machine for the purpose set forth, the carrier-frame, its side bars having the bearings R of the grinder-shaft mounted at one end thereof and provided with handles c at the opposite end and pivotally supported to afford tilting action, in combination with the two backwardly and forwardly swinging supporting-bars A, the laterally-extended footways E, and the movable work-supporting table or carriage traveling on said ways, substantially as set forth.

3. In a machine for the purpose specified, the combination, with the swing-frame having side bars A A suspended from the over-head shaft, the wheel-carrier frame disposed between said side bars, flexibly connected thereto, and carrying the center shaft, grinder-shaft, grinding-wheel, and driving-belts, as shown, of the vibrator-gears having wrist-pins adjustable therein for varying the length of throw, connecting-rods from the wrist-pins pivoted to the opposite sides of said swing-frame, the actuating-gears, back shaft M', pulley M², and belt *m*, substantially as described, for rotating said vibrator-gears, as and for the purpose set forth.

4. In a machine for the purpose specified, the combination, with the swing-frame suspended from the overhead shaft and the tilting carrier flexibly connected with said swing-frame, as shown, of the center shaft, its journal-bearings forming the hinge or fulcrum axis for said carrier, the grinder-shaft carrying a grinding or polishing wheel mounted in bearings on said carrier, driving-belts for rotating said shaft and wheel, the footway or guiding tracks extending laterally in relation to the swing of said frame, and the work-supporting carriage movable longitudinally on said tracks, substantially as set forth.

5. In a machine for the purpose specified, the combination of the swing-frame suspended from the overhead driving-shaft, the upwardly and downwardly swinging grinder-carrier flexibly connected thereto, the center shaft, the grinder shaft and wheel supported on the rear end of said carrier, the work-supporting carriage running on the transversely-disposed footway-guides, vibrating gear for imparting motion to said swing-frame, and feed-actuating mechanism automatically operated from said swing-frame for imparting movement to said carriage, substantially as set forth.

6. In a machine for the purpose specified, the combination, with the swing-frame, tilting carrier, and grinding-wheel, and laterally-moving carriage provided with a ratchet or engaging devices, of the reciprocating bar and pawl or its equivalent, and the actuating-lever operated by said swing-frame to effect movement of said carriage, as set forth.

7. The combination of a plurality of grinders, each comprising a swing-frame, and a tilting carrier provided with a grinding-wheel mounted and operating thereon, a footway common to said grinders, a carriage adapted for sustaining a scraper-blade or uneven plate, movable on said footway for advancing it forward beneath the several grinding-wheels, and mechanisms, substantially as described, for automatically imparting pendulous motion to said grinders and for advancing said carriage, as and for the purpose set forth.

8. In a machine for the purpose specified, the removable carriage adapted for supporting a road-scraper-blade plate, in combination with swinging frame, tilting grinder-carrier, grinding mechanism, the carriage guiding-way, and feed-actuating mechanism, substantially as described, for the purpose set forth.

9. In a machine for the purpose specified, the combination, with the carriage, its guideway and feed-operating lever and ratchet, of an engaging pawl and pawl-supporter for moving said carriage, and a throw-off lever connected therewith for starting and stopping the feed of the carriage, substantially as set forth.

10. In a machine for the purpose specified, the combination, with the carriage F, its ratchet *f*, of the reciprocating bar H, carrying the pawl h, the shifting-frame K, supported by inclined guides *i*, and the shifting-lever *l*, substantially as set forth.

11. In a machine for the purpose specified, the journal-supporting boxes A' for the center-shaft provided with extensions, and the supporting-boxes A², attached to the carrier and mounted on said extensions, in combination with the swing-frame and tilting carrier, substantially as set forth.

12. In a machine for the purpose specified, the yielding journal-boxes for supporting the grinder-shaft, in combination with the rocking carrier swing-frame and work-supporting carriage, substantially as set forth.

13. In a machine for the purpose specified, the combination, with the swing-frame A and grinder carrier-frame C flexibly connected thereto and having the grinding-wheel shaft mounted in journal-boxes at one of its ends and handles c at its other end, of the adjustable stop-dog O, substantially as described, for temporarily sustaining said carrier with the grinding-wheel elevated.

411,840. AUTOMATIC SYNCHRONIZING-COMMUTATOR. ROBERT S. TAYLOR and MARSHALL H. M. SLATTERY, Fort Wayne, Ind. Filed June 26, 1889. Serial No. 315,614. (No model.)

Claim.—1. An automatic pole-changer comprising in combination an alternating motor adapted to run synchronously with the dynamo generating the current to be commuted and carrying upon its armature-shaft the commutator through which the commutation is effected, and an induction-motor for obtaining initial motion of the armature of the synchronizing-motor.

2. An automatic pole-changer comprising in combination an alternating-current motor adapted to run synchronously with the dynamo generating the current to be commuted and carrying upon its armature-shaft a commutator connected up with its armature-coils in such manner that the current to be commuted shall pass through said armature-coils and be transformed into a continuous current by said commutator, and an induction-motor to produce initial revolution of the synchronizing-armature.

3. An automatic pole-changer consisting of two motors having a common shaft, one of them being an induction-motor for initial action and the other an alternating-current motor adapted to operate synchronously with the dynamo generating the current to be commuted, and carrying upon its armature-shaft a commutator through which the commutation is effected.

411,841. SPIKE. WILLIAM TAYLOR, Allegheny, Pa. Filed Apr. 19, 1889. Serial No. 307,949. (No model.)

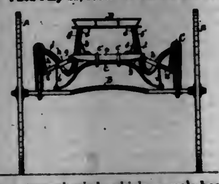
Claim.—1. A new article of manufacture consisting of a hook-headed nail or spike having a shank of triangular form its entire length and outwardly-curved triangular shoulders underneath the head.

2. A hook-headed nail or spike having a triangular shank, the triangular sides of which are thickened and spread outwardly into curved triangular shoulders forming part of the head.

3. A hook-headed nail or spike having a shank of triangular form its entire length, a suitable point, and outwardly-curved triangular shoulders forming part of the head.

411,842. SPINDLE-DRIVING DEVICE FOR SPINNING-MACHINES. THEO VANDERWEIL, Yonkers, N.Y. Filed June 4, 1889. Serial No. 313,003. (No model.)

Claim.—1. In spindle-driving devices for spinning-machines, the combination of a spindle, a driving-drum, a driving-band, a tension-arm made of spring metal coiled at one end to form a spring and having its other end free, and a sleeve to which said pulley is attached longitudinally adjustable on said arm, substantially as described.

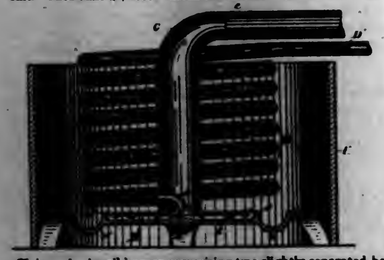


2. In spindle-driving devices for spinning-machines, the combination of a series of spindles, a driving-drum, a driving-band passing alternately about the drum and the spindles and from one end spindle to the other end spindle, a bracket, a spring, a tension-arm controlled by said spring, an idler-pulley, and a sleeve to which said pulley is attached longitudinally adjustable on said arm, said pulley being arranged between the bands passing over and under said driving-drum to the whirls and acting on the band between the end spindles, substantially as described.

3. In a tension-regulator for spindle-driving bands, the combination of a spindle, a driving-drum, a driving-band, a spring, a tension-arm controlled by said spring, a bracket to which said spring is at-

tached, and a set-screw for securing said spring to said bracket and for adjusting the tension of said spring, substantially as described.

4. In spindle-driving devices for spinning-machines, the combination of a series of spindles, a driving-drum, a driving-band passing alternately about the drum and the spindles and from one end spindle to the other end spindle, a bracket, a spring, a tension-arm controlled by said spring, an idler-pulley, a sleeve to which said pulley is attached longitudinally adjustable on said arm, said tension-arm being made of spring metal and having a free end adapted to move up and down as well as forward and back, and said pulley being arranged between the bands passing over and under said driving-drum to the whirls and acting on the band between the end spindles, substantially as described.



411,848. TWO-WHEELED VEHICLE. HENRY W. VISTHEYER, Columbus, Ohio. Filed July 22, 1889. Serial No. 318,282. (No model.)

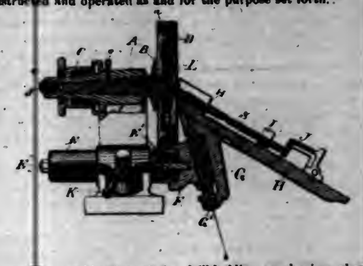
Claim.—1. In a two-wheeled vehicle, a scale-beam for the purpose of practically increasing or decreasing the length of the vehicle-spring, said beam being jointedly connected with said spring and its bar and adjustably supported by hangers, substantially as described.

2. The combination, with the frame-work of a two-wheeled vehicle, of a scale-beam for the purpose of practically increasing or decreasing the length of the vehicle-spring, said beam being jointedly connected with said spring and adjustably supported by hangers, substantially as and for the purpose specified.

411,844. VAPOR-BURNER. EDWARD H. WAGNERMAN, Cleveland, Ohio. Filed June 27, 1889. Serial No. 315,098. (No model.)

Claim.—1. An oil-burner comprising two slightly-separated horizontal disks, the upper disk having a central opening for receiving an air-pipe from above, the lower disk having a crowning center and having an annular trough or lighting-cup at the periphery thereof, an upwardly-projecting rim extending athwart the opening between the disks, and a vapor-generator comprising a coil of pipe located above the trough, the lower end of the coil leading into the air-pipe and discharging from thence downward, substantially as and for the purpose set forth.

2. In a vapor-burner, in combination, two slightly-separated horizontal disks, an air or commingling tube leading from above and discharging through a central orifice in the upper disk, a vapor-generator consisting of a coil of pipe surrounding the air-commingling tube and discharging downward inside the latter, and an annular rim projecting up from the lower disk for deflecting the flame against the generating-coil, substantially as set forth.



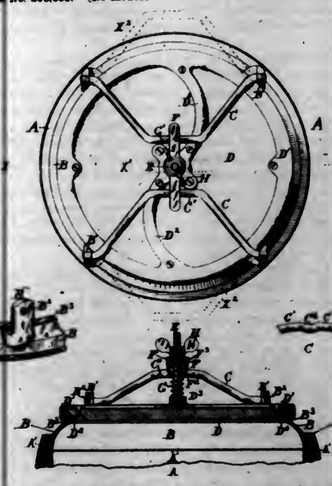
411,845. DRILL-GRINDING MACHINE. OAKLEY S. WALKER, Worcester, Mass. Filed Dec. 23, 1887. Serial No. 258,088. (No model.)

Claim.—1. The V-grooved drill-holder H, in combination with the stationary drill-lip rest *t*, which has its line of drill-contact inclined to the bisecting line of the V-angle and intersecting the same near the apex of said angle, as and for the purpose described.

2. The combination, with the drill-holder H and guide-bracket G, of an inclined and screw-threaded axis of oscillation, along which the drill-holder is helically advanced by said screw-thread when oscillated, as above set forth.

3. In combination with the V-grooved drill-holder H, the separate drill-stop J, and the independent V-shaped support I, which is adjustable in a direction parallel to the axis of the drill, as described.

4. The combination of the drill-holding mechanism, comprising drill-holder H, guide-bracket G, separate drill-stop J, and the independent adjustable V-shaped support I, with the cylindrical slide E, constructed and operated as and for the purpose set forth.

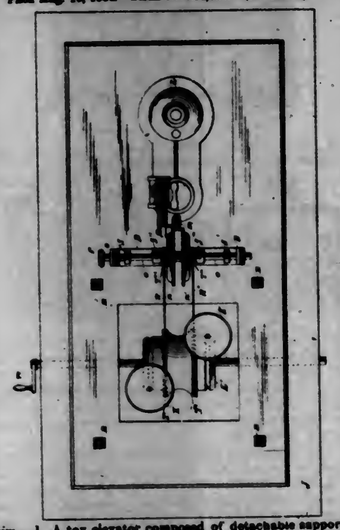


5. The combination of the drill-holding mechanism above described, supported on a cylindrical slide provided with a swivel, arranged to swing the drill to any desired part of the grinding-surface, as described.

6. The drill-holder H, the stationary lip-rest *t*, and the guide-bracket G, combined with the inclined and screw-threaded axis of oscillation G', arranged to helically advance the drill along the axis toward the grinding-wheel as the drill-holder is oscillated, as described.

7. The angular sliding drill-holder H and guide-bracket G, combined with the swivel-head F, arranged to swing the drill across the grinding-surface in a plane parallel to the same, as and for the purpose described.

411,846. CLOSURE FOR CHURNS. HENRY A. WEBBER, Rockton, assignor to Searle, Bishop & Co., Rockford, Ill. Filed Feb. 4, 1889. Serial No. 298,655. (No model.)



Claim.—1. In combination, a circular cover having a metallic casing inclosing the periphery and upper peripheral angle thereof, and a transverse strengthening-brace integral with said casing, extending across the center of the cover, and provided with a central vertical boss on the upper side thereof, a vertical bolt, threaded at both ends, tapped into said boss, a thumb-nut, a spring coiled about said bolt, a cam-bail button having a vertical hole therein to admit said bolt, and being provided with a central vertical recess on the under side thereof to admit the upper end of said spring, and a central vertical recess on the upper side of the same to receive the thumb-nut, substantially as set forth.

2. In combination, a churn having a cross in the chine thereof, a chine-ring head, concavo-convex in form, seated in said cross, projecting above and extending inwardly from the open end of said churn sufficiently to adapt the upper side thereof to receive and sustain bail-lugs located thereon, cam-bails pivoted to said lugs, a circular cover having a metallic casing inclosing the periphery and upper peripheral angle thereof, and a transverse strengthening-brace integral with said

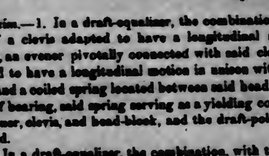
casing, extending across the center of the cover, and provided with a central vertical boss on the upper side thereof, a vertical bolt, threaded at both ends, tapped into said boss, a thumb-nut, a cam-bail button having a vertical hole therein to admit said bolt, and being provided with a central vertical recess on the under side thereof to admit the upper end of said spring, and a vertical recess on the upper side of the same to receive the thumb-nut, substantially as and for the purpose set forth.

411,847. TOY ELEVATOR. OSCAR A. WEISSENBORN, Jersey City, N. J. Filed Aug. 16, 1888. Serial No. 282,809. (No model.)

Claim.—1. A toy elevator composed of detachable supports fitting into each other and into a bottom platform and secured by pins, a roof supported by uprights, balconies surrounding said supports, braces fitting into notches in the supports, pulleys placed one in the roof and another in the bottom platform, a cord passing over said pulleys, small elevator-cars attached to said cord, and a crank or other means for imparting motion to the cord and elevator-cars, substantially as described.

2. A toy elevator composed of detachable supports fitting into each other and into a bottom platform and secured by pins, a roof supported by uprights, balconies surrounding said supports, braces fitting into notches in the supports, pulleys placed one in the roof and another in the bottom platform, a cord passing over said pulleys, small elevator-cars attached to said cord, a toy engine, clock-work, or other means of imparting motion to the cord and elevator-cars, the gear-wheel *m*, the support D, axle *o*, push-button P, gear-wheels *n n'*, pulleys T, collars S S', pulley L', grooves T, collars S', and cords R R', substantially as described.

411,848. COMPOSITION FOR FUEL. GEORGE A. SWIM, Covington, Ky. Filed Feb. 23, 1889. Serial No. 300,906. (Specimens.)



Claim.—1. An odorless and smokeless fuel composition consisting of eighty-seven parts of carbonaceous matter, such as vegetable or mineral coal or peat, three parts of saltpeter, three parts of lime, three parts of sulphite of lime, three parts of sulphate of lime, and one part of chloride of lime, this whole mass bound together and held in suitable shape by a binder of a purely vegetable origin and prepared without chemical treatment, as fully described.

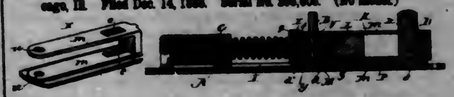
2. In an artificial-fuel composition, the combination of the same with the binder of a purely natural vegetable source and with a deodorizer consisting of three parts of lime, three parts of sulphite of lime, three parts of sulphate of lime, and one part of chloride of lime, as described.

411,849. FASTENER FOR FILE-CASES. THEODORE J. ARMOUR, Chicago, Ill., assignor to the Amberg File and Index Company, same place. Filed May 6, 1889. Serial No. 309,670. (No model.)

Claim.—1. The combination, with a file-case having a front wall B and an opening and closing lid A, of a locking-clamp plate *d*, pivoted to the front wall and having one end bent into a clamping-hook which receives and embraces the front edge of the lid, substantially as described.

2. The combination, with the cover and front wall of a file-case, of a locking-clamp having a hooked end and pivoted to the said front wall to swing in a plane parallel thereto for causing the said hooked end to embrace the front edge of the cover and hold it against the front wall of the case, substantially as described.

3. In a file-case, the combination, with the cover A, having the orifice *a*, of the front B, having a stud *c* to enter the said orifice, and a locking-clamp *d*, swinging in a plane parallel to said front and having a hooked end which directly engages the front edge of the cover and holds the latter against the front of the case and in engagement with the stud, substantially as described.

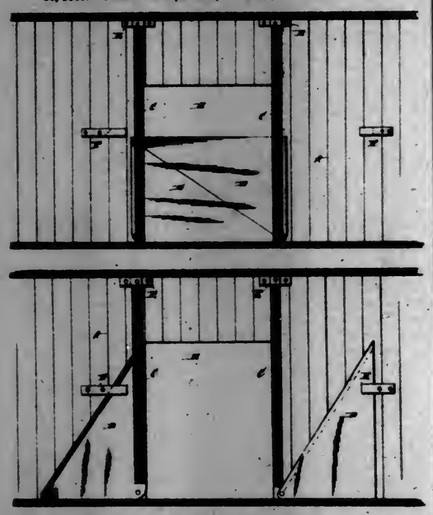


411,850. APPARATUS FOR THE MANUFACTURE OF WOOD-GAS. JOHN D. AVERILL, Brooklyn, N. Y., assignor, by mesne assignments, to the Terrya Patent Gas Company, Philadelphia, Pa. Filed Jan. 17, 1889. Serial No. 296,669. (No model.)

Claim.—1. A wood-gas generator comprising an imperforate cartridge adapted to receive the wood to be distilled and be removably inserted in a retort, said cartridge constructed of sheet metal having an inner open end, a longitudinally-concaved bottom, and of a size to leave gas-passages and heating-spaces between its open end and its sides and the inner walls of the retorts, substantially as described.

2. In a wood-gas-generating apparatus, a normally-closed retort, in combination with an imperforate wood-receiving cartridge removably located in the retort, said cartridge having its inner end open, through which the cartridge is charged and the gas escapes into the retort, said cartridge forming gas-passages and heating-spaces between its open inner and end walls and the inner walls of the retort, for the purpose set forth.

411,851. SPRING-DRAFT ATTACHMENT. HIRAM BARBER, Chicago, Ill. Filed Dec. 14, 1888. Serial No. 293,603. (No model.)



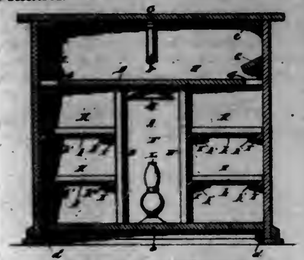
Claim.—1. In a draft-equalizer, the combination, with the draft-pole, of a clevis adapted to have a longitudinal motion relatively thereto, an evener pivotally connected with said clevis, a head-block adapted to have a longitudinal motion in unison with the evener and clevis, and a coiled spring located between said head-block and a fixed point of bearing, said spring serving as a yielding connection between the evener, clevis, and head-block, and the draft-pole, substantially as specified.

2. In a draft-equalizer, the combination, with the draft-pole, of a plate secured thereto, a clevis adapted to have a sliding motion thereon, and guided in its movements by said plate and evener having a pivotal connection with the clevis, a head-block adapted to have a sliding motion on the plate, and guided thereby, a coiled spring having one end bearing upon a rigid support attached to the forward end of the plate, and its other end bearing upon the head-block, said spring serving as a yielding connection between the clevis, the evener, the head-block, and the draft-pole, when a forward draft is brought upon said evener, substantially as specified.

3. In a draft-equalizer, the combination, with the draft-pole, of a plate secured thereto, a clevis *g* adapted to have a longitudinal movement relatively to said plate, said plate being slotted to serve as a guide for the clevis, and adapted to impart the longitudinal movement to the clevis when draft is applied, a head-block adapted to have a sliding movement upon the plate in unison with that of the clevis and evener, and guided in its movements by the plate, and a coiled spring located between the head-block and a fixed point of bearing on the plate, substantially as specified.

4. In a draft-equalizer, the combination, with the draft-pole, of a longitudinally-slotted plate A, a clevis K, having the upper and lower parts *m m*, provided with corresponding eyes or openings at its rear and forward ends, the evener L passing through the clevis, and provided with the plate M, having the sleeve V, the thimble T, passing through the sleeve, and the forward openings of the plates *m m*, the standard D, and bolt B, united by the strap P, said standard passing through the rear openings of the plates *m m*, and the bolt passing through the thimble T, the head-block H, having a head F, and a shank J, said head-block being adapted to have a sliding movement on the plate A, and guided in said movement by the slot therein, the casing C, secured to the forward end of the plate, and a coiled spring located between said casing and the head of the head-block, said parts being arranged for co-operation, substantially as described, and for the purposes specified.

411,852. CAR-DOOR. CHARLES BERNARD, Trenton, Ill. Filed Apr. 16, 1889. Serial No. 307,389. (No model.)



Claim.—1. The combination, with the car, of the triangular door-sections pivoted to the side of the same and having their adjacent edges overlapping when closed, as set forth.

2. The combination, with the car, of the standards C and keepers F, arranged on opposite sides of the door-opening in the side of the car, and the triangular door-sections pivoted on the side of the car and moving between the same and the standards C and adapted to engage the keepers F, as set forth.

3. A car-door consisting of two triangular sections pivoted on opposite sides of the door-opening and having their longest edges adapted to meet across the door-opening, as set forth.

411,853. BREAD-RAISER. ELIJAH BRENTZER and AARON BRENTZER, Hastings City, Pa. Filed June 15, 1888. Serial No. 277,263. (No model.)

Claim.—The improved bread-raiser, comprising the chest, the series of shelves or gratings arranged at each side of the chest and forming an intermediate space adapted to receive a lamp or other source of heat, the deflector located at the top of the said intermediate space and serving to deflect the heat down upon the shelves or gratings, the partition D, arranged above the shelves and providing a kneading-board, and having notches *d* in its sides for the passage of the heat, said partition also forming an upper chamber or compartment for the reception of a thermometer, the transverse strips arranged above the notches and inclined to deflect the heat toward the middle of the upper compartment, and the removable cover, substantially as described.

411,854. FRUIT-CANNER. MARTHA A. CARTER, Ames, Ind. Filed June 29, 1889. Serial No. 315,968. (No model.)

Claim.—1. In a fruit-canner, the inner basket formed of a series of radial arms perforated and provided with a wire bottom, substantially as specified.

2. In a fruit-canner, the basket formed of a series of arms which terminate in guiding-flanges perforated, and provided with a wire bottom having spring-tongues occurring intermediate each of the arms, substantially as specified.

3. In a fruit-canner, the inner basket formed with radial arms perforated for the passage of water, and provided at their lower ends with a series of perforations and a bottom formed of wire, which is passed in a convolute manner from one perforation in one arm to a corresponding perforation in an adjacent arm, and so on throughout the series, substantially as specified.

4. In a fruit-canner, a basket having a series of radial arms, the ends of which terminate in guiding-flanges, the flanges being formed integral with the arms, substantially as specified.

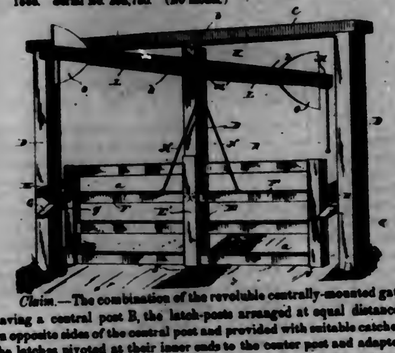
5. In a fruit-canner, the inner basket formed of a series of arms which are perforated and provided with a bottom having spring-tongues, which occur intermediate each of the arms, as set forth.

411,855. DUST-PAN. LEON CLINE, Chicago, Ill. Filed Dec. 7, 1888. Serial No. 292,986. (No model.)

Claim.—A dust-pan made of a single sheet of metal having a pointed rear portion, the corner of such pointed portion being brought flat on the bottom of the pan, and provided with an aperture, both these parts and also the sweeping-edge of the pan being bent downward below the plane of said bottom, substantially as set forth.

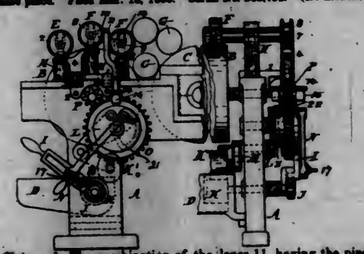
411,856. VALVE. SAMUEL P. COLLINS, Binghamton, N. Y. Filed Feb. 14, 1888. Serial No. 263,831. (No model.)

Claim.—1. In combination, a valve having an annular channel and a screw-threaded central projection on its lower face, a packing-ring fitting the channel, and a collar provided with a ledge for holding said ring in place, a channel provided with a packing-ring in the upper face of the valve, a central socket for the end of the valve-spindle, and a ring having an overhanging holding-lip, substantially as described.



2. In a valve, an annular channel on its upper face provided with a packing-ring, a central socket for the end of the valve-spindle, and a ring having an overhanging lip to bear on the packing, said ring fitting around the valve-spindle and having screw-threads on its outer periphery engaging the screw-threads of the socket, substantially as described.

411,857. HOOK. FRANK R. DE LONG, Philadelphia, Pa., assignor of one-half to Charles F. De Long, same place. Filed Mar. 18, 1889. Serial No. 303,691. (No model.)



Claim.—A hook comprises of a hook proper and a shank formed of substantially parallel bars, and a tongue having its free end forming a loop coincident with the bend of the hook, said tongue and loop being intermediate of said side bars, substantially as described.

411,858. GATE. THOMAS J. BUSBANK, Bagwell, Tex. Filed Dec. 6, 1888. Serial No. 292,760. (No model.)

Claim.—The combination of the revoluble centrally-mounted gate having a central post B, the latch-posts arranged at equal distances on opposite sides of the central post and provided with suitable catches, the latches pivoted at their inner ends to the center post and adapted to engage the said catches, the operating-bar affixed at its center to the upper end of the center post and at right angles to the gate, the loop N, connected at its free ends, respectively, to the latches, and the operating-cords L L, running over guide-pulleys M and M', and connected at their inner ends to the closed upper end of the loop N, whereby both latches may be raised by drawing either operating-cord, substantially as specified.

411,859. VIBRATING APPARATUS FOR INKING-ROLLERS. SAMUEL G. GOSS, Chicago, Ill., assignor to the Goss Printing Press Company, same place. Filed Mar. 18, 1889. Serial No. 303,732. (No model.)

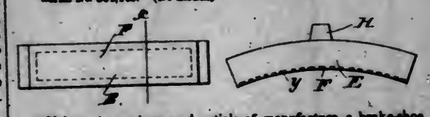
Claim.—1. The combination of the lever 11, having the pins or rollers 12, 13, and 15, with the wheel O, having the cams 23 24, and the rollers F F', having the grooved wheels 8 and 9, substantially as specified.

2. The lever or arm L, having the pin or roller 22, in combination with the wheel O, having the cams 21, 23, and 24, substantially as and for the purpose specified.

3. In the inking apparatus for a printing-press, the plate 1, having the bearings 2 and 10, in combination with the lever 11 and rocking arm 4, substantially as described.

4. The combination of the rollers E F F', the grooved wheels or sheaves 7, 8, and 9, rocking bar 4, having the pins or rollers 5 6, and lever 11, having the pins or rollers 12, 13, and 15, with the wheel O, having the cams 23 24 constructed and operated substantially as specified.

5. The gear-wheel O, provided with cams 21, 23, and 24, formed substantially as described, in combination with the lever L, the take-up roller K, the lever 11, and the rollers E F F', substantially as and for the purpose specified.



411,860. TRIP-HOOK FOR HAY-ELEVATORS. CLARK HASKINS, Dexanna, Oreg. Filed Apr. 25, 1889. Serial No. 308,542. (No model.)

Claim.—1. The combination of a shank or body, hooks diverging outwardly from the rear side of the same, a trip-hook connected pivotally to its lower end and adapted to fold upwardly against the front side of said shank, a link sliding vertically upon said shank and adapted to engage the trip-hook, and a trip-cord for raising said link, substantially as set forth.

2. The combination of the shank having rearwardly-extending diverging hooks and provided with an eye at its upper end, a trip-hook pivoted at the lower end of said shank, a link sliding vertically upon the latter and having an upwardly-extending bail or staple, a pin extending laterally from the shank to limit the movement of said link, a sheave journaled in the eye at the upper end of the shank, and a trip-cord passing over said sheave and attached to the upwardly-extending bail of the sliding link, substantially as herein set forth.

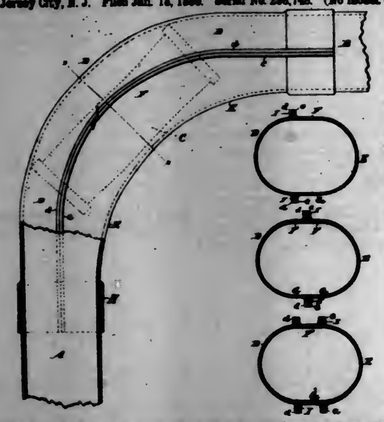
411,861. BRAKE-SHOE. SAMUEL HAYT, Montreal, Quebec, Canada, assignor to George Sanderson, same place. Filed July 26, 1888. Serial No. 281,105. (No model.)

Claim.—As an improved article of manufacture, a brake-shoe, substantially as described, having a marginal portion of chilled metal formed on its sides and arranged, as described, so that there will be a uniform relative proportion of chilled and soft metal throughout the places of its wear from front to back, the whole substantially as described.

411,862. ENVELOPE OPENER AND SEALER AND STAMP-MOISTENER. CLARENCE C. LAMB, Pittsburg, Pa. Filed Aug. 20, 1888. Serial No. 284,042. (No model.)

Claim.—The combination, with a stamp-moistener consisting of a strip of absorbent material D and an inclosing-case A, provided with slots or openings *g* and *h*, of an envelope-opener or paper-cutter consisting of a blade D and handle D', having flanges *d d'*, said flanges fitting, respectively, above and below the edges of the slot *h*, substantially as described.

411,863. ROAD-CART. HENRY G. LEA, Novada, Ohio. Filed May 6, 1889. Serial No. 309,731. (No model.)



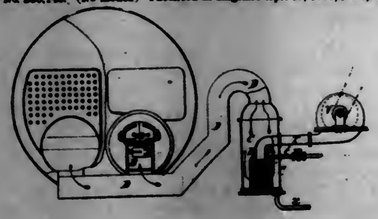
Claim.—1. In a road-cart, the combination, with the thills and cross-bar connecting the same, of the seat-bars having laterally-movable connections with the thills, an inverted curved spring mounted on the cross-bar, and links connecting said spring with the seat-bar and embracing the cross-bar, whereby longitudinal movement of the seat is obviated, substantially as set forth.

2. In a road-cart, the combination, with the seat-bars provided with a corresponding top and bottom series of indentures, of an adjustable seat provided with staples embracing said bars and with studs or pins adapted to be received by said top perforations and form pivotal bearings for the seat, and set-screws for engaging the said bottom perforations to retain the seat in adjusted position, substantially as and for the purpose set forth.

3. In a road-cart, the combination, with the thills and a cross-bar connecting the same, of seat-bars having a pivotal spring connection with the thills, substantially as described, and carrying a seat, and an inverted curved spring mounted on the cross-bar and connected with the seat-bars by laterally-movable elongated links embracing said cross-bar, substantially as set forth.

4. In a road-cart, the combination of the thills, seat-bars connected therewith by approximately U-shaped springs, said springs being rigidly secured to said bars and pivotally secured to the thills in the manner set forth, an inverted curved spring mounted on a cross-bar and in a plane therewith and provided with bearing-eyes at its ends, laterally-movable elongated links bearing in said eyes and embracing the cross-bar, links or rings encircling the seat-bars and connected with said elongated links, and a seat adjustably mounted on the seat-bars, substantially as set forth.

411,864. PNEUMATIC DISPATCH-TUBE. Edwin D. Leavcraft, Jersey City, N. J. Filed Jan. 18, 1889. Serial No. 296,743. (No model.)

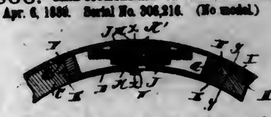


Claim.—1. In a pneumatic dispatch-tube, the combination, with cylindrical straight portions, of a curved portion widened in one direction so as to match to the carrier in traversing it, as herein specified.

2. In a pneumatic dispatch-tube, the flattened portion D E F G, in combination with the straight portions A B, and with the joining means H, adapted to serve as herein specified.

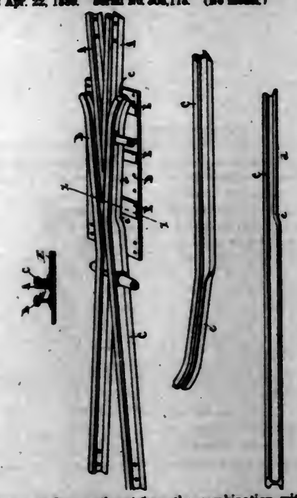
3. The pieces D and E, with their flanges *d* and *e* and the portions F and G, with their flanges *f* and *g*, and joining means H, arranged as shown, in combination with each other and with the straight lengths of cylindrical pipe A and B, as herein specified.

411,865. FURNACE. Robert Le Lan, Walnut Tree, near Cardiff, England, and Albert Rosen, Paris, France. Filed July 12, 1888. Serial No. 280,140. (No model.) Patented in England Apr. 13, 1888, No. 5,527.



Claim.—1. The grate of a furnace and an air-pump for supplying air under pressure beneath said grate, in combination with an intervening air-moistening device consisting of a casing, an air-inlet leading from the pump and conducting air to the lower part of the casing, an air-outlet to the furnace, leading from the upper part of the casing, whereby the air under pressure is forced upwardly through the casing, a water-inlet pipe entering the upper part of the casing, and a water-distributer adapted to subdivide the water and cause it to descend through the casing in such manner as to intercept and mingle with the ascending air, whereby the latter is caused to pass through the descending water and become thoroughly moistened thereby.

2. The grate of a furnace and an air-pump for supplying air beneath the same, in combination with a casing, an air-inlet pipe leading from the pump to the casing, an air-outlet pipe leading from the casing to the furnace, a cloth or fabric arranged within the casing to be traversed by the air in passing from the inlet to the outlet pipes, and a water-inlet conducting water to said fabric to keep it saturated, substantially as set forth.



3. The grate of a furnace and an air-pump for supplying air beneath the same, in combination with a casing, an air-inlet pipe leading from the pump to the casing, an air-outlet pipe leading from the casing to the furnace, a frame or box within the casing inclosing the mouth of the air-inlet pipe, a cloth or fabric covering said frame or box, and a water-inlet pipe conducting water to said casing for keeping said cloth saturated, substantially as set forth.

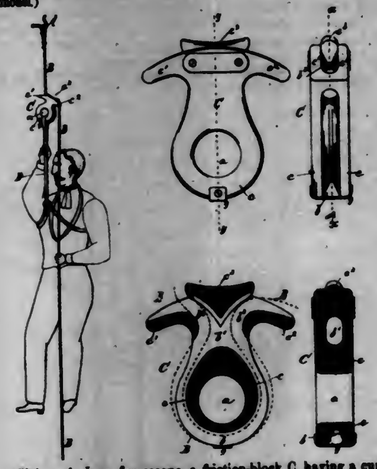
411,866. TIRE-TIGHTENER. Addison E. Leonard, Kinsley, Kans. Filed Apr. 6, 1889. Serial No. 306,216. (No model.)

Claim.—In a wheel, the combination of the divided felly having recesses G in its outer side at its ends, the casing D, arranged between the ends of the felly and provided with the spurs or points E, adapted to enter the ends of the felly, and the lips F, adapted to engage the recesses G, the divided tire fitted around the felly and provided at its ends with the integral internally-threaded bosses J, fitting in the casing, the coupling having its ends engaging said threaded bosses and provided at its center with diametrical openings, the plate K, adapted to be arranged between the ends of the tire and provided on its inner side with longitudinal ribs adapted to engage against the sides of the casing, and the bolt passed through said plate and one of the diametrical openings of the coupling, as set forth.

411,867. RAILWAY-FROG. Walter C. Mehring, Jersey City, N. J. Filed Apr. 22, 1889. Serial No. 308,118. (No model.)

Claim.—1. In a railroad-frog, the combination, with the frog-point, of a wing-rail having a portion of one of its flanges turned up to lie against the rail-web, adapting its head to lie against the point of the frog, substantially as described.

2. In a railroad-frog, a wing-rail reduced in height where it lies adjacent to the point of the frog and with its inner flange turned upward, so that the head of said wing-rail may lie against the point of the frog, substantially as described.



3. In a railroad-frog, the combination, with the frog-point, of the stationary wing-rail, the movable wing-rail with the offset on its under side and upwardly-turned flange, and the raising plate or plates, substantially as described.

411,868. COMBINED PULLEY-BLOCK AND RELAYING-PIN. James E. Miller, Emporia, Kans. Filed Apr. 4, 1887. Serial No. 233,600. (No model.)

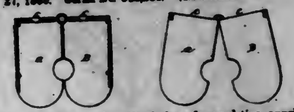
Claim.—A shock-binder composed of a block having its front end rounded and pointed, as shown at *e*, the rear end extended to form a handle having a notch in its end, a slot in the side of the block, a pulley mounted therein, and a binding-rope having a loop A in one end permanently secured thereby to the pointed end of the block, its other end being adapted to be passed around the shock, over the pulley, and around the handle, as described, to and across its pointed end, for the purpose set forth.

411,869. FIRE-ESCAPE. Curtis M. Mitchell, Hudson, and Geo. R. Small, Hudson, N. H. Filed June 13, 1889. Serial No. 314,103. (No model.)

Claim.—1. In a fire-escape, a friction-block C, having a curved lower portion with a groove in its outer edge, a central downwardly-tapered portion c^3, having a groove in its inner edge, and one or more wings, as c' c^3, having, respectively, a grooved inner and upper surface, and said block being also formed with an entrance and exit passage for the rope B at its top, substantially as described.

2. The combination, with a fire-escape friction-block C, having an entrance and exit passage at its top, and formed with a curved lower portion having a groove in its outer edge, a central downwardly-extended portion c^3, having a groove in its inner edge, and with one or more wings, as c' c^3, having, respectively, a grooved inner and upper surface, of a suspending-strap D, applied to the lower end of the block, and a rope B, rove through the block and adapted to be suspended from a fixed part of a building and therefrom extend below the block, all substantially as described.

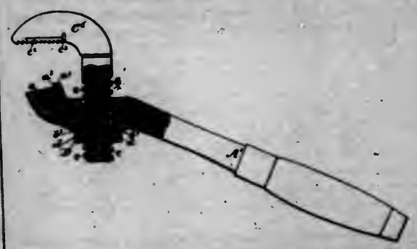
411,870. CHOCOLATE-POT. Charles J. Mulford, New York, N. Y. Filed May 25, 1889. Serial No. 312,062. (No model.)



Claim.—1. The herein-described vessel, provided with a cover having an elongated slot therein and a detachable puddler or stirrer adapted to be supported upon said vessel over the cover and extending into the vessel and removable therefrom through the slot in its cover.

2. The combination, with a vessel and its cover B, having a central elongated slot therein, of a detachable frame supporting a vertical shaft having blades and an extended plate F, secured to said frame and bearing upon the cover, substantially as described.

3. The combination, with a vessel and its cover B, having a central elongated slot therein, of a frame removably supported over the cover, provided with a cross-piece *o*, and a curved bar *p*, providing a bearing *q*, a vertical shaft *r*, having a beveled pinion at its end supporting the same in said bearing, so that it may depend therefrom into the vessel through the slot in its cover, a horizontal shaft *n*, and a driving-wheel *v*, meshing with said pinion for rotating the shaft, substantially as described.



411,871. NECKTIE-FASTENER. Willam B. McCormick, Cleveland, Ohio, assignor of one-half to William A. Smith, same place. Filed May 27, 1889. Serial No. 312,202. (No model.)

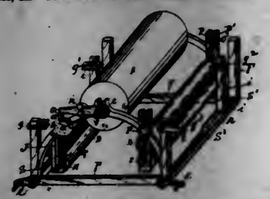
Claim.—The herein-described clasp for neck-ties, consisting of the two plates provided with the recess to inclose the shank of the collar-button and the wire pins secured to the plates and having the central spring-coil, the depending pins and spring-coils therefor, and the fast-ening-loops for the pins, substantially as described.

411,872. PIPE-WRENCH. George F. Newell, Newton, Mass., assignor to Stiles Frost, same place, and F. L. Ferguson, Byfield, Mass. Filed Jan. 21, 1889. Serial No. 297,006. (No model.)

Claim.—1. In a pipe-wrench, the combination of a lever having the body A perforated, and hooked lips b^3 on the sides of the perforation, and a toothed jaw at one end, with the nut D, having a peripheral groove, and the movable jaw having its stem screw-threaded and inserted through the perforation of the body of the lever, substantially as described.

2. In a pipe-wrench, the combination of a lever having the body A perforated, and hooked lips b^3 on the sides of the perforation, and a jaw at one end, having a beveled face *a* and a tooth the edge of which overhangs said beveled face, with the circumferentially-grooved nut D and the serrated movable jaw having its stem passing through the lever, substantially as shown and described.

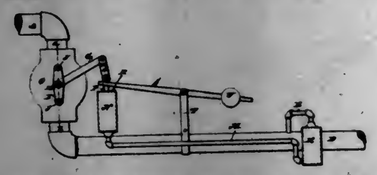
411,873. COVERING FOR VASES. Gustav Gmelin, Chicago, Ill. Filed June 27, 1888. Serial No. 315,772. (No model.)



Claim.—1. An ornamental covering for vases, &c., comprising sections of card-board or similar material having a longitudinal fold, whereby each section is formed into two integral parts, in combination with means for flexibly connecting the adjacent edges of the sections, substantially as and for the purposes described.

2. An ornamental covering for vases, &c., constructed in separable sections, each section having a longitudinal central fold or crease and

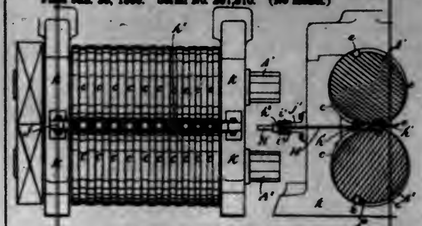
the side margins thereof having perforations, and lacing-cords whereby to secure the sections together, substantially as described.



411,874. CLOTH-MEASURING MACHINE. BYRON A. ROATH, Marseilles, Ill. Filed June 6, 1889. Serial No. 313,415. (No model.)

Claim.—In combination with the frame F, the measuring-roll A, having the cam c and cam-strap forming arm c, provided with leg c', roll B, having the pinions L L, racks T T, for engaging said pinions, rolls D and E, the roll E being adapted to be vertically adjusted in boxes O, rotatable checks g, g', g², and g³, having crank Z, adjustable posts i, and screw-rods S', having cranks e, substantially as and for the purpose set forth.

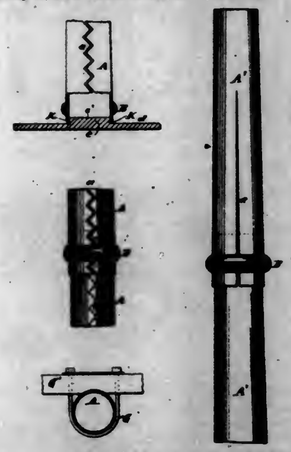
411,875. SAFETY-PRESSURE GAS-REGULATOR. CHARLES M. RYDER, Findlay, Ohio. Filed Jan. 4, 1889. Serial No. 295,451. (No model.)



Claim.—1. The combination, with a valve, of a movable fluid-chamber mechanically connected therewith, a balance for such chamber, and pressure communication between the outlet side of the valve and such chamber, a body of fluid being shifted by the forces of pressure and gravity to act on the balance, and so move the chamber, and hence the valve, substantially as set forth.

2. The combination, with a valve, of a movable fluid-chamber mechanically connected therewith, a balance for such chamber, a stationary fluid-chamber communicating with the outlet side of the valve and located at a lower level than the movable chamber, and a flexible pipe connecting the two chambers, a body of fluid being forced into the movable chamber by pressure and running out of it by gravity to disturb its balance and move it, and so operate the valve, substantially as set forth.

3. The combination, with a valve, of a movable fluid-chamber mechanically connected therewith, a weighted lever connected with the chamber so as to balance it, a stationary fluid-chamber communicating with the outlet side of the valve and located at a lower level than the movable chamber, and a flexible pipe connecting the two chambers, a body of fluid being forced into the movable chamber by pressure and running out of it by gravity to disturb its balance and move it, and so operate the valve, substantially as set forth.



411,876. METHOD OF MANUFACTURING BLANKS FOR AXLE-BOXES. JOHN SUTTER, Baltimore, County of Worcester, England. Filed Jan. 23, 1889. Serial No. 297,310. (No model.)

Claim.—1. The improved method of manufacturing axle-boxes for carriages and other road-vehicles, which consists in passing a heated tubular blank between rolls which form a reduced part or parts, and a collar or collars thereon corresponding, respectively, with the barrel and collar parts of the required axle-boxes, the said tubular blank meanwhile being supported internally by a mandrel, substantially as hereinbefore described.

2. The improved method of manufacturing axle-boxes for carriages and other road-vehicles, which consists in passing a heated round blank between rolls which form a reduced part or parts, and a projecting feather or feathers and a collar or collars thereon, corresponding, respectively, with the barrel, feather, and collar parts of the required axle-boxes, substantially as hereinbefore described.

411,877. METALLIC POLE. SAMUEL H. THEBY, St. Louis, Mo. Filed May 14, 1889. Serial No. 310,907. (No model.)

Claim.—1. A tubular metallic pole having a longitudinal slot extending a part of the length of a section, in combination with a binding-ring, as above described, and for the purposes set forth.

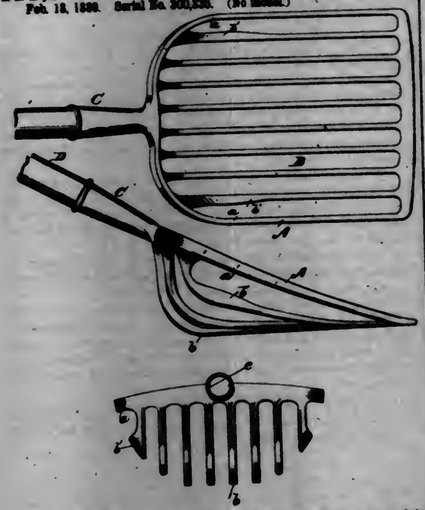
2. In a metallic pole made of tubular or hollow sections, a slotted section having the edges of the slot during a whole or a part of its distance provided with notches or saw-teeth uniting or interlocking in each other, in combination with a binding-ring, substantially as above described, and for the purposes set forth.

3. A tubular or hollow metallic pole having a longitudinal slot extending the whole or a part of the length of the pole, said slot having its edges provided with notches or teeth made integral with the metal of the pole and adapted to unite with each other, in combination with a binding-ring surrounding the pole, as and for the purposes set forth.

4. A tubular metallic pole having a longitudinal slot or slots provided on the edges of the slots with notches or recesses, whereby the edges of the slots are prevented from moving on each other.

5. In a hollow or tubular metallic pole, an internal projecting flange on the inside of the bottom of the pole engaging an outward-projecting flange on a base-plate, in combination with a binding-ring, whereby the base-plate is firmly secured to the pole, substantially as shown and described.

411,878. SPINNING-SPINDLE AND SUPPORT THEREFOR. JOSEPH R. TYRAR, Paterson, N. J. Filed June 7, 1888. Serial No. 276,277. (No model.)

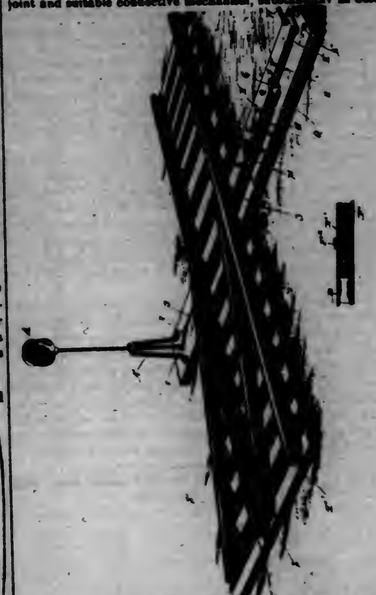


Brief.—The object of the invention is to provide an improved construction whereby the spindle may be self-centering under an unbalanced load, and otherwise to simplify the construction.

Claim.—1. The combination of a bolster-supporting tube having a fixed step-bearing at the bottom thereof, a spindle the lower end of which enters and is confined laterally in said bearing, and which is flexible, unconfined laterally, and free to bend immediately above said bearing, and a bolster fitting the said spindle and having an externally-swelled portion, which alone fits the supporting-tube, substantially as herein described.

2. The combination, with a spindle for spinning, a supporting-tube therefor having a step-bearing for the spindle in its lower part, a lateral oil-passage communicating with said step-bearing, and a shoulder opposite to said tube for supporting a bolster, of a bolster having a projection at its bottom entering said oil-passage, substantially as herein described.

411,879. POTATO-SCOOP. JOSEPH VOWLES, Hilliard, Mich. Filed Feb. 18, 1889. Serial No. 300,836. (No model.)



Claim.—1. A potato-scoop, as herein described, consisting of the frame A and the curved ribs B, said ribs being thickened at their heads b and flattened on the under sides of said heads, and the outer ribs thickened also on their sides adjacent to the frame, substantially as described.

2. A potato-scoop, as herein described, having the ribs which are adjacent to and extending parallel with the frame widened to fill the intervening space, substantially as described.

411,880. INTERLOCKING-SWITCH-OPERATING MECHANISM. FRANK P. ARMBRUSTER, Sunbury, Pa. Filed Jan. 9, 1889. Serial No. 295,953. (No model.)

Claim.—1. In an apparatus for producing two or more independent and consecutive motions, the combination of the sliding and twisting piece, a supporting-piece which has inclined guideways, and two or more sliding pieces, against certain parts of which projections on the sliding and twisting piece strike, together with suitable mechanism for imparting motion to the sliding and twisting piece, substantially as described.

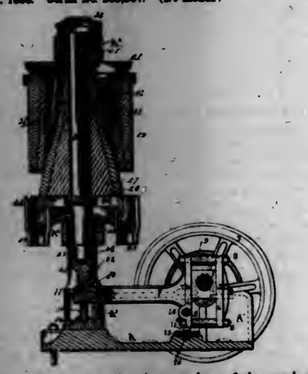
2. In an apparatus for producing two or more independent and consecutive motions, the combination of a sliding and twisting piece, a supporting-piece which has guideways upon which certain projections from the sliding and twisting piece move, said guideways being inclined to the axis of motion of the sliding and twisting piece for certain portions of their length, while other portions are parallel to said axis, two or more sliding pieces which move parallel to the axis of motion of the sliding and twisting piece, and which have certain rigid parts with which projections from the sliding and twisting piece engage at predetermined points in its travel, together with mechanism for imparting motion to the said sliding and twisting piece, substantially as described.

3. In an apparatus for producing two or more independent and consecutive motions, the combination of a sliding and twisting piece, a supporting-piece which has guideways upon which certain projections from the sliding and twisting piece move, said guideways being inclined to the axis of motion of the sliding and twisting piece for certain portions of their length, while other portions are parallel to said axis, two or more sliding pieces which move parallel to the axis of motion of the sliding and twisting piece, and which have certain rigid parts with which projections from the sliding and twisting piece engage at various predetermined points in its travel, together with a reciprocating lever connected to the sliding and twisting piece by a swivel-joint and suitable connective mechanism, substantially as described.

4. In an apparatus for producing two or more independent and consecutive motions, the combination of a sliding and twisting piece, a supporting-piece which has guideways upon which certain projections from the sliding and twisting piece move, said guideways being inclined to the axis of motion of the sliding and twisting piece for certain portions of their length, while other portions are parallel to said axis, two or more sliding pieces which move parallel to the axis of motion of the sliding and twisting piece, and which have certain rigid parts with which projections from the sliding and twisting piece engage and disengage at various predetermined points in its travel, together with a reciprocating lever connected to the sliding and twisting piece by a swivel-joint and suitable connective mechanism, substantially as described.

5. In an apparatus for producing two or more independent and consecutive motions, the combination of the sliding and twisting piece, a supporting-piece which has inclined guideways, and two or more sliding pieces against certain rigid parts of which projections on the sliding and twisting piece strike, together with suitable mechanism for imparting motion to the sliding and twisting piece, and a lock operated by one of the said sliding pieces to lock and unlock the other sliding piece, substantially as described.

6. In an apparatus for producing two or more independent and consecutive motions, the combination of a sliding and twisting piece, a supporting-piece which has guideways upon which certain projections upon the sliding and twisting piece move, said guideways being inclined to the axis of motion of the sliding and twisting piece for certain portions of their length, while other portions are parallel to said axis, two or more sliding pieces which move parallel to the axis



of motion of the sliding and twisting piece, and which have certain rigid parts with which projections from the sliding and twisting piece engage at predetermined points in its travel, and a lock operated by one of the said sliding pieces to lock and unlock the other in its various positions of rest, together with mechanism for imparting motion to the said sliding and twisting piece, substantially as described.

7. In an apparatus for producing two or more independent and consecutive motions, the combination of the sliding and twisting piece, a supporting-piece which has inclined guideways, and two or more sliding pieces against certain rigid parts of which projections on the sliding and twisting piece strike, together with suitable mechanism for imparting motion to the sliding and twisting piece, a locking-bar which has projections which engage with suitable portions of one of the sliding bars, and a bell-crank by which the other sliding piece reciprocates the locking-bar, substantially as described.

8. In an apparatus for producing two or more independent and consecutive motions, the combination of a sliding and twisting piece, a supporting-piece having inclined guideways, two or more sliding pieces which have certain rigid parts with which projections on the sliding and twisting piece engage at predetermined points in its travel, a movable switch connected to one of said sliding pieces, and a tell-tale device connected to the other of said sliding pieces, together with suitable mechanism for imparting motion to said sliding and twisting piece, substantially as described.

9. In an apparatus for producing two or more independent and consecutive motions, the combination of a sliding and twisting piece, a supporting-piece having inclined guideways, two or more sliding pieces which have certain rigid parts with which projections on the sliding and twisting piece engage at predetermined points in its travel, a movable switch connected to one of said sliding pieces, a tell-tale device connected to the other of said sliding pieces, and a locking device for the movable switch, also operated by the second sliding piece, together with suitable mechanism for imparting motion to the first-named sliding and twisting piece, substantially as described.

411,881. CRUSHER. DAVID H. ANDERSON, Granite, Mont. Filed Sept. 17, 1888. Serial No. 285,567. (No model.)

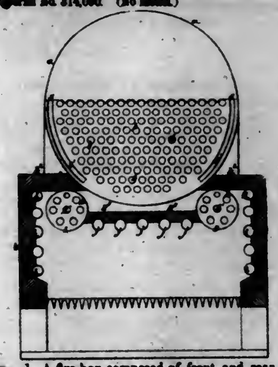
Claim.—1. The combination, in a crusher, of the crank-shaft, a bearing-box therefor, a connecting-bar provided with vertical slideways embracing the bearing-box, and a toggle-lever for actuating the cone and coupled to the connecting-bar, substantially as described.

2. In a crusher, a toggle-lever actuating the cone, a connecting-bar coupled to said toggle-lever and having a slideway at its other end, a crank and a bearing in the slideway, and a swinging link connected to the bar and to the frame, all combined substantially as described.

3. In a crusher, a vertically-reciprocating shaft, a toggle-lever supporting the same, and a connecting-bar interposed and forming the sockets for the adjacent ends of the toggle-levers, said bar connected to the driving mechanism, all combined substantially as described.

4. The combination, in a crusher of the character described, of a vertically-reciprocating conical plunger and a surrounding shell having a conical chamber therein, substantially as described.

5. The combination, in a crusher of the character described, of a vertically-reciprocating conical plunger and a surrounding shell having a chamber of less taper than the taper of the cone, substantially as described.



6. In a crusher, the combination of a vertically-reciprocating conical plunger having a fluted surface and a surrounding shell having a less taper than the plunger.

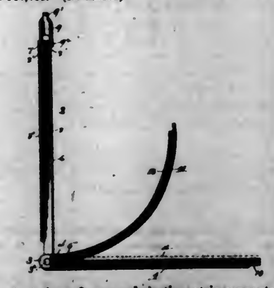
7. In a crusher, the combination of a vertically-reciprocating conical plunger and a surrounding shell fluted on its interior surface, substantially as described.

8. The combination, in a crusher, with a vertically-reciprocating conical plunger, of a surrounding shell having conical chamber, said shell being vertically adjustable on its supports, as set forth.

9. The combination, in a crusher, of a vertically-reciprocating conical plunger having its base downward and a shell having a hardened interior lining with a surface of less taper than the taper of the plunger, substantially as described.

411,882. BOILER. JOHN BAIRD, New York, N. Y. Filed June 13, 1888. Serial No. 314,090. (No model.)

Claim.—1. A fire-box composed of front and rear water-spaces and tubes horizontal, or nearly so, forming the sides and top thereof when said tubes pass through sleeves at one of said ends and are connected to the front and rear water-spaces, all substantially as described.



2. In combination with a fire-box composed of front and rear ends and of sides, and a top formed of tubes, all made and connected as described, large tubes provided with flues, such as *I I*, combined therewith, as described.

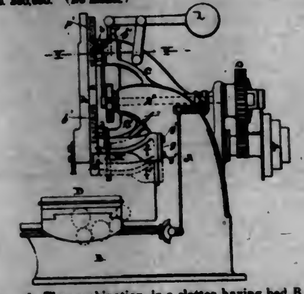
3. In combination with the end of a fire-box such as is described, and with water-tubes connected therewith and a boiler, a pipe, such as *p*, with a floating valve therein, whereby a connection may be at times established between said tubes and the boiler proper, in the manner and for the purposes set forth.

4. In combination with horizontal flues or tubes inclosed in a shell, as described, deflectors above the upper tier thereof, said deflectors being bars of angle-iron supported as described.

5. In combination with a shell inclosing horizontal tubes or flues, as described, plates of metal extending over the space between the outer flues and the shell of the boiler and provided with depending tubes, which latter descend in the comparatively cool space between the shell and the flues, whereby circulation is improved, substantially as set forth.

411,883. CLAMP FOR MATRIX-PLATES. GILBERT H. EMERSON, Ellenville, and PATRICK M. FURLONG, Albany, N. Y. Filed Apr. 19, 1888. Serial No. 307,705. (No model.)

Claim.—1. A clamp for curved elastic matrix-supports, consisting, essentially, of a flat bed-plate and a frame fitted to the bed-plate and constituting a clamp-jaw and a molding-guard for the same, substantially as described.



2. In a combined clamp and molding-pan for curved elastic matrix-supports, the combination of a flat bed-plate having one edge provided with a molding-guard with a frame fitted to the bed-plate, constituting a clamp-jaw and a guard for the other sides of the same, substantially as described.

3. In a combined clamp and molding-pan for curved elastic matrix-supports, the combination of a flat bed-plate having one edge provided with a molding-guard recessed on its under side for the reception of one edge of the matrix-support with a three-sided open frame fitted to the bed-plate, constituting a clamp-jaw and molding-guard for the other sides of the same, substantially as described.

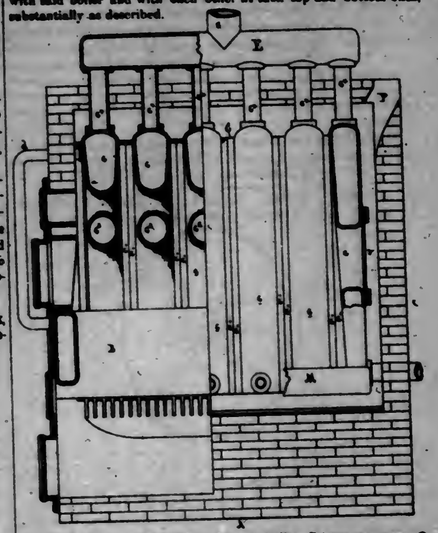
4. In a combined clamp and molding-pan for curved elastic matrix-supports, the combination of a flat bed-plate with a frame hinged to move in planes at right angles to the face of the bed-plate and constituting a clamp-jaw and a molding-guard for three sides of the same, substantially as described.

5. In a combined clamp and molding-pan for curved elastic matrix-supports, the combination of a flat bed-plate having one edge provided with a molding-guard recessed on its under side for the reception of one edge of the matrix-support with a three-sided open frame fitted to the bed-plate, constituting a clamp-jaw and a molding-guard for the other sides of the same, and clamps for holding the frame to the bed-plate and for releasing it from the same, substantially as described.

411,884. SLOTTING-MACHINE. HENRY L. SIMMS, New York, N. Y., and ARTHUR J. PRITT, Newark, N. J. Filed July 21, 1888. Serial No. 280,656. (No model.)

Claim.—1. The combination, in a slotter having bed B, table D, and column A, with crank-shaft *d'*, journaled therein, as set forth, of the brackets *c* and *c'*, projected from the column above and below the crank-shaft, the slide *c*, fitted to seats *d d'* upon the brackets and clamped thereto by bolts *b*, and the foot *f*, attached to the lower end of the slide and fixed movably upon the front of the column, substantially as herein set forth.

2. The combination, in a slotter having bed B, table D, and column A, with crank-shaft *d'*, journaled therein, as set forth, of the brackets *c* and *c'*, projected from the column above and below the crank-shaft, the slide *c*, fitted to seats *d d'* upon the brackets and clamped thereto by bolts *b*, the foot *f*, projected from the lower end of the slide adjacent to the bracket *c'* and clamped movably upon the front of the column, and the screw M, connecting the foot and the bracket *c'* to adjust the slide vertically, substantially as herein set forth.



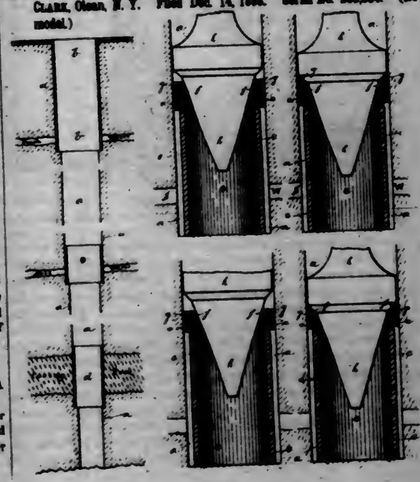
3. The combination, in a slotter having bed B, table D, and column A, with crank-shaft *d'*, journaled therein, as set forth, of the brackets *c* and *c'*, projected from the column above and below the crank-shaft, the slide *c*, fitted to seats *d d'* upon the brackets, and clamped thereto by bolts *b*, the foot *f*, projected from the lower end of the slide, and formed with the flanges *f'*, adapted to move outside the bracket *c'*, the flanges *f'* upon the front corners of the column, with the gibs *g*, and bolts *g'* for clamping the same thereto, and the screw M, connecting the foot and the bracket *c'*, as and for the purpose set forth.

4. The combination, in a slotter having bed B, table D, and column A, with crank-shaft *d'*, journaled therein, as set forth, of the brackets *c* and *c'*, projected from the column above and below the crank-shaft, the slide *c*, fitted to seats *d d'* upon the brackets, and clamped thereto by bolts *b*, the foot *f*, attached to the lower end of the slide and fixed movably upon the front of the column, the tongue *a*, fitted to a recess in the seat *d*, and the ribs *r*, fitted to the beveled edges of the seat, as and for the purpose set forth.

411,885. STEAM-HEATER. EDWIN G. BROWN, Waltham, Mass. Filed Apr. 16, 1888. Serial No. 270,122. (No model.)

Claim.—1. In combination with the fire-pot boiler B, two or more ∩-shaped tubes *c c*, reaching over and around it and connected by a common water and steam passage with it and with each other at their top and bottom ends, substantially as described.

2. In combination with the fire-pot boiler B, two or more ∩-shaped tubes *c c*, reaching over and around it, each provided with cross-tubes *c' c'* and connected by a common water and steam passage with said boiler and with each other at their top and bottom ends, substantially as described.



3. In combination with a fire-pot boiler B, two or more ∩-shaped tubes extending over and around it and connected with each other at top and bottom by a common water and steam passage, and the outer shell or casing A around the latter, connected by pipes with boiler B, the whole forming a base-burning heating-furnace, substantially as described.

4. The combination of steam-drum E, ∩-shaped tubes *c c*, one or more water-drums M, fire-pot boiler B, and steam and water escape passage *d*, leading from the upper end of the latter, the whole being connected together by water and steam passages, substantially as described.

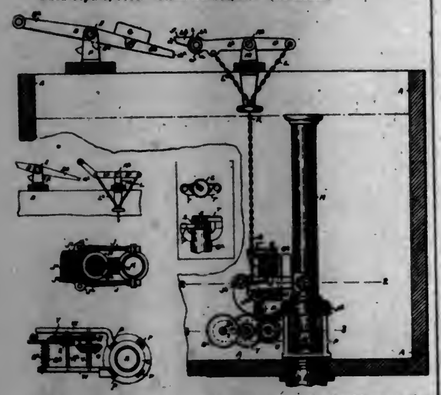
5. In combination with fire-pot boiler B, a ∩-shaped tubular reservoir *c*, embracing the fire-pot between its lower ends and provided with a cross-tube *c'*, passing over the fire-pot between its opposite sides and forming a double crown-sheet for the ascending heat, substantially as described.

411,886. CASING FOR ARTESIAN WELLS. ALEXANDER J. CLARK, Ocean, N. Y. Filed Dec. 14, 1888. Serial No. 293,580. (No model.)

Claim.—1. As a means for packing Artesian wells, a short casing adapted to extend a short distance above the vein or rock to be shut off and having a packing at the upper end thereof, substantially as and for the purposes set forth.

2. The combination of a short casing for Artesian wells, a collar and nipple at the upper end thereof, and a packing-ring supported by said collar and nipple, substantially as and for the purposes set forth.

3. The combination of a short casing for Artesian wells, a nipple at the upper end, and a rubber, hemp, or like packing-ring surrounding said nipple and adapted to be forced against the walls of the well by the spreading of the nipple, substantially as and for the purposes set forth.



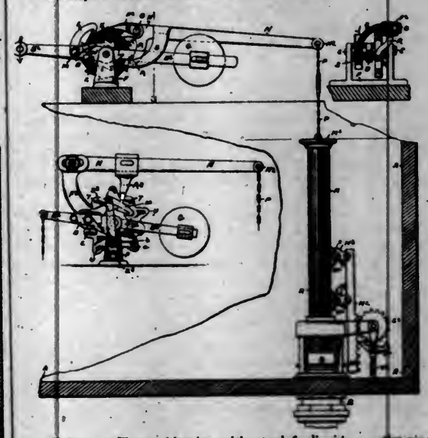
4. The combination, with a short casing for Artesian wells, of a nipple at the upper end adapted to be spread or expanded, substantially as and for the purposes set forth.

411,887. WHEEL. GEORGE B. DEAN, Lancaster, Ill. Filed Nov. 12, 1888. Serial No. 290,637. (No model.)

Claim.—The combination of the hub having a central annular flange, said flange being provided with radial grooves in its sides, transverse openings at the inner ends of said grooves, and lugs near the outer ends of the same at the sides thereof, and the spokes fitting in said grooves and between said lugs and having their inner ends bent laterally and passed through the transverse openings in the flange, as set forth.

411,888. OPERATING MECHANISM FOR VALVES OF WATER-CLOSET OR OTHER TANKS. PATRICK W. DOHERTY, Boston, Mass. Filed Sept. 3, 1888. Serial No. 284,511. (No model.)

Claim.—1. The combination, with a tank for liquid, an outlet-pipe for the liquid, an opening and closing valve to the outlet-pipe, and mechanism adapted to secure an opening and closing of the valve, of gearing composed of a train or series of wheels severally turning on fixed axes, and having the wheel at one end geared to the valve or some part connected therewith, and the wheels interposed between the opposite end wheels and said end wheels adapted to impart to the wheel at the opposite end of the train to the wheel geared to the valve a speed of rotation reduced as compared with that of the end wheel geared to the valve, and of means—such as a spring, weight, &c.—applied to said train to act as a resistant to its movement, substantially as described, for the purpose specified.



2. The combination, with a tank for liquid, an outlet-pipe for the liquid, and opening and closing valve to the outlet-pipe, and mechanism adapted to secure an opening and closing of the valve, of gearing composed of a train or series of wheels severally turning on fixed axes, and having the wheel at one end geared to the valve or some part connected therewith, and the wheels interposed between the opposite end wheels and said end wheels adapted to impart to the wheel at the opposite end of the train to the wheel geared to the valve a speed of rotation reduced as compared with that of the end wheel geared to the valve, and of means—such as a spring, weight, &c.—applied to said train to act as a resistant to its movement, and also of a ratchet-wheel S, turning on a fixed axis and pawl to engage with and disengage from said ratchet-wheel in the opposite movements of the valve, substantially as described, for the purpose specified.

3. The combination, with a tank for liquid, an outlet-pipe for the liquid, an opening and closing valve to the outlet-pipe, and mechanism adapted to secure an opening and closing of the valve, of a train of gearing connected to the valve or some part connected therewith and adapted to exert resistance to the movement of the valve, and comprising a suitably supported and rotating cam-slotted sleeve O^2, engaged by a pin N of the valve, a pawl T, carried by said sleeve, and an arbor Q, turning in said sleeve and having a ratchet-wheel S, and connected to said gearing-train, substantially as and for the purpose specified.

4. The combination, with a tank for liquid, an outlet-pipe for the liquid, and an opening and closing valve to the outlet-pipe, of a reciprocating lever D, an oscillating lever L^2 at one end, and also one end of said lever D adapted for abutment on and escape from each other in the movement to and fro of lever D, and flexible lines L L^1—such as chains—each connected at one end to and on opposite sides of the fulcrum of lever L^2, and at its other end to the valve or part connected therewith, substantially as described, for the purposes specified.

5. The combination, with a tank for liquid, an outlet-pipe for the liquid, and an opening and closing valve to the outlet-pipe, of an oscillating lever L^2, a lever J, fulcrumed on a suitable support and engaging the valve or some part connected therewith, and lines L L^1—such as chains—connected to the lever L^2 on opposite sides of its fulcrum and to the lever J, substantially as described, for the purpose specified.

411,889. OPERATING MECHANISM FOR VALVES OF WATER-CLOSET OR OTHER TANKS. PATRICK W. DOHERTY, Boston, Mass. Filed Sept. 3, 1888. Serial No. 284,512. (No model.)

Claim.—1. The combination, with a tank for liquid, an outlet-pipe for the liquid, and an opening and closing valve for the outlet-pipe, of a cam rotating about a fixed axis and suitably adapted to be rotated, and a lever having a fixed fulcrum and adapted to rest on said cam and connected to the valve, so that on a rotation in one direction of said cam said lever is operated to open the valve and then the valve left free to close, substantially as described.

2. The combination, with a tank for liquid, an outlet-pipe for the liquid, and an opening and closing valve for the outlet-pipe, of a cam rotating about a fixed axis, a ratchet-wheel turning on a fixed axis to rotate in one direction of its rotation said cam, a pawl to engage and thus to rotate said ratchet-wheel, and adapted to be reciprocated about the axis of said ratchet-wheel, and a lever having a fixed fulcrum and adapted to rest on said cam and connected to the valve, all so that on a rotation in one direction of said cam said lever is operated to open the valve and the valve left free to close, substantially as described.

3. The combination, with a tank for liquid, an outlet-pipe for the liquid, and an opening and closing valve for the outlet-pipe, of two

cams separately and independently rotating about a fixed axis common to both, two pawls—one for each cam—to engage and thus to rotate it, a device carrying said pawls and reciprocating them about the axis of said cams, and a lever having a fixed fulcrum and adapted to rest on each of said cams and connected to the valve, and all so that on a forward and backward reciprocation of said pawls about the axis of said cams one of the said cams will be rotated in said forward and the other in said backward reciprocation of the pawls, and thereby each of said cams rotated about its axis and said lever operated by each, securing two openings of the valve and a leaving of the valve to close after each opening, substantially as described, for the purpose specified.

4. The combination, with a lifting and dropping valve elevated by a positive connection with a valve-lifting mechanism of the water-closet, of a vertical toothed or rack bar N^3, links N^2 at their opposite ends pivoted to the rack-bar and to the valve or some part held thereon, and having abatement-shoulders *g* A at opposite points to abut against the valve or some part held thereon, and a gear-wheel turning on a fixed axis and arranged to mesh with said rack-bar, substantially as described, for the purpose specified.

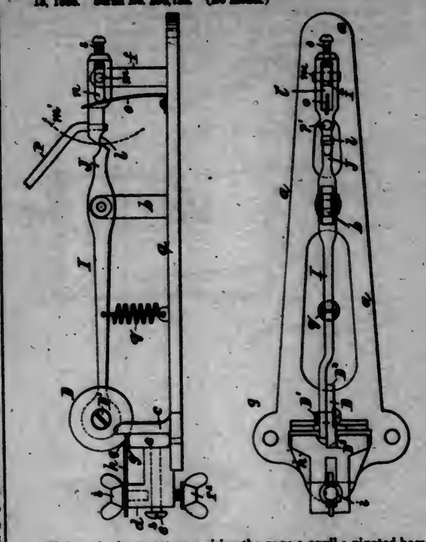
411,890. MEANS FOR OPENING BOTTLES CONTAINING LIQUIDS UNDER PRESSURE. FREDERICK PEATES, London, England. Filed Dec. 4, 1888. Serial No. 292,694. (No model.)

Claim.—As an improved article of manufacture, the trigger-opener hereinbefore described, and particularly illustrated by Fig. 3 of the accompanying drawings, having a curved part D to overlap the stopper and trunnions E E at its extremities to form the hinge required to operate the pricker C by means of the handle B, as and for the purposes substantially as described.

411,891. CAR-COUPLING. GEORGE W. GEMMING and EDGAR S. LEWIS, Ingraham, Ill. Filed June 13, 1889. Serial No. 314,177. (No model.)

Claim.—The cars A A, provided with counterpart draw-heads B B, containing the cushioned buffer-blocks F, in combination with the headed pin D, moving in said guides, the link C, the chain L, and the arm J, movable either by the lever J^4 or by lever J^3 through the chain K, the whole co-operating in the manner, for the purpose, and in the correlation herein fully shown and described.

411,892. SCISSORS. JOSEPH O. HEBNER, Grand Rapids, Wis. Filed Mar. 18, 1889. Serial No. 303,894. (No model.)



Claim.—1. The combination, with the opposite blades pivoted near their rear ends, of a finger-receiving ring connected to one of the blades intermediate its point of pivot and free ends, and similar rings connected to the opposite blade at each side of its pivot, substantially as specified.

2. The combination, with the pivoted blades, of a loosely-swiveled finger-receiving ring mounted in each blade, substantially as specified.

3. The combination, with the blade 1, of the blade 2, pivoted to each other, as at 7, the blade 1, having the opening 8 intermediate its point of pivot and free end, and the finger-receiving ring 3 swiveled therein, and the blade 2, having the opposite perforation 9 and swiveled ring 5, and the perforation 6 in rear of its pivot, and the loosely-swiveled ring 4 therein, substantially as specified.

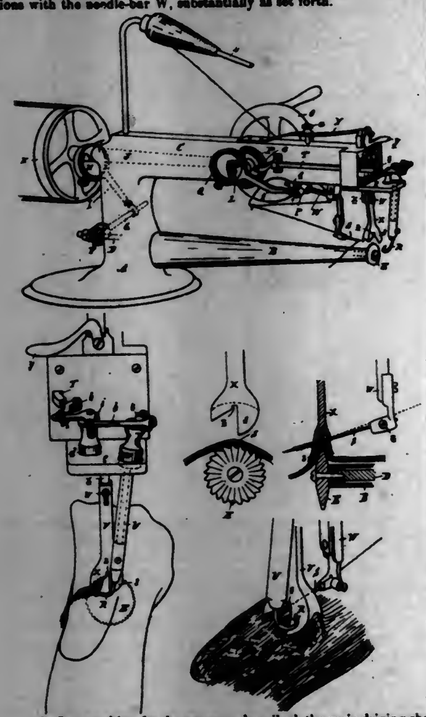
411,898. SAW-SET. JAMES ELDER, Bound Brook, N. J. Filed Nov. 13, 1888. Serial No. 290,722. (No model.)

Claim.—1. A saw-set comprising the gage *c*, anvil *c*, pivoted hammer-helve I, with hammer-head pressed toward the anvil by a spring, the lever J, projected from the rear of the hammer-helve, and the trip *l*, formed with slot *n*, fitted movably upon the pin *m*, and provided with adjusting set-screw *s* and spring *o*, the whole arranged and operated as and for the purpose set forth.

2. A saw-set comprising the bed *a*, provided with fulcrum-bearing *b*, trip-bearing *f*, gage *c*, anvil *c*, and set-screw c^2, for clamping the same removably in its place, the hammer-head D, the helve I, with the lever *j* projected from the rear of the bearing *b*, the spring *g*, and the trip *l*, formed with slot *n*, fitted movably upon the pin *m*, and provided with the adjusting set-screw *c*, spring *o*, and hand-lever P, the whole arranged and operated substantially as set forth.

3. A saw-set comprising the bed *a*, provided with fulcrum-bearing *b*, trip-bearing *f*, gage *c*, anvil *c*, having different bevels upon its four corners, numbered substantially as herein set forth, and set-screw c^2, for clamping the same removably in its place, the hammer-head D, the helve I, with the lever *j* projected from the rear of the bearing *b*, the spring *g*, and the trip *l*, formed with slot *n*, fitted movably upon the pin *m*, and provided with the adjusting set-screw, spring, and hand-lever, the whole arranged and operated substantially as set forth.

4. In a saw-set, the combination, with an anvil and a hammer head vibrated to and from the same, of a centering device consisting in the toggles *r'*, jointed together and to the bed of the saw-set, and provided at their outer ends with the mandrel *r*, the socket *t*, and the conical plug *t'*, the whole arranged and operated as and for the purpose set forth.



411,894. SEWING-MACHINE FOR MAKING LOOP-STITCH LINING. HENRY H. HUMPHREY, Detroit, Mich. Filed Nov. 24, 1888. Renewed July 13, 1889. Serial No. 317,466. (No model.)

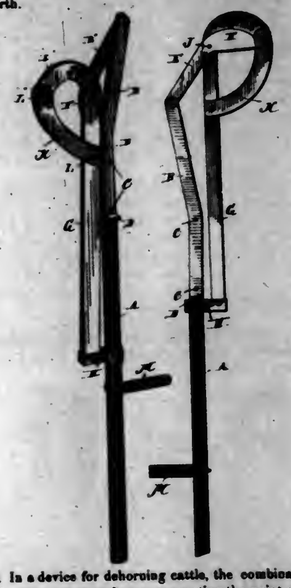
Claim.—1. In a machine for the purpose described, and in combination with the needle and looping mechanism thereof, a feed-disk which decreases in thickness from the center to the periphery and a notched presser-foot extending down on both sides of said disk, and constructed and arranged to press the fabric into a ridge, substantially as described.

2. In a machine for the purpose described, an oscillating looper, a feed-disk which decreases in thickness from the center to the periphery, a grooved presser-foot extending down on each side of the disk, and a reciprocating needle running in a path substantially parallel with the axis of the disk, substantially as described.

3. In a machine for the purpose described, the combination of the table B, shaft D, carrying upon its end a corrugated feed-disk, which decreases in thickness from the center to the periphery, said shaft running through said table, a presser-foot extending down both sides of the disk, and a ratchet-wheel F, secured on said shaft, with the pawl G, connecting strap I, and eccentric H, secured on the main driving-shaft J, substantially as specified.

4. In a machine for the purpose described, the combination, with the stitch-forming mechanism and feeding devices, of the shaft L, journaled transversely through the arm C, with the channeled cam P and its connections with the looper R, and eccentric Q and its connections with the needle-bar W, substantially as set forth.

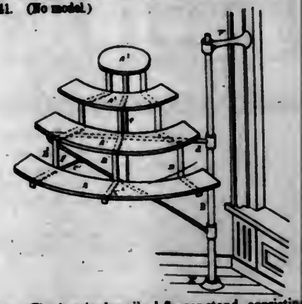
5. In a machine for the purposes described, the main driving-shaft J, journaled longitudinally in the arm C and carrying upon its end a bevel-pinion N, in combination with shaft L, journaled transversely in the arm C and carrying a bevel-pinion M, the eccentric H, the feed-disk and its connections with the eccentric H, channeled cam P, the looper R and its connections with the cam P, and the eccentric Q, the needle and its bar, and its connections with the eccentric Q, substantially as specified.



6. In a machine for the purpose described, and in combination with the sewing devices and the feed-disk, a recessed presser-foot extending down both sides of the feed-disk, and having lip 3 extending down between the looper and the material being operated on, substantially as described.

411,895. DEVICE FOR DEHORNING CATTLE. JAMES M. KING, Chester, Nebr., assignor of one-half to John W. Mendenhall and John P. Beermaster, same place. Filed May 9, 1889. Serial No. 310,171. (No model.)

Claim.—1. In a device for dehorning cattle, the combination of a hooked-shaped knife or cutter, plates or braces connecting the point of said cutter with the shank of the same, and a knife or cutter attached pivotally at the base of said hook-shaped cutter, with its point sliding between the said plates or braces, substantially as set forth.

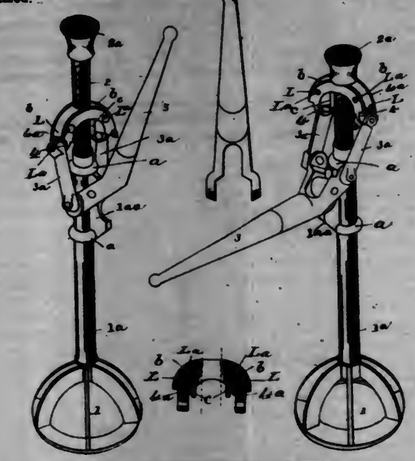


2. The combination of a rod or handle, the metallic bars or straps attached to the sides of the same and having their lower ends bent outwardly to form shoulders or offsets, a knife or cutter having the outer end of its shank mounted pivotally between the outer ends of said straps, a hook-shaped knife or cutter, a bolt or rivet connecting the said knives or cutters at their respective bases, and a ring suitably attached to the shank of the hook-shaped cutter for the passage of the rod or handle, substantially as set forth.

3. In a device for dehorning cattle, the combination of a hook-shaped cutter, straps or braces connecting the point of the same with the shank thereof, a cutter mounted pivotally at the base of the said hook-shaped cutter, a handle having upwardly-extending straps, the outer ends of which are connected pivotally with the outer end of the shank of the pivoted cutter, and a ring or guide for said handle at the lower end of the shank of the hook-shaped cutter, substantially as set forth.

4. In a device for dehorning cattle, the combination of a hook-shaped cutter, straps or braces connecting the point of the same with the shank thereof, a cutter mounted pivotally at the base of said hook-shaped cutter, a ring suitably attached to the shank of the latter, and a rod extending through said ring and having a laterally-extending handle and upwardly-extending straps, the outer ends of which are connected pivotally with the outer end of the shank of the pivoted cutter, and the lower ends of which are bent outwardly so as to form shoulders or offsets, substantially as and for the purpose set forth.

411,896. FLOWER-STAND. JAMES A. KOEHLER and CLARENCE A. KOEHLER, East Saginaw, Mich. Filed Jan. 16, 1889. Serial No. 296,541. (No model.)

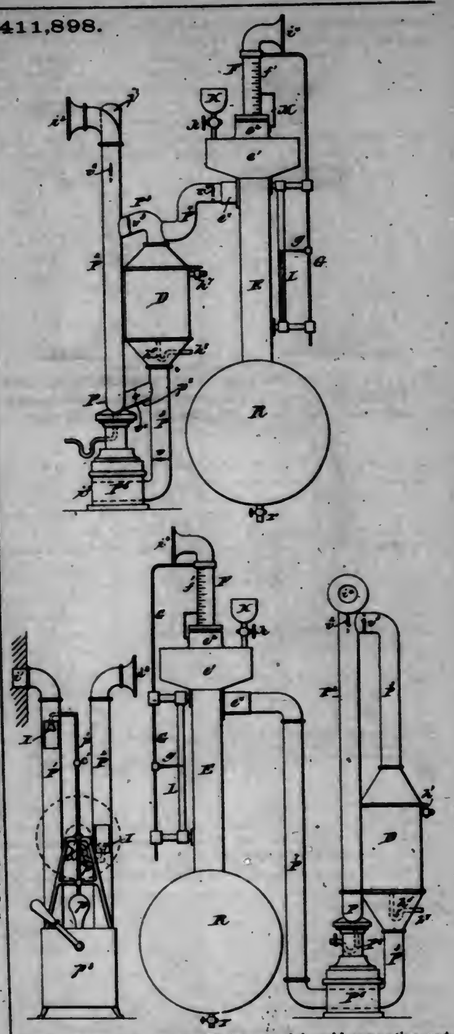


Claim.—The herein-described flower-stand, consisting of a series of stepped brackets, shelves secured to said step-brackets one above the other, a rotatable standard, a bracket-supporting arm constructed of a piece of bent metal having its two extremities fixed to said standard, and braces c, c', and c^2, connecting the opposite portions of said bracket-arm with the said shelves, substantially as set forth.

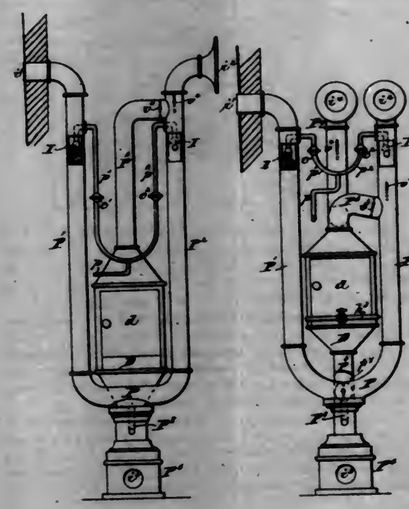
411,897. LIFTING-JACK. LORENZO MERKER, Chicago, Ill., assignor of one-half to Delivar Mosher, Detroit, Mich. Filed July 9, 1889. Serial No. 316,942. (No model.)

Claim.—1. A lifting-jack consisting of the base A, to the center of the upper surface of which is secured the upright tubular standard 1^a, having the lateral projection 1^m, such projection being secured thereon by collars a a, the bifurcous lever 3, to the ends of which are pivotally connected arms 3^a, which in like manner are joined to the clutch, the clutch 4, consisting of the frame 4^a and dogs b b, as shown, and the screw-threaded cylindrical shaft arranged to freely enter the tubular standard and to be secured at any point by the clutch and having on its upper end head 2^a.

2. The combination of the tubular standard 1^a, the base 1, the lateral projection 1^m, collars a a, bifurcous lever 3, arms 3^a, clutch 4, and screw-threaded shaft 2, all as described, and for the purpose named.



411,898. VENTILATING APPARATUS. MAX MEISTER, Turin, Italy, assignor to himself, Victor de L'Hervilliers, same place, and Theresa Meistera, Munich, Germany. Filed Mar. 10, 1888. Serial No. 266,816. (No model.) Patented in England Feb. 10, 1888, No. 871; in Austria-Hungary Apr. 1, 1888, No. 43,306 and No. 10,097; in Italy Dec. 31, 1888, XLI, 400; in Norway May 2, 1887, No. 626, and in Spain Feb. 16, 1888, No. 12,095.



Claim.—1. A combined ventilating and heating apparatus consisting of a U-shaped air-pipe, an injector in the inlet branch thereof, a hot-air pipe connected with the outlet branch of said U-shaped pipe, and a damper in said hot-air pipe, substantially as and for the purposes specified.

2. A combined ventilating and air heating or cooling apparatus consisting of a U-shaped air-pipe, an injector in the inlet branch thereof, the drum D, and air inlet and outlet pipes for the same, said outlet-pipe being provided with a damper and connected with the outlet branch of the U-shaped air-pipe, substantially as and for the purposes specified.

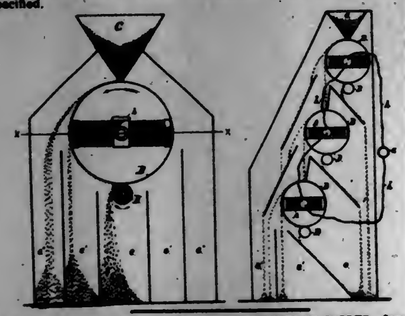
3. A combined ventilating and air heating or cooling apparatus consisting of a U-shaped pipe, an injector in the inlet branch thereof, the drum D, air inlet and outlet pipes therefor, said air-outlet pipe being provided with a damper and connected with the outlet branch

411,898.

of the U-shaped pipe, a pipe P^4, interposed in said connection and provided with a damper v^1, and the valved connection p^x between the U-shaped pipe and the air-inlet pipe of the drum D, substantially as and for the purposes specified.

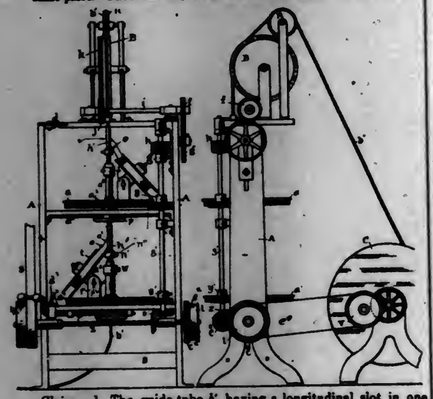
411,899. ELECTRO-MAGNETIC SEPARATOR. RICHARD R. MOFFATT, New York, N. Y., assignor, by direct and mesne assignments, to the Moffatt Electric Construction Company, of New York. Filed Aug. 9, 1888. Serial No. 282,267. (No model.)

Claim.—1. An electro-magnetic separator having one or more electro-magnets that are energized by means of an alternating electric current, substantially as and for the purpose specified.



2. In an electro-magnetic separator, an electro-magnet energized by means of an alternating current of electricity, substantially as and for the purpose specified.

3. In an electro-magnetic separator, an electro-magnet, combined with means for rapidly changing its polarity, substantially as and for the purpose herein specified.

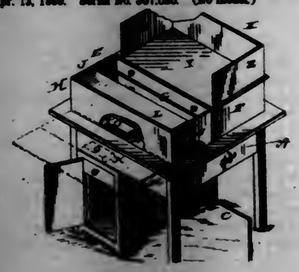


4. In an electro-magnetic separator, the stationary electro-magnet A, located within a magnetic rotating drum B, substantially as and for the purpose specified.

5. In an electro-magnetic separator, the stationary electro-magnet A, located within a rotating drum B, and energized by means of

an alternating electric current, substantially as and for the purpose specified.

411,900. MACHINE FOR COVERING WIRES OR CABLES. JOHN MCCAREY, Providence, R. I., assignor to the New England Butt Company, same place. Filed June 27, 1888. Serial No. 315,784. (No model.)

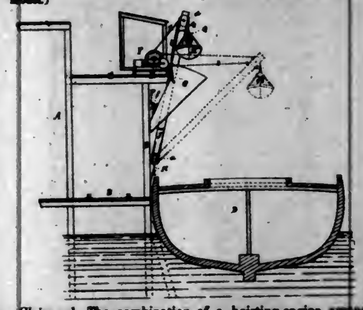


Claim.—1. The guide-tube *h'*, having a longitudinal slot in one side and recessed out at its lower end to fit on the hub of plate *a*, and provided with a set-screw to hold it in place, in combination with said plate *a*, a reel attached to said plate, and mechanism to revolve the plate, substantially as and for the purpose specified.

2. The collar *n'*, furnished with a pin *o* and set-screw, substantially as described, in combination with the tube *h'* and plate *a*, having a reel attached to its face, for the purpose set forth.

3. A reel composed of a plate *t'*, having a hollow hub on its face, the plate *t*, provided with a hub having a hole through it fitted to slide on the hub of the plate *t'*, washer a^3, spring n^3, and screw *t*, in combination with the stud a^3, knee-plate *r*, and plate *a*, substantially as and for the purpose set forth.

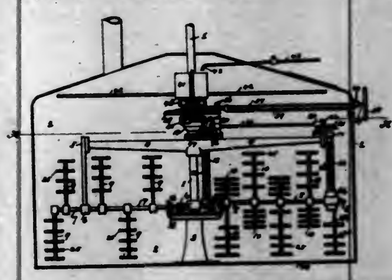
4. The combination of plate *a*, gear-wheel *c'*, made adjustable to and from said plate by means of a slot made in the table for its stud, substantially as described, with gear-wheels *g'* and *d'*, upright shaft *s'*, and means for rotating said shaft, for the purpose set forth.



411,901. SEWING-CABINET. JULIA A. MCGLOSSON, Kingston, Tenn. Filed Apr. 13, 1888. Serial No. 307,080. (No model.)

Claim.—1. The combination, with the supporting-table having a hook D on its side, of the rack pivoted at one end to the side of the table and having its free end resting on said hook D, the said rack being made in two sections pivoted together, as set forth.

2. The combination of the table, the stationary frame F, secured on the upper side thereof, the folding frame H, consisting of the base-plate I, the side plates J, leaf K, and partial top L, and the screw X, hinged to the stationary frame F and adapted to swing over the folding frame, as set forth.



411,902. APPARATUS FOR HANDLING COAL. GEORGE W. RAWSON, Cambridge, Mass. Filed Feb. 21, 1889. Serial No. 300,651. (No model.)

Claim.—1. The combination of a hoisting-engine arranged to move on a track, a hopper secured to said engine and movable therewith, the rail H, the shears having sheaves *d* and guides *e* and adapted to move lengthwise on and swing transversely of the said rail, and the guys *b b*, connected to the engine and shears, with the hoisting-bucket and its operative lines, all supported, arranged, and operated essentially as shown and set forth.

2. The shears provided with sheaves *d d*, guide-prongs *e*, wheels *a*, and hook *c*, pivoted thereto, in combination with the hoisting-engine arranged to move on a track and having secured to it a hopper movable with it, said hopper provided with a wheel to work against a rail P, the rail H, supported as described, for sustaining the shears, the guys *b b*, secured to the engine and shears, and the hoisting-bucket and its operative lines, all supported, arranged, and operated essentially as shown and set forth.

411,903. MASH-MACHINE. GEORGE RIEBECK, Allegheny, Pa. Filed May 31, 1887. Serial No. 239,877. (No model.)

Claim.—1. In a mash-machine, the combination, with the power-shaft and a rigid arm extending angularly therefrom, of a rotatable mixer-shaft provided with the usual mixers and vertically adjustable, whereby said mixers may be brought into or out of contact with the mash, and suitable means whereby to adjust said mixer-shaft.

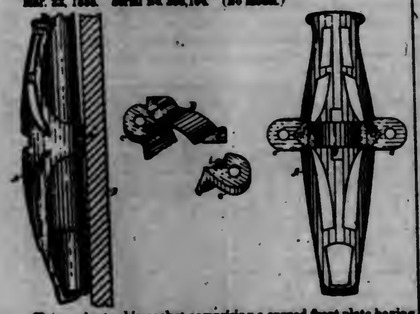
2. In a mash-machine, the combination, with a vertical power-shaft located axially on the mash-tub, of a longitudinal arm rigidly fixed upon said shaft toward the top of the mash-tub, guides depending from said arm toward the respective ends thereof, a mixer-shaft adjustable vertically along said guides, and suitable means for raising and lowering said shaft, substantially as described.

3. In a mashing-machine, the combination, with a vertical rotary shaft 1, carrying a shaft 7, having a series of mash-arms or paddles 9, and a fixed gear-wheel with which the shaft 7 engages, of a vertically-movable shaft 8, mounted in sliding bearings and adapted to gear with the fixed gear-wheel when lowered, and elevating-screws

for raising said shaft 8 at any desired elevation within the mash-tub, substantially as and for the purpose described.

4. In a mashing-machine, the combination, with a vertical rotary shaft 1, carrying a horizontal shaft 7, having a series of mash-arms, and a fixed gear-wheel with which said horizontal shaft is normally geared, of a vertically-movable shaft 8, journaled in sliding bearings and adapted when lowered to gear with the fixed gear-wheel and be rotated thereby, the elevating-screws 13, for raising the shaft 8 and bearings, and mechanism, substantially as described, for simultaneously rotating the elevating-screws, substantially as and for the purpose described.

5. In a mashing-machine, the combination of a vertically-movable horizontal shaft 8, journaled in sliding bearings and having a series of arms, a vertical shaft 1, carrying upright guides 23, upon which the sliding bearings are fitted, the elevating-screws working in the bearings, a shaft 20, geared to both screws to simultaneously rotate the same, a clutch fitted on the vertical shaft and having one section thereof normally geared with the screw-operating shaft, and an externally-operated shaft adapted to rotate the clutch and the screws to adjust the vertically-movable shaft, substantially as and for the purpose described.

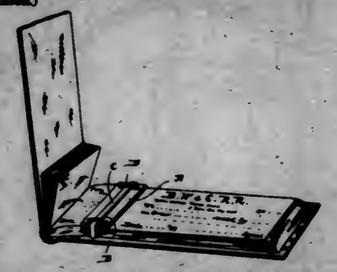


6. In a mashing-machine, the combination of a vertically-movable shaft 8, carrying a series of mash-arms and journaled in sliding bearings, a vertical shaft 1, carrying the beam 4 and the vertical parallel guides 23, upon which the sliding bearings work, the elevating-screws, a horizontal shaft 20, geared to the elevating-screws to simultaneously rotate the same, the clutch fitted on the vertical shaft and having one section thereof geared with the shaft 20, a gear-wheel 28, secured to the other section of the clutch, and an externally-operated rotatory shaft 37, adapted to gear with the wheel 29 to rotate the clutch and the elevating-screws, substantially as and for the purpose described.

7. In a mashing-machine, the combination, with a vertical shaft 1 and a fixed gear-wheel 11, of a vertically-movable shaft 8, carrying a series of mash-arms and journaled in sliding bearings, fixed guides for the bearings, the elevating-screws, a clutch fitted on the vertical shaft and having one section thereof geared with the elevating-screws, an externally-operated shaft for rotating the clutch, and tripping devices for automatically uncoupling the clutch-sections when the vertically-movable shaft reaches its lowest limit and gears with the fixed gear-wheel, substantially as and for the purpose described.

8. In a mashing-machine, the combination, with a vertical shaft 1 and a fixed gear-wheel 3, of a vertically-movable shaft 8, carrying a series of mash-arms and journaled in sliding bearings 46, one of which has a lug 34, the elevating-screws to rotate the same simultaneously, a clutch having one section thereof geared with the screw-operating shaft, and an operating-rod 32, connected at one end with one section of the clutch and adapted to strike the lug 34 when the shaft 8 is lowered, to thereby uncouple the sections of the clutch, substantially as and for the purpose described.

9. In a mashing-machine, the combination, with a vertical shaft 1, carrying the horizontal rotary shafts 8, provided with the mash-arms, of a sectional water-reservoir fitted loosely on the vertical shaft above the horizontal shafts and supported on friction-rollers which rest upon a suitable support, the horizontal radial pipes 42, secured to the reservoir and having a series of fine perforations formed in opposite sides, and a pipe for supplying water to the reservoir, substantially as and for the purpose described.



411,904. WHIP-SOCKET. GEORGE P. ROSS, Fenton, Mich. Filed Mar. 22, 1888. Serial No. 268,164. (No model.)

Claim.—1. A whip-socket comprising a curved front plate having side lugs for attachment and a cross-bar extending across the rear portion of said front plate and connected to said front plate at about the center or fulcrum-point, substantially as described.

2. A whip-socket comprising a curved front plate having side lugs for attachment and a cross-bar extending across the rear portion of said front plate and connected thereto at about the center or fulcrum-point by rivets cast on the front plate and headed over the cross-bar, substantially as described.

411,905. STRAIGHT-EDGE FOR RECEIPT OR STUB BOOKS. GEO. ROSS, South Butte, Mont. Filed Mar. 8, 1889. Serial No. 302,703. (No model.)

Claim.—1. The straight-edge for receipt or stub books, consisting of a plate bearing on the leaves and provided with a continuous elastic band encircling both the plate and the book and secured to the plate to hold it in place, substantially as specified.

2. The straight-edge for receipt or stub books, consisting of the plate provided with upstruck ears, and the band extending over the plate and engaged by the said ears, substantially as specified.

3. As a new article of manufacture, the straight-edge for receipt or stub books, consisting of a plate A, having parallel edges and opposite struck-up bent ears formed intermediate its ends, and an elastic band connected to the plate by means of the ears and adapted to extend around the leaves of the book, substantially as specified.

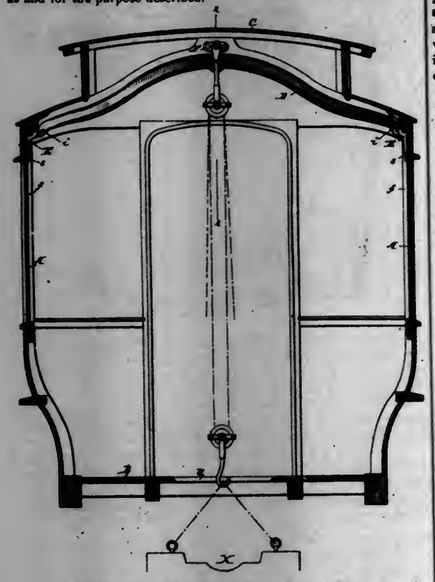
411,906. CULTIVATOR. JAMES SHANK, Clayton, Ill. Filed Mar. 27, 1888. Serial No. 268,033. (No model.)

Claim.—In a cultivator, the combination, with the beams formed as shown and having their rear ends provided with vertically-disposed cross-heads *b*, of the toothed bars or plates arranged above the beams and in engagement with the forward edge of the upper branch of the cross-head, the lower branch of said head being in engagement with the outer side of the yoke, the yoke straddling the beam and plates from below upwardly, and the plates and nuts for securing the yokes in position, substantially as specified.

411,907. GRIP-HOISTING ARCH-BAR FOR CABLE CARS. JOHN STEVENSON, New York, N. Y. Filed July 20, 1888. Serial No. 318,113. (No model.)

Claim.—1. A car having as part of its apparatus a cable-grip machine, and above it an arch-bar adapted to support a tackle for lifting the cable-grip machine, substantially as and for the purpose described.

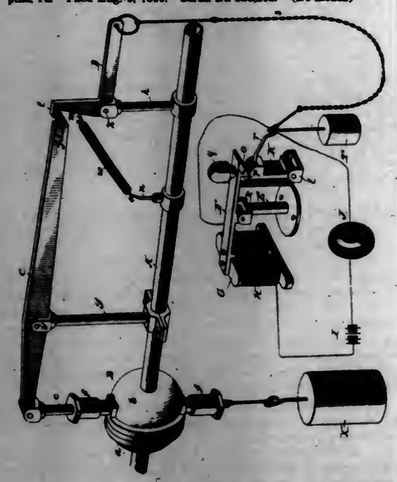
2. A car having a cable-grip below the car-floor with opening through the floor sufficient for the passage of the cable-grip machine, and over the machine and connected with the upper part of the car structure an arch-bar suitable for holding a tackle adapted to hoisting and lowering the grip-machine in and out of place in the car, substantially as and for the purpose described.



3. A car having above a cable-grip machine an arched bar with its ends supported by the side walls of the car-body, substantially as and for the purpose described.

4. A car having a tackle-supporting arched bar with its ends lodged in metal plates secured to the side top rails of the car-body, substantially as and for the purpose described.

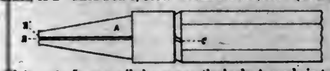
5. A car having a tackle-supporting arch-bar immediately beneath the car-roof, with the ends of the arch-bar lodged in sockets or metal plates secured in part to the side pillar or other portion of the car-body, substantially as and for the purpose described.



6. A car having a tackle-supporting arch-bar immediately beneath

the car-roof, with the end of the arch-bar connected to a metal plate or socket secured to the side wall structure of the car-body by a detachable connection, permitting removal of the arch-bar without affecting the metal plate or socket union with the car-body, substantially as and for the purpose described.

7. A car having a tackle-supporting arch-bar with and a stay for supporting the crown of the arch, and adapted to permit the arch-bar being removed or withdrawn from its place without disturbing the crown stay or brace, substantially as and for the purpose described.



411,908. ELECTRIC VALVE DEVICE. FRANK STEVENS, Philadelphia, Pa. Filed Aug. 9, 1889. Serial No. 320,292. (No model.)

Claim.—1. In an electric valve device, the combination of the supply-pipe, a weighted valve in the line thereof, a standard on the pipe, a lever pivoted to the standard and connected to the valve, a detent adapted to engage the free end of the lever, a spring, a weight connected to the detent, a pivoted dog normally carrying said weight, and an electro-magnet and connections controlling the dog, substantially as set forth.

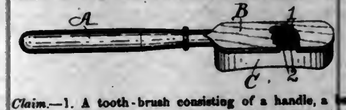
2. In an electric valve device, the combination of the supply-pipe, a weighted valve in the line thereof, a standard on the pipe, a lever pivoted to the standard and connected to the valve, a second standard also carried by the pipe, an L-shaped detent pivoted to the latter standard and adapted to engage the free end of the lever, a spring, a weight loosely connected to the detent, a pivoted dog normally carrying said weight, and an electro-magnet and connections controlling the dog, substantially as described.

411,909. PENCIL-SHARPENER. PARDON W. TILLINGHAST, Providence, R. I. Filed Dec. 5, 1888. Serial No. 292,762. (No model.)

Claim.—1. In a pencil-sharpener, the body A, made in two pieces, in combination with the collar A', for the purpose of holding the two parts A together.

2. In a pencil-sharpener, the body A, made in two pieces and provided with a ferrule or collar A' and having cutting-edges B and C, the said cutting-edges C being at an angle to the plane of the pencil, for the purpose described.

3. In a pencil-sharpener, the body A, composed of one or more parts and provided with cutting-edges at each end of the same, the cutting-edges C being at an angle to the axis of the sharpener and to the plane of the pencil for the purpose of trimming down the pencil, so that the outside of the sharpener may be the same or a smaller diameter than the pencil.



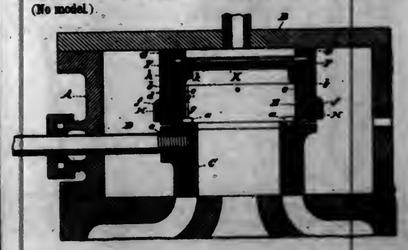
4. In a pencil-sharpener, the body A, composed of one or more parts, in combination with the nut E or other suitable means for adjusting the outlet B' to a large or small diameter, as and for the purpose described.

5. In a pencil-sharpener, the body A, composed of one or more parts and having its smallest diameter slightly removed from the end of the same, for the purpose of giving a curved cutting-edge B at the point or outlet B'.

6. A pencil-sharpener composed of one or more parts and provided with an inwardly-projecting piece D, adapted to press into the pencil and hold the sharpener on the same.

7. In a pencil-sharpener, the combination of the body A, cutting-edges B and C, tongue D, and adjusting-nut E, all for the purpose specified.

411,910. RUBBER TOOTH-BRUSH. HERMAN E. VAN HORNE, New York, N. Y. Filed Mar. 20, 1888. Serial No. 267,871. (No model.)

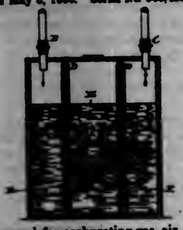


Claim.—1. A tooth-brush consisting of a handle, a back, and a honeycombed brush of soft rubber secured to the back, substantially as described.

2. As a new article of manufacture, a tooth-brush consisting of a handle and a back of hard material and a brush portion constructed of soft rubber secured to the back and honeycombed, substantially as described.

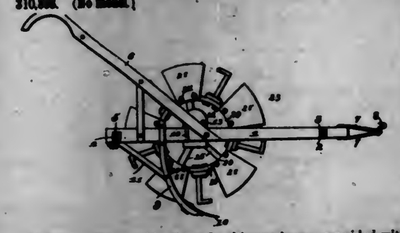
3. A tooth-brush consisting of a handle, a back, and a vertically-honeycombed brush of soft rubber attached to the back, substantially as described.

4. In a tooth-brush, a honeycombed brush portion formed of soft rubber adapted to be attached to a brush handle or back, substantially as described.



411,911. BALANCED SLIDE-VALVE. WILLIAM A. WHEELAND and JOHN J. WHEELAND, Chicago, Ill. Filed Jan. 28, 1889. Serial No. 297,982. (No model.)

Claim.—1. The balanced slide-valve provided with a hollow extension having steam-passages, in combination with the follower encircling said valve-extension and having between itself and said extension a packing-chamber the upper wall of which is formed by an inner flange upon the follower about midway the height of said follower, said flange forming the bottom of a steam-space communicating with said steam-passages of the valve-extension, substantially as set forth.



2. The balanced slide-valve provided with a hollow extension having steam-passages, and a covering-plate connected thereto, in combination with the follower encircling said valve-extension and having connected to its lower end a ring, and provided with a steam-space communicating with said steam-passages, said valve-extension having a flange forming with the valve-covering plate the bottom and top walls of a packing-chamber, and said follower having a flange forming with an inwardly-projecting flange of said ring the bottom and top walls of an additional packing-chamber, intermediately of which packing-chambers is arranged the aforesaid steam-space, substantially as set forth.

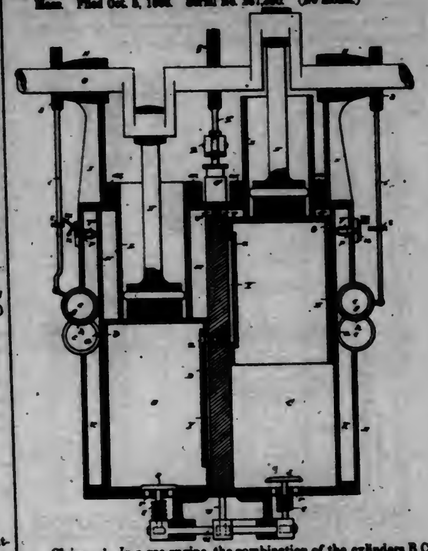
411,912. CARBURETING COMPOUND. TIMOTHY R. WHELAN, New York, N. Y. Filed May 2, 1889. Serial No. 309,483. (No specimens.)

Claim.—A compound for carbureting gas, air, or other illuminating-fluids, composed of benzole, sulphuric ether, and bisulphide of carbon united, as and for the purposes set forth.

411,913. COTTON-CUTTER. THEODORE C. WILDER, Heber, Tex., and ATWOOD R. WILDER, Homer, La. Filed May 15, 1889. Serial No. 310,893. (No model.)

Claim.—1. The combination of cultivator-beams provided with opposite adjustable brackets secured thereto, and provided with yielding bearings mounted in the brackets, of a transverse shaft mounted in the bearings, and a cupping-wheel mounted on the shaft, substantially as specified.

2. In a machine of the class described, a cupping-wheel consisting of a hub and rim, the latter provided with circumferential slots and with cups mounted in the slots, and intermediate legs or spokes also mounted in the slots, the cups and the spokes being adjustable and having their outer extremities curved upon the same radius, substantially as specified.



3. The combination, with opposite beams provided with opposite bearings, of opposite shafts mounted in the bearings, a sleeve connecting the shafts, a wheel mounted on the sleeve, and adjustable cups mounted on the wheel, substantially as specified.

4. The cupping-wheel consisting, essentially, of the hub 24 and spokes 25, the double rim 26, having space 27, the cups 28, secured to the rim by flanges 29, and bolts and nuts, and the intermediate arms 33, having the curved foot 36, and also secured to the rim by tenons inserted in the space 27 and held by nuts, as set forth.

5. The beams having the spring-actuated bearing-blocks, the separate opposite shafts or axles mounted in the said blocks, the sleeve connecting the inner ends of the separate shafts, and the cupping-wheel mounted on the sleeve, as set forth.

6. The beams having the adjustable brackets 13, forming bearings and having spring-actuated bearing-blocks carried thereby, combined with the cupping-wheel, having its shaft or axle mounted in the brackets and held down by the bearing-blocks, as set forth.

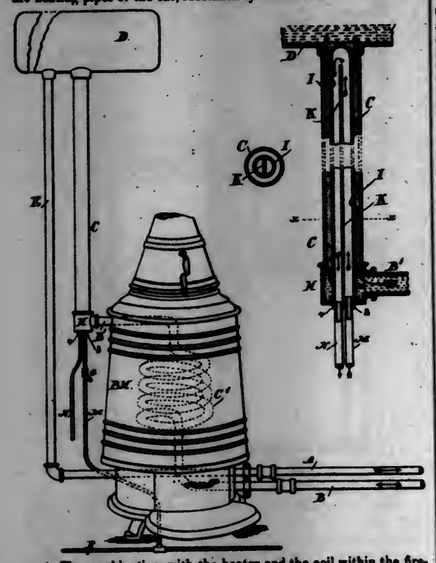
411,914. HYDROCARBON-ENGINE. ROBERT ALDERSE, Melville, Minn. Filed Oct. 5, 1888. Serial No. 287,260. (No model.)

Claim.—1. In a gas-engine, the combination of the cylinders B C, trunk-pistons with contracted portions forming chambers, and with recesses, as described, the cylinders O O', with piston-valves P P', provided with ports U U' and W W', the pipes V V', with fluid and air inlets, means, substantially as described, for operating the piston-valves P P', and igniting-jets *d*, communicating through ports with the cylinders, as set forth.

2. In a gas-engine of the character described, the combination of the pipe V, the fluid-supply pipe *p*, the air-valve *n*, and a tripping device applied to the rod *i* of the lighting device, substantially as described.

3. In a gas-engine, the combination of cylinders B C, trunk-pistons having contracted portions forming elongated chambers Y, the cylinders O O', provided with piston-valves P P', ported at U U' W W', the pipes V V', having fluid and air inlets, the ports Z Z X X', and means, substantially as described, for operating said valves P P', and igniting-jets *d*, communicating through ports with the cylinders, as specified.

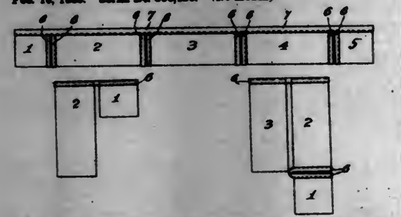
4. The combination of the cylinders B C, the trunk-pistons constructed, as described, with recesses Y and ports Z *b*, the ported cylinders c c, communicating with each other and with the ports *b*, and gas-jets in said cylinders, for the purpose specified.



411,915. HEATING APPARATUS FOR RAILWAY-CARS. WILLIAM C. BAKER, New York, N. Y., assignor to the Baker Heater Company, same place. Filed Dec. 10, 1888. Serial No. 293,120. (No model.)

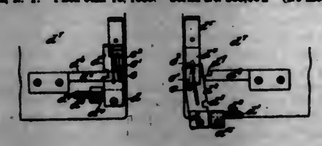
Claim.—1. The combination, with the expansion-vessel D, pipe E, and the heating-pipes within the car through which the water circulates, of the vertical pipe C below the expansion-vessel, the tube I within the pipe C, the head H, that closes the lower end of the pipe C and to which the pipe I is connected, the pipe M, for supplying steam, and the pipe N, for the water of condensation, and a partition within the pipe I for promoting the circulation of the steam within such pipe I, substantially as set forth.

2. The expansion-vessel D, descending pipe E, heating-pipes within the car, the end A of which is connected to the pipe E, a heater having a fire-chamber, and a coil of pipe within the fire-chamber, the lower end of which is connected to the pipe B of the heating-pipe, a vertical pipe C, connected at its upper end to the expansion-vessel and at the lower part to the upper end of the coil within the heater, the head H, for closing the lower end of the pipe C, the vertical steam-heating pipe I within the pipe C and connected at its lower end to the head H, and the pipes M and N, connected to such head and opening into the pipe I for supplying steam to such pipe I and taking off the water of condensation, substantially as set forth.



3. The combination, in a car-heating apparatus, of the heating-coil within the fire-chamber of the heater, an ascending pipe C, ex-

pansion-drum, descending pipe E, and heating-pipes within the car for the circulating hot water, and a steam-heating pipe within the vertical pipe C for imparting heat to the water within such pipe C and causing the same to circulate up into the expansion-vessel and thence through the heating-pipes of the car, substantially as set forth.

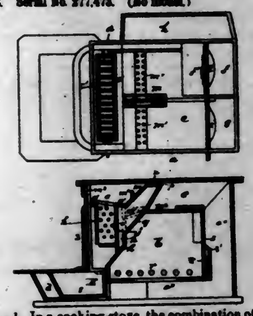


4. The combination, with the heater and the coil within the fire-chamber thereof, the heating-pipes within the car for circulating hot water, and an elevated expansion-vessel, of a rising pipe for the circulating water extending from the upper end of the coil to the expansion-vessel, and a steam-supply pipe and heater acting upon the water in the rising pipe and entirely above the coil in the fire-chamber of the heater, substantially as specified.

411,916. METHOD OF MAKING BUTTON-HOLE STRIPS. MORRIS F. BRAY, Amenia, assignor to Henry W. Lyon, Bridgeport, Conn. Filed Feb. 16, 1889. Serial No. 300,180. (No model.)

Claim.—The method of making button-hole strips from separate short sections, the same consisting in placing the ends of successive sections in alignment, uniting said ends by stitching a binder around the same and throughout their length, swinging the sections so united into extended alignment, whereby the strip is formed and said bound ends are brought into parallelism to form the button-holes, and stitching a continuous binder around and throughout the length of the front or closed edge of the strip, substantially as set forth.

411,917. PLAITING ATTACHMENT FOR SEWING-MACHINES. ALFRED FAHLBERG, Jersey City, N. J., assignor to Eli W. Broadbent, New York, N. Y. Filed Jan. 10, 1889. Serial No. 296,004. (No model.)



Claim.—1. The combination, with two sewing-machines, of two knives or tongues, levers for operating said knives or tongues, mechanism, substantially such as described, for operating both said sewing-machines and said levers in unison, springs on the levers for forcing said knives or tongues in one direction, bearing-surfaces against which said knives or tongues are forced by said springs, and other springs adjacent to said knives or tongues adapted to bear directly thereon to force them away from the goods when moved in one direction and acting against the resistance of the springs first named, substantially as specified.

2. The combination, with two sewing-machines, of two reciprocating knives or tongues, levers for operating said knives or tongues and with which the latter have pivotal connections, bearing-surfaces, springs on the levers exerting pressure in opposite directions for forcing the knives or tongues against said bearing-surfaces, and other springs adjacent to said knives or tongues and adapted to bear directly against the same to force the knives or tongues away from the goods when moving in one direction, the operation of said first-named springs being such that one of said knives will be forced downwardly while the other is being forced upwardly, and vice versa, substantially as specified.

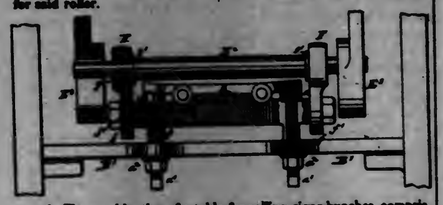
3. The combination, with two sewing-machines, of two knives or tongues having oblique movements in contrary directions, guides for the knives or tongues guiding them in oblique direction, levers for operating said knives or tongues and with which the latter are pivotally connected, bearing-surfaces adjacent to each of said knives or tongues, springs on the levers for forcing said knives or tongues against the bearing-surfaces, and other springs adjacent to the knives or tongues and adapted to bear directly upon the same in order to move the knives or tongues away from said bearing-surfaces when moving in one direction, substantially as specified.

411,918. COOKING-STOVE. WILLIAM A. GREBER, Ocean Grove, assignor of one-half to Edward R. Cahoone, Newark, N. J. Filed June 18, 1888. Serial No. 277,473. (No model.)

Claim.—1. In a cooking-stove, the combination of a fire-box having an air-space surrounding it, said air-space being closed all round at the top and also at the bottom on the rear side and having a passage leading from it up to the top of the stove, and diffusion-chambers formed on the under side of the top communicating with the passage, as set forth.

2. In a cooking-stove, the combination of a fire-box and air-space surrounding the fire-box and closed at the top thereof, and a passage leading from the air-space to diffusion-chambers on the under side of the stove-lid, said passage having openings communicating with the oven, as set forth.

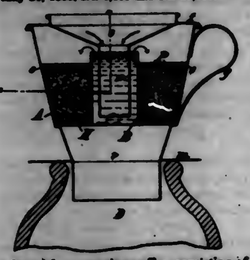
3. In a cooking-stove, an extension formed on the back of and above the fire-box, having the hook or projection m^3, as set forth.



4. In a cook-stove, the combination of the fire-box, the passage m above and back of it, a hook or projection m^3 on the front of said passage, and a door m^2 at the top of the front thereof, as set forth.

5. In a cooking-stove, the combination, with a fire-box, oven, and flues around the oven, of the projections t' t' at the back of the oven in the rear flue of the stove, as and for the purpose set forth.

411,919. CIGAR-BUNCHING MACHINE. FERDINAND J. HAGEN, New York, N. Y. Filed Oct. 1, 1888. Serial No. 286,884. (No model.)

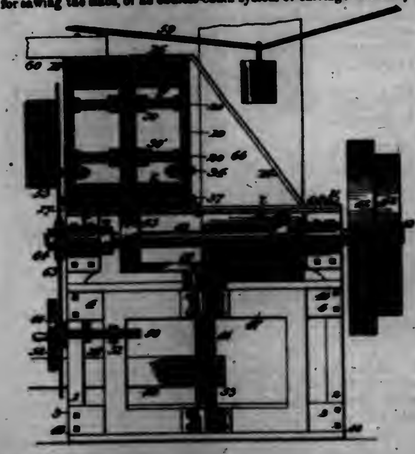


Claim.—1. The combination of a table for rolling cigar-bunches, comprising a middle portion and side portions hinged to swing upward, adjusters to hold the side portions in inclined positions, and a rolling-apron.

2. The combination of a table for rolling cigar-bunches, comprising a middle portion and side portions hinged to swing upward, adjusters to hold the side portions in inclined positions, a rolling-apron, a reciprocating light-forming roller, and vertically-adjustable guides for said roller.

3. The combination of a table for rolling cigar-bunches, comprising a middle portion provided with a transverse pocket and side portions hinged to swing upward, adjusters to hold the side portions in inclined positions, a rolling-apron, a reciprocating light-forming roller, and vertically-adjustable guides for said roller.

411,920. FUNNEL FOR PREPARING COFFEE. CARL HEISSER, Hamburg, Germany. Filed Aug. 23, 1888. Serial No. 283,716. (No model.) Patented in Germany Feb. 2, 1888, No. 43,673; in France Feb. 6, 1888, No. 185,916; in Belgium Feb. 6, 1888, No. 84,913, and in Austria-Hungary May 30, 1888, No. 6,169 and No. 10,988.

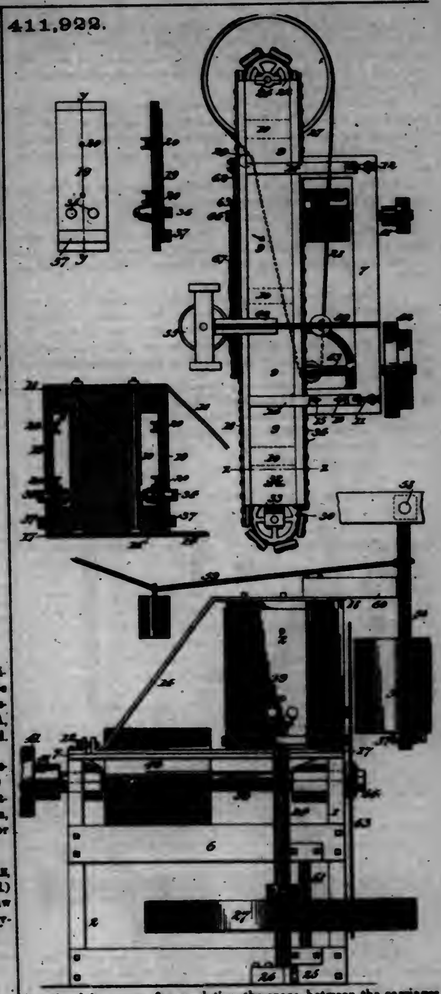


Claim.—The funnel for preparing coffee, consisting of the combination of the outer mantle A, the strainer H in said mantle, the tube B, having a closed bottom above the strainer H, and the infusion-vessel c, having an attached tube r, and supported upon the mantle A, with said tube r within the tube B, substantially as herein described.

411,921. REMEDY FOR NEURALGIA. JACOB O. ISHAM, Jr., Ivydell, Tex. Filed May 27, 1889. Serial No. 312,207. (No specimens.)

Claim.—The described compound for relieving neuralgia, consisting of butternut, alder, hoshane, oil of sassafras, carbonate of iron, spikenard-root, sapocarbonate of soda, and pepsine in wine syrup or other suitable vehicle, in about the proportions set forth.

411,922. SLAB-SAWING MACHINE. ALBERT T. LINDERMAN, Whitehall, Mich. Filed Feb. 12, 1887. Serial No. 227,451. (No model.)

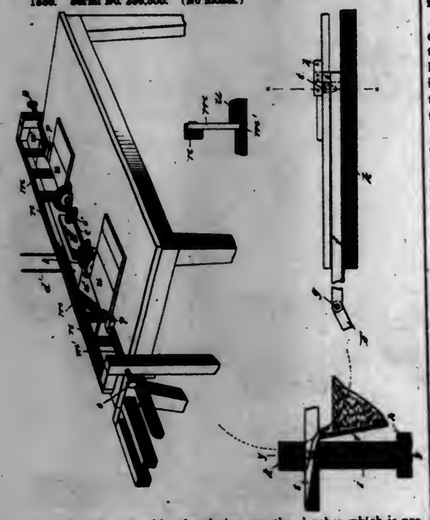


Claim.—1. In a slab-sawing machine, the combination, with a saw for sawing the slabs, of an endless-chain system of carriages for carrying the slabs, means for regulating the space between the carriages and the saw, whereby the thickness of the lumber cut from the slab is regulated, wood or soft-metal faced supports upon the carriages for supporting the slabs, wood or soft-metal faced receding dogs in the carriages for dogging the end of the slab, whereby it is driven along with the carriages, a reciprocating presser-wheel ahead of the saw for holding the slab against the carriages, and suitable mechanism for stopping, starting, or reversing the feed of the carriages, substantially as set forth.

2. In slab-sawing machines, the combination, with a saw for sawing the slabs, of a moving endless-chain system of carriages provided with receding dogs which recess in the carriages when covered by the slab, but become operative to dog the end of the slab when not so covered, whereby the slab is driven with the carriages, substantially as shown and described.

3. In slab-sawing machines, the combination, with a saw for sawing the slabs, of an endless-chain system of moving carriages provided with wood or soft-metal faced feet for supporting and carrying the slab while it is being cut, means for changing and regulating the distance of the travel of the moving carriages from the saw, whereby the thickness of the lumber cut from the slab is regulated, and a presser-wheel for holding the slab in position on the carriages, as set forth.

411,923.



4. In the moving endless-chain system of carriages for slab-sawing machines, a carriage provided with wood or soft-metal faced receding dogs for driving the slabs, whereby contact of the saw-teeth with said dogs is rendered harmless to the saw-teeth, substantially as shown and described.

5. In the moving endless-chain system of carriages for slab-sawing machines, a carriage provided with a wood or soft-metal faced foot for supporting the slab, whereby contact of the saw-teeth with said foot is rendered harmless to the teeth of the saw, substantially as shown and described.

6. The combination, in a machine for sawing slabs, of a saw for sawing the slabs, an endless-chain system of moving carriages for carrying the slab, means for regulating the distance evenly of the carriages from the saw, whereby the thickness of the lumber cut is regulated, and the presser-wheel 55, arranged to operate in holding the slab to the carriages where they are regulated, substantially as set forth.

7. The machine for sawing slabs, consisting, essentially, of a vertical circular saw, a vertical flat-surfaced endless carrier moving parallel to the plane of the saw and provided with a bottom support for the slab, and dogs for dogging it at its rear end, and a presser-wheel adapted to act upon the rough side of the slab, substantially as set forth.

411,923. DOVETAIL-JOINT-CLOSING MACHINE. ALBERT T. LUDERMAN, Whitehall, Mich. Filed Mar. 6, 1886. Renewed Feb. 9, 1889. Serial No. 299,355. (No model.)

Claim.—1. A machine for closing together lumber which is provided with interfitting dovetail joints upon its edges, having the following elements: a table for the receiving and incoming lumber, a pusher for driving the incoming into the receiving stock, a guide-fence alongside the pusher's travel for regulating the position of the incoming piece, an adjustable follower-block to support the end of the receiving stock against the push of the incoming piece, and gages to regulate the position of the receiving stock when it is pressed against them, which gages are so arranged as to recede from before the incoming stock as it is driven home, substantially as set forth.

2. In a dovetail-joint-closing machine, the combination, with a reciprocating pusher for driving the stock and an adjustable guide-fence alongside the pusher's travel to regulate the position of the incoming stock, of two sets of devices at opposite sides of the table, each of which sets of devices consists of an adjustable follower-block to support the end of the receiving stock against the push of the incoming stock and gages to regulate the position of the receiving stock, so arranged as to recede from before the incoming stock as it is driven home, substantially as set forth.

3. The combination, with the table for the receiving and incoming lumber, a guide-fence, a stop for the receiving lumber to resist the push of the incoming piece, and receding gages to regulate the position of the receiving lumber, of a gluing device for applying liquid glue to the edge of the incoming piece as it is driven into the receiving piece, substantially as set forth.

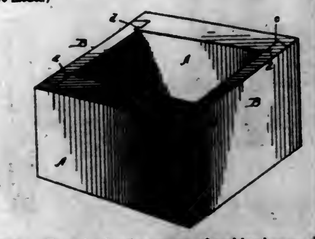
4. In a machine for closing dovetail tenon-joints, the combination, with a table for the receiving and incoming lumber, a stop for the receiving lumber, receding gages to regulate the position of the receiving piece, and a gluing device for spreading liquid glue from a glue-pan underneath upon the edge of the incoming piece while in transit, of a waste-glue spout opposite the gluing device recessed in the table-top and a pusher for driving the incoming stock, having overhanging ends whereby the stock is driven home without interference to the waste-glue spout, substantially as shown and described.

5. In a machine for closing dovetail tenon-joints, the combination, with a table for the lumber, a guide-fence, and a reciprocating pusher having overhanging driving ends, of two sets of devices at opposite sides of the table, each set consisting of a gluing device, a stop-block for the receiving lumber, pendent sidewise-yielding gages, and a trough recessed in the table for waste glue, as and for the purposes set forth.

6. In a machine for closing dovetail tenon-joints, the combination, with a table for the receiving and incoming lumber, a guide for the incoming lumber, and a gluing device, of the bar n above the table and gage-pins m, pivotally attached to the bar to gage the position of the receiving lumber and recede successively before the incoming lumber, substantially as set forth.

7. The combination, with a table for the receiving and incoming lumber, a guide-fence, a gluing device, a pusher for the incoming piece of lumber, and a stop for the receiving lumber to resist the push of the incoming piece, of gages pivotally arranged above the table to regulate the position of the receiving lumber and to yield sidewise before the incoming piece, substantially as specified.

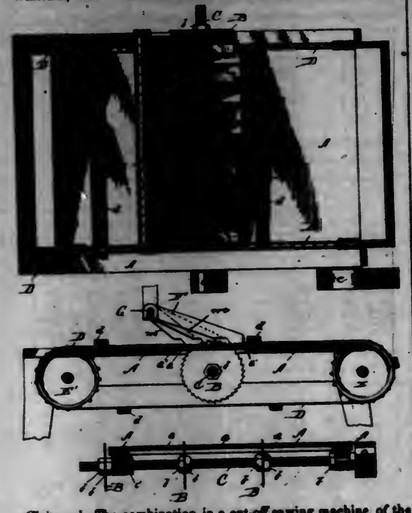
8. The machine for closing dovetail joints, consisting, essentially, of a pusher reciprocating along a table for supporting the material to be joined and adapted to drive the incoming stock and a stop for holding the other portion of the stock against the push of the incoming stock, in combination with said table and separate devices for positioning both parts of the stock preparatory to uniting them, substantially as set forth.



9. In a machine for uniting tongued and grooved lumber, the combination, with a table for supporting the material to be joined and a power-driven pusher reciprocating along such table and acting to drive the incoming stock, of one or more gages for positioning the receiving stock, such gages being located in the path of and adapted to be moved out of the way by the incoming stock, and a holding device for the receiving stock, substantially as set forth.

10. In a machine for uniting tongued and grooved lumber, the combination of a table for supporting the material to be joined, a reciprocating pusher for driving the incoming stock moving along said table, and a fence against which the incoming stock is positioned, with a stop for holding the receiving stock against the push of the incoming stock and a gage or gages against which the receiving stock is positioned, substantially as set forth.

11. In a machine for uniting tongued and grooved lumber, the combination, with a table for supporting the material, a reciprocating pusher moving along said table and adapted to drive the incoming stock into the receiving stock by a lengthwise-sliding movement, and a stop for holding the receiving stock, of a brush-wheel located essentially as shown and adapted to apply glue to the edge of the moving stock as it enters the receiving stock, substantially as set forth.



12. The combination, in a machine of this character, with a reciprocating pusher adapted to drive incoming stock in both directions and a table for supporting the material, said pusher moving along over said table, of a stop at each side of said pusher for holding the receiving stock against the push of the incoming stock, substantially as set forth.

411,924. CORNER-JOINT FOR PACKING-BOXES. ALBERT T. LUDERMAN, Whitehall, Mich. Filed Feb. 16, 1889. Serial No. 300,195. (No model.)

Claim.—The joint for the corners of packing-boxes, wherein one part is provided with the bevel-groove *c* and tongue *d*, and the other part is provided with the bevel *e* and groove *f*, substantially as set forth.

411,925. CUT-OFF SAWING-MACHINE. ALBERT T. LUDERMAN, Whitehall, Mich. Filed Mar. 1, 1889. Serial No. 301,670. (No model.)

Claim.—1. The combination, in a cut-off sawing machine, of the adjustable saw or saws, a carrier, and a stationary table having a portion made changeable to accommodate the adjustments of the saw, such changeable portion being composed of movable narrow pieces *a*, substantially as set forth.

2. The combination, with the table and saw or saws of a cut-off sawing-machine, of an endless carrier having wood-pushing slats, such slats passing over the saws and extending both above and below the top thereof, substantially as set forth.

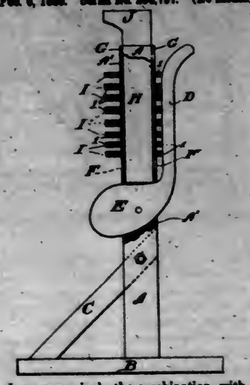
3. The combination, with the table and the adjustable saw or saws, of an endless carrier having wood-pushing slats, such slats passing over the saws and extending both above and below the top thereof, substantially as set forth.

4. The cut-off sawing-machine, consisting of an adjustable saw or saws, a table changeable to accommodate the saw adjustments, and an endless carrier, the pushing-slats whereof are of wood and extend both below and above the top of the saws, substantially as set forth.

5. The combination, with the table, the carrier, and the laterally-adjustable saw or saws, of arms for holding down the stuff, such arms being movable to different positions upon their support to accommodate the different positions of the saws, substantially as set forth.

6. The cut-off sawing-machine, consisting of an adjustable saw or saws, a table for supporting the stuff to be sawed and changeable to accommodate the various positions of the saws, an endless carrier for pushing the stuff along the table, and arms movable to different positions upon their support to accommodate adjustment of the saws and adapted to hold down the stuff while being sawed, substantially as set forth.

411,926. BOBBIN-HOLDER FOR SPINDLES OF SPINNING-MACHINES. JOHN B. MAWBEY, Philadelphia, Pa. Filed Feb. 21, 1889. Serial No. 300,717. (No model.)

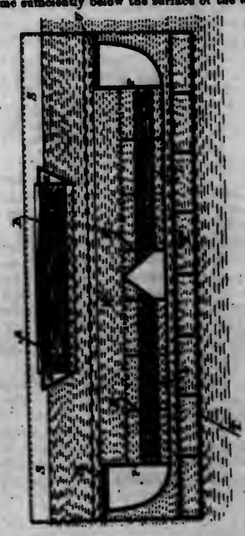


Brief.—The object of the invention is to provide simple and effective means whereby the bobbin is held in contact with the rotating spindle and prevented from jumping.

Claim.—1. A spinning-machine bobbin provided with two grooves concentric to the spindle to which the bobbin is applied and in each of which grooves is partially concealed or inclosed a hook adapted to engage with a similar hook provided on a bobbin-rest of the spindle, substantially as and for the purposes set forth.

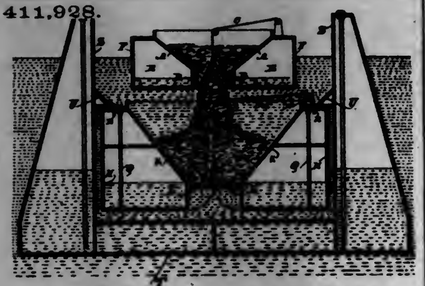
2. A spinning-machine bobbin provided with concentric grooves, each having secured therein a hook, in combination with a spinning-machine spindle having a bobbin-rest provided with similar hooks to those of the bobbin, said hooks adapted and arranged to interlock with each other, substantially as and for the purposes set forth.

411,927. WAGON-JACK. ANDREAS P. HILLEBRAND, Bridgeport, Conn. Filed Feb. 6, 1889. Serial No. 299,797. (No model.)



Claim.—1. In a wagon-jack, the combination, with a vertically-movable slide-lift, of a vertical series of pin-supports extending freely through said lift to a place beyond the front of said jack, substantially as set forth.

2. The combination of the slide-lift having movable pin-supports extending transversely therethrough, and the operating-lever, the lower end whereof supports the lift, while the handle in normal position abuts against the rear ends of said pins, substantially as shown and described.

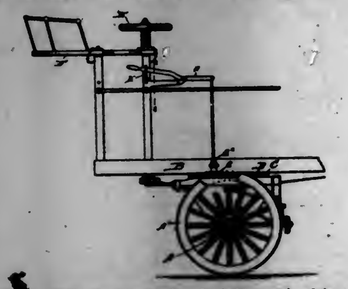


3. The combination of the uprights, the operating-lever pivoted between said uprights, the plates F, which bridge the space between said uprights, the plates G, secured to said uprights at the upper end thereof and extended only part way across said space, the slide-lift between said uprights and confined therein by said plates, the pins I, extending in a vertical series loosely through said lift from front to rear the cross-pins *l* within the front and rear ends of said pins I, and the cam-lever pivoted between said uprights and supporting the slide-lift, substantially as and for the purposes hereinbefore set forth.

411,928. METHOD OF REMOVING MUD, &c. CHARLES A. MORSE, Moorefield, and RALPH G. PACKARD, Morristown, N. J. Filed Dec. 21, 1888. Serial No. 294,322. (No model.)

Claim.—1. The method herein specified of loading, conveying, and discharging materials—such as mud, sand, ashes, &c.—consisting in loading the same first into comparatively small scows or vessels, providing a receiving-vessel of large capacity with compartments, sinking the same sufficiently below the surface of the water for float-

411,928.



ing the small scows or vessels over the receiving-vessel and discharging the contents of the small scows or vessels into the receiving-vessel and raising such receiving-vessel, so that the upper parts thereof are above the water-line, and floating such vessel to the place where the contents are discharged, substantially as set forth.

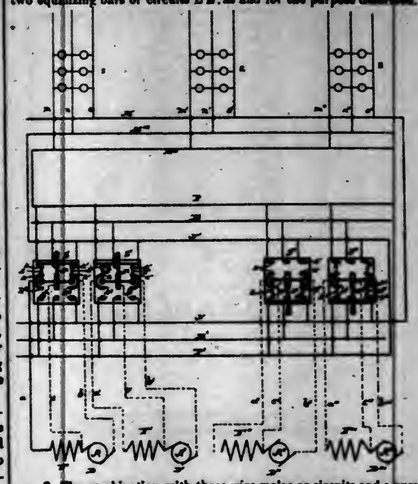
2. The method herein specified of receiving and floating away refuse or solid materials, consisting in floating the receiving-vessel into a dock, sinking such receiving-vessel sufficiently below the water-line, floating small scows in above the receiving-vessel, discharging their contents into the receiving-vessel to load the same, and then floating the receiving-vessel and removing the same from the dock to the place of discharge, substantially as set forth.

3. The method herein specified of loading and discharging a receiving-vessel, consisting in sinking the vessel sufficiently below the surface of the water for the reception of its load, introducing the load from above the vessel, pumping out water from the compartments to raise the vessel, towing or propelling the vessel to the place of discharge, and discharging the contents downwardly while the vessel is floating, substantially as specified.

4. The method herein specified of loading vessels and conveying the same to the point of discharge, consisting in sinking the vessel below the surface of the water, discharging the load into the vessel from above it while below the water, floating the vessel to the surface of the water, and towing or propelling the same to the point of delivery of the contents of such vessel, substantially as set forth.

411,929. FIRE-LADDER TRUCK. EVERETT B. PRESTON, Chicago, Ill. Filed July 27, 1889. Serial No. 318,894. (No model.)

Claim.—1. The combination, in a fire-ladder truck, of the truck-frame with the axle, the fifth-wheel, and a locking-bolt engaging the two rings of the fifth-wheel, substantially as specified.



2. The combination, in a fire-ladder truck, of the truck-frame with the axle, the fifth-wheel, and a locking-bolt engaging the two rings of the fifth-wheel, said locking-bolt being provided with a spring for setting the same automatically, substantially as specified.

3. The combination, in a fire-truck, of the truck-frame, the axle, the fifth-wheel, a steering mechanism, and a locking-bolt engaging the two wheels of the fifth-wheel for locking the same rigidly together, substantially as specified.

411,930. STATION SWITCH-BOARD AND CONNECTION. BROWN W. ESTY, Jr., and ALBERT L. HERMAN, Lynn, Mass. Filed July 20, 1889. Serial No. 318,099. (No model.)

Claim.—1. The combination, with dynamo-machines, of electric switches controlling the connections of such machines in multiple are to the conductors or mains to be supplied and provided with supplemental switch-contacts in circuits from such machines to an equalizing bar or connection.

2. The combination, with dynamo-machines, of double-throw electric switches controlling the connection of such dynamos in multiple to a three-wire system and provided with a supplemental double-throw switch device controlling the connection of such dynamos with two equalizing bars or circuits E E', as and for the purpose described.

3. The combination, with three wire mains or circuits and a number of dynamos having switches for connecting such dynamos in multiple to either side of the system at pleasure, of two equalizing bars or connections—one for forming an equalizing-connection when the dynamos are connected in multiple to one side of the system, and the other for forming a similar connection when they are connected to the other side of the system, as and for the purpose described.

411,931. TANNING COMPOSITION. GEORGE H. RUSSELL, Roxbury, Pa. Filed Mar. 7, 1889. Serial No. 302,462. (No specimens.)

Claim.—The herein-described compound for tanning, composed of bark, bicarbonate of soda, salt, sulphuric acid, and water, in about the proportions specified.

411,932. TANNING PROCESS. GEORGE H. RUSSELL, Roxbury, Pa. Filed Dec. 10, 1888. Serial No. 292,197. (No specimens.)

Claim.—1. The herein-described improvement in the art of tanning, which consists in first unhairing the hides, then dispensing with the usual masure bates and treating the hides with an alkaline or neutral solution of a salt of an alkali and sulphuric acid and then treating them with a tanning agent, substantially as described.

2. In converting hides into leather, the herein-described process of treating them with a watery solution of salt, bicarbonate of soda, and sulphuric acid, substantially in the proportions specified, and then treating them with a tanning-liquor.

3. In converting hides into leather, the process of first treating the hides after being unhaired with a solution containing salt of an alkali to open the pores and remove the lime, and then tanning them in liquors containing tannic acid, to which liquors has been added a watery solution of salt, bicarbonate of soda, and sulphuric acid.

4. In converting hides into leather, the process of treating them with a watery solution of salt, bicarbonate of soda, and sulphuric acid, and then treating them with a tanning-liquor containing tannic acid, to which has been added a watery solution of salt, bicarbonate of soda, and sulphuric acid.

5. The improvement in the art of tanning to produce leather of great toughness, which consists in subjecting the hides to the action of a solution containing a salt of an alkali, sulphuric acid, and sulphate of zinc preparatory to treating them with a tanning agent.

411,933. CURLING-COMB. EDWARD T. RYAN, New Bedford, Mass. Filed May 31, 1889. Serial No. 312,664. (No model.)

Claim.—1. The combination, with a hollow handle or body having the comb-teeth upon one end, of a spring-retracted curling or heating iron adapted to normally lie concealed within said handle.

2. A curling-comb consisting of the hollow tube *a*, handle *b*, formed integral therewith, the slot *m*, having notch *h* in its forward end, the spring-retracted curling or heating iron *d*, provided with the stud *c*, for engagement with the notch *h*, to hold the curling-iron in its projected position when desired, substantially as described.

411,934. PIANO-AGRAFFE. EDWARD G. SHELLENBERG, Mount Vernon, N. Y. Filed Feb. 1, 1889. Serial No. 298,302. (No model.)

Claim.—1. An agraffe for piano-fortes, consisting of a continuous piece having a flat base portion whereby the agraffe is screwed or bolted to the wrest-plank, and a continuous vertical portion, the latter being provided with oblique holes, whereby two bearing-points for the strings are provided, substantially as shown and described.

2. An agraffe for piano-fortes, having a base portion and a continuous vertical portion, the latter being provided with oblique holes for the strings, whereby two bearing-points are provided, the base portion extending forward and having its front edge elevated, whereby a third bearing-point is formed, substantially as shown and described.

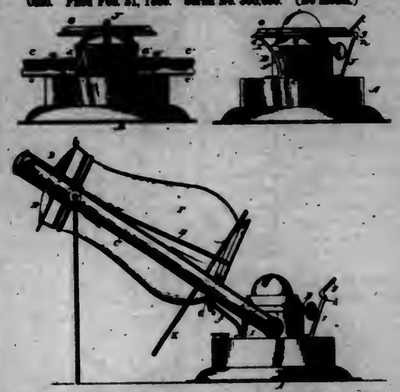
411,935. CUT-OUT. ALBERT P. SEYBOLD, Syracuse, N. Y. Filed Jan. 3, 1889. Serial No. 295,523. (No model.)

Claim.—1. The combination, in an electric switch, of a main-line contact connected to one pole of the line, a branch contact, an intermediate contact connected to the other pole of the line, and an arc-rupturing magnet applied to the main-line contact and having its coils in the line-connection from the opposite pole of the line to the intermediate contact, as and for the purpose described.

2. In an electric switch, the combination, with two contact-blocks mounted on a suitable base and having overhanging contact ends, of an intermediate moving contact making sliding connection with the under surface of the overhanging ends and wider than the space between them, and a spring tending to move the intermediate contact bodily in a line transverse to the plane of the contact-surfaces and away from the base carrying the contact-blocks.

3. The combination, in a lever electric switch, of two simultaneously-engaged fixed contacts D I at opposite sides of the pivotal point for the lever and an intermediate sliding-contact switch-lever provided with a spring tending to press it in the direction of its pivoted axis and toward the plane of the contact-surfaces for the fixed contacts, said contact-lever being fitted loosely to its pivot, so as to be capable of a slight rocking motion in a direction transverse to the plane of its swing, as and for the purpose described.

4. The combination, with the switch-lever loosely fitted to its pivot, so as to be capable of a slight rocking movement in a direction transverse to the plane of its swing, and having a spring tending to move it in the direction of its pivotal axis, of the two fixed sliding-connection contacts I D at opposite sides of the pivotal point for the lever, and a spring-contact L, engaged by the levers simultaneously with the other two.



411,936. CARBON-CLAMP FOR ARC LIGHTS. ALBERT P. SEYBOLD, Syracuse, N. Y. Filed July 20, 1889. Serial No. 318,749. (No model.)

Claim.—1. A detachable clamp for carbon-carriers, having its body slit transversely at the part where it connects with the carbon-carrier, and provided with carbon-clamping devices which tend to draw the two sides of the clamp-body together against the carrier.

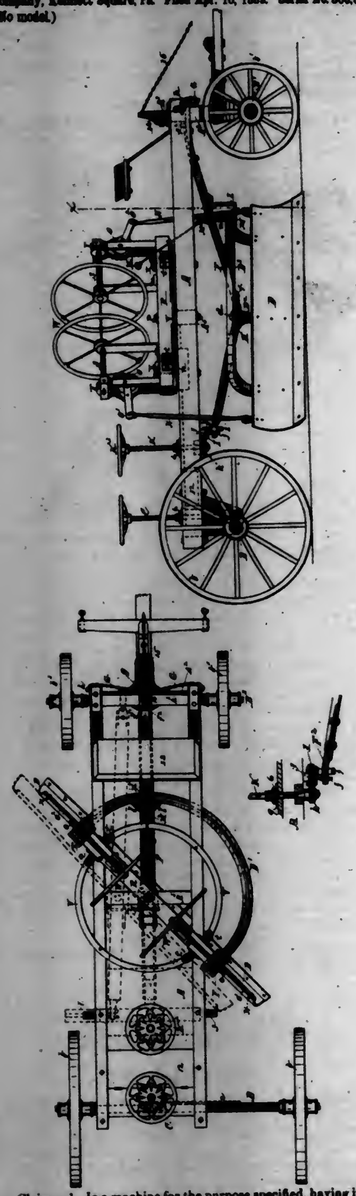
2. In a detachable clamp for carbon-carriers, the combination, with the clamp-body having a screw-threaded socket and transverse slit through the side of the socket, of a clamping-rod and clamp-block bearing on the clamp-body in a direction transverse to the line of the slit in the body.

411,937. TUBULAR LANTERN. WILLIAM C. STEWART, Bellaire, Ohio. Filed Feb. 21, 1889. Serial No. 300,689. (No model.)

Claim.—1. In a tubular lantern, the combination of the base, side tubes pivotally connected to the base, a globe movably connected to the central tube by means of the canopy, a supporting-plate for said globe pivotally attached to the base at one side of the side tubes, and connecting-braces secured to the canopy and globe-supporting plate, whereby when the side tubes are moved to one side both vertical and lateral motions are imparted to the globe, substantially as set forth.

2. In a tubular lantern, the combination of the base, side tubes pivotally connected to the base, a globe movably connected to the central tubes by means of the canopy, a supporting-plate for said globe pivotally attached to the base at one side of the side tubes, connecting-braces secured to the canopy and globe-supporting plate, whereby when the side tubes are moved to one side both vertical and lateral motions are imparted to the globe, and a latch attached to the base and engaging with the globe-supporting plate when the parts are in their normal position, substantially as set forth.

3. In a tubular lantern, the combination of the base, side tubes pivoted in sleeves *a a* on the base, slots *b b* within said sleeves, studs *d d* in said side tubes and engaging with said slots, a globe movably connected to the central tube by means of the canopy, a supporting-plate for said globe pivotally attached to the base at one side of the side tubes, and connecting-braces secured to the canopy and globe-supporting plate, whereby when the side tubes are moved to one side both vertical and lateral movements are imparted to the globe, substantially as set forth.



411,938. CHAIR. WILLIAM SORRENTI, West Stratford, Conn. Filed July 20, 1888. Serial No. 280,708. (No model.)

Claim.—1. The garment-supporter A, provided at its outer ends with the journals *d d*, said journals formed substantially at right angles to the upright arms of said supporter, combined with bearings secured to the chair-back to receive said journals, and a guard in rear of said journals to prevent the same disengaging from their bearings, substantially as shown.

2. The combination, with a chair-back having supporting-legs attached thereto, and a supporting device journaled in said legs and operating freely therein, of a guard situated back of each of said journals, one of said guards having a groove formed transversely through a portion thereof to admit one end of said supporting device to enable the journal to enter its bearing, as described, and for the purpose set forth.

411,939. **MACHINE FOR MAKING, REPAIRING, AND CLEARING ROADS.** GEORGE W. TAPT, Kennett Square, Pa., and ELIAS L. LATHROP, Fort Wayne, Ind., assignors to the American Road Machine Company, Kennett Square, Pa. Filed Apr. 10, 1889. Serial No. 306,688. (No model.)

Claim.—1. In a machine for the purpose specified, having its body or carriage frame mounted on front and rear traveling wheels, the combination, with said carriage-frame and the scraper-blade, of a reach or draft-bar for sustaining the scraper, having its forward end confined and adjustable in a transverse slot in the front end of the carriage-frame, and its rear end confined by an eye on a laterally-movable supporter connected with the carriage-frame, whereby said reach is laterally adjustable in relation to said carriage-frame at both its front and rear ends, and fastenings for retaining the same at positions of adjustment, for the purpose set forth.

2. In a machine for the purpose specified, having a body or carrying frame supported at front and rear on wheels, the combination, with said body and the diagonal scraper, of a reach or scraper connecting-frame sustained at its ends beneath said body, and provided at an intermediate position in its length with a transverse hinge having a normally horizontal axis, substantially as and for the purpose set forth.

3. In a machine for the purpose specified, the combination, with the diagonal scraper-blade and the body or carrying frame mounted on front and rear axles and wheels, of a reach or draft-bar, to which said scraper is attached, having its ends supported in connection with the body-frame and provided with a hinge in rear of the scraper attachment, to permit upward and downward movement of the scraper while the ends of said draft-bar remain at a given position in relation to the frame, and means, substantially as described, for raising and depressing the respective ends of the scraper, as set forth.

4. In a machine for the purpose specified, the combination of the carrying-frame mounted on front and rear axles and wheels, the reach having both of its ends pivotally sustained in connection with said carrying-frame and provided with a central horizontal hinge, the scraper connected to said reach by a pivoting-axis and provided with a semicircle D', the brace L and guides whereby the front of said semicircle is held in connection with said reach, a fastener or locking-bolt arranged thereon for confining the semicircle, and connections for operating said fastener or locking-bolt, substantially as set forth.

5. In a machine for the purpose specified, the combination of a carrying-frame mounted on wheels, an adjustable diagonal scraper having a semicircle attached thereto, a reach-bar, to which said scraper is pivoted, having a hinge in rear of the scraper-pivot, its ends supported in connection with the carrying-frame and laterally adjustable thereon, a swing-beam pivoted on said carrying-frame, and hand-wheels and operating-gear mounted in bearings on said swing-beam, with connections and rods at the respective ends of the scraper for effecting adjustment of the same, all substantially as set forth.

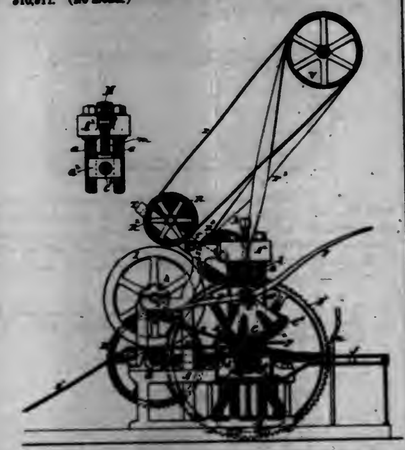
6. In a machine for the purpose specified, the combination, with the scraper and its carrying-frame having a transverse slot at its forward end, of the reach or scraper draft-bar F, its forward end extending through and laterally adjustable in said slot and furnished with a head-plate *g*, and means for retaining the head of the reach at different positions of adjustment in relation to the carrying-frame, all substantially as and for the purpose set forth.

7. In a machine for the purpose specified, the combination, substantially as described, of the carrying-frame, the longitudinally-adjustable rear axle, the laterally-adjustable reach F, the diagonal scraper-blade pivotally connected to and adjustable with said reach, the traverse guide-bar J, the slide I, provided with a loop *i*, that supports the rear end of said reach, the hand-wheel shafts C and K, and connecting-gear for shifting said slide and rear axle, for the purpose set forth.

8. In a machine for the purpose specified, the combination of the carrying-frame mounted on front and rear wheels, the circular traverse-track V, fixed thereon, the diagonal adjustable scraper-blade, the laterally-adjustable reach supporting said scraper, the swing-beam R, centrally pivoted on the carrying-frame and supported on said traverse-circle V, the lifting-rods N, connecting the scraper with lifting-arms, and operating mechanism supported on said swing-beam for working said scraper, all combined substantially as and for the purposes set forth.

9. In a machine for the purpose specified, in combination with the diagonal adjustable scraper and its support, substantially as described, the guide-bar J, fixed to the carrying-frame, the slide I, mounted on said guide-bar, having a toothed rack and a dependent loop *i*, that embraces the tail end F^3 of the scraper-support, the pinion *k*, shaft K, hand-wheel K', locking-wheel 6, and lever 7, all arranged for operation as and for the purpose set forth.

10. In a machine for the purpose specified, the combination, with the scraper-blade D, semicircle D', reach F, and brace L, of the locking-bolt M, its spring *m*, actuating cam-lever M', and handle-rod M^3, substantially as described.



11. In a machine for the purpose specified, the combination, with the swing-beam R, carrying the scraper-adjusting gearing, and the traverse-circle V, fixed to the carrying-frame, of the clamping-plate *n*, its cam-lever X, and connecting-bolt *n'*, substantially as and for the purpose set forth.

12. In a machine for the purpose specified, the combination, with the main carrying-frame and the laterally-adjustable reach or draft-bar, of the primary scraper-blade D, having the semicircle D', with downwardly-curved ends attached thereto pivotally connected for oblique adjustment, and the auxiliary scraper-blade D^2, arranged on said primary scraper-blade and attached thereto by clips 20, and detachable fastening-bolts 18, fitted in slots or openings 16 in said primary blade, said auxiliary blade being longitudinally adjustable for extension at the right or left of said primary blade, all substantially as shown and described.

13. In a machine for the purpose specified, the combination of a carrying-frame mounted on wheels, a diagonally and vertically adjustable scraper, a reach to which said scraper is connected supported by and laterally adjustable in relation to the carrying-frame at both its front and rear ends, a longitudinally-adjustable rear axle, hand-wheels and gearing mounted on the rear part of the carriage for effecting adjustment of said reach and axle, and means for holding the parts at different positions, substantially as set forth.

14. In a machine for the purpose specified, the combination, with the carrying-frame mounted on wheels, of the traverse-circle V, fixed on said frame, the laterally-adjustable reach, the scraper pivoted to said reach, and scraper-operating mechanism supported by a carrier or swing-beam that moves on said traverse-circle, substantially as set forth.

411,940. **MACHINE FOR BENDING ROAD-SCRAPER BLADES.** GEORGE W. TAPT, Kennett Square, Pa. Filed May 16, 1889. Serial No. 310,911. (No model.)

Claim.—1. In a plate-bending machine, the swinging die or former, having its pattern-surface shaped to the curvature of a road-scraper blade, the swinging jaw-plate arranged along the rear edge of said former, connected thereto by adjustable hinging-studs, and provided with weighted arms that force said jaw-plate toward the former-surface for retaining the work thereon, and a lifter for opening the jaw, in combination with the bender-roll over which the forming-surface travels, intermatching teeth that connect the former and bender-roll, and operating-gearing fixed on the bender-roll axles for imparting rotative movement to said bender-roll, all substantially as and for the purposes set forth.

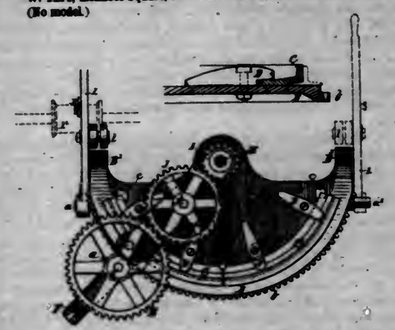
2. In a machine for the purpose specified, the combination of the former C, provided with the gripping-jaw D and jaw-operating lever, the bed-roll B, journaled on the housing-frame and connected by gears *b* and C' with said former, the roll-operating gears E', and the shaft G, having pinions G', that mesh with said roll-operating gears, all substantially as and for the purpose set forth.

3. In a machine for the purpose set forth, the combination of the frame having uprights *a* and heads A^2, the bed-roll supported in the stationary boxes *a'*, the former C, supported in movable journal-boxes a^2 between said uprights, the presser-levers M, fulcrumed on the heads, and the struts *m* and weights N, substantially as and for the purposes set forth.

4. In a machine for the purpose specified, the combination of the bed-roll B and the former C, geared together and provided with the gripping-jaw D, the feed-apron J at the front of said roll disposed for directing the edge of the plate between said jaw and the former-surface, and the discharge-apron K, disposed for receiving the plate after it has passed through the machine, substantially as set forth.

5. In a machine for the purposes specified, the combination, with the bending-former, bed-roll, and their operating-shafts and gearing, of the main friction-wheel I, the oscillating frame T, supported on a center arbor, the oppositely-operative friction-wheels R and R', having their arbors mounted on said oscillating frame and respectively provided with pulleys R^2 and R^3, that receive driving-belts for moving in opposite directions, and a shifting mechanism, whereby either of said driving friction-wheels R or R' is brought into contact with said main friction-wheel, substantially as and for the purpose set forth.

6. In a machine for the purpose specified, the combination of the former C, the gripping-jaw D, the connecting-bolts *d*, the jaw-operating arms *e*, weight-bar E, lifter F, and the springs S, substantially as and for the purpose set forth.



7. In a machine for the purpose specified, the rolling-former having the curved surface *c*, and the removable longitudinal rib or bar C^3 for offsetting the edge-cant in a scraper-blade, in combination with the gripping-jaw D, bending-roll B, pressure-screws L, and operating-gearing, substantially as described, for imparting motion thereto, as set forth.

8. In a machine for the purposes set forth, the guard-band fillet C^3, in combination with the former C, having pattern-surface *c*, and bed-roll B, geared for rolling action in conjunction therewith, substantially as and for the purpose set forth.

9. In a machine for the purpose specified, the guard-band fillets C^3 and lifting-lugs C^4, in combination with the former C, provided with a gripping-jaw, and the bed-roll B, geared thereto, substantially as and for the purpose set forth.

10. In a machine for the purpose specified, the combination of the former having the curved pattern-surface, the offset bar C^3, attached thereto, the gripping-jaw hinged to said former by adjustable connections, the jaw-operating mechanism, and the bed-roll having a longitudinal groove or depression and geared or connected for operation in unison with said former, substantially as set forth.

411,941. **MECHANISM FOR BENDING METAL BARS.** GEORGE W. TAPT, Kennett Square, Pa. Filed June 3, 1889. Serial No. 312,975. (No model.)

Claim.—1. A bending-machine having a shaping-former, a central operating-shaft, a radial arm that swings about the axis of said operating-shaft as a fulcrum, a follower-roll journaled in said arm and provided with a toothed pinion that engages with gear-teeth on the frame or former-plate for rolling about the periphery of the former, and a train of gears carried on said arm by which power and motion are transmitted to said follower-roll from a gear fixed on said operating-shaft and axially coinciding with the fulcrum-axis of said arm, substantially as set forth.

2. In a machine for bending segmental forms of flat, T, or angle iron, the combination of a former having an overhanging rim or flange and a toothed periphery, a swinging arm carrying a presser or follower roll provided with gear-teeth that mesh with the teeth on said periphery, a central operating-shaft about which said arm swings as an axis, and a train of gears supported on said arm for rotating said follower-roll from said operating-shaft, substantially as set forth.

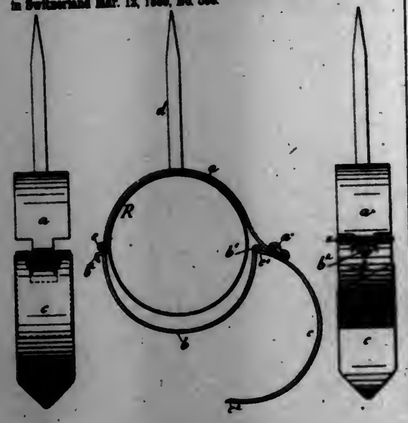
3. In a machine for shaping compound curved semicircles from T-bars or angle-bars, the combination, substantially as described, of the former composed of a main segment provided with supplemental end segments disposed with their planes at an angle or transverse to the plane of the main segment, and continuing the forming-surface on downward curves, the removable flange section or sections, guide-lugs, and recesses that indicate the position for the flange-section on the former-plate, and turn-buttons that detachably secure said flange-section to the main segment, for the purpose set forth.

4. In a machine for binding semicircles for road machines or scrapers, the former comprising a main segment with shaping-periphery and supplemental end segments disposed in planes at an angle to the plane of the main segment, and an overhanging supporting-flange detachably fixed on the forming curvature of said main segment, in combination with an arm and follower-roll that travels around said main segment, and an auxiliary arm and follower for forcing the metal

bar to the curves of the supplemental segments in a direction transverse to said main curve, substantially as set forth.

5. The combination of the removable former provided with a toothed segment, the sweep or radial arm F, carrying the follower-roll G, said roll being geared to match into said toothed segment, the operating-shaft E, disposed at the center or axis of the radial arm and former, a train of gears for rotating said follower-roll, and means for adjusting the axes of the follower-roll and intermediate gear to accommodate formers of greater or less radial diameter, substantially as set forth.

6. In a machine for the purpose specified, the arm F, provided with means for shifting or adjusting the follower-roll axis A, and geared J', the geared follower-roll G, and its actuating-gear H, mounted on the axis or shaft A, that is adjustable in said arm, and the intermediate gear J, journaled on a stud J', that is adjustable in said arm, in combination with a peripherally-toothed removable former and a central operating-shaft provided with a driving-gear I, substantially as and for the purpose set forth.



7. The combination of the former composed of the main segment having the overhanging flange and toothed periphery, and the supplemental end segments continuing the forming-surface on curves in a different plane from that of the main segment, the central shaft, the radial arm fulcrumed on said shaft, the follower-roll journaled on said arm and geared to the toothed periphery of said former, the driving-gear fixed on said shaft, a train of gears mounted on said arm for rotating said presser-roll, and a supplemental follower for bending the metal around said supplemental end segments, substantially as set forth.

8. The combination of the former composed of the main segment having the toothed periphery, overhanging flange, and the supplemental end segments continuing the forming-surface on curves different from that of the main segment, the radial arm or sweep fulcrumed at the axis of the former, the follower-roll journaled on said arm and geared to the toothed periphery of said former, the supplemental bending-follower for bending the metal around said supplemental end segments, and means, substantially as described, for applying power to said supplemental bending-follower, substantially as set forth.

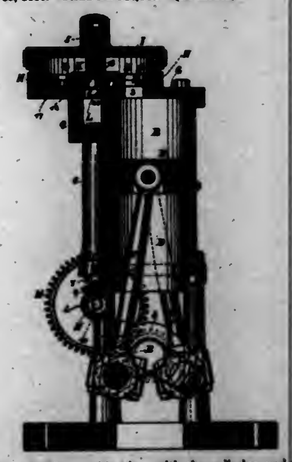
9. In mechanism for the purpose specified, the combination, with the peripherally-toothed former B, the backwardly and forwardly swinging arm F, carrying the pressing-roll or follower G, its actuating-gears H, I, and J, and the operating-shaft E, of the vibrating shaft E', having the friction-wheel M fixed thereon, the oppositely-rotating drive-shafts N and N', and with driving friction-wheels n and n', respectively fixed thereon and means, substantially as described, for swinging said shaft to bring the wheel M into or out of engagement with either of the driving-wheels n or n', all substantially as set forth.

10. In mechanism for the purpose specified, the combination of a peripherally-toothed former, an operating-shaft carrying an actuating-gear I at the center of said former, the swinging arm F, the follower-roll G, and roll-operating gears H and J, adjustably mounted on said arm, the flange on said former having guiding-surface, the follower guide-roll W, connected with the follower-roll journal-support, and links K and K', connecting the gear-axes with the operating-shaft, substantially as and for the purpose set forth.

411,942. PIPE-HANGER. GABRIEL TSCHUDI, Madretsch, Switzerland. Filed Apr. 26, 1889. Serial No. 308,739. (No model.) Patented in Switzerland Mar. 12, 1889, No. 568.

Claim.—1. A pipe-hanger composed of a main loop having a suitable device for attaching it to a wall or other object, a loop hinged to one end of said main loop, and a locking-loop hinged to the other end of said main loop, substantially as set forth.

2. In a pipe-hanger, the combination, with a main loop having a suitable device for securing it to a wall or other object, of a loop hinged to one end of the main loop and provided with a hook on its opposite end, a locking-loop hinged to the opposite end of the main loop and provided on its hinged end with a tongue adapted to engage the hook on the free end of the loop that is hinged to the other end of the main loop, substantially as set forth.

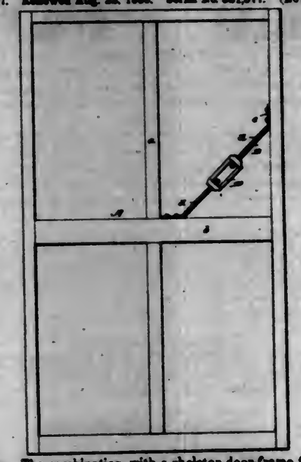


3. In a pipe-hanger, the combination, with a main loop *a*, having a suitable device for securing it to a wall or other object, of the loop *b*, hinged to one end of the loop *a*, and provided below said hinged end with a hook *b'* and with a hook *b'* on its free end, the locking-loop *c*, connected by a link or staple with one end of the loop *a*, and provided at its hinged end with a tongue *c'* and at its opposite end with a hook *c'*, substantially as set forth.

411,943. APPARATUS FOR SEPARATING BUTTERMILK FROM BUTTER. ALBERT F. THAYER, Maple Hill, Kans. Filed May 4, 1889. Serial No. 309,653. (No model.)

Claim.—The herein-described apparatus for separating buttermilk from butter, consisting of the separator A, provided with the perforated shelf or strainer B and suitable perforations *a*, a butter-beater supported in the upper portion of said separator, and the vessel C, all arranged, combined, and constructed to operate substantially as and for the purpose set forth

411,944. VALVE FOR STEAM-ENGINES. CHARLES VOGEL, Port Lee, assignor to himself and George O'Rourke, Englewood, N. J. Filed June 13, 1889. Serial No. 314,142. (No model.)



Claim.—1. The combination, with the cylinder and piston in an engine, of a circular steam-chest having a lateral opening through which steam is supplied, and a circular valve-seat having ports therein leading to the cylinder and a central exhaust-port, a circular valve covering the exhaust-port and having ports and recessed exhaust-passages, a spindle for rotating the valve, having a T head or connection and passing up from beneath the valve, so that the valve may be removed from the spindle, and a removable cover to the steam-chest, substantially as set forth.

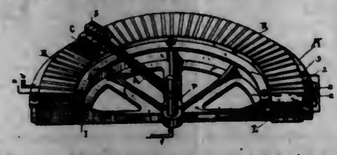
2. The combination, with the cylinder and piston in an engine, of a circular steam-chest having a lateral opening through which steam is supplied, and a circular valve-seat having ports therein leading to the cylinder and a central exhaust-port, a circular valve covering the

exhaust-port and having ports and recessed exhaust-passages and a central stem, a spindle for rotating the valve, having a T head or connection and passing up from beneath the valve, so that the valve may be removed from the spindle, and a removable cover to the steam-chest, having a central socket for the valve-stem, substantially as set forth.

3. The combination, with the cylinders A B C, their pistons, connecting-rods, main shaft and cranks, of a head to the three cylinders, having steam-ports in it, a steam-chest upon such head, having a central exhaust and lateral steam-supply, a removable cover to the steam-chest, a valve having two steam-ports and recessed exhaust-passages and covering the central exhaust-port, a spindle passing up from below for rotating such valve, and gearing for connecting the spindle and the main shaft, so that the valve may revolve once for every two revolutions of the main shaft, substantially as set forth.

411,945. DOOR. WALTER R. WEBER, Wayne, Kans. Filed Sept. 26, 1887. Renewed Aug. 22, 1889. Serial No. 321,577. (No model.)

Claim.—The combination, with a skeleton door-frame formed as shown, of the angularly-arranged adjustable brace interposed between the transverse bar and the outer vertical bar, and composed of the threaded rods *d*, having the angular portions *e*, and the turn-buckle D, arranged upon the threaded portions of the rods, substantially as specified.



411,946. HORSE-GIN. FRANZ WEHNEMANN, Saarlingen, near Klein-Kreuts, Prussia, Germany. Filed June 18, 1889. Serial No. 314,748. (No model.)

Claim.—1. The combination of pivoted beam A, with connected elbow-levers G pivoted thereto, and with the frames H, secured to the elbow-levers, substantially as specified.

2. The combination, in a gin, of the following elements: pivoted beam A, elbow-levers G H, braces K, hubs M, rings N, rods O, and chains Q, substantially as specified.

411,947. RHEOSTAT. MERLE J. WIGHTMAN, Lynn, Mass. Filed July 5, 1889. Serial No. 316,660. (No model.)

Claim.—1. An electric-resistance pile consisting of alternate layers of conducting and insulating material, having the parts of each conducting-strip to either side of its center connected, respectively, to the two adjoining conducting-strips.

2. An electric-resistance pile consisting of a series of interlocked pairs of sheets of insulating and conducting material, having the successive sheets of conducting material in electrical contact alternately at opposite sides of their centers.

3. An electric-resistance pile consisting of a series of pairs of sheets of conducting and insulating material intersecting to one side of their center and piled together with the successive sheets of conducting material in electric contact.

4. An electric-resistance pile made up of alternate layers of conducting material and a non-combustible insulator.

5. An electric-resistance pile consisting of alternate sheets of mica and a conducting material, with the successive sheets of the conducting material in electrical contact.

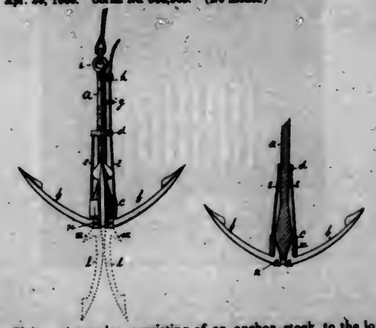
6. An electric-resistance pile consisting of alternate layers of conducting and insulating material piled together, with the successive conducting-layers in electrical connection through parts integral with them.

7. An electric-resistance pile consisting of alternate sheets or layers of mica and iron, having the successive sheets of iron in electrical connection.

8. In a rheostat, a pile of alternate sheets of insulating and conducting material clamped in a holder or trough lined with insulating material, as and for the purpose described.

9. An electric-resistance pile formed of sheets of conducting and insulating material formed with shoulders, as and for the purpose described.

10. An artificial electric resistance consisting of interlocked or crossing sheets of iron and mica having shoulders at their opposite ends, in combination with a holder or trough into which the same are set edgewise and clamping-plates for engaging with the shoulders, as and for the purpose described.



11. The combination, with an artificial electric resistance, of an arc-rupturing magnet applied to the final contact of the series and connected to the resistance-circuit, as described, so as to be energized as the moving contact nears the terminal contact.

12. The combination, with an artificial electric resistance and the fixed contacts therefor, of a movable contact and an arc-rupturing magnet the field of which includes the arc-forming space at the final contact of the series.

13. In an electric-resistance pile, alternate sheets of conducting and non-conducting material provided with slots extending inward from their edges, as and for the purpose described.

14. An electric-resistance plate formed with shoulders at its ends and with one or more slots extending inward from its edges, as and for the purpose described.

411,948. ANCHOR. OMAR F. WILCOX, New Bedford, Mass. Filed Apr. 29, 1889. Serial No. 308,905. (No model.)

Claim.—An anchor consisting of an anchor-stock to the lower end of which are pivoted the flukes having spurs on their inner ends adapted to be inclosed by a ring inclosing the anchor-stock, together with means for sliding said ring on the anchor-stock, whereby the spurs are released and the anchor is caused to let go its hold, substantially as and for the purpose shown and described.

411,949. STEAM-BOILER FURNACE. LEVI D. YORK, Portsmouth, Ohio. Filed June 13, 1889. Serial No. 314,155. (No model.)

Claim.—1. In a steam-boiler furnace, the combination of the boiler, a combustion-chamber arranged centrally under it and in line of the draft, the coking-chambers upon each side of said combustion-chamber and closed off from the draft except through said combustion-chamber, doors at the top of said chambers for the supply of fuel to said chambers, and the grate-bars extending under the three chambers, substantially as and for the purpose set forth.

2. The combination, substantially as specified, of the boiler and fire-box with the inclined tiles G, dividing the said fire-box into three chambers E F F, said chambers F being closed, except at the bottom, so that their only communication with the draft is through the chamber E.

411,950. ARMATURE. ARTHUR S. ATWATER, Cleveland, Ohio. Filed Mar. 30, 1889. Serial No. 305,304. (No model.)

Claim.—Laminæ consisting of wrought-iron plates cut out with the two passages and shaft-hole, and having the channels stamped nearly radially to afford air-escape, substantially as and for the purposes described.

411,951. WATER-HEATER. WILLIAM H. CAMPBELL, Alpena, Mich. Filed Mar. 26, 1889. Serial No. 304,813. (No model.)

Claim.—1. In a boiler, a section composed of a header having fire-flues therein and depending pipes communicating with said header at the lower surface thereof and having indirect communication with the base of the boiler, substantially as described.

2. In a boiler, the combination, with the sections, the cross-chamber, and the pipes, of the longitudinal pipes C, joining the sections above the pipes and entering the cross-chamber, substantially as described.

3. In a boiler, the combination, with the fire-box, of a main hot-air flue D and the side flues E, affording communication between the fire-box and the flue D, substantially as described.

4. In a boiler, a base, a water-supply for the same, supply-pipes J, extending upward from the same, and a top having depending manifold pipes H', in combination with sloping pipes connecting said supply-pipes with said manifold pipes, and vertical pipes connecting said base with said top, substantially as described.

5. In a boiler, a fire-box surrounded with tubes for water, flattened above so as to inclose said fire-box and flattened below in the opposite direction, substantially as described.

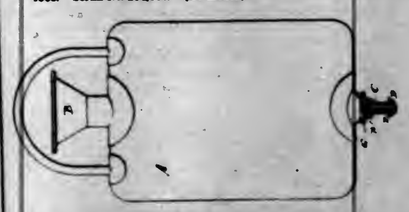
6. In combination with the fire-box of a boiler, a base, a water-supply for the same, vertical tubes at the opposite ends, sloping pipes connecting the same, and one of said end rows communicating with a top water-chamber, and vertical pipes at the sides of said fire-box, said tubes flattened above to inclose said box and below in a direction at right angles to the flattening of the upper part, substantially as described.

411,952. GAME-COUNTER. WILLIAM W. CLAY, Chicago, Ill. Filed Apr. 3, 1888. Serial No. 269,444. (No model.)

Claim.—1. A counter for games, comprising a main portion or body, as A, and a plurality of parts, as B, said parts being entirely independent of each other, and joined to the body A at a portion of their margins and separately detachable from said body, substantially as described.

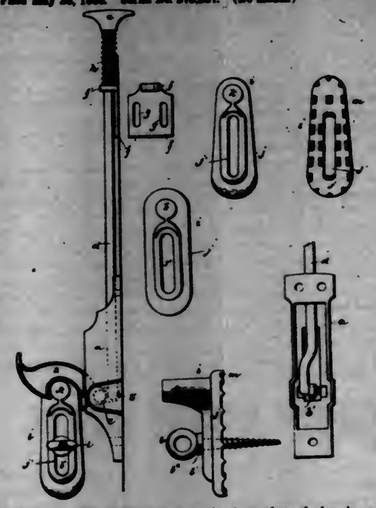
2. A game-counter comprising a main portion or body, as A, provided with a plurality of detachable parts secured to said body at a portion of their margins and independent of each other, and means permanently revealing the number of parts detached from said body, whereby the number of games lost is indicated, substantially as described.

3. A game-counter comprising a main portion or body, as A, and a plurality of separately detachable parts, as B, which are separately secured to said body at a portion of their margins, one of which parts is to be removed when a game is lost, said body of the counter being provided also with a plurality of V-shaped cuts, as C, adapted to receive the detachable portion of another similar counter, substantially as specified.



411,953. ADJUSTABLE BIT. JAMES M. CUNNINGHAM, Lewisburg, W. Va., assignor of one-half to John F. Estill, same place. Filed Sept. 26, 1888. Serial No. 286,463. (No model.)

Claim.—1. The combination, with the section A, having the leg B and provided with the grooves H and I, of the section D, having the leg E, provided with the slotted arms F and G, and the set-screws J and K, substantially as described.



2. In a bit, the combination, with the section A, having the leg B, provided with the bevel cutting-edge *b*, the body C, the neck *c*, and the slots H and I, of the section D, having the leg E, provided with the cutting-edge *e* and the slots *f* and *g* in its arms F and G, and the set-screws J and K, substantially as described.

411,954. FOUNTAIN-SYRINGE. ARTHUR G. BOSSERT, New York, assignor to the Ideal Rubber Company, Brooklyn, N. Y. Filed Dec. 19, 1888. Serial No. 294,077. (No model.)

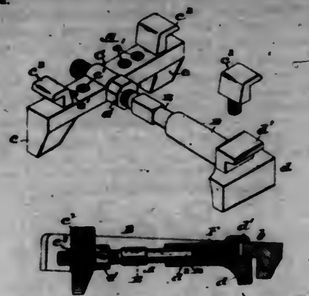
Claim.—The combination, with a rubber bag provided with a top filling-opening and at the bottom with an outlet-tube having a bead at its lower end, a neck of less diameter above said bead and a screw-threaded shoulder at its upper end, of a screw-cap adapted to be screwed on the screw-threaded collar of the outlet-tube for the purpose of closing the same, substantially as set forth.

411,955. GATE-LATCH. CHARLES H. BLAIR, New Albany, Ind. Filed May 20, 1889. Serial No. 310,957. (No model.)

Claim.—1. The casing *a* and the hook *b*, pivoted therein, combined with the rod *d*, jointed to the hook and extended up out of the casing, the adjustable bracket *f*, and the spring *h*, interposed between said adjustable bracket and the rod-knob, substantially as shown and described.

2. The casing *a* and the hook *b*, pivoted therein, combined with the rod *d*, jointed to the hook and extended up out of the casing, the adjustable bracket *f*, and the spring *h*, interposed between said adjustable bracket and the rod-knob, and the adjustable catch *i*, having the projecting arm *k*, to be engaged by the hook, substantially as shown and described.

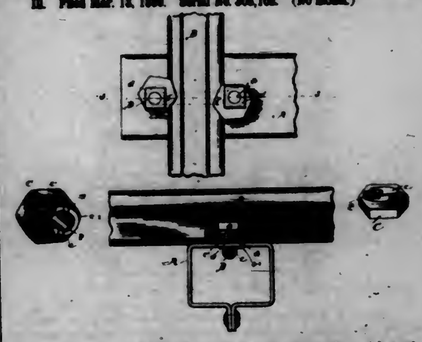
411,956. SPRING-HINGE. HENRY L. PERRIN, Harvard, Ill., assignor to Hunt, Heim & Perrin, same place. Filed Jan. 24, 1889. Serial No. 297,621. (No model.)



Claim.—1. A spring-hinge comprising two leaves pivotally secured together at their adjacent ends, a spring located over one of said leaves, one end of said spring being pivotally secured to one leaf at a remove from the other leaf, the remaining end of said spring being pivotally secured to the second leaf at a point adjacent to the first leaf in line with but below and between the axis of the pivots which unite said leaves, substantially as described.

2. In a spring-hinge, the combination, with the leaves A A', hinged together at their adjacent ends, of a tube B', closed at one end and pivoted at its open end to the leaf A, a spring B, located in said tube, a movable plate *c'* in engagement with one end of the spring B, and a rod C, secured at one end to said movable plate *c'*, and at its other end pivotally secured to the leaf A', substantially as described.

411,957. HORSESHOE. LEWIS FISHER, St. Louis, Mo. Filed Apr. 22, 1889. Serial No. 308,211. (No model.)



Claim.—1. The herein-described horseshoe attachment, consisting of the cross-bar having the calks and adjustable clips, the longitudinal bar having the calk and lug, the thrust-bar, and the spring, said longitudinal bar having a recess to receive said spring and the forward end of said thrust-bar, and said cross-bar having a threaded perforation to receive the rear end of said thrust-bar, substantially as described.

2. The combination of the cross-bar having the calks and the adjustable lugs, the longitudinal bar having the calk and lug at its forward end and being recessed at its rear end, the thrust-bar, the spring, and the jam-nut, the said spring and the forward end of said thrust-bar being held in said recess, the rear end of said thrust-bar engaging in a threaded perforation in said cross-bar, and said jam-nut being applied to said thrust-bar, substantially as described.

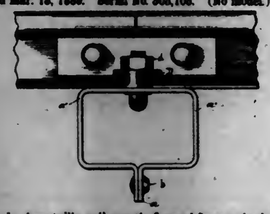
3. The combination of the horseshoe, the cross-bar, the longitudinal bar, the thrust-bar, and the spring, said cross-bar and longitudinal bar having the calks and lugs, as described, said spring being held in a recess within said longitudinal bar, and said thrust-bar being at one end thereof held in said recess against said spring and at its opposite end engaging in a threaded perforation in said cross-bar, substantially as described.

411,958. RAILWAY-RAIL CLAMP. ROBERT FORSYTH, Chicago, Ill. Filed Mar. 13, 1889. Serial No. 303,102. (No model.)

Claim.—1. A railway-rail clamp comprising a bolt, and a perforated jam-block upon said bolt, said jam-block having an eccentrically-curved portion to bear laterally against the rail and having a shoulder or offset to enter a hole in the tie-plate, substantially as described.

2. A railway-rail clamp comprising a bolt, and a perforated jam-block upon said bolt, said jam-block having a shoulder to lock the edge of the rail-flange and having a shoulder to enter a hole in the tie (one of said shoulders being eccentrically curved) and having a broad portion to overlap the rail-flange, substantially as described.

3. A railway-rail clamp comprising a bolt, and a perforated jam-block upon said bolt, said jam-block having an eccentrically-curved shoulder, to lock the rail-flange, and having a broader portion to overlap said flange, said broader portion of the jam-block being of polygonal shape to be engaged by a suitable wrench, substantially as described.

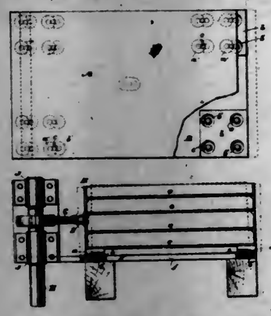


4. A railway-rail clamp comprising a bolt, and an eccentrically-perforated jam-block upon said bolt, said jam-block having a shoulder to bear against the edge of the rail-flange and having a shoulder to enter a hole in the tie, (one of said shoulders being eccentrically curved,) and having a polygonal body adapted to overlap the rail-flange, substantially as described.

5. A railway-rail clamp comprising a bolt, and a perforated jam-block upon said bolt, said jam-block having a shoulder to bear against the edge of the rail-flange, and having a shoulder to enter a hole in the tie-plate, (one of said shoulders being eccentrically curved,) in combination with said perforated tie-plate, substantially as described.

6. The combination, with a railway-tie having a perforated plate A, of a rail-clamp comprising a U-shape bolt D, the jam-blocks C, having the shoulders *c* and *c'*, and the nuts, substantially as described.

7. The combination, with a suitable perforated plate for supporting the rail, of a bolt, a perforated jam-block upon said bolt, said jam-block having a shoulder to bear against the edge of the rail-flange, and having a shoulder considerably smaller than the perforation of said plate to enter said perforation, (one of said shoulders being eccentrically curved,) substantially as described.



411,959. METALLIC RAILWAY-TIE. ROBERT FORSYTH, Chicago, Ill. Filed Mar. 13, 1889. Serial No. 303,108. (No model.)

Claim.—1. A metallic railway-tie formed from a single plate bent to box-like shape and having its abutting edges provided with the flanges bent in the same direction from the body of the metal and bearing against each other, substantially as described.

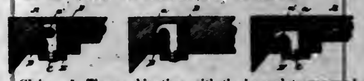
2. A metallic railway-tie formed of a plate bent to box-like shape and having its abutting edges flanged and projecting downwardly from the lower side of the tie, substantially as described.

411,960. MECHANICAL MOVEMENT. THOMAS R. GRIFFITH, Wilkes-Barré, Pa. Filed June 18, 1889. Serial No. 314,737. (No model.)

Claim.—1. In a mechanical movement, the combination, substantially as hereinbefore set forth, of two parts, one of which is movable and the other of which is stationary, provided upon their inner faces with a circular track or bearing, and a globe or sphere placed between and having rolling contact with said tracks and arranged to furnish a rolling gyrating bearing and support for the upper of said parts.

2. As a means for enabling a relatively-gyrating motion to be produced between two parts which have parallel inner faces, and in combination therewith, a globe or sphere that is placed between and has rolling contact with said faces, substantially as and for the purposes shown and described.

3. As a means for supporting a part parallel with and enabling the same to be gyrated over a relatively stationary part, the combination therewith of two or more globes or spheres which are placed between and have rolling contact with the contiguous parallel faces of said parts, substantially as and for the purposes specified.



4. In a mechanical movement, the combination, substantially as hereinbefore set forth, of a movable part arranged to gyrate over a relatively stationary part, one or more globes placed between said parts and having rolling contact with the contiguous faces of the same, and means, substantially as described, for imparting motion to the movable part.

5. In a mechanical movement, the combination, substantially as hereinbefore set forth, of a movable part arranged to gyrate over a relatively stationary part, one or more globes placed between said parts and having rolling contact with circular guide tracks or bearings on each of the contiguous faces of said parts, and means, substantially as described, for imparting a gyrating motion to the movable part.

6. In a mechanical movement, the combination, substantially as hereinbefore set forth, of a movable part the lower face of which is composed of any number of relatively-inclined surfaces, a stationary part over which said movable part gyrates, the upper face of which is composed of an equal number of correspondingly inclined and parallel faces, one or more globes or spheres placed between any pair of the contiguous faces of said parts and arranged so as to form a rolling contact between the same and support for the movable part, and means, substantially as described, for imparting a gyrating motion to said movable part, whereby a vertical or jigging motion is at the same time imparted to the movable part.

7. In a mechanical movement, the combination, substantially as hereinbefore set forth, of a movable part the lower face of which is composed of one or more relatively-inclined surfaces, a stationary part over which said movable part gyrates, the upper face of which is composed of an equal number of correspondingly inclined and parallel surfaces, one or more globes or spheres placed between any pair of the contiguous faces of said parts, having rolling contact with circular guide tracks or bearings on each of said faces, whereby a support is formed for said movable part, and means, substantially as described, for imparting a gyrating motion to said movable part, whereby a vertical or jigging motion is at the same time imparted to the movable part.

411,961. HORSESHOE. JAMES A. HAMLAR, Washington, D. C. Filed Jan. 5, 1889. Serial No. 295,494. (No model.)

Claim.—1. The combination, with the base-plate, recessed as described, and a pintle within each recess, of a shoe or calk, a fastening-bolt whose upper end enters the recess in the base-plate and engages with the pintle, and whose lower end passes through the shoe or calk, and means, substantially as described, for tightening the bolt, for the purposes set forth.

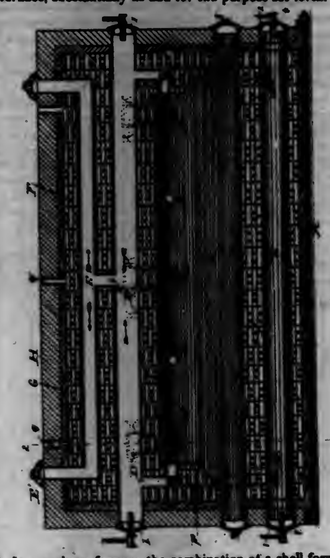
2. The combination, with the base-plate, recessed as described, and a pintle within each recess, of a shoe or calk, a fastening-bolt whose upper end enters the recess in the base-plate and engages with the pintle, and whose lower end is screw-threaded and passes through the shoe or calk, a filling-block in the recess alongside the bolt, and a nut on the bolt, for the purposes set forth.

3. The combination, with the base-plate, recessed as described, and a pintle within each recess, of a shoe or calk having an integral filling-block on its upper surface, a fastening-bolt whose upper end enters the recess in the base-plate and engages with the pintle, and whose lower end passes through the shoe or calk, and means, substantially as described, for tightening the bolt, for the purposes set forth.

411,962. MOLDER'S SPRUE. DANIEL J. HEAPHY, Grand Rapids, Mich. Filed Mar. 5, 1889. Serial No. 301,961. (No model.)

Claim.—1. A molder's sprue constructed in two parts and provided with means, substantially as described, for effecting permanent longitudinal extension.

2. In a molder's sprue constructed in two parts and having a body provided with a conical head, a cylindrical extensible part provided with means for effecting permanent longitudinal extension, substantially as described.



3. In a molder's sprue constructed in two parts for the purpose of effecting permanent longitudinal extension, a body provided with a central longitudinal chamber adapted to a cylindrical extensible part, in combination with a cylindrical extensible part provided with means for effecting permanent longitudinal extension, substantially as described.

4. In a molder's sprue, the combination and arrangement of the body A, having chamber F and pin D, the part B, and pin C, arranged substantially as described.

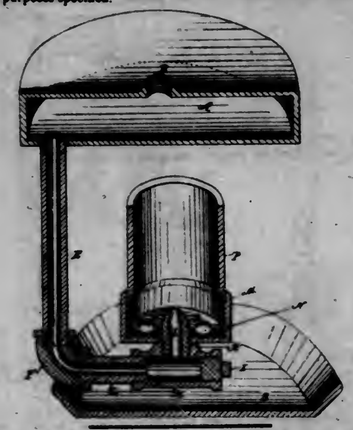
5. In a molder's sprue, the combination and arrangement of a fixed or non-movable part, and movable or extensible part provided with means of permanent screw adjustment, substantially as described.

411,963. GARBAGE-FURNACE. BERNARD C. HEAVEY, Chicago, Ill., assignor of one-third to Mortimer Sunsius, same place. Filed Feb. 1, 1889. Serial No. 298,333. (No model.)

Claim.—1. In a garbage-furnace, the combination of a shell formed with material non-conductive of heat, a fire-chamber B, and a retort C above the fire-chamber, surrounded by a mass of spaced brick, substantially as described, within the shell, and inlet and outlet passages extending from the retort and fire-chamber to the exterior of the furnace, substantially as and for the purpose set forth.

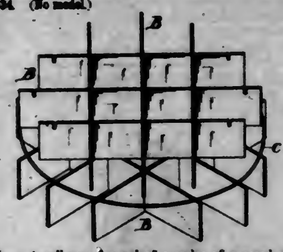
2. In a garbage-furnace, the combination of a shell formed with material non-conductive of heat, a fire-chamber B, and a retort C above the fire-chamber, surrounded by a mass of spaced brick, substantially as described, within the shell, one or more passages M, connecting the fire chamber and retort, and one or more flues and chutes extending from the exterior of the furnace to the retort, substantially as set forth.

3. In a garbage-furnace, the combination of a shell formed with material non-conductive of heat, a fire-chamber B, and a retort C above the fire-chamber, surrounded by a mass of spaced brick, substantially as described, within the shell, a passage M, connecting the fire-chamber and retort, a chute K, and flue in the furnace-wall provided with a port L, the said chute, port, and flue extending from the exterior of the furnace to the retort, a door *s*, affording access to the retort from without the furnace, an ash-pit N, and a chute *r*, extending from the retort to the ash-pit, substantially as described.



4. In a garbage-furnace, the combination of a shell formed with material non-conductive of heat, a fire-chamber B, a retort C above the fire-chamber, surrounded by a mass of spaced brick, substantially as described, within the shell, a second fire-chamber B', intercommunicating with the retort, and inlet and outlet passages extending from the retort and fire-chambers to the exterior of the furnace, substantially as and for the purpose set forth.

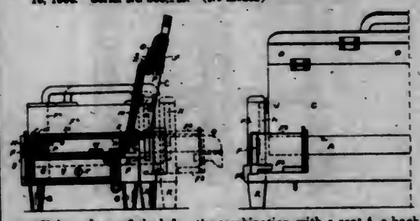
5. In a garbage-furnace, the combination of a shell formed with material non-conductive of heat, a retort C, fire-chambers B and B', respectively below and above the retort, passages D and M, affording communication between the fire-chambers and the retort, a mass F of spaced brick, substantially as described, about the chambers B' C and the chamber B, which opens into the mass F, a flue *q*, extending through the shell, a chute K in the furnace-wall, provided with a port L, the said chute and port extending from the exterior of the furnace to the retort, a door *s*, affording access to the retort from without the furnace, an ash-pit N, a chute *r*, extending from the retort to the ash-pit, and a flue E, extending from the fire-chamber B' to the exterior of the furnace, substantially as described.



411,964. OIL-BURNER FOR HEATING PURPOSES. FRANCIS G. LILLY, Jamestown, N. Y., assignor to Charles H. Gregory, same place. Filed Feb. 26, 1889. Serial No. 301,462. (No model.)

Claim.—1. The combination, in an oil-burner, of the retort A, the section H, connecting therewith by means of a pipe E, the externally-threaded jet-burner connected to the branch K of said section, and the cylindrical section M, secured to the jet-burner and resting upon the branch K, the said cylindrical section being provided with draft-apertures R, substantially as and for the purposes specified.

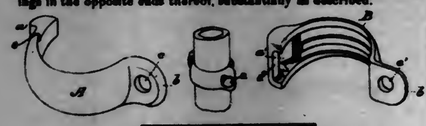
2. The combination, with the section H, connected with the retort A, of the externally-screw-threaded jet-burner, the short section M, secured thereto and resting on the branch K, and the cylinder P, mounted on the upper part of said section M, substantially as and for the purposes specified.



411,965. CELL-CASE FOR TOBACCO-PAILS. EDWARD MARSH and JOHN HARTNER, Detroit, Mich. Filed July 12, 1889. Serial No. 317,394. (No model.)

Claim.—A cell-case formed of a series of crossed strips notched together and secured by the hoop C, resting in notches in the upper edges of the crossed strips near their ends, substantially as and for the purpose set forth.

411,966. SOFA-BED. ISAAC H. MILLER, Boston, Mass. Filed July 16, 1888. Serial No. 280,145. (No model.)



Claim.—In a sofa-bed, &c., the combination, with a seat A, a back C, hinged to the seat, and a horizontal arm or arms made in parts F F², one stationary and the other adapted to travel on the stationary part and also connected through a vertical way H to the back, and the back adapted to travel on said way H, of a horizontal extension F² at one end, hinged to the rear end of the stationary part F of the arm F F², to be placed in and out of line with said part F, and when in line with said part F the other and sliding part F² can travel over it, substantially as described, for the purpose specified.

411,967. CLAMPING DEVICE. PETER RIEMER, Allegheny, Pa. Filed Feb. 25, 1889. Serial No. 300,982. (No model.)

Claim.—The combination, with the part A, having at one end a lug *a* and shoulder *c*, of the part B, having its corresponding end enlarged and provided with a through opening *a'* and recess *c'*, whereby the lug *a* is secured through the opening *a'* and into recess *c'*, the shoul-

der *c* abutting against the outside wall of said enlarged end, and said parts A and B being secured together by a bolt passing through openings in the opposite ends thereof, substantially as described.

411,968. HOOK. ALBERT SANFORD, Oshkosh, Wis. Filed July 21, 1883. Serial No. 260,637. (No model.)

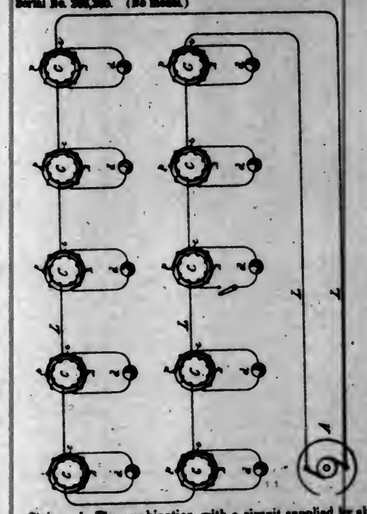
Claim.—1. A hollow chain-hook having the core-support holes in the back or edges closed or filled, substantially as set forth and described.

2. As an improved article of manufacture, a blank from which to form a hollow hook, having its walls integral at the back with openings therein, and flanges for closing said openings, substantially as described.

3. As an improved article of manufacture, a blank from which to form a hollow hook, having its walls integral at the back with openings in said back, flanges for closing the same, and openings in the side walls of the hook, substantially as described.

411,969. APPARATUS FOR FORMING GLASSES, &c. NATHAN R. SCOTT, Wheeling, W. Va. Filed Apr. 29, 1889. Serial No. 309,071. (No model.)

Claim.—1. A device for joining glass bodies to their standards and comprising a mold for the glass bodies having an aperture therein, in combination with a movable holder adapted to hold the disconnected standard and to insert the end of the same into said aperture and press it in contact with the body to unite it thereto, substantially as specified.



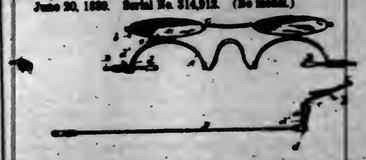
2. A device for joining standards to glass bodies, comprising a holder for the glass standards adapted to move vertically, in combination with a mold for the bodies situated above said holder, with sufficient space between said aperture and holder for the standard, and provided with an aperture situated directly above said holder, substantially as specified.

3. A device for joining glass standards to glass bodies, consisting of a table having a flanged collar and a body-mold fitting over said collar and constructed to form the body only, in combination with a stem bearing a platform arranged at a distance from the bottom of said mold and adapted to slide vertically under said mold beneath an aperture therein, substantially as specified.

4. A device for joining glass bodies and standards, consisting of a table having a flanged collar and an apertured mold fitting over said collar and designed to form the body only, in combination with a vertically-sliding stem under said aperture, a platform on said stem, a guide projecting above said platform, and a lever pivoted to said table and connected to said stem, substantially as specified.

5. A device for joining glass bodies and standards, consisting of a table having a flanged collar and a separable glass-mold constructed to form the body only and fitting over said collar and having an aperture in the bottom thereof, in combination with a vertically-sliding stem under said aperture, said stem having a restricted portion, a platform, and a guide, said platform being arranged at a distance from the aperture in the bottom of the mold substantially equal to the length of the standard, and a lever pivoted to the table and having an end embracing said restricted portion, substantially as specified.

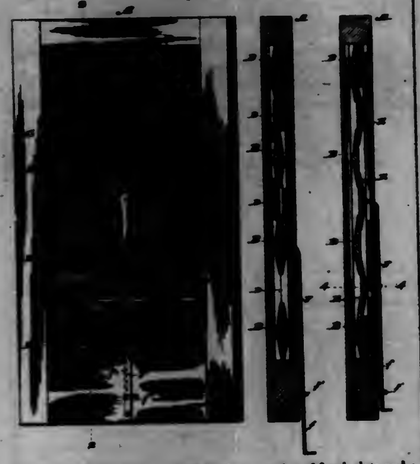
411,970. SYSTEM OF ELECTRICAL DISTRIBUTION FOR STREET-LIGHTING. OLIVER B. SHALLENBERGER, Rochester, assignor to the Westinghouse Electric Company, Pittsburg, Pa. Filed Oct. 16, 1888. Serial No. 288,265. (No model.)



Claim.—1. The combination, with a circuit supplied by alternating electric currents, of two or more electric converters having their primary coils connected in series in said circuit, and an incandescent electric lamp or other translating device connected in the secondary circuit of each converter, the coils of the converters being so proportioned to the mass of iron in the corresponding cores that upon the interruption of the circuit through any lamp a normal current is allowed to pass through the other converters by reason of the high magnetic saturation of the core of the corresponding converter.

2. In a series system of secondary distribution, a converter so proportioned that the self-induction of its primary with open secondary is the equivalent of the resistance of the translating devices normally on the secondary circuit.

3. In a series system of electrical secondary distribution, converters having their primary coils so proportioned that the inductive opposition to the current is approximately the same when the secondary is open as when the secondary is closed through its normal circuit.



411,971. SPECTACLES. URIAH SMITH, Battle Creek, Mich. Filed June 20, 1888. Serial No. 314,912. (No model.)

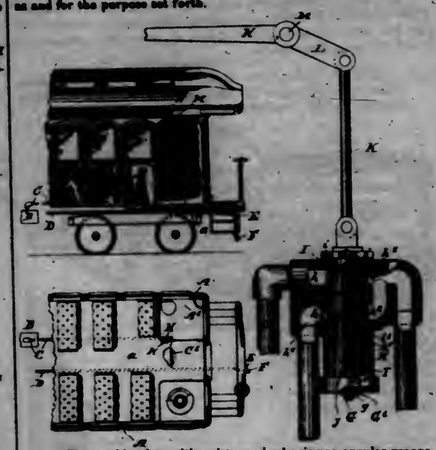
Claim.—1. The combination, with a main spectacle-frame and an adjustable swinging frame carrying suitable glasses, of a spring for lifting and holding the swinging frame out of range of the eyes, substantially as described.

2. The combination, with a main frame and an adjustable frame hinged thereto, of a spring for lifting and holding the latter in its raised position, and a latch or catch for holding said adjustable frame in its position in line with the eyes, substantially as described.

411,972. WINDOW-BLIND. EDWARD SCHEPELWEIN and HENRY SCHEPELWEIN, St. Louis, Mo. Filed May 11, 1888. Serial No. 311,361. (No model.)

Claim.—1. A window-blind having a series of fixed slats and a sliding series of slats, the slats of said sliding series at the upper edge thereof lapping upon the inner face of the fixed slats, respectively, next above and at the lower edge thereof lapping upon the outer face of the fixed slats next beneath, substantially as described.

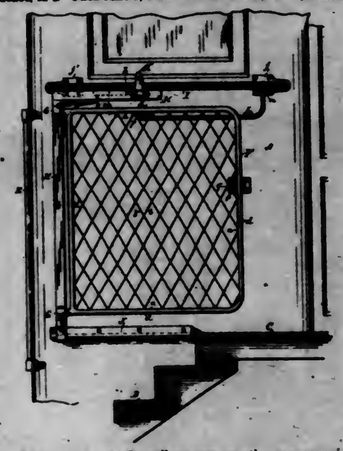
2. A window-blind having a series of fixed slats and a sliding series of slats, the slats of said sliding series at the upper edge thereof lapping upon the inner face of the fixed slats, respectively, next above and at the lower edge thereof lapping upon the outer face of the fixed slats next beneath, and said sliding series of slats having connected therewith the adjusting-bar F, arranged as described, for sliding and holding in position said series of slats, substantially as described.



3. The combination, in a window-blind, of the series of fixed slats B and the sliding series of slats E, said slats B being spaced apart, as described, and having the outer face *b'* inclined, as shown, and the upper portion of the inner face made vertical and the lower portion inclined, as shown, and said slats E being spaced apart, as shown, and the upper portion being made vertical and the lower portion inclined and made to lap upon the fixed slats, substantially as described.

411,973. VALVE. CHARLES F. WEBB, Concord, N. H., assignor to the Westinghouse Air Brake Company, Allegheny, Pa. Filed June 21, 1888. Renewed Aug. 17, 1889. Serial No. 321,143. (No model.)

Claim.—1. An automatic relief-valve consisting of a valve-housing provided with a valve-chamber having upper and lower ports, the two upper ports connecting with the supply-pipe and the two lower ports with said supply and an exhaust pipe, and an air-inlet located below the lower ports, whereby an air-cushion is formed below a piston-valve, the said piston-valve fitting the valve-chamber in said housing and having an annular groove for conducting air through the same, and a suitable spring or springs for holding said valve normally with its groove below the lower ports, all substantially as and for the purpose set forth.



2. The combination, with a piston-valve having an annular groove, of a valve-housing provided with upper and lower ports, the two upper ports connecting with the supply-pipe and the two lower ports with said supply and an exhaust pipe, a suitable spring or springs for closing said valve, and an aperture or air-inlet for admitting air to the valve-chamber below said lower ports and the said piston-valve, whereby the closing movement of said valve is sufficiently retarded to exhaust the air in the supply or delivery pipe back through said valve to a waste-pipe.

3. In a valve having automatic relief mechanism, the combination, with a chamber underneath the valve, having a small opening for admission of air, of an opening provided with an adjustable device for controlling the escape of confined air from said chamber, comprising a screw threaded to said opening, having a longitudinal groove at one side, and a flexible collar or washer interposed between the bottom of said chamber and the head of said screw, substantially as and for the purpose set forth.

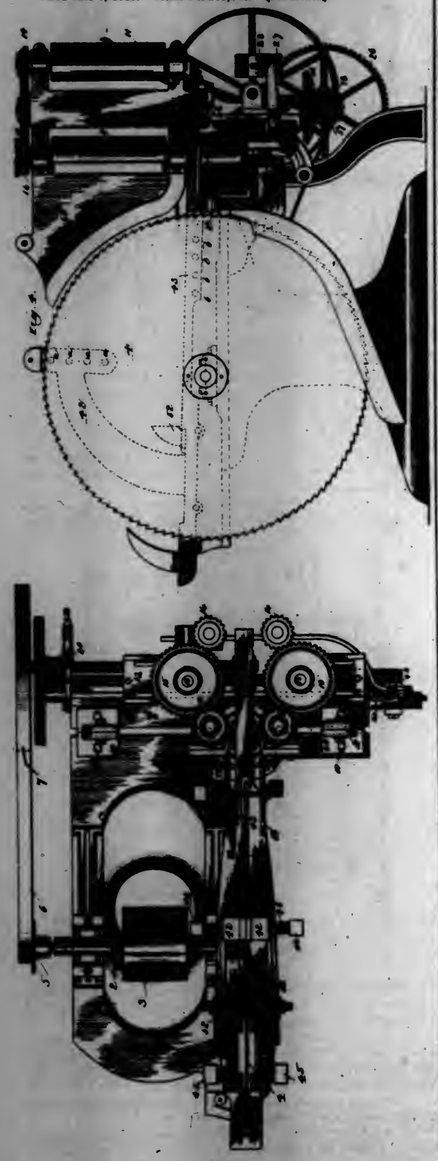
4. The combination, with a piston-valve having an annular groove, of a valve-housing provided with upper and lower ports, the two upper ports connecting with the supply-pipe and the two lower ports with the supply and an exhaust pipe, a suitable spring or springs for closing said valve, an aperture or air-inlet for admitting air to the valve-chamber below said lower ports, and a device for controlling its escape, consisting of a threaded opening in the bottom of said chamber, to which is fitted a screw the threads of which are flattened or removed on one side, and a flexible washer, all substantially as and for the purpose set forth.

411,974. GATE FOR RAILWAY-CARS. JOHN B. WOOD, Providence, R. I. Filed June 6, 1889. Serial No. 313,189. (No model.)

Claim.—1. A gate for railway-cars or other purposes, jointed to a support which is adapted for inward and outward movement in operating the gate, substantially as described.

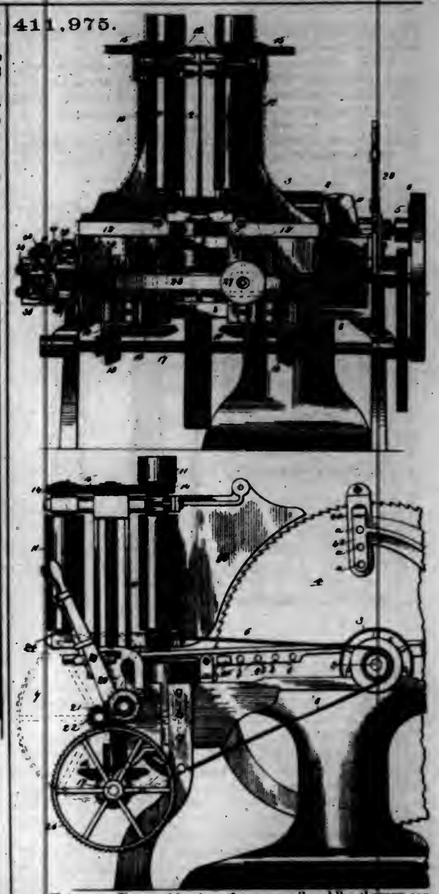
2. A gate for railway-cars or other purposes, jointed to a support which is adapted for inward and outward movement in operating the gate, and provided with the guiding-rod to control the opening and closing movement, substantially as described.

3. The slotted guide-tube adapted to guide the supporting-bar of the gate, substantially as described.



4. A gate for railway-cars or other purposes, jointed to a support which is adapted for inward and outward movement in operating the

gate, in combination with a latch for holding the gate in position, substantially as described.



5. A gate for railway-cars or other purposes, formed with the cross-wires, the channel-bars, and the rounded bands, and provided with the pintle-pieces, substantially as described.

6. A gate for railway-cars or other purposes, jointed to a support which is adapted for inward and outward movement in operating the gate and held in a guide-tube slotted at its under side, substantially as and for the purpose specified.

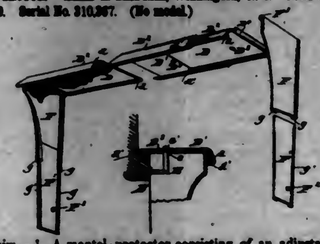
411,975. **RESAWING-MACHINE.** ERWIN BENJAMIN, South Evanston, Ill., assignor to the Benjamin Machine Company, of Illinois. Filed Jan. 7, 1889. Serial No. 296,671. (No model.)

411,975.

Claim.—1. The combination of a cross-rail, saddles thereon carrying the feed-rolls and capable of movement on the rail, a yielding lever pivoted in fixed relation to said rail, and connections from each of said saddles, respectively, to points upon said yielding lever oppositely situated in relation to the pivot thereof, whereby the saddles and the rolls supported thereon are adapted to yield simultaneously in opposite directions, substantially as described.

2. The combination of a cross-rail, saddles movable thereon and carrying the feed-rolls, a yielding lever pivoted in stationary relation to said rail and having cams or lugs placed oppositely with relation to said pivot, and blocks connected with each of said saddles and with said lugs or cams, one of said cams being detachably connected by means of a latch pivoted to the block and having a recess engaging with said leg or cam.

3. The combination, with the cross-rail and saddles carrying the feed-rolls of a resawing-machine, of a block connected to said saddle and sliding in said cross-rail, and a latch pivoted to said block and adapted to engage with a yielding lever or with a stop attached to the cross-rail.



4. The combination, with the rail 8 and saddle carrying the feed-rolls, of screw 34, block 32, latch 38, handle 39, and stop 43.

5. The combination of a saw, saddles carrying feed-rolls, guide-aprons secured to said saddles and extending from the feed-rolls to the saw, and a bolt passing through both aprons and having a spring-washer intervening between it and the apron so as to form an elastic connection between said aprons, substantially as described.

6. The combination, in a resawing-machine, of a vertical pivot supported by the frame of the machine, a rail having a socket fitted to said pivot, saddles on said rail, and feed-rolls carried by said saddles, whereby the horizontal rotation of said rail and the alignment of the direction of feed with the saw is permitted, substantially as described.

7. The combination, in a resawing-machine, of a vertical pivot supported by the frame of the machine and adapted to be partially rotated on a horizontal axis, a rail having a socket fitted to said pivot, saddles on said rail, and feed-rolls carried by said saddles, whereby the horizontal rotation of said rail and the alignment of the direction of feed with the saw is permitted, substantially as described.

411,976. **GRATE AND FIRE-PLACE CORNICE AND MANTEL-PROTECTOR.** ELIJA B. BRIDGERS, Wilmington, N. C. Filed May 11, 1889. Serial No. 310,267. (No model.)

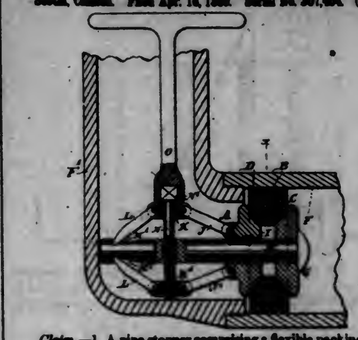
Claim.—1. A mantel-protector consisting of an adjustable top formed of the middle section D', bent down near its front edge, and the end sections D D, bent down near their front edges and having the outer upwardly-extending end flanges D^4, and the adjustable and removable side pieces formed of the lower sections F' and the upper sections F, having the top end grooves F^3, substantially as set forth.

2. In a mantel-protector, the combination of the retaining-hooks E, the adjustable top formed of the middle section D', bent down near its front edge and having the apertures D^5, and the end sections D, bent down near their front edges and formed with the apertures D^5 and the outer upwardly-extending end flanges D^4, the adjustable sides formed of the lower sections F', having the apertures F^5, and the upper sections formed with the upper end grooves and the retaining-screws, substantially as set forth.

411,977. **OIL-CAN.** JAMES A. CAMPBELL, New Orleans, La. Filed Sept. 5, 1888. Serial No. 284,502. (No model.)

Claim.—1. The combination, with an oil-can nozzle having a bearing in its lower end, of a wire passing through said bearing and nozzle and having a reduced diameter at the delivery end of the nozzle, an adjusting-piece through which the lower end of the wire passes, and a spiral spring on the wire between said bearing and adjusting-piece, substantially as set forth.

2. An oil-can nozzle having a sleeve *a* in its outer end, a trapezoidal guide-piece in its inner end, a wire extending through the guide-piece and sleeve and having a reduced diameter of greater length than the latter, and a spiral spring on the wire pressing at its upper end against the lower end of the guide and at its lower end against a bearing on the wire, substantially as set forth.



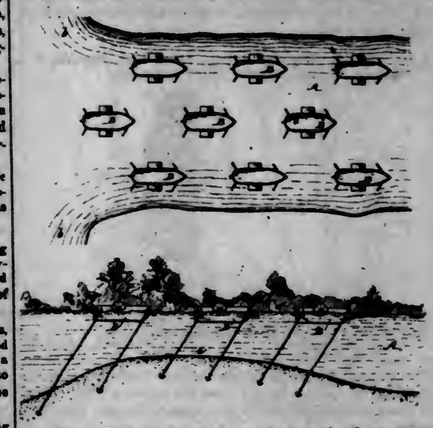
3. The combination, with the nozzle B and wire *c*, of the guide C', formed of a strip of metal bent into trapezoidal shape and provided with apertures *b* for receiving the said wire *c*, substantially as specified.

4. In an oil-can, the combination, with the oil-can nozzle having a longitudinal slot at the delivery end thereof, of the sliding wire having a projecting pin near its outer end entering said slot, provided with a notch in its side, the notch being normally within the end of the nozzle, substantially as set forth.

5. In an oil-can, the combination, with the nozzle having guides, of a sliding wire passing through the guides and projecting beyond the delivery end of the nozzle, a spring pressing the rod inwardly, a sleeve on the inner end of the rod, and a pin extending upwardly into the lower end of the sleeve and engaging the inner extremity of the wire, substantially as set forth.

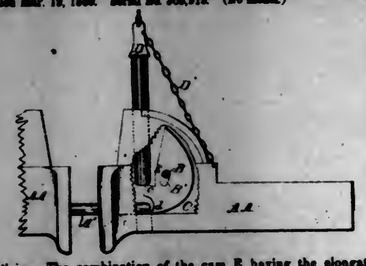
6. In an oil-can, the combination, with the nozzle having a sliding wire extending through it, the wire having a contracted diameter adjacent to the delivery end of the nozzle, and a spring normally pressing the wire inwardly to hold said contracted part within the nozzle, of an adjusting-piece on the inner end of the wire, having a right-opening on one side, and a pin extending upward through the lower end of the adjusting-piece against the extremity of the wire, substantially as set forth.

411,978. **PIPE-STOPPER.** JOHN W. CHANDLER, Liverpool, Nova Scotia, Canada. Filed Apr. 16, 1889. Serial No. 307,494. (No model.)



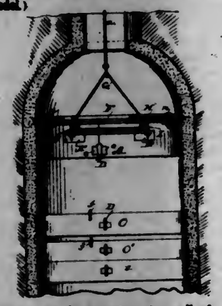
Claim.—1. A pipe-stopper comprising a flexible packing-ring having the inner half of its cross-section semicircular, a disk fitting onto one side of the said semicircular cross-section and closing the central opening of the packing-ring, a rod extending centrally from the said disk and passing through the central opening of the packing-ring, a second disk held on the said rod and adapted to be moved onto the packing-ring opposite the other disk, a toggle-joint connected with the said second disk, and a screw-rod for operating said toggle-joint, substantially as shown and described.

2. A pipe-stopper comprising a flexible packing-ring, two disks at opposite sides of said ring and closing its opening, the disks being rounded or inclined to expand the ring when forced together, a headed rod passed through the disks, opposite toggles connecting the outer end of the rod with the adjacent end of the disk and provided with collars at their joints, one collar being threaded, and the operating screw-rod passing through one of said collars and rod and engaging the opposite threaded collar, substantially as set forth.



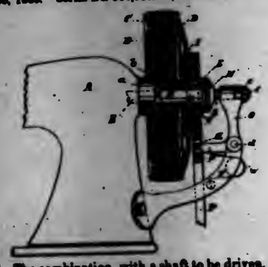
3. A pipe-stopper comprising a flexible packing-ring B, the disks G I at opposite sides thereof, the rod H, passed through said disks and having a head bearing on disk G, an aperture near its opposite end and opposite notches H' H', the links J, hinged to the disk I, the links L, engaging the notches H', the collars K K', connecting the links J L and the screw N, passed through the collar K and aperture in rod H into the threaded collar K', substantially as set forth.

411,979. **MEANS FOR CONTROLLING THE FLOW OF NAVIGABLE RIVERS OR OTHER WATERS.** JOSEPH G. COBLE, Crockett, Tex. Filed Apr. 27, 1889. Serial No. 308,782. (No model.)



Claim.—The herein-described means for increasing the current or outflow of rivers and other streams to prevent the formation of sand-bars and the overflow of the banks of rivers, consisting of a series of anchored steam-vessels arranged in parallel rows, with their heads in the same direction, and in alternation, as specified, and provided with propelling devices which are in practice kept in motion for accelerating the outflow of the stream, as set forth.

411,980. CAR-COUPLING. JAMES H. CRITTENDEN, Fall River, Mass. Filed Mar. 19, 1889. Serial No. 303,912. (No model.)



Claim.—The combination of the cam E, having the elongated slot B', shoulder C, and the offset *d*, in combination with the pivot B, pin D, and the housing or chamber for the same, all substantially as described.

411,981. METHOD OF CEMENTING CISTERNS OR WELLS. WILLIAM H. H. DAVIS, Oakfield, Mich. Filed Sept. 24, 1887. Serial No. 250,667. (No model.)

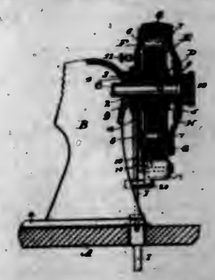
Claim.—The process of constructing the wall of a well by successive excavations and cementing, consisting, first, in making a single excavation, then inserting an expansible, redesible, and forming cylinder in said excavation, then filling the space between the said cylinder and the earth wall with cement, then making another excavation, inserting a cylinder, and cementing as before, thus cementing and completing the well in sections by successive downward steps, substantially as described.

411,982. ELECTRIC MOTOR. PHILIP DIEHL, Elizabeth, N. J. Filed Apr. 20, 1889. Serial No. 307,917. (No model.)

Claim.—1. The combination, with a shaft to be driven, of an electric motor the wheel of which is loosely mounted on said shaft, a clutch-disk connected with said shaft so as to rotate therewith and adapted to be engaged with said wheel, and an arm or lever for forcing said disk and wheel into frictional contact with each other when desired.

2. The combination, with a shaft to be driven, of an electric motor comprising a stationary field-magnet and a rotary armature, forming part of a wheel which is loosely mounted on said shaft, a clutch-disk connected with said shaft to rotate therewith and adapted to be frictionally engaged with said wheel, and means for forcing said disk and wheel into frictional contact with each other when desired.

3. The combination, with a shaft to be driven, of an electric motor the wheel of which is loosely mounted on said shaft, a clutch-disk rotatively connected with said shaft and adapted to be engaged with said wheel, means for causing a frictional engagement between said disk and wheel, and a brake arranged to arrest the movements of said disk and of the shaft driven thereby, when the pressure of the said disk against said wheel is relieved.



4. The combination, with a shaft to be driven and a sleeve secured to said shaft, of an electric motor comprising a stationary field-magnet and an armature, forming part of a wheel which has a hub mounted loosely on said sleeve, a clutch-disk rotatively connected with said sleeve, but adapted to slide thereon into or out of engagement with said wheel, and an arm or lever for pressing said disk into frictional contact with said wheel, when desired.

5. The combination, with a shaft to be driven and a sleeve secured to said shaft, of an electric motor comprising a stationary field-magnet and an armature, forming part of a wheel which has a hub mounted loosely on said sleeve, a clutch-disk rotatively connected with said sleeve, but adapted to slide thereon into or out of engagement with said wheel, an arm or lever for pressing said disk into frictional contact with said wheel, when desired, and a spring-pressed brake to arrest the movements of the said disk and shaft when the pressure of the said arm or lever on said disk is relieved.

6. The combination, with the shaft E and the sleeve H, fixed thereto, of the stationary field-magnet D, the rotary armature-wheel B, having the hub *b* loosely fitting said sleeve, the clutch-disk L, keyed to said sleeve and having the button M, and the spring-operated lever O, provided with a brake G.

7. The combination, with the arm A, having the hub *a* and bracket F, of the shaft E, extending through said hub and provided with the sleeve H, the stationary field-magnet D, secured to said hub *a*, the rotary armature-wheel B, having hub *b* loosely fitting said sleeve, the clutch-disk L, free to slide on said sleeve, but keyed thereto for rotate therewith, the bell-crank clutch-lever O, pivoted to said bracket and provided with the brake G, and the spring *w* to operate said lever.

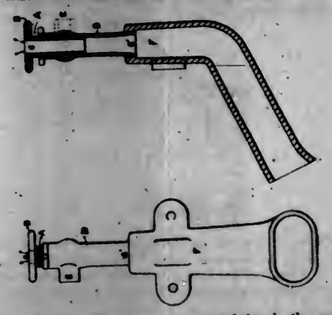
411,983. ELECTRIC MOTOR. PHILIP DIEHL, Elizabeth, N. J. Filed Apr. 20, 1889. Serial No. 307,918. (No model.)

Claim.—1. In an electric motor, the combination, with a shaft to be driven, of a rotary armature normally connected with said shaft to rotate therewith, a field-magnet adapted to rotate independently of said shaft when desired, and means for frictionally holding said magnet or armature more or less tightly to regulate the movement of the active part of the motor.

2. In an electric motor, the combination, with a rotary field-magnet and rotary armature, of a clamping device for frictionally holding one or both of said parts more or less tightly, and comprising a normally stationary disk or plate to which the circuit-terminals are attached and which is provided with contact-rings to be engaged by brushes on the armature.

3. In an electric motor, the combination, with a rotary field-magnet provided with friction plugs or blocks, of a sleeve having a threaded portion, a plain portion on which said magnet is loosely mounted, and a flange at its end opposite to said threaded portion, a clamping-disk having an orifice interiorly threaded to engage said threaded portion of the sleeve, an armature surrounding said field-magnet, a wheel by which said armature is carried, a brake to engage said wheel, and a driven shaft with which said wheel is operatively connected.

4. In an electric motor, the combination, with a shaft to be driven, of a field-magnet adapted to rotate independently of said shaft when desired, means for frictionally holding said magnet more or less tightly, a rotary armature, a wheel carrying said armature and which is normally connected with said shaft to rotate therewith, and a brake for arresting the movements of said wheel when the frictional hold on the magnet is relaxed.



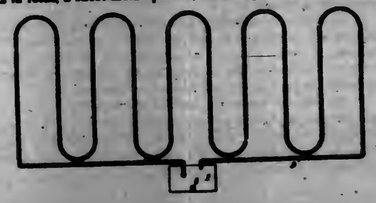
5. In an electric motor, the combination, with a rotary field-magnet and a clamping disk or plate for frictionally holding the same more or less tightly, of a rotary armature-wheel and a brake arranged to engage said wheel, said brake being operated by said disk or plate and adapted to be forced into contact with said wheel when said magnet is released and to be released from said wheel when said magnet is clamped.

6. The combination, with the rotary field-magnet, the clamping-disk F, the armature, and the wheel H, of the brake-lever 17, pivoted to said disk and having an inclined under side, and the arm E, having the pin or projection 20, on which said lever rests.

7. The combination, with the arm A, having the hub 3, of the sleeve D, attached to said hub and having plain and threaded portions, the rotary field-magnet mounted loosely on said plain portion, the plate or disk mounted on said threaded portion, the armature surrounding said field-magnet, the wheel H, carrying said armature and having the hub 8, the sleeve on which said hub loosely fits, the shaft C, connected with said sleeve 9, the stop-motion or clutch-screw 10, and the brake-lever operated by said disk.

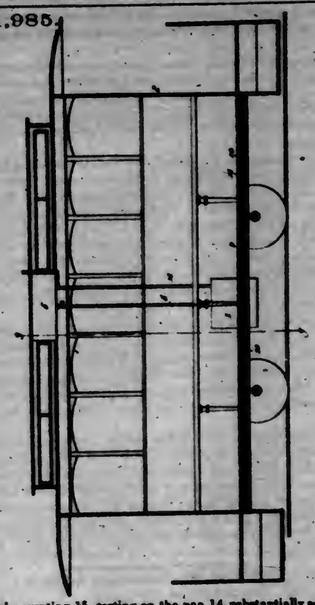
8. The combination, with a sewing-machine provided with an electric motor, of a stopping and starting or regulating device for said motor, and a pitman for operating said stopping and starting or regulating device, said pitman being provided with a joint just above the level of the top of the sewing-machine table, or in the line with the pivots of the machine hinges, thereby permitting the machine to be turned up on its hinges without disconnecting said pitman.

411,984. FURNACE. ALFRED DEE and JOHN SAMES, Sydney, New South Wales. Filed Jan. 8, 1889. Serial No. 295,689. (No model.)



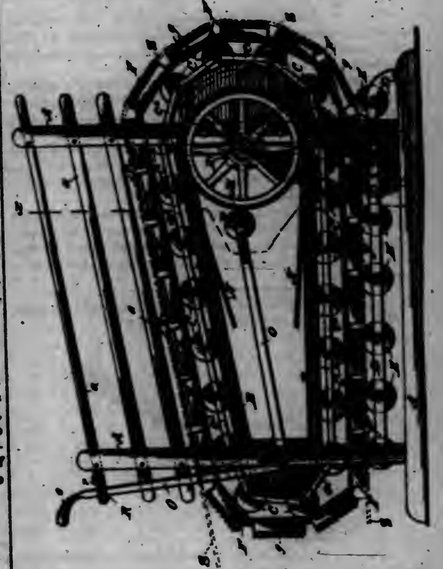
Claim.—An attachment for furnaces, consisting in the angular distributing-tube, the two arms of which form an obtuse angle, and the bore of the tube gradually increasing in diameter from its inlet to its discharge end, and the annular injector having an adjustable air-pipe and connected at its outlet end to the upper or inlet end of the distributing-tube, substantially as set forth.

411,985. STEAM-CAR-HEATING APPARATUS. JOHN L. HADLEY, New York, and MICHAEL H. WHALEN, Brooklyn, N. Y. Filed Apr. 26, 1889. Serial No. 308,509. (No model.)



Claim.—1. A street-car-heating apparatus consisting of a heater mounted on the car, a heat-radiating pipe connected with the heater and extending in folds over the floor of the car, a removable sheet-metal pan extending over the folds of the heat-radiating pipe, and a removable floor-grating extending over the sheet-metal pan, substantially as shown and described.

2. A street-car-heating apparatus consisting of a casing 1, mounted in the bottom and side of a car 2, and having an oil-tank 5, with burners 7, located in the bottom of casing 1, a water-supply tank 6, located in the car at its top, a boiler 3, suspended in casing 1, above burners 7, and connected with water-tanks 6 by pipe 8, a heat-radiating pipe 9, leading from boiler 3 and extending over the floor of car 2 in folds, a sheet-metal pan 14, extending over the folds of pipe



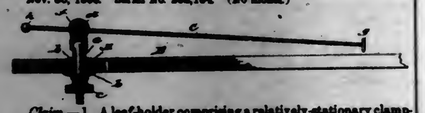
9, and a grating 15, resting on the pan 14, substantially as shown and described.

411,985.

411,986. ANIMAL TREAD-POWER. DAVID C. FRASHER and WILLIAM J. DAVIS, New Market, N. J. Filed Oct. 12, 1888. Serial No. 288,021. (No model.)

Claim.—1. The combination, in a tread-power, of a supporting-frame, a track or guide thereon, an endless chain of rollers running freely on the track and independently of drums or wheels which transmit the power of the machine, and an endless chain of lugs running freely on the endless chain of rollers and independently of drums or

wheels which support the endless chain of rollers or which transmit the power of the machine, substantially as described, for the purposes set forth.



2. The combination, in a tread-power, of a supporting-frame, a track or guide thereon, an endless chain of rollers running freely on the track, an endless chain of lags running freely on the endless chain of rollers and provided with racks, and gearing engaged by the racks and transmitting the power of the machine, substantially as described, for the purposes set forth.

3. The combination, in a tread-power, of a supporting-frame, a track or guide thereon, a series of anti-friction wheels journaled below the track, an endless chain of rollers running freely on the track and independently of drums or wheels which transmit the power of the machine, and an endless chain of lags running freely on the endless chain of rollers and independently of drums or wheels which support the endless chain of rollers or which transmit the power of the machine, said endless chain of lags running between the endless chain of rollers and the lower anti-friction wheels, substantially as described, for the purposes set forth.

4. The combination, in a tread-power, of a supporting-frame, an endless track B thereon, an endless chain of rollers C, running freely on the track, an endless chain of lags F, provided with tracks *g* and running freely on the endless chain of rollers, a shaft H, a gear-wheel G thereon engaged by the lag-racks, and gearing driven by the shaft H and transmitting the power of the machine, substantially as herein set forth.

5. The combination, in a tread-power, of a supporting-frame, an endless track B thereon, an endless chain of rollers C, running freely on the track, a series of anti-friction wheels E, journaled to the frame below the track, an endless chain of lags F, having racks *g*, and running freely on the endless chain of rollers and over the anti-friction wheels E, a shaft H, a gear-wheel G thereon engaged by the lag-racks, and gearing driven by the shaft H and transmitting the power of the machine, substantially as described, for the purposes set forth.

411,987. MUSIC-HOLDER. BURDETT GUY, Oneonta, N. Y. Filed Nov. 30, 1888. Serial No. 292,184. (No model.)

Claim.—1. A leaf-holder comprising a relatively-stationary clamping-bolt, a transversely-apertured head turning on the outer end of the said bolt, and a sliding rod passed through said aperture, substantially as set forth.

2. In a music-holder, the combination, with a post, of a swiveling head thereon having an eye oblique to the axis of the post, and a longitudinally-sliding rod fitted to pass through said eye and adapted to bear at its dipping end down upon the music, substantially as specified.

3. The combination of the screw-threaded post A, having an upper collar *c*, the flanges *b b*, the nut *e*, the swiveling head *d*, having an eye *f* oblique to the axis of the post, and the longitudinally-sliding rod C, essentially as shown and described.

4. In a music-holder substantially as specified, the rod C, having a button-shaped projection *g* on its one end and a stop *h* at its opposite end, in combination with the swiveling head *d*, having an eye *f* oblique to the axis of the post, through which said rod is guided and free to move, as set forth.

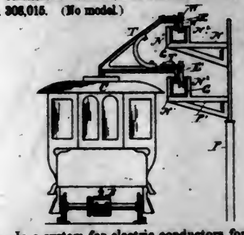
411,988. MUSTACHE-GUARD. MAY R. HARRINGTON, Oakland, Cal. Filed June 6, 1888. Serial No. 313,409. (No model.)

Claim.—1. As a new article of manufacture, a mustache-guard provided with a spring extending in the direction of its length, and means at the free end of the spring for securing it to the handle of the article to which it is to be applied, whereby, when in place, the guard will be supported above the edge of the article and have a laterally-yielding movement, substantially as set forth.

2. As a new article of manufacture, a mustache-guard provided with a spring extended in the direction of its length and bowed at its free end, and a clamp at the bowed extremity of the spring to embrace the handle of the article to which the guard is to be applied, whereby the guard may be supported above the edge of a spoon or cup and have a laterally-yielding movement, substantially as set forth.

3. As a new article of manufacture, a mustache-guard provided with an elastic shank or support having its free end extending toward the guard and into a lower plane than the main portion of the shank, and a clamp provided with an adjusting-screw passing through the free end of the shank, substantially as set forth.

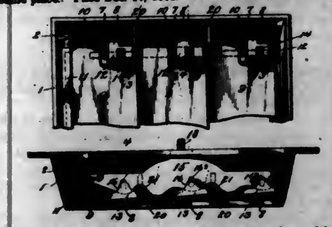
4. The combination, with an article of tableware for use in eating liquid food, of a yielding mustache-guard secured thereto above and independent of the edge thereof, substantially as set forth.



5. The combination, with a spoon or analogous article, of an elastic shank or support secured to the handle and extending over the bowl thereof, and a guard on the said shank above the bowl, substantially as set forth.

6. The combination, with a spoon, of a guard provided with an elastic shank having clamping-jaws embracing the spoon-handle, substantially as set forth.

7. The combination, with a spoon, of an inwardly-yielding guard above and projecting beyond one edge of the bowl, substantially as set forth.

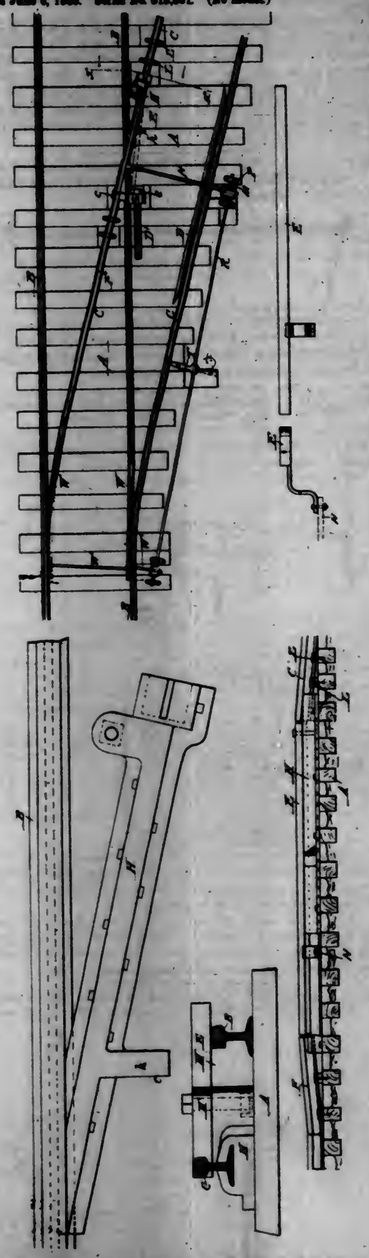


8. As a new article of manufacture, a mustache-guard having a spring extending in the direction of its length, and a clamp at the outer end of the spring and on which it has a vertically-swinging movement, substantially as set forth.

411,989. SYSTEM FOR ELECTRIC CONDUCTORS FOR ELECTRIC CARS. CHARLES A. JACKSON, Billerica, Mass. Filed Apr. 20, 1889. Serial No. 308,015. (No model.)

Claim.—In a system for electric conductors for cars, the combination of the double-armed trolley T T, extending laterally from the car and having trolley-wheels, as described, with the conducting-wires and with supporting-brackets, substantially as and for the purpose set forth.

411,990. HOT-AIR REGISTER. JOSEPH W. JOHNSON, Philadelphia, Pa., assignor to the Philadelphia Hardware and Malleable Iron Works, same place. Filed Dec. 17, 1883. Serial No. 293,793. (No model.)



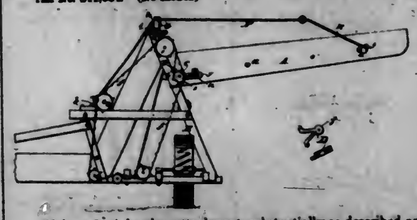
Claim.—1. In a hot-air register, the combination, with a frame having opposite perforations in its end walls and inwardly-projecting flanges intermediate its sides, of shutters having trunnions mounted in the perforations and provided with short lugs at one of their ends, and a link perforated for and mounted on the short lugs, guided by the flanges, and formed with recesses intermediate its perforations, substantially as specified.

2. In a hot-air register, a frame having inclined end walls, opposite perforations formed therein, and having recesses formed in the lower edge of one of the walls adjacent to each of the perforations therein, in combination with shutters having opposite end trunnions mounted in the perforations, substantially as specified.

3. The frame 1, having the inclined end walls 6, perforated, as at 7, and recessed, as at 8, in combination with the shutters 9, having the trunnions 10, inserted in the recesses, and the short lugs 14, and the link 15, perforated, as at 16*, having the intermediate recesses 21 and lug 19, substantially as specified.

411,991. FROGLESS SWITCH. CHARLES W. JOHNS, Junction, Va. Filed June 6, 1888. Serial No. 313,231. (No model.)

Claim.—1. As an improvement in railroad-switches, the block H, forming a support for the frog-rail, in combination with said frog-rail pivoted to the plate on the outer side of the said rail, substantially as and for the purpose set forth.



2. As an improvement in railroad-switches, the combination of the main-line rail, the supporting-block *c*, secured to the ties and channeled for the passage of the wheel-flange, the block H, also secured to the ties, and frog-rail pivoted to said plate, all arranged substantially as and for the purpose specified.

411,992. WEATHER-STRIP. JOHN R. JOHNS, New York, N. Y. Filed Mar. 12, 1889. Serial No. 303,062. (No model.)

Claim.—The sash or frame A, cut out at its edge to form the space C, in combination with the thin spring-metal strip B, set into the sash or frame and inclosed in said space and curved from edge to edge, substantially as described.

411,998. HEADER ATTACHMENT FOR HARVESTERS AND REAPERS. GEORGE A. JOY, Bismarck, Dak. Filed Aug. 16, 1888. Serial No. 211,094. (No model.)

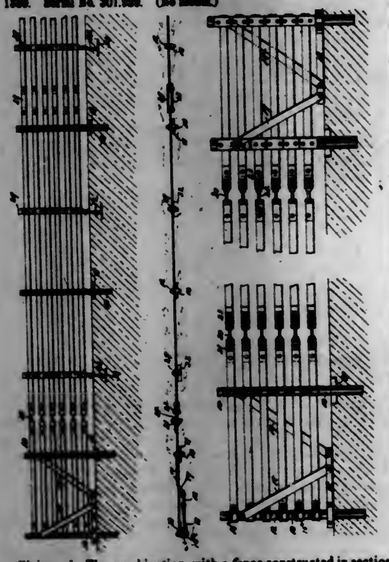
Claim.—1. A header attachment substantially as described and shown, consisting of the draper-frame having side-boards provided in one end with slots extended in the direction of their length, the inner roller having its trunnions passed through said slots, whereby the said roller may be adjusted to tighten the draper, the outer roller, the draper, the brackets having bearings for the trunnions of the inner roller, and the plates J J, connected adjustably with the side bars of the draper-frame and arranged to engage the brackets, all substantially as and for the purposes specified.

2. The combination of the harvester-frame, the brackets D, secured thereto, the inner draper-roller having its trunnions journaled in said brackets, the draper-frame having side bars provided in their inner ends with slots passed over the trunnions of the inner roller, the outer roller, the draper, and the plates J J, secured to and adjustable along the draper-frame, said plates being arranged to bear at their inner ends against the brackets, whereby by the adjustment of said plates the draper may be tightened and the weight of the draper-frame may be supported independent of its inner shaft, substantially as set forth.

3. The combination of the harvester-frame, the bearing-brackets having a convex surface, the draper-frame having slots *l l*, the inner and outer rollers, the draper, the plates J J, having slots *n n*, and having their inner ends concaved and conformed to the convex surface of the bearing-brackets, and the bolts passed through the slots *n n* into the draper-frame, substantially as set forth.

4. The combination of the A-frame, the pulley G, the hook I, connected therewith, the bearing-brackets D D, having convex surfaces, the draper-frame having slots *l l*, the rollers B *b*, the draper supported thereon, the plates J J, slotted and having concaved ends, the bolts *m m*, the bail H, and the adjusting-cord connected therewith and extended over pulley G and secured to hook I, substantially as set forth.

411,994. LOCK. OTTO W. LUNDHOLM, Muchachinock, Iowa, assignor to Edward C. Smith, same place. Filed May 22, 1889. Serial No. 311,768. (Model.)



Claim.—1. The combination, in a lock, of a sliding bolt, a post D, guiding said bolt, and one or more swinging tumblers E, pivoted

to the bolt and having notches *d*, adapted to pass over or embrace the post D when thrust back by the key, so as to allow the bolt to be withdrawn, substantially as described.

2. The combination, in a lock, of a sliding bolt having a longitudinal slot at one end and a shoulder at the other, a spring for shooting the bolt to the locked position, a fixed guide-post arranged in the slot of the bolt, and a set of combined tumblers and thrust-bars pivoted to the bolt and provided with registering notches adapted to be projected over the guide-post, substantially as shown and described.

411,995. FENCE. PETER MASE, Waterville, Ohio. Filed Mar. 5, 1889. Serial No. 301,989. (No model.)

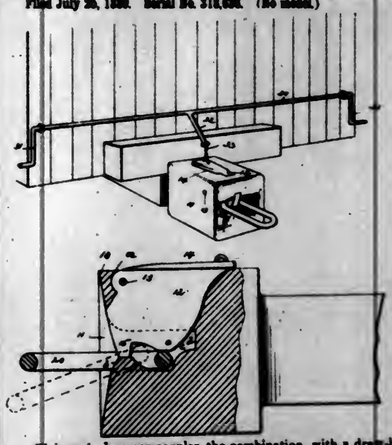
Claim.—1. The combination, with a fence constructed in sections, of a spring turn-buckle uniting the several strands of the sections, substantially as shown and described.

2. The combination, with the sections of a fence, of a V-shaped yoke at the ends of each of the strands of one section, apertured spring-plates connecting the diverging ends of the yokes, loops secured to the strands of the next section, bolts passed through the cross-pieces of the loops and through the apertures in the spring-plates, and nuts on the projecting ends of the bolts, substantially as set forth.

3. The combination, in a fence, of a strand having its extremity bent at an acute angle and inwardly at a right angle, an angle piece or plate 21, shaped to correspond to said end and riveted at its inner end to the strand, a spring-plate secured at its ends to the inwardly-projecting ends of the yoke formed by the said plate and bent end of the strand with another strand having a loop at its end, and a bolt passed through the cross-bar of the loop and through the aperture in the spring-plate, substantially as set forth.

4. In a fence, the series of strands and their supporting-posts, in combination with the intermediate supporting-bars 29, twisted axially, as at 30, into a plane at right angles to the upper part, and a T-shaped anchor bolted at the upper end of its vertical arm to said end 30, substantially as set forth.

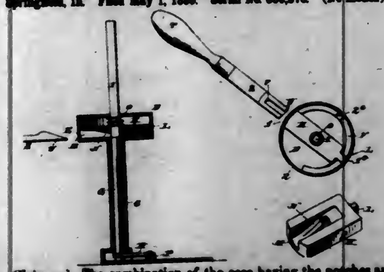
5. The combination, in a fence, with a post, of a vertically-aligned series of clamping-plates arranged longitudinally of the post, pivoted at one end thereto, and clamping-bolts passing through the post and opposite ends of said plates, the strands being clamped under the plates and between the pivots and clamping-bolts, substantially as set forth.



6. The combination, with the end sections of a fence, consisting of two spaced posts and strands uniting the same, of a horizontal rod secured at its outer end to the outer post near the base, a brace-rod secured at its lower end to the horizontal rod near the inner end thereof, and its upper end to the upper end of the outer post, and a draw-rod secured at its lower end to the inner end of the brace-rod and adjustably attached at its upper end to the inner post, substantially as shown and described

411,996. PAN. THOMAS O. MORTON, Brooklyn, assignor of one-half to Willis B. Blackwell, New York, N. Y. Filed Dec. 7, 1888. Serial No. 292,913. (No model.)

Claim.—The pan B, having the fastening-pieces *i* at the upper edge, in combination with the slotted tube C, applied to the upper edge of the pan, substantially as shown and described.



411,997. CAR-COUPLING. WILLIAM C. MCCORD, Springfield, Ky. Filed July 26, 1889. Serial No. 318,636. (No model.)

Claim.—1. In a car-coupler, the combination, with a draw-head formed with a projection *b*, of a pivotally-mounted catch formed with a hook 15 and a projection *c*, and a cut-out portion between said hook and projections, substantially as described.

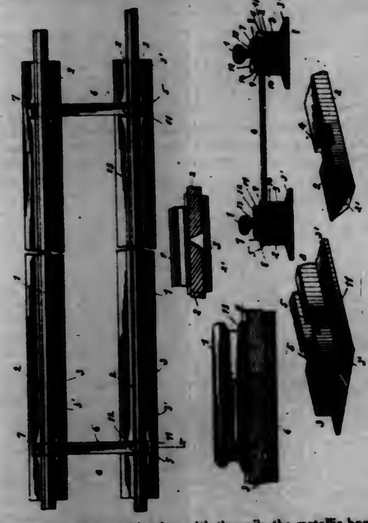
2. In a car-coupler, the combination, with a draw-head formed with a projection *b*, a shoulder *c*, and a recess *d*, of a catch 12, formed with a hook 15 and a projection *c*, and a cut-out portion between said hook and projections, substantially as described.

411,998. LOCK FOR RAILROAD-SWITCHES. NELSON NEWMAN, Springfield, Ill. Filed May 1, 1889. Serial No. 309,273. (No model.)

Claim.—1. The combination of the case having the notches and the slot, the rock-shaft extending through the case and having the arm connected to the switch-rails, the lock-plate fast to and movable vertically on the rock-shaft and having the cam-opening communicating with the slot and the stud adapted to engage the notches, and the key adapted to enter the cam-opening and raise the lock-plate and to engage the rock-shaft, for the purpose set forth, substantially as described.

2. In a switch-lock, the combination of the rock-shaft having the connections to the switch-rails, the case having the slot and the notches diametrically opposite the ends of the slot, the lock-plate in the case, revoluble with and movable vertically on the rock-shaft and having the cam-opening at one end communicating with the slot and the stud at the opposite end adapted to engage the notches, the spring pressing down on the lock-plate, and the key-lever adapted to be inserted in the cam-opening to raise the lock-plate and to engage and rotate the rock-shaft, substantially as described.

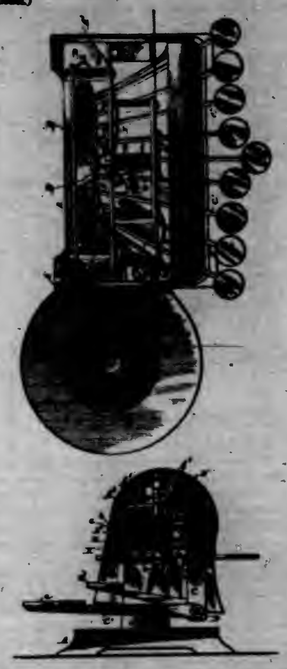
3. In a lock for railway-switches, the combination of the switch-shaft, the case in which the shaft turns, the lock-plate to lock the shaft fast in the case, and the key-lever adapted to simultaneously trip the lock-plate and engage the shaft to operate the switch, for the purpose set forth, substantially as described.



4. In a lock for railway-switches, the combination of the rock-shaft, the case in which the shaft turns, the lock-plate vertically movable on the shaft and revolubly therewith, having the cam N, and further adapted to engage the case and lock the shaft fast therein, and the key-lever having the cam U to engage and trip the lock-plate, and the open slot V to simultaneously engage the shaft and enable the latter to be turned, substantially as described.

411,999. GLOVE. JEAN B. RAY and EMILE DUPAY, Lyons, France, assignors to the Société Noyrez Cohen & Compagnie, same place. Filed Dec. 26, 1888. Serial No. 294,262. (No model.) Patented in France Apr. 23, 1888, No. 189,419, and in England Oct. 26, 1888, No. 16,260.

Claim.—A glove having the body and fingers formed of a single blank, said blank having a series of front finger-pieces and a corresponding series of back finger-pieces wider than said front series, the back of the glove being cut away, whereby when the glove is sewed the increased width of the said back is taken up, substantially as and for the purpose set forth.



412,000. SUPPORT FOR RAILWAY-RAILS. JOHN M. ROGERS, Leominster, Mass. Filed June 4, 1888. Serial No. 276,004. (No model.)

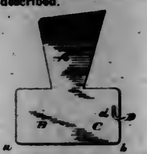
Claim.—1. The combination, with the rails, the metallic bozings 3, and wooden stringers 2, having coincident recesses 4 and 5, of the metallic ties 6, having hooked end portions that lie in said recesses and embrace the rail-flanges, and means for securing said ties to the bozings, substantially as shown and described.

2. The combination, with rails 1, of bozings 3, having flanges 3', recesses 5, and lugs 11, with screw-holes 10, wooden stringers 2, located in the bozings 3, and having recesses 4, and metallic ties 6, with hooked ends 7, engaging the outer flange of rails 1, and screws 9, with lateral beveled heads 12, engaging the inner flange of rails 1, ties 6, and lugs 11, the wooden stringers 2 and bozings 3, extending the length of the rails, substantially as described.

412,001. MACHINE FOR PERFORATING PAPER. JAMES H. ROGERS, Hedenburg, Md. Filed July 27, 1888. Serial No. 281,282. (No model.)

Claim.—1. The combination, with the punches and their actuating-levers, of the feed-lever provided with a yoke which extends across the path of movement of all of the punch-actuating levers, the vibratory feed-finger actuated by said feed-lever to move rearwardly or to the position from which it starts to feed, and the spring for returning said feed-finger to its forward position, substantially as and for the purposes hereinbefore set forth.

2. The combination, with the slotted plate over which the paper is fed, of the vibrating feed-finger adapted to play back and forth in said slot, and arranged with relation to said plate, so that it shall project beyond the face of the plate as it moves toward the rear of the slot and shall withdraw so as to be flush with the face of the plate as it moves toward the front end of the slot, substantially as and for the purposes hereinbefore set forth.



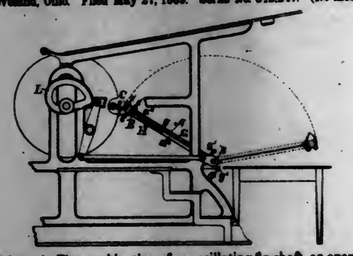
3. The combination of the plates between which the paper passes, the vibrating feed-finger and the reciprocating punches, and the devices for operating said punches and for actuating said feed-finger, one of said plates having a slot within which said feed-finger plays back and forth in acting upon or feeding the paper, substantially as and for the purposes hereinbefore set forth.

412,002. SCRAPER ATTACHMENT FOR BROOMS OR BRUSHES. FRANK C. SHERMAN, Baltimore, Md. Filed Feb. 13, 1889. Serial No. 299,721. (No model.)

Claim.—1. As an improved article of manufacture, a sheet-metal scraper having an expansible and contractible socket on one side of and parallel with the blade and open at both ends, substantially as described.

2. As an improved article of manufacture, a sheet-metal scraper

having an angular front end and an expansible and contractible socket on one side of and parallel with the blade and open on one side and both ends, substantially as described.



3. As an improved article of manufacture, a sheet-metal scraper having a socket open on one side and at both ends and provided with a slot in the wall of the socket, substantially as described.

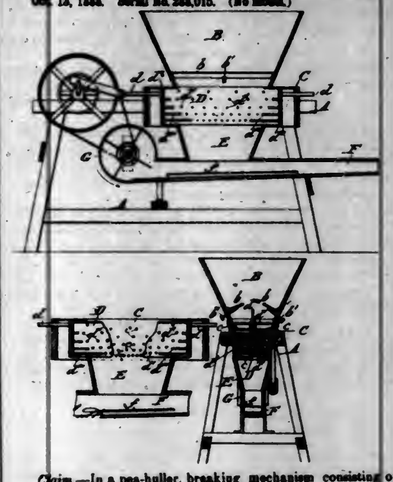
4. As an improved article of manufacture, a sheet-metal scraper having a projecting blade provided with an angular front end and a socket open on one side and at both ends, and provided with a slot in the wall of the socket, substantially as described.

5. A scraper having a socket on one side of the plane of the blade and open on one side and at both ends, in combination with a handle upon which said scraper is constructed to slide freely and to be secured on the end thereof, substantially as described.

412,003. SHEET-DELIVERING APPARATUS. FRANK J. SEDER, Cleveland, Ohio. Filed May 27, 1889. Serial No. 312,247. (No model.)

Claim.—1. The combination of an oscillating fly-shaft, an open fly-frame secured thereto, the rock-shaft E, bearing gripping-fingers *e*, and the rock-shaft C, bearing gripper-fingers *c*, with springs for closing said gripper-fingers, and mechanism for opening one set of gripper-fingers when the frame is at one extreme of its movement and for opening the other gripper-fingers when the frame is at the other extreme of its movement, substantially as and for the purpose specified.

2. The combination of an oscillating fly-shaft and an open fly-frame secured thereto, the rock-shafts C E, each bearing gripper-fingers, a crank-arm attached to each of said shafts at opposite ends thereof, rods movably held against the side bars of the frame and pivotally connected to said crank-arms, springs whereby said rock-shafts are rocked to close the gripper-fingers, and stop mechanism to limit the extent of this spring-actuated movement, with mechanism, substantially as described, for rocking one shaft in the opposite direction when the frame is at one extreme of its movement and for rocking the other shaft in the opposite direction when the frame is at the other extreme of its movement, substantially as and for the purpose specified.

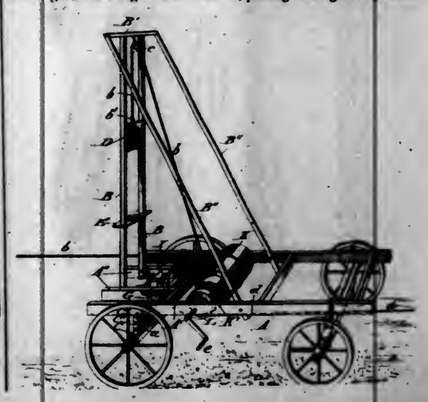


3. The combination of an oscillating fly-shaft and an open fly-frame attached thereto, the rock-shafts C and E, each bearing gripper-fingers, a crank-arm attached to each of said rock-shafts at opposite ends thereof, rods movably secured to the side bars of the frame and connected with said crank-arms, springs for moving said rods to close the gripper-fingers, and stops to limit the extent of this spring-actuated movement, with a sliding bar adapted to engage with the crank-arm upon the rock-shaft C, a revolving cam, and a spring for operating said sliding bar, and a shoulder for engaging with the inner end of the rod attached to the crank-arm on the rock-shaft E, substantially as and for the purpose specified.

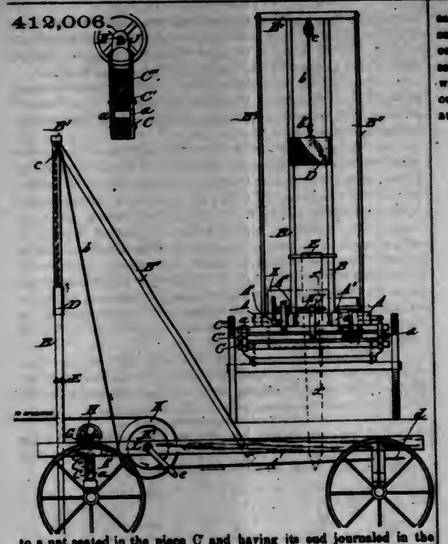
412,004. SPINDLE-WHARVE. JAMES SHAW, Paterson, N. J. Filed June 15, 1889. Serial No. 314,349. (No model.)

Claim.—As an improved article of manufacture, the wharve 16, having a chamber 17 in its upper end, provided with an internal annular shoulder 18, and the centrally-apertured disk 19, resting on said shoulder and provided with a depending annular flange 20 around said central opening, substantially as set forth.

412,005. PEA-HULLER. WILLIAM P. SMITH, Helton, Ga. Filed Oct. 12, 1888. Serial No. 288,015. (No model.)



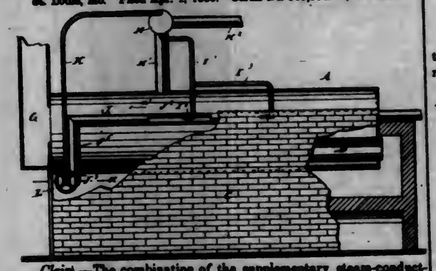
Claim.—In a pea-huller, breaking mechanism consisting of the reciprocating plunger D, having teeth *d'*, and actuating mechanism, and the chamber C, provided with teeth *c*, said teeth *d'* and *c* being nearer to each other in the rows and the rows closer together as they approach the bottom of the said plunger and chamber, substantially as shown and described, and for the purpose specified.



412,006. POST-DRIVING MACHINE. JOHN G. WEBER and ALBERT WEBER, Defiance, Ohio. Filed Mar. 25, 1889. Serial No. 304,826. (No model.)

Claim.—1. As an improvement in post-driving machines, the combination of the wagon-bed, the frame A, supported thereon and carrying the upright B and the braces B^2, the weight D, supported between said upright, the drum having a periphery of different diameters, the rope *b*, suspending the weight and wound on the larger periphery of the drum, the rope *d*, wound on the smaller periphery of the drum, and the crank *e*, for winding said rope *d* on the drum, substantially as and for the purpose set forth.

2. As an improvement in post-driving machines, the combination of the wagon-bed, frame A, carried thereon, supporting the uprights B, the weights suspended between said uprights, the mechanism for operating said weights, and the means for leveling the frame carrying the weight, consisting of the screw G, passing through the piece C^2



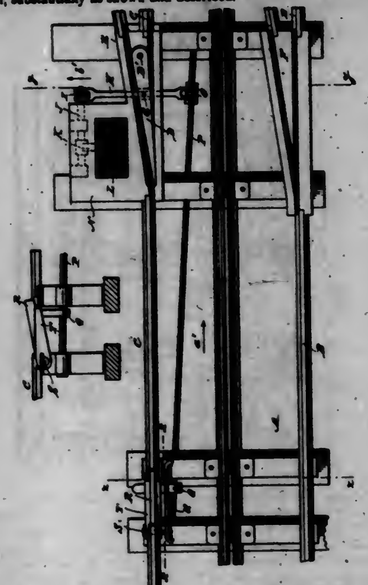
412,006.

to a nut seated in the piece C and having its end journaled in the piece C, said pieces moving vertically in the guides *c c*, substantially as and for the purpose set forth.

3. As an improvement in post-driving machines, the devices for shifting the derrick and frame laterally, consisting in the combination, with said derrick and frame, of the supporting-pieces C C and the screw H, substantially as specified.

412,007. SMOKE-CONSUMING FURNACE. GEORGE W. WILCOX, St. Louis, Mo. Filed Apr. 1, 1889. Serial No. 305,564. (No model.)

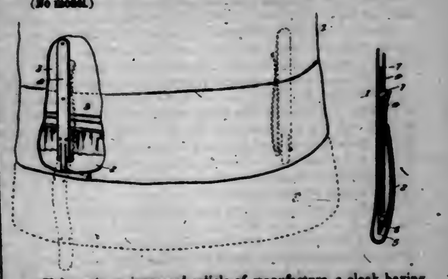
Claim.—The combination of the supplementary steam-conducting pipe K K', having nozzles K^2, and valve L, with the steam and air conducting pipes J J^3 J^4, arranged as specified, the steam-pipes I I' P, and the fire-box, boiler, and steam-dome, all as shown and described.



412,008. RAILROAD-SWITCH. JOHN R. WOLFE, New York, N. Y. Filed Dec. 14, 1888. Serial No. 293,501. (No model.)

Claim.—1. A railroad-switch comprising a pivoted switch-rail, a short rail located in and forming a part of the main track, and a platform located alongside the main track, said platform and the said short rail operating and controlling the said switch-rail, substantially as shown and described.

2. A railroad-switch comprising a pivoted switch-rail located between the main and side rails, a short rail pivoted in and forming a part of the main-track rail and connected with the said switch, and a platform held alongside the track, and also connected with the said switch-rail and the said short rail, substantially as shown and described.

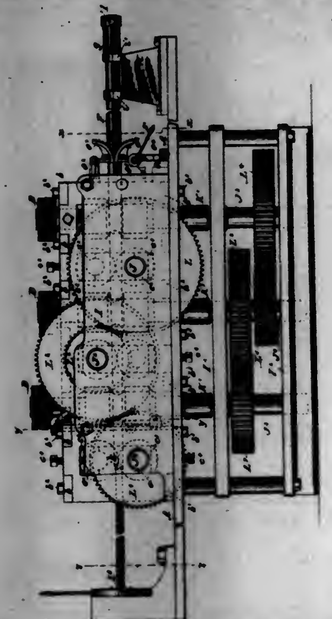


3. In a railroad-switch, the combination, with a switch-rail pivoted between the main and side rails, of a rod connected with the said switch-rail, a shaft having an arm pivotally connected with the said rod, a curved arm held on the said shaft, and a short rail pivoted in one of the rails of the main track and resting at its free end on the said curved arm, substantially as shown and described.

4. In a railroad-switch, the combination, with a switch-rail pivoted between the main and side rails, of a rod connected with the said switch-rail, a shaft having an arm pivotally connected with the said rod, a curved arm held on the said shaft, a short rail pivoted in one of the rails of the main track and resting at its free end on the said curved arm, a second shaft having an arm pivotally connected with the said rod, a curved and forked arm fastened on the said second shaft, and a platform supported on the said curved and forked arm, substantially as shown and described.

5. In a railroad-switch, a short rail pivoted on one of the rails of the main track and provided with a base inclined to the head of the rail, substantially as shown and described.

412,009. CLOAK AND SKIRT PROTECTOR. MARTHA H. ASHLEY, Fishkill-on-the-Hudson, N. Y. Filed Dec. 5, 1888. Serial No. 292,666. (No model.)



Claim.—As an improved article of manufacture, a cloak having an extension at its bottom to fold up inwardly and envelop the bottom of the skirt, and having also a series of jointed clasps with springs at their hinges secured to the cloak, as described, and serving to hold the extension of the cloak in its upturned position.

412,010. MACHINE FOR ROLLING SEAMLESS TUBING. WILLIAM H. APPLEGEE, New York, N. Y. Filed Nov. 2, 1888. Serial No. 289,816. (No model.)

Claim.—1. The combination, with the rolls of a rolling-machine and a mandrel for co-operation therewith, of a stock for holding the mandrel in proper position with respect to said rolls during the rolling operation, adapted to receive the ingot to be transformed and permit of its transfer to the mandrel, substantially as described.

2. The combination, with the rolls of a rolling-machine, a mandrel for co-operation therewith, and a stock for engaging with the re-

ceiving end of said mandrel, adapted to receive the ingot to be transformed and permit of its transfer to the mandrel, of a strut for acting against the discharging end of each mandrel and a resisting bracket or support against which the strut acts, substantially as described.

3. The combination, with the rolls of a rolling-machine, a mandrel for co-operation therewith, and a stock for holding said mandrel in proper position during the rolling operation, adapted to receive the ingot to be transformed and permit of its transfer to the mandrel, of devices for supporting said mandrel from contact with the rolls when free from an ingot, substantially as described.

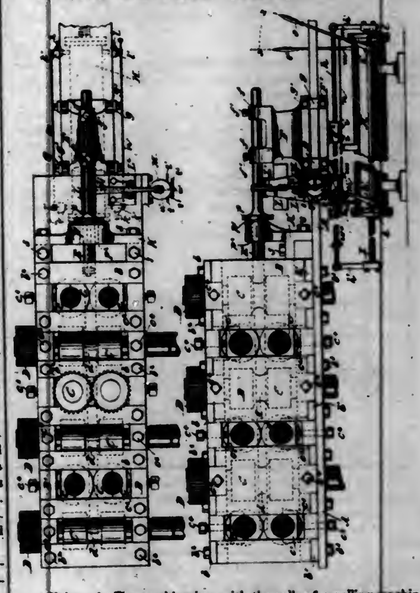
4. The combination, with a plurality of pairs of vertical and horizontal rolls arranged in alternate series and a mandrel extending between them, of a stock for holding said mandrel in proper position between the rolls during the rolling operation, provided with suitable means whereby it may be locked to and unlocked from such mandrel, and supporting devices therefor, substantially as described.

5. The combination, with a plurality of pairs of circumferentially-grooved vertical and horizontal rolls arranged in alternate series, and a mandrel extending between them and lying in said grooves, of a stock for holding said mandrel in proper position between the rolls during the rolling operation, adapted to receive the ingot to be transformed and permit of its transfer to the mandrel, and a bracket provided with suitable bearings in which such stock is fitted to slide and rotate, substantially as described.

6. The combination, with a plurality of pairs of vertical and horizontal rolls arranged in alternate series, a mandrel arranged to co-operate therewith, and a stock for holding the mandrel in proper position respecting said rolls during the rolling operation, of a bracket or standard provided with suitable bearings in which the stock is mounted and devices for supporting the mandrel and holding it from contact with the rolls when free from an ingot and when disengaged from the stock, substantially as described.

7. The combination, with a plurality of pairs of circumferentially-grooved vertical and horizontal rolls arranged in alternate series, a mandrel extending between them and provided with a locking member, and a stock for holding said mandrel in proper position between the rolls during the rolling operation, provided with a locking member, whereby it may be locked to and unlocked from said mandrel, of a bracket or standard having a bearing in which said stock is mounted and devices for supporting the mandrel and holding it from contact with the rolls when free from an ingot and when disengaged from the stock, substantially as described.

8. The combination, with the rolls of a rolling-machine, and a mandrel for co-operation therewith, provided with a locking member at its end, of a stock for holding said mandrel in proper position between the rolls during the rolling operation, provided with a locking member, whereby it may be engaged with and disengaged from the mandrel, and a support for such stock, substantially as described.



9. The combination, with a mandrel provided with the orifice *f*, having the radial grooves *f' f'* and enlarged chamber *f²*, of the stock provided with the stud *e*, having the lugs *e' e'* formed thereon, substantially as described.

10. The combination, with a plurality of pairs of vertical and horizontal rolls arranged in alternate series and a mandrel extending between them, of a strut for holding said mandrel in proper position between the rolls during the rolling operation and a resisting bracket or standard against which said strut acts, substantially as described.

11. The combination, with a plurality of pairs of circumferentially-grooved vertical and horizontal rolls arranged in alternate series, a mandrel arranged to project between them and lie in the grooves thereof, and a strut for holding said mandrel in proper position between the rolls during the rolling operation, of a resisting bracket or standard against which the strut acts and devices for supporting the mandrel and holding it from contact with the rolls when free from an ingot, substantially as described.

12. The combination, with the strut L, provided with a groove or shoulder at its end, and a resisting bracket or standard M, of suitable jaws and means for causing them to engage with said groove or shoulder or recede therefrom, substantially as described.

412,011. MACHINE FOR ROLLING SEAMLESS TUBING FROM HOLLOW INGOTS. WILLIAM H. APPLETON, New York, N. Y. Filed Nov. 2, 1888. Serial No. 289,817. (No model.)

Claim.—1. The combination, with the rolls of a rolling-machine and a mandrel for co-operation therewith, of a carriage in which said mandrel is mounted, a support for such carriage, and a motor for moving said carriage back and forth to withdraw and insert the mandrel from and between the rolls, substantially as described.

2. The combination, with a plurality of pairs of rolls, a mandrel extending between them, and a carriage in which said mandrel is mounted, of a track or support upon which the carriage is mounted and a motor for moving said carriage back and forth upon its track or support to withdraw and insert the mandrel from and between the rolls, substantially as described.

3. The combination, with a plurality of pairs of vertical and horizontal rolls arranged in alternate relation, a mandrel extending between them and provided with a flange or collar, and a carriage for supporting said mandrel, of a support upon which the carriage is mounted, mechanism for moving the carriage back and forth upon the support to withdraw and insert the mandrel from and between the rolls, and a stop against which the flange on the mandrel abuts to resist the strain put upon the mandrel by the ingot as it is withdrawn therefrom during the rolling operation, substantially as described.

4. The combination, with a plurality of pairs of vertical and horizontal rolls arranged in alternate relation, a mandrel for co-operation with such rolls, a carriage in which the mandrel is mounted, and a track or support upon which the carriage traverses, of a cylinder, a piston, a piston-rod, and connecting devices intermediate such piston-rod and carriage whereby the said carriage may be caused to move back upon its track or support to withdraw the mandrel from the rolls and afterward move forward over it to reinsert it between them, substantially as described.

5. The combination, with the rolls of a rolling-machine, a mandrel for co-operation therewith, and a carriage for supporting the mandrel and permitting of its withdrawal from and insertion between the rolls, of a holder for receiving an ingot and presenting it in the path of movement with the mandrel with its axis coincident with the axis of said mandrel, substantially as described.

6. The combination, with the rolls of a rolling-machine, a mandrel for co-operation therewith, a carriage for supporting said mandrel, and a track or support upon which said carriage is mounted, of mechanism for moving such carriage back and forth upon its track or support to withdraw and insert the mandrel from and between the rolls, a holder for receiving a fresh ingot and presenting it in the path of movement of the mandrel with its axis coincident therewith, and a motor whereby the holder is caused to operate from the mechanism which moves the carriage, substantially as described.

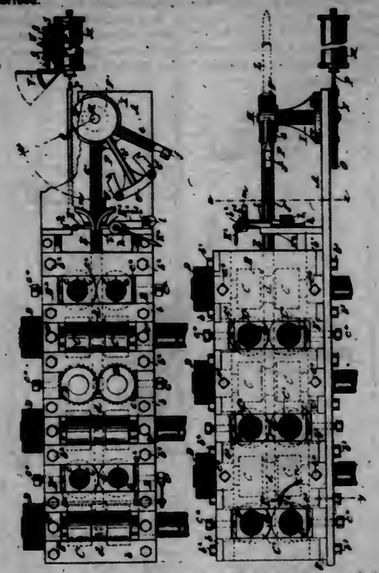
7. The combination, with a holder for the ingot, a lever for supporting the same, and a bracket or support in which such lever is pivoted, of a cylinder, a piston, a piston-rod, a pitman, and devices for controlling the flow of steam or other actuating agent to and from the cylinder, substantially as described.

8. The combination, with a mandrel, a carriage in which it is supported, a track upon which the carriage is mounted, a cylinder, a piston, a piston-rod, connecting devices intermediate the piston-rod and the carriage, provided with suitable dogs, and devices for controlling the flow of steam or other actuating agent to and from the cylinder, of a holder for the ingot, a lever for carrying the same, a bracket in which such lever is pivoted, a second cylinder, a piston and a piston-rod, a pitman, and devices for controlling the flow of steam or other agent to and from such second cylinder, operated from said dogs, whereby the automatic movement of the ingot-holder in proper relation to the movements of the mandrel is insured, substantially as described.

9. The combination, with the cylinder M, the piston-rod a, provided with a suitable piston upon its lower end, the induction and eduction pipes *t t'*, the valves *t²*, and pinions *t³*, the gear *w*, provided with the arm w^3, lever w^4, and mechanism for vibrating said lever upon its pivot, of the mandrel E and the carriage in which it is supported, substantially as described.

412,012. MACHINE FOR ROLLING SEAMLESS TUBING. WILLIAM H. APPLETON, New York, N. Y. Filed Jan. 30, 1888. Serial No. 262,043. (No model.)

Claim.—1. A stock for holding a mandrel between the rolls of a rolling-machine, consisting of a suitable body with a plurality of arms extending therefrom, substantially as described.



2. A stock for holding a mandrel between the rolls of a rolling-machine, consisting of a suitable body with a plurality of arms extending therefrom radially to its axis, substantially as described.

3. A stock for holding a mandrel between the rolls of a rolling-machine, consisting of a body F, having a plurality of arms *e e'*, extending radially to its axis and provided at their outer ends with T-shaped heads, substantially as described.

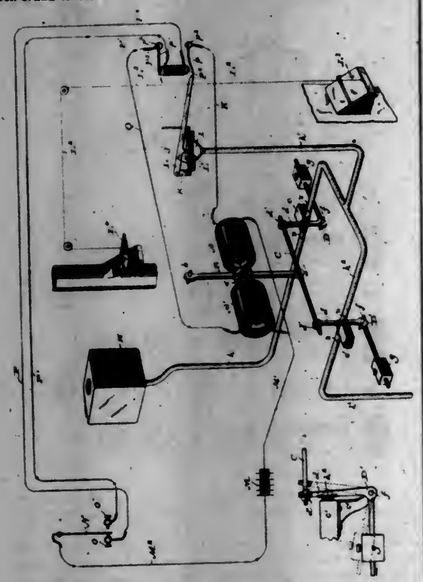
4. A stock for holding a mandrel between the rolls of a rolling-machine, consisting of a suitable body F, having a plurality of arms *e e'*, provided with T-shaped heads at their outer or free ends extending radially from its axis, and a third arm e^3, provided with an arc-shaped flange e^4 and hinged sections e^5, substantially as described.

5. The combination, with the rolls of a rolling-machine and a mandrel provided with a suitably-shaped slot through its receiving end, of a stock for holding said mandrel between the rolls and supplying it with fresh ingots, consisting of a suitable body, a plurality of arms extending from such body and provided with suitably-shaped heads at their outer ends for engagement with said slot, and an arc-shaped flange for connecting such heads, provided with hinged sections at its ends, substantially as described.

6. The combination, with the rolls of a rolling-machine, a mandrel provided with a T-shaped slot through its receiving end, and a stock consisting of a suitable body, having a plurality of arms extending from it and provided with T-shaped heads at their outer ends and an arc-shaped flange for connecting such heads, of a piston and cylinder for communicating an oscillating movement to said stock to bring its arms alternately into engagement with the mandrel, substantially as described.

7. The combination, with a stock for holding the mandrel between the rolls of a rolling-machine, consisting of a suitable body F and arms *e e'*, extending radially to its axis, a shaft to which such stock is secured, and a bracket or standard in which the shaft is mounted, of a piston and cylinder and mechanism intermediate such piston and shaft, whereby to impart to the latter an oscillatory motion, and through it to the stock a similar movement, substantially as described.

8. The combination, with the stock consisting of the body F, arms *e e' e² f f*, flange e^4, and hinged sections e^5 e^5, the shaft H, the bracket or standard I, the gear N, the rack O, piston-rod P, having a piston thereon, the cylinder M, and means for controlling the flow of the actuating agent thereto, whereby to impart an oscillating movement to the stock, substantially as described.



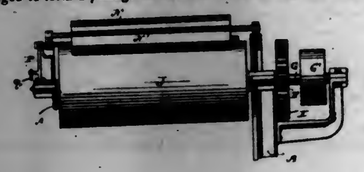
412,013. TEMPERATURE-REGULATOR. ROBERT W. RENNE, Milwaukee, Wis. Filed Apr. 3, 1888. Serial No. 269,627. (No model.)

Claim.—1. The combination, in a temperature-regulator, of a reservoir containing water or fluid under pressure, a pipe leading therefrom having supply and exhaust branches, an armature-lever, and weighted levers connected thereto for keeping these pipes normally closed, an expansion-chamber connected to the supply branch and having a lever connected to the dampers of a furnace, a pair of magnets, each located adjacent to the armature-lever, and a battery wired to but normally out of circuit therewith, a thermostat wired to the battery, contact-points located on each side of the thermostat and wired to contact-posts adjacent to the lever on the expansion-chamber, and circuit making and breaking springs located adjacent to said contact-posts and wired to the said magnets.

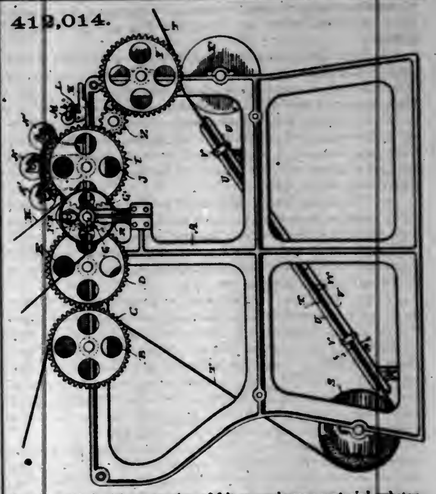
2. The combination, in a temperature-regulator, of a reservoir containing water or fluid under pressure, a pipe leading therefrom having supply and exhaust branches, said pipe and branches being compressible at certain points, a pair of magnets, a battery wired to but normally out of circuit therewith, an armature-lever depending between the said magnets, a rod hung to the lower end of said armature-lever, a weighted bell-crank lever suspended from each end of said rod opposite the compressible points of the said pipe and branches, an expansion-chamber at the end of the supply branch, a lever pivoted to said chamber and having a head bearing against the movable wall thereof, and cords or chains at its free end connected to the dampers of a furnace, a thermostat wired to the battery, contact-points located on each side of the thermostat and wired to contact-posts adjacent to the lever on the expansion-chamber, and circuit making and breaking springs located adjacent to said contact-posts and wired to the said magnets.

3. The combination, with a reservoir and expansion-chamber, and a lever operated by the expansion-chamber and connected with a

damper, of a flexible connection between said reservoir and expansion-chamber, and a flexible drain-pipe for said chamber, a thermostat and magnets wired thereto, a lever suspended between said magnets, and a lever connected with the armature-lever at one end and carrying an adjustable weight on its other end, and arms supporting the branches in position to be normally compressed by the bell-crank lever.



4. The combination, with the reservoir and expansion-chamber and drain and supply pipe, of a thermostat and electro-magnets wired thereto, a swinging armature hung between the magnets, a pair of levers having weights on one end and connected with the armature-levers at their other end, and arms supporting the pipes in position to be compressed by the last-named levers, substantially as described.



5. The combination, in a heat-regulator, of a fluid-reservoir, a flexible pipe leading therefrom, an expansion-chamber connected with said reservoir by said flexible pipe, a lever connecting the expansion-chamber with a damper or valve, a flexible drain-pipe leading from said expansion-chamber, levers adapted for compressing both flexible pipes, and a thermostat and electro-magnets in circuit, and an armature-lever connected with the compressing-levers and controlling them, substantially as described.

412,014. MACHINE FOR PRINTING AND BRONZING RIBBONS. THOMAS H. BOWEN, Milwaukee, Wis. Filed June 25, 1888. Serial No. 278,071. (No model.)

Claim.—1. A machine for printing and bronzing on a continuous ribbon, that comprises an impression-roller, a printing-cylinder, an inking mechanism for the cylinder, a feeding mechanism for the ribbon, and a perforated hollow cylinder arranged in the path of said ribbon beyond the impression-roller and printing-cylinder, substantially as set forth.

2. A machine for printing and bronzing on a continuous ribbon, that comprises an impression-roller, a printing-cylinder, an inking mechanism for the cylinder, a feeding mechanism for the ribbon, a perforated hollow cylinder arranged in the path of said ribbon beyond the impression-roller and printing-cylinder, and two parallel strips arranged to form a passage for the ribbon and having their opposing

faces provided with a covering of felt or analogous material, substantially as set forth.

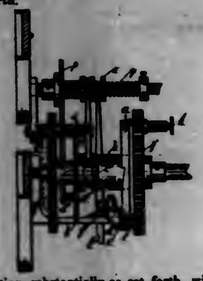
3. A machine for printing and bronzing on a continuous ribbon, that comprises an impression-roller, a printing-cylinder, an inking mechanism for the cylinder, a perforated hollow cylinder arranged in the path of the ribbon beyond the impression-roller and printing-cylinder, an inclined way composed of two parallel strips having their opposing faces covered with felt or analogous material, and a pair of friction-rollers arranged adjacent to the upper end of the inclined way, substantially as set forth.

412,015. CORSET. MORRIS P. BRAY, Ansonia, Conn., assignor of one-half to August Feilheimer, New York, N. Y. Filed June 17, 1889. Serial No. 314,536. (No model.)

Claim.—A corset constructed with vertical pockets on the rear and near the rear edges, the said pockets extending from near the bottom upward toward the top and open at the top and bottom, combined with shoulder-straps extending from the front over the shoulders and down through said pockets, with an adjustable attaching device between the straps and the corset below the lower ends of the pockets, substantially as described.

412,016. MANUFACTURE OF ALLOYS OF ZINC. JOHANNES C. BELL, Erith, County of Kent, England. Filed Dec. 3, 1888. Serial No. 293,019. (No specimens.) Patented in England Mar. 16, 1888, No. 4,066.

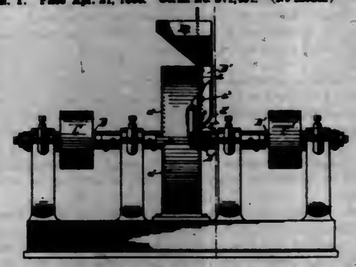
Claim.—1. The herein-described process of making alloys of zinc and the more refractory metals—as iron, manganese, chromium and wolfram, for example—which consists in combining arsenic with the zinc, whereby arseniureted zinc is produced, and then while the temperature of the zinc is nearly at the point of volatilization adding to the bath of zinc the iron or other metal to form the alloy.



2. The herein-described process of making alloys of zinc and the more refractory metals—as iron, for example—which consists in first combining the respective metals with arsenic and then, while in a molten state, combining the said arseniureted metals with each other.

412,017. PROCESS OF MAKING ALLOYED RAISED GOLD PLATES WITH CORRUGATED BACKGROUND FOR JEWELRY. JOSEPH BULOVA, New York, N. Y. Filed July 19, 1889. Serial No. 318,049. (No specimens.)

Claim.—The process of producing alloyed raised gold plates with corrugated background, which consists in annealing the alloyed-gold plate, removing the oxide from its surface, stamping it out in a female die containing the raised ornament and the corrugated background, and then polishing the raised ornament, substantially as specified.

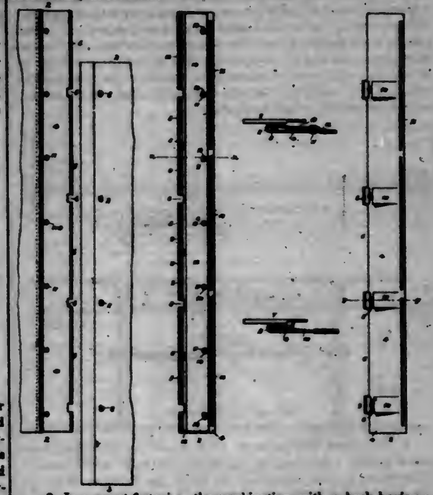


412,018. CLOCK STRIKING MECHANISM. EDWIN B. CARR, Boston, Mass., assignor of one-half to the E. Howard Watch and Clock Company, same place. Filed July 18, 1888. Serial No. 280,312. (No model.)

Claim.—1. The combination, substantially as set forth, with the center wheel *j* and the spur-wheel *g*, of a cam-wheel *a*, having a series of members *a'* and an unlocking-cam *b* connected therewith, said cams receiving motion from the center wheel, a programme-wheel *u*, having lands or projections *u'*, gearing whereby motion is communicated to said programme-wheel from the spur-wheel *g*, the unlocking-lever *p*, having a pin *t*, and intermediate mechanism, substantially as described, whereby the pin *t* and unlocking-cam *b* are brought into operative relation to each other when a land of the programme-wheel and a member of the cam *a* concur in their action on said intermediate mechanism, as set forth.

2. The combination, substantially as set forth, with the center wheel *j* and spur-wheel *g*, of a cam *a*, having a series of members and an unlocking-cam *b* rotatively connected therewith, said cams receiving motion from the center wheel, a programme-wheel *u*, having lands or projections *u'*, gearing whereby motion is communicated to said programme-wheel from the spur-wheel *g*, the unlocking-lever *p*, having a sliding pin *t*, a pivoted lever *r*, engaged at one end with the pin *t*, a sliding spring-pressed collar *o*, engaged with the other end of the lever *r*, a laterally-movable lever *l*, engaged at one end with the collar *o* and arranged to bear at its other end against a land of the programme-wheel, and a pivoted lever *d*, engaged at one end with the lever *l* and having at its other end a pin which is held in yielding contact with the cam *a*, all arranged and operating substantially as described.

412,019. GRINDING-MILL. MORTIMER C. CORNWELL, Brooklyn, N. Y. Filed Apr. 21, 1888. Serial No. 271,431. (No model.)



Claim.—In a grinding-mill, the combination, with the inclosing-case A, in the head a^2 of which is the described opening a^3, and the driving-shaft B, passing through said opening, of the hopper-spout D' on the exterior of said case-head and extending thereon to said opening therein, and having the described bottom d' leading into said opening in the case-head alongside said shaft, and provided with the web or lip d^3, carried by said bottom and adapted to fit edgewise into and fill said opening in the case-head between said spout-bottom and the shaft-surface, and to conform to the latter, substantially as and for the purpose specified.

412,020. CORSET-FASTENING. FRANK L. CROSS, New York, N. Y. Filed May 26, 1888. Serial No. 311,921. (No model.)

Claim.—1. In a corset-fastening, the combination, with a busk having a series of studs projecting from its face, of a busk having a series of fixed hooks along its edge, the throats of which are arranged lengthwise of said busk and adapted to receive said studs, and a series of openings between said hooks, adapted to permit the escape of said studs when said busks are moved longitudinally, substantially as set forth.

2. In a corset-fastening, the combination, with a busk having a series of studs projecting from its face, of a busk having a series of fixed hooks along its edge, the throats of which are arranged lengthwise of said busk and adapted to receive said studs, and a spring plate or plates for holding said studs in engagement with said hooks, substantially as set forth.

3. In a corset-fastening, the combination, with a busk having a series of studs, of a busk having a series of fixed hooks the throats of which are arranged lengthwise of said busk, a spring plate or plates adapted to lock or hold said studs in engagement with said hooks, and a series of openings between said hooks, adapted to permit the intentional escape or disengagement of said studs upon an endwise movement of either of said busks, substantially as set forth.

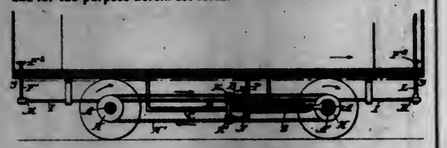
4. In a corset-fastening, the combination, with a studded busk, of a flexible plate or strip provided with a series of hooks, one or more of said hooks being transversely slitted, substantially as set forth.

5. In a corset-fastening, the combination, with a studded busk, of a flexible plate having a series of hooks, a series of openings between said hooks, and a continuous spring-plate connected to said flexible plate, substantially as described, to permit of an independent longitudinal movement of the parts at their ends when bent or bowed, substantially as set forth.

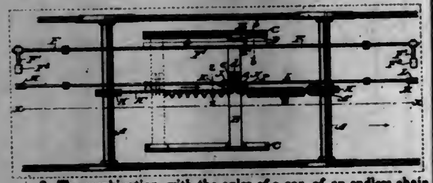
6. In a corset-fastening, the combination, with a studded busk, of a flexible plate having a series of hooks, a series of openings between said hooks, and a continuous spring-plate provided with elongated holes and a series of securing devices, as rivets, whereby the ends of the two plates are adapted when bent or bowed to move independently, and thus avoid all buckling or crinkling, substantially as set forth.

7. In a corset-fastening, the combination, with a studded busk, of a flexible plate having a series of hooks, and a spring plate or plates whose free edge or edges extend toward said hooks and form therewith a slot or space, as 15, for the introduction of the studs, substantially as set forth.

8. In a corset-fastening, the combination of a busk provided with eccentric studs, of a busk having a series of hooks, a spring locking-plate, and a series of openings between said hooks, substantially as set forth.



9. In a corset-fastening, the combination of a busk provided with partially-headed studs, and a busk having a series of hooks, and a series of openings between said hooks, the said studs and openings being arranged the same distance apart, so that when the busks are moved endwise the said studs may all simultaneously make their exit from the hooks at the said openings, substantially as set forth.



412,021. IMITATION WHITE AND COLORED MARBLE. JEAN M. DARDENAS, Paris, France. Filed Apr. 12, 1888. Renewed Mar. 27, 1889. Serial No. 305,031. (No specimens.)

Claim.—The process for making imitation marbles and other stones by first mixing sulphate aluminum, albumen, alcohol, wax, coloring substance, acids, and potash, and forming the whole into a plastic state, then subjecting it to baths of vaseline and paraffine, and finally carbonizing it, substantially as herein set forth.

412,022. CAR-STARTER. EDWARD DEGENHARDT, Helsingfors, Finland. Filed Feb. 13, 1889. Serial No. 300,570. (No model.)

Claim.—1. The combination, with the axles of a car and with an endless chain geared thereto to revolve therewith, of a bar moving transversely to the chain between the two lengths thereof, gripping-arms pivoted to said bar to swing alternatively into engagement with the chain, a spring interposed between the bar and one of the axles to draw the bar toward the axle, a pawl carried with the bar to engage a rack and thereby prevent the retraction of the bar by the spring, and means, substantially as described, for releasing the pawl and for oscillating the grip-arms, substantially in the manner and for the purpose herein set forth.

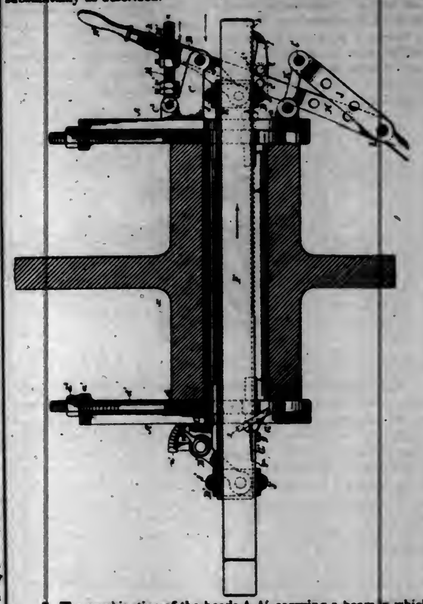
2. The combination, with the axles of a car, of an endless chain geared thereto, a bar moving transversely between the two lengths of the chain, a spring actuating the bar in one direction, and gripping-arms pivoted to the bar to engage alternatively the upper and lower lengths of the chain to move the bar in the opposite direction, and stationary fingers placed to engage and detach either arm from the chain when the bar is drawn fully back by the spring, substantially in the manner and for the purpose herein set forth.

3. The combination, with the axles of a car, of an endless chain geared thereto, a bar moving transversely between the two lengths of the chain, an oscillating rod extending parallel with the chain from end to end of the car, a collar sliding longitudinally upon said rod, but made to oscillate therewith and attached to the bar to partake of its movement, grip-arms extending from said collar to engage alternatively in its oscillation one of the lengths of the chain, and means, substantially as described, for producing an oscillation of said rod at either end of the car, substantially in the manner and for the purpose herein set forth.

4. The combination, with the axles of a car, of an endless chain geared thereto, a bar moving upon suitable ways transversely between the two lengths of the chain, a spring actuating the bar in one direction, gripping-arms pivoted to the bar to engage alternatively the upper and lower lengths of the chain to move the bar in the opposite direction, a pawl carried with the bar and having a lateral stud or pin, a fixed rack engaged by the pawl to prevent a movement of the bar under the stress of the spring, an oscillating rod extending the length of the car adjacent to the pawl, having a lateral fin projecting therefrom under the lateral pawl-pin, and means, substantially as described, for oscillating said rod and thereby causing the fin to lift the pawl and disengage it from its rack, substantially in the manner and for the purpose herein set forth.

412,028. KEY-SEATING MACHINE. THOMAS C. DILL, Philadelphia, Pa., assignor to himself, Thomas Y. England, Charles B. Walton, and James W. England, same place. Filed Mar. 7, 1889. Serial No. 302,253. (No model.)

Claim.—1. The combination of the heads adapted to be secured to a pulley, the beam, and traveling cutter-bar with mechanism for moving said cutter-bar, substantially as described.



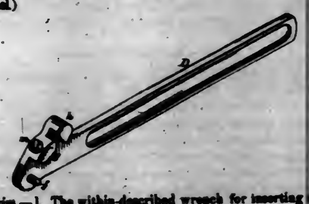
2. The combination of the heads adapted to be secured to a pulley and the beam linked to said heads with a traveling cutting-tool guided by said beam, substantially as described.

3. The combination, in a key-seat-cutting tool, of the head having the bearing-pins *b b* with the movable clamping-jaw *d*, substantially as described.

4. The combination, in a key-seat-cutting tool, of the heads adapted to be clamped to the hub, the beam, the adjustable clamps on said beam connected to said heads, and a cutter-bar guided by said beam and carrying a cutting-tool, substantially as described.

5. The combination of the heads A A', the beam E, adjustable clamps D D', a lever, and links pivotally connecting the clamps to the heads A A', with a threaded rod M, having a nut acting upon the lever for limiting the depth of cut of the key-seat, substantially as described.

6. The combination of the heads A A', the beam linked thereto and carrying a cutting-bar with a cutter, ratchet-teeth in the cutting-bar, and a lever H, having a pawl adapted to said teeth, so that on the movement of the lever the cutter-bar will be intermittently moved, substantially as described.



7. The combination of the heads A A', carrying a beam in which is guided a cutter-bar having a series of ratchet-teeth, with a lever H, having a pawl adapted to said teeth, and a lever J, pivoted to said lever H and linked to the head A, substantially as described.

8. The combination of the heads A A', the beam linked thereto and carrying a cutter-bar, with a lever B, provided with a handle B' and carrying a block M', adapted to a rod M, and a lever H, carrying a pawl engaging with teeth on the cutter-bar, said lever H being pivoted to a lever B and to a lever J, which in turn is linked to the head A, substantially as described.

9. The combination of the heads A A', the beam E, carrying the cutter-bar, adjustable clamps D D' on said beam, with levers or links connecting the clamp-plates to the heads, gages on each head, and indicators on the links or levers, substantially as and for the purpose set forth.

10. The combination, in a key-seat-cutting tool, of the heads A A', the beam E, carrying the cutter-bar, adjustable clamps on said beam, a handled lever B, connecting the front clamp to the head A and carrying a block M', and a rod M, projecting from said head A and having a series of graduations therein, with a link B' at the opposite end connecting the rear clamp to the head A', a pointer on the link B', and an indicator on the head, substantially as described.

412,024. DEVICE FOR INSERTING SAW-TEETH. THOMAS S. DENNEN, Philadelphia, Pa., assignor to Henry Disston & Sons, Incorporated, same place. Filed Aug. 2, 1889. Serial No. 319,288. (No model.)

Claim.—1. The within-described wrench for inserting saw-teeth, said wrench consisting of an arm or lever having a pin or projection for engagement with an opening in the teeth, a lag for bearing upon the top of the tooth, and a second lag for bearing upon the front of the tooth, substantially as specified.

2. The within-described wrench for inserting saw-teeth, said wrench consisting of an arm or lever having a pin or projection for engagement with an opening in the teeth, a lag for bearing upon the top of the teeth, and a second lag for bearing upon the front of the tooth, the latter lag being provided with an adjustable set-screw, substantially as specified.

412,025. PNEUMATIC OPERATOR FOR DENTAL PLUGGERS. FRANK I. RAMM, Meriden, Conn. Filed June 26, 1889. Serial No. 315,941. (No model.)

Claim.—1. The combination of the cylinder A, piston O, arranged therein, plate K, hung to vibrate in a plane parallel with the axis of the cylinder, a slot in said plate in a line at substantially right angles to the axis of said cylinder, piston-rod P, extending from the piston and adjustably hung in the said slot N of the plate K, and mechanism, substantially such as described, to impart vibrating movement to said plate, with a tube leading from one end of the cylinder, substantially as described.

2. The combination of the cylinder A, vibrating plate K, constructed with the vertical slots M and N, a piston O in the cylinder, piston-rod P, extending from the piston and adjustably hung in said slot N, a revolving crank I, its crank-pin J working in said slot M of the plate K, with a tube leading from one head of the cylinder, substantially as described.

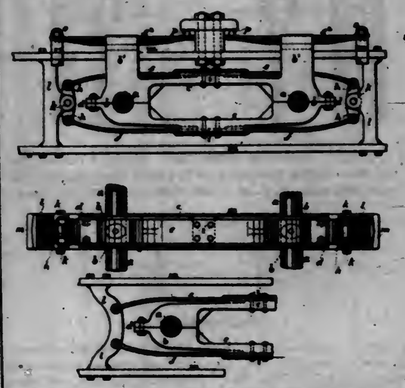
3. The combination of the cylinder A, the piston O therein, constructed with an adjustable opening S therein, provided with a valve on the operative side of the piston, the vibrating plate K, constructed with a slot N, piston-rod P, extending from the piston O and adjustably hung in said slot N, and mechanism, substantially such as described, for imparting vibratory movement to said plate, substantially as specified.

412,026. HEEL-TRIMMING MACHINE. FRANK H. BURRIDGE, Boston, and CHARLES W. B. FULLER, Malden, assignors to the Acme Heel Trimmer Company, Boston, Mass. Filed May 28, 1889. Serial No. 312,060. (No model.)

Claim.—1. The cutter-head composed of the knives having grooved backs, the holder engaged with said grooves and composed of the part 4, affixed to the shaft, and the part 5, having the cam-shaped hub or collar 8, and the stud 10, having the cam-shaped shoulder formed to engage said cam-shaped hub or collar, as set forth.

2. The combination of the knives having grooved backs, the holder engaged with said grooves and composed of the part 4, affixed to the shaft and provided with the screw-threaded sleeve 6 and the adjustable part 5, the adjustable sleeve 13, movable on the sleeve 6 and having stops 12 for the rear ends of said blades, and a locking-nut 14, engaged with the threaded portion of the sleeve 6, whereby said sleeve 13 may be secured at any point to which it may be adjusted, as set forth.

412,027. LATHE-CHUCK. JAMES HARTNESS, Torrington, Conn., and ELISHA P. SPAULDING, Windsor, Vt., assignors to the Jones & Lamson Machine Company, Springfield, Vt. Filed Jan. 2, 1889. Serial No. 295,185. (No model.)



Claim.—1. The chuck-body, the levers having longer and shorter arms pivoted thereto, means for moving said levers, the radially-movable jaws, and the sliding sleeve surrounding the jaws and tapered or wedge-shaped internally, said sleeve being in contact with the shorter arms of the levers, all combined substantially as set forth.

2. The combination of the chuck-body, the sliding sleeve therein, having a tapered or wedge-shaped inner surface, the loose or independent jaws inserted loosely in said sleeve and having their backs shaped to conform to said tapered surface, the latter preventing inward endwise movement or displacement of the loose jaws, the flanged collar screwed upon the body to prevent outward endwise movement or displacement of the jaws, and means for moving said sleeve to compress the jaws, as set forth.

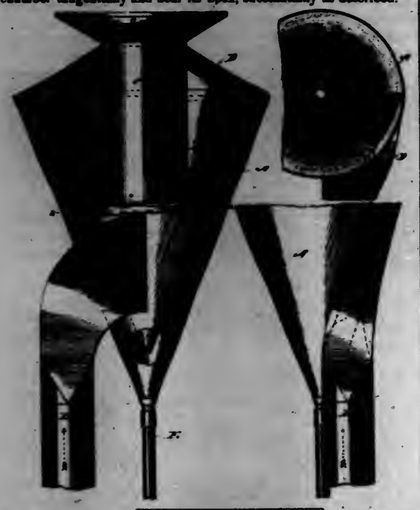
3. The combination of the chuck-body having longitudinal slots, the levers pivoted in said slots and having the inclined arms, the sliding sleeve operated by said levers within the body, the jaws within said sleeve, and studs or projections carried by a slide or ring and bearing on the inclined arms of the levers, as set forth.

412,028. CONNECTION FOR CAR-AXLE BOXES. CHARLES W. HUNT, West New Brighton, N. Y. Filed Aug. 2, 1889. Serial No. 319,569. (No model.)

Claim.—1. The combination, with the axles, of the boxes and yoke connecting such axles, the thrust-bars *e f* above and below the yoke and connected at the middle portions to such yoke, and the levers pivoted upon the frame and to the ends of the thrust-bars, substantially as set forth.

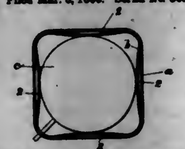
2. The combination, with the axles, of the boxes and yoke made in two parts and bolted together so as to grasp the axles, the thrust-bars above and below the yoke and connected thereto and having curved end portions, and the levers pivoted upon the frame and connected at their ends to the respective thrust-bars, substantially as set forth.

3. The combination, with the axles, of the boxes and yoke connecting the axles, thrust-bars above and below the yoke and connected to the same, levers connecting the ends of the thrust-bars and pivoted upon the frame, and springs for supporting the weight, substantially as set forth.



4. The combination, with the axles, of the boxes and yoke made in two parts and bolted together so as to grasp the axles, and the thrust-bars above and below the yoke and connected thereto and having curved end portions connected at their ends to the frame, substantially as set forth.

412,029. STEAM-CONDENSER. OSWALD KUTSCHE, Chicago, Ill. Filed Jan. 21, 1889. Serial No. 297,012. (No model.)



Claim.—1. In a condenser, the combination, with a condensing-chamber having separate outlets for steam and water and a tangential inlet-opening, of a collar or pipe surrounding the steam outlet and projected into the chamber, and a supplementary deflector suspended within the chamber, its upper end surrounding the outlet-pipe and its lower end having an orifice for the escape of water from its interior, substantially as described.

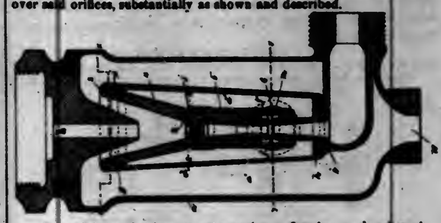
2. A condenser having an inverted cone-shaped condensing-chamber formed by an imperforate peripheral wall and having an outlet for the dry steam at its base, and an outlet for the water of condensa-

tion at its apex, and an inlet for the steam entering the condensing-chamber tangentially and near its apex, substantially as described.

412,080. WATCH-MOVEMENT BOX. WILLIAM B. LEARNED, Boston, Mass., assignor of one-half to the E. Howard Watch and Clock Company, same place. Filed Mar. 8, 1889. Serial No. 302,418. (No model.)

Claim.—A watch-movement box having rounded corners, combined with a sheet-metal lining bent to fit said rounded corners and presenting inwardly-curved sides 2 between said corners, said sides constituting a series of springs or yielding bearings 2 2, which are separated by intervening spaces from the sides of the box, as set forth.

412,081. SUPPORT FOR SPINNING-SPINDLES. THOMAS H. LOGAN, Lowell, Mass., assignor, by direct and mesne assignments, to Horatio R. Fletcher, trustee, same place. Filed June 18, 1888. Serial No. 277,429. (No model.)



Claim.—1. A spindle and flat step for supporting the same vertically, combined with a bolster-case, a whirl secured to the spindle, and a circle of anti-friction balls constructed and arranged solely to form a lateral bearing or support for the spindle interposed between the whirl and bolster-case, as set forth.

2. A spindle and flat step for supporting the same vertically, combined with a bolster-case, a sleeve-whirl extending over the bolster-case, and a circle of anti-friction balls constructed and arranged solely to form a lateral bearing or support for the spindle interposed between the whirl and bolster-case on a line horizontally with the whirl, as set forth.

412,082. INJECTOR. WILLIAM B. MAGE, Boston, Mass. Filed Sept. 30, 1887. Renewed Mar. 8, 1889. Serial No. 302,587. (Model.)

Claim.—1. In an injector, the combination, with the outer and inner casings, of the combining-cone fitted at its widened end on one end of said inner casing and composed of sections 4 5, the former being provided at its lower end with a reduced threaded portion and with a series of air-vents or relief-orifices, and the section 5 having its upper end fitted on said threaded portion and designed to extend over said orifices, substantially as shown and described.

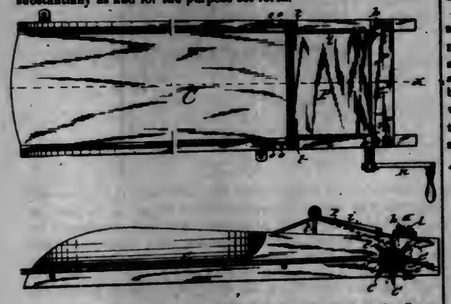
2. An injector having an outer casing *a*, forming a chamber *a'*, and provided with a steam-cone at its upper end and a water-inlet at its lower end, an inner chamber within, but having no connection with said outer chamber, an overflow-passage extending from said inner chamber through the outer chamber and casing, and combining and delivery cones fitted in said inner chamber, as described, the combining-cone being provided with air-relief orifices *j*, and said delivery-cone having water-overflow orifices, both said orifices communicating with said inner chamber and through the latter with the overflow-passage, as set forth.

3. The herein-described improved injector, comprising the outer casing forming a chamber *a'*, the casing *d*, located within said chamber and forming an inner chamber having no connection with said former chamber, the combining-cone made in sections 4 5, the section 4 having a lower threaded end and air-relief orifices, and the section 5 adjustably secured on said threaded end and designed to extend over said orifices, the delivery-cone secured to the lower end of said combining-cone and having water-overflow orifices, and the overflow-passage extending from said inner chamber and casing through said outer chamber and casing, substantially as shown and described, said air and water orifices opening into said inner chamber, as set forth.

4. In an injector, the combination of the two-part casing comprising the outer casing *a* and the inner casing *d*, forming inner and outer chambers *a' d'*, said inner chamber having no connection with said outer chamber and provided with an overflow-passage *n*, the steam-cone screwed into the end of the outer casing, the combining and delivery cones passing through the inner chamber and having vents communicating directly with the latter and with said overflow, all arranged and operating substantially as described.

412,083. FERRULE. JAMES MACPHAIL, Rockford, Ill. Filed June 18, 1888. Serial No. 277,577. (No model.)

Claim.—1. A ferrule having an opening at any point between the ends thereof, extending transversely therethrough, and a tongue-fastener formed integrally therewith and projecting into said opening from the perimeter thereof, substantially as described, and for the purpose specified.



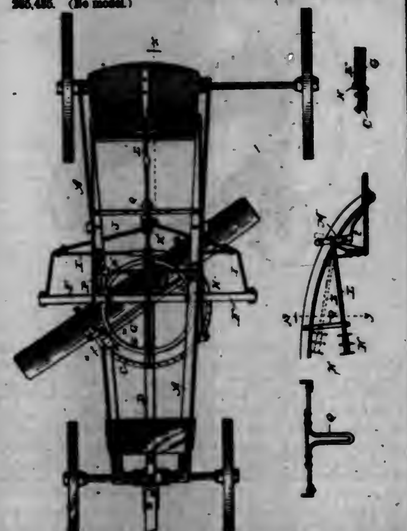
2. The ferrule A, having the tongue-fastener A^3 formed integrally therewith, substantially as described, and for the purpose set forth.

412,084. FEED-CUTTER. JUSTICE W. MARSHALL, Greenwich, N. Y., assignor to Pliabury A. Webster, same place. Filed June 7, 1888. Serial No. 313,623. (No model.)

Claim.—1. In a feed-cutter, the combination, with the trough, of a knife extended across the top of said trough and secured thereto, and a feed-roller arranged across the trough under the aforesaid knife and provided with wings adapted to pass with their free edges in proximity to the said knife, substantially as described and shown.

2. In a feed-cutter, the combination, with the trough, of the knife *c*, extended across the top of said trough and secured at its front edge to the same, the set-screws *b b*, working in screw-threaded openings near the rear edge of the said knife and bearing on top of the trough, and the feed-roller *e*, arranged across the trough under the rear edge of the aforesaid knife and provided with wings adapted to pass with their edges in proximity to the knife, substantially as described and shown.

3. In combination with the trough C, the stationary knife *c*, extended across the top of said trough and secured thereto, the feed-roller *e*, arranged across the trough under the rear edge of the aforesaid knife and provided with wings *d' d'*, disposed longitudinally obliquely in relation to the axis of the roller and adapted to pass with the edges of said wings in proximity to the rear edge of the stationary knife, the plate P, lying movably vertically over the feed-roller *e*, and a spring or springs pressing said plate toward the said roller, substantially as and for the purpose set forth.

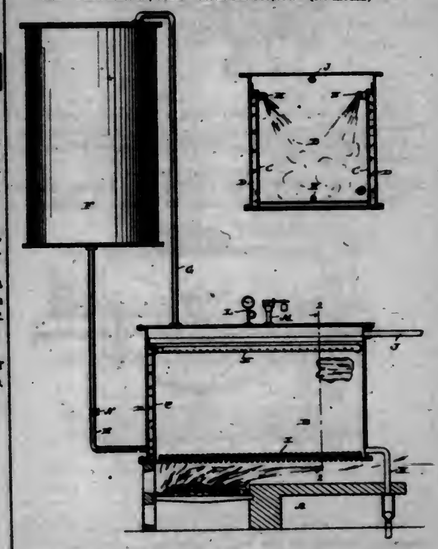


4. In combination with the trough C, knife *c*, and feed-roller *e*, the pivotal supports *t t*, connected to the side plates of the trough adjustably toward and from the aforesaid knife, the plate P, pivoted to the aforesaid supports and resting with its front end upon the feed-roller, and springs *i i*, pressing the said plate toward the feed-roller, substantially as described and shown.

412,085. FIRE AND WATER PROOF COMPOUND. WILHELM MATT, Athens, N. J. Filed May 4, 1888. Renewed Aug. 27, 1889. Serial No. 322,085. (No specimens.)

Claim.—The within-described plastic compound, consisting of a solution of water, glue, pulp, and paste, in about the proportions named, thickened by the admixture therewith of whiting, plaster-of-paris, and coal-ashes, substantially in the proportions set forth.

412,086. ROAD-SCRAPER. OTTO R. MOATS, Chicago, Ill., assignor to Frederick C. Austin, same place. Filed Feb. 27, 1888. Serial No. 265,495. (No model.)



Claim.—1. In a road-scraper, the combination of a frame, a draft-bar, a scraper-blade connected thereto, an adjustable tumbler, and supporting-spring connecting the tumbler and scraper-blade-supporting mechanism, substantially as described.

2. In a road-scraper, the combination of a frame, a draft-bar, a scraper-blade connected thereto, a horizontal drum or worm shaft, and around the drum or worm of which an adjusting-chain is wound, and means for rotating the drum or worm shaft in one direction or the other, substantially as described.

3. In a road-scraper, the combination of a frame, a draft-bar, a scraper-blade connected thereto, a horizontal drum or worm shaft vertically adjustable at its forward end, and around the drum or worm of which an adjusting-chain is wound, and means for rotating the drum or worm shaft in the one direction or the other, substantially as described.

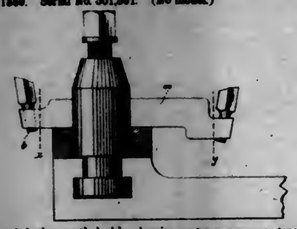
4. In a road-scraper, the combination of a frame, a draft-bar, a scraper-blade pivotally connected thereto, a transverse adjuster-bar moving the draft-bar and scraper-blade to the one side or the other as it is moved, a chain connected with the adjuster-bar near its ends, and a horizontal drum or worm around which the chain passes and by which either end may be shortened or lengthened at pleasure, whereby the scraper-blade and supporting mechanism may be moved toward one side of the machine or the other, substantially as described.

412,087. STEAM-GENERATOR. HOSEA P. GREGORY, Milwaukee, Wis. Filed Mar. 20, 1889. Serial No. 303,937. (No model.)

Claim.—1. A steam-generator comprising a furnace, a generating-chamber supported above the furnace and provided with a water-space, perforated pipes connected to the water-space and arranged in the generating-chamber, a reservoir also connected to said water-space, and a steam-delivery pipe connected to the generating-chamber, substantially as set forth.

2. A steam-generator comprising a furnace, a generating-chamber supported above the furnace and provided with a water-space and corrugated bottom, perforated pipes connected to the water-space and arranged in the generating-chamber, a feed-water supply also connected to said water-space, and a steam-delivery pipe connected to the generating-chamber, substantially as set forth.

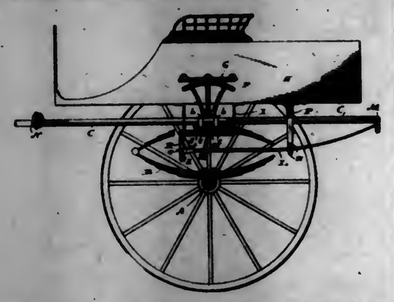
3. A steam-generator comprising a furnace, a generating-chamber supported above the furnace and provided with a water-space of limited area, a feed-water supply connected with the water-space, distributer-pipes also connected with said water-space and arranged within the generating-chamber, a corrugated bottom for said generating-chamber constructed to present narrow water-spaces and materially wider fire-spaces, and a steam-delivery pipe, substantially as set forth.



4. A steam-generator comprising a furnace, a generating-chamber supported above the furnace and provided with a water-space, perforated pipes connected to the water-space and arranged in the generating-chamber, a feed-water supply also connected to the said water-space, a steam-delivery pipe, and a valved waste-pipe connected to the generating-chamber, substantially as set forth.

5. A steam-generator comprising a furnace, a generating-chamber supported above the furnace and provided with a water-space, perforated pipes connected to the water-space and arranged in the

generating-chamber, a feed-water supply also connected to the water-space, a steam-pipe connecting said feed-water supply and generating-chamber, and a steam-delivery pipe also connected to said generating-chamber, substantially as set forth.



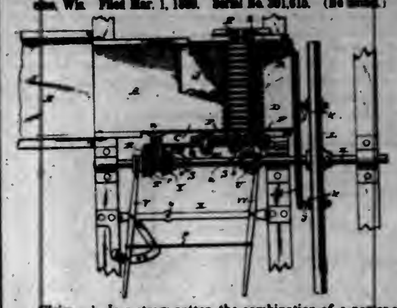
6. A steam-generator comprising a furnace, a generating-chamber supported above the furnace, a lining secured within the generating-chamber to form a water-space, a feed-water supply connected to the water-space, perforated pipes also connected to said water-space and arranged within the generating-chamber, and a steam-delivery pipe also connected to said generating-chamber, substantially as set forth.

412,038. LATHE-TOOL. FRANK S. PECKER, Boston, Mass. Filed Feb. 27, 1889. Serial No. 301,361. (No model.)

Claim.—A lathe-tooth holder having a transverse outwardly-inclined tapering socket, combined with the tool having a tapering shank to fit tightly in the said socket and be retained therein by friction only, substantially as described.

412,039. TWO-WHEELED VEHICLE. PAUL PERSCHEL, Milwaukee, Wis. Filed Mar. 23, 1889. Serial No. 304,539. (No model.)

Claim.—1. A two-wheel vehicle having a transverse rock-shaft connection between its box and running-gear, a longitudinal lever cranked at one end to the rock-shaft and connected at its other end to said running-gear, and a depending bracket on the box loosely connected to the lever, substantially as set forth.



2. A two-wheel vehicle having a transverse rock-shaft connection between its box and running-gear, a longitudinal lever cranked at one end to the rock-shaft and connected at its other end to said running-gear, a depending bracket on the box loosely connected to the lever, and stops for limiting the upward movement of said box, substantially as set forth.

3. A two-wheel vehicle having its box provided with racks, a shaft journaled to the vehicle-springs, toothed segments fast on the shaft and meshed with the racks, a lever cranked at one end to the shaft and connected at its other end to a cross-bar of the vehicle, and a bracket depending from the vehicle-box to have loose connection with the lever, substantially as set forth.

4. A two-wheel vehicle having its box provided with racks, a shaft journaled to the vehicle-springs, toothed segments fast on the shaft and meshed with the racks, an arm extended from the shaft, a depending link pivoted to the arm, a lever having one end thereof shackled to the link and its other end connected to a cross-bar of the vehicle, and a bracket depending from the vehicle-box to have loose connection with the lever, substantially as set forth.

5. A two-wheel vehicle having its box provided with racks, a shaft journaled to the vehicle-springs, toothed segments fast on the shaft and meshed with the racks, a lever cranked at one end to the shaft and connected at its other end with a cross-bar of the vehicle, a bracket depending from the vehicle-box, and anti-friction rollers arranged on the bracket to impinge on opposite sides of the lever, substantially as set forth.

412,040. STRAW-CUTTER. JORAN RAHN and PETER RAHN, Racine, Wis. Filed Mar. 1, 1889. Serial No. 301,615. (No model.)

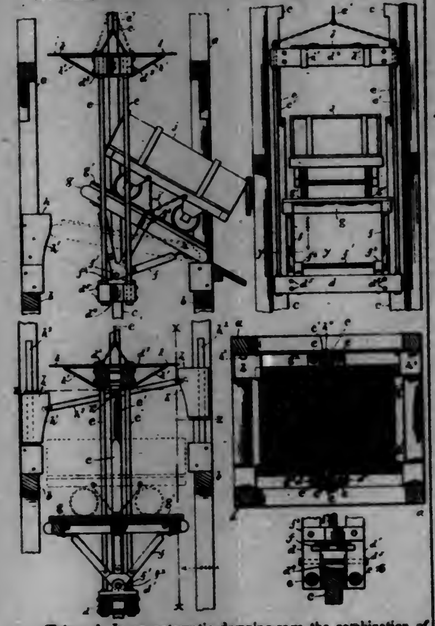
Claim.—1. In a straw-cutter, the combination of a power-shaft provided with clutch-pins, pinions loosely arranged on the shaft and provided with notches for engagement with said pins, levers connected to the pinions and united by a link, and a double gear-wheel arranged with relation to said pinions, whereby when one of the latter is thrown out of engagement with the adjacent set of gear-teeth on said wheel the other pinion and set of gear-teeth are brought into engagement, substantially as set forth.

2. In a straw-cutter, the combination of a power-shaft, pinions loosely arranged on the shaft, means, substantially as described, for clutching said shaft and pinions, levers connected to the pinions and to each other, a double gear-wheel arranged to be in mesh with one or the other of said pinions, according to the position of the levers, a pinion carried by the gear-wheel, and the lower feed-roller geared to the pinion and upper feed-roller, as set forth.

3. In a straw-cutter, the combination of a power-shaft, pinions loosely arranged on the shaft, means, substantially as described, for clutching said shaft and pinions, levers connected to the pinions and each other, a double gear-wheel arranged to be in mesh with one or the other of the pinions, according to the position of the levers, and an anti-friction roller arranged to support said gear-wheel, as set forth.

412,041. CHILD'S CARRIAGE. MILES C. ROOT, Toledo, Ohio, assignor of one-third to John H. Lloyd, same place. Filed Apr. 15, 1889. Serial No. 307,384. (No model.)

Claim.—1. In a child's carriage, the combination, with the running-gear, of an annulus secured to said gear, the body having rubirons upon its bottom adapted to bear upon the annulus, a pivot-rod passing through the body and the annulus upon which the body turns, a catch secured at either end of the body, and an upwardly-extending spring-dog attached to the running-gear adapted to engage the catch and hold the body in position, substantially as shown and described.



2. In a child's carriage, the combination, with the running-gear, of an annulus attached thereto, intermediate pivotal arms connecting the annulus to the gear, whereby the annulus is adapted to be elevated, and a carriage-body pivotally secured to the annulus by a suitable bolt, all arranged and adapted to operate substantially as shown and described.

3. In a child's carriage, the combination, with the running-gear, of an annulus pivotally connected with said running-gear and adapted to move both vertically and horizontally, and a body pivoted to the annulus and adapted to revolve thereon, substantially as shown and described.

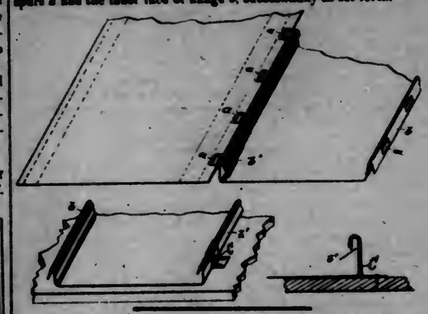
4. In a child's carriage, the combination, with the running-gear, of an annulus attached thereto, intermediate arms pivotally connected to the running-gear and annulus, a body suitably pivoted upon the annulus, a catch arranged at either end of the body, and an upwardly-extending spring-dog adapted to engage with the catch and hold the body in place, substantially as shown and described.

5. In a child's carriage, the combination, with the catch L, arranged at either end of the body, of the spring-dog K, secured to running-gear and extending upwardly to engage the catch, said dog terminating in a suitable handle, whereby it may be thrown out of engagement, as and for the purpose set forth.

412,042. AUTOMATIC DUMPING-CAGE. BENJ. RUSSELL and HARRY T. PARSONS, Braidwood, Ill. Filed May 21, 1889. Serial No. 311,547. (No model.)

Claim.—1. In an automatic dumping-cage, the combination of the cage-frame, vertical guides having cut-away portions *d* and arranged in the shaft upon opposite sides of said frame, a pivotal platform the axis of which is arranged in the plane of said guides, there being notches formed in said platform to receive said guides, and means, such as the cut-away portions *d*, at or near the dump-level, whereby said platform is permitted to tilt upon its axis, substantially as shown and described.

2. The combination, in a dumping-cage, of the tilting platform *g*, provided with notches g^1 g^2, guide-posts *c c*, having cut-away portions *d' d'* at or near the dump-level, and means, such as the inclined-faced block, for tilting said platform in a given direction when opposite to said cut-away portions *d' d'*, substantially as shown and described.



3. The combination, with a cage, of the pivoted platform *g*, notched as described, guide-posts *c c*, having cut-away portions *d' d'*, inclined-faced blocks A A loosely arranged in vertical guides upon opposite sides of the shaft, and means, such as the pivoted bar A^2, for alternately reversing the position of said blocks, substantially as shown and described.

4. The combination, with a cage, of the hinged covers *k k* and means for normally retaining the same in a horizontal position, substantially as shown and described.

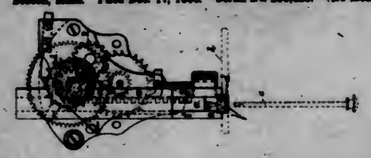
412,043. METALLIC ROOFING. LOMBLEY L. SACHSENMEYER, Cincinnati, Ohio. Filed July 11, 1889. Serial No. 317,312. (No model.)

Claim.—1. A sheet of metal roofing provided on one side with an outward-projecting flange having inward-projecting spurs on its downward extension, the opposite side of said sheet having an internal flange, substantially as set forth.

2. In a metal roof, the combination of internal flange *b'*, cleat C, and the outward overlapping flange *b*, the cleat C fitting over flange *b'* and nailed to the sheeting, said flange *b'* engaging between the spurs *a* and the inner face of flange *b*, substantially as set forth.

412,044. EDUCATIONAL APPLIANCE. AUGUSTUS SCARLETT, Newark, N. J. Filed Aug. 20, 1888. Serial No. 311,304. (No model.)

Claim.—1. The improved educational chart herein described, combining with a frame or backing provided with brackets or supports *c* strips *d*, separable from said brackets and grooved in their upper edges, and word-cards, said parts being arranged and combined substantially as and for the purposes set forth.



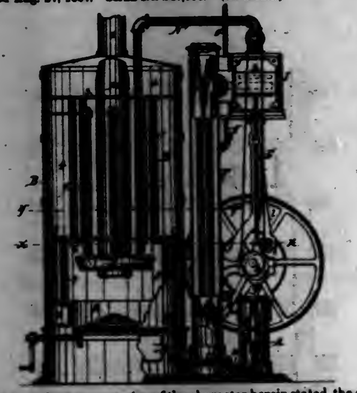
2. The improved educational chart herein described, combining therein a frame or backing having clips at the sides thereof, a series of grooved strips adapted to be separably or removably held in said clips at the ends thereof, and cards having words printed thereon, substantially as set forth.

3. The improved educational chart herein described, combining therein a frame or backing composed of sections or pieces separable from one another, the side sections being provided with brackets or supports for separable strips, said strips having grooves for word-cards, and said word-cards, said parts being arranged and combined substantially as and for the purposes set forth.

4. In combination, in an educational chart, a frame provided with spring-clips, rigid and grooved strips separable from the frame, and word-cards, substantially as set forth.

5. In combination, a rack of separable sections having series of spring-clips or brackets secured at the sides thereof, a series of separable card-holders, and a series of interchangeable word-cards, all arranged and combined substantially as and for the purposes set forth.

412,045. WATCHMAN'S CLOCK-STATION. JAMES F. SCHERMERHORN, Newark, N. J., assignor to the E. Howard Watch and Clock Company, Boston, Mass. Filed Dec. 17, 1888. Serial No. 293,525. (No model.)



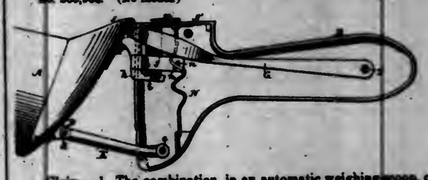
Claim.—The combination, with the mechanism of a watchman's clock-station, said mechanism including the arbor 3, stop-wheels 1 and 2, and spring 4, of the rack *a*, meshing with the wheel 1 and provided with the stud *c*, the guides for said rack, and the key guide or bushing in the bottom of the case arranged with its opening coincident with the stud *c*, as set forth.

412,046. TAILOR'S FITTING-CLASP. NOAH S. SHEIFER, New York, N. Y. Filed June 1, 1889. Serial No. 312,671. (No model.)

Claim.—The combination, in a tailor's fitting-clasp, of a plate having one end doubled or folded back outwardly upon itself, pins secured to said outer end and bent to cause their points to project forward over the same and parallel therewith in the direction of its length, and a second spring-actuated clamping-plate pivoted to the opposite inner side of the folded pin-bearing plate, to close with one end against said pin-plate at a point in front of the pivotal axis and approximately under the pin-points, substantially in the manner and for the purpose herein set forth.

412,047. STEAM-ENGINE. JAMES A. SHEPARD, Havana, N. Y. Filed Aug. 27, 1887. Serial No. 247,998. (No model.)

Claim.—In a steam-engine of the character herein stated, the combination of the following instrumentalities: an upright steam-boiler provided with an annular water-chamber 1, forming the wall of a fire-pot, a cylindrical shell provided with fire-flues extended vertically through a water and steam compartment 4, communicating by means of pipes with said annular water-chamber, a central fuel-supply magazine, a smoke-box, an annular steam-superheater in the fire-chamber provided with vertical pipes rising into the steam-space of compartment 4, a pipe leading from said superheater into one end of a steam-cylinder provided with a reciprocating piston and valve, a vertically-arranged condenser provided with upper and lower chambers H H and pipe-communications, an exhaust-port from the engine-cylinder leading into the upper chamber of said condenser, a cold-water-supply pipe, and a pumping-engine communicating with the condenser and with the annular water-chamber of the boiler, all constructed and adapted for joint operation, substantially as described.



412,048. AIR AND FEED-WATER PUMP FOR CONDENSING-ENGINES. JAMES A. SHEPARD, Havana, N. Y. Original application filed Aug. 27, 1887, Serial No. 247,998. Divided and this application filed Apr. 9, 1889. Serial No. 276,091. (No model.)

Claim.—1. In a feed-water pump for steam-boilers, the combination, with the air-pump A, provided with the piston P, and having the condenser-pipe inlet-opening *n* for the admission of the water of condensation, of the boiler feed-force pump A', provided with the piston P', and the cross-head pin *d*, connecting said pistons and inclosed within said pumps A and A', substantially as described.

2. The combination of the pump-case A, provided with the induction-valve V at the base, the vertical slot *a* in its side, and the port *b* above said slot, the piston P, provided with the lift-valve V', the supplemental pump-case A', provided with the discharge-pipe *n*, and open at its side and secured at said side to the side of the case A, having the aforesaid slot and port, and the piston P', connected with the piston P by the coupling-pin *d*, projecting through the slot *a*, substantially as described.

412,049. AUTOMATIC WEIGHING-SCOOP. EDGAR SIZE, Philadelphia, Pa., assignor, by direct and mesne assignments, to Joseph J. Carr and F. C. Sturgen, Wilkes-Barré, Pa. Filed Aug. 26, 1886. Serial No. 213,009. (No model.)

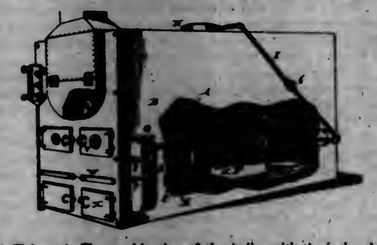
Claim.—1. The combination, in an automatic weighing-scoop, of the scoop, the handle, the dial thereon, a spring by which the scoop is suspended on the handle, with a helical shaft having a hand, and with an arm on the scoop engaging with the helical shaft.

2. The combination of the scoop-handle having two pivot-pins, the scoop and links connecting the scoop to said pins, with an indicator-shaft, an arm on the scoop engaging with said shaft, and a balance-spring supporting the scoop on the handle, substantially as described.

3. The combination, in an automatic weighing-scoop, of the handle and the scoop pivotally connected thereto, a spring suspending the scoop on the handle, with an indicating-dial the face of which is parallel with the upper face of the scoop, and a pointer geared to the scoop, substantially as described.

4. In a weighing device, the combination of a relatively-fixed handle or base part, a movable weighing scoop or platform, and a rotary indicator with a helical axis controlled by the moving scoop and operating the rotary indicator.

412,050. VEHICLE-AXLE. PHILIP ROSENFELD, San Francisco, Cal. Filed Apr. 5, 1889. Serial No. 306,119. (No model.)



Claim.—1. In an axle, the combination of the tubular body-piece, the fixed tubular bearings screwed into each end of said piece, the independent spindles for carrying the wheels and journaled in the bearings, the flanges on the inner end of the spindles abutting against the inner end of the tubular bearings, and the collars on said spindles abutting against the outer ends of said bearings, substantially as described.

2. In an axle, the combination of the tubular body-piece, the tubular bearings screwed into each end of said piece, the independent spindles journaled in the tubular bearings and having their projecting ends square or angular in cross-section to receive the wheels, the flanges on the inner ends of the spindles and abutting against the inner ends of the tubular bearings, the collars fast on said spindles abutting against the outer ends of said bearings, and the nuts for confining the wheel on the spindles between themselves and the collars, substantially as described.

3. In an axle, the combination of the tubular body-piece, the tubular bearings screwed into each end of said piece, the independent spindles journaled in the tubular bearings, the flanges on the inner ends of the spindles abutting against the inner ends of the bearings, the collars on said spindles abutting against the outer ends of the bearings, the oiling-pieces D, secured to the inner ends of the spindles, the oil-grooves H in said spindles, and the oil-hole F in the body-piece, substantially as described.

412,051. STEAM-GENERATING APPARATUS. WILLIAM L. TEPPER, Philadelphia, Pa. Filed May 20, 1889. Serial No. 312,063. (No model.)

Claim.—1. The combination of the boiler with the inclosed setting having the ash-pit, fire-box, and combustion-chamber, a grate between the ash-pit and fire-box, a superheater filled with a heat-absorbing material in the combustion-chamber, a steam-pipe for supplying steam to said superheater, a pipe for leading the superheated steam to the ash-pit, and air-valves to control the flow of air to the ash-pit.

2. The combination of the boiler, with the inclosed setting having the ash-pit, fire-box, and combustion-chamber, a grate between the ash-pit and fire-box, a superheater filled with a heat-absorbing material in the combustion-chamber, a steam-pipe for supplying steam to said superheater, a pipe for leading the superheated steam to the ash-pit, and air-valves to control the flow of air to the ash-pit, a mixing-chamber in which the air and steam are mixed prior to entering the ash-pit, and a valve to control the flow of the steam to the mixing-chamber.

3. The combination of the boiler, with the inclosed setting having the ash-pit, fire-box, and combustion-chamber, a grate between the ash-pit and fire-box, a superheater having vertical division-plates forming a circuitous passage-way for the steam filled with a heat-absorbing material in the combustion-chamber, a steam-pipe for supplying steam to said superheater, a pipe for leading the superheated steam to the ash-pit, and air-valves to control the flow of air to the ash-pit.

4. The combination of a boiler, a boiler-setting having a fire-grate, an ash-pit, and a combustion-chamber, a superheater in said combustion-chamber, a steam-pipe leading from the boiler to the superheater, a steam injector-mixer, a steam-pipe from the superheater to the steam injector-mixer, valves on the injector to control the flow of steam and air through the mixer, and a passage-way connecting the mixer with the ash-pit under the grate.

5. The combination of a boiler, a boiler-setting having a fire-grate, an ash-pit and combustion-chamber, a superheater in said combustion-chamber, a steam-pipe leading from the boiler to the superheater, a steam injector-mixer consisting of the chamber M and tapering ports *n* O, and valves M and P, for controlling steam and air to the ports or orifices, a steam-pipe from the superheater to the steam injector-mixer, valves to control the flow of steam and air through the mixer, and a passage-way connecting the mixer with the ash-pit under the grate.

6. The combination of a boiler, a boiler-setting having a fire-grate, an ash-pit, and a combustion-chamber, a superheater in said combustion-chamber, a steam-pipe leading from the boiler to the superheater, a steam injector-mixer, a steam-pipe from the superheater to the steam injector-mixer, valves, independent steam and air valves on the injector to control the flow of steam and air through the mixer, and a passage-way connecting the mixer with the ash-pit under the grate, and a sight-window above the superheater in the wall of the boiler-setting.

7. The combination of the boiler, the grate C, the ash-pit under the grate, the bridge-wall D, the combustion-chamber F back of the bridge-wall, a superheater made box shape and filled with fire-brick or other heat-absorbing material and exposed on all sides, a steam-pipe for supplying steam to the superheater, a pipe for conveying the superheated steam from the superheater to the ash-pit, a valve to control the flow of steam to the ash-pit, an air-passage leading to the ash-pit, and a valve to control the flow of air to the ash-pit.

8. The combination of the boiler, the grate C, the ash-pit under the grate, the bridge-walls D, the combustion-chamber F back of the bridge-wall, a superheater made box shape and filled with fire-brick or other heat-absorbing material and exposed on all sides, a steam-pipe for supplying steam to the superheater, a pipe for conveying the superheated steam from the superheater to the ash-pit, a valve to control the flow of steam to the ash-pit, an air-passage leading to the ash-pit, and a valve to control the flow of air to the ash-pit, a mixing-chamber for the steam and air before passing into the ash-pit, and a perforated wall through which the mixed air and steam is caused to pass in entering the ash-pit.

9. The combination of a boiler, a boiler-setting having a fire-box and ash-pit, a steam and air injector-mixer to introduce mixed steam and air to the ash-pit, having independent steam and air valves, doors opening into the fire-box and ash-pit, and a packing of non-combustible material between said doors and boiler-setting to exclude the passage of air through them and cause a forced draft to said ash-pit from said injector-mixer.

10. The combination of a boiler having a grate, ash-pit, and combustion-chamber, with a superheater in the combustion-chamber, an opening through the wall of the combustion-chamber, a plate J, covering said opening, steam inlet and outlet pipes for the superheater extending through and supported by said plate, and an injector-mixer for air and steam for supplying steam and air to the ash-pit.

412,052. LOW-WATER ALARM. DAVID C. WALTER, Toledo, Ohio, assignor of two-thirds to James C. Otis and Samuel F. Bowlus, both of same place. Filed Sept. 3, 1888. Serial No. 284,515. (No model.)

Claim.—1. In a low-water alarm, the combination, with an alarm-whistle, expansion-tube, and couplings at either end, of a cross bar or lever secured to the lower coupling, an elbow-lever pivoted to the upper coupling at one side and adapted to bear upon the valve-stem of the whistle, an extensible rod connecting said elbow-lever with one arm of the cross bar or lever, and a rigid rod connecting the upper coupling with the opposite arm of the cross bar or lever, substantially as shown and described.

2. In a low-water alarm, an expansion-tube carrying an alarm-signal, and a bar or rod pivotally connected with the signal, so as to bring the same into action when the tube is heated to expand longitudinally, said rod being detachably connected at one end with the expansion-tube and arranged to automatically connect therewith, substantially as and for the purposes set forth.

3. The combination, with the expansion-tube and a valve-operating lever secured to the upper end of said tube, of a lever at the lower end of the tube, a rod connected to said lever and to the upper end of the tube, a lever pivotally connected to the valve-operating lever and detachably engaging the lower lever, and a spring for automatically throwing the rod into engagement with the lower lever, substantially as and for the purpose specified.

412,053. RAILWAY TIME-SIGNAL. JAMES WALLACE, Bowart, N. J. Filed Dec. 4, 1882. Serial No. 262,690. (No model.)

Claim.—1. In a railway time-indicator substantially such as described, the combination, with the rail, a standard or post *f*, and a clock arranged thereon and having a hand clamped upon the hand-shaft of said clock, of a wedge for releasing the clamp and a vertically-

movable rod carrying said wedge and connected with and operated by the rail, substantially as and for the purposes set forth.

2. In a railway or time indicator, a clock having a stop projection on the dial-plate, a hand free to move independent of the hand-shaft, a clamp for holding the hand to the clock-work, a lever *k*, for releasing said clamp, a vertically-movable wedge for operating said lever under the influence of the power exerted by the passing train, and a motor for setting the hand back to said stop when released, said parts being arranged and combined substantially as set forth.

3. In combination with the clock-work of a railway-signal, having a hand adapted to move independent thereof, a clamp for holding said hand to said clock-work and a vertically-movable wedge for releasing said hand, substantially as set forth.

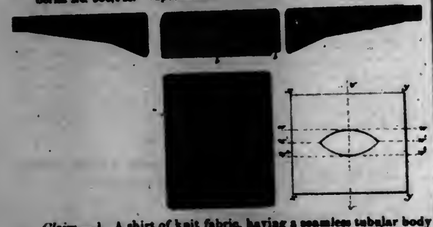
4. In combination, rails *b b*, lever *d*, bar *c*, having an incline or wedge, a clock having hand-shaft *m*, sliding friction-clamp, and lever *k*, all arranged and combined substantially as and for the purposes set forth.

5. In combination with rails *b b*, lever *d*, incline or wedge *i*, clock-work hand-shaft *m*, clamp *l*, extension *p*, having head *s*, spring *r*, and weighted cord, all arranged and combined substantially as and for the purposes set forth.

6. In combination, in a combined signal and time indicator, a clock having a hand held on an extension of the hand-shaft by a friction-clamp, a lever *k*, a lever 6, operating a danger-signal, and an incline connected with and operated by the track and adapted to operate both of said levers 6 and *k*, substantially as and for the purposes set forth.

7. In combination with the railway-rail, a lever *d*, engaging the said rail and receiving its depression, a rod *c*, lever 3, spring-crank 9, danger-signal, and a catch controlled by the railway-train, substantially as and for the purposes set forth.

8. In combination with the vertical rod *c* and a wedge at the end thereof, levers and a revolving signal adapted to be turned by the vertical movement of the wedge, substantially as and for the purposes set forth.



9. In combination, a danger-signal, rails, a train of mechanism for connecting said rails and signal and transmitting the movement imparted by the railway-train to said signal to turn the same to a position indicative of danger, and a catch 13, for holding said signal in the danger-indicating position, said catch being in connection with the rail, whereby it may be released by the movement imparted by the railway-train, substantially as and for the purposes set forth.

10. In combination, a danger-signal, rails, a train for connecting rails and signal and transmitting the movement imparted by the railway-train to said signal to turn the same to a position indicative of danger, a catch 13, having a connection with the railway-track, and a spring for automatically restoring the signal to a normal position, substantially as set forth.

11. In a time-signal for railways, the combination, with a clock-work hand and a clamp for holding the same, of a cone for moving said clamp in its relation to the hand, substantially as set forth.

12. In a time-signal for railways, the combination, with a clock-work hand and a clamp for holding the same, of a wedge having a cylindrical base, substantially as set forth.

412,054. KNIT SHIRT. LOUIS H. D. WILLIAMS, Philadelphia, Pa., assignor of one-half to Robert W. Scott, same place. Filed Apr. 5, 1889. Serial No. 306,046. (Specimens.)

Claim.—1. A shirt of knit fabric, having a seamless tubular body portion and a seamless shoulder-web of substantially uniform character from front to back, said shoulder-web being united at its lower edges to the upper edge of the tubular body, substantially as specified.

2. A shirt of knit fabric, having a seamless tubular body portion and a seamless shoulder-web of substantially uniform character from front to back, the lower edges of said shoulder-web forming a seamless union with the upper edge of the seamless tubular body portion, substantially as specified.

3. A shirt of knit fabric, having a seamless tubular body portion, a seamless shoulder-web of substantially uniform character from front to back and united at its lower edges to the tubular body portion, and sleeves united to the opposite ends of said seamless shoulder portion of the shirt, substantially as specified.

4. A shirt of knit fabric, having a seamless shoulder-web of substantially uniform character from front to back, a seamless tubular body united to the lower edges of said shoulder-web, and sleeves each composed of a shaped seamless tube, said sleeves being united at their inner ends to the armholes at the opposite sides of the seamless shoulder-web, substantially as specified.

412,055. KNITTED SHIRT. LOUIS H. D. WILLIAMS, Philadelphia, Pa., assignor of one-half to Robert W. Scott, same place. Filed May 16, 1888. Serial No. 311,069. (No specimens.)

Claim.—1. The within-described shirt of knit fabric, having the shoulder portion and sleeves composed of one piece of fabric, forming seamless armholes, and having a tubular body portion depending from said shoulder portion, substantially as specified.

2. The within-described shirt of knit fabric, having a seamless shoulder portion and sleeves in one piece therewith, forming seamless armholes, and having a tubular body portion depending from said shoulder portion, substantially as specified.

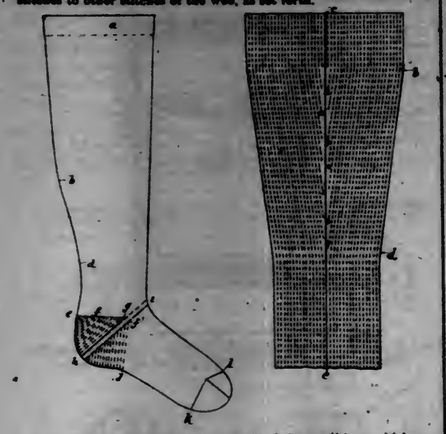
3. The within-described shirt of knit fabric, having a shoulder portion and shaped tubular seamless sleeves in one piece therewith and a tubular body portion depending from said shoulder portion, substantially as specified.

4. The within-described shirt of knit fabric, having a seamless shoulder portion, shaped tubular seamless sleeves in one piece therewith, and a tubular body portion depending from said shoulder portion substantially as specified.

5. The within-described shirt of knit fabric, having a shoulder portion and sleeves in one piece therewith and a tubular seamless body portion united to the lower edges of the shoulder portion of the shirt, substantially as specified.

6. The within-described shirt of knit fabric, having seamless shoulder portions and shaped tubular seamless sleeves in one piece therewith, and having a seamless tubular body the upper edge of which is united to the lower edges of the shoulder portion of the shirt, substantially as specified.

7. The within-described shirt of knit fabric, having a shoulder portion and sleeves in one piece and a body the upper edges of which are united to the lower edges of the shoulder portion of the shirt, the wales in the shoulder and sleeve portions of the shirt being horizontal and those in the body of the shirt being vertical, substantially as specified.



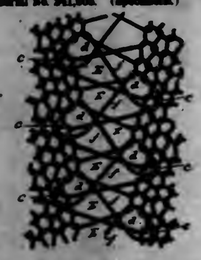
8. The within-described shirt of knit fabric, having a seamless shoulder portion and shaped tubular seamless sleeves in one piece therewith, and a body portion consisting of a seamless tubular web, the upper edge of which is united to the lower edges of the shoulder portion of the shirt, the wales in said shoulder and sleeve portions of the shirt being horizontal and those in the body of the shirt being vertical, substantially as specified.

9. The within-described shirt of knit fabric, having a shoulder portion and sleeves with ribbed cuffs, the whole being in one piece, and a body portion depending from the shoulder portion of the shirt, substantially as specified.

10. The within-described shirt of knit fabric, having a seamless shoulder portion and shaped seamless tubular sleeves with ribbed cuffs, the whole being in one piece, and a body portion depending from the shoulder portion of the shirt, substantially as specified.

412,056. STOCKING AND THE ART OF KNITTING THE SAME. CHARLES H. YOUNG, Manchester, N. H., assignor of two-thirds to William Stark, Ralph Emerson, and William A. Talcott, Rockford, Ill., and A. P. Chesebrough, Manchester, N. H. Filed Apr. 6, 1888. Serial No. 269,669. (No specimens.)

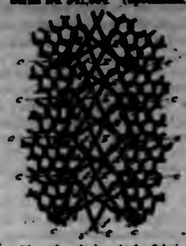
Claim.—1. The improvement in the art of knitting stockings, which consists in knitting a tube for the upper leg portion in any suitable manner, then narrowing for the lower leg portion by dropping stitches in any desired order, then forming the ankle, heel, foot, and toe portions in any suitable manner, and finally uniting the dropped stitches to other stitches of the web, as set forth.



2. The improvement in the art of knitting stockings, which consists in knitting a tube for the upper leg portion in any suitable manner, then narrowing for the lower leg portion by dropping stitches in any desired order on each side of an unbroken or uninterrupted course of stitches, then forming the ankle, heel, foot, and toe portions in any suitable manner, and finally uniting the dropped stitches to other stitches of the web, as set forth.

3. The improvement in the art of knitting stockings, which consists in knitting a tube for the upper leg portion in any suitable manner, then narrowing for the lower leg portion by dropping stitches in any desired order on each side of an unbroken or uninterrupted course of stitches, then forming the ankle portion in any desired manner, then forming the heel by knitting into the tube any suitable number of gores of any desired width and depth, then knitting the foot and toe portions in any known way, and finally uniting the dropped stitches to other stitches of the web, as set forth.

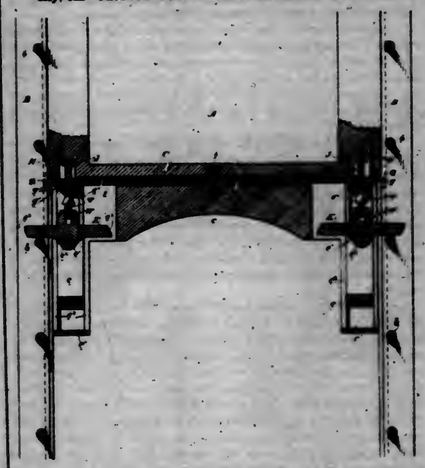
4. As an article of manufacture, a stocking having the upper leg and ankle portions formed tubular in any suitable manner, the lower leg portion being narrowed or shaped to fit the leg of the wearer, there being in said narrowed or lower leg portion an unbroken line of stitches with dropped stitches on both sides thereof united to other stitches of the web, the heel being formed by any suitable number of gores knit integral with the main web and of any desired depth and width, and the foot and toe portions formed in any suitable manner, as set forth.



412,057. WIDENED TUBULAR-KNIT FABRIC AND THE ART OF KNITTING THE SAME. CHARLES H. YOUNG, Manchester, N. H. Filed June 17, 1887. Serial No. 241,603. (Specimens.)

Claim.—1. In the art of widening a tubular-knit fabric produced on two rows or ranks of needles, the improvement consisting in bringing into action a new or additional needle, feeding a supplemental yarn thereto and to a needle already in action, retiring such new or added needle and knitting with the main yarn on the needles already in action, then bringing into action the new needle holding a loop of the supplemental yarn, and knitting thereon and on the needles before in action with the main yarn, as set forth.

2. A widened tubular-knit fabric having a supplemental yarn looped or connected with the loops comprising the body of the fabric, said supplemental yarn being drawn across the wide meshes or eyelet-holes formed at the base of the new or widening wales, as set forth.



412,058. WIDENED TUBULAR-KNIT FABRIC AND THE ART OF KNITTING THE SAME. CHARLES H. YOUNG, Manchester, N. H. Filed June 17, 1887. Serial No. 241,604. (Specimens.)

Claim.—1. A widened tubular-knit fabric having two supplemental yarns looped or connected with the main or body yarns, said supplemental yarns being drawn across the wide meshes or eyelet-holes formed by the main yarns at the base of the new or added wales, as set forth.

2. In the art of knitting a tubular-knit fabric produced on two rows or ranks of needles, the improvement consisting in widening by bringing into action two new or additional needles, feeding a supplemental yarn to each and to an adjacent needle or needles already in action, retiring each new or added needles and knitting a course with the main yarn on the needles already in action, then bringing into action the new needles holding loops of the supplemental yarns and knitting thereon and on the needles before in action with the main yarn, drawing the supplemental yarns across what would otherwise be an eyelet-hole formed at the base of the new or added wale, and uniting such supplemental yarns with the loops forming the body or main fabric, as set forth.

412,059. ELEVATOR-SAFETY DEVICE. HENRY ALBERT, Crescent City, Cal. Filed Jan. 28, 1889. Serial No. 297,825. (No model.)

Claim.—1. In an elevator, and in combination with the cage or car and the rack-bars or stops in the shaft or well, the reversible catches having their outer ends extending within the plane of the rack-bars or stops and adapted to come in contact therewith, said catches having enlarged centers, and sliding frames having fixed stops with which the enlarged centers of the catches come in contact when said catches are reversed, substantially as described.

2. In an elevator, and in combination with the cage or car and the rack-bars or stops in the shaft or well, the slotted guides secured to the cage or car, the pivoted reversible catches mounted in frames in said guides and having their outer ends extending within the plane of the rack-bars and adapted to come in contact therewith, said catches having enlarged centers, and said frames having fixed stop-flanges with which said centers come in contact when the catches are reversed, substantially as herein described.

3. In an elevator, the cage or car and the rack-bars or stops in the shaft or well, in combination with the slotted guides on the cage or car, the frames, the reversible catches pivoted in said frames and having their ends projecting into the plane of the rack-bars or stops and adapted to come in contact therewith, the balancing-weights formed with the catches and forming enlarged centers therefor, and the said frames having stop-flanges with which the weights are adapted to come in contact and hold the catches when they are reversed, substantially as described.

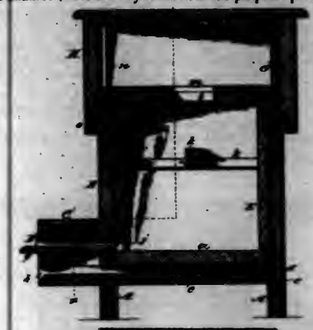
4. In an elevator, and in combination with the cage or car and the rack-bars or stops in the shaft or well, the reversible catches E, pivoted in frames on the cage or car and having enlarged weighted centers whereby they are held in position, the said frames having stop-flanges with which the weighted centers come in contact to hold the catches when they are reversed, and the adjustable screw in the lower part of the weights for regulating the catches, substantially as described.

5. In an elevator, and in combination with the cage or car and the rack-bars or stops in the shaft or well, the slotted guides *c'*, secured to the cage or car, the carrying-frames *c*, mounted in said guides, the reversible catches E in the carrying-frames, having weighted enlarged centers, the pivot-pins *d'*, passing through the sides of said frames and intervening catches and confined by the guides, and said frames *c* having stop-flanges with which the said centers come in contact, substantially as herein described.

6. In an elevator, and in combination with the cage or car and the shaft-timbers in which it moves, the sliding frames *c*, the oppositely-moving clamps G, carried thereby and playing on each side of the shaft-timbers, the wedge H, carried by the frames *c* and adapted to actuate the clamps to cause them to bind on the shaft-timbers, and stops, substantially as described.

7. In an elevator, and in combination with the cage or car and the rack-bars or stops in the shaft or well, the vertically-movable reversible catches pivoted in the sliding frames with their outer ends extending within the plane of the rack-bars or stops and adapted to come in contact therewith to hold the catches in a reversed position, the movable clamps in the ends of the cage or car and embracing the rack-timbers, and power mechanism—such as the wedge-shaped cams—between the vertically-movable catches and the clamps, whereby when the catches are arrested the clamps are forced together to bind on the rack-timbers, substantially as herein described.

8. In an elevator, the cage or car and the reversible pivoted catches E carried thereby and operating as described, in combination with the sliding frames *c*, by which the catches are carried, the oppositely-moving clamps embracing the guide-timbers of the shaft or well and having slotted shanks, and the wedge-shaped cams engaging said shanks and carried by the sliding frame of the catches, substantially as described.



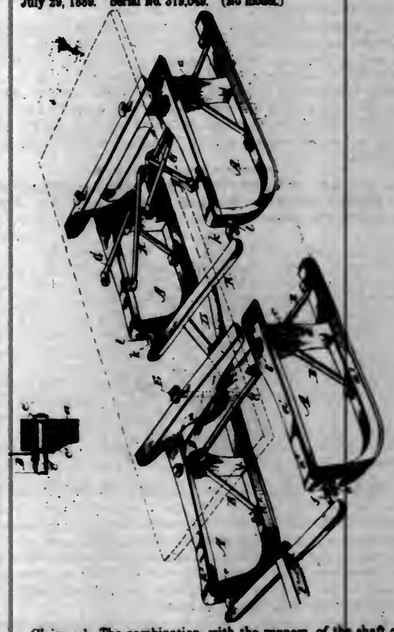
9. The safety appliance for elevator cages or cars, comprising the sliding frames *c*, mounted in guides in the cage or car and having stop-flanges on their inner sides, the reversible catches E, pivoted in and carried by said sliding frames and having enlarged centers adapted to come in contact with the flanges of the frames, whereby the catches are held when reversed, the oppositely-moving clamps on the ends of the cage or car for embracing the sides of the well or shaft-timbers, said clamps having slotted shanks, and the wedge-shaped cams on the top of the frames *c*, engaging said slotted shanks, substantially as described.

10. In an elevator, and in combination with the cage or car and the rack-bars or stops in the shaft or well, the slotted guides *c'*, secured to the cage or car, the sliding frames *c*, mounted in said guides, the reversible catches pivoted in the frames and having their outer ends extending into the plane of the rack-bars or stops and adapted to come in contact therewith, said catches having enlarged and weighted centers, and said sliding frames being provided with stop-flanges with which the enlarged centers of the catches are adapted to come in contact to hold said catches when reversed, the oppositely-movable clamps in the ends of the cage or car and embracing the rack-timbers, said clamps having overlapping slotted shanks, and the wedge-shaped cams on the sliding frames *c*, engaging the slotted shanks and operating the clamps, substantially as described.

11. In an elevator provided with safety-clamps, the means for relieving the cage or car of the binding effect of the clamps, consisting of a rock-shaft having eccentrics or cams on its ends adapted to raise the cage or car by fulcruming on the catches, substantially as described.

412,060. BEE-HIVE. JOHN T. ALEXANDER, Arlington, Ky. Filed June 22, 1889. Serial No. 315,220. (No model.)

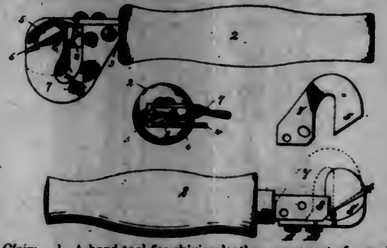
Claim.—In a bee-hive, the combination, with the hive, of the extension C, having an inlet-tube D and a moth-passage *h i*, the glass secured beneath the bottom proper of said hive and forming a chamber *b*, communicating with the passage *h i*, and a removable rear side to said chamber, substantially as and for the purpose specified.



412,061. FERTILIZER-DISTRIBUTER. FRANK H. ALLEN, Port Allen, La. Filed May 28, 1889. Serial No. 312,461. (No model.)

Claim.—In a fertilizer-distributer, the combination, with the axle and gear thereon, of the hopper, the vertical shaft arranged therein, the bevel-gear on the lower end of the shaft, adapted to engage the gear on the axle, the agitator-arms B, secured to the upper ends of the shaft, the arms D, secured to the walls of the hopper on the inner sides thereof, and the curved and outwardly-flaring radially-disposed blades E, having their opposite edges arranged above and below a horizontal line on the vertical shaft, substantially as specified.

412,062. SLED. ROBERT B. ARES, Marlborough, Mass. Filed July 29, 1889. Serial No. 319,049. (No model.)

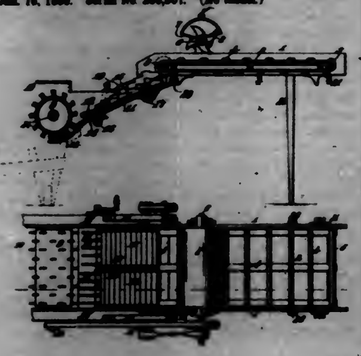


Claim.—1. The combination, with the runners, of the shaft connecting the same, having reduced ends passed through openings in the posts of the runners, nuts on the ends of the shaft, and sleeves *c'* in the openings in the posts and through which the reduced ends of the shaft turn loosely, as and for the purpose specified.

2. The combination, with the runners, of the shaft passed loosely through sleeve-openings in the posts of the runners and provided upon its ends with nuts, the collars on the shaft inside the posts, and the head-block on the shaft inside the collars, substantially as shown and described.

3. The combination, with the runners, the shaft connecting the same and free to turn loosely in the post thereof independent of each other, of the head-block on the shaft, and the king-bolt passed through the head-block and having its lower end securely held therein, as set forth.

412,063. LEATHER-SKIVING TOOL. HENRY H. ARNOLD, Scotland, assignor of one-half to William B. Arnold, North Abington, Mass. Filed Mar. 2, 1889. Serial No. 302,036. (No model.)



Claim.—1. A hand-tool for skiving leather, composed of a tool-stock squared at the end in part to form a vertical guide and terminating in a fixed horizontal lip or guide, a knife secured to said stock, but above the horizontal guide, and a yielding guard likewise affixed to said tool-stock above the horizontal guide and with its free end juxtaposed and in front of the cutting-edge of said knife, and forced down toward said edge by elastic pressure, substantially as herein described.

2. In a skiving implement, a tool-stock, the fixed horizontal terminal guide thereon, a vertical guide S, formed by the upright end portion of said stock, and the knife adjustable upon said stock with respect to the horizontal guide and above the latter, combined with a spring-guard also affixed independently to said stock and with its free end in front of the knife-edge and adjustable therewith, substantially as and for purposes herein set forth.

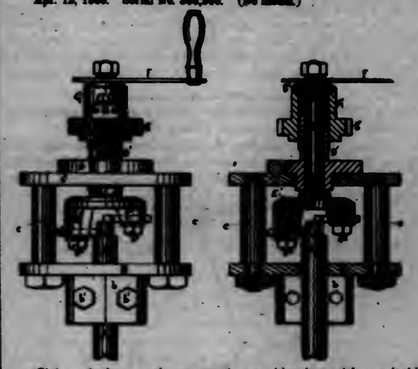
3. In combination with a tool-stock 3, the horizontal guide 4 transversely thereon, and the knife 5, fastened to said tool-stock above said horizontal guide and adjustable with the latter, a spring-guard 7, composed of a steel plate provided with a free yielding end equal in width to the cutting-edge of the knife and approximately coincident therewith, but in front of it, the leather traveling between the horizontal guide and the spring-guard substantially as herein specified.

4. The combination, with a tool-stock 3, the horizontal guide 4 transversely thereon upon one side of the material in process, a spring-guard, as described, upon the opposite side of said material, and the adjustable knife co-operating therewith, of a vertical guide S, composed of the end of the tool-stock between the horizontal guide 4 and the innermost cutting-edge of the knife, substantially as herein stated.

412,064. BAND-CUTTER AND FEEDER. VERNON C. BAILEY, Battle Creek, Mich., assignor to the Advance Thresher Company, same place. Filed Jan. 16, 1889. Serial No. 296,807. (No model.)

Claim.—1. The combination of the movable grain-table, the rotating band-cutters, the vibrating grain-delivery pan at the inner end of the grain-table, the fingers or rods extending in the direction of their length from the grain-pan toward the cylinder of the grain-separator and serving to support and carry the grain after it leaves the grain-delivery pan and to conduct such grain to the cylinder, and devices under the fingers or rods for supporting and raising the latter to different heights, substantially as described.

2. The combination of the movable grain-table, the rotating band-cutters, the vibrating grain-delivery pan at the inner end of the grain-table, the fingers or rods extending in the direction of their length from the grain-pan toward the cylinder of the grain-separator and serving to support and carry the grain after it leaves the grain-delivery pan and to conduct such grain to the cylinder, a hinged feed-board located under and supporting the fingers or rods between the grain-delivery pan and the cylinder, and devices beneath the feed-board for lifting the latter and correspondingly raising the fingers or rods, substantially as described.



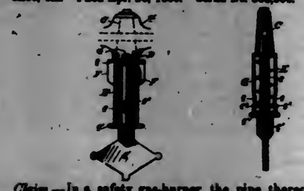
3. The combination of the movable grain-table, the vibrating grain-delivery pan provided at its discharge end with fingers or rods which extend in the direction of their length toward the cylinder of the grain-separator and serve to support the grain leaving the pan, and devices below the fingers or rods for raising the latter with the grain-delivery pan, substantially as described.

4. The combination of the movable grain-table, the vibrating grain-delivery pan located at the inner end of the table and provided with attached fingers or rods which extend lengthwise toward the cylinder of the grain-separator and serve to support and carry the grain which leaves the grain-pan, a vertically-movable feed-board located under and supporting the fingers or rods and grain-pan, and a cam-shaft arranged under the feed-board to raise the latter and correspondingly raise the fingers or rods and grain-pan, substantially as described.

5. The combination, with a grain-thresher and a roller supported at the feed end thereof, of a band-cutter and feeder frame having a pivoted leg and provided with forked arms at its inner and outer ends, adapted to rest on the roller to support the band-cutter and feeder frame on the thresher either in operative position for feeding or for transportation, substantially as described.

6. The combination, with a grain-thresher, of the side arms thereof, the bracket on the side arms, the transverse roller carried by the bracket, and the band-cutter and feeder frame having an adjustable leg and provided with pendent forked arms at both its inner and outer ends, adapted to embrace and rest upon the roller, substantially as described.

412,065. AXLE-CUTTER. FRANK H. BEARDSLEY, Traverse City, Mich., assignor of one-half to Warren R. Sullivan, same place. Filed Apr. 12, 1889. Serial No. 306,969. (No model.)



Claim.—1. In an axle-cutter, the combination, with a suitable frame-work adapted to be fastened to the axle, of the tool-head having the cutting-knives located thereon, a shaft for revolving the same, and a movable sleeve embracing said shaft and adapted when moved longitudinally to carry the shaft with it, substantially as described.

2. In an axle-cutter, the combination, with a suitable frame-work adapted to be fastened to the axle, and the shaft E, carrying the tool-head F, of the feeding mechanism, consisting of the sleeve G, screw-threaded on its interior to fit the threaded exterior of the shaft-journal and adapted when moved longitudinally to simultaneously move the shaft in the same direction, the pinion J, for revolving the sleeve G, and means for revolving the pinion J when desired, substantially as described.

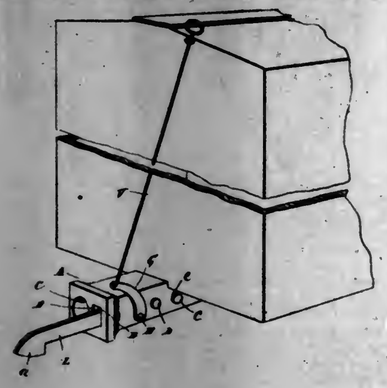
3. In an axle-cutter, the combination, with the face-plate C, of an adjusting-plate D, adjustably fastened to the face-plate and carrying the operative mechanism, substantially as described.

4. In an axle-cutter, the face-plate C, having the opening through which the operating-shaft passes considerably larger than the shaft, substantially as described.

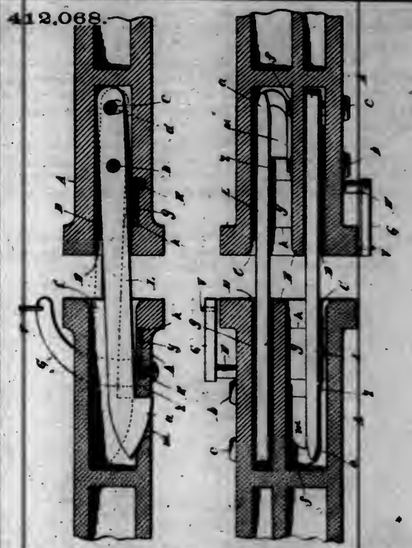
412,066. SAFETY GAS-COCK. JOHANNES P. BOEKER, San Francisco, Cal. Filed Apr. 20, 1889. Serial No. 308,006. (No model.)

Claim.—In a safety gas-burner, the pipe thereof having on its under side the notched flange and the valve seated in said pipe and having an outwardly-extending valve-stem, in combination with the sleeve fitted upon said valve-stem and secured thereto and movable thereon by means of elongated slots in said sleeve fitting over pins or studs in the valve stem, catch-plates carried by the upper end of the sleeve and fitting against the flange and adapted to engage the notches thereof to lock the valve in a closed position, and the spring within the sleeve for holding it up and effecting the engagement of the catch-plates, substantially as described.

412,067. SASH-HOLDER. MONTGOMERY BLAIR, Port Jefferson, Ohio. Filed May 10, 1889. Serial No. 310,275. (No model.)



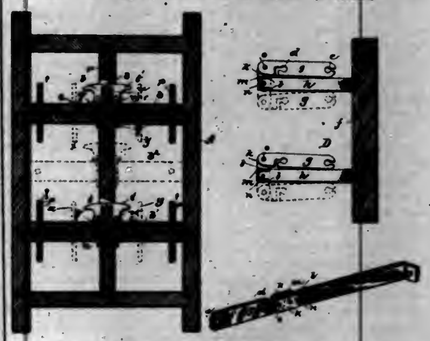
Claim.—1. The herein-described lever A, having the laterally-projecting head C, and having the undercut rim D extending around the head on three sides, that portion of the rim opposite the open side being notched, and the strip E, inserted sidewise in the space inclosed by the rim and held in place by the overlapping portions of the rim, substantially as described.



2. The herein shown and described fastener, composed of the base B, having the arm *b*, the lever A, having the handle *a* and hub *d* mounted on the arm *b*, and having the radial arms *c*, which extend in opposite directions and terminate in the lateral heads C, that have the undercut rim D, which rim closes the heads C in on three sides, that portion of the rim opposite the open side being notched, and the strip E, fitted in the space inclosed by the rim, substantially as described.

412,068. CAR-COUPLING. PETER J. BURNS, Florence, Mass. Filed June 20, 1889. Serial No. 314,660. (No model.)

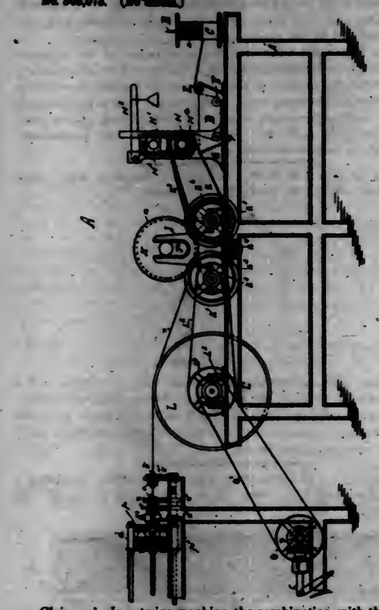
Claim.—In a car-coupling, the combination, with the draw-head having the lateral front chambers C and D, their recessed seats, slotted walls, and the abutment Z, of the coupling-hook, its pivot-pin, and



412,068.

auxiliary pin in rear thereof engaging the slotted walls, the transverse shaft, and its lifting-arms and the lever in connection therewith, substantially as specified.

412,069. FENCE-WEAVING MACHINE. ROYAL R. CARTER, Enid, Ohio. Filed May 18, 1889. Serial No. 311,341. (No model.)



Claim.—1. In a fence-machine of the type described, the twister having a wire-holder *g*, pivoted to a hinge-piece *k*, which in turn is pivoted to an arm *h*, secured to a handle-bar, forming a double hinge and adapted to give the wire a single turn or a whole twist, substantially as and for the purpose set forth.

2. In a hand-weaving fence-machine, the reel-frame combining the following elements: suitable uprights or standards, one of said standards being provided with transverse mortises, pawls passing through said mortises and provided with centrally-elongated slots and extending laterally from the upright, said lateral extensions being notched, rectangular bars passing longitudinally through the stanchions and also passing through the elongated slots of the pawls, the reels adapted to carry wire substantially in the manner described and provided with dowels to regulate the tension of the wire, and the ratchet-wheels attached to the inner ends of said reels, all constructed and combined to operate in connection with the wire and fence-posts substantially as set forth.

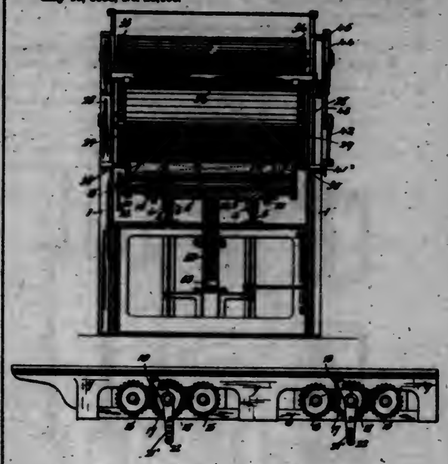
3. In a fence-machine of the type described, the twister consisting of the laterally-extending arm provided with a shoulder, the hinge-piece pivoted to said arm and provided with a central stop or guard, and the wire-holders articulating with the hinge-piece and provided with slots having enlarged inner ends, in combination with the handle-bar, substantially as set forth.

412,070. MACHINE FOR FINISHING AND COMPLETING TWINE OR CORD. JOHN CROTON, Paterson, N. J. Filed Mar. 13, 1888. Serial No. 303,073. (No model.)

Claim.—1. In a twine-machine, the combination, with the sizing-trough, the press-rolls H H', the rollers K K', and the roller N, covered with absorbent material and bearing on said rollers, and the drying-cylinder L, all supported on a common frame, of the flier *d*, the spool-tube R', and the grooved face-cam and the traverse-bar T', for reciprocating said spool-tube, all supported on a common frame, a single main driving-pulley, and intermediate driving mechanism connecting the said main driving-pulley, drying-cylinder, flier, and face-cam with the said main driving-pulley, whereby all the said devices are combined to form a single compound machine and are driven simultaneously at appropriate speeds, substantially as set forth.

2. In a twine-machine, the combination, with the supporting-frame, of the sizing-trough, the press-rolls H H', supported over said trough, the rollers K K', provided with toothed wheels K³, the toothed wheel K⁴, intergearing with both of said wheels K³, the cylinder N, covered with absorbent material and bearing on said rollers, the drying-cylinder L, and intermediate driving devices connecting the drying-cylinder and press-roll shafts with the shafts of rollers K K', whereby all the said devices may be driven simultaneously and at appropriate speeds, substantially as set forth.

412,071. THILL-COUPLING. ROBERT M. CRIPPEN and WILLIAM H. LOSCOUT, Sullivanville, N. Y. Filed July 26, 1888. Serial No. 318,699. (No model.)



Claim.—1. The combination, in a thill-coupling, of a clip designed to be connected to the axle and having ears permanently carrying the pivot-bolt, a metal section D, having a bolt-channel and end stop, the latter perforated, as described, and a lower section E, having a bolt-channel, an end lug to engage the perforation in the stop, so as to pivotally engage said sections, and a device for connecting the free ends of said sections, substantially as set forth.

2. The combination, in a thill-coupling, of the axle-clip provided with a permanently-attached pivot-bolt, a section D, having the bolt-channel and vertical end stop, the latter provided with an opening having a curved bottom, and the lower section E, provided with a bolt-channel and having the end lug to engage said stop-opening and curved to correspond with the bottom thereof, and a thumb-screw for connecting the free end of said section E to the section D, substantially as set forth.

3. The combination, in a thill-coupling, of the clip having the permanent pivot-bolt and the sections D E, grooved, as described, and pivotally engaged in the rear of said bolt and connected as set forth, the section D having shoulders *d e* to hold the forward portion out of contact with the similar parts of section E, substantially as specified.

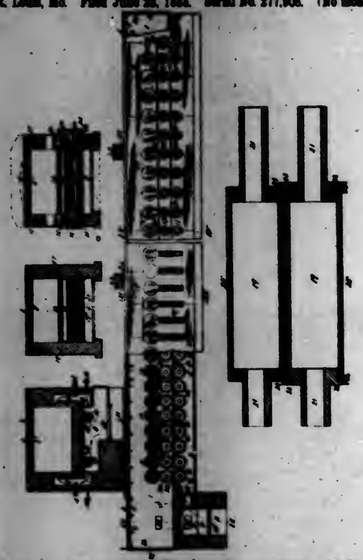
412,072. COLOR-PRINTING MACHINE. WILLIAM GIBBONS and THOMAS S. GIBBONS, Lambeth, County of Surrey, assignors to Dunbar Douglas Hunter, John Gilbert Mudge, and Lloyd Salisbury Rawlinson, all of London, England. Filed May 3, 1888. Serial No. 272,703. (No model.) Patented in England Oct. 15, 1887, No. 13,874; in France Apr. 17, 1888, No. 189,062; in Belgium May 3, 1888, No. 81,878, and in Canada May 18, 1888, No. 20,196.

Claim.—1. In a color-printing machine, a table for supporting a color-block, in combination with means for adjusting same vertically in an automatic manner at each impression to compensate for consumption and consequent reduction in the thickness of said block.

2. In a color-printing machine, the combination of a table for supporting a color-block, a cylinder adapted to roll in contact with and to remove color from a color-block on said table, and means, substantially as described, for adjusting said table in an automatic manner in relation to said cylinder to compensate for consumption and consequent reduction in thickness of said color-block.

3. In a color-printing machine, the combination of a table for carrying a color-block that is consumed during printing, means, substantially as herein described, for automatically adjusting the height of said table at each impression to compensate for consumption and consequent reduction in thickness of the color-block, a transfer-cylinder arranged to roll in contact with the color-block and remove color therefrom, and a cylinder for carrying material to be printed and pressing the same in contact with said transfer-cylinder, for the purposes set forth.

4. In a color-printing machine, the combination of a table for supporting a color-block, means, substantially as herein described, for automatically adjusting the height of said table, a second table for carrying a key-block or a second color-block, a transfer-cylinder adapted to roll in contact with said first-mentioned color-block and also with said key-block or with said second color-block and to remove color therefrom, and a cylinder for carrying the material to be printed in contact with said transfer-cylinder, so as to receive color therefrom, for the purposes set forth.



5. In a color-printing machine, the combination of a table for supporting a color-block, means, substantially as herein described, for automatically adjusting its height, a table for carrying a key-block, means, substantially as described, for reciprocating said tables, mechanism for inking said key-block, a transfer-cylinder arranged to roll in contact with said color-block and with said key-block and remove color and ink, respectively, therefrom, and a cylinder for carrying the material to be printed in contact with said transfer-cylinder, substantially as herein described.

6. In a color-printing machine, the combination, with a table for

carrying a color-block, means for reciprocating said table, a transfer-cylinder arranged to roll in contact with said cylinder, and a cylinder for carrying the material to be printed, of stop and brake mechanism, substantially as herein described, for keeping the cylinder that carries the material to be printed stationary during rotary motion of said transfer-cylinder in one direction, substantially as herein described, for the purposes set forth.

7. In a color-printing machine, the combination of a double box or coffin 6 7, adapted to carry one or two color-blocks or a color-block and a key-block, means, substantially as herein described, for reciprocating said box or coffin, means, substantially as herein described, for automatically adjusting the height of said color block or blocks, a transfer-cylinder 26, operated from said box or coffin and adapted to roll in contact with said color block or blocks or with said color-block and key-block, and a cylinder 31, adapted to carry the material to be printed and to be operated in one direction only from said transfer-cylinder, all substantially as herein described, for the purposes set forth.

412,073. LEER FOR ANNEALING GLASS. JOHN K. CUMMINGS, St. Louis, Mo. Filed June 22, 1888. Serial No. 277,908. (No model.)

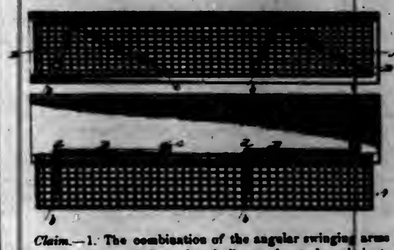
Claim.—1. In a glass-annealing leer, the combination of the annealing-chamber with the structure that incloses it, the metal casing to said structure, the side walls of said structure and casing provided with circular ports and vertical slots from said ports, the upper and lower series of rolls with journals arranged to enter through said open ports, and the journals stationed in said vertical slots, the collars on the terminals of said journals that keeps the rolls in juxtaposition in non-contact with the side walls of the leer-chamber, the sprocket-wheels on said journals, and the drive-chain and drive-sprocket wheel by which they are driven arranged to carry the glass between the two series of rolls through the leer, substantially as and for the purpose set forth.

2. In a glass-annealing leer, the combination of the structure that incloses the annealing and cooling chamber, the rolls between which the glass passes having journals mounted in said structure, and the transverse T-bars that support the glass between the rolls, substantially as and for the purpose set forth.

3. In a glass-annealing leer, the combination of the structure inclosing the annealing and cooling chamber, two parallel series of rolls and the two series of soft-cushion sleeve-beds of non-combustible material between which the glass lies and is carried, the fire-box at one end of the leer provided with upper and lower flues transmitting heat from said fire-box to said annealing and cooling chamber, and the adjustable dampers in said flues, substantially as and for the purposes set forth.

4. In a glass-annealing leer, the combination of the two series of rolls having journals mounted in said structure, and the cushion-sleeves of incombustible material around each of said rolls, substantially as and for the purpose set forth.

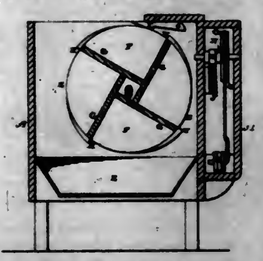
5. In a glass-annealing leer, the combination of the cooling-rolls having journals arranged one above the other, bearings supporting the journals of the lower rolls, and the beveled flanges 24 on the ends of the lower rolls, said upper rolls resting upon the lower rolls, substantially as and for the purpose set forth.



6. In a glass-annealing leer, the combination of the structure with its metal casing that incloses the annealing and cooling chamber, the vertically-sliding doors at each end of said chamber, the rolls, the said structure and casing provided with ports and vertical slots through which to insert and in which to station the tubular rolls, and the shutters inclosing said ports after the insertion of the rolls, substantially as and for the purpose set forth.

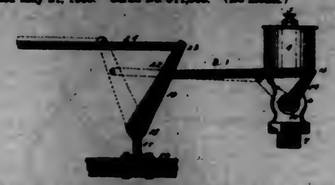
412,074. HAT-HOOK. HUGH DARBY, Gloucester, Mass. Filed May 20, 1889. Serial No. 312,466. (No model.)

Claim.—The combination of the bent strip A, provided with a handle or knob at its top and having one of its ends turned horizontally outward, with the spring-clamp C, having the upper end of its longer jaw also turned outward and pivoted to the turned-out end of the strip, substantially as shown.



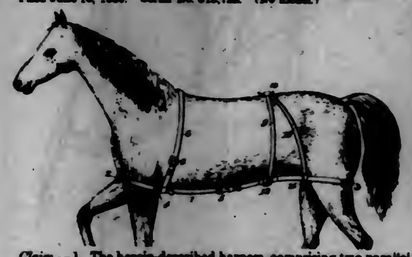
412,075. CRAYON-RACK FOR BLACKBOARDS. ADELBERT J. DOUGLASS, Ilion, N. Y. Filed June 4, 1889. Serial No. 312,982. (No model.)

Claim.—1. The combination of the angular swinging arms having eyes at either end thereof, and elbows, the studs and rivets, and the tray and rack to which swinging arms are secured, substantially as shown, and for the purpose described.



2. The combination of the tray, the rack, and the swinging arms provided with elbows, substantially as shown, and for the purpose described.

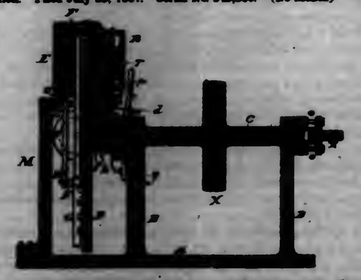
412,076. ROTARY GRAIN-METER. JOHN S. DUFFY, BRADDOCK T. DUFFY, WILLIAM O. DUFFY, and CHARLES C. DUFFY, Homestead, Nebr. Filed May 18, 1889. Serial No. 311,207. (No model.)



Claim.—The combination of the frame A, provided with the slots C, the rotating weighing device divided into chambers and provided with stops H, stationary stops I, placed in the frame, the pivoted frame J, in which the weighing device is pivoted and by which the device is given a vertical movement, the strap L, secured to one end of the frame J, the shaft N, around which the upper end of the strap is wound, the drum O, secured to the shaft, cord P, and weight Q, substantially as shown.

412,077. LUBRICATOR. BENJAMIN R. RIGBY and KAVANAUGH R. RIGBY, Laramie City, Wyo.; said Rigbys assignor to said Rigby. Filed May 31, 1889. Serial No. 311,889. (No model.)

Claim.—A lubricating device consisting of a cup 4, formed with a stem 6, having a vertical passage 8, and provided with a plug 5, for closing the cup, the rotary plug 10, having right-angle passage 11, the arm 14, secured to the rotary plug, the frame 17, the rod 18, journaled to the frame, having the arm 19, the connecting-bar 21, the pin 15, connecting the bar with the arm 14, the pin 22, connecting the bar to the middle portion of the arm 19, the operating-bar 24, and the pin 23, connecting the operating-bar with the upper end of the arm 19, substantially as described.



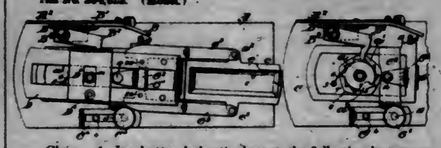
412,078. HARNESS. CHARLES D. ELLIOTT, Wheeling, W. Va. Filed June 10, 1889. Serial No. 313,722. (No model.)

Claim.—1. The herein-described harness, comprising two parallel side straps having an adjustable independent loop at each end, the girth and the flank straps secured to the side straps, extending below the same, and provided between the side straps with buckles for buckling them beneath the body of an animal at points respectively behind the fore legs and in front of the sheath, and the hip or loin straps diverging from the top part of the flank-strap and secured, respectively, at their lower ends to the rear loops of the side straps, substantially as described.

2. The herein-described harness, consisting of the two parallel side straps, each composed of two sections having front and rear independent loops, the girth and the flank straps adjustably connected with the side straps, extending below the same, and having buckles between said side straps for buckling them beneath the body of the animal at points respectively behind the fore legs and in front of the sheath, the buckles connecting the sections of the side straps between the girth and flank straps for adjusting the latter to and from each other, and the hip or loin straps adjustably secured to and diverging from the top part of the flank-strap and connected, respectively, at their lower ends to the rear loops of the side straps, substantially as described.

412,079. ROTARY ENGINE. JULIUS M. FARMER, Cheboygan, Mich. Filed July 25, 1887. Serial No. 245,266. (No model.)

Claim.—1. The combination of the revolving steam-pipe, the disk secured to its end and revolving therewith, the steam-cylinders secured to the disk, the heads, piston-rods connected thereto, the rod K, and the point of resistance L, to which one end of the rod K is attached at one end with the jacket which surrounds the end of the steam-pipe, the live and exhaust steam-pipes, the straps *m n*, placed upon the disk *n*, and the valves and valve-rods, substantially as shown.



2. In a rotary engine, the combination of the revolving steam-pipe and the disk and its attachment secured thereto, with the revolving jacket *h*, secured to the disk at one end, the steam-pipes *b v*, the eccentric disk *n*, placed upon the jacket, the straps *m n*, the valve-rods and the standard B, having the passage *y* through it, substantially as described.

412,080. PROCESS OF CLEANING ANIMAL-HAIR. ERNEST J. PERRIER, Philadelphia, assignor of two-thirds to John G. Brewer and Francis H. Miller, both of Watsontown, Pa. Filed July 17, 1888. Serial No. 280,282. (No specimens.)

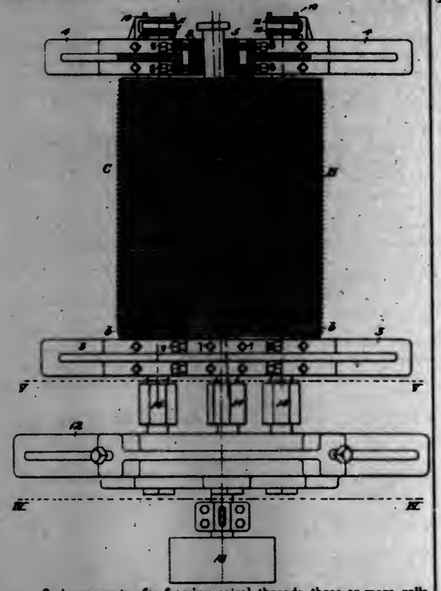
Claim.—1. The process of treating hair or wool to remove the oily matter from the tubular cavities, consisting of a long-continued soaking of the material in clear water until said oily matter becomes softened, then soaking the material so treated in a saponifiable solution to extract said oily matter, then washing in clear water, and finally drying, substantially as described.

2. The process of treating hair or wool to remove the oily matter from the tubular cavities, consisting of a long-continued soaking of the material in successive charges of clear water until it becomes quite soft and somewhat water-soaked, then soaking the material in a saponifiable solution to extract said oily matter from the cavities, then thoroughly washing in clear water, and finally drying, substantially as described.

412,081. BUTTON-HOLE ATTACHMENT FOR SEWING-MACHINES. ELIAS FLETCHER, Needham, Mass. Filed Dec. 26, 1888. Serial No. 294,622. (Model.)

Claim.—1. In a button-hole attachment, the following instrumentalities, viz: the base-plate having a stud *a*, the slotted yoke C, the cloth clamp having a shank D, engaged by a projection of the said yoke, the depth-stitch cam *a'*, uniform in cross-section at all points to fill from side to side the slot in the said yoke to thus move the same positively and prevent any lost motion, and a ratchet-wheel connected to it, both being movable together about the said stud, a lever B, a pawl B^3, carried thereby and directly engaging the said ratchet-wheel, and means to move the cloth-clamp longitudinally, to operate substantially as described.

2. The base-plate having the stud *a*, the depth-stitch cam *a'*, uniform in cross-section at all points, and the ratchet-wheel a^3, connected to the depth-stitch cam and both movable upon the said stud, the slotted yoke C, having the projection C', the said depth-stitch cam at all times filling the slot in the said yoke from edge to edge, the cloth-clamp having a slotted shank D engaging the said projection, and the cam D^2, having a slot 10, and the bridge-plate having a roller-stud, combined with means for rotating the said cam-plate and the said depth-stitch cam and means to move the cloth-clamp longitudinally, substantially as described.

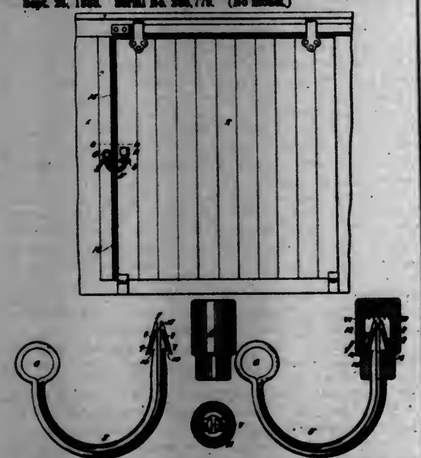


3. The base-plate, its stud *a*, the depth-stitch cam, the connected ratchet a^3, the yoke C, moved by the said cam and having an ear C^2 and a projection C', the fulcrum-plate C^2, the stud 14, serving as a fulcrum for the yoke C, the cam D^2, having a cam-groove 10, means to rotate it intermittingly, the cloth-clamp having the slotted shank D, means to move the cloth-clamp longitudinally, the bridge-plate, the roller-stud D', mounted thereon, entering the said groove 10, means to rotate the said cam D^2 intermittingly, and means to effect the adjustment of the said fulcrum-block, substantially as described.

4. The base-plate A, having the stud *a*, the depth-stitch cam and its ratchet-wheel, means to rotate them, the yoke C, having the projection C', the fulcrum-plate for the said yoke, the bridge-plate having a roller-stud, the cam D^2, means to rotate it, the friction-plate co-operating with the said cam, the cloth-clamp having a slotted shank D, engaged by the said bridge-plate, the slotted plate *m*, secured to the cam D^2, the adjustable screw therein having a cam thereon, and the slotted arm A, secured to the cloth-clamp, the combination being and operating substantially as described.

412,082. APPARATUS FOR MAKING SPIRAL SCREW-THREADS. ERNST H. POPPITZ, Chicago, Ill. Filed Feb. 7, 1888. Serial No. 263,504. (No model.)

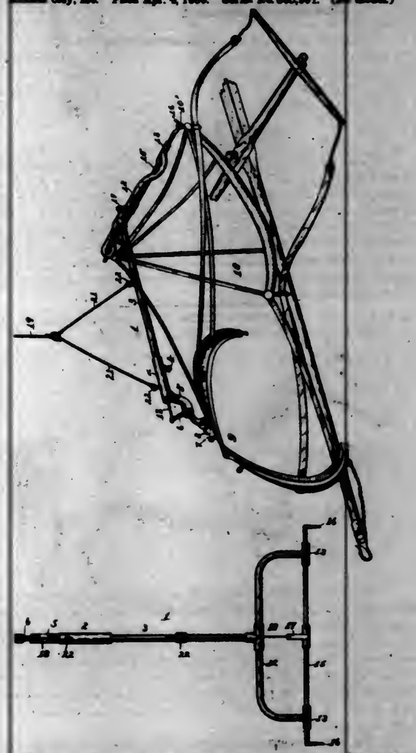
Claim.—1. In apparatus for forming spiral threads, rolls axially inclined to the direction of the blank, and having a series of parallel



peripheral tongues or teeth, and adjusting mechanism by which the rolls may be adjusted longitudinally and the said tongues or teeth properly correlated, substantially as and for the purposes described.

2. In apparatus for forming spiral threads, three or more rolls, axially inclined and disposed around a central line, substantially as and for the purposes described.

3. In apparatus for forming spiral threads, rolls axially inclined to each other, and having a series of parallel peripheral teeth, said rolls being beveled at the ends to permit insertion of the blank, substantially as and for the purposes described.



412,083. SEAL-LOCK. Robert W. Gillespie, St. Louis, Mo. Filed Sept. 28, 1888. Serial No. 286,779. (No model.)

Claim.—1. In a seal-lock, the combination of the shank having an arrow-head provided with spring-points 9 and downwardly-projecting barbs contiguous thereto, and a hollow seal having a contracted neck, substantially as set forth.

2. In a seal-lock, the combination of the shank formed of a single piece of half-round metal bent so that the ends are approximately parallel, an arrow-head on one end of the shank and a ring at the other end, and a hollow seal with a contracted neck, substantially as and for the purposes set forth.

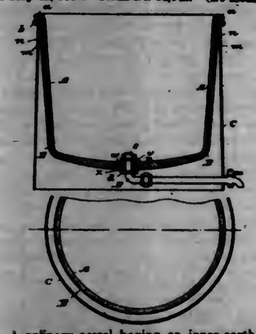
412,084. Harness Suspension Device. George T. Hale, Kansas City, Mo. Filed Apr. 4, 1889. Serial No. 305,991. (No model.)

Claim.—1. A harness suspension device consisting of a longitudinal unbroken rod or bar, a lever fulcrumed on one end of said bar and adapted to detachably engage one part of the harness to be suspended, a device movably supported at the opposite end of said bar for engaging the other end or part of the harness, and an intermediate cord or rod connected to said device and the lever, all arranged and combined for service substantially as herein shown and described.

2. A harness suspension device consisting of a longitudinal rod or bar, a lever fulcrumed on one end of said rod or bar and arranged to detachably engage one part of the harness to be suspended, and a rock-shaft having separated harness-engaging devices for spreading the parts of the harness laterally and connected by an intermediate cord or rod with the lever, to be held in such position by the latter and the weight of the harness as to engage and suspend the harness, substantially as and for the purpose described.

3. In a harness suspension device, the combination of a hollow longitudinal rod or bar, a vertically-disposed lever fulcrumed on the front end thereof, a rock-shaft journaled on the opposite end of said rod or bar, a cord or rod passing through the hollow longitudinal bar and connecting the lever and rock-shaft, and a weighted cord or rod connected to the hollow longitudinal bar, substantially as and for the purpose described.

4. A suspension device for harness, consisting of a longitudinally-extensible bar or rod, a lever fulcrumed on one end thereof, and a rock-shaft having devices for engaging the harness and connected by an intermediate cord or rod with said lever, substantially as and for the purpose described.



5. A suspension device for harness, consisting of a longitudinal bar or rod, a hanger fixed to the rod, a lever fulcrumed at an intermediate point of its length in the hanger and constructed at its lower end to detachably engage the collar of a harness, the transverse bar fixed to the opposite end of the longitudinal bar and having the bearings, and a rock-shaft journaled in said bearings and connected by an

intermediate cord or rod with the lever, substantially as and for the purpose described.

6. A suspension device for harness, consisting of a tubular bar or rod made in sections which are adjustably fitted together and held in fixed relation to each other by a binding-screw, a hanger fixed to one of the sections of said rod and carrying a lever, a rock-shaft journaled on the other section of the rod, and a cord or rod passing through the tubular rod and connected to the lever and rock-shaft, substantially as and for the purpose described.

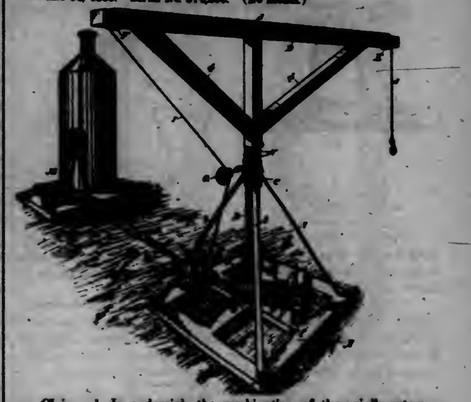
7. In a harness suspension device, the combination, with a longitudinal bar or rod, of two catches or hooks pivotally supported at opposite ends of said bar or rod and adapted to be detachably connected to the ends of a set of harness, and an intermediate cord or rod connected to said hooks or catches to adapt the same to move or operate simultaneously, whereby one hook or catch serves through the intermediate rod or cord to hold the other hook or catch in position when both are engaged with the harness, and one hook or catch is automatically operated to lower the harness when that part of the harness connected to the other hook is pulled down on the animal, as set forth.

412,085. Culinary Vessel. Charles Halstead, New York, N. Y. Filed May 13, 1889. Serial No. 311,162. (No model.)

Claim.—1. A culinary vessel having an inner earthenware vessel and an outer metallic casing, and provided with an outlet pipe leading from said inner vessel through said metallic casing, the said pipe having the collar *d*, the elastic packing *w x*, and the nut *e*, said parts being combined substantially as described.

2. A culinary vessel having the earthenware or china bowl A, with a rim, the metallic casing with a bead *n* and handles *o*, and the casing C, open at top and bottom, and provided with an interior supporting-bead *m*, said parts being combined substantially as described.

3. A culinary vessel having an earthenware inner vessel with a metallic encircling-casing, in combination with a metallic casing surrounding the inner vessel, and an outlet-pipe leading from said inner vessel through the inclosing-vessel, the said pipe having the collar *d*, the elastic packing *w x*, the washer *y*, and the nut *e*, substantially as described.



412,086. Shaft-Holder for Vehicles. Philip J. Harran, Rosenfeld, Ind., assignor of one-third to S. Lehman, same place. Filed Aug. 15, 1888. Serial No. 282,961. (No model.)

Claim.—1. The combination, with the thill-coupling having the axle-clip and the shaft or tongue, of the spring-arm herein described, rigidly secured at its forward end to said shaft or tongue and having its rear widened curved end continuously in contact with and bearing against the rear side of said clip, substantially as set forth.

2. The herein-described improved shaft or tongue-holder and anti-rattler, consisting of the combination, with an axle-clip and a shaft or tongue having an inner curved end, of a spring-arm rigidly secured at its forward end to said curved end of the shaft or tongue, and having a rearwardly-inclined curved widened portion provided with two forks constantly in contact with the rear side of said clip, and having end shoulders formed therewith, which, when the shaft or tongue is elevated, engage the under side of the axle, substantially as set forth.

412,087. Derrick. James B. Harrison, San José, Cal. Filed June 14, 1889. Serial No. 314,206. (No model.)

Claim.—1. In a derrick, the combination of the axially-rotary mast, the cross-beam on its top, the sheave in each end of said beam, the hoisting-rope passing from the load end over said sheaves to the power, a pulley on said mast, having ratchet-teeth, a pawl for engaging said teeth, a turning-rope secured to said pulley, whereby the mast may be turned, and a spring for returning the mast, substantially as described.

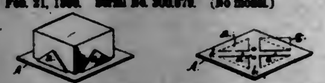
2. In a derrick, the combination of the axially-rotary mast, the cross-beam on its top, the sheave in each end thereof, a swiveled sheave on the mast, the hoisting-rope passing from the load end over said sheaves to the power, the pulley J on the mast, the turning-rope secured to said pulley, whereby the mast is turned, a retaining-pawl for the pulley, a latch for said pawl, a spring for returning the mast, and a source of power common to both ropes, whereby the load is raised and directed simultaneously, substantially as described.

3. In a derrick, the combination of an axially-rotary mast, the cross-beam on its top, the sheave in each end thereof, the hoisting-rope passing over said sheaves, guide-sheaves for said rope, the pulley J on the mast, having the ratchet-face, the turning-rope secured to said pulley, and a retaining-pawl engaging the ratchet-faced pulley, substantially as described.

412,088. Steam-Heating Coil. Lisle P. Hamphan, New Orleans, La. Filed Apr. 8, 1889. Serial No. 306,573. (No model.)

Claim.—The steam-heating coil consisting of the main outer pipe-coil *a*, having connected therewith at regular intervals apart at their inlet ends the branch involutes D D' D'', the involute continuation *b* of the said main pipe forming the main condensing-pipe, the branch involute D'' connecting with the involute continuation *b*, the involute D'

connecting with involute D″, and involute D connecting with involute D′ about centrally of the plane of the main pipe-coil, substantially as set forth.



412,089. GLOBE AND REFLECTOR FOR INCANDESCENT LAMPS. THOMAS G. HAWKES, Corning, N. Y. Filed Aug. 31, 1888. Serial No. 284,562. (No model.)

Claim.—1. The combination, with a reflector having an outwardly-extending rim, of an unbroken transparent or translucent shade smaller in diameter than the outwardly-extending rim and secured to the reflector, substantially as set forth.

2. The combination, with a reflector having an outwardly-extending rim and a depending flange, the latter located at the inner edge of the rim, of an unbroken transparent or translucent shade supported by and removably secured to the depending flange of the reflector and completely closing its larger end, substantially as set forth.

412,090. CANDY-HOLDER. MILTON S. HERSHEY, Lancaster, Pa. Filed Feb. 21, 1889. Serial No. 300,679. (No model.)

Claim.—1. A candy-holder made from a single plate having portions of the material in the center cut out, said cut-out portions projecting upward and forming the sides of the holder, and other portions located between said sides extending inward and forming the bottom, substantially as specified.

2. A candy-holder made from a single plate having openings cut through it, the portions of the material cut from the openings projecting upward and forming the sides of the holder, and other portions extending across the holder between the openings and forming the bottom thereof, substantially as specified.

412,091. REVERSIBLE PLOW. JEREMIAH S. HUSER, Pricsburg, Pa. Filed May 20, 1889. Serial No. 312,469. (No model.)

Claim.—1. In a reversible plow, the combination, with a mold-board provided with an apertured projection 17, of a yoke 20, bolted to the inner face of the mold-board, a stud formed upon the yoke and extending forward therefrom, a plow-standard in the heel of which there is an aperture, the plow-standard being provided with a forwardly-extending stud arranged to enter the aperture in the mold-board projection, the yoke-stud being arranged to enter the aperture in the plow-heel, a reversible supporting-bolt 32, said bolt being arranged to engage the yoke, and a hooked bolt 18, which engages the yoke and a hook formed upon the mold-board, substantially as described.

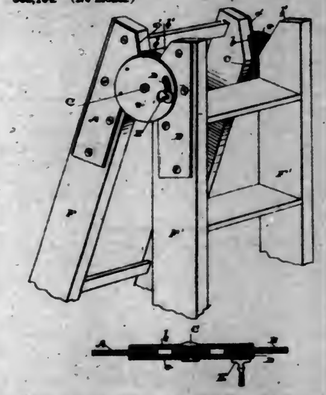
2. A standard 11, integral with the plow-beam and with a handle-plate 12 and a forwardly-projecting stud, and having an eye *k* upon said handle-extension, in combination with the reversible mold-board, the yoke, and the sliding and rotating rocking-rod 33, having a stop 34, and a branch crank-bolt 32, adapted to enter either of the mold-board apertures *g g'*, substantially as set forth.

412,092. SPRAY ATTACHMENT FOR BROOMS. CORNELIA M. JACOBY, St. Louis, Mo., assignor of one-half to Henry L. Heydel, same place. Filed May 20, 1889. Serial No. 310,698. (No model.)

Claim.—1. In combination with a broom, an aspirator secured to the broom and having a nozzle directed away from the broom, and a pressor for working the aspirator, substantially as and for the purpose set forth.

2. In combination with a broom, an aspirator secured to the broom, and a movable sleeve secured to the upper end of the broom, having means for operating the aspirator in the act of using the broom, substantially as and for the purpose set forth.

3. The combination of a broom, an aspirator secured to the broom, a movable arm for compressing the bulb of the aspirator, a movable sleeve located on the handle, and means of connection between the sleeve and arm, substantially as and for the purpose set forth.



4. The combination of a broom, an aspirator secured to the broom, a spring-retracted arm located over the bulb of the aspirator, a sleeve movably secured to the broom, and means of connection between the arm and the sleeve, substantially as and for the purpose set forth.

5. The combination of a broom, an aspirator secured to the broom, a movable arm located over the bulb of the aspirator, a sleeve movably secured to the broom, the means of connection between the sleeve and arm, and a pulley secured to the broom and over which the connection passes, substantially as and for the purpose set forth.

6. The combination of a broom, an aspirator secured to the broom, a spring-retracted arm located over the bulb of the aspirator, a lever connected to the arm, a cord secured to the lever, a pulley on the upper end of the broom-handle over which the cord passes, and a movable sleeve fitting over the upper end of the handle and to which the cord is secured, and which has a slot-and-screw connection with the handle, substantially as and for the purpose set forth.

7. The combination of the broom, an aspirator secured to the broom, a pressor secured to the broom over the bulb of the aspirator, a lever connected to the pressor by means of a rod, a cord connected to the lever, tube 22, secured to the handle of the broom and through which the cord passes, and a movable sleeve fitting over the upper end of the handle and to which the cord is connected, substantially as and for the purpose set forth.

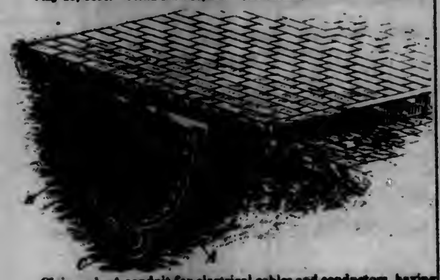
412,093. HINGE. CARL JAENIG, San Francisco, Cal., assignor of one-half to Max Pauly, same place. Filed Mar. 6, 1889. Serial No. 302,164. (No model.)

Claim.—An adjustable hinge consisting of the straps A B, the disks *a b*, secured to or formed with said straps on relatively opposite sides, whereby each disk overlaps the opposite strap, the central pivot pin or bolt C, uniting the disks, the elongated slot in the overlapping portion of one disk, and the set-screw passing through said slot, substantially as described.

412,094. PHOTOGRAPHIC-PRINTING FRAME. GEORGE A. JAEGER, San Francisco, Cal. Filed Apr. 20, 1889. Serial No. 308,053. (No model.)

Claim.—1. The photographic-printing frame consisting of metallic sides A, with the inwardly-turning flanges A′, and the inclined locking-slots B, with the legs or projections *b*, substantially as and for the purpose herein described.

2. The frame A, having the slots and locking-legs, in combination with the metallic pressure-plate E and the springs D, pivoted thereto, so that the ends of the springs will engage the slots in the sides of the frame and be locked therein, substantially as herein described.



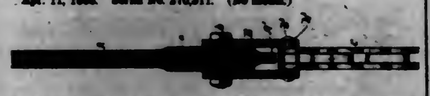
3. The metallic plate made in sections with the adjacent edges meeting, in combination with the facing or covering of felt forming a hinge or flexible connection between the parts and the turned-over edges or flanges of the plates, whereby the flexible facing is held in place, substantially as herein described.

4. The pressure-plate E, held in sections, the re-enforcing bars F, extending across the backs of the sections, and the flexible facing with the turned-over flanges, whereby it is held in place, in combination with the springs having the center portion pivoted to the sections of the plate E, and the outer ends curved upward from the back of the plate, so that the springs may be turned clear of the re-enforcing strips F, substantially as herein described.

5. A photographic-printing frame consisting of the exterior slotted sides stamped from sheet metal and having the inwardly-turned flanges to support the negative and sensitive paper, in combination with the hinged metallic sectional pressure-plates fitting within the frame, and the springs pivoted thereto having their ends adapted to engage the slots and locking-points in the frames, substantially as herein described.

6. The flanged slotted metallic outer frame, the sectional metallic pressure-plate with the flexible front, and the locking or holding springs, together with the yoke or support hinged to the frame and the holding-latch engaging said yoke, substantially as herein described.

412,095. ELECTRIC SUBWAY. ISAAC LA R. JOHNSON, Washington, D. C., assignor of one-half to Oliver T. Thompson, same place. Filed July 29, 1889. Serial No. 318,462. (No model.)



Claim.—1. A conduit for electrical cables and conductors, having a water-repellent non-contacting lining or shell therein which conforms to the outline of said conduit and having brackets thereon for the support of said cables and conductors, substantially as described.

2. A conduit for electric cables and conductors, having a water-repellent non-contacting bracket bearing shell or lining therein, formed of perforated or foraminous material to prevent the collection of moisture beneath the cables, and conductors located on the brackets, substantially as described.

3. A conduit for electrical cables and conductors, having a water-repellent non-contacting lining or shell therein, said lining being divided longitudinally and having dowels and openings for engagement to prevent accidental separation of the sections, substantially as described.

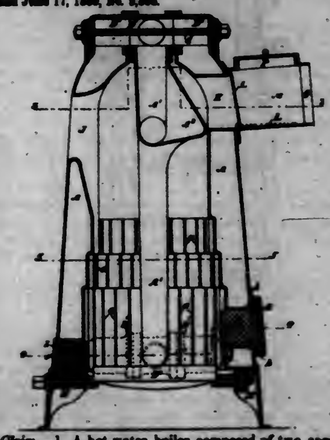
4. In a conduit approximately semi-tubular in form and having an auxiliary drain-pipe, the combination of a water-repellent non-contacting lining or shell therein, longitudinally separable, and having at the meeting edges dowels and orifices for engaging said edges and openings along said edges for the exit of water, substantially as described.

412,096. PIPE-WRENCH. PATRICK H. KANE, Oil City, Pa. Filed Apr. 11, 1888. Serial No. 270,311. (No model.)

Claim.—1. In a chain pipe-tongs, the combination of a lever A, having a toe A′, a link B, pivotally connected with said lever and having one side made movable, as and for the purposes set forth, and a chain C, connected with said link.

2. In a chain pipe-tongs, the combination of a chain for gripping the pipe, an operating-lever having a toe A′, and a link connecting said chain to said lever near said toe, which has one of its sides made movable, as shown, so as to adapt it to receive the chain sidewise.

412,097. SUSPENDERS. JAMES KATZENBERG, New York, N. Y. Filed July 15, 1889. Serial No. 317,324. (No model.)



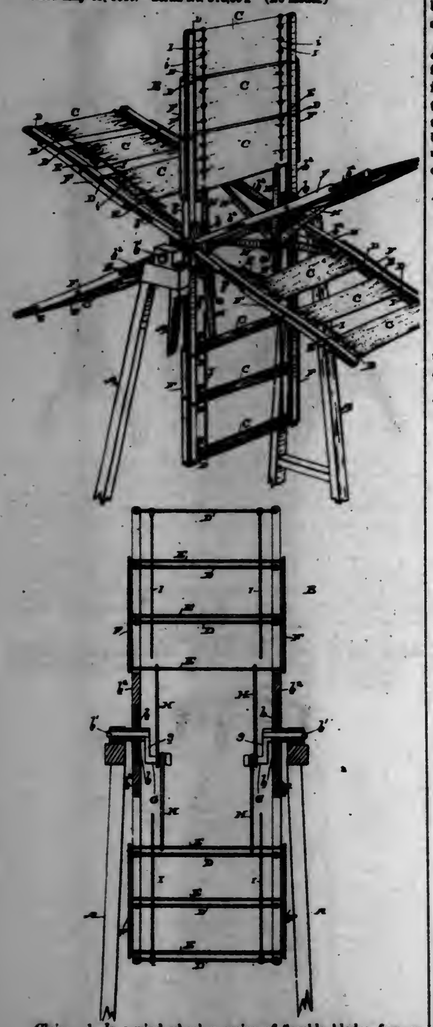
Claim.—1. A suspender having ground straps B connecting the shoulder-straps in the rear, substantially as described.

2. A suspender having the buckles secured to the shoulder-straps on their inner sides and at some distance from their lower front ends and short straps or webs carrying the ends, adjustable in the buckles, substantially as described.

3. A suspender having the buckles secured to the shoulder-straps on their inner sides at some distance from their lower front ends, and short straps or webs carrying the ends adjustable in the buckles, and cord or braid loops at the rear ends of the shoulder-straps and secured directly thereto, substantially as described.

412,098. HOT-WATER BOILER. JAMES KEITH, London, England. Filed July 11, 1888. Serial No. 317,193. (No model.) Patented in England June 17, 1888, No. 8,892.

Claim.—1. A hot-water boiler composed of two approximately semi-cylindrical hollow sections and a central tubular section or heater, constructed and connected substantially as described.



2. In a hot-water boiler, a bifurcated tubular water heater and circulator A′, situated within the combustion-chamber so as to be surrounded by the fire or flame, and having connections at top and bottom to the main water-space of the boiler, substantially as set forth.

3. In a hot-water boiler, the combination, with the double-cased shell recessed to hold a fire-brick, of the ribs or flanges *d* formed in

the outer shell, and the flanged sliding cover H, for securing the fire-brick in place, substantially as described.

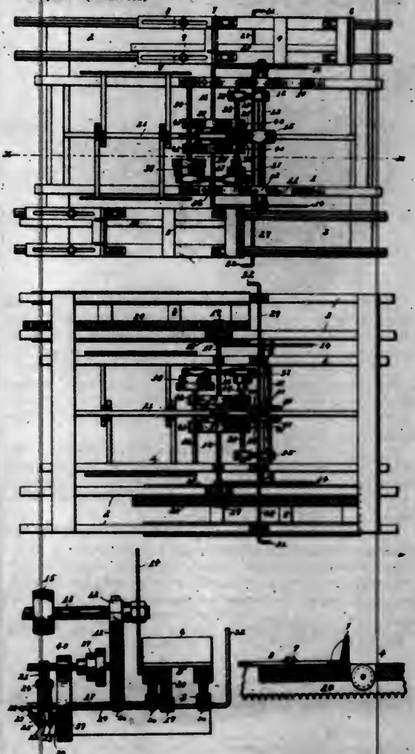
4. In a chimney-flue or smoke-pipe for hot-water boilers, a combined draft-regulator, ventilator, and cleaning-door, constructed and arranged to operate substantially as described.

412,099. WIND-WHEEL. JOHN D. KELLER, San Francisco, Cal. Filed May 15, 1889. Serial No. 310,994. (No model.)

Claim.—1. In a wind-wheel, a series of flexible blades, fans, or wings attached at one end firmly to the wheel, pivoted radial arms, the centers of which are eccentric to the center of the wheel, and connections between said arms and the other ends of the blades, fans, or wings, whereby as the wheel rotates said blades, fans, or wings successively open out and fold up, substantially as described.

2. In a wind-wheel, the combination of the series of radial arms b^3 of said wheel, having fixed cross-rods D, flexible or folding wings, fans, or blades secured by one edge to said cross-rods, a series of rotary arms H, the centers of which are eccentric to the center of the wheel, and sliding cross-rods E, connected with said arms and with the other edge of the wings, fans, or blades, whereby the latter successively expand and fold up as the wheel rotates, substantially as described.

3. In a wind-wheel, the combination of the wheel B, consisting of the hubs and radial slotted arms b^3, the fixed cross-rods D between each pair of arms, the flexible or folding wings, fans, or blades C, having one edge attached to said fixed cross-rods, the series of arms H, having pivotal centers located eccentrically to the center of the wheel, the sliding cross-rods E, fitted and guided in the slotted arms of the wheel and connected with the eccentric-arms, and the connecting-bars F, uniting the sliding rods of each series, substantially as described.



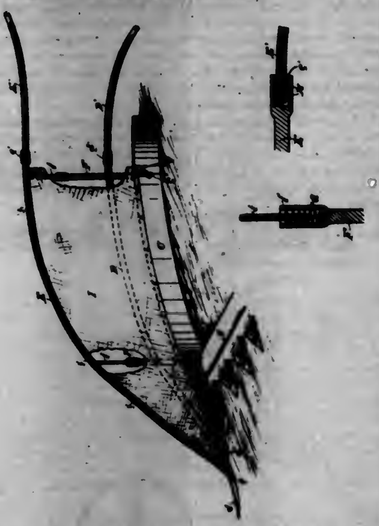
4. In a wind-wheel, the combination of the wheel B, having radial arms b^3, the fixed cross-rods D, secured to the radial arms, the flexible or folding wings, fans, or blades C, secured by one edge to said fixed rods, the series of arms H, having pivotal centers located eccentrically to the center of the wheel, the sliding cross-rods E, to which the other edges of the wings, fans, or blades are secured, said rods being connected with the arms H, the fixed rods I, secured to rods D, and the rings i, secured to the wings, fans, or blades and fitted to slide on the rods I, substantially as described.

412,100. CAKE-CUTTER. GEORGE W. KNAPP, Baltimore, Md. Filed Nov. 23, 1888. Serial No. 292,066. (No model.)

Claim.—A sheet-metal cake-cutter having a vertical fluted cutting-rim A and a top B, said parts A and B being integral, or made of a single piece of sheet metal, substantially as specified.

412,101. PORTABLE CIRCULAR-SAW MILL. JOHN C. LAKE and REUBEN A. LAKE, Big Prairie, Ohio. Filed May 25, 1889. Serial No. 312,100. (No model.)

Claim.—1. In a saw-mill, the combination of a rotary saw-mandrel carrying two saws, two independent carriages arranged to travel in lines at right angles to the axis of said mandrel and at opposite ends thereof, and independent feed-shafts geared to said carriages and rotated in either direction at will from a common feed mechanism, arranged and combined for service substantially as herein shown and described.



2. In a saw-mill, the combination of a rotary mandrel carrying a saw at each end thereof and two independent carriages arranged at opposite ends of said mandrel in such relation to the saws thereof as to permit the latter to act on the work on the carriage, substantially as described.

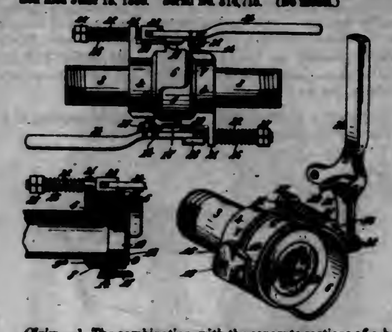
3. In a saw-mill, the combination of a rotary mandrel carrying two saws, the carriages, the independent feed-shafts geared to said carriages, and a common feed mechanism driven from the saw-mandrel and adapted to rotate either or both of the shafts in the same or reverse directions at will, substantially as and for the purpose described.

4. In a saw-mill, the combination of a rotary mandrel carrying two saws, the carriages, the independent feed-shafts geared to the carriages and separately mounted in oscillating bearings, a shifting-lever connected to each feed-shaft, and a common feeding mechanism driven from the saw-mandrel and adapted to contact with and rotate either or both of said feed-shafts, according to the adjustment of said feed-shafts, substantially as described.

5. In a saw-mill, the combination of a rotary mandrel carrying two saws, the carriages, the independent feed-shafts geared to said carriages and separately supported in swinging bearings, a shifting-lever connected to each feed-shaft, and a pair of oppositely-rotating shafts located on opposite sides of the feed-shafts and geared to each other and the saw-mandrel, said oppositely-rotating shafts being provided with friction-disks 40 41, against which are adapted to alternately impinge the friction-disk 39 on either of said feed-shafts, according to the adjustment thereof, all arranged and combined for service substantially as and for the purpose described.

412,102. SWATHER. WILLIAM H. LAMBERT, Coyote, Cal. Filed June 26, 1888. Serial No. 278,068. (No model.)

Claim.—1. In a swather, the combination of the board C, secured to the shoe of the mower, the directing-arm E, pivoted at its forward end, the socketed standards F, secured to the board C, the rods *f*, secured to the arm E and fitting in the standards, and the springs G therein supporting the rods, substantially as and for the purpose herein described.



2. In a swather, the combination of the board C, secured to the shoe of the mower, the lower directing-arm D, secured to said shoe, the upper directing-arm E, pivoted to the forward end of the lower arm, the socketed standards F, secured to the board and to the lower directing-arm D, the rods *f*, secured to the upper arm and fitting in the socketed standards, and the springs G in said standards supporting the rods *f*, substantially as described.

3. In a swather, the combination of the board C, the pivoted directing-arm E, the socketed standard F, the thumb-screw or nut fitting in an elongated slot in the board, whereby the standard may be adjusted vertically, the rod *f*, secured to the arm E, and the spring G in the standard supporting the rod, substantially as described.

4. In a swather, and in combination with its directing arms, the extension portions fitted to the rear ends of said arms and axially adjustable, and the springs H, for returning said extensions to position, substantially as described.

5. In a swather, the board C, the directing-arms D and E, and connections F and *f* between said board and arms, in combination with the shield-plate I and the removable portion of the arm E, for clamping the upper edge of said shield to said arm, substantially as described.

412,103. BRAKE-HOSE COUPLING. ERWIN A. LELAND, Brooklyn, N. Y., assignor to Leonard Richardson, same place. Original application filed Apr. 11, 1888, Serial No. 270,787. Divided and this application filed June 18, 1889. Serial No. 314,718. (No model.)

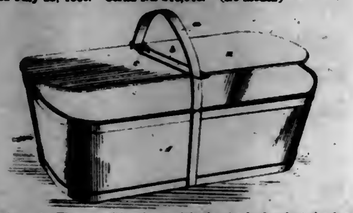
Claim.—1. The combination, with the separate sections of a hose-coupling having side bosses each formed with two convex cam-surfaces struck from different centers, of the pivoted locking-levers each having on its inner side a laterally-projecting and curved cam-flange provided at its upper end with a detent-lug to rest upon the upper side of one of the cam-bosses when the cam-flange of the lever is in engagement with the two convex cam-surfaces of such boss, substantially as described.

2. The combination, with the separate sections of a hose-coupling having side bosses each formed with two convex cam-surfaces struck from different centers, of pivoted lengthwise spring-yielding locking-levers each having on its inner side a laterally-projecting cam-flange provided with a detent-lug to rest upon one of the cam-bosses when the cam-flange on the lever is in engagement with the two cam-surfaces of such boss, substantially as described.

3. In a brake-hose coupling, the combination, with two separate coupling-sections, of locking-levers pivoted upon movable bearings, and springs normally retracting said bearings, each coupling-section being provided with a boss having upon its rearward face two convex cam curves or faces struck from different points and meeting between the top and bottom of the boss, and each locking-lever being provided with a cam-flange having a lug or detent at its upper end to strike the upper side of a boss when the cam-flange is in engagement with the two convex cam-surfaces of such boss, substantially as described.

4. In a brake-hose coupling, the combination, with two separate coupling-sections each having a boss 14, provided with two rearward cam-faces 15 and 16, of locking-levers 24, pivoted upon spring-retracted bearings and provided with cam-flanges 26, having lugs or detents 29 at their ends, substantially as described.

412,104. MOWING-MACHINE. ELLSWORTH M. LEITH, Waverly, N. Y. Filed Aug. 9, 1888. Serial No. 282,308. (No model.)



Claim.—1. The combination, in a mowing-machine, of the fixed shear-plate rigidly secured to the finger-bar and provided with teeth

having downwardly and outwardly beveled edges and their points seated in notches in the points of the fingers, the reciprocating cutter-bar located beneath the fixed shear-plate, the teeth of which have upwardly and outwardly beveled edges, and the fingers provided with the open clearing-channel beneath the teeth or blades of the cutter-bar, substantially as described.

2. In a lawn-mower, the main frame constructed as described, having the upper and lower rearwardly-extending brackets *m o*, the lower one of which is provided with the adjustable cup-bearing, in combination with the vertical crank-shaft having the fly-wheel thereon, substantially as and for the purpose described.

3. In a lawn-mower, the combination of the main frame, the drive-wheels, the pinion-shaft mounted in brackets on the main frame and provided with the vertical bevel-wheel in its center and the fixed ratchets near its ends, the pinions loosely mounted on the ends of the pinion-shaft and provided with ratchet-housings containing the spring-controlled dog, the vertical crank-shaft mounted in brackets secured to the main frame, the lower one of which is provided with an adjustable cup-bearing, the fly-wheel mounted on the vertical shaft, the adjustable pitman, and the pivoted lever actuating the sickle-bar, substantially as and for the purpose described.

412,105. FRUIT-BASKET. CHARLES C. LEWIS, Westfield, N. Y. Filed July 25, 1889. Serial No. 318,615. (No model.)

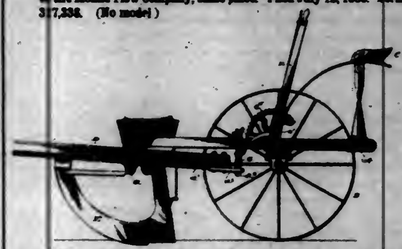
Claim.—1. The combination, with the body having the handle, of the top and a transverse fastening-section looped around the handle and connected to the top at one side of its longitudinal center, substantially as set forth.

2. The combination, with the basket having the handle, of the top and a transverse fastening consisting of a wire looped around the handle, having its ends interlocked and embedded in the top at one side of its longitudinal center, substantially as set forth.

412,106. CULTIVATOR. AUGUST LIENDERS, Moline, Ill., assignor to the Moline Plow Company, same place. Filed Jan. 9, 1889. Serial No. 295,827. (No model.)

Claim.—1. In a cultivator, and in combination with the cross-head having the shovel-standards attached and the fore-and-aft opening therethrough, the beam-plate formed with upper and lower pivot-bearings, substantially as described, adapted to interlock with the cross-head, the upper bearing to resist forward and the lower bearing to resist backward motion of the cross-head, whereby the beam-plate is enabled to hold the cross-head and shovels in operative position without reliance upon a pivot-bolt to receive the strains.

2. In a cultivator, a cross-head provided with a pivot-stud and a seat or cavity, in combination with a beam-plate provided with a cavity to receive the stud and with a journal to enter the seat.



412,107. HARROW. AUGUST LIENDERS, Moline, Ill., assignor to the Moline Plow Company, same place. Filed Mar. 21, 1889. Serial No. 304,129. (No model.)

Claim.—1. The channel-bar and the tooth passing through its edges, in combination with the intermediate spring bearing at its ends on the bar and at its middle on the tooth.

2. In a harrow, the combination of a frame-bar, an upright tooth arranged to slide therethrough, and an intermediate spring acting between the frame and the side of the tooth and held in place by the latter, substantially as shown.

412,108. CORN-PLANTER. AUGUST LIENDERS, Moline, Ill., assignor to the Moline Plow Company, same place. Filed July 12, 1889. Serial No. 317,336. (No model.)

Claim.—1. In a corn-planter, the wheeled frame and the front runner-frame jointed thereto, in combination with two intermediate springs, one resisting the upward and the other resisting the downward movement of the runner-frame.

2. In a corn-planter, the wheeled rear frame and the front runner-frame hinged thereto, in combination with a vertically-adjustable arm on the runner-frame and two springs connecting said arm with the runner-frame, one to resist the upward and the other to resist the downward movement of the runner-frame.

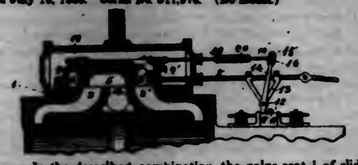
3. In a corn-planter, the wheeled rear frame having the hand-lever, the rock-shaft, the crank-arm, and lever-locking mechanism thereon, in combination with the front runner-frame hinged to the wheeled frame and provided with a rearwardly-extending arm, a vertical bolt passing through the arm of the runner-frame and the crank-arm of the wheeled frame, and two springs applied to said bolt, one to resist the upward and the other to resist the downward movement of the arm of the runner-frame.

4. In a corn-planter, the combination of the wheeled rear frame, the runner-frame jointed to its front and provided with a rearwardly-extending arm, two springs interposed between said arm and the wheel-frame, acting one to resist upward and the other to resist downward motion of said arm, and a bolt for regulating the tension of said springs.

412,109. TOY OR MODEL HORSE. MORITZ LIENDER, Berlin, Ontario, Canada. Filed Dec. 20, 1888. Serial No. 294,057. (No model.) Patented in Canada May 9, 1885, No. 21,630.

Claim.—1. A hollow imitation figure consisting of a flat vertical wooden skeleton having the bulky portions covered with a shell in two halves molded upon a properly-shaped model, said shell consisting of cemented layers of stiffened fabric, the parts of the shell subjected to pressure supported by ribs upon the skeleton, and the slender limbs finished in solid material and secured to said skeleton, substantially as set forth.

2. In hollow toy or model figures, a covering of felt in imitation of natural skin, in combination with a molded shell composed of two halves and consisting of layers of stiffened fabric and solid limbs, all secured to a flat vertical skeleton strengthened by ribs, substantially as set forth.

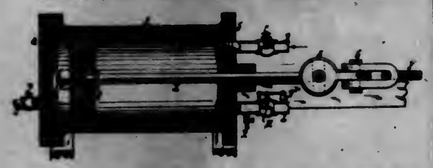


412,110. MOLD-BOARD PLOW. EDWARD P. LYNDE, Davenport, Iowa. Filed Dec. 22, 1888. Serial No. 294,266. (No model.)

Claim.—1. The mold-board plow comprising the share, the solid forward end of the mold-board, the series of independent elastic arms extending rearward from said solid portion and each free at its rear end, and the adjusting devices at the forward ends of the individual arms, whereby the rear end of the mold-board is given a slatted form, rendered elastic, and adapted to be changed in shape at will.

2. In a mold-board, the combination of a series of elastic arms or slats forming the rear part of the board and free to vibrate at their rear ends, a solid support to which the arms are bolted at their forward ends, and intermediate adjusting devices for changing the position of the individual arms to or from the land, whereby an elastic board of variable form is produced.

412,111. CUT-OFF VALVE. ROBERT R. HOOER, Field's Store, Tex. Filed July 19, 1889. Serial No. 317,976. (No model.)



Claim.—In the described combination, the valve-seat 1 of slide-valve 4, the entrances of whose steam-passages 6 6' form seats 8 8' for auxiliary valves 9 9', pivoted to yoke 11 11' on a rod 10, whose stud 16 occupies said slot 15 in upper portion of arm 14, pivoted to pendant 13 from main valve-rod 7 and terminating in tappet 14', the same being combined with the adjustable stops 17 17', substantially as set forth.

412,112. SNAP-HOOK. THOMAS T. MORROW, Carr, Mich. Filed May 14, 1889. Serial No. 310,703. (No model.)

Claim.—The improvement in hooks, substantially as described and shown, consisting of the ferrule or support having one end socketed to fit a whiffletree or the like and provided at its other end with a slot B, the inner wall of which is formed to provide a stop for the shank-arm of the hook proper and the hook proper having a shank-arm *c* and a point-arm *c'*, the said shank-arm *c* being pivoted at or near its extremity to the ferrule or support at a point near the rear edge of the ferrule and close to the inner stop-wall of the slot, whereby, when the hook is closed, its shank-arm will bear against said stop-arm, and when open said arm will rest with its inner side approximately flush with the rear edge of the support, thereby leaving the opening to said hook unobstructed, substantially as and for the purpose set forth.

412,113. SURGE-RELIEVER. WILLIAM MURPHY, New York, N.Y. Filed June 6, 1889. Serial No. 313,269. (No model.)

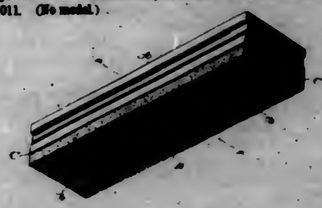
Claim.—1. The combination of a hawser, a piston connected therewith, and a cylinder containing the piston and having one end provided with two independent valves, one opening to admit a fluid into the cylinder at one side of the piston and the other connected with a pressure attachment and opening at a certain pressure to permit the outlet of a fluid from the cylinder at that side of the piston to which such fluid was admitted, substantially as described.

2. The combination, with the cable or hawser F and a piston-rod and piston connected to said hawser, of a cylinder for said piston, said cylinder being provided at one of its heads with an inlet-valve C, an outlet-valve M, having a pressure attachment, and an opening O and valve P, situated at the other cylinder-head, substantially as described.

3. The combination, with the cable or hawser F and a piston-rod and piston connected to said hawser, of a cylinder for said piston, said cylinder being provided with an inlet-valve C and an outlet-valve M, having a pressure attachment, a cross-head H for the piston-rod, guides I for said cross-head, and springs K, acting on said cross-head, substantially as described.

412,114. ATTACHMENT FOR TYPE-WRITING MACHINES. JOHN MCSWEENEY, Wilmington, Del. Filed Apr. 19, 1888. Serial No. 271,186. (No model.)

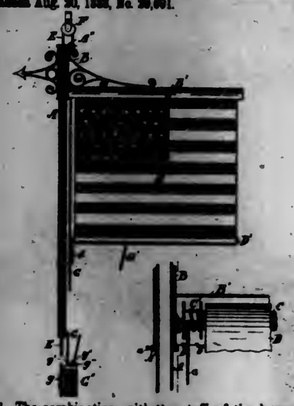
Claim.—1. The base-plate 1, the screw 2, and the slotted base-plate 3, the vertical bar 4', the cross-rod 5, the bent rods 6 6, a cross-plate 7, vertical standards 8 8, the levers 9 9, the bearing-plates 10 10, and knee-pieces 11 11, all combined and arranged as and for the purpose described.



2. The combination of the following elements: the base-plate 3, adapted to rest upon the machine, the vertical standards 8 8 on the base-plate 3, the actuating-levers 9 9, the dependent bar 4', the sliding rod of the levers, and the knee-pieces adapted to actuate the sliding rods, as described.

412,115. THERMOSTAT. JAMES L. NIX, Homer City, Pa. Filed May 8, 1889. Serial No. 310,054. (No model.)

Claim.—The combination of the two arms m and m', secured together rigidly at one end, the rod m^2, attached to the upper arm, with the lever O, having a weighted short arm *o* and a long arm o^2, and the damper h, hanging loosely at the end of the long arm, substantially as and for the purposes set forth.



412,116. BLACKBOARD-ERASER. JOHN F. PALMER, Chicago, Ill., assignor to Thomas Kane, same place. Filed May 16, 1889. Serial No. 311,011. (No model.)

Claim.—1. In a blackboard-eraser, the combination of the block or body, the facing of soft material, as felt, and the intermediate sheet cemented to the body and to the facing.

2. As a new article of commerce, the facing for blackboard-erasers, consisting of the erasive fabric and a backing-sheet cemented on one face to the fabric and coated on the other face with a soluble adhesive.

412,117. **FLAG-STAFF.** JOSEPH POIRÉ, St. Joseph de Lovis, Quebec, Canada. Filed Oct. 1, 1888. Serial No. 286,990. (No model.) Patented in Canada Aug. 20, 1888, No. 30,601.

Claim.—1. The combination, with the staff, of the laterally-extending vertically-adjustable arm, and the flag-carrying roller journaled in said arm, substantially as specified.

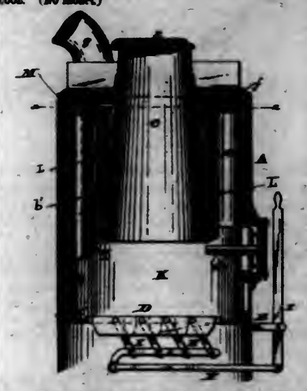
2. The combination, with the vertical staff, of the horizontal arm having the longitudinal recess in its under side, and the roller for receiving the flag journaled in the recess in the arm, whereby the flag is protected from the weather within the arm when furled.

3. The staff, the horizontal arm thereon, the roller journaled in said arm and having the drum, and the flag on said roller, in combination with the operating-cord having one end connected to the flag and its other end connected to the drum, substantially as described.

4. The staff, the supporting-arm sustained thereby, the roller journaled in said arm and having the winding-drum, the flag attached to said roller, the rod attached to the free end of the flag, and the operating-cord connected, respectively, to the drum and the rod, in combination with the counter-balance suspended loosely from the operating-cord and arranged to permit a relative movement of the cord as the flag is furled and unfurled, substantially as described.

5. The roller, its supporting-arm, the flag on said roller, and its operating-cord, in combination with the counter-balance loosely suspended from said cord and arranged to move thereon, and the clamp on the said counter-balance constructed to engage the cord and hold it in a fixed relation thereto, whereby the flag may be held in varying positions.

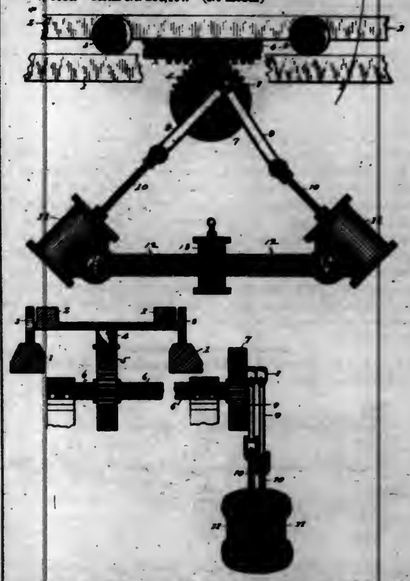
6. The staff, the horizontal arm sustained thereby, the roller journaled in said arm and having the drum, the flag carried by said roller, the rod attached to the end of the flag and guided by the staff, and the operating-cord connected, respectively, to the drum and the rod, in combination with the guided counter-balance suspended loosely from the said cord, and the guide on which the counter-balance moves.



7. The combination of the main supporting-staff, the series of supplementary staffs provided with flag-carrying rollers, and the supports for said supplementary staffs connected to the main staff and to the said supplementary staffs, substantially as described.

8. The combination, with the main central staff, of the series of supplementary staffs grouped thereabout, the vertically-movable arms provided with the flag-carrying rollers, and the disks H' and H, adjustable on the main staff and arranged to sustain the arms and supplementary staffs, respectively.

9. A flag-staff A, having a tube B, centered upon it, held in place by a collar *a*, carrying an arm B', having stirrup-bearing *b*, in which is a roller C, having a pulley C', and carrying a flag or banner D, held steady by means of a weighted rod D', connected to the said staff by means of the sliding bracket *d*, and operated by the cord G G' and weight G^2, substantially as set forth.



10. The combination, with the staff, of the laterally-extending arm, the flag-carrying roller journaled in said arm, and suitable mechanism, substantially as shown, for revolving said roller to furl and unfurl the flag.

412,118. **BOILER.** HERMAN H. PRAHSE, Akron, Ohio, assignor of two-fifths to C. C. McNeil, same place. Filed May 8, 1889. Serial No. 310,002. (No model.)

Claim.—The herein-described boiler, consisting of the outer annular casing provided near its lower end with an inwardly-extending annular ledge, an annular wall supported by said ledge and extending to within a short distance of the top of the boiler, an inner annular wall concentric with said ledge-supported wall, the connecting cap or dome provided with a series of perforations, the alternating drop water-tubes and smoke-bonnets, said tubes provided with closed bottoms, the circulating-tubes provided with open ends, and a central magazine, the space between the same and the inner annular wall forming a water-leg communicating at its top with a horizontal extension, and the space between the outer ledge-supported wall and the outer casing also forming a depending water-leg communicating with the upper horizontal portion and the space between the two annular walls forming the smoke-flue, substantially as set forth.

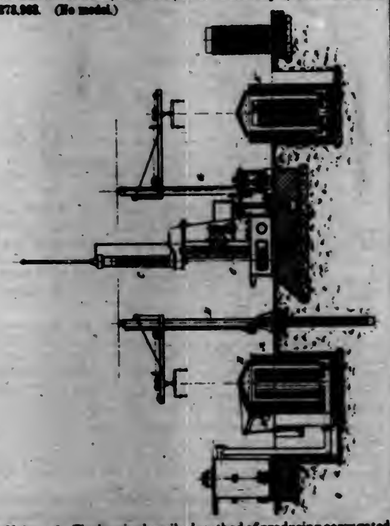
412,119. **MECHANISM FOR RECIPROCATING THE LOG-CARRIAGES OF SAW-MILLS.** GEORGE R. RAY, Manistee, Mich. Filed Nov. 7, 1888. Serial No. 290,197. (No model.)

Claim.—1. In a saw-mill, the combination, with a log-carriage provided with a toothed or cogged rack and a track for said carriage, of a shaft journaled with its inner end transversely below said track and provided with a pinion which meshes with said rack, and steam-cylinders provided with piston-rods which are directly connected to the outer end of said shaft and arranged at one side of said track, substantially as and for the purpose described.

2. In a saw-mill, the combination, with a log-carriage provided with a toothed or cogged rack and a track for said carriage, of two steam-cylinders provided with piston-rods, and a horizontal shaft arranged centrally between said cylinders and provided at its inner end with a pinion which meshes with said rack and at its outer end, which projects out from one side of said track, with a crank-disk which is provided with a crank-pin, to which said piston-rods are pivoted, substantially as and for the purpose described.

3. In a saw-mill, the combination, with a log-carriage provided with a cogged rack, a track for said carriage, and a shaft geared to reciprocate said carriage, of a crank-disk mounted upon the outer end of said shaft at one side of said track and provided with a crank-pin, and two steam-cylinders, which are inclined at right angles to each other and provided with piston-rods, which are pivoted to said crank-pin, substantially as and for the purpose described.

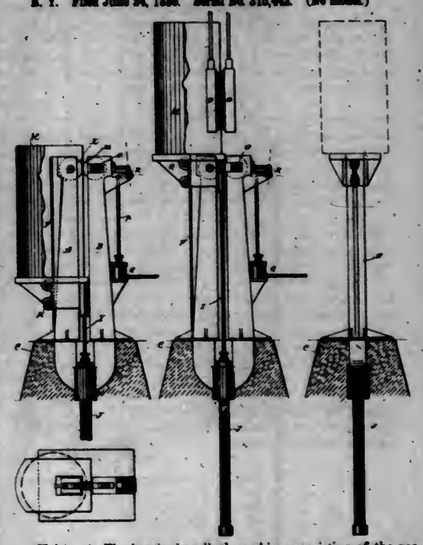
4. In a saw-mill, the combination of the track 1, the reciprocating log-carriage 2, provided with the rack 4, the transversely-arranged horizontal shaft 6, provided with the pinion 5, meshing with said rack and with the crank-disk 7, which projects out from one side of said track and is provided with the crank-pin 8, the steam-cylinders 11, inclined at right angles to each other, the piston-rods 10, and the connecting-rods 9, pivoted to said crank-pin, substantially as and for the purpose described.



5. In a saw-mill, the combination of the track 1, the log-carriage 2, provided with the rack 4, the two steam-cylinders 11, the piston-rods 10, the connecting-rods 9, and the horizontal shaft 6, provided at its inner end with the pinion 5, which meshes with said rack, and at its outer end with the crank-disk 7, which is projected out from one side of said track and provided with double-journaled crank-pin 8, to which said connecting-rods are directly pivoted, substantially as and for the purpose described.

412,120. **BRUSH FOR MOISTENING THE SHEETS OF COPYING-BOOKS.** GEORGE R. RICKETTS, Goshen, Ind. Filed Feb. 26, 1889. Serial No. 301,220. (No model.)

Claim.—In a letter-press brush, the stock comprising the ovoid handle and the flat flaring holder, the web having the reduced inner portion fitting in the holder, the thumb-nut and screw in the holder for regulating the flow of the liquid to the web, and the band having the bends forming a support for the holder, substantially as described.



412,121. **METHOD OF PRODUCING CORRUGATED CYLINDERS.** THOMAS P. ROWLAND, New York, N. Y. Filed July 3, 1888. Serial No. 278,262. (No model.)

Claim.—1. The herein-described method of producing corrugated cylinders, consisting in placing a plain cylinder in an upright position in a furnace, and while in such position bringing it to a working-heat, and then, while still maintaining the cylinder in a vertical position, removing it from the furnace to and corrugating it between suitable rolls, substantially as described.

2. The herein-described method of producing corrugated cylinders, consisting in bringing a plain cylinder to a working-heat while in an upright position, and still maintaining the cylinder in the upright position, corrugating it between suitable rolls, and then reheating and annealing it, substantially as described.

412,122. **WELDING-MACHINE.** THOMAS P. ROWLAND, New York, N. Y. Filed June 24, 1889. Serial No. 315,442. (No model.)

Claim.—1. The herein-described machine, consisting of the vertically-arranged arms A B, provided at their upper free ends with welding-rolls.

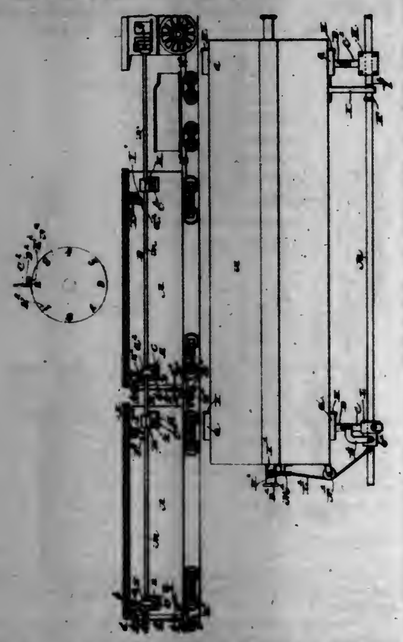
2. The herein-described welding-machine, consisting of the vertically-arranged arms A B, welding-rolls journaled in said arms, and a vertically-moving blank-carriage.

3. The combination of the vertically-arranged arms A B, the blank-carriage mounted upon one of said arms, and the carriage-operating power-cylinder, the welding-rolls, and the power-cylinder for adjusting them.

4. The combination of the arms A and B, the blank-carriage mounted and moving on one of said arms, the power apparatus for operating the same, the welding-rolls L and M, and the power apparatus P Q R, for adjusting the roll M.

412,123. **CARRIAGE-HINGE.** GEORGE H. ROTH, Rochester, N. Y., assignor to the James Cunningham Son & Company, same place. Filed Jan. 8, 1889. Serial No. 295,761. (Model.)

Claim.—1. The plate F, adapted to be secured to a coach-body and provided on one side with a hinge-arm D, adapted to be secured to the folding pillar and also provided on the same side with flanges to support the detachably-fixed arm *r* of the door-hinge, substantially as set forth.



2. The combination, with the body B, of the door A, concealed

bent hinge-arm E E', plate F, and detachable pivot-supporting arm *r*, substantially as described.

3. The combination, with the hinge-plate F of a concealed carriage-door hinge provided with internally-projecting flanges *s f*, of the detachable pivot-supporting arm *r*, inserted between the flanges and secured to the outer face of the plate, substantially as described.

412,124. DEVICE FOR COUPLING AND UNCOUPLING CARS.

JOHN H. SCARBROUGH, Americus, Ga. Filed Feb. 13, 1889. Serial No. 299,723. (No model.)

Claim.—1. In a device for coupling and uncoupling cars, the combination of a longitudinal shaft attached to a car in such a manner as to be capable of longitudinal movement, a hook extending radially from said shaft, a horizontally-arranged arm or lever having a block provided with a downwardly-extending eye adapted to engage the said hook, and a rope passing over suitable guide-pulleys and connecting the said block with the coupling-pin, substantially as herein described.

2. The combination of the longitudinal shaft, the boxes or bearings mounted upon the outer ends of the arms or brackets in such a manner as to be capable of longitudinal movement, and the sockets connected pivotally with the inner ends of the arms or brackets and having flanges whereby they are mounted in and enabled to slide longitudinally in suitable casings attached to the side of the car, substantially as set forth.

3. The combination of the sockets D D, having slots I, the arms C C, mounted pivotally in said slots, and the springs J, arranged in said slots and bearing against the pivot-pins, substantially as set forth.

4. The combination of the arm or bracket C, arranged as herein described, the pin or bolt Q, the lever P', and the block O', connected with the coupling-pin by means of a rope passing over suitable guide-pulleys, substantially as herein set forth.

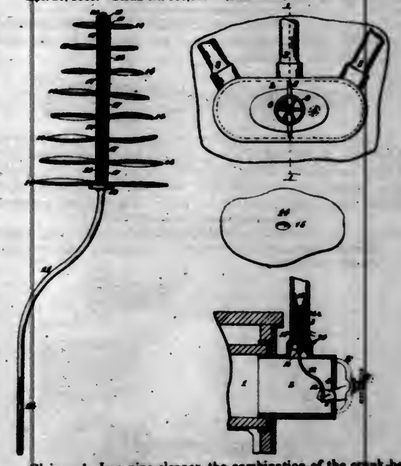
5. The combination of the shaft-section N, mounted to revolve in the coupling-box L, and having a polygonal recess at its front end, with the shaft-section N, adapted to be mounted detachably in the said coupling-box, and provided with a nipple or extension adapted to enter the said recess in the section N, substantially as set forth.

6. The combination of the coupling-box L, having the flaring mouth V, provided with the tapering rib or flange W, with the shaft-section M, mounted to revolve in said coupling-box, and the shaft-section N, having the flange T, provided with notch U, substantially as set forth.

7. The combination of the coupling-box L, having flaring mouth R, provided with rib or flange W, the shaft-section M, mounted to revolve in said shaft-coupling box and having recess R, and the shaft-section N, having notched flanges T and nipple or extension S, substantially as set forth.

8. In a device for coupling and uncoupling cars, the combination, with suitable supports or bearings, of a longitudinally movable and revoluble shaft extending through the entire length of the train and composed of sections connected to the individual cars thereof, and suitable means for connecting or coupling together the said shaft-sections and for uncoupling or disconnecting them at any particular time when it is desired to break the train, substantially as herein described.

9. In a device for coupling and uncoupling cars, a longitudinal shaft extending through the entire length of the train and composed of longitudinally-movable sections attached to the individual cars, in combination with the shaft-couplings, constructed substantially as described, and so arranged as to admit of the shaft being disconnected only at one particular point at a given time, substantially as set forth.



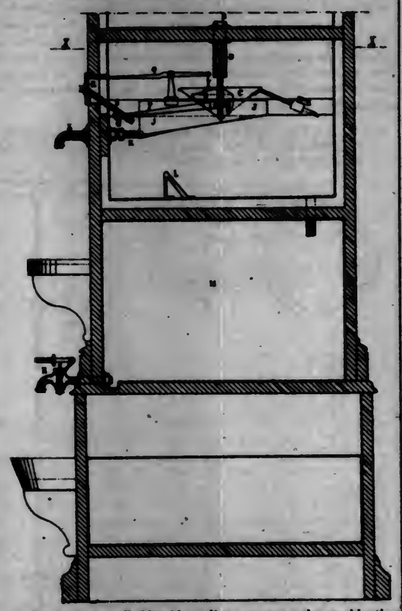
10. In a device for coupling and uncoupling cars, the combination of the longitudinally-movable shaft, the herein-described couplings for connecting the sections of the same, and an indicator-disk at the front end of said shaft accessible to the engineer and having numbered notches that correspond with and may be brought into alignment with the shaft-couplings of any correspondingly-numbered car, substantially as herein described.

11. The hooks and eyes G^3 F^3, extending radially from the shaft-sections M and N, and registering with the notches U, formed in the flanges T upon the shaft-sections N, substantially as and for the purpose set forth.

12. The combination of the shaft B, the brackets N^3, journaled upon the said shaft and having their rack-bar M^3, the transverse shaft B^3, having pinion O^3, and the hand-wheel Q^3, substantially as and for the purpose set forth.

412,125. PIPE-CLEANER.

JOHN SHRIPPEL, St. Louis, Mo. Filed Apr. 20, 1889. Serial No. 308,073. (No model.)



Claim.—1. In a pipe-cleaner, the combination of the crank-bent shank 11, having a handle 12 at one end and an extension disk-bearer rod 13 at the other end, and the succession of disk-cutter bits 14, of diverse diameters, the said disks being secured and spaced on said bearer-rod in respective conical position, the diameter of said disks being reduced toward the point or front of the auger, substantially as described, and for the purpose set forth.

2. In a pipe-cleaner, the combination of the crank-bent shank having a handle at one end, an extension disk-bearer rod at the other, and a flanged shoulder between said shank proper and said disk-bearer rod, the conically-placed disk-bits of diverse diameters, the said disk being bent into a curvilinear form to provide a biting-grip of the auger when worked, and the sleeve-rings 17, that are seated on the disk-bearer rod and space apart the respective distance of the disks, the said disks being held to their seats by a washer and screw-nut, which latter engages on the screw-terminal or point of the disk-bearer rod, substantially as described, and for the purpose set forth.

412,126. COIN-OPERATED LIQUID-VENDING APPARATUS.

HENRI SOULOMBRE and BENJAMIN DÉSIRÉMONT, Marseilles, France. Filed June 11, 1889. Serial No. 313,891. (No model.) Patented in France July 3, 1888, No. 191,374.

Claim.—1. In a coin-controlled liquid-vending apparatus, the combination of an oscillatory delivery-vessel or tipper pivotally supported at an intermediate point of its length, a valved supply-pipe for delivering liquid directly to said vessel or tipper, a vertically-movable float located within said vessel or tipper, and connected by intermediate devices with the valve to regulate the quantity of liquid supplied to the vessel or tipper, and a coin-operated lever carried by said oscillatory vessel or tipper to tilt the latter and cause it to discharge its contents upon the introduction of a coin of proper denomination to said coin-lever, substantially as described.

2. In a coin-controlled liquid-vending apparatus, the combination of an oscillatory delivery-vessel or tipper pivotally supported at an intermediate point of its length, and having means for counterbalancing the same, a stationary trough arranged to receive the contents of the vessel, mechanism, substantially as described, for automatically refilling the vessel with a predetermined quantity of liquid after the vessel has been tilted to discharge its contents, and a coin-operated lever rigidly secured to said vessel to tilt the latter, substantially as and for the purpose described.

3. In a coin-controlled liquid-vending apparatus, the combination of an oscillatory counterbalanced delivery-vessel or tipper, a coin-operated lever connected to said vessel to tilt the latter, a fixed coin-way intermediate the coin-slot and lever to guide the coin to the lever, a float operating in said delivery-vessel, a lever connected at one end to the float and carrying a coin-detaining plate at its opposite end, which plate is adapted to close the coin-slot when the supply of liquid is exhausted, and mechanism, substantially as described, for automatically refilling said vessel with a predetermined quantity of liquid, substantially as and for the purpose described.

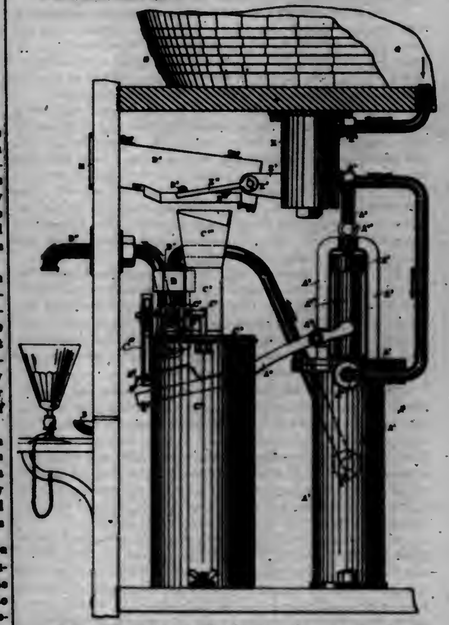
4. In a coin-controlled liquid-vending apparatus, the combination of an oscillatory delivery-vessel or tipper, a supply-pipe leading from a suitable tank or reservoir and having an automatic valve, and a float operating in said vessel and connected to the valve to normally close the same and automatically open it when the vessel is emptied of its contents, arranged and combined for service substantially as herein shown and described.

5. In a coin-controlled liquid-vending apparatus, the combination of an oscillatory delivery-vessel or tipper, a supply-pipe having an automatic valve, a float operating in said vessel and connected to the valve to control the latter, and a coin-operated lever connected to said vessel to tilt the latter, substantially as and for the purpose described.

6. In a coin-controlled liquid-vending apparatus, the combination of an oscillatory counterbalanced delivery-vessel or tipper, a supply-pipe having an automatic valve, a float operating in said vessel and connected to the valve, a coin-operated lever fixed to the vessel, and a coiway beneath which the free end of said lever is normally arranged to receive the coin directly therefrom, substantially as and for the purpose described.

7. A fixed inclined coiway having a coin-slot of the proper diameter formed therein, and a lever carried by a tiltable vessel or receptacle and normally held by the latter in position beneath the coiway to receive a coin after it passes through the slot in said coiway, for the purpose described.

8. A fixed inclined coiway having a coin-slot, a tiltable receptacle, and a lever carried by said receptacle and having a coin-holder at its free end, said coin-holder being provided with vertical prongs *g*, for the purpose described, substantially as set forth.



9. In a coin-operated liquid-vending apparatus, the combination of an oscillatory delivery-vessel or tipper, a fixed supply-pipe leading from a suitable tank and having a valve-seat, a float operating in said vessel, and an endwise-movable valve-stem connected to said float and having a valve fitted in the supply-pipe, for the purpose described, substantially as set forth.

10. In a coin-operated liquid-vending apparatus, the combination of an oscillatory vessel or tipper, a supply-pipe leading from a suitable reservoir or tank and having an automatic valve, a float operating in said vessel and connected to the valve, a water-chamber arranged to deliver a predetermined quantity to said vessel, and a water-supply pipe leading to the water-chamber, substantially as and for the purpose described.

11. In a coin-operated liquid-vending apparatus, the combination of an oscillatory vessel or tipper, a water-chamber having an independent supply-pipe and arranged to deliver its contents to said vessel, a supply-pipe leading from a beverage-tank and having an automatic valve, a float operating in the vessel and connected to said valve, a lever controlled by the float and having a coin-detaining plate at one end, an elevated chamber intermediate the beverage-tank and its supply-pipe, and a float in said chamber having a rod which connects with the lever, all arranged and combined for service substantially as described, for the purpose set forth.

412,127. COIN-OPERATED LIQUID-VENDING APPARATUS.

HENRI SOULOMBRE and BENJAMIN DÉSIRÉMONT, Marseilles, France. Filed June 11, 1889. Serial No. 313,892. (No model.) Patented in France Mar. 4, 1889, No. 192,462.

Claim.—1. In a coin-controlled liquid-vending apparatus, the combination of a delivery pressure-cylinder, a valve-chest communicating with said cylinder and having an automatic valve, a coin-controlled lever connected with said valve to automatically open the latter and permit the liquid from the pressure-cylinder to escape through the

valve-chest, and mechanism for closing said valve when the pressure-cylinder is emptied, all arranged and combined for service substantially as and for the purpose specified.

2. In a coin-controlled liquid-vending apparatus, the combination of a pressure-cylinder having a piston, a valve-chest communicating with said cylinder, a coin-operated lever arranged in the path of the coin deposited in the machine, a valve located in said valve-chest and connected with said coin-operated lever to be maintained thereby in a normally closed position, and mechanism connected to said valve and arranged to be operated by the piston to close the valve when the pressure-cylinder is emptied, substantially as and for the purpose described.

3. In a coin-controlled liquid-vending apparatus, a pressure-cylinder having an outlet at or near its lower portion and a piston operating in said cylinder and provided with an inlet-port and a piston-rod, the area of exposed surface on the upper side of the piston being less than the exposed area on the lower side thereof, for the purpose described, in combination with a valve-chest which communicates with the outlet of said pressure-cylinder, a valve, and a coin-operated lever connected to said valve, all arranged and combined for service substantially as described.

4. In a coin-controlled liquid-vending apparatus, a pressure-cylinder, a reciprocating piston operating therein, and an adjusting-screw arranged to limit and vary the stroke of said piston to regulate the capacity of the cylinder for holding liquids, in combination with a valve-chest communicating with the cylinder and having an automatic valve, and a coin-operated lever for operating the valve, substantially as described.

5. In a coin-controlled liquid-vending apparatus, the combination of a pressure-cylinder, a valve-chest communicating with said cylinder, an automatic valve housed within said valve-chest, a coin-operated lever having a trip-pawl, and a lever connected to said valve and normally supported by said trip-pawl, all arranged for service substantially as described, for the purpose set forth.

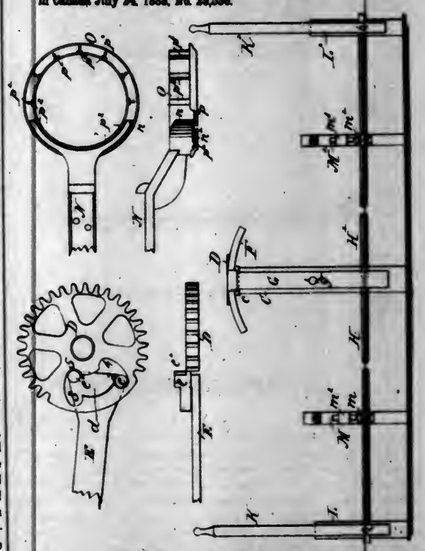
6. In a coin-controlled liquid-vending apparatus, the combination, with a pressure-cylinder and a valve-chest having a valve, of a coin-tube, a lever arranged in the path of the coin that passes through said coin-tube, and another lever connected to the valve and normally sustained by the coin-operated lever in an elevated position to close the valve, substantially as and for the purpose described.

7. In a coin-controlled liquid-vending apparatus, the combination, with a pressure-cylinder and a valve, of a lever connected to said valve, a coin-operated lever for sustaining the valve-lever in an elevated position, and a lever operated by the piston of the pressure-cylinder to raise the valve-lever after it has been released by the coin-operated lever, substantially as and for the purpose described.

8. In a coin-controlled liquid-vending apparatus, the combination, with a pressure-cylinder and an automatic valve, of a coin-operated lever having a trip-pawl, a lever connected at one end to said valve and resting at its other end on the trip-pawl, and a lever fulcrumed on the pressure-cylinder to be operated by the piston thereof and having its free end arranged to lift the valve-lever, whereby, when said valve-lever is lowered after its disengagement with the coin-operated lever to open said valve, the descent of the piston actuates the piston-lever to elevate the valve-lever and cause it to re-engage with the trip-pawl, substantially as described.

9. In a coin-controlled liquid-vending apparatus, a valve-chest having a valve-seat and the aligned guides, a vertically-movable valve-stem fitted in said guides and carrying a valve, and a rock-shaft having an arm at one end on which the lower end of the valve-stem rests, in combination with a lever fixed to the extended end of said rock-shaft, a coin-operated lever for normally elevating the valve-lever, and a pressure-cylinder, substantially as described.

10. In a coin-controlled liquid-vending apparatus, the combination of a vertical coin-tube having a slot, a counterbalanced lever fulcrumed on an axis C^9 and having its free end fitted in the slot of the coin-tube, a trip-pawl carried by said lever, a valve-lever normally fitted on said pawl, an automatic valve controlled by said valve lever, a pressure-cylinder, and a bifurcated lever fulcrumed on the pressure-cylinder, with one end arranged in the path of a protuberance on the piston of the cylinder and having its other end arranged to lift the valve-lever, substantially as and for the purpose described.



11. A coin-receiver having a longitudinal coin-passage and a transverse opening which extends through one side and the lower edge of said coin-passage, combined with a counterbalanced plate arranged in said transverse opening at the base of the coin-passage and forming a continuation of the bottom of the coin-passage, to sustain a coin of proper denomination as it passes across said opening, substantially as described.

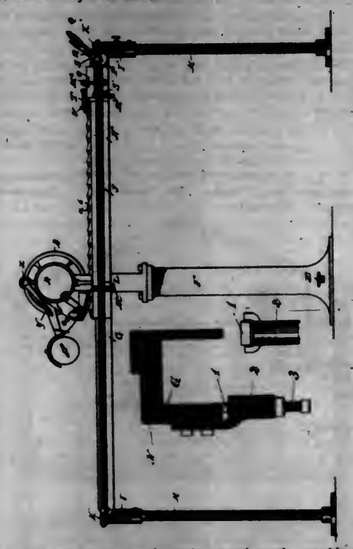
12. In a coin-operated liquid-vending apparatus, a fixed coin-receiver having a longitudinal coin-passage and a series of transverse openings which intersect said longitudinal passage and extend through one side and the bottom of the coin-passage, combined with a counterbalanced plate fitted in each of said transverse openings at the base of the coin-passage and forming a continuation of the bottom thereof, a series of levers, each of which carries one of the plates, and a common fixed support on which all of the levers of the series are fulcrumed, substantially as described.

13. In a coin-operated liquid-vending apparatus, the combination, with a coin-receiver and a counterbalanced plate, of a float-receptacle which communicates with the source of liquid-supply for the vending apparatus, and a float connected by intermediate devices with said counterbalanced plate to hold the latter against movement under the weight of a coin, substantially as and for the purpose described.

14. In a coin-operated liquid-vending apparatus, the combination, with a coin-receiver, of a plate carried by a counterbalanced lever, a float-receptacle having a rock-shaft journaled in one end thereof, a float, an arm carried by the rock-shaft and jointed to the float, and a lever intermediate of the rock-shaft and the counterbalanced lever, substantially as described.

412,128. FARM-GATE. ISAAC S. SHERWIN, Toronto, Ontario, Canada. Filed May 13, 1889. Serial No. 310,662. (No model.) Patented in Canada July 24, 1888, No. 28,536.

Claim.—1. In a farm-gate, the combination, with the posts and levers for opening and closing the gate from either side, of an oscillating bar pivoted to the hinge-post, a curved segmental gear carried by such bar, a slotted gear mounted on such hinge-post, and an arm affixed to the gate and engaging with such slotted gear in such manner that by the operation of the levers the gate will be raised and unlatched at its front end and swung back in either direction, substantially as specified.



2. In a gate apparatus, the combination, with a segmental gear and levers for operating same, of a horizontal gear having a slot with four recesses, and an arm affixed to the gate and having two pins or projections entering such slot and adapted to be drawn into pairs of such recesses alternately, and thus afford a leverage for lifting and swinging the gate, substantially as described.

3. In combination, the gate, the gate-post, the horizontal segmental gear thereon, a rack having operating-connections to each side of the gate, and a connection between the segmental gear and the gate, substantially as described.

4. The combination, with the gate and its posts and with the gears D and F and their connections, of the pivoted bar G, rods H H', posts L L', and operating-levers K K', substantially as and for the purpose described.

412,129. MACHINE FOR STAPLING PIPE-COVERINGS. JAMES H. SHIELDS, Chicago, Ill. Filed Nov. 19, 1888. Serial No. 291,294. (No model.)

Claim.—1. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a supporting-bar underlying the stapling devices thereof and mechanism for automatically and intermittently advancing the covering along said bar past the stapling devices, substantially as described.

2. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a supporting-bar underlying the stapling devices thereof and mechanism for automatically and intermittently advancing the covering along said bar alternately in either direction relative to the stapling devices, substantially as described.

3. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a removable supporting-bar underlying the stapling devices thereof and mechanism for automatically and intermittently advancing the covering along said bar, substantially as described.

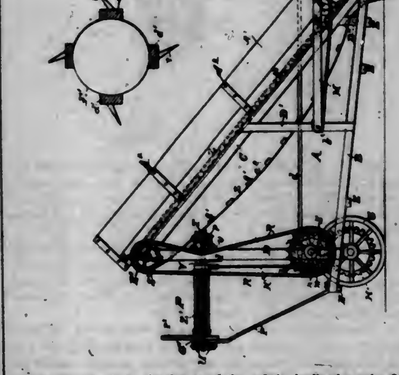
4. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a removable supporting-bar underlying the stapling devices thereof, vertically-adjustable bearings therefor, and mechanism for automatically and intermittently advancing the covering along said bar, substantially as described.

5. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a removable supporting-bar underlying the stapling devices thereof, a sliding carriage, a fixed arm and a movable arm projecting therefrom for holding the covering and supporting and guiding said bar, and mechanism for automatically and intermittently advancing said carriage, substantially as described.

6. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a removable supporting-bar underlying the stapling devices thereof, a sliding carriage, a fixed arm and a movable arm projecting from said carriage and supporting and guiding said bar, mechanism for actuating and locking said movable arm, and mechanism for automatically and intermittently advancing said carriage, substantially as described.

7. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a removable supporting-bar underlying the stapling devices thereof adjustable bearings therefor, a sliding carriage, a laterally-fixed but vertically-adjustable and a laterally-movable and vertically-adjustable arm projecting therefrom and supporting and guiding said bar, mechanism for actuating and locking said movable arm, and mechanism for automatically and intermittently advancing said carriage, substantially as described.

8. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a supporting-bar underlying the stapling devices thereof, a sliding carriage, an arm projecting therefrom, a sliding block working on said carriage, an arm projecting therefrom opposing the arm on the carriage for holding the pipe-covering, a lever-cam pivoted to the carriage for actuating said block and a lock device therefor, and mechanism for causing said carriage to automatically and intermittently advance, substantially as described.



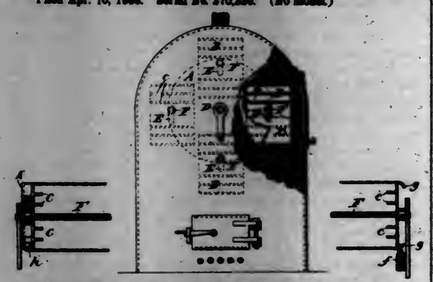
9. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, of a support for the covering, a carriage for advancing the covering along said support, having rack-bars thereon, pawls adapted to alternately and respectively engage said racks, spring-actuated shafts having crank-arms at each end thereof, one of which arms carries the pawls, the main shaft of the stapling-machine, and a cam fixed thereon for actuating the other crank-arm, substantially as described.

10. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, a supporting-bar underlying the stapling devices thereof, and a carriage for advancing the covering along said bar, having racks *a b* thereon, of pawls *c d*, crank-arms *e f*, carrying said pawls, spring-actuated shafts *g h*, from which said crank-arms project, crank-arms *j k*, also projecting from said shafts, link *n*, lever *o*, cam *l*, anti-friction rollers *m p*, and mechanism for simultaneously oscillating the shafts *g h* in the same direction, so as to throw said pawls alternately in an operative position, substantially as described.

11. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, a supporting-bar underlying the stapling devices thereof, and a carriage for advancing the covering along said bar, having racks *a b* thereon, of pawls *c d*, crank-arms *e f*, carrying said pawls, spring-actuated shafts *g h*, from which said crank-arms project, crank-arms *j k*, also projecting from said shafts, link *n*, lever *o*, cam *l*, anti-friction rollers *m p*, levers *q r*, loosely mounted on said shafts, shaft *x*, crank-arm *w*, projecting therefrom, links *u v*, respectively connecting said levers with said crank-arm, a hand-lever for oscillating said shaft, and a lock device for holding the same in its adjusted positions, substantially as described.

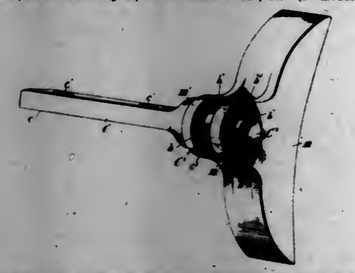
12. In a machine for stapling pipe-coverings, the combination, with a wire-stapling machine, a supporting-bar underlying the stapling devices thereof, and a carriage for advancing the covering along said bar, having toothed racks fixed thereon, of a pair of pawls adapted and arranged to alternately and respectively engage said racks, and a revolving cam for alternately operating said pawls, substantially as described.

412,180. HAY-LOADER. JOHN J. SHIVELY, Cerro Gordo, Ill. Filed Dec. 3, 1888. Serial No. 292,808. (No model.)



Claim.—1. A hay-loader consisting of the inclined carrier-frame supported at its rear end on wheels and at its front end on runners or shoes, the adjustable transverse carrier pivoted to the rear end and projecting beyond the side of the inclined carrier-frame, the front truck having the trussed side bars pivoted at their rear ends to the inclined frame, the ball connected to the front end of said inclined carrier-frame, the lever mounted on the truck pivoted to the ball, and the segmental catch on the truck, substantially as specified.

2. In a hay-loader, the combination, with the inclined carrier-frame and the transverse carrier pivoted to the rear thereof, of the drive-wheel and the sprocket-wheel S, the sprocket-wheel S' on the upper roller of the inclined carrier-belt, the intermediate sprocket-wheel T, the chain R, engaging said sprocket-wheels, the shaft *p* and its bevel-gear *u*, the shaft V and its bevel-gear *v*, and sprocket W and the sprocket of the transverse carrier connected therewith, substantially as specified.



3. The combination of the inclined carrier-frame, its carrier apron and cylinders, the runners on the front end of the frame, and the wheels supporting the rear end of the laterally-projecting adjustable transverse carrier-frame pivoted to the rear end of the inclined frame, its carrier, the front truck, its trussed bars pivoted to the inclined carrier-frame, the lever mounted on the truck and connected to the front of the inclined carrier-frame, and the adjusting-rod journaled in the inclined platform, having means at its front end for its manipulation, its rear end bearing a wheel engaging a rope connected to the transverse carrier-frame, substantially as set forth.

412,131. FRUIT-DRIER. DAVID L. SMITH, San Francisco, Cal. Filed Apr. 10, 1888. Serial No. 270,296. (No model.)

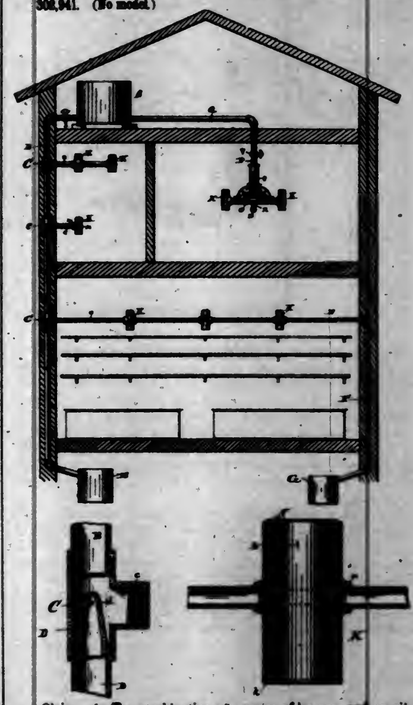
Claim.—The combination, with the revolving frames, of the pivoted reversible hanging cages mounted thereon, having trays above and below their centers, and constructed, as described, so as to retain their upright position when either half is below the central support, substantially as above described.

412,132. BRAKE FOR VEHICLES. THOMAS S. SMITH, Washington, D. C. Filed July 16, 1889. Serial No. 317,717. (No model.)

Claim.—1. In combination with a piece having the stem for supporting the brake-block provided with a lug, the brake-block having the two ears with openings through which the supporting-stem passes situated on opposite sides of the stem-lug, substantially as and for the purpose shown.

2. In combination with the brake-block-supporting stem provided with a lug, the brake-block having the two ears with openings to receive the supporting-stem, and the stop between the ears to engage the lug on the stem to limit the swing of the block around the latter, substantially as and for the purpose set forth.

3. In combination with the supporting-stem having the lug, a brake-block having the ears provided with stem-receiving openings with offsets, and the lug-engaging stop between such ears out of line with the offsets from the stem-receiving openings, substantially as and for the purpose described.



4. In combination with a suitable head provided with a lug, the brake-block provided with the two ears on its back, each having a stem-receiving opening with an offset, and a stop between the ears to engage the stem-lug when the block has been turned to bring the offsets in the ear-openings and the lug on the stem diametrically opposite each other, substantially as and for the purpose specified.

5. In combination with the brake-block-supporting stem having a lug on its under side, the brake-block having the two ears on its back provided with the stem-receiving openings and the offsets from such openings, and with a stop to engage the lug on the under side of the stem, such stop and the offset from the openings in the ears being out of line with each other, substantially as and for the purpose shown.

6. A brake-block having on its back the two ears, with openings for the reception of a supporting-stem and offsets from such openings, and a stop projection between the two ears out of line with the offsets, substantially as and for the purpose set forth.

7. In combination with a head adapted to be attached to a brake bar or lever and having a stem provided with a lug projecting from the stem-periphery between its two ends, a brake-block having the two ears adapted to engage the stem on opposite sides of the lug thereon, each provided with a stem-receiving opening with an offset or notch to admit the passage of the stem-lug as the block is slid longitudinally upon the stem, and the stop on the block between the ears out of line with the offsets or notches adapted to be engaged by the lug on the stem, substantially as and for the purpose described.

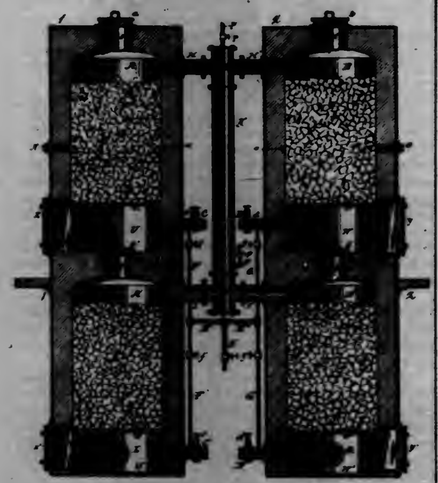
412,133. APPARATUS FOR BURNING FLUID HYDROCARBONS. WATSON SNYDER, Petoskey, Mich. Filed Mar. 13, 1889. Serial No. 302,941. (No model.)

Claim.—1. The combination of a series of burners and an oil-receptacle with the supply-pipes connecting said oil-receptacle and burners, and the perforated drip-plugs in said supply-pipes, whereby overflow of the burners is prevented, and a drip-receptacle, all substantially as specified.

2. The combination of the reservoir supply-pipe, the tubular burner, the horizontal pipe connected to said burner and supply-pipe, and the conical drip-plug at the junction of and within said pipes, all substantially as set forth.

3. The combination of the reservoir, the valved supply-pipe connected therewith, the horizontal pipe connected to supply-pipe, the plug D at the junction of said pipes, the series of burners K, connected to said horizontal pipe, and drip-pipe and receiver, all substantially in the manner and for the purpose set forth.

412,134. CAN AND CAN-CLOSURE. RICHARD M. SPENCER, New York, N. Y. Filed May 26, 1888. Serial No. 275,139. (No model.)



Claim.—1. A can-top having the annular piece extending inward to the can-cover-receiving aperture, curved downward and then upward between its outer portion and inner edge, but having such edge lower than its outer portion, and a can-cover fitting the cover-receiving aperture and engaged by the inner edge of the can-top, substantially as and for the purpose specified.

2. In combination with a can-top having an annular piece extending inward and downward from the edge of the can to the cover-receiving opening, so that its inner edge is below its outer portion and curved or concaved between such inner edge and the outer portion, the can-cover having the upwardly-extending flange or rim fitting the cover-receiving opening and held solely by the engagement of the can-top with the flange and plate of the can-cover, substantially as and for the purpose set forth.

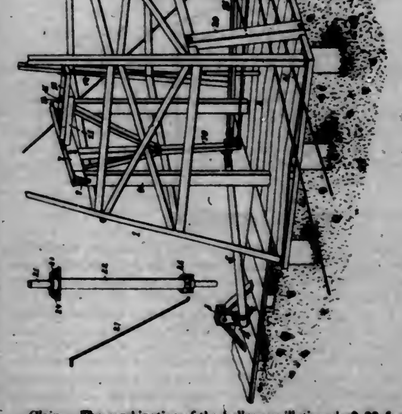
3. In combination with a can-top having an annular piece extending inward and downward from the edge of the can to the cover-receiving opening, so that its inner edge is below its outer portion, and provided with a downwardly-extending flange or rim at its inner edge, the can-cover having the upwardly-extending flange or rim fitting the cover-receiving opening and held solely by the engagement of the can-top with the flange and plate of the cover.

4. In combination with a can-top having an annular piece extending inward and downward from the edge of the can to the cover-receiving aperture and provided at its inner edge with a downwardly-extending flange, the dish-shaped can-cover held solely by the engagement of the can-top with the flange and plate of the cover, consisting of a plate with an upwardly-extending rim engaged by the inner edge of the annular piece and the downwardly-extending flange thereon at a point above the body or plate part of the cover and having on its upper edge an outwardly-extending bead or flange, substantially as and for the purpose specified.

412,135. PROCESS OF AND APPARATUS FOR MANUFACTURING GAS. THEODORE C. SPRINGER and MARCELLUS A. HOBBS, Chicago, Ill. Filed Jan. 28, 1888. Serial No. 262,304. (No model.)

Claim.—1. The process of manufacturing gas which consists in charging bituminous coal or slack upon a body of heated fuel, causing smothered combustion and distillation thereof by admitting a limited supply of air, or air and steam, and converting it into coke, at suitable intervals discharging the hot coke into a fixing-chamber and highly heating it, and passing the gaseous vapors produced in the coking-chamber through the body of highly-heated coke in the fixing-chamber for converting them into dry fixed gas.

2. The process of manufacturing gas which consists in charging bituminous coal or slack upon a body of heated fuel, causing smothered combustion and distillation thereof by admitting a limited supply of air, or air and steam, and converting it into coke, at suitable intervals discharging the hot coke into a fixing-chamber and highly heating it, enriching or carbureting the gaseous vapors produced in the coking-chamber with hydrocarbon oil or vapor, and passing the mixture through the body of highly-heated coke in the fixing-chamber for converting it into dry fixed gas.



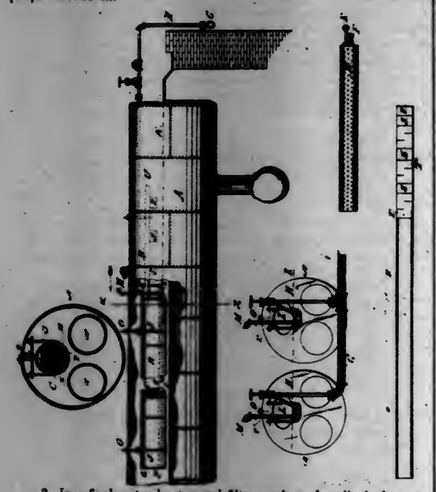
3. A cupola-generator divided into upper and lower fuel-chambers, each having air and steam supply pipes, the dividing-partition being provided with an opening and tight-fitting lid, in combination with the gas-conducting pipe leading from the top of the upper chamber into the top of the lower chamber, and the gas-take-off pipe leading from the lower chamber, for the purpose described.

4. A gas-generating cupola divided by partition 1 having a passage and tight-closing lid, into upper and lower fuel-chambers A A', each provided with an ash-pit and grate, and each having an air and steam supply pipe connecting with its ash-pit, and chamber A, having openings above its grate for the insertion of fake bars, in combination with gas-conducting pipe leading from chamber A to chamber A', and the gas-take-off pipe leading from chamber A', as and for the purpose described.

5. Two cupola gas-generators divided by horizontal partitions, the arches having openings and lids, into upper and lower fuel-chambers, in combination with gas-conducting pipes leading from the top of each of the upper chambers, and each pipe connecting to a flue which leads into each of the lower chambers, and means for supplying all of the chambers with air and steam, whereby producer-gas and vapors generated in two of the upper chambers and either of the lower chambers may be passed through the body of fuel in the other of the lower chambers for producing a fixed gas.

6. Two cupola gas-generators divided into upper and lower fuel-chambers, as described, in combination with gas-conducting pipes leading from the tops of the four chambers and connecting with a vertical pipe having connected with it an oil-supply pipe, a gas-take-off pipe leading from each of the lower fuel-chambers, and supply-pipes for air or steam connecting with the chambers, as and for the purpose described.

412,136. CONNECTING DEVICE FOR WELL-PUMPING RIGS. OSCHAR C. STOVER, Bradford, assignor of one-half to John J. B. Fisk, Pittsburg, Pa. Filed June 14, 1888. Serial No. 277,047. (No model.)

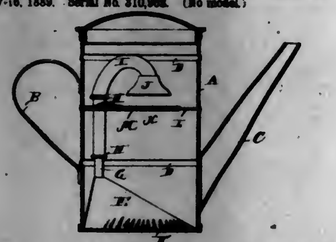


Claim.—The combination of the hollow oscillating shaft 22, fixed upright rod or bar 21, on which it is journaled, bell-crank 17, fixed by means of clamping-bracket 23 to the hollow shaft, perforated castings 26, brasses 27, fixed in the perforations and secured to the bell-crank, and connecting-rods 31 of any number of wells, substantially as shown and described.

412,137. FEED-WATER HEATER AND FILTER. JOHN D. SELLIVAN, New Orleans, La., assignor of one-half to William W. Sutcliffe, same place. Filed Mar. 29, 1889. Serial No. 305,223. (No model.)

Claim.—1. In a feed-water heater and filter such as described, the combination of a boiler with a filter placed therein, the perforated plates in said filter, and the perforated pipe running under filtering-plate and connecting with blow-off pipe F, for the purpose set forth.

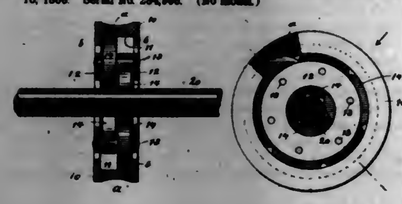
2. In a feed-water heater and filter such as described, the combination of a boiler with a filter placed therein, the perforated plates in said filter, and the feed-water pipe leading under filtering-plate and



connecting with perforated pipe attached to blow-off pipe, for the purpose set forth.

3. In a feed-water heater and filter such as described, the combination of a boiler with a filter placed therein, the perforated plates in said filter, and the feed-water trough, for the purpose set forth.

4. In a feed-water heater and filter such as described, the combination of a boiler with a filter placed therein, the perforated plates in said filter, the water-trough with partitions, and mineral-chambers therein, for the purpose set forth.

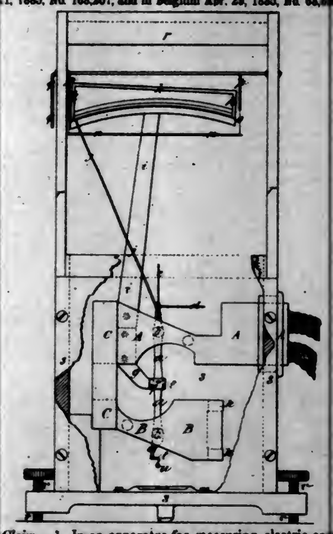


412,138. COFFEE-POT. ROBERT W. TERRELL, Conyers, Ga. Filed May 16, 1889. Serial No. 310,968. (No model.)

Claim.—1. In a coffee-pot, the combination, with the fountain attachment, of the divided spring-ring and the straining-cloth secured thereto, whereby the tube of the fountain attachment may pass upward without cutting the cloth, as set forth.

2. The improved coffee-pot herein described and shown, consisting of the coffee-pot A, having a series of internal annular grooves, the divided spring-ring adapted to engage one of said grooves, the screening-cloth secured to said ring, the false bottom within the coffee-pot, the vertical pipe rising from the said false bottom and consisting of a series of sections detachably fitted together and passing upward between the ends of the divided spring-ring, and the discharging-nozzle removably fitted on the upper end of the said pipe and having a flared mouth, as specified.

412,139. SHEAVE FOR PULLEY-BLOCKS. HOWELL P. TERRY, Brooklyn, N. Y., assignor to George W. Blair, same place. Filed Sept. 10, 1888. Serial No. 284,966. (No model.)



Claim.—1. In an apparatus for measuring electric currents, the combination of a movable mass of soft iron having the ratio of its greatest to its least diameter comparatively small, an indicator connected therewith, and an adjacent conductor having approximately equal fields of electro-magnetic force on both sides of said soft-iron mass, and being wound or shaped so that the current passing through it will produce a non-uniform field of electro-magnetic force about the said soft-iron mass.

2. In an apparatus for measuring electric currents, the combination of a movable mass of soft-iron and an indicator connected therewith, an adjacent electric conductor for producing a magnetic field about said mass, and a reversing-key in circuit with the said conductor, by which any residual magnetism may be dispelled.

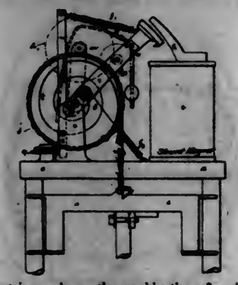
3. In an apparatus for measuring electric currents, the combination of a movable mass of soft iron and an indicator connected therewith, and the adjacent electric conductor having approximately equal fields of electro-magnetic force on both sides of said soft-iron mass, and being irregularly shaped or wound, so that the current passing through it will produce a non-uniform field of electro-magnetic force about the said mass.

4. The method of graduating electric meters, which consists in placing the meter under a constant electrical influence, then placing a series of weights upon the movable indicating member, which are inversely proportional to the squares of the forces to be indicated, and marking the different positions of the meter in said indicating member.

412,140. GALVANOMETER. WILLIAM THOMSON, Glasgow, County of Lanark, Scotland. Filed Mar. 20, 1886. Serial No. 197,013. (No model.) Patented in England Aug. 9, 1884, No. 11,106; in France Apr. 11, 1885, No. 168,207, and in Belgium Apr. 29, 1885, No. 68,605.

Claim.—1. In an apparatus for measuring electric currents, the combination of a movable mass of soft iron having the ratio of its greatest to its least diameter comparatively small, an indicator connected therewith, and an adjacent conductor having approximately equal fields of electro-magnetic force on both sides of said soft-iron mass, and being wound or shaped so that the current passing through it will produce a non-uniform field of electro-magnetic force about the said soft-iron mass.

2. In an apparatus for measuring electric currents, the combination of a movable mass of soft-iron and an indicator connected therewith, an adjacent electric conductor for producing a magnetic field about said mass, and a reversing-key in circuit with the said conductor, by which any residual magnetism may be dispelled.



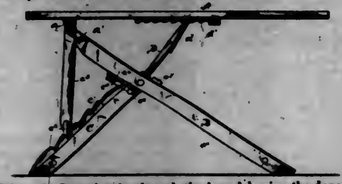
3. In an apparatus for measuring electric currents, the combination of a movable mass of soft iron and an indicator connected therewith, and the adjacent electric conductor having approximately equal fields of electro-magnetic force on both sides of said soft-iron mass, and being irregularly shaped or wound, so that the current passing through it will produce a non-uniform field of electro-magnetic force about the said mass.

4. The method of graduating electric meters, which consists in placing the meter under a constant electrical influence, then placing a series of weights upon the movable indicating member, which are inversely proportional to the squares of the forces to be indicated, and marking the different positions of the meter in said indicating member.

412,141. ARC LIGHT. FRIEDRICH VON HEFNER-ALTENECK, Berlin, and CARL HOFFMANN, Charlottenburg, Prussia, Germany. Filed Apr. 5, 1889. Serial No. 306,051. (No model.) Patented in Germany June 25, 1887, No. 42,900; in Belgium Nov. 16, 1887, No. 78,560; in France Nov. 16, 1887, No. 187,089; in Italy Dec. 31, 1887, No. 22,894; in Norway Jan. 7, 1888, No. 854, and in Austria-Hungary Sept. 30, 1888, No. 17,015 and No. 40,063.

Claim.—1. In an electric-arc lamp, the combination, with a carbon-carrier and a drum, of a flexible conductor of electricity carrying the carbon-carrier and wound upon the drum, from which it is unwound by the weight of the carbon-carrier, a reacting device connected with the said drum which winds the flexible conductor thereon when relieved of the weight of the carrier, a pivotally-mounted frame carrying the said drum, and a pendulous escapement also carried by the frame and regulated in its operation by the inclination thereof, as and for the purposes described.

2. In an electric-arc lamp, the combination, with a movable carbon-carrier and a drum, of a flexible electrical conductor carrying the said carbon-carrier and wound upon the drum, from which it is unwound by the weight of the said carrier, and a reacting device connected with the said drum which winds the flexible conductor thereon when relieved of the weight of the carrier, as and for the purposes described.



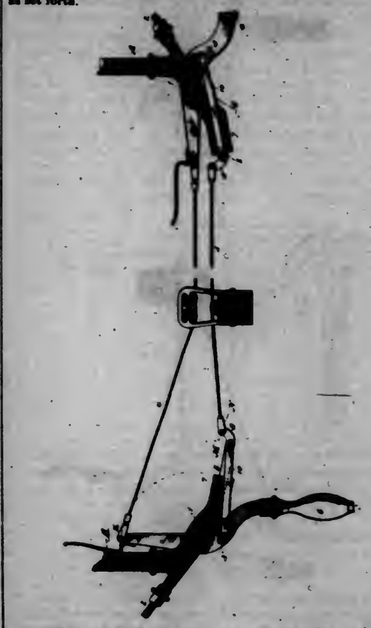
3. In an electric-arc lamp, the combination of a pivoted frame, a carbon carried thereby, a spring drawing the frame in a direction opposite to that in which it is drawn by the weight of the carbon, and an auxiliary spring which, in the consumption and consequent loss of weight of the carbon, stretches and has its strength increased in proportion to the loss of weight of the carbon, as and for the purposes described.

4. In an electric-arc lamp, the combination, with a movable carbon-carrier, of an electro-magnet in shunt-circuit to the lamp, a pivoted frame forming an armature for the said magnet, a drum provided with an escapement mounted in the said frame, and a flexible electrical conductor wound upon the said drum and carrying the carbon-carrier, as and for the purposes described.

5. In an electric-arc lamp, the combination, with a movable carbon-carrier, of an electro-magnet in shunt circuit to the lamp, a pivoted frame forming an armature for the said magnet, a drum provided with an escapement mounted on the said frame, a flexible electrical conductor coiled upon the said drum and carrying the carbon-carrier, and a reacting device opposed to the attraction of the said magnet, as and for the purposes described.

412,142. IRONING-BOARD. WILLIAM WALTERS, Findlay, Ohio. Filed Apr. 5, 1889. Serial No. 306,092. (No model.)

Claim.—1. In an ironing-board, the board having the depending legs, the legs having the casting pivoted in said legs, the eccentric carried by said legs, the legs pivoted to the first-named legs, having rack and cross-bar against which the eccentric bears, and the hanger having the pawl for engaging the rack in said legs, substantially as shown and described.



2. In an ironing-board, the combination of the board having the racks d', the legs C, having the rack-plates c' secured thereon, the arm D, carrying a plate d, engaging the racks d' on the board, the hangers c^3, depending from the board, having a pawl c^5, for engaging the rack-plate c' on the legs C, the legs B, pivoted to the legs C, and the eccentric c^4, carried by legs B, for engaging the rod c^6 on legs C, all of said parts being arranged as shown and operating in the manner and for the purpose described.

412,143. CASH AND PACKAGE CARRYING APPARATUS. HENRY M. WEAVER, Mansfield, Ohio. Filed Mar. 6, 1889. Serial No. 302,694. (No model.)

Claim.—1. The combination, with track-wires and supports therefor, of pivoted levers to which the ends of one wire are connected and reciprocating rods connected with the levers and having the ends of the other wire attached thereto.

2. The combination, with track-wires and supports therefor, of pivoted levers to which the ends of one wire are attached and reciprocating rods mounted in inclined bearings and connected to the ends of the other wire.

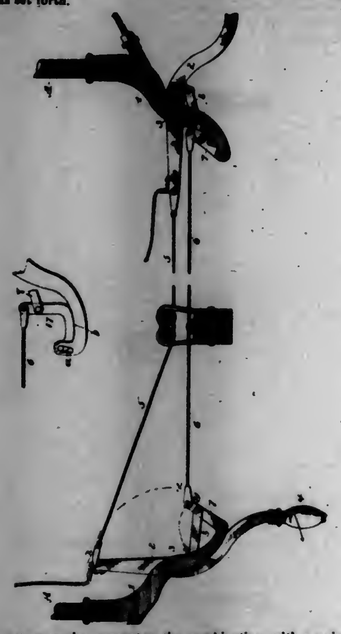
3. The combination, with a pair of track-wires and supports therefor, of pivoted levers to which the ends of one wire are connected and obliquely-reciprocating rods connected with the levers and having the ends of the other wire connected therewith, substantially as set forth.

4. The combination, with a pair of track-wires and supports therefor, of pivoted levers to which the ends of one wire are connected, reciprocating rods to which the ends of the other wire are secured, and connecting-bars pivotally connecting these rods to the levers, substantially as set forth.

5. The combination, with a pair of track-wires and carrier, of hangers having elbows thereon, levers pivoted to the elbows, to which levers the ends of one wire are secured, rods or sliding bars loosely connected with the elbow and having the ends of one wire connected thereto, and connecting-bars pivotally joining the sliding bars and levers, substantially as set forth.

6. The combination, substantially as hereinbefore set forth, in a store-service system, of the supporting-brackets at the in and out stations, the reciprocating bars sliding therein, the track-wire secured to said reciprocating bars, spreading-levers connected mediately or immediately to said reciprocating bars, whereby the levers and bars are moved concurrently, and a wire stretched between the ends of the spreading-levers.

7. The combination, substantially as hereinbefore set forth, in a store-service system, of supporting-brackets at each station, reciprocating bars mounted in said brackets, the track-wires stretched between said bars, spreading-levers connected mediately or immediately with said bars, whereby the movement of one will operate the other, a wire stretched between the ends of said levers, and hand-levers whereby said bars are reciprocated and the spreading-levers moved.



412,144. CASH AND PACKAGE CARRIER. HENRY M. WEAVER, Mansfield, Ohio. Filed Mar. 12, 1889. Serial No. 302,930. (No model.)

Claim.—1. The combination, in a store-service apparatus, of supports, levers pivoted to said supports, a wire attached to said levers, arms pivoted to the supports and connected to the levers, and a wire attached to the arms.

2. In a store-service apparatus, the combination of a longitudinally movable track-wire, a diverging longitudinally-movable track-wire, and devices for changing the direction of inclination of the diverging wire relative to the longitudinally-movable wire and for moving the latter.

3. In a store-service apparatus, the combination, with a horizontal longitudinally-movable wire and a movable wire located normally at an inclination or angle to the horizontal wire, of levers attached

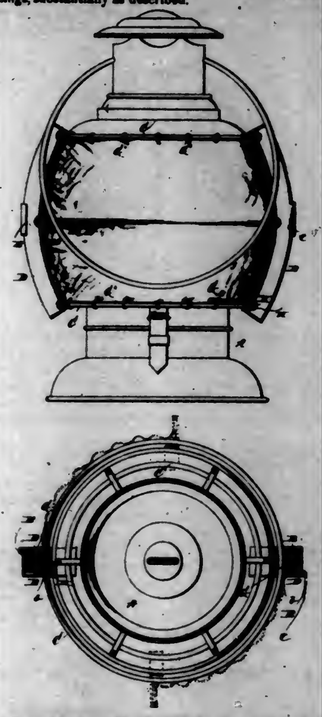
to the opposite ends of the inclined wire for changing the direction of its inclination and arms attached to the ends of the other wire, substantially as set forth.

4. In a store-service apparatus, the combination, with a pair of movable track-wires, one of which is maintained continuously in approximately horizontal position and the other inclined or at an angle to the horizontal wire, of rigid supports, levers pivoted thereto for changing the angle of inclination of the inclined wire, and arms actuated by the levers for moving the horizontal wire longitudinally, substantially as set forth.

5. In a store-service apparatus, the combination, with a track-wire and levers attached to the ends thereof for moving it longitudinally and changing its inclination relative to the lower wire, of a lower approximately horizontal wire and arms connected to the ends of said wire for moving same longitudinally.

6. In a store-service apparatus, the combination, with a track-wire and levers for moving said wire longitudinally and the ends thereof in arcs of a circle, of a second wire maintained continuously in approximately a horizontal plane and arms for moving said second wire longitudinally.

7. The combination, with supports and a pair of track-wires, of a pair of pivoted levers for one wire and a pair of pivoted arms for the other wire, the levers connected to one wire adapted to move in arcs of a circle and the arms connected to the other wire adapted to move in arcs of a circle, and links connecting the levers and arms, substantially as set forth.



8. The combination, with a pair of track-wires and carriers, of hangers having elbows thereon, levers pivoted to the elbows to which the ends of one wire are secured, arms pivoted to the elbows with the ends of one wire connected thereto, and connecting-bars loosely joining the pivoted arms with the levers, substantially as set forth.

9. The combination, substantially as hereinbefore set forth, in a store-service system, of a reciprocating track-wire extending from station to station operating devices at each station to which it is connected, a wire extending from station to station, and spreading devices at each station to which it is connected, said spreading devices connected mediately or immediately to the mechanism for operating the reciprocating wire.

412,145. SIGNAL-LANTERN. GEORGE C. WHITEHURST and WILLIAM A. WHITEHURST, Oberlin, Ohio. Filed Jan. 30, 1889. Serial No. 298,113. (No model.)

Claim.—1. A lantern provided with the screens attached thereto at diametrically-opposite points and constructed to be simultaneously extended around the lantern, substantially as described.

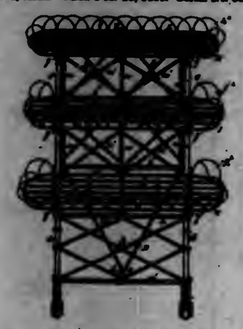
2. The combination of the lantern, the casings attached thereto at diametrically-opposite points, and the folding screens constructed to be simultaneously extended around the lantern and folded within the casings, substantially as described.

3. In combination with a lantern, the rings surrounding the same and the flexible colored screen running on the rings and constructed to be folded or extended around the lantern, substantially as specified.

4. The combination, with a lantern, of the casing attached thereto, the sliding rings surrounding the lantern, and the flexible screens attached to the rings and adapted to be folded within the casing, substantially as specified.

5. The combination, with a lantern, of the open-sided casings arranged on opposite sides thereof, the sliding rings surrounding the lantern, the caps attached to the rings and carried thereby, and the flexible screens attached at one edge to the casings and at the other edge to the caps, substantially as and for the purpose specified.

6. The combination, with a lantern, of the open-sided casings attached thereto, the sliding rings surrounding the lantern, the caps carried by the rings and adapted to close the open sides of the casings, and provided with spring-catches to engage the same, and the flexible screens arranged on the rings and adapted to be folded within the casings, substantially as specified.



7. The combination, with a lantern, of the casings attached thereto at diametrically-opposite points, the sliding rings operating in guide-apertures in the said casings and surrounding the lantern, and the flexible screen provided with small rings G', fitting on the said sliding rings and attached at one edge to the casings, substantially as specified.

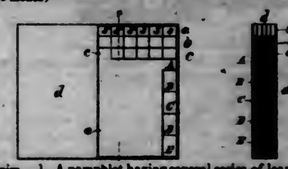
8. The combination, with a lantern, of the sliding rings surrounding the same, the flexible screen sliding on the rings and adapted to be gathered thereon, and the small rings G' G' on the said sliding rings passing through the edge of the screen to secure the latter firmly to the rings, substantially as specified.

9. In a lantern, the two folding screens arranged at diametrically-opposite points and constructed to be simultaneously extended in opposite directions, each screen covering one-half of the lantern proper, so that when both the screens are extended the entire lantern is covered, as set forth.

10. The combination, with a lantern, of the sliding rings surrounding the same, the flexible screen sliding on the rings and adapted to be gathered thereon, the casings secured to the lantern and having openings that form bearings for the sliding rings, the caps secured to the latter, and loops H H, secured to the inner faces of the casings and caps and bent around the stiffening-rods in the ends of the screen, substantially as set forth.

412,146. FOLDING WIRE FLOWER-STAND. ALONZO B. WHITEHOUSE, Boston, Mass. Filed Feb. 26, 1889. Serial No. 301,015. (Model.)

Claim.—1. The combination of two front wire posts with two rear wire posts of greater length than the front posts, the two front posts being connected together at the top and bottom by transverse wire rods hinged at each end to the posts, the two rear posts being connected in a similar way, each front post being connected with its rear post by side rods, the upper side rods being formed with steps and a brace extending from one of the rear transverse rods to one of the front transverse rods, detachably fastened at one end, so that when unfastened the frame may be flattened by pressing two diagonally-opposite corners toward each other, substantially as described.



2. The combination of two front wire posts with two rear wire posts of greater length than the front posts, each front post connected with its rear post at the upper end by a wire rod bent to form a series of steps, each front post and its rear post and connecting top rod being formed of one continuous wire, and each front post being connected with its rear post near the bottom by a side rod, the two front posts being connected both at the top and bottom by transverse rods hinged at both ends to the posts, the rear posts being similarly connected, and a brace extending from the rear bottom transverse rod to the front bottom transverse rod, detachably connected to one of the transverse rods, so that when unfastened it allows the frame to be flattened by compressing two diagonally-opposite corners toward each other, substantially as described.

3. The combination of two front wire posts with two rear wire posts of greater length than the two front posts, each front post connected with its rear post at the upper end by a wire rod bent to form a series of steps, each front post and its rear post and connecting top rod being formed of one continuous wire, and each front post being connected with its rear post near the bottom by a side rod, the two front posts being connected both at top and bottom by transverse rods hinged at both ends to the posts, the rear posts being similarly connected, the front and rear being filled in with wire panels hinged to the posts, the sides being also filled in with wire panels, and a brace extending from the rear bottom transverse rod to the front bottom transverse rod detachably connected to one of the transverse rods, so that when unfastened it allows the frame to be flattened by compressing two diagonally-opposite corners toward each other, substantially as described.

4. The combination of two or more folding wire trays of graduated sizes, forming a nest when folded, each of which is formed with a wire rim and suitable wire filling, the front side of the rim of the smallest being connected with the rear side of the rim of the next exceeding and larger tray by wire rods hinged at each end and of suitable length to allow the first tray to shut inside the second tray, the second tray connected with the third tray in the same manner, if more than two trays be used, and so on with each succeeding tray, substantially as described.

5. A folding wire flower-stand consisting of a frame composed of two front wire posts and two rear wire posts of greater length than the front posts each front post being connected with its rear post at the upper end by a wire rod bent to form a series of steps, each front post and its rear post and connecting top rod being formed of one continuous wire, and each front post being connected with its rear post near the bottom by a side rod, the two front posts being connected both at top and bottom by transverse rods hinged at both ends to the posts, the rear posts being similarly connected, and a brace extending from the rear bottom transverse rod to the front bottom transverse rod, detachably connected to one of the transverse rods, so that when unfastened it allows the frame to be flattened by compressing two diagonally-opposite corners toward each other, in combination with a set of folding wire trays to fit the steps formed by the upper side rods, the trays being graduated in size to form a nest when folded, each of which is formed with a wire rim and suitable wire filling, the front side of the rim of the top tray being connected with the rear side of the rim of the next succeeding and larger tray by wire rods hinged at each end and of suitable length to allow the first tray to nest in the second tray, the second tray connected with the third still larger tray in the same manner, if more than two trays be used, and so on with each succeeding tray, the trays seated on the top step and on the bottom step having a rest projecting from the transverse rods, the top step having catches at the rear corners, against which the back of the top tray bears, and each step having at its front corner a catch-hook to hold the tray in position, substantially as described.

412,147. COMBINED INDEX-PAMPHLET AND FILE. RICHARD R. WILLIAMS, Brooklyn, N. Y. Filed Oct. 4, 1888. Serial No. 287,226. (No model.)

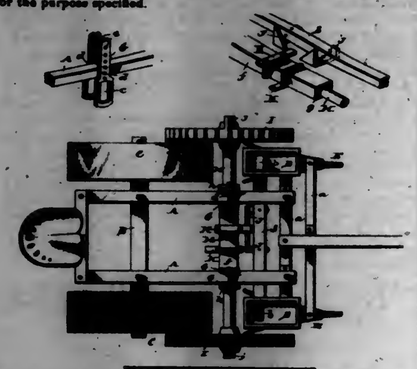
Claim.—1. A pamphlet having several series of leaves of uniform width from the hinge outward, and the several series of leaves being successively shortened at the top end of the pamphlet, the leaves in each series having their edges coincident and the outer leaves of each series being notched to expose the inner leaves, as and for the purpose set forth.

2. The combination, with a cover or case, of several pamphlets of the same length and width, consisting each in several series of leaves successively shortened, with the edges of the leaves in each series notched to expose index-spaces upon the inner leaves of the pamphlet, as set forth, and the edges of the pamphlets being provided with a marginal index at the desired points, as and for the purpose set forth.

412,148. PROCESS OF MAKING DYES. ROBERT GREVILLE-WILLIAMS, Albany, N. Y., assignor to the Albany Coal Tar Dye and Chemical Company, same place. Filed June 6, 1889. Serial No. 313,266. (No specimens.)

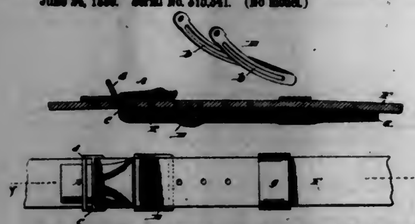
Claim.—The process for the production of new coloring-matters by combining one molecule of tetrazo-diphenyl or one molecule of one of the other herein-mentioned tetrazo compounds with two molecules of an alkalized acid of the orchilla lichens or halogen or sulpho compounds of the same, substantially as set forth.

412,149. PROCESS OF MAKING DYES. ROBERT GREVILLE-WILLIAMS, Albany, N. Y., assignor to the Albany Coal Tar Dye and Chemical Company, same place. Filed June 6, 1889. Serial No. 313,267. (No specimens.)



Claim.—The process for the production of mixed coloring-matters by first combining one molecule of tetrazo-diphenyl or one molecule of one of the other herein-mentioned tetrazo compounds with one molecule of one of the herein-mentioned amines or phenols and then combining this intermediate product with one molecule of an alkalized acid of the orchilla lichen or halogen or sulpho compound of the same, substantially as set forth.

412,160. CORN-PLANTER. JOHANN F. A. WIEHLMANN, Sabetha City, Kas. Filed June 26, 1889. Serial No. 315,573. (No model.)



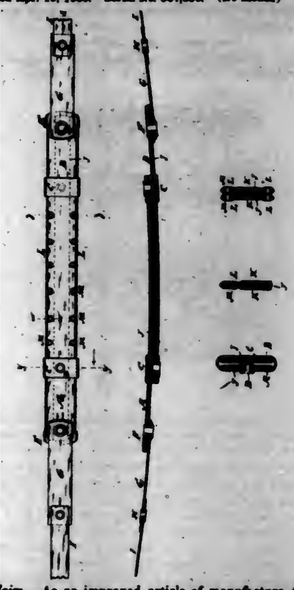
Claim.—1. The combination, with the frame, feed-boxes, and reciprocating feed-slide, of the transverse shaft, the measuring-wheels carried thereby, the plates on the feed-slide embracing the slide upon two sides and formed with oppositely-inclined faces, and the fingers clamped on the shaft of the measuring-wheels and extending in opposite directions to contact directly with the said inclined faces, substantially as and for the purpose specified.

2. The combination, with the frame, the seed-boxes, the reciprocating feed-slide, and the plates secured to the feed-slide and formed with vertical portions having oppositely-inclined faces, of the hangers secured to the frame, the transverse shaft journaled in the hangers and formed with squared portion between the hangers, and the fingers secured to the squared portion of the shaft by clips and extending in

opposite directions from opposite sides thereof, substantially as and for the purpose specified.

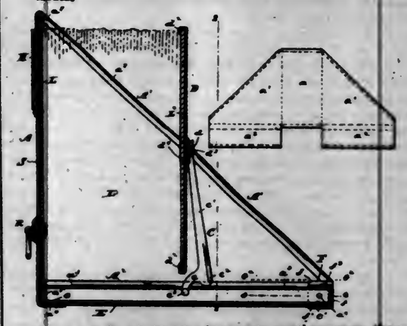
412,151. BUCKLE. MILTON I. WHITERS, Atlee's Station, Va. Filed June 24, 1889. Serial No. 315,341. (No model.)

Claim.—1. The combination, with the trace and the hame-tag, of the plate A, having the tongue E, the loop B, pivotally connected with the hame-tag and with the plate in line with the tongue E, and the link C, pivotally connected with the hame-tag and adapted to swing over the end of the plate A, substantially as specified.



2. The combination, with the trace, the hame-tag, the plate A, having the tongue E and the loop B, of the link C, pivotally connected with the hame-tag and adapted to fit over the end of the plate A and having the supplemental loop *d*, substantially as described.

412,152. DRESS-SPRING. RAPHAEL H. WOLFF, New York, N. Y. Filed Apr. 19, 1889. Serial No. 307,656. (No model.)



Claim.—The springs A B, in combination with the guide-loops C C and supplementary loops J J, substantially as described.

412,153. DRESS-SPRING. RAPHAEL H. WOLFF, New York, N. Y. Filed Apr. 19, 1889. Serial No. 307,655. (No model.)

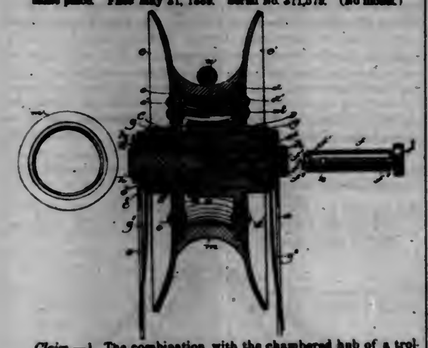
Claim.—As an improved article of manufacture, the herein-described dress-spring, comprising the two spring-plates lengthwise adjustable one upon the other and each having at its longitudinal edge a projecting flange of fibrous material provided with a series of eyelets, some of which eyelets in one flange are brought into coincidence with the eyelets in the adjacent flange by sliding one spring-plate on the other, substantially as and for the purposes described.

412,154. FILE OR DOCUMENT HOLDER. REMUS W. WOODRUFF, Washington, D. C. Filed Mar. 26, 1889. Serial No. 304,798. (No model.)

Claim.—1. In a holder for documents or other papers, the combination, with a thin sheet-metal exterior, of the interior lining consisting of sheets of fibrous and elastic material secured in place on the inner side and by means of said sheet-metal portion, and adapted by their elasticity to stiffen the box and preserve its shape and to protect the papers from the condensation and rust upon the inner face of the metal shell, substantially as set forth.

2. The combination, with the sheet-metal bottom, of the stiff flanged slot-piece E, connected therewith, substantially as set forth.

3. The combination, with the sheet-metal bottom portions A^9, separated by the slot B, of the slot-piece E, interlocking with and uniting said portions, substantially as set forth.



4. The combination, with the sheet-metal front having the flange a^4, the side A', and the bottom A^9, of the slot-piece E, connected with said bottom and with the flange a^4, substantially as set forth.

5. The combination, with the file-board, the lever C, and the slotted bottom, of the end piece having a horizontal portion passing across said slot for supporting the lever, substantially as set forth.

6. The combination, with the sheet-metal bottom and sides of the holder, of the end piece covering the edge of said bottom and having vertical end flanges riveted horizontally to the sides, substantially as set forth.

7. The sheet-metal file-holder blank in one piece having the parts *a a' a⁴*, substantially as set forth.

412,155. TROLLEY FOR ELECTRIC-RAILWAY SERVICE. ALBERT ANDERSON, Boston, Mass., assignor to Charles L. Edgar, trustee, same place. Filed May 21, 1889. Serial No. 311,573. (No model.)

Claim.—1. The combination, with the chambered hub of a trolley-wheel, of an insulating non-metallic bearing, substantially as described.

2. The combination, with the hub of a trolley-wheel, of a detachable annular contact-shield, substantially as described.

3. The divided hub of the trolley-wheel and the attached side flanges, combined with a detachable annular contact-shield clamped between the said hub and side flanges, substantially as described.

4. In a trolley-wheel, a divided hub, chambered as described, combined with a removable tube and a series of non-metallic washers contained therein, substantially as described.

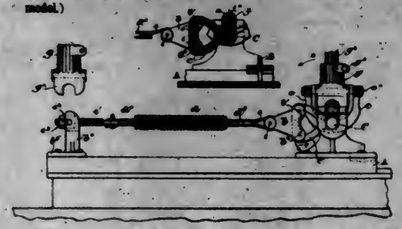
5. The separable trolley-hub, chambered as described, and a series of non-metallic washers therein, combined with a two-part pin or axle *f f'*, to operate substantially as described.

6. The combination, with a trolley-wheel and pivot or axle therefor, of a trolley-frame composed of sheet metal having flanged edges united together, substantially as described, and brushes g^8 to connect the hub of the trolley-wheel with the trolley-frame, substantially as described.

7. The combination, with the trolley-wheel, of a sheet-metal trolley-frame having overturned flanges and made tapering, substantially as described, from its end between which the trolley-wheel runs toward its opposite end, the sides being rigidly connected by straps attached to the flanges, substantially as described.

8. The combination, with a trolley-frame and trolley-wheel, of metallic conducting-brushes g^8 between the hubs of the trolley-wheel and the said frame, to operate substantially as described.

412,156. MANGLE. HENRY ANDERSEN, New York, N. Y., assignor of one-half to Moritz Sandrock, same place. Filed June 6, 1889. Serial No. 313,005. (No model.)

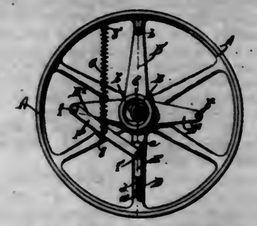


Claim.—1. The combination, with supporting-standards B B, of the rolls C C' C^9 C^9, a fixed abutment D between the rolls C C^9, the face of the abutment being concentric to the roll C', an inclined guide-board F, supported on ledges *f* of the standards B, and an inclined guide-board G in front of the lower roll C^9, substantially as set forth.

2. The combination of supporting-standards B B, rolls C C' C^9 C^9, a fixed abutment D between the rolls C C^9, the face of the abutment being concentric to the axis of the roll C', and an inclined guide-board F, provided with pins and engaging a fixed eye f^2 of the base-board A, substantially as set forth.

3. The combination, with supporting-standards B B, of rolls C C' C^9 C^9, a fixed abutment D between the rolls C C^9, the face of said abutment being concentric to the axis of the roll C', a guide-roller E above the roll C, said guide-roller being supported by curved and pivoted arms E', stop-pins *e* for said arms, and the inclined guide-board F back of the rolls C^9 C^9, substantially as set forth.

412,157. TROLLEY ATTACHMENT FOR ELECTRIC-RAILWAY CARS. JOHAN M. ANDERSEN, Boston, Mass., assignor to Charles L. Edgar, trustee, same place. Filed June 20, 1889. Serial No. 316,031. (No model.)



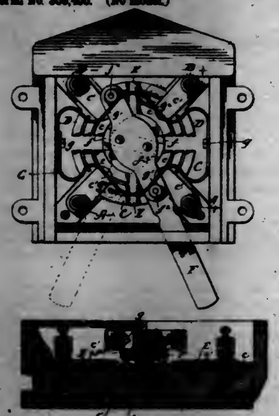
Claim.—1. A rock-shaft, as C, having an arm, as *c'*, and a connected trolley-pole holder, combined with a head having pins or projections shaped to engage the said arms, as described, at opposite sides of a line intersecting the said rock-shaft, and springs co-operating with the said head to keep the trolley-pole holder pressed in the direction to keep the trolley-wheel vertically against the usual wire or conductor whatever may be the direction of movement of the car, substantially as described.

2. The stand, a rock-shaft, as C, therein having ears *c*, and a pivoted trolley-pole holder, combined with springs co-operating with the said holder, whereby it may tip on the said rock-shaft to enable the trolley-wheel to move laterally, as required, and follow along and remain upon the wire or conductor notwithstanding differences of curvature between the track and wire, substantially as described.

3. The stand, the rock-shaft therein having arms *c'*, ears *c*, and lugs 2 3 4, the rod *f*, springs surrounding the rod, the pivoted trolley-pole holder having its lower end placed under the control of the said springs, and the trolley-pole and trolley-wheel, combined with the head and the springs connected thereto, as described, to cause the head to draw upon a part of the said arms in all positions of the trolley-pole holder and pole, substantially as described.

412,158. GOVERNOR. GEORGE G. ARMAMA, Syracuse, N. Y., assignor of one-half to James D. Wheeler, same place. Filed July 13, 1888. Serial No. 317,403. (No model.)

Claim.—1. In a governor, the combination of an oscillating eccentric-operator for changing the throw of the eccentric, a guide arranged diametrically opposite to the pivot-point of said support, a centrifugally-operating weight guided by said guide, a connection between said eccentric-operator and the weight, and a spring for retracting said weight, substantially as described.

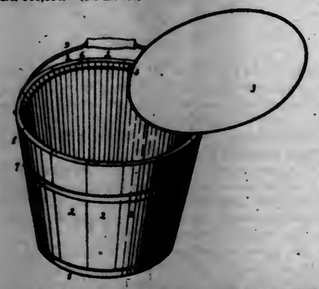


2. In a governor, the combination of a rocking eccentric-operator B for changing the throw of the eccentric, a centrifugally-working weight E, a guide-rod *d* for said weight, and the link F, hinged to the said eccentric-operator and weight E, and also to the spring for retracting the weight, substantially as specified.

3. In a governor, the combination of an oscillating eccentric-operator for changing the throw of the eccentric, a guide arranged diametrically opposite to the pivot-point of said support, a centrifugally-operating weight guided by said guide, a link F, pivoted to the weight and pivoted off the center of the eccentric-operator, and a spring for retracting said weight, substantially as specified.

4. In a governor, the combination of an oscillating eccentric-operator for changing the throw of the eccentric, a guide arranged diametrically opposite to the said eccentric-operator, a weight guided by said guide, connection-p ints on either side of the center of said eccentric-operator, a link connected to said weight and adapted to be connected to either of said connection-points of the eccentric-operator, and a spring for retracting said weight, substantially as described.

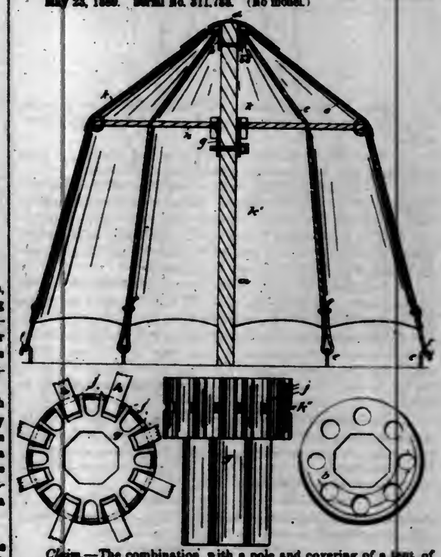
5. In a governor, the combination of an eccentric-operator, a projecting arm provided upon said operator and pivoted to the frame mounted on the driving-axle, a centrifugally-operating weight, a guide for said weight, arranged diametrically opposite to the said projecting arm of the eccentric-operator, arms B^2 and B^3, projecting from opposite sides of the said eccentric-operator, a connection F from the weight to either of said arms B^2 and B^3, and the spring for retracting said weight, substantially as specified.



412,159. ELECTRIC SWITCH. FRED M. BURNETT, New York, N. Y., assignor of one-half to William Carroll, same place. Filed Apr. 3, 1889. Serial No. 306,055. (No model.)

Claim.—1. In an electric double-pole switch, four pairs of plates, each pair in electrical connection with a binding-post and forming nearly a quadrant, springs for forcing said plates together, in combination with two circuit-closing plates mounted opposite each other upon a rotatable disk, the said circuit-closing plates being located in a plane coincident with the contact-points between the pairs of quadrant-plates, substantially as described.

2. In an electrical double-pole switch, four pairs of plates, each pair in electrical connection with a binding post and forming nearly a quadrant, springs for forcing said plates together, in combination with two circuit-closing plates mounted opposite each other upon a rotatable disk, the said circuit-closing plates being located in a plane coincident with the contact-points between the pairs of quadrant-plates, a lever connected with said disk, and a spring for imparting a quick motion to the lever, substantially as described.



412,160. KIT. WILLIAM H. DUNN, Chicago, Ill., assignor to the Menasha Woodenware Company, Menasha, Wis. Filed May 7, 1888. Serial No. 309,890. (No model.)

Claim.—1. As an article of manufacture, a kit composed of staves having crozings formed near each end of the staves, a bottom inserted in the lower one of said crozings, a hoop secured around the kit near its bottom end and one intermediate between said bottom hoop and the upper crozing, a chamfer formed upon the projecting ends of the staves above said upper crozing, and a cover having a smooth upper surface and its upper and lower surfaces near the edge thereof chamfered, and adapting the cover to enter said upper crozing and also to be inserted therein by being placed upon the aforesaid chamfered ends of the staves, pressed downward, and sprung into said crozing under the positive shoulder 4', and thereby making the removal of said cover impossible except by its breakage or the lowering of the aforesaid upper hoop, all combined and operating substantially as described.

2. As an article of manufacture, a kit composed of staves having crozings formed near each end of the staves, a bottom inserted in the lower one of said crozings, a hoop secured around the kit near its bottom end and one intermediate between said bottom hoop and the upper crozing, said intermediate hoop having corrugations transversely thereof, a chamfer formed upon the projecting ends of the staves above said upper crozing, and a cover having a smooth upper surface and its upper and lower surfaces near the edge thereof chamfered, and adapting the cover to enter said upper crozing and also to be inserted therein by being placed upon the aforesaid chamfered ends of the staves, pressed downward, and sprung into said crozing under the positive shoulder 4', and thereby making the removal of said cover impossible except by its breakage or the lowering of the aforesaid upper hoop, all combined and operating substantially as described.

412,161. TENT. JOSEPH BURRELL, Newark, N. J., assignor of one-half to Emma J. Miller, same place. Filed June 20, 1887. Renewed May 23, 1889. Serial No. 311,733. (No model.)

Claim.—The combination, with a pole and covering of a tent, of a fixed flange-collar on the upper end of the pole, ropes secured to said tent-covering and fastened at one end to the fixed flange and to tent-pins in the ground at the other end, radial arms having one end pivoted to a sliding collar and the other end secured to ropes *a*, a sliding collar adapted to slide on the pole, and a set-screw for holding said collar in position, whereby the said ropes may be spread and made taut, after having been arranged to said pole and pins, without unduly stretching the tent-covering, all as herein described, as and for the purposes set forth.

412,162. ROLL FOR PAPER-MAKING MACHINES. APOLLOS CASTWRIGHT and ALBERT R. CROSBY, Springfield, Mass., assignors to C. H. Smith & Co., same place. Filed Feb. 1, 1888. Serial No. 262,534. (No model.)

Claim.—1. A roll-frame for paper-makers' use, having two spiral coils wound or coiled in opposite directions, substantially as shown.

2. A dandy-roll frame formed of two coils of wire, one coiled in a direction opposite the other and being within the coil of the other and having the larger part of points of contact united, substantially as shown.

3. The combination of spirally-formed cylinders *a b*, having longitudinal wires *c* secured thereto, with heads *d*, journals *f*, and cover-supporting wire *e*, wound upon the longitudinal wire *c*, and a cover, substantially as shown.

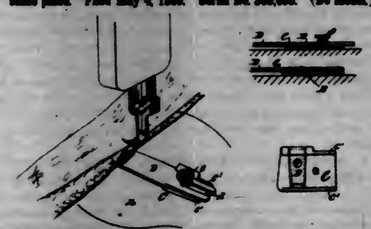
4. A dandy-roll having suitable heads and an open-work metal frame therebetween, consisting of a series of wires wound spirally upon each other in reverse directions and having their ends secured to said heads, and a series of rods extending between the latter by the sides of said wires, substantially as set forth.

5. A dandy-roll having suitable heads and an open-work metal frame therebetween, consisting of a series of wires wound spirally upon each other in reverse direction, and a series of rods extending between said heads by the side of said wires, substantially as shown.

6. In a roll, the combination of two or more spiral coils, one within the other, and coiled in the opposite direction, with longitudinal wires, winding-wires, and cover, substantially as shown.

7. A paper-maker's roll having two spirally-formed cylinders, one within the other, one or both being crimped, substantially as shown.

8. A paper-maker's roll having its supporting-body made of two or more spirally-formed cylinders, one within the other, the wires of the inner one being bent or crimped to bring it to the surface of the outer cylinder, substantially as shown.



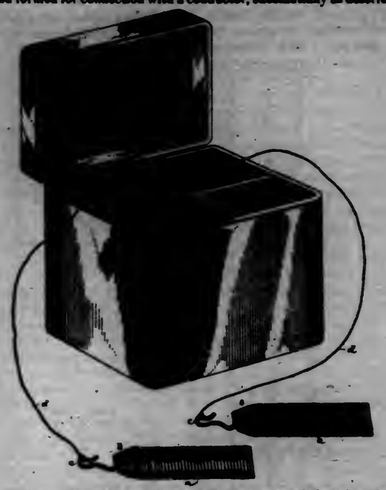
412,163. BOBBIN. ADOLPH CLAUS, Lowell, Mass., assignor of one-half to Joseph S. Ludlam, same place. Filed Feb. 26, 1889. Serial No. 301,244. (No model.)

Brief.—The object of the invention is to facilitate the removal of the base of the cop from the base of the bobbin without the necessity of using a knife.

Claim.—A bobbin having a base and a barrel provided with holding projections, and with a starting portion between the barrel and base, the said starting portion being of greater diameter than the barrel in the line of its holding projections, substantially as described.

412,164. ATTACHMENT-HOLDER FOR SEWING-MACHINES. JAMES CORE, Ogdensburg, N. Y., assignor of one-half to Benjamin C. Algie, same place. Filed May 4, 1889. Serial No. 309,696. (No model.)

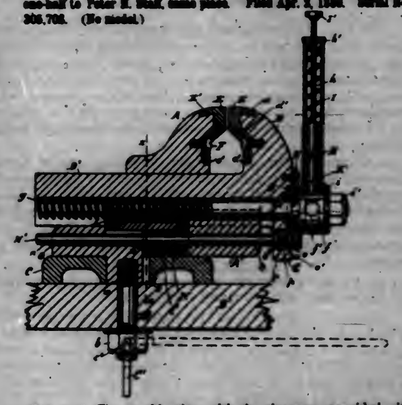
Claim.—An attachment-holder for sewing-machines, consisting of two plates located, respectively, the one B in a fixed position upon the bed-plate of a sewing-machine and the other C having an adjustable connection with the attachment, the former of said plates being wedge-shaped and provided with beveled edges, making a dovetail connection with a counterpart opening located in the opposite connecting-plate, substantially as and for the purpose set forth.



412,165. ELECTRODES FOR MEDICAL BATTERIES. HARRY R. COE, New Haven, Conn., assignor to the H. R. Coe Electric Company, same place. Filed Mar. 8, 1889. Serial No. 302,602. (No model.)

Claim.—1. An electrode consisting of a hollow pliable elastic cylinder formed of coiled spring-wire, substantially as described.

2. An electrode-handle consisting of a single length of tightly-coiled spring-wire forming a flexible handle adapted to conform itself to the interior shape of the hand when grasping the same, substantially as described.

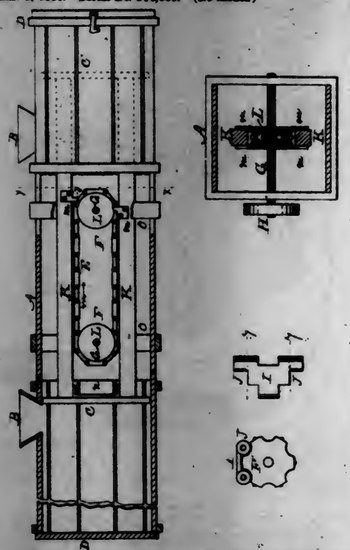


3. As a new article of manufacture, a medical-battery electrode consisting of a pliable coil of wire, one end of the wire being extended to form means whereby the electrode can be connected with a conductor, substantially as described.

4. An electrode-handle consisting of a closed pliable cylinder open at the ends and composed of a single coil of spring-wire having one end formed for connection with a conductor, substantially as described.

5. An electrode-handle consisting of a closed flexible cylinder tapered at one and open at both ends and formed of a single coil of spring-wire having one end extended and bent to form a hook, substantially as described.

412,166. VISE. EDWARD DAWSON, Terre Haute, Ind., assignor of one-half to Peter H. Stalf, same place. Filed Apr. 3, 1888. Serial No. 269,702. (No model.)



Claim.—1. The combination, with the vise-screw provided with a beveled collar, of the circular retaining-ring formed of two separate parts having overlapping beveled ends and secured in a circular recess in the sliding jaw and provided with a circular beveled recess for the said collar to revolve in, substantially as set forth.

2. The combination, with the vise-screw provided with a beveled collar, of the circular retaining-ring adapted to fit into a circular recess in the sliding jaw, and formed of two separate parts having overlapping beveled ends, and having a circular beveled recess for the said collar to turn in, the upper part being further provided with an oil-hole and a beveled portion at its outer edge, and a removable plate secured to the vise-jaw and engaging with the beveled portion on the edge of the ring and covering the oil-hole, substantially as set forth.

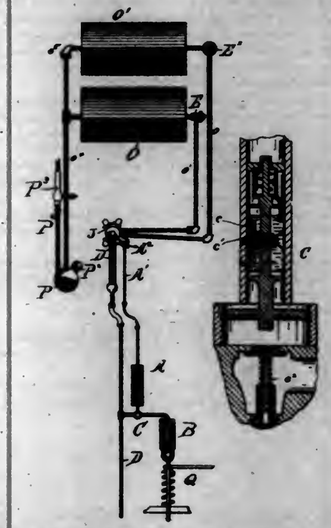
3. In a vise, the combination, with the vise-screw, of the segmental nut arranged beneath it and provided with a nut-stock having cheeks *n* and the leg *n'*, the revolvable double cam-sleeve for raising the nut-stock, the segmental nut arranged above the said vise-screw and provided with cheeks *o*, extending downwardly at each end of the said cheeks *n* upon each side of the screw and joined onto a plate under the cam for receiving the reverse thrust of the said cam, and

the projections T on the said cheeks *c* for the cam to strike against, substantially as and for the purpose set forth.

412,167. RAILING-PRESS. JOSEPH DUNBAR, Dayton, Ohio, assignor of two-thirds to Joseph M. Dunbo and Barton Pickering, same place. Filed Mar. 1, 1889. Serial No. 301,660. (No model.)

Claim.—1. The combination, with the press-frame having a compression-chamber at each end, of the sprocket-wheels journaled in said frame, the endless sprocket-chain carried by said wheels and having a laterally-projecting lug, the plunger-heads, the rails connecting the same, and a projecting plate on each of said rails, so arranged as to be engaged alternately by the lug on the sprocket-chain to reciprocate the plunger-heads and their connecting-rails, substantially as described.

2. The combination, with a suitable supporting-frame, of a pair of sprocket-wheels journaled in said frame, an endless sprocket-chain carried by said wheels and provided with laterally-projecting lugs, rails rigidly connected at their ends, and projecting plates on both sides of said rails, so arranged as to be engaged alternately by the lugs on the sprocket-chain to reciprocate said rails, substantially as described.



412,168. AIR-BRAKE. THOMAS S. R. DIXON, Hyde Park, Ill. Filed July 22, 1889. Serial No. 318,206. (No model.)

Claim.—1. In a railway-air-brake system, in combination with the main reservoir, train-pipe, connecting-passage, and engineer's valve, a limiting-valve actuated by variations of train-pipe pressure independently of the pressure in the main reservoir, and so arranged that the superior force of the latter pressure tends to hold the valve to its seat when closed, substantially as described.

2. In a railway-air-brake system, the combination of the main reservoir, train-pipe, connecting-passage, and engineer's valve with a valve-seat having a suitable port or ports which, when open, vent air from the main reservoir to the train-pipe, a valve interposed between said valve-seat and the main reservoir, and so constructed and arranged with relation to its port or ports that the main-reservoir pressure tends to hold it to its seat when closed, a diaphragm actuated by train-pipe pressure against the resistance of a spring, and a connection from the diaphragm to the valve, whereby the latter is actuated by variations of train-pipe pressure acting upon the diaphragm, substantially as described.

3. In a railway-air-brake system, the combination of a main reservoir and train-pipe with a connecting-passage controlled by the engineer's valve, and with a limiting-valve device consisting of a diaphragm, valve, and spring, said spring being supplemented in its action by fluid-pressure independent of the main-reservoir pressure, combined and operating substantially as described, whereby the spring, aided by its coacting fluid-pressure, tends to hold the valve-port open, and the train-pipe pressure at a predetermined limit above said coacting fluid-pressure closes it.

4. In a railway-air-brake system, the combination of the main reservoir, train-pipe, connecting-passages, engineer's valve, and auxiliary reservoir with a limiting-valve device consisting of a diaphragm, spring, valve, and air-passage from an auxiliary reservoir, which is independent in its pressure from the main air-reservoir to the back of the diaphragm, combined and operating substantially as described, whereby the spring and auxiliary-reservoir pressure coact to hold the valve-port normally open, and the train-pipe pressure at a predetermined limit above the auxiliary-reservoir pressure closes it.

5. In a fluid-pressure-brake system, the combination of the engineer's valve with a differential valve governed by the pressure of the auxiliary reservoir of one of the brake mechanisms, substantially as and for the purposes described.

6. In a fluid-pressure-brake system, the combination, with the train-pipe or other air-receptacle the pressure of which is to be regulated, of a separate air-chamber and a diaphragm interposed between them and actuated in opposite directions by the two fluid-pressures, a passage communicating with the train-pipe or air-receptacle the pressure in which is to be regulated, an engineer's valve to open and close said passage at will, a valve controlled by said diaphragm to automatically govern said passage when it is opened by the engineer's valve, and a spring to aid one of said pressures in holding the valve-port open against the opposition of the other, substantially as described.

7. In a fluid-pressure-brake system, the combination, with the train-pipe or other air-receptacle the pressure in which is to be regulated, of a separate air-chamber the pressure in which corresponds to the pressure in the auxiliary reservoirs of the brake-mechanism, and a diaphragm interposed between them and actuated in opposite directions by the two fluid-pressures, a passage communicating with the train-pipe or air-receptacle the pressure in which is to be regulated, an engineer's valve to open and close said passage at will, a valve controlled by said diaphragm to automatically govern said passage when it is opened by the engineer's valve, and a spring to aid one of said pressures in holding the valve-port open against the opposition of the other, substantially as described.

8. In a fluid-pressure-brake system having governing-valves provided or combined with refilling-passages to permit the refilling of the auxiliary reservoirs from the train-pipe while the brakes are not without releasing them, the combination of the main reservoir and train-pipe with a feed-passage leading from the source of the fluid-pressure to the train-pipe, an engineer's valve to open and close the same, and means for independently adjusting the capacity of the feed-passage, substantially as described.

9. In a fluid-pressure-brake system having governing-valves provided or combined with refilling-passages to permit the refilling of the auxiliary reservoirs from the train-pipe while the brakes are not without releasing them, the combination of the following elements, viz: a feed-passage leading from the source of fluid-pressure to the train-pipe, an engineer's valve to open and close said feed-passage at will, and means for limiting the head of feed-pressure to a predetermined amount above the train-pipe pressure, substantially as described.

10. In a fluid-pressure-brake system having governing-valves provided or combined with refilling-passages to permit the refilling of the auxiliary reservoirs from the train-pipe while the brakes are not without releasing them, the combination of the following elements, viz: a feed-passage leading from the source of fluid-pressure to the train-pipe, an engineer's valve to open and close said feed-passage at will, means for independently adjusting the capacity of the feed-passage, and means for limiting the head of feed-pressure to a predetermined amount above the train-pipe pressure, substantially as described.

11. In a fluid-pressure-brake system, the combination of the train-pipe with an expansion-chamber arranged between the engineer's valve and the governing-valves, and located at or near the engineer's valve, substantially as and for the purpose described.

12. In a railway-air-brake system, the combination of a way-cock and its casing adapted to be arranged at or beneath the floor of the cab, with a tubular standard extending upward from the engineer's valve-casing, an operating-shaft extending upward from the way-cock through the tubular standard and provided with a handle at its upper end, a curved plate extending from the standard up over the upper end of the shaft, and a screw supported by said plate and bearing down upon the end of the shaft for the purpose of holding the cock to its seat, substantially as described.

13. In a railway-air-brake system, the combination of a way-cock, a curved indicating plate or rim, a handle so arranged as to leave the upper surface of the plate or rim entirely exposed, and a retaining-spring engaging with the inner or concave edge of the plate or rim to retain the handle in its several positions, substantially as described.

14. In a railway-air-brake system, the combination of a way-cock casing, a tubular standard enlarged at its lower end to screw into the top of the casing, a screw or pin to retain the standard in proper relation to the casing, a way-cock arranged in the casing, a shaft extending up from the engineer's valve and provided with a handle, a curved plate extending from the standard up over the top of the shaft and held in proper relation to the standard by a screw or pin, a screw extending through the curved plate and bearing downward upon the upper end of the shaft, and an indicating-plate or retaining-spring, substantially as described.

15. In a railway-air-brake system provided with means for applying the auxiliary-reservoir pressure of the tender to regulate the flow of air to or from the train-pipe at the engine, the combination of the brake-applying rods and levers of the tender with a spring to reduce the effective force of the air-pressure upon the brakes, substantially as and for the purposes described.

16. In a railway-air-brake system provided with means for applying the auxiliary-reservoir pressure of the tender to regulate the flow of air to or from the train-pipe at the engine, the combination of a pipe leading from said auxiliary reservoir, a valve-casing connected to said pipe, branch pipes or passages leading from said valve-casing to the regulating devices, and a cock arranged in said casing adapted to open all the pipes and passages communicating with the casing, or to close any one of them and leave the others open, substantially as described.

17. In a railway-air-brake system, the combination of a valve-casing having a tapering internal chamber circular in cross-section, a pipe A', leading from the auxiliary reservoir of the tender to said chamber, branch pipes or passages leading from said chamber to devices for regulating the flow of air to and from the train-pipe, and a cock arranged in said chamber, provided with a handle and adapted to open all the ports of the chamber or to close any one of them and leave the others open, substantially as described.

18. In a railway-air-brake system operated by varying, by movements of the engineer's brake-valve, the relation between the air-pressure in the train-pipe and the air-pressure in the auxiliary reservoirs along the train, and provided with a valve controlled by a piston or diaphragm for automatically limiting the extent of such variation, the herein-described method of governing the action of said valve, consisting, essentially, in subjecting said piston or diaphragm on one side to an air-pressure whose variations substantially coincide with those of the train-pipe and on the other side to an air-pressure whose variations substantially coincide with those of the auxiliary reservoirs along the train.

19. In an engineer's brake-valve, the combination of a piston or diaphragm and a connected discharge-valve controlling the exhaust of air from a brake-pipe, said piston or diaphragm being adapted to close the discharge-valve by a disturbance of equilibrium of pressure to a predetermined extent on its opposite sides and to open and maintain the opening of the discharge-valve by a restoration of such equilibrium, whereby, when the engineer's valve is opened, the flow of air from the brake-pipe is automatically regulated, substantially as described.

20. In an engineer's brake-valve, the combination of a piston or diaphragm and a connected supply-valve controlling the supply of air from the main reservoir to the brake-pipe, said piston or diaphragm being adapted to close the supply-valve by a disturbance of equilibrium of pressure to a predetermined extent on its opposite sides and to open and maintain the opening of the supply-valve by restoration of such equilibrium, whereby, when the engineer's valve is opened to the reservoir-port, the flow of air into the brake-pipe is automatically regulated, substantially as described.

21. In a railway-air-brake system, the combination of a brake-pipe or other air-receptacle whose pressure is to be reduced, an exhaust-passage therefrom controlled at one point by a hand-valve and at another point by an automatic valve, and a piston or diaphragm connected to the automatic valve and adapted to close the same by a disturbance of equilibrium of pressure to a predetermined extent on its opposite sides and to open and maintain the opening of the same by a restoration of such equilibrium, whereby, when the engineer's valve is opened, the flow of air from the brake-pipe is automatically regulated, substantially as described.

22. In a railway-air-brake system, the combination of a brake-pipe or other air-receptacle whose pressure is to be increased, a supply-passage leading from the main reservoir to said brake-pipe or receptacle, controlled at one point by a hand-valve and at another point by an automatic valve, and a piston or diaphragm connected to the automatic valve and adapted to close the same by a disturbance of equilibrium of pressure to a predetermined extent on its opposite sides and to open and maintain the opening of the same by a restoration of such equilibrium, whereby, when the engineer's valve is opened to the reservoir-port, the flow of air into the brake-pipe is automatically regulated, substantially as described.

23. In an engineer's brake-valve, the combination of a piston or diaphragm and a connected discharge-valve controlling the exhaust of air from a brake-pipe, with a spring or its equivalent to oppose the closing of the valve, said piston or diaphragm being adapted to close the discharge-valve by a disturbance of equilibrium of pressure on its opposite sides sufficient to enable it to overcome the resistance of the spring and to permit the spring to open and maintain the opening of the discharge-valve upon the restoration of such equilibrium, substantially as described.

24. In an engineer's brake-valve, the combination of a piston or diaphragm and a connected supply-valve controlling the supply of air from the main reservoir to the brake-pipe, with a spring to oppose the closing of the valve, said piston or diaphragm being adapted to close the supply-valve by a disturbance of equilibrium of pressure on its opposite sides sufficient to enable it to overcome the resistance of the spring and to permit the spring to open and maintain the opening of the supply-valve upon the restoration of such equilibrium, substantially as described.

25. In a railway-air-brake system, the combination of a brake-pipe or other air-receptacle whose pressure is to be reduced, an exhaust-passage therefrom controlled at one point by a hand-valve and at another point by an automatic valve, and a piston or diaphragm connected to the automatic valve, with a spring to resist the closing of said valve, said piston or diaphragm being adapted to close the automatic valve by a disturbance of equilibrium of pressure on its opposite sides sufficient to enable it to overcome the resistance of the spring and to permit the spring to open and maintain the opening of said valve upon the restoration of such equilibrium, substantially as described.

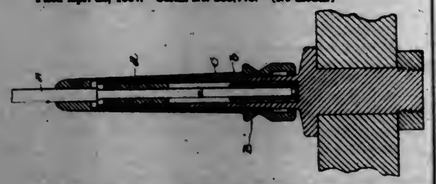
26. In a railway-air-brake system, the combination of a brake-pipe or other air-receptacle whose pressure is to be increased, a supply-passage leading from the main reservoir to said brake-pipe or receptacle, controlled at one point by a hand-valve and at another point by an automatic valve, and a piston or diaphragm connected to the automatic valve, with a spring to resist the closing of said valve, said piston or diaphragm being adapted to close the automatic valve by a disturbance of equilibrium of pressure on its opposite sides sufficient to enable it to overcome the resistance of the spring and to permit the spring to open and maintain the opening of said valve upon the restoration of such equilibrium, substantially as described.

27. In an engineer's brake-valve, the combination of an automatic discharge-valve controlling the exhaust of air from a brake-pipe or other air-receptacle whose pressure is to be reduced, a piston or diaphragm connected to said valve, adapted to close the same by a disturbance of equilibrium of pressure to a predetermined extent on its opposite sides and to open and maintain the opening of the same by a restoration of such equilibrium, and a valve actuated by hand for effecting an exhaust of air through the passage controlled by the automatic valve at one side of the piston or diaphragm, and for causing by the same movement a slower exhaust of the air at the opposite side of the piston or diaphragm, substantially as described, whereby, when the hand-actuated valve is open, the automatic valve is so controlled by the two varying air-pressures as to initially permit the one to reduce to the predetermined extent below the other, and then to allow

both to reduce together without any substantial disturbance of the difference thus initially established.

28. In an engineer's brake-valve, the combination of an automatic supply-valve controlling the admission of air from the main reservoir to a brake-pipe or other air-receptacle whose pressure is to be increased, a piston or diaphragm connected to said valve, adapted to close the same by a disturbance of equilibrium of pressure to a predetermined extent on its opposite sides and to open and maintain the opening of the same by a restoration of such equilibrium, and a valve actuated by hand for effecting an increase of pressure through the passage controlled by the automatic valve at one side of the piston or diaphragm, and for causing by the same movement a slower increase of pressure at the opposite side of the piston or diaphragm, substantially as described, whereby, when the hand-actuated valve is open, the automatic valve is so controlled by the two varying air-pressures as to initially permit the one to rise to the predetermined extent above the other, and then to allow both to rise together without any substantial disturbance of the difference thus initially established.

29. In a railway-air-brake system, the combination of a brake-pipe or other air-receptacle whose pressure is to be reduced, an exhaust-passage therefrom controlled at one point by a hand-valve and at another point by an automatic valve, a spring to resist the closing of the automatic valve, a piston or diaphragm connected to the automatic valve, adapted to close the same by a disturbance of equilibrium of pressure on its opposite sides sufficient to enable it to overcome the resistance of the spring and to permit the spring to open and maintain the opening of the same upon the restoration of such equilibrium, and an air-passage affecting a communication between the auxiliary reservoir of one of the brake mechanisms and that side of the piston or diaphragm which is most remote from said exhaust-passage, substantially as described.



30. In a railway-air-brake system, the combination of a brake-pipe or other air-receptacle whose pressure is to be increased, a supply-pipe leading from the main reservoir to said brake-pipe or receptacle, controlled at one point by a hand valve and at another point by an automatic valve, a spring to resist the closing of the automatic valve, a piston or diaphragm connected to the automatic valve, adapted to close the same by a disturbance of equilibrium of pressure on its opposite sides sufficient to enable it to overcome the resistance of the spring and to permit the spring to open and maintain the opening of the same upon the restoration of such equilibrium, and an air-passage affecting a communication between the auxiliary reservoir of one of the brake mechanisms and that side of the piston or diaphragm which is most remote from said supply-passage, substantially as described.

31. In a railway-air-brake system operated by varying the relation between the air-pressure in the train-pipe and the air-pressure in the auxiliary reservoirs along the train, a controlling-valve for automatically limiting such variation, said valve being so connected as to be operated by the differences of pressure in the train-pipe and auxiliary reservoirs, substantially as and for the purpose set forth.

32. In a railway-air-brake system, the combination of a train-pipe, an engineer's valve, a controlling-valve connected to the engineer's valve, and a pipe or passage connecting the controlling-valve with one of the auxiliary reservoirs of the train, substantially as and for the purpose set forth.

33. In a railway-air-brake system, the combination of a train-pipe, an engineer's valve, a controlling-valve regulating the flow of air through a port or passage leading into the train-pipe, and a pipe or passage connecting the controlling-valve with one of the auxiliary reservoirs of the train, substantially as and for the purpose set forth.

412,169. **SUPPORT FOR SPINNING-SPINDLES.** WILLIAM F. DRAPER, Hopedale, Mass., assignor to George Draper & Sons, same place. Filed Apr. 20, 1887. Serial No. 235,773. (No model.)

Claim.—1. A spindle and a bolster case or tube, combined with a rigid upper lateral bearing located in said case or tube and an independent yielding lateral bearing for the lower end of the spindle, located in said supporting-tube, the said bearings being separated, substantially as described.

2. A spindle and bolster case or tube, combined with a rigid upper lateral bearing located in the said case or tube, an independent yielding lateral bearing for the lower end of the spindle, located in the said supporting-tube, and a yielding or elastic support therefor within said tube, substantially as described.

3. A sleeve-whirl spindle and bolster case or tube, combined with a rigid upper lateral bearing located in the said case or tube, an independent yielding lateral bearing for the lower end of the spindle, located in the said supporting-tube, and a yielding or elastic support therefor within said tube, substantially as described.

4. The bolster case or tube, the rigid upper lateral bearing fixed in the upper portion of said case or tube, and a yielding lateral bearing for the lower end of the spindle and located in said case or tube, combined with a sleeve-whirl spindle having the band-receiving groove of its whirl located below the said rigid bearing, substantially as described.

5. A spindle and a bolster case or tube, combined with a rigid lateral bearing fixed in the upper portion of said case or tube and an independent yielding lateral bearing for the lower end of the spindle, located in said supporting-tube, the said bearings being separated, substantially described.

412,170. **SUPPORT FOR SPINNING-SPINDLES.** WILLIAM F. DRAPER, Hopedale, Mass., assignor to George Draper & Sons, same place. Filed Jan. 3, 1888. Serial No. 259,618. (No model.)

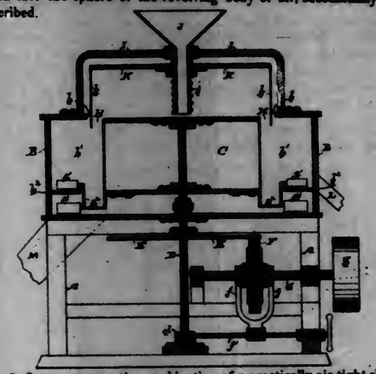
Claim.—1. The combination, with a sleeve-whirl spindle, of a bearing composed of a block having rising from it a series of independent arms *c*, arranged in a circle and of a thickness to substantially fill the space between the pintle of the spindle and the interior of the sleeve-whirl and having inner rounded corners, the said arms forming a lateral bearing for the spindle at a point below the attachment of the whirl and being extended into the space between the sleeve of the whirl and the spindle, the said arms being entirely unrestricted as to their movement excepting by the whirl, substantially as described.

2. In a spindle-bearing, a sleeve-like support or bolster to receive within it the pintle or lower end of the spindle and slitted longitudinally to constitute a series of independent arms, the inner corners of which are rounded, and provided with a suitable number of grooves cut into it from the outside to render the said support or bolster elastic under the strain of the spindle, substantially as described.

3. In a spindle-bearing, a sleeve-like support or bolster to receive within it the pintle or lower end of the spindle, and provided at or near its base with annular grooves extended well into the substance of the support or bolster to render it elastic under the strain of the spindle, substantially as described.

412,171. **SUPPORT FOR SPINNING-SPINDLES.** WILLIAM F. DRAPER, Hopedale, assignor to the Sawyer Spindle Company, Boston, Mass. Filed Apr. 26, 1887. Renewed Mar. 26, 1889. Serial No. 304,517. (No model.)

Brief.—The object of the invention is to produce a bearing which shall accommodate the movement of the pintle of the spindle at two points of its length below the junction of the sleeve-whirl with the spindle.



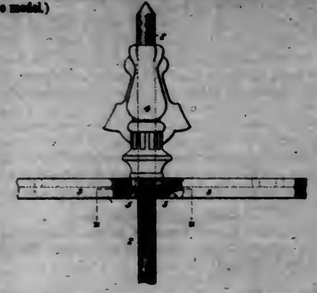
Claim.—1. A spindle and a bolster-case combined with independent yielding lateral bearings therein, one above the other and surrounding the pintle of the spindle, substantially as described.

2. A sleeve-whirl spindle and a bolster-case combined with independent yielding lateral bearings therein, one above the other and surrounding the pintle of the spindle, substantially as described.

412,172. **SEPARATOR.** JOHN H. FINCH, Crockett, assignor of part to John R. Gruen, San Francisco, George Riley, Vallejo, and Frank Miller, Marysville, Cal. Filed May 4, 1888. Serial No. 273,023. (No model.)

Claim.—1. In a separator, the combination of a practically air-tight shell or casing, a disk or wheel mounted therein so as to rotate in a horizontal plane, and having a diameter sufficiently less than that of the shell or casing to leave a surrounding separating-chamber in which a horizontally-revolving body of air accompanies it, and having a diameter sufficiently less than that of the shell or casing to leave a surrounding separating-chamber in which a revolving body of air accompanies said disk or wheel, and a feed-hopper above for directing the material upon the top of said rotating disk or wheel, whereby it is discharged centrifugally over the edge thereof and into the sphere of the revolving body of air, substantially as described.

2. In a separator, the combination of a practically air-tight shell or casing and a disk or wheel mounted therein so as to rotate in a horizontal plane, and having a diameter sufficiently less than that of the shell or casing to leave a surrounding separating-chamber in which a revolving body of air accompanies said disk or wheel, and a feed-hopper above for directing the material upon the top of said rotating disk or wheel, whereby it is discharged centrifugally over the edge thereof and into the sphere of the revolving body of air, substantially as described.



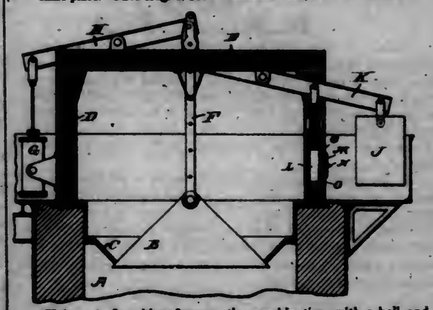
3. In a separator, the combination of a practically air-tight shell or casing and a horizontally-rotating disk or wheel mounted therein, and having a diameter sufficiently less than that of the shell or casing to leave a surrounding separating-chamber in which a revolving body of air accompanies the rotating disk or wheel, separate receiving floors or compartments with separate outlets in said surrounding chamber, scrapers operating on said floors, and a feed-hopper for directing the material upon the top of the rotating disk or wheel, whereby it is directed centrifugally over its edge into the separating-chamber and into the sphere of the revolving body of air therein, substantially as described.

4. In a separator, the combination of a practically air-tight shell or casing having a contracted top opening and a horizontally-rotating disk or wheel mounted in said shell or casing, leaving a surrounding separating-chamber in which a revolving body of air accompanies it, and an annular communicating-aperture between its top edge and the edge of the top of the shell or casing, a feed-hopper above for directing the material upon the top of the rotating disk or wheel, whereby it is thrown centrifugally outwardly and discharged over its edge and through the annular communicating-aperture in the sphere of the revolving body of air, and an adjustable gate or valve for controlling and regulating said communicating-aperture and the feed of the material through it, substantially as described.

5. In a separator, the combination of a practically air-tight shell or casing having a top opening and a horizontally-rotating disk or wheel mounted in the shell or casing, leaving a surrounding separating-chamber in which a revolving body of air accompanies it, and an annular communicating-aperture between its top and the edge of the top opening of the shell or casing, a feed-hopper above having a downwardly-extending neck adapted to direct the material centrally upon the top of the disk or wheel, whereby said material is thrown outwardly by centrifugal force and discharged over its edge through the communicating-aperture into the sphere of the revolving body of air, and the inverted pan-shaped gate or valve seated and vertically movable upon the neck of the hopper and having its rim extending down into the communicating-aperture, whereby the feed of material through said aperture is regulated and controlled, substantially as described.

6. A separator consisting of the combination of the shell or casing, the horizontally-rotating disk or wheel mounted therein and leaving a surrounding separating-chamber between its periphery and the wall of the shell or casing, in which a revolving body of air accompanies it, and an annular communicating-aperture from the top of said disk or wheel into said chamber, a flanged ledge within said chamber, scrapers secured to the disk or wheel and operating in the bottom of the shell or casing and over the flanged ledge separate outlets for said ledge and the bottom of the shell or casing, a feed-hopper adapted to direct the material upon the top of the disk or wheel, whereby it is thrown outwardly by centrifugal force and discharged into the surrounding separate chamber, and the vertically-adjustable gate or valve for controlling the communicating-aperture from the top of the disk or wheel into the separating-chamber, substantially as described.

412,173. **IRON FENCE.** LOUIS FEILG, Pittsburg, Pa., assignor to Taylor & Dunn, same place. Filed Feb. 16, 1889. Serial No. 300,093. (No model.)

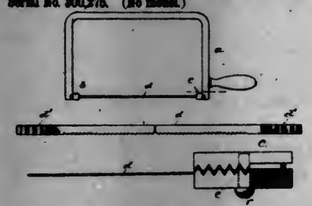


Claim.—An improvement in iron fence, which consists in the combination of a rail, a tubular integral ornament set on the rail and having a lug or legs extending through the rail, the ends of said legs being upset on the under side, and a picket passing through and above the rail and tubular ornament, substantially as and for the purposes described.

412,174. **PEN-HOLDER GUIDING ATTACHMENT.** CASSIUS M. GAY, Oak Park, assignor of one-half to Frank H. Palmer, Maple Park, Ill. Filed May 23, 1888. Serial No. 311,767. (No model.)

Claim.—The herein-described pen-guide, consisting of the sleeve to embrace a pen-holder, and having a side spur or projection which is adapted to pass beneath the finger next to the holder and rest upon the hand at the juncture of said finger and the next adjacent finger, substantially as hereinbefore set forth.

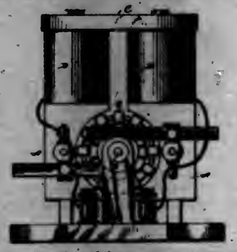
412,175. **BLAST-FURNACE TOP.** FRED W. GORDON and VICTOR O. STRAUBEL, Philadelphia, Pa., assignors to Gordon, Straubel & Laureau, same place. Filed Aug. 1, 1887. Serial No. 245,801. (No model.)



Claim.—1. In a blast-furnace, the combination, with a bell and hopper and actuating-beams, and motor mechanism for raising and lowering the bell, of a resisting air-cylinder provided with a piston having its piston-rod connected to one of said beams, a conduit connecting with the two ends of the cylinder and adapted to have its connections with the cylinder overrun by said piston, a cock in said conduit serving as a means for adjusting the effective conduit area, and cocks at the extreme ends of the cylinder, substantially as and for the purpose set forth.

2. In blast-furnaces, the combination, substantially as set forth, of the columns D, located in pairs at diametrically-opposite sides of the furnace-throat, beams E, supported by said columns, bell and hopper B C, bell-rod F, reaching from the bell upward between said beams, oscillating beams H and K, connected to said bell-rod and disposed between said first-mentioned beams and having their centers supported thereby, and motor mechanism and a counter-balance connected, respectively, with said oscillating beams.

3. In blast-furnaces, the combination, with a bell and hopper, a bell-rod, an oscillating beam connected with the bell-rod, and motor mechanism for raising and lowering the bell through the instrumentality of said beam, of a second oscillating beam connected to the bell-rod, a counter-balance attached thereto, and regulating-cylinder L, connected with said last-mentioned beam.

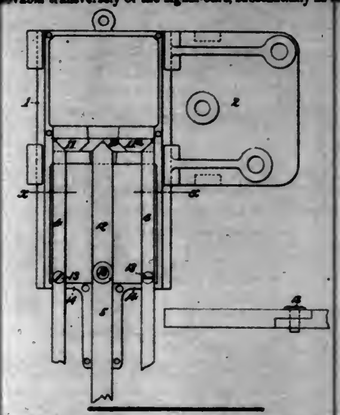


4. In blast-furnaces, the combination of a bell and hopper, a bell-rod, and mechanism for raising and lowering the bell, of two pairs of columns D, beam K, supported thereby and connected to the bell-rod, counter-balance J, attached to said beam, and air-cylinder L, disposed between the two columns of one of said pairs of columns and connected with said beam.

412,176. SAW-BLADE. GEORGE W. GRIFFIN, Franklin Falls, N. H., assignor of one-half to Parker C. Hancock, same place. Filed Feb. 18, 1889. Serial No. 300,275. (No model.)

Claim.—The herein-described jig-saw blade, having at its opposite ends a series of permanent corrugations transverse to the length of the blade, substantially as shown and described.

412,177. ELECTRIC MOTOR. HENRY GROSWITH, Philadelphia, Pa., assignor of three-fourths to Charles W. Kennedy and Ransom F. Rankin, same place. Filed July 30, 1889. Serial No. 319,183. (No model.)



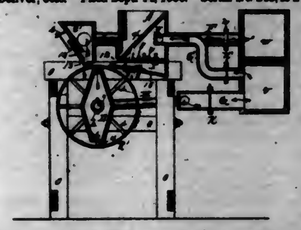
Claim.—1. The combination of the armature proper constructed substantially as described, the removable disk or plate provided with radial metallic conduit-plates or sectors adapted to connect the termini of the wire coils in the manner described, and the removable box or bearing carrying the radial contact or commutator plates arranged in a vertical plane and connected at their inner ends to the corresponding sector-plates, substantially as and for the purpose set forth.

2. The combination, in an electric motor, of an armature constructed substantially as described, the radial connecting-plates or sectors, and the radial commutator-plates arranged in a vertical plane and adapted to bear with their outer sides or faces against commutator-brushes adapted to press against them at right angles, or in a direction parallel to the axis of the motor, substantially as and for the purpose shown and set forth.

412,178. SIGNAL APPARATUS. JAMES T. HANRAY, Wilkinsburg, assignor to the Union Switch and Signal Company, Pittsburg, Pa. Filed July 5, 1889. Serial No. 316,093. (No model.)

Claim.—1. In a signal apparatus, the combination of a movable signal, a movable frame connected to the signal, two or more signal-operating bars, and one or more blocks constructed, when shifted by one or more of the signal-bars, to lock the other bar into engagement with the movable frame, substantially as set forth.

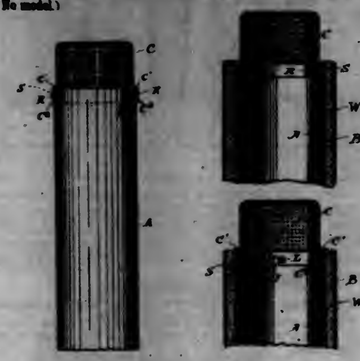
2. In a signal apparatus, the combination of a movable signal, a movable frame connected to the signal, three or more signal-operating bars movable in said frame, a dog pivotally connected to one of said bars, and two or more blocks arranged in grooves in said frame and movable transversely of the signal-bars, substantially as set forth.



412,179. BALE-TIE. FOSTER B. HARD, Handsborough, Miss. Filed May 28, 1889. Serial No. 312,385. (No model.)

Claim.—The improved bale-tie fastening described, consisting, essentially, of the plate A, bent about midway of its length at *a*, and having the straight portions *b b*, and the loops B struck from the plate, the one on the upper side and the other on the under side of the opposite portions *b b'*, said loops being adapted to receive the ends of a bale-band, substantially as specified.

412,180. ORE-CONCENTRATOR. ROBERT B. HASTINGS, Georgetown, assignor of one-fourth to Charles P. O'Reilly and William E. Ure, both of Denver, Colo. Filed Sept. 14, 1888. Serial No. 213,494. (No model.)



Claim.—1. An ore-concentrator consisting of a rotating porous-covered cylinder, a compressed-air chamber I, located contiguous to said cylinder, having an air-exit passage above the surface of the latter covered with a porous cloth, a hopper located over said chamber having an aperture through which the gangue is delivered onto said porous cloth, a suction-box near said cylinder having an air-inlet near the latter, an air-blast box fixed within said cylinder having an air-exit passage therein from which air flows from the cover of the latter, and means, substantially as described, for forcing air into said blast-box and chamber, and for exhausting the air from said suction-box, combined and operating substantially as set forth.

2. In an ore-concentrator, the rotating ore-bed cylinder R', the blast-box D, fixed within the latter and having the perforated air-pipe *h* therein, the air-box *v*, the pipe G, connecting the latter and said pipe *h*, the hopper A, having an inclined bottom and a discharge-opening at one side thereof, the suction-box *c'*, located over said cylinder, the exhaust-box *w*, the pipe F, connecting the latter with said suction-box, and means, substantially as described, for forcing air into said box *v* and for exhausting the air from said box *w*, substantially as set forth.

3. The hopper A, having an outlet at one side, the air-chamber I, having a pipe-connection, substantially as described, with the air-pressure box *v*, and having an air-outlet contiguous to said hopper-outlet having a porous covering, the valve *o* in the bottom of said chamber, having an arm connected therewith, and the ore-bed cylinder R, having a projection in position for intermittent engagement with said arm, and a suitable spring to close said valve, combined and operating substantially as set forth.

4. The rotating ore-bed cylinder R', the blast-box D, fixed within the latter, the valve 6, pivoted at the lower edge of said box, having an arm 4 thereon, which intermittently engages with a projection on the head of said cylinder, whereby said valve is opened, and a suitable spring to close the latter, combined and operating substantially as set forth.

412,181. LAMP. LEONARD REBELL, Rochester, assignor to Charles Stanford Upton, New York, N.Y. Filed May 27, 1887. Serial No. 239,065. (No model.)

Claim.—1. In a central-draft lamp, a thimble or auxiliary tube C, having perforated vertical walls formed with a shoulder C' and a rim C², substantially as shown and described.

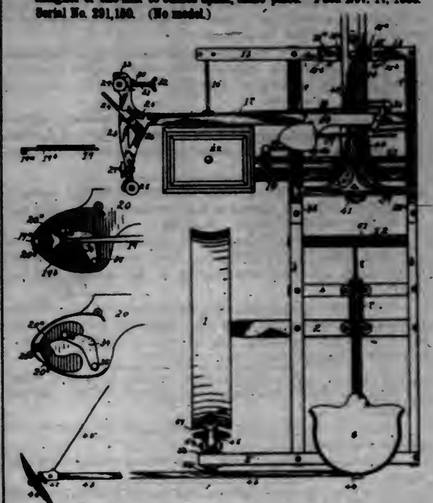
2. In a central-draft lamp, the combination, with a central-draft tube, of a perforated thimble or auxiliary tube having an outwardly-projecting portion seating upon the top of said draft-tube, the perforated portion of said thimble or auxiliary tube setting inwardly, so as to stand off from the line of flame.

3. In a central-draft lamp, the combination, with the central-draft tube, of a perforated thimble or auxiliary tube standing inwardly from the line of flame and seating over the outside of the central-draft tube and being supported thereby, substantially as and for the purpose set forth.

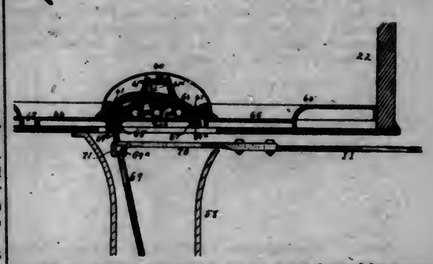
4. In a central-draft lamp, the combination, with a central-draft tube, of a perforated thimble or auxiliary tube supported by said draft-tube and extending inwardly from the upper edge of the draft tube and thence vertically upward, as and for the purpose set forth.

5. In a central-draft lamp, the combination, with the central-draft tube, of the perforated thimble or auxiliary tube, the vertical side walls and top of the thimble or auxiliary tube being of smaller diameter than the draft-tube, and the thimble or auxiliary tube at its lower end seating directly on the draft-tube and adapted to be retained in a central position thereby.

6. In a central-draft lamp, the combination, with a central-draft tube, of a thimble or auxiliary tube having a perforated portion setting inwardly on a line with the top of the outer wick-tube and then upward to the top of the thimble or auxiliary tube, the upper side walls and top of said thimble or auxiliary tube being of a smaller diameter than the draft-tube.



7. In a central-draft lamp, the combination, with a central-draft tube, of a thimble or auxiliary tube supported by said draft-tube closing the upper end of the latter at its edge, the vertical side walls of the thimble or auxiliary tube being perforated, and said walls and top of the thimble or auxiliary tube being of a smaller diameter than the central-draft tube.



8. In a central-draft lamp, the combination, of a central-draft tube forming the inner-wick tube open for the admission of air, a thimble or auxiliary tube the internal diameter of the lower portion of which corresponds with the external diameter of said draft-tube and adapted to set over the upper end of said draft-tube, the said thimble or auxiliary tube being constructed with an upper portion above the draft-tube of a diameter less than the diameter of the draft-tube, so as to form an annular shoulder as a rest upon the upper end of the draft-tube, the sides of the upper portion being perforated, substantially as described.

9. The combination of the central-draft tube A, having a screw-thread or its equivalent, and the perforated thimble or auxiliary tube C, formed with an outwardly-extending shoulder C', and a rim C², having a screw-thread or its equivalent on the central-draft tube, substantially as described.

10. In a central-draft lamp substantially as hereinbefore set forth, the central-draft tube A, forming a support for a perforated thimble or auxiliary tube C, in combination with said thimble or auxiliary tube having the vertical perforated walls for distributing the air, as described, the said thimble or auxiliary tube standing inwardly from the line of flame and terminating at its lower end in a rim C², formed parallel with the central-draft tube, and adapted to be supported and retained in a central position by said central-draft tube.

412,182. SEED-PLANTER. EDWARD M. HUTLMAN, Havana, Ill., assignor of one-half to James Spink, same place. Filed Nov. 17, 1888. Serial No. 291,180. (No model.)

Claim.—1. In corn-planters, in combination, a forward frame carrying planting mechanism, a rear frame mounted on wheels and having two longitudinal bars on opposite sides of and equidistant from the longitudinal center of the planter, and a universal joint pivotally connected with the forward ends of the bars, and also pivoted to rock laterally on the forward frame, as set forth.

2. In corn-planters, in combination, a forward frame carrying a planting mechanism, a rear frame mounted on wheels and having two longitudinal bars on opposite sides of and equidistant from the longitudinal center of the planter, a universal joint pivotally connected with the forward ends of the bars and also pivoted to rock laterally on the forward frame, and springs interposed between the bars and extensions of the forward frame projected rearwardly under the bars, as set forth.

3. In seed-planters, in combination, the longitudinally-reciprocating bar 19, having pin 19ª and hooks 19ᵇ, the housing 20, having depression 20ª 20ᵇ, and the oblique guide-surface 20ᶜ, lever 34, having pins 35 adapted to the hooks, and means, substantially as described, for imparting the motion of the lever to the seed-slide of the planter, as set forth.

4. In seed-planters, in combination, check-rower head 23, having ways 23ª and recess 23ᵇ, yoke 30ª, having transverse motion in the head and extending outwardly as bolt 30, nut 32 on the end of the bolt, spring 31, interposed between the nut and the head, plate 29ᵇ,

pivoted in the yoke and having knob 29^{c}, and pulley 29, pivoted on plate 29^{b}, as set forth.

5. In seed-planters, in combination, a second drop-valve, a bifurcate shake-bar, lateral pins on the valve, and yoke formations on the forks of the shake-bar adapted to the pins, as set forth.

6. In seed-planters, in combination, seed-plate 66, having cells 67, casing 60, cut-offs 61, presented in opposite directions and pivoting on trunnions in casing 60, upward extensions 61^{a} of cut-offs 61, and spring 63 between said upward extensions, as set forth.

7. In seed-planters, in combination, seed-plate 66, having cells 67, and the upward-projecting cam 72, casing 60, containing cut-offs presented in opposite directions, and rocking frame 64, having ends 64^{a}, adapted to the cells and the cam, as set forth.

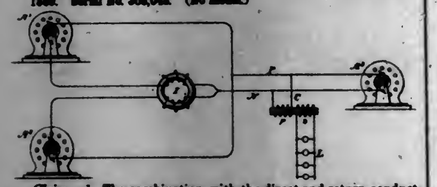
8. In seed-planters, the wheel-scraper comprising the bell-crank lever carrying a scraper on its lower end and having its upper end in contact with the wheel, as set forth.

9. In seed-planters, the wheel-scraper comprising the bell-crank lever having its fulcrum adjustable with relation to the wheel, the anti-friction roller in the upper end of the lever, and the scraper on the lower end, as set forth.

10. The lateral adjuster for the tongue of seed-planters, comprising the brackets 15, having the upward extensions 15^{a} and the slots 15^{b}, and the adjusting-bolts 15^{c}, passed through the slots and secured to the frame, as set forth.

412,183. ART OF PRINTING, LITHOGRAPHING, &c. OLIVER G. HOLZ, Louisville, Ky., assignor to MAX RICHENACK, trustee. Filed Apr. 20, 1889. Serial No. 308,073. (Specimens.)

Claim.—1. The herein-described improvement in the art of type and plate printing, lithographing, and doing other impression-work, which consists in printing, lithographing, &c., by means of semi-fluid maltha.

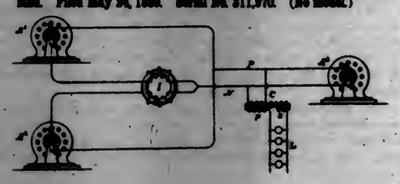


2. The herein-described improvement in the art of type and plate printing, lithographing, and doing other impression work, which consists in printing, lithographing, &c., by means of an ink composed of semi-fluid maltha and of a pigment or pigments.

412,184. INK. OLIVER G. HOLZ, Louisville, Ky., assignor to MAX RICHENACK, trustee. Filed June 15, 1889. Serial No. 314,226. (No specimens.)

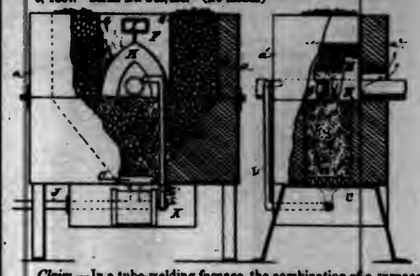
Claim.—1. An ink having as its essential and characteristic constituent semi-fluid maltha.

2. An ink composed of semi-fluid maltha and a pigment or pigments.



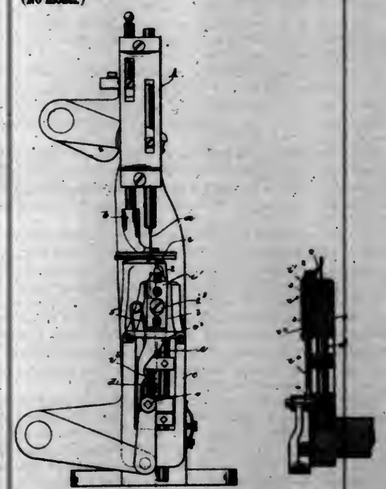
412,185. COUPLING ALTERNATE-CURRENT GENERATORS. JOHN HOPKINSON, Westminster, County of Middlesex, and EDWARD HOPKINSON, Manchester, County of Lancaster, England, assignors to George Westinghouse, Jr., Pittsburg, Pa. Filed June 4, 1887. Renewed Apr. 30, 1889. Serial No. 308,042. (No model.)

Claim.—1. The combination, with the direct and return conductors of an electric circuit, of two or more alternate-current dynamo-electric machines connected thereto in parallel with each other, and one or more self-induction coils included in the circuits of said alternate machines.



2. The combination, with one or more alternate-current dynamo-electric machines, of another alternate-current dynamo-electric machine serving as a motor, all of said machines being in parallel with the main conductors, and a self-induction coil included within the circuits of said alternate machines.

412,186. METHOD OF SYNCHRONIZING ALTERNATE-CURRENT GENERATORS. JOHN HOPKINSON, Westminster, County of Middlesex, and EDWARD HOPKINSON, Manchester, County of Lancaster, England. Filed May 24, 1889. Serial No. 311,970. (No model.)



Claim.—The hereinbefore described method of synchronizing alternate-current electric generators, which consists in causing the excess of current from one generator to induce an assisting current in the circuit of the other generator and thereby temporarily lessen the load of that generator.

412,187. TUBE-WELDING FURNACE. HARRY JEWETT, Ludlow, Ky., assignor of one-half to Fred. Hoeflin, Meridian, Miss. Filed Aug. 3, 1887. Serial No. 246,493. (No model.)

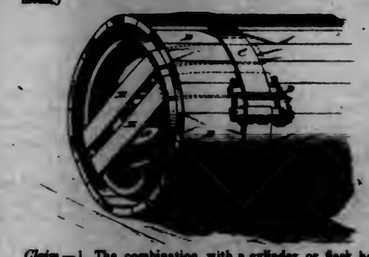
Claim.—In a tube-welding furnace, the combination of a furnace-chamber having a V-shaped bottom, the grate C, plates G, forming the inner walls of said chutes E, the removable V-shaped hood H, the blast-pipe J, arranged under the grate, and the branch air-pipe L, opening into the hood H, said branch pipe having a valve L', substantially as specified.

412,188. GROOVE-CUTTING ATTACHMENT FOR SEWING-MACHINES. ALBERT R. JOHNSON, Brockton, Mass., assignor of one-half to C. Herbert Porter, same place. Filed July 3, 1889. Serial No. 316,767. (No model.)

Claim.—1. The combination, with the stitch-forming mechanism of a sewing-machine, comprising the awl, needle and cast-off, the needle-bar and rocker-arm in which it slides, of a laterally and vertically adjustable grooving-tool and an independent carrying-lever loosely connected to the rocker-arm, substantially as described.

2. The combination, with the stitch-forming mechanism of a sewing-machine, comprising the awl, needle and cast-off, the needle-bar, and rocker-arm in which it slides, of an adjustable grooving-tool and an independent lever pivotally connected to the said rocker-arm and provided with a cam-edge, and means, substantially as described, for acting upon said cam-edge and moving the said lever on its pivot while the needle is entering and leaving the work, substantially as described.

3. The combination, with the stitch-forming mechanism of a sewing-machine, comprising the awl, needle and cast-off, the needle-bar, said rocker-arm, of the grooving-tool and pivoted lever F^{3} said grooving-tool being vertically adjustable with the tool-carrier, substantially as described.



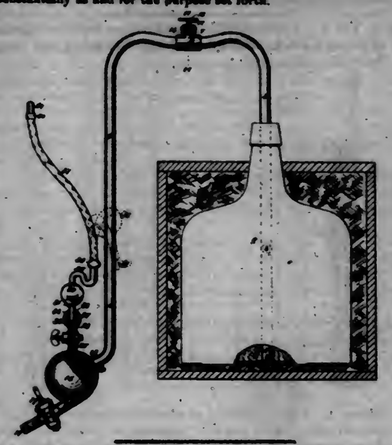
4. The combination, with the stitch-forming mechanism of a sewing-machine, comprising the awl, needle and cast-off, the needle-bar, and rocker-arm, of the grooving-tool and pivoted lever F^{3}, said grooving-tool being laterally adjustable on the tool-carrier, substantially as described.

412,189. SASH-FASTENER. GEORGE KIRKLAND, Stanwood, Mich. Filed June 28, 1888. Serial No. 278,494. (No model.)

Claim.—In a window-fastener, the case A, having side plate G, provided with the guide-plate *b*, flange *c*, and post *i*, in combination with the spindle C, mounted in said case, the collar *c'* on said plate and having shoulder *d*, the actuating lever and cam on said spindle, and the coil-spring surrounding the collar and having one end inserted in the cam and the other end in engagement with the post i, substantially as set forth.

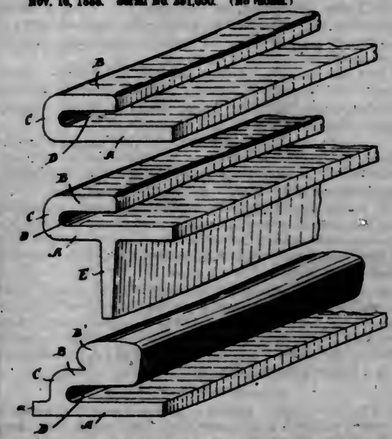
412,190. PROTECTIVE COVERING FOR METALLIC FLASKS. HENRIK J. KREBS, Wilmington, Del., assignor to the Delaware Chemical Company, same place. Filed May 29, 1889. Serial No. 312,633. (No model.)

Claim.—1. The combination, with a cylinder or flask having a concaved end, and a valve secured therein, of the protecting-cover herein described, extending longitudinally of and surrounding said cylinder or flask, and the transversely-arranged straps extending across said concaved end and having bent ends secured between said flask and cover, substantially as set forth.



2. The combination, with the cylinder or flask having a concaved end, and a valve secured therein, of the protecting-cover composed of a series of wooden battens extending longitudinally of said cylinder or cask, the retaining-hoops encircling said battens, the end tightening-bars and netted bolts, and the straps extending across said concaved end of the flask and secured at their ends between said flask and cover, substantially as set forth.

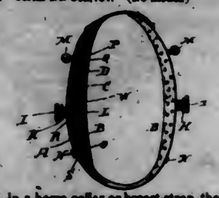
412,191. SIPHONIC DISPENSER FOR VITRIOL, &c. HENRY C. KREBS, St. Louis, Mo., assignor of one-half to John Cornwall, same place. Filed Nov. 23, 1888. Serial No. 291,572. (No model.)



Claim.—1. In a siphonic dispenser, the combination of the siphon conductor-pipe, the globular incasement 16, that incloses the chamber into which said pipe discharges, the surmounting tube 25, having a packing-chamber 27, filled with packing, a gage having a stem embedded in said packing and communicating with tube 25, a section-pipe connected to said gage, the discharge-pipe 18, and the cut-off valve 17, substantially as and for the purpose set forth.

2. In a siphonic dispenser, the combination of the siphon conductor-pipe, the globular incasement that incloses the chamber into which said pipe discharges, the discharge-pipe 18, the cut-off valve 17 in said pipe, the pedestal-tube 25, with its globular incasement that incloses the chamber 26, the glass indicating-pipe with its recording-bulb, the rubber tube 37, and mouth-piece 39, for withdrawal of air from the siphon to cause a vacuum in the siphon and effect the siphonic current therein, substantially as and for the purpose set forth.

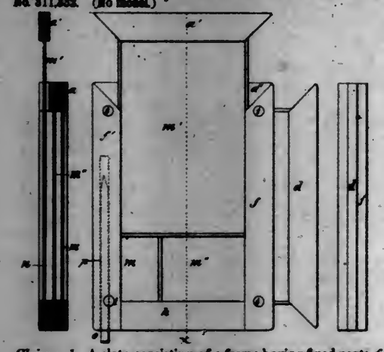
3. In a siphonic dispenser, the combination of the sectional pipes, the coupling-pipe joint that connects them, the tubular T-stud that surmounts said joint, provided with air-ports, the pneumatic valve that opens and closes said ports, the globular incasement that incloses the globe-chamber 16, the discharge-pipe 18, the cut-off valve 17 in said pipe, the pedestal-tube 25, with its globular incasement that incloses the chamber 26, the glass indicating-pipe with its recording-bulb, its pendent pipe being seated in the chamber 26, the packing around said pipe in said chamber, the rubber tube 37, and mouth-piece 39, for the withdrawal of air from the siphon to cause a vacuum and effect a siphonic current of the liquid being dispensed therein, substantially as and for the purpose set forth.



412,192. RAILROAD-RAIL. HOSEA W. LEDOUX, Boston, Mass. Filed Nov. 16, 1888. Serial No. 291,050. (No model.)

Claim.—A railroad-rail consisting of lower portion A, upper portion B, and back portion C, forming a spring, a space D between the lower and upper portions A B, whereby the upper portion is free to yield, substantially as set forth.

412,193. COMBINED COLLAR AND BREAST-STRAP. JACOB LIPP, De Graff, Ohio, assignor of one-half to Wilbur L. Smith, same place. Filed Mar. 9, 1889. Serial No. 302,737. (No model.)



Claim.—1. In a horse-collar or breast-strap, the leather covering, the inside pad, the trace-button, the inside plate, and the thimble K, as and for the purpose set forth.

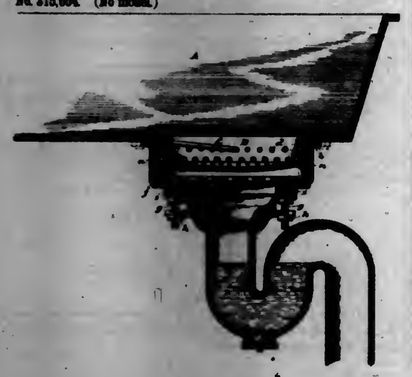
2. In a horse-collar, an inside plate having secured thereto the detachable trace-button I, thimble K, and a locking device for keeping the button from turning, as and for the purpose set forth.

3. The combination of a horse-collar having the inner plate D, and detachable button I, having thimble K thereon, with the ratchet T, pawl U, and fastening N, as and for the purpose set forth.

412,194. SCHOOL-SLATE. SOLOMON MARKS, Cincinnati, Ohio, assignor to the Paragon Slate Company, of Ohio. Filed May 18, 1889. Serial No. 311,332. (No model.)

Claim.—1. A slate consisting of a frame having fixed parts *f f h* formed with slate-grooves, and the removable parts, and the removable slates secured to the removable parts, substantially as shown and described.

2. A slate consisting of the fixed parts *f*, *f'*, *h*, and *a''*, having slate-grooves, the removable slate *m*, having the removable part *a* secured thereto, the slate *m''* and the button *l* secured to the fixed part *a''*, substantially as shown and described.

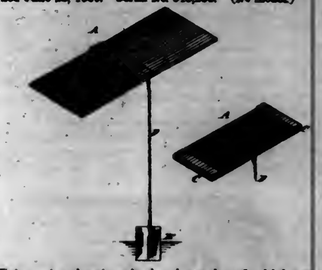


3. A slate consisting of the fixed parts *f*, *f'*, *h*, and *a''*, having slate-grooves, the removable slate *m*, having the removable part *a* secured thereto, and the slate *m''*, having the removable part *d* secured thereto, substantially as shown and described.

4. A slate consisting of the fixed parts *f*, *f'*, *h*, and *a''*, having slate-grooves, the removable parts *a*, *a'*, and *d*, and the removable slates *m*, *m'*, and *m''*, secured, respectively, to the removable parts, substantially as shown and described.

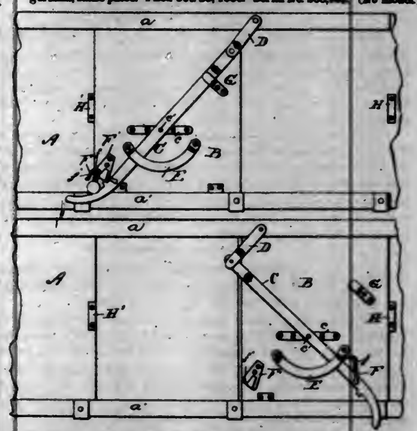
5. A slate consisting of a frame having grooves for three slates, slates removable from said grooves, the outer slates being removed in the same direction and the middle slate being removed in a direction at right angles to the outer slates, substantially as shown and described.

6. A slate consisting of the parts *a*, *a'*, *a''*, *f*, *f'*, *d*, and *h*, which form the frame, said frame having grooves *n* adapted to receive the slates *m*, *m'* *m''*, being securely attached to the parts *a*, *a'*, and *d* of the frame, the parts *a* and *a'* with the slates attached being secured in position by the button *l*, said frame having a socket *p* bored in one side to receive a pencil, substantially as shown and described.



412,195. SINK. STEPHEN A. MARSHS, Newark, N. J., assignor of one-half to Charles B. Bond, same place. Filed June 26, 1889. Serial No. 315,604. (No model.)

Claim.—1. The combination, with the downwardly-extending portion *a*, having an annular shoulder *b*, of the removable strainer B, having perforations in its sides and bottom, and the ball C, formed of springy material, provided with oppositely-extending lateral arms *c*, designed to engage side perforations in the strainer and to be sprung into place therein and to fold within the strainer, substantially as described.



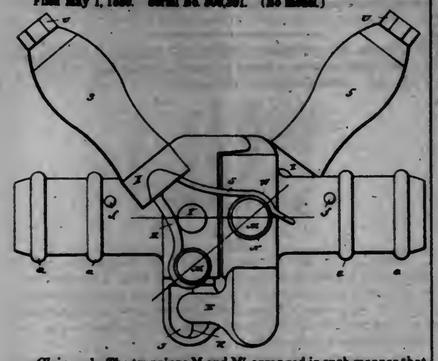
2. The combination, with the downwardly-extending portion *a*, formed with annular depressions *f* and *b* and chamber *i*, of the removable strainer B, having an annular flange *c* resting in the depression *b*, and the strainer D, seated in the depression *f* in the said portion *a* below the strainer B and resting on the inner wall of the chamber *i*, and the bolts *g*, passed through holes in said strainer and through said chamber *i* and provided with suitable nuts, substantially as and for the purpose specified.

412,196. ELECTRO-THERAPEUTIC APPLIANCE. JOHN S. MELLON, St. Louis, Mo., assignor of six-tenths to G. W. Lewis, same place. Filed June 22, 1889. Serial No. 315,263. (No model.)

Claim.—A galvanic pair the electrodes of which are adapted to be artificially excited electrically by the moisture of any part or parts of the human system or that of any other organized life from its contact therewith, in combination with a ground-conductor connecting the pair with the earth, substantially as described.

412,197. CAR-DOOR OPENER AND CLOSER. MYRON MILES, Oxford, Mich., assignor of two-thirds to John D. Hagerman and Clyde Hagerman, same place. Filed Oct. 23, 1888. Serial No. 288,882. (No model.)

Claim.—1. A car-door opener and closer consisting of a lever having its center fulcrumed to the door and its upper end pivoted to a link that in turn is pivoted to the car-body, said lever being thereby adapted to have the power applied to its lower end for opening and closing the door, substantially as described.

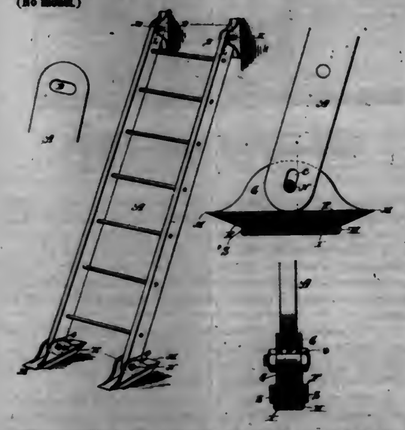


2. A car-door opener and closer consisting of a lever fulcrumed to the car-door and pivotally secured at its upper end to a link or rod, which is in turn pivoted to the car at such a point that the point of connection between the lever and link will fall out of a line drawn between the points of attachment of said lever and link as the direction the door must be moved, substantially as and for the purpose described.

3. In a car-door opener and closer, the combination, with a lever fulcrumed to the door and a rod or link pivotally engaged at one end to the upper end of the lever and pivoted at the other end to the car, of a suitable stop located back of the lever and adapted to keep it in a desired position when the door is closed, and means for additionally locking the door, if desired, substantially as described.

4. A car-door opener and closer consisting of a lever fulcrumed to the car-door, a rod or link pivotally connected to the lever at one end and having the other end pivoted to the car, and a guide adapted to keep the lever in the desired position, substantially as described.

5. In a car-door opener and closer, the combination of the lever C, rod or link D, pivoted to the car, said rod or link and lever being pivotally connected together, door B, lever-guide E, latch F, and hook F', said latch and hook forming means for additionally locking the car-door, and the stops H, H', and G, substantially as described.



412,198. PIPE-COUPLER. CHARLES F. MERRICK, Detroit, Mich., assignor to the Automatic Car Coupler Heating Company, same place. Filed May 1, 1889. Serial No. 308,901. (No model.)

Claim.—1. The trunnions M and M', arranged in such manner that when on duty they shall stand at an angle of about forty-five degrees with each other, in combination with levers R and S and stop-pin Y, the latter being so arranged with reference to the trunnions that the three shall form a triangle having its base in either two of said bearings, substantially as specified.

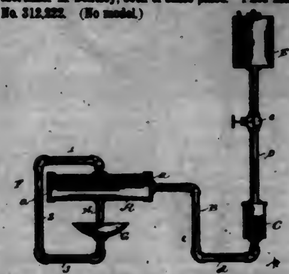
2. The combination, with the coupling-heads carrying a lug or stud, of the locking-levers hinged or pivoted to said heads, the levers each carrying a yielding branch adapted to engage a stud or trunnion on the opposite head, and each head also having a stop or lug arranged so as to limit the locking movement of said levers and hold them in a position whereby they may be disconnected by longitudinal draft on the hose, substantially as specified.

412,199. SHOE FOR LADDERS. JAMES S. MCELHENNY, Washington, D. C., assignor of two-thirds to John Irwin, Jr., and Robert L. Middleton, both of same place. Filed May 20, 1889. Serial No. 312,614. (No model.)

Claim.—1. The ladder having the pivoted shoes with their pivots working in slots, whereby lost motion is effected between the ladder and shoes to relieve the pivots of strain when the ladder is erected, substantially as described.

2. The ladder having the slots at its ends, one or both, in combination with the shoe having the pivot-bolts working in the said slots, substantially as described.

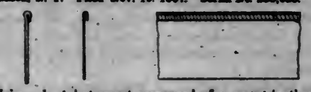
3. The shoes adapted to be pivoted to a ladder and having the friction plates or surfaces and the pointed ends M in line with the faces of the shoes, substantially as described.



4. The pair of shoes adapted to be attached to a ladder, for the purpose set forth, said shoes having the friction plates or soles provided with diagonal corrugations arranged in reverse relation to each other on the respective shoes, substantially as described.

5. The shoes adapted to be pivoted to a ladder and having the countersunk recesses with roughened surfaces on their lower sides and the friction soles or plates of rubber secured in said recesses, substantially as described.

6. The shoes having the countersunk recesses on their lower sides, the sides of said recesses being inclined and converging downward, and the friction plates or soles arranged in said recesses, substantially as described.



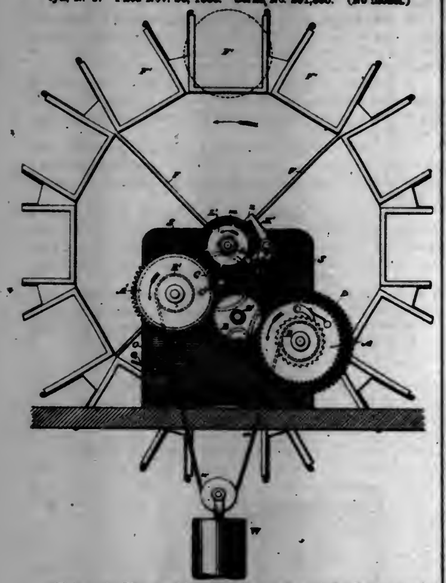
7. The ladder having the transverse slots at its upper end and the longitudinal slots in its lower end, in combination with the shoes attached to said ends of the ladder and having the pivotal bolts working in said transverse and longitudinal slots, substantially as described.

412,200. HYDROCARBON VAPORIZER AND BURNER. THOMAS J. OGLE, Chicago, Ill., assignor of two-thirds to William B. Moore and Mortimer H. Bentley, both of same place. Filed May 27, 1889. Serial No. 312,222. (No model.)

Claim.—In a hydrocarbon generator and burner, the combination, with the generator A, having at each end a removable head, and having depending therefrom a burner having jet-orifices, of the supply-pipe leading from a reservoir and fitting in one head of the reservoir, an intermediate non-conducting chamber between the reservoir and generator, the hollow bracket F, supported from the generator and made up of the parts 1, 2, and 3, united together, and the dished or concave deflector supported by the bracket immediately beneath the burner, substantially as described.

412,201. HAT-SWEAT. GEORGE W. PARKINSON, Fishkill-on-the-Hudson, N. Y. Filed Nov. 19, 1887. Serial No. 255,655. (No model.)

Claim.—1. A hat-sweat composed of a sweat-leather having its edge gummed and rolled, so as to present a solid appearance, as if inclosing a reed, a wire, a cord, or the like, substantially as and for the purpose set forth.



2. A hat-sweat composed of a sweat-leather having its edge gummed, rolled, and colored, so as to present a solid appearance, and as if inclosing a covered reed, wire, cord, or the like, substantially as and for the purpose set forth.

412,202. NEEDLE-GUARD FOR SEWING-MACHINES. JAMES S. PATTEN, Baltimore, Md. Filed Dec. 6, 1888. Serial No. 292,669. (No model.)

Claim.—A needle-guard for a sewing-machine presser-foot, consisting in the parallel vertically-extending plates 10, connected at the lower ends of their rear edges, as shown at 15, formed on their lower edges with apertured flanges 12, and provided with openings 11, extending downwardly from their upper edges.

412,203. AUTOMATIC EXHIBITOR. WILLIAM H. ROGERS, Brooklyn, N. Y. Filed Nov. 26, 1888. Serial No. 291,866. (No model.)

Claim.—1. The combination of a substantially flat vertically-arranged and intermittently-rotating picture-holding disk having a horizontal or substantially horizontal axis, an inclosing-case having a sight orifice or lens before which the picture-holder revolves, and power mechanism to intermittently rotate said disk.

2. The combination of a vertically and intermittently rotating picture-holding disk having a horizontal or substantially horizontal axis, and formed with the pictures arranged substantially in the same plane and radiating from the axis, a magic lantern having a lens before which the picture-holder revolves, and power mechanism to intermittently rotate said disk.

3. The combination of a vertically and intermittently rotating picture-holding disk having a horizontal or substantially horizontal axis, and formed with the pictures arranged substantially in the same plane and radiating from the axis, a magic lantern having a lens before which the picture-holder revolves, power mechanism to intermittently rotate said disk, and an inclosing-case for the disk, power mechanism, and lantern.

4. In an automatic exhibitor, a magic lantern, in combination with an intermittently-revolving exhibiting frame or disk, a catch-wheel carried with said frame, a pallet or catch to catch or release the catch-wheel, and power mechanism to operate both the frame or disk and the pallet.

5. In an automatic exhibitor, a magic lantern, in combination with an intermittently-revolving exhibiting frame or disk, a catch-wheel carried with said frame, a pallet or catch to catch or release the catch-wheel, and independent power devices for operating the frame or disk and the pallet.

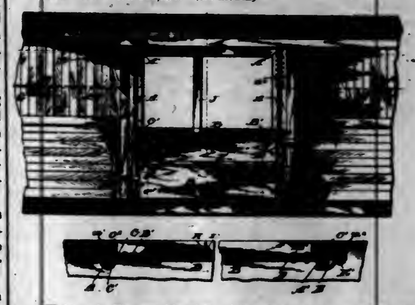
6. In an automatic exhibitor, a magic lantern, in combination with an intermittently-revolving exhibiting frame or disk, a catch-wheel carried with said frame, a pallet or catch to catch or release the catch-wheel, independent power devices for operating the frame or disk and the pallet, consisting of gearing and drums and in which a single cord and weight is arranged to operate both motors.

7. In an automatic exhibitor, a magic lantern, in combination with an intermittently-revolving exhibiting frame or disk having a horizontal axis and formed with pictures arranged in substantially the same plane and radiating from said axis, a power mechanism to rotate said disk, and a stop motion to intermittently arrest the rotation of said disk.

8. In an automatic exhibitor, a flat disk or frame having a central axle and provided with pictures arranged in a circle about said axle and radiating at right angles or thereabout from the axle and in substantially the same plane, power mechanism to rotate said disk, and intermittently-actuated stop mechanism to intermittently arrest the rotation of the disk.

9. In an automatic exhibitor, a magic lantern, a flat disk or frame having a central axle and provided with pictures arranged in a circle about said axle and radiating at right angles or thereabout from the axle and in substantially the same plane, power mechanism to rotate said disk in front of the lens of the lantern, and intermittently-actuated stop mechanism to intermittently arrest the rotation of the disk.

10. The combination of a rotating disk F, having openings for pictures around its circumference, power mechanism to rotate said disk, an escapement mechanism to intermittently arrest the rotation of said disk, and having an operating-arm, a crank-pin or its equivalent to operate said arm, and power mechanism to rotate said crank-pin.



412,204. AUTOMATIC SPRINKLER. CHARLES F. RICHE, Hopedale, Mass., assignor to George Draper & Sons, same place. Filed June 6, 1889. Serial No. 313,567. (No model.)

Claim.—1. In an automatic sprinkler, the combination, with a valve-casing adapted to be secured to a supply-pipe, of a valve fitted into said casing and provided with a stem having a peripheral groove or slot, as b^3, a support having a slot to correspond in position with the slot b^3 when the valve is closed, and a retaining-plate, as c, to operate substantially as described.

2. In an automatic sprinkler, the combination, with a valve-casing adapted to be secured to a supply-pipe and a deflector secured to said casing, of a valve fitted into said casing and provided with a stem having a peripheral groove or slot, as b^3, a support having a slot to correspond in position with the slot b^3 when the valve is closed, and a retaining-plate, as c, having one end secured to the deflector and its other end inserted into said groove, substantially as described.

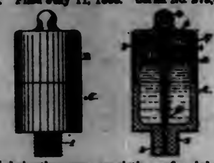
412,205. GRAIN-CAR DOOR. EDGARD B. STARLIN, Baltimore, Md., assignor of one-fourth to Charles C. Corbin, same place. Filed May 10, 1889. Serial No. 310,337. (No model.)

Claim.—1. The combination, with rods or posts arranged within a car, of doors provided with hinges and catches on their ends to slide on and engage with the rods, respectively, substantially as specified.

2. The combination, with rods arranged at each side of a car-door opening, of doors having hinges at their ends, said hinges sliding on opposite rods, said doors extending across the opening and hinged one above the other to opposite rods, substantially as shown and described.

3. The combination, with rods arranged at each side of a car-door opening, of doors the hinges of which slide on opposite rods, catches on said doors, and pivoted latches bearing on the hinges to hold the doors closed, substantially as specified.

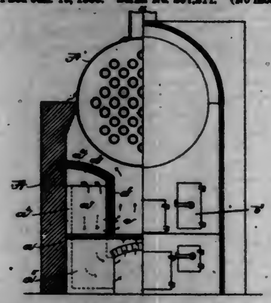
4. The combination, with rods arranged at each side of a car-door opening, of doors extending across said opening and provided at one end with hinges and at the other end with catches, said hinges and catches being alternately arranged, one or more of said doors being provided with a strip or flange and brackets to hold said doors in place when swung out of their normal position, substantially as specified.



5. A grain-car door having a hinge thicker on one side than on the other, substantially as specified.

6. A grain-car door having a hinge thicker on one side than on the other, in combination with a rod serving as a pivot for said hinge, substantially as specified.

7. A grain-car door having a hinge thicker on one side than on the other, in combination with a rod serving as a pivot for said hinge, and with the studding of a car-door opening, whereby when closed the thicker portion of the hinge serves to prevent the escape of grain, substantially as specified.

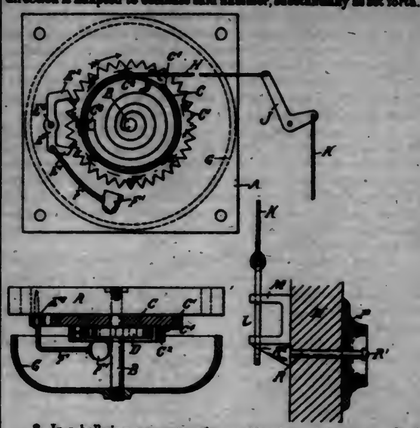


8. In combination with a car-door supported at its extremities, as described, a collar fastened to the outside of the same and provided with a bayonet-slot, a bolt sliding in said collar and provided with a pin sliding in said slot, and a spring surmounted by a cap set into the floor of the car directly under said bolt, substantially as specified.

412,206. LUBRICATING-CUP. JOHN H. SHERWARD, Albany, N. Y., assignor of two-thirds to Robert C. Marshall and James F. Bowers, both of same place. Filed July 11, 1888. Serial No. 278,645. (No model.)

Claim.—A lubricating-cup consisting of a lubricant-receptacle having in its upper end a series of notches, a screw-valve fitted to govern the flow of lubricant from said receptacle, and a cap-piece which covers said receptacle and valve, the head of the stem of said valve being slotted and provided with a radial spring which projects from one side of said stem and is then bent back to pass through the slot in the head of said stem, so as to form a cross-handle for said valve, the outer end of said spring being fitted to engage in the notches in the upper end of said receptacle, so that the cover of the latter will inclose said spring, as and for the purpose herein specified.

412,207. FURNACE. FRANK G. SHERWOOD, Rochester, N. Y., assignor to the Clark's Coking and Smokeless Furnace Company, same place. Filed Jan. 19, 1889. Serial No. 297,211. (No model.)

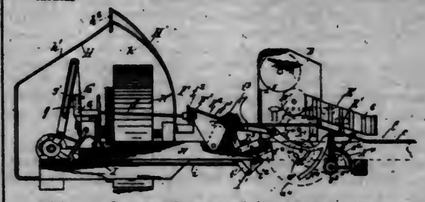


Claim.—1. In a coking-furnace, a combustion-chamber provided with grate-bars, combined with an auxiliary oven having a flue or passage-way leading from it to below the grate-bars of the combustion-chamber, a partition-wall separating said oven and chamber and extended to the said grate-bars, and a series of independent openings in the said partition-wall to form flame-outlets for the said auxiliary oven, substantially as described.

2. In a coking-furnace, a combustion-chamber provided with grate-bars, combined with an auxiliary oven having a flue or passage-way leading from it to below the grate-bars of the combustion-chamber, and a partition-wall separating said oven and chamber and having its lower portion composed of independent pieces provided with openings b to form flame-outlets for the said oven, substantially as described.

412,208. BELL-RINGING APPARATUS. DAVID J. SMITH, Reading, Pa., assignor of one-half to John Schoenfeld, same place. Filed Jan. 7, 1889. Serial No. 295,944. (No model.)

Claim.—1. In a bell-ringing apparatus, the combination, with a scape-wheel and drum connected with an operating-wire and a retracting-spring, of a pivoted anchor E, with dependent hammer, the pallets of said anchor engaging the wheel substantially in the manner described, whereby the movement of said wheel in either direction is adapted to oscillate said hammer, substantially as set forth.



2. In a bell-ring apparatus, the combination, with a scape-wheel and drum connected with an operating-wire and a retracting-spring and having teeth with equally-sloped working-faces, of a hammer operated by a pivoted anchor having correspondingly-shaped pallets engaging said teeth substantially in the manner described, whereby the movement of said wheel in either direction is adapted to oscillate said hammer, substantially as set forth.

3. In a bell-ringing apparatus, the combination, with the scape-wheel, the drum C^2, the retracting-spring D, connecting said wheel to its arbor B, and an operating-wire attached to said drum, of a pivoted anchor E, with dependent hammer, and V-shaped pallets F and F^3, engaging corresponding teeth in the scape-wheel, substantially as described, all arranged to operate as set forth.

4. In a bell-ringing apparatus, the combination, with a scape-wheel connected with an operating-wire and a retracting-spring, of an operating mechanism consisting of a push-button, with wedge-shaped end R^3 engaging a slotted plate L, connected to said operating-wire and moving in a guide M, all substantially as set forth.

412,209. CORN-HARVESTER. GILBERT B. SNOW and JAMES T. SNOW, Sugar Grove, Ill. Filed Oct. 17, 1888. Serial No. 288,204. (No model.)

Claim.—1. In a corn-harvester, the combination, with the stationary guards B^2, of the reciprocating cutting-knives B', arranged above said guards and extending forward of the same, substantially as and for the purpose specified.

2. In a corn-harvester, the combination, with the cutting and binding mechanism, of the vertically-swinging bundle-discharger arranged at the stubble side of the binding mechanism and provided with guards extending downward from its inner end, substantially as and for the purpose specified.

3. In a corn-harvester, the combination, with the cutting and binding mechanism, of the vertically-swinging bundle-discharger arranged at the stubble side of the binding mechanism and provided with fingers, each having a yielding guard, and a suitable spring to press the guard outward, substantially as and for the purpose specified.

4. In a corn-harvester, the combination, with the arm f and cross-bar F', of the fingers F^2, each composed of side plates f^2, attached to said cross-bar, guard F^3, pivoted between said plates, and spring f', interposed between said guard and cross-bar, substantially as and for the purpose specified.

5. In a corn-harvester, the combination, with the binder, of the vertically-swinging bundle-discharger, its operating mechanism, and a trip for throwing said mechanism into connection, substantially as de-

scribed, and a connection between the binder and said trip, whereby the latter is operated by the binder to start the bundle-discharger, substantially as and for the purposes specified.

6. In a corn-harvester, the combination, with the bundle-discharger and its operating mechanism, of the stop-arm I, controlling the same, the rod *i*, connected thereto, the shaft I', having crank-arms i^2 and i^3, the former connected to the rod *i*, the rock-shaft I^4, carrying crank-arm I^5, and the link I^6, connecting said crank-arm and the crank-arm i^3, substantially as and for the purposes specified.

7. In a corn-harvester, the combination, with the vertical shaft E^3, having crank-arm E', of the butt-evener having arm *d'* pivoted to said crank-arm, the arm E^5, connected to said butt-evener, the guide-rod D', pivoted to said arm at one end, the pivoted bearing *d*, through which the other end of said guide-rod passes, and the link e^3, having one end pivotally connected to the butt-evener and its other end adjustably pivoted to a suitable fixed support, substantially as and for the purposes specified.

8. In a corn-harvester, the combination, with the gathering and carrying chains, arranged in vertical planes, and their pivoted dogs, of the shield K, arranged on the inner side of each chain along the forward-moving portion thereof, substantially as and for the purposes specified.

9. In a corn-harvester, the combination, with the main wheel and the bundle-discharger swinging over the same, of the arch H, arranged over the wheel and having the inner part *h* curved to conform to the curved motion of the discharger, an outer part *h'*, inclined downward and outward, and a curved spring H', attached at its lower end to the curved portion *h* of the arch and provided at its upper end with the downwardly-bent arm h^2, substantially as and for the purposes specified.

10. In a corn-harvester, the combination, with the vertically-swinging bundle-discharger and its operating mechanism, of a spring arranged in the path of said bundle-discharger near the outer limit of its motion and adapted to engage with the same and assist its return, substantially as and for the purposes specified.

11. The combination, with the vertically-swinging bundle-discharger F, having arm *f*, of the spring G', attached to a suitable support and provided with an adjustable screw *g'*, arranged in the path of the said arm near the outer limit of its motion, substantially as and for the purposes specified.

12. In a corn-harvester, the combination, with the binding mechanism and the vertically-swinging bundle-discharger arranged at the delivery side thereof, of yielding arms projecting above the binding-deck on each side of the compressor and between the latter and the needle-shaft, substantially as and for the purposes specified.

13. In a corn-harvester, the combination, with the vertically-swinging bundle-discharger and the binding mechanism provided with the rock-shaft I^4, which operates the compressors, of the arms I^8, attached to said rock-shaft and projecting normally upward above the deck on each side of the compressor and between it and the needle-shaft, substantially as and for the purposes specified.

14. In a corn-harvester, the combination, with the gathering and carrying chains and their pivoted dogs, of the shield K, arranged on the inner side of each chain along the forward-moving portion thereof and provided at its rear upper end with a cushioning-spring *k*, against which the dogs strike at the beginning of their forward motion, substantially as and for the purposes specified.

412,210. WEATHER-STRIP FOR WINDOWS. DRAPER STONE, Pittsford, N. Y. Filed June 4, 1888. Serial No. 275,913. (No model.)

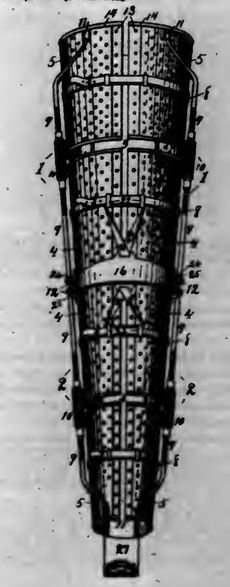
Claim.—1. The combination, with a window-sash rail having one of its inner corners rounded and provided with a depression, of a packing-strip attached to said rounded corner and resting in said depression, its free edge standing outward against the jamb, and a metallic stiffening-strip of less width also attached to the corner outside the packing, said stiffening-strip serving the double purpose of a stiffener and a wear-plate, as shown and described, and for the purpose specified.

2. The combination, with a window-sash rail having its two inner corners rounded and provided with a depression, of two packing-strips attached, respectively, to the two rounded corners and resting in the depressions, their free edges standing outward in the same direction against the jamb, and two metallic stiffening-strips also attached to the corners outside the packings, the whole arranged to operate in the manner and for the purpose specified.

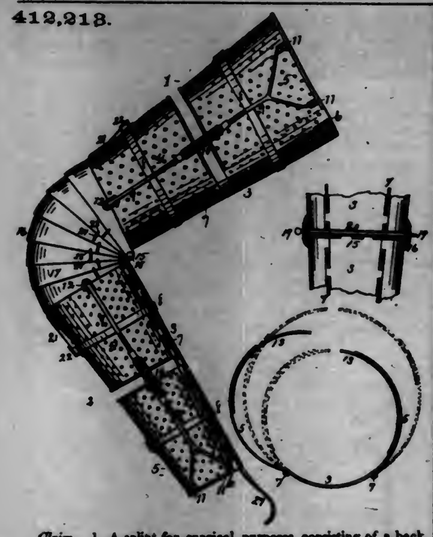
412,211. WELL OR CISTERN CLEANING MACHINE. ARTHUR H. TAYLOR, Niles, Mich. Filed Apr. 10, 1889. Serial No. 306,777. (No model.)

Claim.—In a cistern-cleaner, the combination, with the receiving-cylinder C, piston A, and valve B, of the guides *a a*, rods F, sliding therein, and the cross-head and piston-rod connecting said piston to said rods F, substantially as and for the purposes specified.

412,212. PAIL, &c., MADE OF STAVES. HENRY H. THOMPSON, Boston, Mass. Filed Feb. 11, 1889. Serial No. 299,508. (No model.)



Claim.—1. A hoop comprising a band of metal of even curvature, having cross corrugations or crimps which normally slant in correspondence to the slanting surface of a bilged or slanting vessel, substantially as set forth.



2. A bilged or slanting vessel having circumferential grooves containing hoops of metal of even curvature, having cross corrugations or crimps which normally slant in correspondence to the slanting surface of said vessel, all substantially as set forth and described.

3. A bilged or slanting vessel having circumferential grooves containing metal hoops of even curvature, having cross corrugations or crimps normally slanting in correspondence to the slanting surfaces of said vessel, the lower ends of the staves forming said vessel being rounded, all substantially as described.

412,218. SURGICAL SPLINT. GEORGE W. TURNER, St. Paul, Minn., assignor of one-half to C. H. Parker, same place. Filed Mar. 22, 1889. Serial No. 304,297. (No model.)

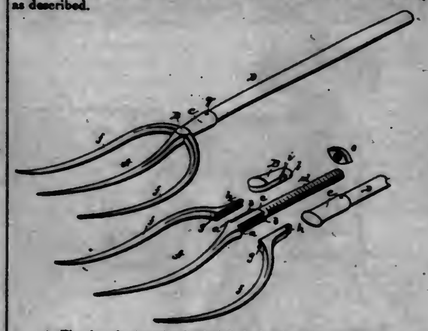
412,213.

Claim.—1. A splint for surgical purposes, consisting of a back, two pairs of suitably curved inclosing-plates hinged to the opposite edges thereof and movable longitudinally with reference thereto by means of a sliding hinge, and means, substantially as described, for drawing apart said sets or pairs of plates upon said back when bound upon the limb, as and for the purpose specified.

2. A surgical splint consisting of a series of curved inclosing-plates hinged at their edges to a suitable back, and an extension-plate attached to and movable upon each of said inclosing-plates by means of a lip formed upon the former and overlapping the opposite edges of the latter of said plates, substantially as and for the purpose specified, whereby the lateral extension of said plates may be increased.

3. A splint for surgical purposes, consisting of two sections adapted to inclose the upper and lower portions of the limb, respectively, each of said sections comprising a back having two sets of inclosing-plates hinged to the opposite sides thereof and movable longitudinally with reference thereto by means of a sliding hinge, the said two series of plates in each section having rods attached thereto upon the opposite sides thereof, an elongated nut uniting the adjacent ends of said rods upon each side by means of right and left screw-threads formed upon said rods and in the opposite ends of the nut, respectively, and a hinged joint connecting the ends of the backs of the two sections, substantially as and for the purpose herein specified.

4. In combination, in a splint for surgical purposes, two sections adapted to fit the upper and lower portions of the limb, respectively, and connected by a hinge-joint, a collapsible cap consisting of a series of lune-shaped plates pivoted together at their points and adapted to slide one within another, the said pivotal point being substantially in line with the joint of the hinge, the outer and inner of said plates being respectively connected with the adjacent splint-sections, and a pin or lug 23 in each of said plates working in a slot 24 in the next inner plate, substantially as and for the purpose herein specified.



5. In a splint for surgical purposes, two sections adapted to fit the upper and lower portions of the limb, respectively, and connected by a hinge-joint, in combination with a collapsible cap composed of a series of lune-shaped plates pivoted together at their points and adapted to slide one within another, the said pivotal points being substantially in line with the joint of the hinge, a pin or lug 23 in each of said plates, working in a slot 24 in the next inner plate, and lugs upon said splint-sections adapted to engage with the edges of said outer and inner plates when the joint is straightened, substantially as set forth.

412,214. PITCHFORK. ADNER B. VAIL, Hillsborough, Dak. Filed Aug. 17, 1889. Serial No. 321,093. (No model.)

Claim.—1. The herein-described pitchfork, having detachable tines, the center tine having a shouldered and tongued shank and the side tines having grooves adapted to register with the tongues of the center tine, substantially as described.

2. The herein-described pitchfork, having detachable tines, the center tine being shouldered and tongued, the side tines being shouldered and grooved and having a shank attachment, substantially as and for the purpose shown.

3. The herein-described pitchfork, having detachable tines, the center tine being shouldered and tongued and the side tines being shouldered and grooved, having also a shank attachment and ferrule having a perforated division, constructed to co-operate substantially as described.

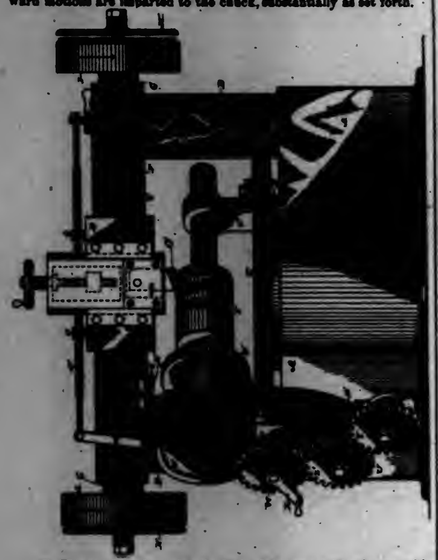
4. The herein-described pitchfork, having detachable tines, the center tine having a shouldered and tongued shank and a prolongation adapted to enter the handle, and the side tines being shouldered and grooved, also having a shank attachment, substantially as described, a divisioned ferrule, the lower part of which is adapted to receive the shanks and shank attachment and the upper division adapted to receive the handle, substantially as described.

5. The herein-described pitchfork, comprising the following elements: a center tine having a shouldered and tongued shank and an upward and threaded prolongation, side tines having shouldered and grooved shanks, a shank attachment, a ferrule having a division perforated to allow the insertion of the prolongation of the center-tine shank, and a nut adapted to be inserted in the end of the handle and receive the threaded prolongation of the shank, all constructed and combined to co-operate substantially as described.

6. The herein-described pitchfork, comprising the following elements: a center tine having a shouldered and tongued shank and a threaded prolongation, side tines having shouldered and grooved shanks, a shank attachment, a ferrule having a central division perforated to allow the insertion of the prolongation of the shank and having a small exterior perforation, a nut adapted to be inserted in the end of the handle and to receive the said prolongation, a narrow interiorly and centrally thickened ferrule adapted to be placed on the end of the handle to hold said nut and adapted to slide into the divisioned ferrule, and a screw adapted to be inserted through the exterior perforation of the divisioned ferrule into the handle, all constructed and combined to co-operate as and for the purpose set forth.

412,215. MACHINE FOR CUTTING SPIRAL PINIONS. EDWARD P. WALKER and HERBERT C. WALKER, Bridgeport, Conn., assignors to Maging, Maxwell & Moore, New York, N. Y. Filed June 15, 1889. Serial No. 314,262. (No model.)

Claim.—1. The combination, with the bed, the turn-table, the carriage mounted thereon, the chuck arranged upon the carriage, and means, as described, whereby forward motion may be imparted to the carriage and both forward and rotary motion to the chuck, of the cutting-tool and carriage mounted above the work-carriage and adapted to be reciprocated, substantially as set forth.



2. The combination, with the tool-carriage and tool adapted to be reciprocated upon the guideway, of the work-carriage adapted to travel upon ways beneath the tool, the chuck mounted upon the carriage, and the gears and pinion whereby rotary motion is imparted to the chuck, substantially as described.

3. The combination with the guideway supported upon columns from the bed, of the screw extended longitudinally through the guideway, the tool-carriage mounted upon the guideway and carried by the screw, and the pulleys and clutch-disks mounted at either end of the screw, substantially as and for the purpose set forth.

4. The combination, with the guideway, of the screw longitudinal thereof and the tool-carriage carried by said screw, the pulleys and clutch-disks, and the shipper-rod, its arms, and connections whereby the engagement of the disks and the movement of the tool-carriage is reversed, substantially as specified.

5. The combination, with the bed of the machine, of the turn-table arranged thereon, the carriage mounted upon the turn-table and supporting the chuck, the driving-screw shouldered in the carriage and threaded in the turn-table, the gears and upright shaft, and the worm meshing with the gear on the chuck, all arranged as and for the purpose set forth.

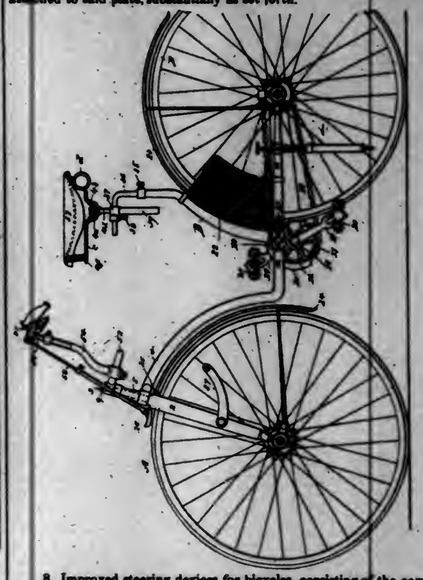
6. The combination, in a machine of the character described, of the following mechanical element, to wit: the traveling tool-carriage and its tool, the longitudinally-moving work-carriage beneath the tool, the chuck mounted and adapted to rotate upon the work-carriage, and mechanism, as described, whereby the combined rotary and forward motions are imparted to the chuck, substantially as set forth.

7. The combination, with the bed, of the turn-table, the movable work-carriage and the chuck geared at its rear end, the gears and the carriage-driving screw, the vertical shaft, index-plate, and pin, and the worm meshing with the gear upon the chuck, substantially as described.

412,216. BICYCLE. GEORGE T. WARWICK, Springfield, Mass., assignor to the Warwick Cycle Manufacturing Company, same place. Filed Jan. 4, 1889. Serial No. 295,401. (No model.)

Claim.—1. In combination with the fork-spindle and the hollow backbone-head fitting on said spindle, a cone-shaped sleeve on said spindle, an internally cone-shaped bushing in said head fitting said sleeve, and a nut on the end of said spindle holding said bushing and sleeve in operative relations, substantially as and for the purpose set forth.

2. In combination with the rear-fork arms constituting the frame of the machine between the two wheels thereof, a yoke 10, fixed on said frame, a shaft-box 12, attached to each end of said yoke and longitudinally adjustable thereon, and the crank and sprocket-wheel shaft supported in said boxes, substantially as set forth.



3. The rear-fork arms *a a*, constituting the frame of the machine between the two wheels thereof, a yoke 10, fixed on said frame and having at each end thereof a longitudinal groove, an adjusting screw-bolt 15, in line with said groove, a shaft-box 12, adjustably attached to each end of said yoke, having a rib thereon engaging with said groove, and the crank and sprocket-wheel shaft supported in said boxes, combined and operating substantially as set forth.

4. An improved support for the saddle-post and crank-shaft of a bicycle, consisting of the yoke 10, fixed to the frame of the machine, and the saddle-post B, fixed to said yoke, combined with the shaft-boxes 12, attached to the ends thereof, substantially as set forth.

5. A depressible mounting-step attached to the frame of the machine, having a leg whose lower end engages with the ground when said step is forced downward, a spring-case in which said leg moves and is supported, and a spring to throw said step upward, combined and operating substantially as set forth.

6. A depressible mounting-step attached to the frame of the machine and normally inclined to the plane of rotation of the wheels of the machine, having a leg whose lower end engages with the ground when said step is moved downward, a spring-case in which said leg moves and is supported, and a spring to throw said step upward, combined and operating substantially as set forth.

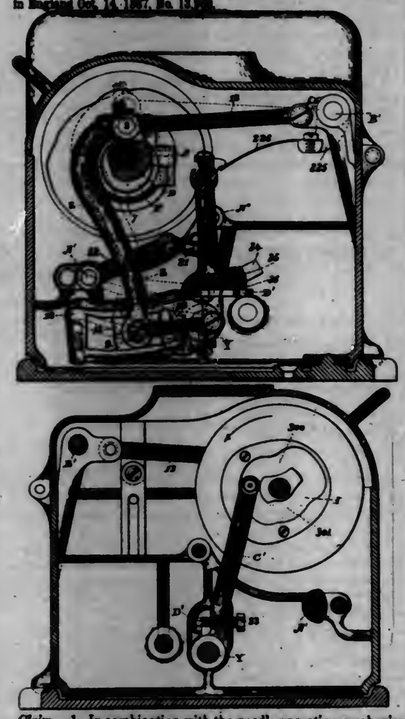
7. In combination with an arm 36, on which the saddle is supported, a yoke 37, attached to said arm, two tubular spring-cases pendi ng from said yoke containing springs, substantially as described, two plungers 41, having a vertical movement against said springs, a saddle-plate 42, rigidly uniting the upper ends of said plungers, and a saddle attached to said plate, substantially as set forth.

8. Improved steering devices for bicycles, consisting of the combination, with the front-fork spindle thereof and the handle-bar, of a steering-post and a lever, substantially as described, forming an intermediate connection between said handle-bar and fork-spindle, substantially as set forth.

9. Improved steering devices for bicycles, consisting of the combination, with the front-fork spindle thereof and the handle-bar, of a steering-post and a lever, substantially as described, forming an intermediate connection between said handle-bar and fork-spindle, said steering-post being adjustable on said lever from and toward the axis of said fork-spindle, substantially as set forth.

10. In combination with the fork-spindle, the laterally-extending lever 52, secured to said spindle, the steering-post 54, attached to said lever and adjustable longitudinally thereon, the handle-bar spindle 56, adjustable vertically in said post, and the handle-bar 57, substantially as set forth.

412,217. STEAM-ENGINE. CHARLES A. WHEELER, Bridgeport, Conn., assignor of one-half to William F. Healy, same place. Filed June 24, 1889. Serial No. 315,209. (No model.)



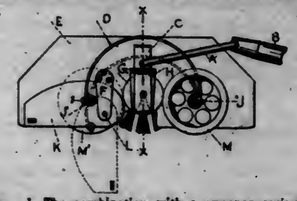
Claim.—1. A steam-cylinder having at opposite ends cams 12 and steam and exhaust pipes, in combination with a piston-rod extending through the ends of the cylinder and a piston secured thereto and provided with inclines 13, adapted to engage the cams, and peripheral grooves each having an arm 7^a, by which steam is taken, and an arm 7^b, and exhaust-openings leading therefrom to the end of the piston, substantially as described and shown.

2. The combination, with a steam-cylinder having at opposite ends cams with portions 12^a and 12^b, substantially as described, and steam and exhaust passages, of a piston having peripheral grooves with arms 7^a, by which steam is taken, and arms 7^b, and exhaust-openings 8, connected therewith, by which steam is exhausted, and at opposite ends thereof inclines having portions 13^a and 13^b adapted to engage the cams, so that the entrance of steam into the cylinder will impart longitudinal reciprocating motion to the piston, and also a complete rotation thereof during each reciprocation.

3. The cylinder having steam and exhaust pipes and cams having portions 12^a and 12^b at opposite ends thereof, in combination with a piston having grooves with arms 7^a and 7^b on the periphery thereof, and steam-passages connected to one of said arms, whereby steam is taken and exhausted, inclines at opposite ends thereof, having portions 13^a and 13^b adapted to engage the cams, and a piston-rod extending through the end of the cylinder and provided with a spline 19, a shaft having a longitudinal opening to receive the piston-rod, and a cross-slot to receive the spline, and a balance-wheel secured to said shaft.

4. The combination, with a steam-cylinder having the usual steam and exhaust openings, and having cams 12 at opposite ends thereof, of a piston having peripheral grooves and passages leading therefrom to the end of the piston and inclines 13 at opposite ends, adapted to engage cams 12, whereby both rotary and longitudinal reciprocating motions are imparted to the piston in use.

412,218. MACHINE FOR SEWING STRAW BRAID. CHARLES H. WILLCOX, New York, N. Y., and GEORGE H. NOBLE, Providence, R. I., assignors to the Willcox & Gibbs Sewing Machine Company, New York, N. Y. Filed Nov. 7, 1887. Serial No. 254,822. (No model.) Patented in England Oct. 14, 1887, No. 13,923.



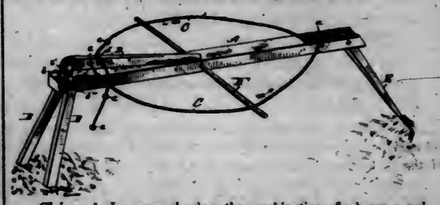
Claim.—1. In combination with the needle-operating mechanism having a part adjustable to regulate the needle-stroke, the controller mechanism for adjusting said part, and the controller-clamping devices, means whereby said clamping devices are released after the needles reach the top of their stroke, said means comprising a moving part of the machine—such as a rotary cam-surface—which releases and restores the clamp periodically and comes into position to effect such release after the needles reach the top of their stroke, substantially as described.

2. The combination, with the needle-operating mechanism, comprising a rock-shaft provided with an operating-arm, a box adjustable lengthwise of said arm, an eccentric and link for vibrating said arm and rock-shaft through said box, and the controller mechanism for adjusting said box, of an automatic intermittent clamp whose pressure is relieved when said operating-arm, eccentric, and link are in position for the force of said eccentric to move the said box in the direction for increasing the needle-stroke, said intermittent clamp having a suitable moving part—such as a rotary cam-surface—which periodically releases and restores the clamp, and which comes into position to effect such release at the time just mentioned, substantially as described.

3. In combination with the looper mechanism, the needle-operating mechanism having a part adjustable to regulate the needle-stroke, the controller mechanism for adjusting said part and the devices for clamping the controller mechanism, and the cam which acts upon said devices and causes them to release the said controller mechanism before the needles are thrust through the work to clamp the same during this operation, to release the clamp after the needles have reached the top of their stroke and before the looper mechanism takes the loop, and to restore the clamp during the time of action of the feed, said cam having inclines which act in succession upon the clamping devices and release and restore the clamp at the respective times stated, substantially as described.

412,219. CARPET-SWEEPER. GEORGE W. GATES, Grand Rapids, Mich., assignor, by mesne assignments, to the Bissell Carpet Sweeper Company, same place. Filed Mar. 21, 1885. Serial No. 159,679. (Model.)

Claim.—1. The combination, with a sweeper-casing, a brush-shaft, and a propelling-handle, of a yielding brush-shaft support lowered by the action of the handle when pressed upon and moving the brush-shaft toward the surface traversed independent of vertical movement of the sweeper-casing, said support automatically rising and restoring the brush-shaft to and sustaining it in its normal position when pressure on the handle is relieved.



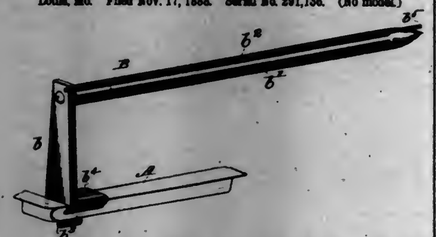
2. The combination, with a sweeper-casing, a brush-shaft, and a propelling-handle, of a yielding brush-shaft support connected with the handle, yieldingly moved downward by pressure exerted on the latter and automatically raised to restore the brush-shaft to and sustain it in its normal position when pressure on the handle is relieved.

3. The combination, with a sweeper-casing, of spring-supports carried by the casing and having bearings for a brush-shaft, and a sweeper-bail journaled to the spring-supports, said spring-supports adapted to sustain the brush-shaft in its normal position and to restore it to such position when relieved of downward pressure on the handle.

4. In a carpet-sweeper, a dust-pan carrying a drive-wheel and hinged to the casing, in combination with the spring which holds the drive-wheel in contact with the brush-shaft, said pan and wheel adapted to turn downward for the purpose of emptying the pan and the spring adapted to hold the pan in an open and closed position, substantially as described.

5. The combination of the dust-pan K and the axle J', said dust-pan inclosing said axle and adapted to protect it from dust, substantially as described.

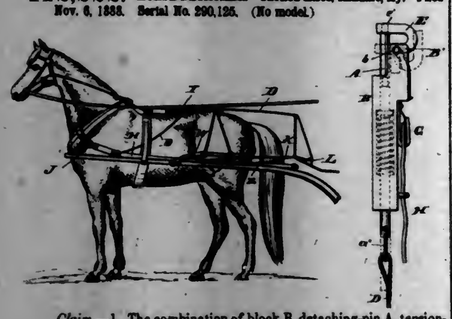
412,220. MACHINE FOR SHOCKING AND BINDING CORN. ADAM REINHEIT, Tiffin, Ohio, assignor of one-half to John Orr, same place. Filed Dec. 20, 1888. Serial No. 294,207. (No model.)



Claim.—1. In a corn-shocker, the combination of a beam, a pulley at one end thereof, a lever pivoted at the other end, and a rope connected at one end to the lever, passed around the pulley, and having its other end adapted to be detachably connected to the lever, substantially as described.

2. In a corn-shocker, the combination of a beam, a pulley, and a pivoted leg at one and the same end, fixed legs and a pivoted lever

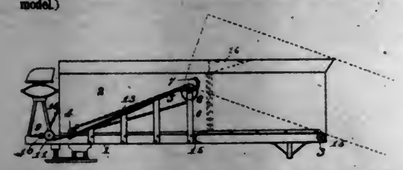
at the other end, and a rope connected at one end to the lever, passed around the pulley, and having its other end provided with knots, whereby it is adapted to be detachably connected to the lever, substantially as described.



3. In a corn-shocker, the combination of a beam having a slot in one end, a pulley in said slot and a lever at the other end thereof, and a compressive rope passed over the pulley and attached at its ends to the lever, substantially as described.

412,221. TYPE-WRITER COPY-HOLDER. JAMES W. ALLEN, St. Louis, Mo. Filed Nov. 17, 1888. Serial No. 291,136. (No model.)

Claim.—In a type-writing-machine copy-holder, the combination of an upright, and bars or rods extending laterally therefrom, said bars or rods b' b^3 being disunited at the outer end thereof, substantially as described.

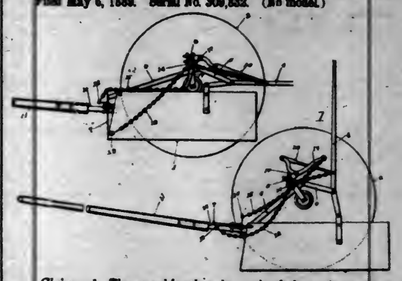


412,222. HORSE-DETACHER. GEORGE ARGO, Millsdale, Ky. Filed Nov. 6, 1888. Serial No. 290,125. (No model.)

Claim.—1. The combination of block B, detaching-pin A, tension-spring C, surrounding pin A, hook E, pivoted in block B and provided with arm e, spring F, bearing against arm e, and trace-hook G, substantially as and for the purposes specified.

2. The combination of block B, detaching-pin A, tension-spring C, surrounding pin A, hook E, pivoted in block B and provided with arm e, spring F, bearing against arm e, trace-hook G, cord D, pulley L, and cords K, attached to the shafts and continuous with cord D, substantially as and for the purposes specified.

412,223. TILTING WAGON. EDWARD O. LYBERTY and ALBERT G. BRAUN, Denver, Colo. Filed Dec. 10, 1888. Serial No. 293,147. (No model.)

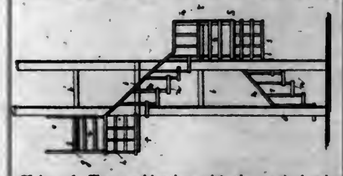


Claim.—1. The combination, with a wagon truck and bed, of inclined ways or tracks rising from the front of the truck to or just beyond the longitudinal center thereof, and supported thereat by standards rising therefrom, pulleys journaled at or near the ends of such standards, wheels or rollers at the front base of the bed taking upon the inclined ways or tracks, a wheel and axle journaled upon the front of the truck, chains passing thence over the pulleys to or near to the front end of the bed for moving it to the rear, and a chain or chains passing directly from the wheel and axle to the front of the bed for moving it to the front, substantially as set forth.

2. The combination of the truck 1, the wheels or rollers 3 3, the inclined ways or tracks 5 5, having stop ends 7 7, the bed 2, having rollers or wheels 4 4 and stops 15 15, the wheel and axle, and the connections 13 14, substantially as set forth.

3. The combination, with the sides of the bed, of auxiliary pieces 16, hinged or pivoted to the flare-boards, substantially as set forth.

412,224. WHEELED SCRAPER. THOMAS ATCHISON, Denver, Colo. Filed May 6, 1889. Serial No. 309,532. (No model.)



Claim.—1. The combination, in a wheeled earth-scraper, of an end-gate 7, suitably pivoted between the rear branched arms of the tongue and operated by a chain 12, attached to lever 4 at one extremity and to the gate at the other extremity, a chain 15, connected to lever 19, and a rod 18, connecting the gate with lever 4, substantially as set forth.

2. In a wheeled earth-scraper provided with an end-gate 7, pivoted between the rear branched arms of the tongue, the combination, with suitable operating mechanisms consisting of a chain attached at one extremity to the gate below its pivotal point, thence passing over a suitable pulley secured to the axle, and attached to the lever 4 at the other extremity, of another chain connected to lever 19 and rod 18 and connecting the gate with lever 4, substantially as set forth.

REISSUES

11,032. STAIRWAY. PETER REISECK, Allegheny, Pa. Filed May 3, 1889. Serial No. 309,510. Original No. 362,537, dated May 10, 1887.

Claim.—1. The combination, with the vertical columns, of the braces extending from one across the adjacent column and secured to both, and the platforms secured to the projecting portions of the braces, whereby the steps and platforms may be supported entirely by the columns, substantially as specified.

2. The combination, with the independent supporting-columns, of the platforms, and the steps of equal width or tread connecting said platforms, and the braces b, extending from one across the adjacent column and secured thereto and projecting outwardly therefrom to support said platforms, substantially as specified.

3. A stairway consisting of four columns arranged relatively at right angles to each other, a hand-rail surrounding the said columns, platforms supported by the columns, the balusters having their lower ends threaded and provided with nuts for securing the same to the steps, and the clamps embracing the hand-rail and bolted to openings in the upper ends of the balusters, substantially as specified.

4. The combination, in a stairway, of steps having perforations, as described, for changing the tread, balusters adapted to be secured vertically to the said steps, and a clamp at the upper end of said balusters, whereby the hand-rail may be connected at desired points, substantially as specified.

5. In a stairway such as described, the combination consisting of the hand-rails e and g, the balusters h, and the adjustable clamps i, for securing the same to the hand-rails, the threaded portion of the balusters h, and the nuts m, and a step having two or more openings g formed in the same, whereby the tread of the step may be changed or adjusted to any required height and width, substantially as described.

R. PETERS, Photo-Lithographer, Washington, D. C.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

PITNEY *v.* SMITH AND EGGE.

Decided September 23, 1889.

1. APPEALS FROM EXAMINERS-IN-CHIEF IN INTERFERENCE CASES—STATEMENT OF REASONS OF APPEAL—RULE 147 CONSTRUED. The brief statement of the reasons which Rule 147 requires should accompany appeals in interference cases is not to be considered of the substance of the appeal in any such sense as that either the omission of such statement or the filing of a defective statement would make the appeal void, and if such statement be defective the opposite party is entitled to a further statement if he desires.

2. SAME—PERMISSION TO SIGN APPEAL NUNC PRO TUNC—RULE 18. Where it appeared that an appeal, taken under Rule 147 by counsel who had repeatedly appeared in the case, was taken in season and with authority of appellant, and the appeal-fee had been paid and accepted by the Office, such appeal was not dismissed simply because the power of attorney of said counsel had not been filed, as called for by Rule 18, and the attorney of record was permitted to sign the appeal *nunc pro tunc*.

3. POWER OF COMMISSIONER TO DETERMINE WHETHER OR NOT AN APPEAL IS INTENDED FOR DELAY. The Commissioner has no power to determine what appeals, seasonably taken, are intended for delay.

MOTION to dismiss appeal.

CORD-CLAMPS.

Application of Albert L. Pitney filed March 29, 1888, No. 268,884. Application of Friend W. Smith and Frederick Egge filed November 30, 1887, No. 256,538.

Mr. Benjamin R. Catlin and *Messrs. Marble & Mason* for Pitney.

Messrs. Smith & Hubbard and *Mr. William H. Finckel* for Smith and Egge.

MITCHELL, *Commissioner:*

This is a motion to dismiss an appeal taken to the Commissioner of Patents from the decision of the Examiners-in-Chief. The reasons alleged are, *first*, because no reasons of appeal or assignments of error appear in the paper purporting to be such an appeal; *second*, because the attorney taking the same was not authorized to make and file an appeal to the Commissioner in said case; *third*, because the pretended appeal appears to have been filed simply for the purpose of delay.

The first reason is based upon Rule 147, which provides that appeals in interference cases must be accompanied by brief statements of the reasons therefor. It appears upon inspection of the record that the appeal and the accompanying statement, suitably addressed, are in the following language:

We hereby appeal to your honor in person from the decision of the Board of Examiners-in-Chief awarding priority of invention to Pitney, and give as our reasons that such decision was contrary to the law and evidence. An oral hearing is requested.

This appeal was signed in the name of the appellant by his counsel, whose name was also affixed.

Undoubtedly the "brief statement of the reasons" accompanying the appeal is exceedingly defective, and is not calculated to subserve the purpose for which the rule exists. It is to be observed, however, that the rule does not state of what the appeal shall consist, but simply provides for a statement of the reasons therefor to accompany the appeal. On the face of the rule, therefore, it would appear that the statement is not to be considered of the substance of the appeal in any such sense as that either the omission of the statement or the filing of a defective statement would make it absolutely void.

But it is claimed that the case is analogous to an appeal from the Commissioner of Patents to the Supreme Court of the District of Columbia, and that in such cases it has been held that the reasons of appeal constitute the ground of jurisdiction, so that in the absence of specific reasons the appeal will be dismissed. (*Blackinton* v. *Douglass*, 1 MacA., 622; *Matthews* v. *Wade*, same, 143.) It is to be remembered, however, that the statute in providing for appeals from the Commissioner (sec. 4912) requires that the appellant shall file "his reasons of appeal *specifically* set forth in writing," and it is further provided (sec. 4914) that the "revision shall be confined to the points set forth in the reasons of appeal."

Manifestly the only matters for consideration are the alleged errors specifically set out, and the court is without jurisdiction to overrule the Commissioner's decision, excepting within the limits of the specific reasons assigned. But the statute, (secs. 4904, 4910,) in providing for an appeal to the Commissioner, contains no such restrictive language, and the provision contained in the rule for a short statement of reasons accompanying the appeal does not constitute the basis of his jurisdiction; it is required simply that the opposite party and the Commissioner may have their attention directed to those features of the case which are supposed to involve errors of law and fact. The two kinds of appeal, therefore, do not stand upon the same basis, and the decisions relating to appeals from the Commissioner are inapplicable to appeals from the Examiners-in-Chief to the Commissioner, to the extent indicated.

I conclude that the defective short statement accompanying this appeal does not render the appeal fatally defective, but that it simply entitles the opposite party to a further statement, if he desires.

The second ground for the motion is based upon Rule 18. It is not claimed that the attorney was not author-

ized by his client to appeal, but that he was not authorized by the rules of the Office to take action of any kind before duly filing a power of attorney in the case. The appeal was taken within the time limited. It was taken by the authority of the appellant. It was taken by his attorney, who had repeatedly appeared in the case as counsel, who had taken the testimony in the interference proceeding, and had appeared upon the brief filed in behalf of his client. The appellant has also paid the appeal-fee, which the Office has accepted. It would be strange, indeed, if under these circumstances it should be found that any lawful interpretation of the rules of practice necessitated the dismissal of the appeal. The act for which the lawful fee was paid and accepted should be treated as a lawful act. Such being the case, I have permitted appellant's attorney of record to sign the appeal *nunc pro tunc*, having to that extent granted the petition of the present appellant, which was heard at the same time with this motion. This done, the appeal, which was seasonably taken, is also regular in form.

The third reason is that the appeal is intended for delay. Neither the law nor the rules, so far as I am aware, confer upon the Commissioner the dangerous power of determining what appeals, seasonably taken, are intended for delay. A hearing will be forthwith granted, if desired.

The motion must be denied.

REYNOLDS *v.* HABERMAN.

Decided September 23, 1889.

1. MOTION TO DISSOLVE INTERFERENCE ON GROUND OF NON-PATENTABILITY MORE THAN TWENTY DAYS AFTER APPROVAL OF PRELIMINARY STATEMENTS—RULE 122.

When a motion to dissolve an interference on the ground of non-patentability is made more than twenty days after approval of the preliminary statements it is not an abuse of discretion on the part of the Examiner of Interferences to grant such motion when it appears that no testimony had been taken, so that the case had not advanced beyond the stage which interference proceedings customarily reach within the first twenty days after approval of the preliminary statements.

2. SAME.

It is no ground for an appeal from a decision of the Examiner of Interferences remanding such motion, filed seasonably in view of the showing made, to the Primary Examiner that the reasons given in support of the claim that the interference issue is unpatentable were fully canvassed by the Primary Examiner before he originally declared the interference. Such motion simply makes a controversy *inter partes* before the examiner as to matter which he had previously considered in an *ex parte* matter.

APPEAL on motion.

WATERING-POTS.

Application of Henry S. Reynolds filed May 18, 1888, No. 274,306. Application of Frederick Haberman filed April 12, 1888, No. 270,452.

Mr. E. C. Webb and *Mr. Marcellus Bailey* for Reynolds.

Messrs. Van Santvoord & Hauff for Haberman.

MITCHELL, *Commissioner:*

This is an appeal from the decision of the Examiner of Interferences upon a motion to dissolve, filed by Reynolds, remanding the above-entitled interference to the Primary Examiner and suspending proceedings therein. The motion to dissolve was based upon a denial of the patentability of the subject-matter of the issue in interference, and this denial was in turn based upon Letters Patent to Reynolds, No. 236,359, January 4, 1881, and Letters Patent to Discho, No. 399,602, March 12, 1889.

The interference was declared on the 31st of August, 1888, and although the usual twenty days allowed for such motions after the approval of the preliminary statements had long since expired, no testimony had been taken, so that the case was in practically the same stage of advancement as if not more than twenty days had elapsed.

The appellant makes two claims: first, that the motion was not seasonably filed, in view of the showing made, and, second, that the reasons given in support of the claim that the interference issue is unpatentable were fully canvassed by the examiner before he originally declared the interference, the Discho patent having been divided out of an earlier patent, to which his attention had been directed.

As to the first question, it has been repeatedly decided that the decision of the Examiner of Interferences, in disposing of interlocutory motions, will not be disturbed, except in cases of abuse of discretion or of disregard of some rule or law. (See *Adams* v. *House and House, Jr.*, 40 MS. Dec., 226; *Daniels* v. *Morgan*, 32 MS. Dec., 73; *Mills* v. *McDonald*, 34 MS. Dec., 228; *Scotford* v. *Sawyer and Force*, 37 MS. Dec., 120.) In the latter case the doctrine was applied to the precise question at issue. Scotford did not file his motion to dissolve until more than twenty days had elapsed. The examiner, however, upon the showing, granted the motion. The Commissioner said:

> The question of remanding such motions rests largely in the discretion of the Examiner of Interferences, and his action should not be disturbed except when there has been an abuse of this discretion or his action is palpably erroneous. The delay involved in appealing from and reviewing such proceedings is generally quite as injurious as the action itself, even when erroneous.

In the present case the length of time before the motion was made would indicate an abuse of discretion on the part of the Examiner of Interferences if it were not for the fact that the parties themselves had postponed the time of taking testimony by stipulation, so that the case has not advanced beyond the stage which interference proceedings customarily reach within the first twenty days. I cannot therefore hold that it was an abuse of discretion to grant the motion under the circumstances, although under ordinary circumstances the delay would be clearly unreasonable.

The second ground upon which the appeal is based presents for consideration a question which could not legitimately come before the Examiner of Interferences upon a motion otherwise seasonable, and which therefore cannot be considered on appeal. Motions to dissolve seem to be based upon the theory that when an applicant is drawn into an interference he is entitled to a hearing upon the same matters which governed the examiner in declaring the interference originally. Thus a motion to dissolve because there is no interference in fact presents to the examiner, as matter of course, precisely the question which was considered by him before the interference was declared. The same is true when a motion is made to dissolve on the ground of want of patentability, the party making the motion being entitled to show the examiner, if he can, that he erred in originally holding in the affirmative upon the subject of patentability.

In the case of *Green* v. *Hall* v. *Siemens* v. *Field* (37 O. G., 1475) occurs the following language:

> Under the provisions of Rule 116, [now Rule 122,] when a regular and seasonable motion to dissolve, based upon one of the grounds recognized by such rule, is filed with the Examiner of Interferences, he seems to have no discretion in the matter, but his clear duty is to transmit such motion for hearing to the Principal Examiner.

The same rule undoubtedly holds as well when the motion is filed seasonably, in view of the showing made, as when it is filed within the twenty days. The motion to dissolve in such a case simply makes a controversy *inter partes* before the examiner as to matters which he had previously considered in an *ex parte* matter. Of course, in many cases questions of which the examiner has not had previous cognizance are brought before him on such motions; but they are not essential to his jurisdiction to give a hearing, nor do they create the duty of the Examiner of Interferences to remand the case.

Inasmuch as there was no abuse of discretion on the part of the Examiner of Interferences in remanding the case upon the showing made, the case having been held from advancing by stipulation, I must decide that there is no error and deny the appeal.

It is not intended by anything in this opinion to hold that newly-discovered matter brought to the attention of the Examiner of Interferences may not be considered for the purpose of determining whether a motion otherwise unseasonable is not thereby rendered seasonable.

EX PARTE MYERS.

Decided September 24, 1889.

1. WITHDRAWAL FROM ISSUE FOR PURPOSE OF AMENDMENT—RULES 78 AND 165.

While it is a general rule that applications which have been allowed will not be recalled for the purpose of amendment, an exception to the rule must be recognised in cases where great hardship or irreparable injury would otherwise result.

2. SAME.

Where the claims sought to be introduced by amendment were so specially pertinent to the subject-matter of the application, and were so inseparable in their nature from the particular invention sought to be patented that if they were to be allowed in another application there would be grave doubt whether the patent therefor would be a valid patent, amendment after allowance was permitted.

ON petition.

HAY-CARRIERS.

Application of Philip A. Myers filed February 15, 1889, No. 299,965.

Mr. Ellis Spear for the applicant.

MITCHELL, *Commissioner:*

This is a petition asking for the withdrawal of the application from issue for the purpose of presenting two new claims for the consideration of the examiner. To this the examiner objects that the amended claims would necessitate a new examination, and that, as no irreparable injury would be done by refusing to grant the petition, that course should be pursued, in accordance with *ex parte Gaboury* (37 O. G., 217) and *ex parte Corning*, (34 MS., 339.) The examiner adds that—

> If cases be permitted to be thus reopened after they have been examined and allowed, the work of examination will be necessarily delayed, and it will be impossible to bring such work as near to dates of filing as desirable.

The effect upon the dispatch of business in the Office by an abuse of the practice of permitting withdrawal for amendment has long been recognized, and certainly no interpretation of Rules 78 and 165 should be adopted which will interfere with that object. On the other hand, it is recognized that cases do arise of a special character warranting the Commissioner in authorizing such withdrawal, and when a great hardship would ensue if the privilege were to be denied. Especially is this true since under modern decisions of the courts the right of reissue has become so restricted that any failure to obtain in the first application full protection for an invention is, in a vast majority of cases, without remedy. While, therefore, it is to be at all times borne in mind that, as a general rule, applications which have been allowed will not be recalled for the purpose of amendment, an exception to the rule must also be recognized in cases where great hardship or irreparable injury would otherwise result.

The rule and the exception are both well stated by Commissioner Hall in *ex parte Page* and *Krausse*, where, in referring to cases like the present, he uses the following language:

> * * * It is the well-settled practice in the Office that such petitions will not be granted unless they show that applicant will sustain some irreparable loss or damage if the amendment be not permitted. An applicant who has had his day in the Office, and whose case has received full consideration and has been passed to issue, ought not to be allowed to withdraw his application from issue and submit amendments which should have been previously submitted, and thus put the Office to the trouble of a re-examination. The practice just alluded to has become settled, and in such cases an applicant is required to file a new application embracing the subject of the proposed amendment, pay the Office the fees contemplated, and he is then entitled to a new and original examination. But it sometimes occurs that public use has intervened, or some other circumstances which render it practically impossible for an applicant to successfully prosecute a new application, and whenever this fact appears the Office with equal uniformity allows the application to be withdrawn from issue and amended. * * * (45 O. G., 1455.)

Applying the rule thus carefully laid down, the question in the present case is whether public use has intervened or some other circumstances render it practically impossible for the applicant to successfully prosecute a new application for the claims which he now seeks to enter. From the showing made before me I am satisfied that if the claims sought were to be allowed in another application there would be very grave doubt whether the patent therefor would be a valid patent. (*Ex parte Roberts*, 40 O. G., 578.) The claims are so specially pertinent to the subject-matter of the application now pending, and are so inseparable in their nature from the particular invention now sought to be patented, that I cannot think the Office would be warranted in insisting upon a course which would result at the best in a patent of doubtful validity.

Under such circumstances, the case is brought fairly within the rule, and therefore the petition is granted. It is not intended to be implied that in all cases where a new application cannot be successfully brought the case will be withdrawn from issue for amendment.

EX PARTE BORGFELDT.

Decided September 23, 1889.

1. REFERENCE TO A PENDING APPLICATION FOR FULLER DESCRIPTION.

A reference in an application for a patent to a contemporaneously-pending application for another patent for a fuller description is not permissible.

2. CORRESPONDENCE BETWEEN LETTERING OF DRAWINGS AND REFERENCE THERETO IN DESCRIPTION.

It cannot be recognized as good practice to refer in the description of a process for which a patent is sought to a very few of the letters upon the drawings which illustrate a complicated machine for carrying out that process. The lettering of the drawings should correspond to the references contained in the descriptive portion of the specification.

ON petition.

PROCESS OF DIVIDING TOBACCO AND OTHER SUBSTANCES IN EQUAL DOSES.

Application of Nicholas H. Borgfeldt, No. 307,919, filed April 20, 1889.

Messrs. Briesen, Steele & Knauth for the applicant.

MITCHELL, *Commissioner:*

The applicant prays that the decision of the examiner requiring a fuller description of the machine shown in his drawings, by which the process claimed may be carried out, may be reversed. In aid of his petition he alleges that his invention consists in a process for dividing tobacco into equal portions for making cigar-fillings, and that it may be carried out by any suitable construction of machine other than the one illustrated in his drawings. He says that his machine is described in another pending application, to which he has referred in his specification. Also, that inasmuch as his process may be carried out by different mechanical constructions he does not deem it necessary to give a more lengthy description of the machine than is sufficient to enable that portion of it to be understood which illustrates the carrying out of the process. He avers further that all the parts essential to the practice of the process are a feed-tube, a plunger therein, and a scale-platform below.

The examiner insists in his statement that the specification not only contains no adequate description, but no description at all of the machine by which the working of the process is intended to be illustrated, and that it is not sufficient to refer to another concurrently-pending application for the full and exact description which the law requires. He further points out that the last step in the process as covered by the claim consists in "then separating from the lower end of the column so pressed a portion of specific weight," and that this function cannot be discharged by either of the three elements which are said by the petitioner to be all that is necessary to practice the process.

The examiner is correct in holding that a reference to a contemporaneously-pending application for a fuller description is not permissible. It cannot be assumed that the application referred to will mature into a patent.

I find on reference to the drawings that they represent an elaborate and complicated machine, and that its parts are designated by a large number of reference-letters. I find on reference to the specification that the description refers to only a very few of the letters upon the drawings. While it may be true that it is unnecessary to refer to the details of mechanism represented by the drawings in order to describe those portions of the machine which illustrate the method of practicing the process sought to be patented, it cannot be recognized as good practice to permit such a want of correspondence between the lettering of the drawings and the references contained in the descriptive portion of the specification. The petitioner may have his option, to file an amended drawing exhibiting those portions of the machine which are essential to the illustration of the process, and to amend his application so as to give a full, clear, and exact description of the drawings as thus amended, or to amend his specification so as to describe fully the present drawings, as he may elect.

As the case now stands I must hold that the examiner's action was correct, and accordingly deny the petition.

Changes in Classification.

(ORDER No. 578.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 2, 1889.

The following changes are directed in Division IV:

New Class 189, Iron Structures, and sub-classes thereunder are established, as follows:

1. Jails.
2. Buildings.
3. Grilles.
4. Metallic ceilings.

The following sub classes are established:

In Class 14, Bridges:
11. Flooring.
12. Truss, Bow-string.

In Class 108, Roofing:
8. Flashing.

In Class 159, Fire Escapes and Ladders:
20. Fluid-check.
21. Fly-check.
22. Escapement-check.
23. Governor-check.

ROBERT J. FISHER,
Acting Commissioner.

Additional Sub-Classes.

(ORDER No. 579.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 3, 1889.

The following additional sub-classes are hereby established in Division XXVI:

In Class 171, Electricity, Generation:
121. Inductoriums—
122. Induction-coils.
123. Transformers, Rotary.
124. Transformers, Stationary.
125. Pyro-magneto-electric devices.

In Class 172, Electricity, Motive-Power:
126. Motors, Reciprocating.

ROBERT J. FISHER,
Acting Commissioner.

Attorneys.

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., September 13, 1889.

SIR: The Secretary of the Interior has ordered that J. M. D. Miller, of Iuka, Miss., be not recognized after this date as attorney or agent in the prosecution of any claim or other matter before this Department or any bureau thereof.

Very respectfully,
E. M. DAWSON,
Chief Clerk.

The Commissioner of Patents.

Issue of October 8, 1889.

DESIGNS.

19,340 and 19,341.—CARPET.—*William F. Brown*, Brooklyn, N. Y., assignor to *The Bigelow Carpet Company*, Clinton, Mass. Applications filed September 10, 1889. Serial Nos. 323,560 and 323,561. Term of patents 3½ years.

19,342.—TYPOGRAPHIC VIGNETTE.—*Frederic S. Butler*, San Francisco, Cal. Application filed August 6, 1889. Serial No. 319,947. Term of patent 14 years.

19,343.—BELT-BUCKLE.—*Fred Frazer*, Syracuse, N. Y. Application filed September 11, 1889. Serial No. 323,652. Term of patent 7 years.

19,344.—CARPET.—*Arthur L. Halliday*, Brooklyn, N. Y., assignor to *The Bigelow Carpet Company*, Clinton, Mass. Application filed September 10, 1889. Serial No. 323,559. Term of patent 3½ years.

19,345.—SLATE-FRAME.—*Henry C. King*, Harrison, Ark. Application filed February 26, 1889. Serial No. 301,260. Term of patent 14 years.

19,346.—FONT OF PRINTING-TYPE.—*Ernst Lauschke* and *Julius Schmohl*, Chicago, Ill., assignors to *Barnhart Brothers & Spindler*, same place. Application filed September 14, 1889. Serial No. 323,963. Term of patent 14 years.

19,347.—ORNAMENTATION OF GLASSWARE.—*Joseph Locke*, Toledo, Ohio, assignor to *The W. L. Libbey & Son Company*, same place. Application filed June 7, 1889. Serial No. 313,508. Term of patent 7 years.

19,348.—CARPET.—*William McCallum*, Yonkers, N. Y., assignor to *The Bigelow Carpet Company*, Clinton, Mass. Application filed September 10, 1889. Serial No. 323,558. Term of patent 3½ years.

19,349.—FOUNTAIN-PEN NOZZLE.—*Noyes F. Palmer*, Brooklyn, N. Y. Application filed September 2, 1889. Serial No. 322,793. Term of patent 14 years.

19,350.—BADGE.—*Harry Stites*, Harrisburg, Pa. Application filed June 28, 1889. Serial No. 315,942. Term of patent 3½ years.

19,351.—FONT OF PRINTING-TYPE.—*John West*, Chicago, Ill., assignor to *Marder, Luse & Co.*, same place. Application filed July 25, 1889. Serial No. 318,669. Term of patent 7 years.

TRADE-MARKS.

[Certificates of registration of Trade-Marks numbered 8,191 and upward are registered under the act of March 3, 1881.]

17,084.—MEDICAL COMPOUND TO BE USED AS AN INHALENT.—*Aerated Oxygen Co.*, Nashua, N. H. Application filed August 31, 1889. Used since August 1, 1889.

"The words 'AERATED OXYGEN.'"

17,085.—ANÆSTHETICS.—*Charles Pierre Brigonnet* and *Eugène Albéric Naville*, St. Denis, France. Application filed July 22, 1889. Used since March 21, 1889.

"The word 'EXALGINE.'"

17,086.—LIQUOR.—*Jean Paul François Cazanove*, Bordeaux, France. Application filed July 18, 1888. Used since August 31, 1855.

"The words 'LIQUEUR DU PÈRE KERMANN.'"

17,087.—LIQUOR.—*Jean Paul François Cazanove*, Bordeaux, France. Application filed July 18, 1888. Used since August 31, 1855.

"The signature 'OSCAR SIEURAC' in fac-simile."

17,088.—LIQUIDS, POWDERS, OR PASTE FOR DESTROYING INSECTS.—*Arthur Gordon Graves*, Boston, Mass. Application filed August 28, 1889. Used since February 1, 1886.

"The word 'BUFFALINE.'"

17,089.—CHEWING-GUM.—*Charles T. Heisel*, Cleveland, Ohio. Application filed August 28, 1889. Used since June 22, 1885.

"The words 'RED BAND' printed on a strip of red paper."

17,090.—LIQUID REMEDY FOR RHEUMATISM, NEURALGIA, AND GOUT. *Joseph F. Murray & Co.*, Anaconda, Mont. Ter. Application filed July 1, 1889. Used since June, 1888.

"The words 'ORO Y PLATA' and the representation of a placer-mining claim, showing mountains, with the sun rising in the background and a pick and shovel in the foreground."

17,091.—CIGARS.—*D. L. Trujillo & Sons*, Key West, Fla., and New York, N. Y. Application filed August 5, 1889. Used since July 1, 1889.

"The representation of two escutcheons, one bearing the device of a key and having an eagle for its crest, the other bearing the device of a flying dragon and having for its crest a plumed helmet."

17,092.—BATTING OR BATS OF FIBROUS MATERIAL.—*Walker & Williams*, Cohoes, N. Y. Application filed August 26, 1889. Used since February 1, 1888.

"The word 'ELECTRIC.'"

17,093.—LEDGER-PAPER FOR BLANK BOOKS.—*Geo. F. Barnard & Company*, East St. Louis, Ill., and St. Louis, Mo. Application filed July 1, 1889. Used since April 1, 1889.

"The words 'UNIVERSAL LINEN RECORD.'"

17,094.—REMEDY FOR NEURALGIA.—*Eugène Fournier*, Issy, Seine, France. Application filed September 4, 1889. Used since February 1, 1889.

"The word 'CÉRÉBRINE.'"

17,095.—LUNG AND THROAT MEDICINE.—*Clarence A. Pierce*, Woburn, Mass. Application filed May 15, 1888. Used since January, 1887.

"The word 'PNEUMONIC' formed by lines representing flashes of lightning."

LABELS.

6,031.—Title: "COLES PERUVIAN BARK AND WILD CHERRY BITTERS."—*David F. Coles*, Rahway, N. J. Application filed September 14, 1889.

6,032.—Title: "GUARANTEE CASE. 20 YEARS MOVEMENT." (For watch-cases.)—*Arthur Laurence*, Chicago, Ill. Application filed September 14, 1889.

6,033.—Title: "DIRECTIONS." (For a catarrh remedy.)—*Eleanor C. Mann*, Detroit, Mich. Application filed March 11, 1889.

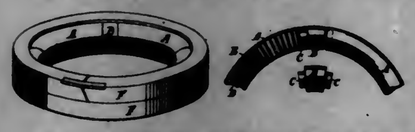
6,034.—Title: "WHITEHEAD BROS'. DYSPEPSIA AND MALARIA PILLS." *Whitehead Brothers*, New York, N. Y. Application filed September 9, 1889.

PATENTS

GRANTED OCTOBER 8, 1889.

412,225. TOOTH-PICK. JAMES ADAIR, New York, N. Y. Filed Apr. 1, 1889. Serial No. 305,892. (Model.)

Claim.—1. A tooth-pick consisting of a flexible inner strip A, rigidly sustained and protected by a covering B, the strip A and covering B being made of material that may be pared or whittled, whereby the end of the pick A B may be sharpened in any desired manner, as and for the uses and purposes set forth.

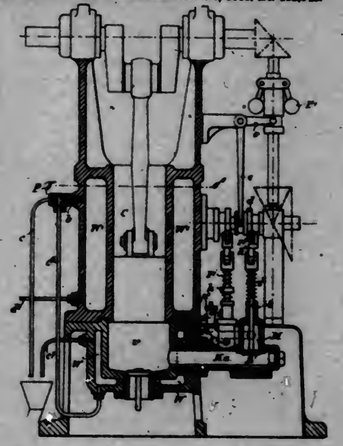


2. A tooth-pick consisting of a flexible inner strip A, rigidly sustained and protected by a covering B, in combination with an incasing-case C, the strip A and covering B being made of material that may be pared or whittled, and adapted and arranged to be withdrawn at will from the case C, as and for the uses and purposes set forth.

412,226. STEAM-PISTON VALVE. ABRAHAM L. ALBERSHEIM, Kansas City, Mo. Filed Jan. 24, 1889. Serial No. 297,748. (No model.)

Claim.—The combination of a steam-chest provided with steam-inlet ports near its respective ends and an exhaust-port intermediate said inlet-ports, valve-seats secured in the ends of said steam-chest, each of said valve-seats being provided with two annular series of apertures, the apertures of one series being larger than the apertures of the other series, the apertures of each valve-seat communicating with the inlet-ports, piston-valves reciprocating within said valve-seats, a steam-cylinder, and steam-ducts communicating with said chest and cylinder, substantially as set forth.

412,227. METALLIC PACKING FOR PISTONS. ARTHUR T. ALLEN, Sheffield, County of York, England. Filed June 13, 1889. Serial No. 314,102. (No model.) Patented in England Aug. 3, 1888, No. 11,220.



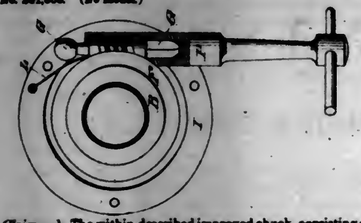
Claim.—1. In combination with expansible packing-rings, an expansible tubular ring within said packing-rings and coiled expanding-springs within said tubular ring, substantially as hereinbefore specified.

2. In combination with circumferentially and radially divided piston-packing having a concave back, an expansible tubular ring within the same having a convex periphery in contact with said concave back, and coiled expanding-springs within said tubular ring, substantially as hereinbefore specified.

3. In combination with expansible packing-rings and short coiled springs for expanding the same, an expansible ring composed of segmental tubes inclosing said springs, sliding connections between said tubes, and intermediate step-pieces within the tubes, substantially as hereinbefore specified.

412,228. PETROLEUM-MOTOR. ADOLPH ALTHANS and PAUL HEFFELMANN, Berlin, Germany. Filed Apr. 24, 1888. Serial No. 272,022. (No model.) Patented in France Nov. 6, 1886, No. 180,948.

Claim.—1. An exploding-chamber v, with the cooling-jacket W separated from the cooling-jacket W' of the cylinder C, in combination with the non-cooled tube K^2, provided with the valve E, and with the mixing-chamber M, provided with the air-inlet L, and the vaporizing-chamber r, bearing the tube n for the petroleum, for the purpose described.

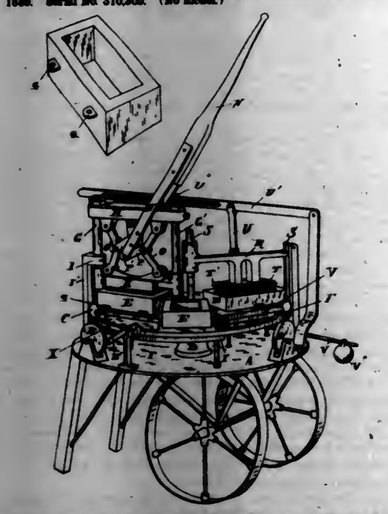


2. An exploding-chamber v, in connection with a tube K^2, provided with the valve E and with the chamber K, having the valves f and F, and the igniting-tube z, the latter being in connection with the outlet-valve g, in combination with the mixing-chamber M, having an air-suction inlet L and a vaporizing-chamber r, the latter being heated by a flame and being in connection with a tube guiding the fluid into the vaporizing-chamber r, for the purpose described.

3. The combination of an explosion-chamber v, having a water-cooled jacket, with chamber K^2, having valve E, governed by a governor F' by means of bent lever e e, cam d, roller r', connecting-piece h', valve-rod s, and spring s^2, valve E, connecting chamber K^2 with mixing-chamber M and vaporizing-chamber r, which receives its petroleum-supply through regulating-valve p^2 from supply-pipe l, K^2 further connected by means of valve f and chamber K with igniting-tube z, in the manner and for the purpose substantially as described.

4. The combination of a non-cooled chamber K^2, adjoining the water-cooled explosion-chamber v, having a valve E opening into the mixing-chamber M and vaporizing-chamber r, and igniting-tube z, with a petroleum-pump p, having a suction-valve d', connected by a spring F^2 and cross-piece h with the valve-rod e and spring s^2, and a delivery-valve d', balanced by a spring s^3, in the manner and for the purpose substantially as described.

5. The combination of the non-cooled chamber K^2, having a valve f, connecting it with the igniting-tube z, a valve F', valve-rod F, spring F', cross-piece h, with the chamber K', having outlet-valve g, valve-rod g^2, and spring g^3, and with a water-cooled explosion-chamber v, in the manner and for the purpose described.



412,229. CHUCK. GEORGE P. ANDREWS and CHARLES R. ANDREWS, Staffordville, assignors to the D. E. Whitton Machine Company, New London, Conn. Filed Jan. 24, 1888. Renewed Nov. 22, 1888. Serial No. 291,609. (No model.)

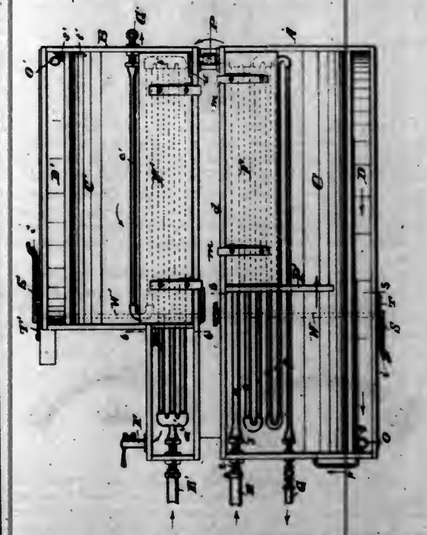
Claim.—1. The within-described improved chuck, consisting of the combination, with an inner part adapted to be fixed to a spindle, an outer shell adapted to rotate upon the fixed part, and radial jaws combined with the two to be slid to and from a common center by the rotation of the shell upon the fixed part, substantially as shown and described, of a peripheral worm-gear upon the fixed part, a joint in the outer shell over said worm-gear, a cylindrical hole through the outer shell at its joint tangential to the worm-gear, a socket in the joint faces of the sections of the outer shell in prolongation of the hole therethrough, a worm-spindle of smaller diameter than said hole, having one end pivoted in the socket and its free end extending within the mouth of the hole and adapted to be combined with a corresponding wrench end, a spring fixed to the outer shell and bearing the worm-spindle normally away from the worm-gear, and a wrench adapted to enter the hole in the outer shell, grasp the worm-spindle, and center it in the hole to thereby bring its thread into engagement with the worm-gear, all combined and operating as and for the purpose set forth.

2. In a chuck, the combination of a central core engaging with the jaws of the chuck, adapted to be fitted to a mandrel or spindle and provided with a series of worm-teeth around itself, an outer case carrying the jaws and adapted to turn freely on the central core and provided with a circular opening tangential to the worm-teeth of the central core, a worm-spindle having an angular outer shank mounted loosely within said opening and normally disengaged from the worm-teeth, and a wrench accurately fitting the mouth of said opening and having a socket adapted to receive said shank, whereby as the wrench is inserted thereon the spindle is thrown into engagement with the worm-teeth, substantially as described and shown.

412,230. MACHINE FOR RE-PRESSING BRICKS. OLIVER BAIRD, Parkhill, and JONAH CORNELL, Thetford, Ontario, Canada. Filed May 10, 1889. Serial No. 310,208. (No model.)

Claim.—1. In a brick-machine, the combination of the platform carrying detents, the turn-table carrying forms and having notches to receive the detents, the guide-bars having the cross-heads, the dies, the toggle-levers, the power-lever having links connected to said toggle-levers, the lever connected and operated by the power-lever, the follower connected to said lever for expelling the bricks from the forms, and the pallet-board arranged to receive the bricks, substantially as described.

2. In a brick-machine, the combination of the platform carrying detents and anti-friction rollers, the turn-table carrying forms riding on the anti-friction rollers and adapted to be engaged by said detents, the guide-bars on the turn-table, having the cross-heads, the dies, the power-lever connected to and operating the dies, the lever connected to the power-lever, the follower having the lubricator and connected to said lever, the guide-bars for said follower, and the pallet-board for receiving the bricks, substantially as described.



3. In a brick-pressing machine, the combination of the turn-table carrying the forms, the guide-bars having the cross-heads, the dies, the toggle-levers, the power-lever having links connected to said toggle-levers, the lever connected to and operated by the power-lever, the follower connected to said lever, and the guide-bars for said follower, substantially as described.

4. In a machine for the purpose described, the combination, with the turn-table carrying forms, of the follower adapted to coincide with one of the forms and adapted to expel the brick therefrom and of the pallet swung on the lever mounted below said form, substantially as described.

5. In a machine for the purpose described, the combination, with the turn-table carrying the forms, of the press consisting of the vertical guide-bars slidingly secured in vertical bearings, the cross-head uniting the same at the upper end, the upper die carried by the sliding cross-head, the lower die secured to the cross-head, fastened upon the guide-bars, toggle-levers connecting the cross-head of the upper die with the cross-head uniting the guide-bars, and an actuating-lever, substantially as described.

6. In a machine for the purpose described, the combination, with the turn-table carrying the forms, of the press provided with the actuating-lever N, the follower adapted to coincide with one of the forms and carried by the cross-head R, the lever U', the link U, suspending the follower from the lever U', and the wrist U", engaging in the slot on the lever U', all arranged to operate substantially as described.

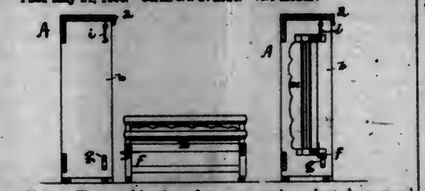
412,231. EVAPORATING-PAN. JOHN L. BUCKER, Hartwell, assignor to the Hymyer Iron Works Company, Cincinnati, Ohio. Filed Mar. 18, 1889. Serial No. 303,772. (No model.)

Claim.—1. An evaporating-pan provided with a connected and continuous series of steam-heating pipes decreasing uniformly in size from the inlet to the discharge pipe, so that the intensity of the heat distributed may be gradually lessened from the heating to the cooling side of the pan, substantially as and for the purpose described.

2. An evaporating-pan provided with a connected and continuous series of steam-heating pipes arranged longitudinally along the bottom of the pan, each succeeding pipe having a smaller heating surface than the preceding one from the inlet to the discharge pipe, arranged substantially as described.

3. An evaporating-pan of greater length than breadth, having one side inclined outward, and provided with a uniformly-graded set of steam-heating pipes arranged longitudinally in a connected and continuous series along the bottom of the pan, so that the smallest heating-surface is nearest the inclined side, substantially as and for the purpose described.

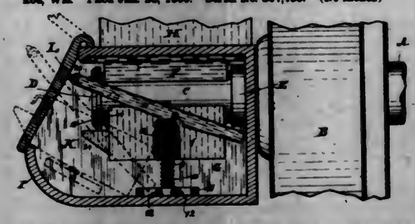
4. An evaporating-pan having a removable set of steam-heating pipes arranged in a connected and continuous series and graded uniformly in size, lying in the bottom of the pan, and coupled by threaded collars with the steam supply and discharge pipes entering through the end of the pan near the bottom, substantially in the manner and for the purpose described.



5. An evaporating-pan provided with a graded set of steam-heating pipes arranged in a connected and continuous series, in combination with a partition extending from side to side across said pipes, perforated below, and having its upper edge cut away, substantially as and for the purpose described.

6. An evaporating-pan provided with a graded set of steam-heating pipes arranged in a connected and continuous series and having an outwardly-inclined side, in combination with the partition P and trough D, substantially as and for the purpose described.

7. An evaporating-pan having a system of steam-pipes arranged in a connected and continuous series and uniformly graded in size and lying along the bottom of the pan, the supply and discharge connections being arranged and extended through the end of the pan at the bottom, so that all heated parts of the apparatus shall be beneath the surface of the juice being evaporated, substantially as and for the purpose described.



8. In an evaporating-pan, the combination, with the pan, of the axle W, rollers N N, and cams M M, connected by shaft Y and operated by the lever S, so that one end of the pan may be raised or lowered, as required, substantially as and for the purpose described.

412,232. COMBINATION-BED. CHARLES BOSCH, Cincinnati, Ohio. Filed May 31, 1883. Serial No. 274,521. (No model.)

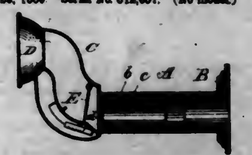
Claim.—The combination of an open casing adapted to stand against a wall, and provided with pintles projecting horizontally inward from the sides of the casing, and a bed provided with folding legs and with open sockets adapted to engage the pintles, whereby, when the bed is shoved into position, the sockets engage upon the pintles and enable the bed to be turned and supported thereon virtually in the casing, with the legs folded against the bed, and upon turning the bed down into a horizontal position the legs may be dropped down to wholly support the bed upon the floor detached from the casing, substantially as set forth.

412,233. CAR-AXLE LUBRICATOR. JOHN F. BINGHAM, Milwaukee, Wis. Filed Jan. 28, 1889. Serial No. 297,755. (No model.)

Claim.—1. The combination of a car-axle and a car-axle box having a chamber therein below the journal of the axle within lubricant-holding box, supporting-springs located in recesses in the sides of the lubricant-holding box, and upright posts fixed in the base-piece adapted to rest on the bottom of the axle-box, the posts being adapted to retain the springs in position and to guide the box in its vertical movements, the lubricant-holding box and frame on which it is supported being collapsible, so as to be removable from the car-axle box, substantially as described.

2. In combination with a removable lubricant-holding receptacle for a car-axle box, two upright posts fixed in a base-piece, box-supporting springs for holding the box up to its work, and locking-bolts having bearings in the walls of the box and adapted to enter sockets in the posts, substantially as described.

3. The combination of a car-axle box with a lubricant-holding receptacle located therein and supported and held yieldingly up to the car-axle in the box by springs thereunder, and two sets of lubricant-supplying wheels consisting of two or more wheels in each set arranged in pairs below and on opposite sides of the car-axle, the wheels being supported loosely, so as to have some travel on axles having their bearings permanent in the walls of the lubricant-holding receptacle, substantially as described.



4. In combination with a car-axle, a lubricant-holding receptacle held by springs yieldingly up to the car-axle, and sets of scrapers, one set at each end of the lubricant-holding box, the scrapers having beveled edges and being held yieldingly up to the car-axle by springs thereunder resting in the lubricant-holding box, substantially as described.

5. In combination with a car-axle box and the journal of a car-axle therein, a lubricant-holding receptacle provided with means, substantially as described, for holding it up to the journal-box, and a frame pivoted to the sides of the receptacle and adapted to be tilted and bear at its rear end against the car-axle for the purpose of depressing the lubricant-holding box, substantially as described.

6. In combination with a car-axle box and the journal of a car-axle therein, a lubricant-holding receptacle provided with means, substantially as described, for holding it up to the journal-box, and a frame pivoted to the sides of the receptacle, and locking-bolts having bearings in the frame and adapted to enter sockets therefor in the walls of the axle-box, whereby the receptacle is secured in position with relation to the axle box, substantially as described.

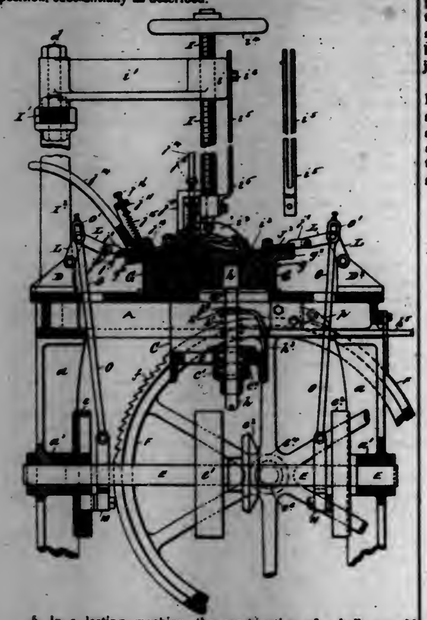
7. In combination with a lubricant-holding receptacle, a funnel 24; secured to the outer end of the receptacle, an aperture therefrom through the end wall of the receptacle, and an obstructing-wall 26 in the funnel in front of the aperture, substantially as described.

412,234. SOUND-TRANSMITTER. ROSE BLAKE, Cornish, Me. Filed Mar. 29, 1889. Serial No. 305,057. (No model.)

Claim.—1. In a sound-transmitter, the radially-movable sensitive diaphragm E, in combination with the tube A, and the interiorly-movable parts *b* and *c*, and the offset C, all in the manner and for the purpose set forth.

2. The sound-transmitter, as described, consisting, substantially, of the tube A, having the offset C, mouth-piece D, and radially-movable sensitive diaphragm E, substantially in the manner and for the purpose described.

412,235. MACHINE FOR LASTING BOOTS OR SHOES. THOMAS BRIDGE, Leeds, County of York, assignor of one-half to George Lister, Headingly, Leeds, England. Filed Dec. 26, 1888. Serial No. 294,606. (No model.) Patented in England Oct. 4, 1887, No. 13,301; in France July 24, 1888, No. 191,986, and in Belgium July 27, 1888, No. 82,702.



Claim.—1. A machine for lasting boots or shoes, consisting of a hollow mold shaped to conform to the outer contour of the boot or shoe mounted upon frame-work and armed with grippers and wipers for drawing the upper over the last and insole, a screw for forcing the last and upper into the mold, and mechanism, as described, for operating said wipers, all substantially as shown.

2. In a lasting-machine, the combination, substantially as hereinbefore set forth, of a table A, the framing on which it is mounted, a hollow mold having its interior shaped to conform to the contour of a boot or shoe and having a laterally-projecting flange g^{2} on both sides and at each end, and wipers adjustably secured on the upper face of the flange at each end and on both sides of the mold.

3. In a lasting-machine, the combination, substantially as hereinbefore set forth, of a hollow mold having its interior shaped to conform to the contour of the boot or shoe to be lasted, the scarfed or recessed wipers on each side of the mold having their inner edges shaped to conform to the contour of the sides and length of the mold and of the boot or shoe to be lasted, wipers at the toe and heel ends of the mold shaped to correspond with the contour of the toe and heel, and grippers for securing the edges of the uppers to be lasted.

4. In a lasting-machine, the combination of a hollow mold shaped to the outer contour of the boot, the wipers J J^{1} J^{2} J^{3}, each of which is actuated on said mold independently of the others, said wipers hav-

ing grippers j^{10}, substantially as described, for holding the upper in position, substantially as described.

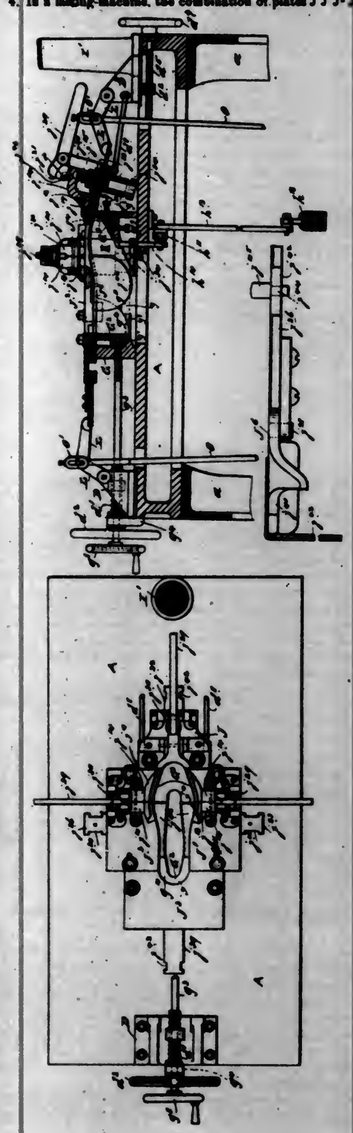
5. In a lasting-machine, the combination of a hollow mold mounted on the table of the machine, the toe and heel wipers adapted to slide on said mold, the hinged plates j^{10}, pins j^{10} j^{10}, and spring adapted to keep the plates open, all substantially as set forth.

6. The combination of a table mounted upon framing, hollow mold-plates J J' J² J³, studs and nuts j j' j^2 j^3, slot-holes j^2 j^2 j^2 j^3, brackets j^3, rods j^3, toggles L, cams e e' e^2, shafts E e^3, bevel-wheels e^4 e^5, bearing e^6, hand-wheel F, ratchet-teeth f, set-screw f', bracket j^{13}, grippers j^{12}, and lever j^{14}, all substantially as shown.

7. The combination, with hollow mold G and with the wipers sliding thereon, of a shaft E, common to all the slides, actuated by mechanism, as described, cam carried on said shaft, levers pivoted to the framing of the machine and armed with runners operating in said cam, and rods having one end attached to levers and the other end loosely and adjustably connected to toggle L, having one of their ends connected to brackets on the table A and their free ends to the slides, said connections having play or lost motion to permit of them operating simultaneously or successively, all substantially as shown.

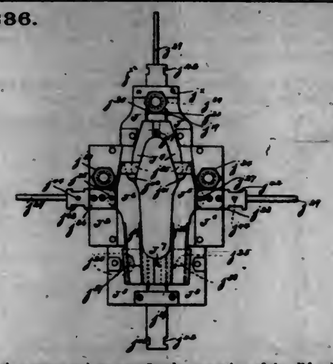
8. In a lasting-machine, the combination of a table mounted upon framing, hollow mold mounted on said table and armed with wipers, and grippers actuated by mechanism, substantially as described, with a last H and screw I, mounted in a movable arm i', pivoted to a support fixed to said table, said screw being armed at one end with a hand-wheel and at the opposite end with a bridge armed with a flat spring-plate, all substantially as and for the purposes described.

9. In a lasting-machine, the combination of a table mounted upon framing, a hollow mold armed with grippers and wipers actuated by mechanism, substantially as described, screw I and its support, hand-wheel, bridge, and flat spring-plate, last H, supporting-pin h, spring h', bar h^2, bearing c', cap c^3, supporting-piece h^3, and bearer C, provided with slot-hole c, all substantially as shown.



412,236. MACHINE FOR LASTING BOOTS OR SHOES. Thomas Bannon, Leeds, County of York, assignor of one-half to George Lister, Headingly, Leeds, England. Filed Apr. 1, 1889. Serial No. 305,574. (No model.) Patented in England Nov. 20, 1888, No. 16,288; in France Dec. 3, 1888, No. 191,995, and in Belgium Dec. 3, 1888, No. 84,212.

Claim.—1. In a lasting-machine, the combination, with a table A, mounted upon framing, of a hollow mold provided with cavities for the reception of heel and toe pieces, the removable heel and toe pieces adjustable in said cavities, fixed plates with which the mold is armed, grippers carried by the plates, and wipers working in recesses in the plates, substantially as described.



2. In a lasting-machine, the combination, with a hollow mold partially shaped to correspond to the contour of a boot or shoe, of the removable heel and toe pieces adjustable in cavities in the mold, a metal plate fixed to the heel-piece shaped to the contour of the heel portion of a boot or shoe, and screws and hand-wheels for adjusting the heel and toe pieces in the cavities of the mold.

3. In a lasting-machine, the combination, with a removable hollow mold and with removable and adjustable toe and heel pieces and shaped metal plate, the recessed plates J J' J² J³, fixed to the top of said mold, the shaped wipers J⁴ J⁵ J⁶ J⁷, slides to which the wipers are pivoted, and mechanism, substantially as described, connected to the slides for giving them an intermittent reciprocating motion, substantially as described.

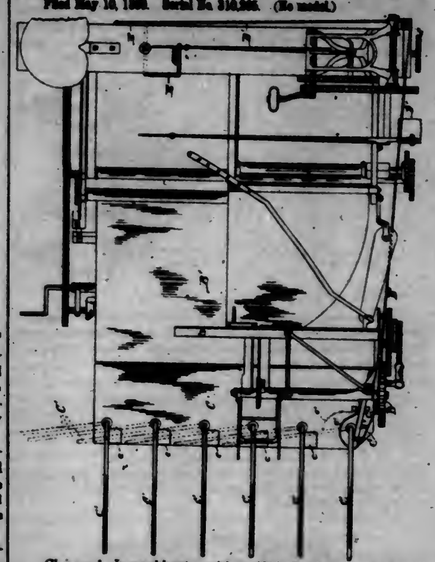
4. In a lasting-machine, the combination of plates J J' J² J³, pro-

412,236.

vided with recesses and grooves for the reception of the slides j^{10} j^{10} j^{10} j^{10}, notched at one end and pivoted at the other end to hinged toe-wiper J⁴, side wipers J⁵ J⁶, and shaped hinged carrier J⁷, provided with slides j^{10} j^{10} for the reception of the ends of the side wipers, the projecting plates j^{10}, pins j^{10} j^{10}, spring j^{10}, the pieces of flexible material j^{10}, fixed to the side and toe wipers, and pin j^{10}, all substantially as and for the purposes set forth.

5. In a lasting-machine, the combination, with a removable hollow mold, removable and adjustable heel and toe pieces, toe, side, and heel wipers actuated by mechanism, substantially as described, of the plates J J' J² J³, bearings j^{10}, grippers j^{12}, brackets j^{13}, cam-ended levers and pulleys j^{15}, tension-springs j^{16}, tubes j^{17}, and nuts j^{18} j^{18}, as and for the purposes described.

6. In a lasting-machine, the combination, with a removable hollow mold armed with fixed plates J J' J² J³, grippers j^{12}, and mechanism, substantially as described, for opening and imparting the required tension to the same, and with the wipers pivoted to intermittent reciprocating slides actuated by mechanism common to all, substantially as described, of the removable toe-piece adjusted by screws g^4 g^5, and the heel-pieces adjusted by screw g^5, and hand-wheel g^6 on flanges g^6, all substantially as shown.



7. In a lasting-machine, the combination of a removable hollow mold, removable toe-piece, and adjustable heel-piece, grippers, and adjustable side wipers pivoted to slides and provided with inclined recesses for closing the hinged jaws of the toe-wipers for gathering in the toe after the edges of the upper have been closed over the insole at the waist of the boot or shoe, all substantially as shown.

8. In a lasting-machine, the combination, with the slides having wipers pivoted thereto at one end and notches formed at the other, of a shaft E, common to all the slides actuated by mechanism, as described, cams carried on said shaft, levers pivoted to the framing of the machine and armed with runners operating in said cams, rods having one end attached to levers and the other end loosely and adjustably connected to toggles L, having one of their ends connected to brackets on the table A and their free ends to the slides, said connections having play or lost motion to permit of them operating the slides simultaneously or successively, all substantially as shown.

9. In a lasting-machine, the combination of a removable hollow mold provided with a removable and adjustable toe-piece, fixed plates armed with grippers, and sliding toe and side wipers armed with pieces of flexible material, with the heel-piece armed with a metal-shaped plate g^{10}, mechanism, substantially as described, for adjusting the plate, the hinged-shaped carrier provided with slides receiving side-wiper ends, said carrier being pivoted to intermittent reciprocating slide j^{10}, adjusted to the movement of heel-piece, toggle L, adjusted bracket D, screw and nut d^2, and hand-wheel d^3, all substantially as shown.

10. In a lasting-machine, the combination of the table A, mounted upon framing, hollow removable and adjustable mold partially shaped to the outer contour of the boot or shoe, removable and adjustable heel and toe pieces G² G³, cavities g' g^2, screws g^4 g^5 g^5, hand-wheel g^6, flanges g^6, shaped metal piece g^{10}, fixed plates J J' J² J³, slides j^{10} j^{10} j^{10} j^{10}, pivoted and hinged toe-wiper J⁴, pins j^{10} j^{10}, spring j^{10}, side wipers J⁵ J⁶, flexible material j^{10}, brackets j^{13}, cam-levers j^{15}, grippers j^{12}, arms j^{14}, tension-springs j^{16}, tubes j^{17}, nuts j^{18} j^{18}, shaped hinged carrier J⁷, provided with slides j^{10} j^{10}, brackets D D' D² D³, adjusting-screws d' d^2, hand-wheels d^3 d^3, rods d^3, toggles L, and mechanism, substantially as described, for operating the same, pin j^{10}, pillar F, screw I, arm i', bridge i^2, hand-wheel i^3, ratchet-teeth i^3, catch i^3, pin h^{10}, double-ended lever h^{11}, rod h^{12}, and treadle h^{13}, all substantially as and for the purposes herein set forth.

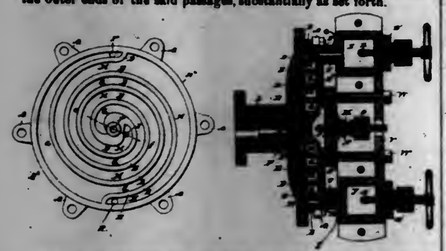
412,237. SHEAF-CARRIER. William W. Bennet, Chicago, Ill. Filed May 14, 1889. Serial No. 310,905. (No model.)

Claim.—1. In combination with a self-binding harvester, a receiving-table hinged thereto at right angles to the line of the finger-bar, with means for operating the same, provided with extension-rods pivoted substantially perpendicularly to said table, adapted to receive the sheaves from the binder and to carry them until dumped upon the ground in bunches convenient for shocking, substantially as set forth.

2. In combination with a self-binding harvester, a receiving-table hinged thereto, as described, with means for operating the same, provided with extension-rods pivoted substantially perpendicularly thereto, said rods provided with an upwardly-inclined head and each permitted to move independent of its fellows, the table and rods being adapted to receive the sheaves from the binder, and by the action of the sheaves upon the rods to swing them to their extended position to carry the sheaves and dump them in bunches upon the ground convenient for shocking, substantially as specified.

3. In combination with a self-binding harvester, a receiving-table hinged thereto, as described, with means for operating the same, said table provided with extension-rods pivoted substantially perpendicularly thereto and raised above the plane of the table throughout the greater part of their length and each having a movement independent of its fellows, said table and rods being adapted to receive and carry the sheaves and to dump them on the ground convenient for shocking, substantially as set forth.

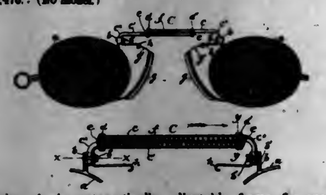
4. The combination of a self-binding harvester, the table C, hinged, as described, thereto, the extension-rods C', pivoted perpendicularly thereto, and the operating-cord D', connecting the said table with the foot-lever E, said table and rods being adapted to receive the sheaves from the binder, to carry them together, and to dump them in bunches on the ground, substantially as set forth.



5. The combination of a self-binding harvester, the table C, hinged thereto, as shown, with means whereby the driver can operate the same, provided with stops c, and the extension-rods C', pivoted perpendicularly to said table, substantially as set forth.

412,238. APPARATUS FOR VAPORIZING FUEL-OIL. Samuel P. Crafts, Hamden, Conn. Filed Feb. 20, 1889. Serial No. 300,578. (No model.)

Claim.—1. An apparatus for vaporizing fuel-oil and commingling it with steam or air, consisting of a vaporizing-chamber provided with two spiral or volute ribs forming two spiral passages lying side by side and terminating near the center of the chamber, where each passage has an outlet-port, a port for steam or air leading into the outer end of one passage, an oil-port leading into the outer end of the other passage, and means for commingling the steam or air and vapor as they issue from the inner ends of the said passages, substantially as set forth.



2. An apparatus for vaporizing hydrocarbon oil and commingling it with steam or air, consisting of a vaporizing-chamber provided with

two spiral or volute passages terminating near its center, a chambered nipple projecting from the center of the vaporizing-chamber, a vapor-chamber located behind the said nipple, a passage leading from the inner end of the oil-passage into the said chamber, and ports entering the outer ends of the said passages, substantially as set forth.

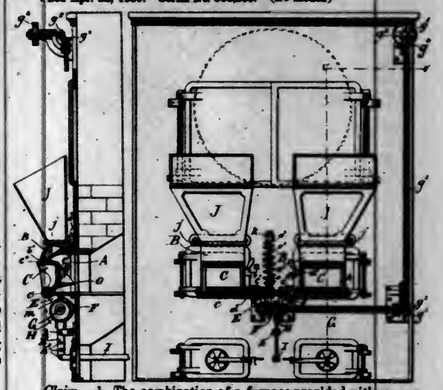
3. In an apparatus for vaporizing hydrocarbon oil and commingling it with steam or air, the combination, with a vaporizing-chamber provided with two spiral or volute passages concentric throughout their length, of a chambered nipple located in the center of the chamber, communication between the inner end of one passage and the inner end of the nipple, ports leading into the respective passages, and a cover secured to the chamber over the said passages and forming around the nipple an annular chamber, which communicates with the inner end of the other passage, substantially as set forth.

412,239. EYEGLASSES. JOHN CURRIE, Southbridge, Mass., assignor to Francis A. Hardy, Chicago, Ill. Filed June 15, 1889. Serial No. 314,478. (No model.)

Claim.—1. An automatically-adjustable frame for eyeglasses, consisting of the combination of two sections of a split tube—one attached to each lens—said sections being arranged parallel and loosely attached to each other by means of a sliding contact and a spiral spring interposed in the tubular space between them, substantially as shown and described.

2. The combination, in an eyeglass-frame, of split tubes attached to the respective lenses and arranged in sliding contact with each other, their concave faces being contiguous, stops or bearings *e e* at the respective ends, and inclosed spring *f*, substantially as shown and described.

3. The combination, in an eyeglass-frame, of the bars *c c'*, loosely attached to each other and arranged with their hollow faces contiguous and in sliding contact, means for detachably securing the protruding ends of said bars to the lenses, respectively, and a spiral spring interposed between said hollow faces and in operative contact with said bars, whereby the action of said spring may tend to draw said lenses toward each other in a straight line or permit them to be separated, substantially as shown and described.



412,240. INKSTAND. WILLIAM H. DANIEL, Englewood, Ill. Filed Apr. 7, 1888. Serial No. 270,153. (No model.)

Claim.—1. A stand for an ink-well, carrying a pen-support consisting of two parts hinged together and connected to the stand at one side thereof, in combination with a lever *f*, an ink-well, and a hinged cover, substantially as and for the purposes specified.

2. A stand for an ink-well, carrying a pen-support consisting of two parts—each as *d e*—which are farther apart at the rear than at the front and are hinged together and connected to the stand, in combination with a lever *f*, an ink-well, and a hinged cover, substantially as and for the purposes specified.

412,241. MECHANICAL STOKER. ISAAC H. DAVIS, Boston, Mass. Filed Apr. 22, 1889. Serial No. 308,233. (No model.)

Claim.—1. The combination of a furnace provided with an opening in the wall thereof, the vibrating shovel C, pivoted at its bottom and provided with corrugations c^3, substantially as described.

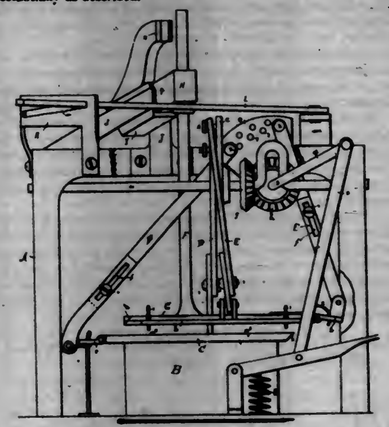
2. The combination of a furnace provided with an opening in the wall thereof, the vibrating shovel C, pivoted at its bottom, and provided with a shelf O at its bottom, substantially as described.

3. The combination of the furnace provided with an opening in the wall thereof, the vibrating shovel C, pivoted at its bottom and provided with the valve-plate c^4, and the hopper J, placed above the shovel and adapted to supply fuel thereto, substantially as described.

4. The combination of the furnace provided with an opening in the wall thereof, the vibrating shovel C, pivoted at its bottom, provided with the valve-plate c^4 and with the corrugations c^3, substantially as described.

5. The combination of the furnace provided with an opening in the wall thereof, the vibrating shovel C, pivoted at its bottom, provided with the valve-plate c^4 and with a shelf O at its bottom, substantially as described.

6. The combination of a furnace provided with a door-opening in the wall thereof, a door pivoted to the furnace-front and adapted to close said opening and having an opening through itself, and the vibrating shovel C, pivoted upon the door and adapted to vibrate to and fro through the opening therein and receive and project coal through the opening into the furnace, substantially as described.



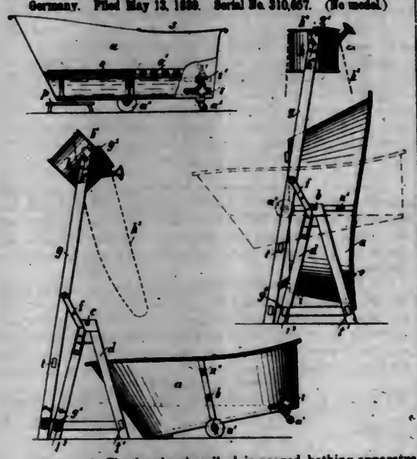
7. The combination of the furnace provided with a door-opening in the wall thereof, a door pivoted to the furnace-front and adapted to close said opening and having an opening through itself, the vibrating shovel C, pivoted upon the door and having the squared end c' of its pivot *c* engaging with the corresponding slot in the rocking shaft D, substantially as described.

8. The combination of the furnace provided with a door-opening in the wall thereof, a door pivoted to the furnace and adapted to close said opening and having an opening through itself, the vibrating shovel pivoted upon the door and adapted to vibrate to and fro through said opening and receive and project coal through the same into the furnace, and the hopper J, mounted upon the furnace-front and formed in two parts, one stationary and the other carried by the door, substantially as described.

9. The combination of the furnace provided with a door-opening in the wall thereof, a door pivoted to the furnace-front and adapted to close said opening and having an opening through itself, the vibrating shovel C, pivoted at its bottom, having the squared end of its pivot c' engaging with the corresponding slot in the rocking shaft D, and the pawl E, spring-rod *e*, and spring e', and the rotating cam F, provided with the enlargement *f* on or near its point, substantially as described.

412,242. QUADRUPLE TIN-FOLDER. HELMUT H. DAWSON, Oak Hill, Kans. Filed June 14, 1888. Serial No. 277,300. (No model.)

Claim.—In a folder, the combination, with the stationary and movable plates having bending-levers hinged to the sides thereof, of a standard secured to the upper plates, a lever connected with said standard, and a plate having an inclined toothed slot receiving one end of said lever, whereby the lateral movement of the lever in said plate imparts a vertical movement to the standard and movable plates, substantially as described.

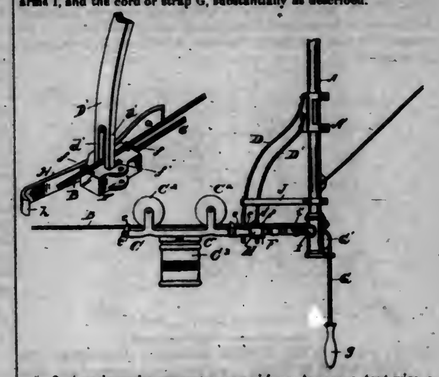


412,243. RIVET. LEVI O. DEAN, Natick, Mass. Filed Sept. 7, 1888. Serial No. 284,805. (No model.)

Claim.—1. The herein-described rivet, it having its opposite ends recessed, substantially as described.

2. The herein-described rivet, it having a waist of small diameter, as *b*, and having its ends enlarged in diameter and recessed, so that both the said ends may be readily upset to form large heads, substantially as described.

412,244. BATHING APPARATUS. CARL F. L. DITTMANN, Altona, Germany. Filed May 13, 1889. Serial No. 310,657. (No model.)



Claim.—1. The herein-described improved bathing apparatus, comprising the portable scaffold or jack, the tilting frame pivoted thereto, a douche-bath vessel having its bearing-rod removably secured to said tilting frame, and the tub, substantially as set forth.

2. The herein-described bathing apparatus, comprising the portable scaffold or jack having upper grooved ends, the tilting frame pivoted thereto, a douche-bath vessel having its bearing-rod secured to said tilting frame, and the tub provided with side trunnions entering said grooves, substantially as set forth.

412,245. CASH-CARRIER. RALPH O. DOUGHTY, Mount Pleasant, Mich. Filed Nov. 30, 1888. Serial No. 292,291. (No model.)

Claim.—1. A cash-carrier apparatus comprising a hanger, an adjustable shoe A', mounted on said hanger, a taut wire, a car, the carriage F, carrying spring-latches H, provided with beveled hooks adapted to engage beveled lugs *c* on the car, the bumper E, the springs D D', attached to the shoe A' and at their lower ends engaging, respectively, with the bumper E and carriage F, the adjustable trip-arms I, and the cord or strap G, substantially as described.

2. A cash-carrier apparatus comprising a hanger, a taut wire, a car adapted to travel thereon, an actuating-spring D, having prongs at its lower end, the bumper E, the carriage F, carrying the latches H, provided with beveled hooks adapted to engage with the beveled lugs *c* on the car, springs *h'*, to hold the latches in engagement with the car, the adjustable trip-arms I, the retracting cord or strap G, the carriage-returning spring D', the shoe A', to which the propelling-springs are secured, and the guard J, all substantially as described.

412,246. SNAP HOOK. CHARLES FAUCHERAUD, St. Amand sur Sevre, France. Filed June 17, 1889. Serial No. 314,503. (No model.)

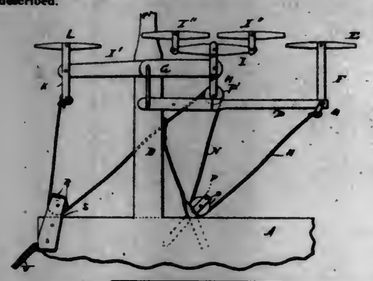
Claim.—1. In a snap-hook, the combination, with the body or section *a* of the hook provided with an arm a^3, of the latch *b*, pivoted upon a pin *b'*, screwed into the section *a* and having a recess or chamber c^x, and the coiled spring *c*, fitted around said pin within said recess, one end of said spring being inserted in a notch in section *a* and the other end in a notch in the latch *b*, as and for the purpose specified.

2. In a snap-hook, the combination, with the section *a* of the hook provided with an arm a^3, the loop portion a', and the shank a^2, of the latch *b*, pivoted upon a pivot-pin *b'*, screwed into section *a* and having a recess c^x, a coiled spring *c*, fitted around said pin within said recess, one end of said spring being inserted in a notch in section *a* and the other end in a notch in the latch *b*, as and for the purpose specified.

412,247. PROCESS OF PRESERVING LIME. WILLIS W. FRAHM, Waynesborough, Pa. Filed Apr. 4, 1889. Serial No. 305,982. (No specimens.)

Claim.—1. The herein-described process of treating lime, consisting in removing it while hot from the kiln, securing it in boxes, and hermetically sealing said boxes while the lime is hot, substantially as described.

2. The herein-described process of treating lime, consisting in removing the same while hot from the kiln, grinding it, and catching it in boxes, and then hermetically sealing said boxes while the lime is hot, substantially as described.



3. The herein-described process of treating lime, consisting in heating the same and boxing it in a hot state in hermetically-sealed vessels, substantially as described.

4. The herein-described process of treating lime, consisting in heating the quicklime, reducing it to powder, putting it into boxes while hot, and hermetically sealing said boxes while the temperature of the lime is above that of the surrounding atmosphere, substantially as described.

412,248. DRAFT-EQUALIZER. ISAAC GUTHRIE, Ashuro, Kans. Filed July 10, 1888. Serial No. 317,977. (No model.)

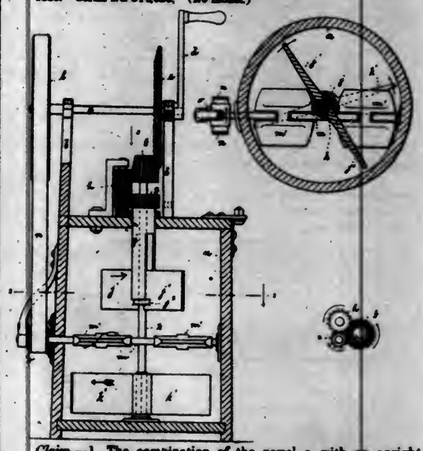
Claim.—In a four-horse draft-equalizer, the combination, with the

frame A and tongue B, of the levers D, G, and I', pivoted, respectively, to project at opposite sides of said tongue, the singletree E, doubletree I, and singletree L, pivoted to the ends of said levers, the pulleys R and O, arranged at the inner end of the frame and at the tongue, the pulley P' upon the end of lever G, and the chain or rope N, secured to the ends of levers D and I' and passed around said pulleys to run obliquely forward from the inner portion of the frame A, substantially as described.

412,249. KNEE REVERSE-MOVEMENT ATTACHMENT FOR TYPE-WRITING MACHINES. GEORGE GLIDDELL, Oswego, Kans. Filed June 19, 1888. Serial No. 277,603. (No model.)

Claim.—1. In an attachment for writing-machines, the combination, with a longitudinal fixed base-piece disposed to one side of the machine, each end of which is provided with an upright pillar or support, of a shaft journaled therein, a downwardly-projecting arm secured to the front end of the shaft and an upwardly-projecting arm secured to the rear end, and a flexible connecting-piece secured to the upper end of the rear arm for connecting the same with the carriage of the machine, whereby said carriage may be drawn back to its original position after completing a line.

2. In an attachment for writing-machines, the combination, with a base-piece, one end of which is provided with a spring-clamp and having upright pillars or supports at its ends, of a shaft journaled in the pillars; an arm secured thereto at each end, a bell-crank lever pivotally secured to the clamp, one end of which projects down below the attachment and the other one projects laterally, a link connected with the end of the laterally-projecting arm of the lever and with the outer end of the arm secured to the front of the shaft, and a flexible piece for connecting the upper end of the rear arm with the carriage of the machine, substantially as and for the purpose set forth.



3. In an attachment for writing-machines, the combination, with a base-piece, of a shaft, two arms secured thereto, a clamp at one end of the base-piece, a lug upon the clamp having jaws, a bell-crank lever which at its angle is provided with a lug to fit between the jaws of the lug upon the clamp, a link connecting one arm of the bell-crank lever with the outer end of the arm upon the front end of the shaft, and a flexible piece connecting the other arm with the carriage of the machine, substantially as set forth.

4. In an attachment for writing-machines, the combination, with an operating mechanism, of a collar to fit upon the paper-table support of the machine, a bell-crank lever pivotally secured thereto at one end of one of its arms, a flexible piece secured at one end to the upper end of the other arm of the bell-crank lever and at the other end to the operating mechanism, and a lug or ear secured to the rear portion of the line-space handle and adapted to be engaged by the bell-crank lever, substantially as and for the purpose set forth.

5. In an attachment for writing-machines, the combination, with an operating mechanism, of a collar to fit upon the paper-table support of the machine, a bell-crank tripping-lever which at its angle is provided with a toe, a set-screw through the end of one of the arms of the lever and through the side of the collar, a lug to be secured upon the rear end of the line-space handle of the machine, the rear portion of which is in a line with and below the toe of the lever, and a flexible piece secured at one end to the upper arm of the tripping-lever and at the other end to the operating mechanism, substantially as and for the purpose set forth.

6. In an attachment for writing-machines, the combination, with an operating mechanism, of a collar to fit upon the paper-table support of the machine, a bell-crank lever pivotally secured thereto at one end of one of its arms, and a flexible piece secured at one end to the other arm of the bell-crank lever and at the other end to the operating mechanism, said lever engaging with the rack-lifting mechanism, substantially as set forth.

412,250. CHURN. CARL GRAF, Brooklyn, N. Y. Filed June 17, 1889. Serial No. 314,629. (No model.)

Claim.—1. The combination of the vessel *a*, with an upright dasher-shaft, a surrounding tube, and a horizontal dasher-shaft, and with wings secured to the tube and the shafts, means for revolving the upright dasher-shaft and the tube in opposite directions, and means for revolving the horizontal dasher-shaft, all substantially as specified.

2. The combination of the vessel *a*, with tube *j*, projecting partly into said vessel and carrying wings *j'*, and with shaft *k*, passing through said tube and carrying wings *k'*, and with a power-shaft and a train of gearing for revolving the tube *j* and shaft *k* in opposite directions, and with transverse shaft *m*, carrying wings *m'*, and revolved from the power-shaft at right angles to shaft *k*, substantially as specified.

412,251. SELF-LUBRICATING JOURNAL-BEARING. WALTER L. HALDY, Cincinnati, Ohio. Filed July 1, 1889. Serial No. 316,131. (No model.)

Claim.—1. A journal-bearing embodying, essentially, three elements in combination, viz: first, a hollow pedestal or supporting-box formed with an oil-reservoir beneath the journal-opening; second, an independent journal-sleeve held in said journal-opening by a connection preventing rotation, but permitting oscillations caused by inaccurate alignment of the shaft, and, third, one or more oil-wheels carried upon yielding supports in the oil-reservoir and bearing through a suitable opening or openings of the sleeve against the journal, substantially as set forth.

2. In a journal-bearing, the combination of a journal-box having an oil-reservoir beneath the axis of the journal, an independent detachable journal-sleeve provided with a spherical enlargement at mid-length, adapted to rest adjustably in a corresponding enlargement of the box, and provided with one or more openings at the under side, and one or more oil-wheels mounted on yielding supports in the oil-reservoir and bearing against the journal through the opening or openings of the sleeve, substantially as set forth.

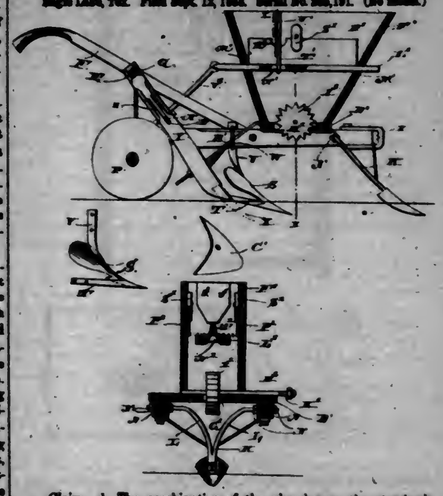
3. In a journal-bearing, the combination of a journal-box having an oil-reservoir beneath the axis of the journal, an independent detachable journal-sleeve enlarged spherically at mid-length to rest adjustably in a corresponding enlargement of the boxing, and with a projecting pin upon the under side of such sleeve enlargement projecting into a corresponding hole in the bottom of the socket-depression of the boxing, and provided with one or more openings at the under side, and one or more oil-wheels mounted on yielding supports in the oil-reservoir and bearing against the journal through the opening or openings of the sleeve, substantially as set forth.

4. In a journal-bearing, the combination of a journal-box having an oil-chamber beneath the axis of the journal, an independent detachable journal-sleeve constructed with a circumferential groove in the inner wall thereof, and a passage leading therefrom through the sleeve into the oil-reservoir below, and two oil-wheels mounted on yielding supports in the oil-reservoir and bearing through suitable openings in the sleeve upon the journal—one at each side of the said groove and passage—substantially as and for the purpose set forth.

5. In a journal-bearing, the combination of a journal-box having an oil-reservoir beneath the journal-axis, an independent journal-sleeve enlarged spherically at mid-length and resting in a correspondingly-enlarged socket-bearing formed in the boxing, said sleeve being provided with a pin at the under side of its spherical enlargement, engaging in a corresponding aperture in the bottom of the socket-bearing to prevent rotation thereof, a circumferential groove in the inner wall of the sleeve with an outlet therefrom leading through said pin into the oil-reservoir below, and two oil-wheels mounted on yielding supports—one at each side of said groove—and bearing against the journal through suitable apertures in the sleeve, substantially as set forth.

6. In a journal-bearing, the combination of a journal-box having an oil-reservoir beneath the axis of the journal, an independent detachable journal-sleeve enlarged spherically at mid-length to rest in a corresponding enlargement of the box, and one or more oil-wheels pivotally mounted in and upon flat spring-plates and revolving in contact with the journal through apertures in said sleeve, said plates having wheel-apertures so conformed to the sectional contour of the wheels as to act as scrapers to remove any excess of oil adhering thereto, substantially as set forth.

412,252. ROLLER ATTACHMENT FOR STOVES. GEORGE D. HAMILTON, Fowlerville, Mich. Filed July 1, 1889. Serial No. 316,163. (No model.)



Claim.—1. In a caster attachment for stoves, the combination of the following elements: the bifurcated brackets secured at one end to the stove-legs and at the other end to the stove-base, the levers pivoted between the bifurcations of said brackets, slidingly engaging at one end with the caster-frame and at the other against an adjustable washer provided with lugs between the levers, a central bolt over which said washer is sleeved, and an adjusting-nut on said bolt, substantially as described.

2. In a caster attachment for stoves, the combination of the following elements: the bifurcated brackets D, the levers F, pivoted in said brackets, the casters H, having pins J engaging into yokes K, the sleeves L_2 and means, as the bolt O, washer M, and nut P, for simultaneously operating the casters, the parts being arranged to operate substantially as and for the purpose described.

3. In a caster attachment for stoves, a bracket secured at one end to the legs and at the other end to the stove-base, and levers pivoted to said brackets and carrying at one end the casters and at the other end bearing against an adjustable washer, substantially as described.

4. In a caster attachment for stoves, the combination of the following elements: bifurcated brackets secured at one end to the stove-legs and at the other end to the stove-base, and levers pivoted between the bifurcations of said brackets and slidingly engaging at one end with the caster-frame and at the other against an adjustable collar, substantially as described.

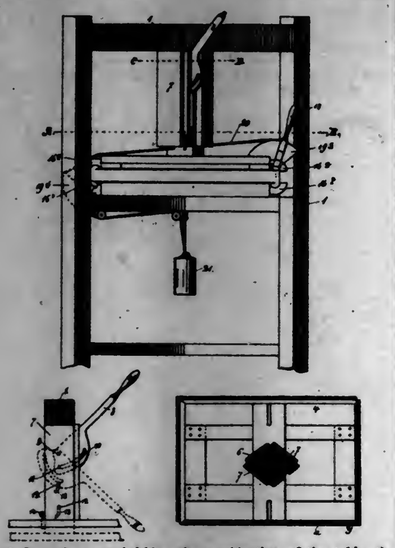
412,253. COTTON OR CORN PLANTER. DEAN C. W. HARDEMAN, Eagle Lake, Tex. Filed Sept. 12, 1888. Serial No. 285,191. (No model.)

Claim.—1. The combination of the plow-beams, the standards secured to said plow-beams and having arms C C, the transverse rods D E, connecting said arms, the adjusting-nuts on said rods, the standard K, having arms L extending transversely through the beams, and the adjusting-nuts N N on said arms, all combined and operating substantially as set forth.

2. The combination of the plow-beams having the standards provided with the arms C, the transverse rods connecting the said arms, the brackets secured to the said arms, and the roller having its shaft journaled in bearings in the said brackets, substantially as described.

3. The combination, in a planter, of the hopper, the shaft H', journaled therein and having the seed-wheel I', the reciprocating slide guided in the hopper and arranged at a distance above the bottom thereof, the width of the said slide being less than the width of the hopper, and the doors or plates P', hinged to the sides of the hopper and adapted to fold downward over the seed-slide, said doors or plates having the opening R', substantially as described.

4. The combination of the hopper, the shaft H', journaled therein and having the seed-wheel I', the seed-slide arranged in the hopper at a distance above the seed-wheel, the said slide being of less width than the hopper, the door or plates P', hinged to the sides of the hopper and adapted to be folded down upon the seed-slide, the buttons S', pivoted to the sides of the hopper and adapted to lock the doors or plates in place, and means, substantially as set forth, to rotate the wheel H' and reciprocate the seed-slide, substantially as described.

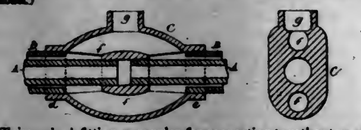


412,254. SHEET-METAL FOLDER. MATTHEW B. HASKINS, New York Mills, N. Y., assignor of one-half to W. Stuart Walcott, same place. Filed May 2, 1888. Serial No. 272,522. (No model.)

Claim.—1. In a sheet-metal-folding machine, the combination of a quadrilateral table, a presser-plate, substantially of the size and form of the table, adapted to descend thereon, brakes upon the two adjacent sides of the table, adapted to work by or around its edge, and brakes upon the two adjacent sides of the presser-plate, being the opposite sides to those having the brakes on the table, the brakes upon the presser-plate being adapted to work by or around its edge, substantially as set forth.

2. In a sheet-metal-folding machine, the combination of the table having a partial bearing affixed thereto, a presser-plate having the complement of the bearing affixed thereto, and the brake working in the bearings.

3. The combination of the table, the presser-plate adapted to descend upon the table and having a vertical and horizontal movement, and the bearings, parts of which are affixed to the presser-plate and table, respectively, and adapted to be brought together when the



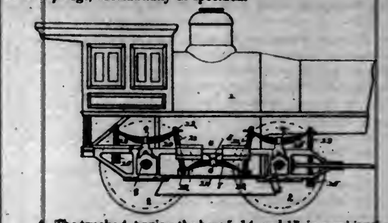
presser-plate descends upon the table, and the brakes in said bearings.

4. In a sheet-metal folder, the combination of the table, the presser-plate adapted to descend upon the table and mounted upon a post movable within guides, the angular slot in the guides, and pin in the post engaging in the slot.

5. In a sheet-metal folder, the combination of the table, the presser-plate adapted to descend upon the table and mounted upon a post movable within guides, the roller upon the guides, and the projection upon the post having a rounded or beveled edge and adapted to engage the roller upon each upward movement, whereby sidewise movement is given to the presser-plate to withdraw it from the fold, substantially as set forth.

412,255. COUPLING FOR GAS OR OTHER PIPES. JOSEPH S. HATFERY, Waterloo, Iowa. Filed Apr. 1, 1889. Serial No. 305,513. (No model.)

Claim.—1. A fitting or coupler for connecting together two pipe-lines placed one inside the other, having the threaded portions or sockets for connection with both pipes made integral with such coupler, and having an outlet leading from the chamber constituting the space between the pipes, such chamber communicating with the outer line of pipes, all substantially as set forth.



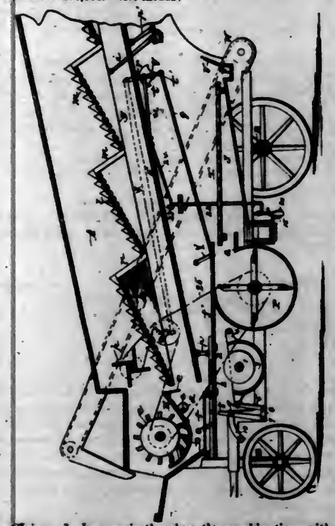
2. In combination with a double pipe-line composed of one line of pipe surrounding another inner and stronger main pipe, a fitting or coupler having independent sockets into which the sections of both sets of pipes are threaded, and also having within it a chamber or passage communicating with the outer line of pipe and having an outlet serving to convey away any leakage from the inner pipe, all substantially as and for the purposes set forth.

412,256. SPRING-GEAR FOR LOCOMOTIVES. JOHN T. HEFFERNAN, Dunkirk, N. Y. Filed June 27, 1888. Serial No. 315,741. (No model.)

Claim.—1. A spring-gear comprising a continuous series of alternately disposed and arranged semi-elliptic bow-springs connected by pivotal couplings, substantially as specified.

2. A spring-gear consisting of a continuous series of alternately-arranged semi-elliptic bow-springs, each alternate spring being arranged out of a plane with the adjacent springs, and pivotal links connecting said springs, substantially as specified.

3. The combination, with a locomotive and its trucks, of standards mounted upon the journals of the trucks and projecting upwardly and provided with yokes, semi-elliptic bow-springs mounted in the yokes, a similar spring mounted intermediate the standards and disposed in an opposite direction, and links pivotally connecting the end of the springs, substantially as specified.



4. The trucks 4, having the bars 5, 14, and 17, in combination with the journals 3, having the yokes 8 and 6, the former having the standards 9, the springs 10, mounted in the yokes 9, and the spring 7, mounted in the yoke 6, depending from the bar 5, the links 11, having the pins 12, connecting the outer ends of the springs 7 with the inner ends of the springs 10, and the links 13, connecting the outer ends of the springs 10 with the end springs 15, mounted in the yoke 16, depending from the bar 17, said spring 15 connecting the series at one side to the series at the opposite side, substantially as specified.

5. A continuous spring-gear consisting of a continuous series of oppositely-disposed springs arranged along the sides and ends of the truck of a locomotive or the like, all the springs being connected together by pivotal couplings, as set forth.

6. A continuous spring-gear for locomotives or the like, consisting of a series of springs connected together by pivotal couplings, as set forth.

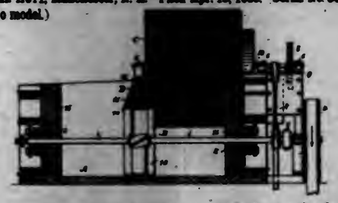
7. A continuous spring-gear consisting of a series of oppositely-disposed springs arranged in different horizontal and vertical planes, the ends of one spring being coupled to the ends of the adjacent spring, as set forth.

412,257. COMBINED GRAIN-THRASHER AND CLOVER-SEED HULLER. CHARLES H. HORTON, Wellington, Ohio. Filed Jan. 19, 1889. Serial No. 296,900. (No model.)

Claim.—1. In a grain-thrasher, the combination, with a cylinder, concave, and separator, of a swinging shelf, arms projecting upwardly from said shelf, a discharge-trough centrally supported on said arms, and a crank connected to the trough for tilting it, substantially as set forth.

2. In a grain-thrasher, the combination, with a cylinder, concave, and separator, of a swinging shelf, centrally-located arms thereon, a trough supported at its center on said arms, and a crank for changing the direction of inclination of the trough and connection between the shaking-bottom and shelf, whereby a lateral swinging motion is imparted to the shelf from the shaking-bottom, substantially as set forth.

3. The combination, with the cylinder and concave, of a grate pivoted in proximity to the cylinder, cams for raising or lowering this grate, an apron depending from the rear end of the grate, and a separator for conducting off the straw, substantially as set forth.



4. The combination, with a cylinder and concave, of a separator composed of movable frames, each frame having oppositely-extending inclines, one series of inclines of each frame being slotted transversely, the other series being slotted longitudinally.

5. The combination, with a cylinder and concave, of a separator composed of a series of frames supported on vibrating arms and a rotating crank-shaft, the upper faces of said frames being in the form of alternate long and short inclines, the former having ribs and slots extending across them and the latter having slots extending longitudinally of the frames, and toothed or stepped strips located on opposite sides of the long inclines, substantially as set forth.

6. The combination, with a cylinder, a concave adjustable grate, and apron depending therefrom, of a separator, substantially as described, and beaters for forcing the straw upon the separator, substantially as set forth.

7. The combination, with a cylinder and concave, of a separator consisting of several shaking-frames, each having oppositely-extending inclines thereon, and toothed strips secured to the sides of said frame, and the beater located near the front ends of the frames, substantially as set forth.

412,258. PULP WASHING AND BLEACHING MACHINERY. JOHN HOTT, Manchester, N. H. Filed Apr. 15, 1889. Serial No. 307,271. (No model.)

Claim.—1. In combination with a partitioned vat and pulp-treating apparatus therein, forcing apparatus, operative with complete immersion, arranged in the vat for creating a circulation therein around the partition, substantially as described.

2. In combination with a partitioned vat and a pulp washer or washers therein, a propeller-screw or forcing apparatus, operative with complete immersion, arranged in the vat for creating a circulation therein around the partition, substantially as described.

3. In combination with a vat and a pulp washer or washers therein, a propeller-screw or forcing apparatus, operative with complete immersion, arranged in the vat for creating a circulation therein, and an additional agitator or agitators also in said vat, substantially as described.

4. In combination with a vat and a pulp washer or washers therein, a propeller-screw or forcing apparatus, operative with complete immersion, arranged in the vat for creating a circulation therein, and an additional agitator or agitators provided with arms set obliquely at different angles, so as to throw the pulp back and forth in opposite directions, substantially as described.

5. In combination with a partitioned vat and pulp-treating apparatus therein, a propeller-screw set in the vat below the pulp-level for creating a circulation therein around the partition, substantially as described

6. In combination with the pulp-vat, a partition provided with an opening, a propeller-screw or forcing apparatus at the opening, whereby the pulp is forced through the said opening from one side of the partition to the other, and a return passage or passages connecting the spaces on opposite sides of said partition, substantially as described.

7. In combination with the pulp-vat, an upright partition provided with an opening at a distance below the top, a propeller-screw or forcing apparatus, operative with complete immersion, arranged at said opening, and a return passage or passages connecting the spaces on opposite sides of said partition, substantially as described.

8. In combination with the pulp-vat, a partition provided with an opening at a distance from both ends of said partition, a propeller-screw or forcing apparatus at said opening, whereby the pulp is forced through the same, and return-passages around both ends of said partition, substantially as described.

9. In combination with a pulp-vat, an upright partition provided with an opening therein, a propeller-screw or forcing apparatus at said opening, a return passage or passages between the spaces on opposite sides of the partition, and an overflow by which the pulp can return directly to the first side of the partition rather than run out of the vat, substantially as described.

10. In combination with an oblong vat divided longitudinally, a propeller-screw or forcing apparatus, operative with complete immersion, placed at an opening in the lower part of a vertical partition in said vat, and a return passage or passages around the end or ends of the partition, substantially as described.

11. In combination with an oblong vat, an upright longitudinal partition provided with an opening therein, a propeller-screw set in said opening and mounted on a shaft transverse to the said vat and partition, and a return passage or passages, substantially as described.

12. In combination with a vat, an upright partition provided with a tube or tubular casing opening into the vat on opposite sides of the partition, a propeller-screw not substantially longer than said tube or tubular casing set therein, and a return passage or passages, substantially as described.

13. In combination with a vat, a partition provided with an opening therein, a renewable lining to said opening, a propeller-screw in said opening, and a return passage or passages, substantially as described.

14. The pulp-vat provided with re-entrant sides, a vertical partition transverse to the line connecting said sides, and return-passages at the ends of said partition, in combination with a shaft across the vat at the re-entrant portion of the sides and a propeller-screw at an opening in said partition, substantially as described.

15. The combination, with the pulp-vat provided with a partition and passages or conduits for the circulation of the pulp, of a propeller-screw in said vat, and beating or mixing arms mounted on the shaft of said screw, substantially as described.

16. The combination of the pulp-vat, a pulp washer or washers therein, a vertical partition provided with an opening at its lower part, a propeller-screw at said opening, and a return passage or passages, substantially as described.

17. The combination of the pulp-vat, a pulp washer or washers therein, a vertical partition provided with an opening at its lower part, a propeller-screw at said opening, a return passage or passages, and beating or mixing arms fixed with the propeller-screw on the shaft of the latter, substantially as described.

18. The combination, with a partitioned vat and pulp washer or washers, of a propeller-screw for creating a circulation in said vat around the partition, the passage or passages from the discharge side of said screw around the said partition to the inlet side thereof being of even depth, substantially as described.

412,259. UNCOUPLING DEVICE FOR RAILWAY-CARS. ELI H. JAMBET, near Alexandria, Va. Filed Mar. 6, 1889. Serial No. 302,097. (No model.)

Claim.—1. The combination of the uncoupling-lever with the slotted hanger, the latter pivoted to the car, and the outer end of the lever passing through the hanger, as set forth.

2. The combination of the uncoupling-lever with a hanger having a slot in which rests the outer end of the lever, the hanger being pivoted to the car, as set forth.

3. A car-coupling uncoupling-lever hanger having the two slots, in combination with the uncoupling-lever, the outer end of which rests in the lower slot, and a pivot-pin passing through the upper slot.

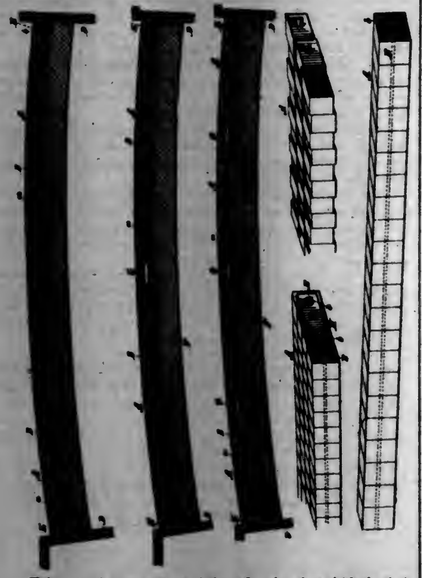
4. The uncoupling-lever pivoted to the coupling-head and having the bend, in combination with the coupling-pin, said bend being under the pin, as set forth.

5. The uncoupling-lever having the flat bend, in combination with the coupling-pin, the bend being below the coupling-pin, as set forth.

6. The coupling-head having the coupling-pin and provided with the bracket, in combination with the uncoupling-lever held at one end in said bracket and passing under the coupling-pin, as set forth.

7. The hanger pivoted to the car, in combination with the limiting-stop, as set forth.

412,260. MEANS FOR MAINTAINING THE GAGE OF RAILWAY-TRACKS. EDWARD A. JESSE, Newport, N. H. Filed Dec. 12, 1888. Serial No. 293,231. (No model.)



Claim.—1. The combination, with the rails and sleepers, of metallic bed-plates resting under either rail, having a slotted projection grasping the inner portion of the base of a rail, and a metallic tie-bar interposed between the said bed-plates and rails and resting within the said slotted projection of the former and having its end adapted to grasp the outer portion of the base of both rails.

2. The combination, with the rails and sleepers, of metallic tie-

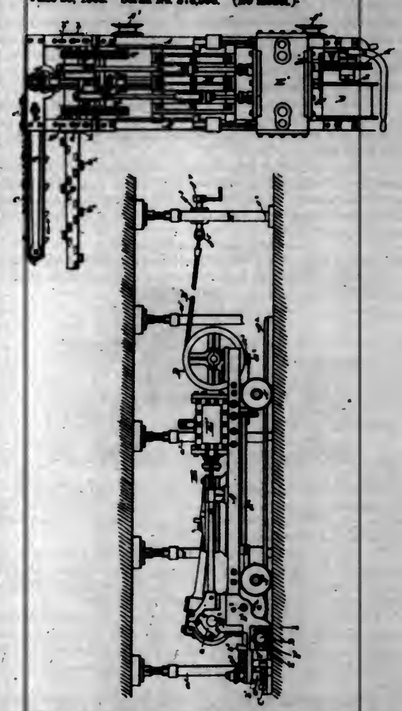
bars having their ends adapted to grasp the outer portion of the base of said rails to prevent their spreading, and metallic bed-plates interposed between said tie-bars and sleepers, having bent projections at each side of said tie-bar for grasping the inner portion of the base of said rails, substantially in the manner and for the purpose specified.

412,261. PAVEMENT. SAMUEL B. JUMPER, New York, N. Y. Filed Nov. 23, 1888. Serial No. 291,643. (No model.)

Claim.—1. A pavement consisting of wedge-shaped blocks A A, united into a continuous curved section by a bar B, substantially as described.

2. A pavement, substantially as herein described, consisting of the perforated wedge-shaped blocks A and the bar B, passing through said blocks, said blocks being held tightly together on the bar B in a curved line, substantially as described.

3. The wedge-shaped blocks A, having apertures *a*, said blocks being placed side by side with their apertures aligned, combined with the rod B, having the nut *b*, said rod passing through the apertures in the blocks A, and the nut *b* drawn up to hold the blocks A rigidly together upon the rod B and in a section having a curved line, substantially as described.



4. The blocks A, having apertures *a*, the apertures in the blocks A being aligned, said blocks tapering from their upper edges downward on both sides, combined with the rod B, having the end nut *b*, the rod B being passed through the apertures in the blocks A and the nut *b* drawn up, whereby the blocks A are rigidly held together and formed into an arch, substantially as described.

5. The blocks A, having apertures *a*, that are aligned with each other, and the rod B, passing through said apertures in said blocks and having nut *b* for holding the blocks on the rod, combined with the recessed blocks E, that rest against the curb and receive the ends of the rod B, substantially as described.

6. The two sections of pavement herein described, each consisting of blocks A, placed side by side and having a rod B passed through them, and the nuts *b* holding said blocks on said rods, combined with the intermediate recessed or apertured block G between said two sections of pavement, the ends of the rods B being passed into the apertures in said block G, whereby the sections of pavement are connected together, substantially as described.

7. A pavement consisting of the perforated blocks A, the upper surface of one block being lower than the upper surface of an adjoining block, and the bar B, passing through said blocks, said blocks being held tightly together on said bar, substantially as described.

412,262. MINING-MACHINE. JOHN KAMSLEY, Streator, Ill. Filed June 20, 1888. Serial No. 277,092. (No model.)

Claim.—1. In a machine such as described, the combination, with the traveling carriage and the cutting mechanism supported upon and projecting laterally therefrom, of a clearing mechanism supported in rear of the cutter, the same comprising an endless belt passing around a supporting-pulley near the outer end of the cutter, and a series of pivoted scrapers or blades depending from said belt on horizontal pivots, substantially as described.

2. In a machine such as described, and in combination with the traveling carriage and cutter-bar mounted thereon and projected beyond the sides, a traveling-belt support parallel with the cut and in rear of the cutter and provided with pivoted scrapers depending below the belt, a support on the belt for each scraper, and a bar for engaging the scrapers to tilt the latter, substantially as described.

3. In a machine such as described, and in combination with the cutting mechanism thereof, a clearing mechanism comprising an endless belt or chain mounted to traverse the cut in rear of the cutting mechanism and provided with a series of blades or scrapers pivotally connected to said belt, shoulders to engage and hold said blades in operative position, and a track-engaging shoulder on the blades to tilt the latter and hold them elevated as they enter the cut, substantially as described.

4. In a machine such as described, and in combination with the cutting mechanism thereof, an endless belt supported to travel parallel with the line of cut and located in rear of the cutters, scrapers or blades pivoted to said belt and depending therefrom, and a track or rail engaging said scrapers to discharge their load and hold them elevated when entering the cut, substantially as described.

5. In a machine such as described, the combination, with a rotary cutter-bar mounted upon and projecting beyond the side of a traveling carriage, of an endless belt encircling a roller supported in rear of the cutter-bar, mechanism for driving said belt, so that the portion

next the cutter-bar shall move in a direction from the outer end of the bar toward the mouth of the cut, a series of pivoted blades or scrapers mounted upon said belt, and a bar engaging the scrapers after they emerge from the cut to discharge the material, substantially as described.

6. As a means for detachably securing the guide-rail for a mining machine in position, a shoe or chair formed in sections, and a jack or extensible prop interposed between the shoe and a superposed support and operating to clamp and hold the shoe and rail firmly in position on the floor, substantially as described.

7. In combination with the rail and the shoe engaging the same, a jack-screw or extensible prop resting upon said shoe and interposed between the latter and a superposed support, substantially as described.

8. In combination with the rail, a sectional shoe, one member provided with a shoulder to engage the flange on one side, a cross-bar extended beneath the rail and an inclined shoulder, the other section fitting between said inclined shoulder and the rail, and a post resting upon said last-named section and engaging a superposed support to clamp the sections onto the rail and hold them firmly in place on the floor, substantially as described.

9. In combination with the rail, the shoe formed in two sections, the one passing beneath the rail and provided with a bearing for engaging the rail and a shoulder on the opposite side of the rail, the other section fitting between said shoulder and rail and provided with lugs projecting beneath the rail, and a prop resting upon said second section, with means for pressing upon a superposed support to clamp the two sections together and hold the chair and rail firmly in position, substantially as described.

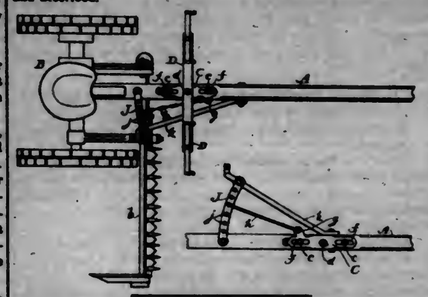
10. In combination with a coal-mining machine of the character described, wherein the cutting devices are mounted upon a traveling carriage supported and guided upon one side by a rail, and in combination therewith, a series of shoes engaging and supporting said rail, and a corresponding series of props, each resting upon one of said shoes and against the roof or a superposed support, substantially as described.

11. The combination, with a machine of the character described, wherein the cutting mechanism is mounted upon a traveling carriage, which latter is drawn or carried forward by means of a rope or chain wound upon a drum, the latter supported upon said carriage, of a movable jack or post provided with a longitudinal movable block, and a tension device supported on said block and adapted to receive and hold the end of the rope or chain, substantially as described.

12. In combination with a mining-machine such as described, an extensible prop, a block movable vertically in guides in said prop and carrying a tension device—such as a screw—to which the rope for feeding the carriage forward is attached, substantially as described.

13. In a mining-machine such as described, in which the feeding and cutting mechanism are mounted upon a traveling carriage, the combination of the winding-drum and its shaft, the worm-wheel, the clutch for connecting said worm-wheel to the drum, the worm engaging the worm-wheel, the driving-shaft, and the two sets of gears, with double clutch interposed between the driving-shaft and worm-shaft, substantially as described.

14. In a mining-machine such as described, in which the feeding, cutting, and clearing mechanisms are mounted upon a traveling carriage, and in combination therewith, the counter-shaft, gear-wheels on said counter-shaft connecting and transmitting motion from the pinions on the main or crank shaft to the rotary cutter, and a bevel-gear secured to said counter-shaft and engaging two gears located on opposite sides thereof, the one actuating the clearing mechanism and the other the feeding mechanism, substantially as described.



15. In a machine such as described, the combination, with the rotary cutter-bar mounted in bearings on a movable carriage, of a series of cutters spirally disposed about the periphery of the bar, each of said cutters being formed with a diagonal cutting face or edge from the outer side rearwardly and toward the axis of the cutter-bar, substantially as described.

412,263. DRAFT-EQUALIZER. LORENZO KENDALL, Chicago, Ill. Filed Aug. 10, 1888. Serial No. 281,193. (No model.)

Claim.—1. A draft-equalizer for reapers and mowers, consisting of a longitudinally-sliding plate secured to the tongue of the machine, means of attaching a doubletree thereto, a rod attached to said sliding plate and connected with an unyielding point of attachment adjacent to the tongue, and means of laterally varying the distance of said point of attachment from the tongue, substantially as shown and described.

2. The combination, with the tongue of a reaper or mower, of the sliding plate C, loosely attached to the tongue, means of attaching a doubletree thereto, a rigid bar extending laterally from the tongue, a rod or chain for connecting said rigid bar and sliding plate, and means for laterally adjusting the free end of said rod upon said laterally-extended bar, substantially as shown and described.

3. The combination, with the tongue of a reaper or mower, of the sliding plate C, rod A, and graduated bar J, substantially as shown and described.

412,264. VULCANIZED PLASTIC COMPOUND. WILLIAM KIEL, Butler, N. J., assignor to Kiel, Butler & Turnbull, New York, N. Y. Filed Jan. 19, 1888. Serial No. 260,915. (Specimens.)

Claim.—1. A vulcanized plastic compound consisting of wood, sulphur, a comingling vulcanizable substance, and crude rubber united by vulcanization, substantially as described.

2. A vulcanized plastic compound consisting of wood, sulphur, oil, and crude rubber united by vulcanization, substantially as described.

412,265. PROCESS OF MANUFACTURING VULCANIZED PLASTIC COMPOUNDS. WILLIAM KIEL, Butler, N. J., assignor to Kiel, Butler & Turnbull, New York, N. Y. Filed Jan. 19, 1888. Serial No. 260,916. (No specimens.)

Claim.—1. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part by boiling or soaking wood in oil and subsequently combining by vulcanization the product thus obtained with sulphur and crude rubber, substantially as described.

2. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part by boiling or soaking wood in oil and subsequently combining by vulcanization the product thus obtained with sulphur, beeswax, and crude rubber, substantially as described.

412,266. PROCESS OF MANUFACTURING VULCANIZED PLASTIC COMPOUNDS. WILLIAM KIEL, Butler, N. J., assignor to Kiel, Butler & Turnbull, New York, N. Y. Filed Jan. 19, 1888. Serial No. 260,919. (Specimens.)

Claim.—1. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part, which consists in vulcanizing together wood and sulphur and subsequently combining by vulcanization the product thus obtained with a comingling vulcanizable substance—sulphur and crude rubber—substantially as described.

2. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part by vulcanizing together wood and sulphur and subsequently combining by vulcanization the product thus obtained with oil, sulphur, and crude rubber, substantially as described.

412,267. PROCESS OF MANUFACTURING VULCANIZED PLASTIC COMPOUNDS. WILLIAM KIEL, Butler, N. J., assignor to Kiel, Butler & Turnbull, New York, N. Y. Filed Jan. 19, 1888. Serial No. 260,920. (Specimens.)

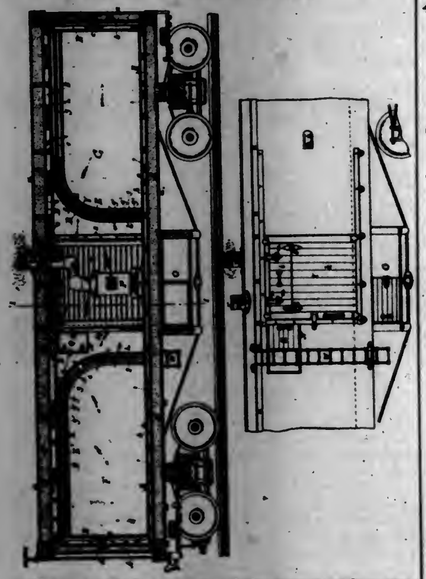
Claim.—1. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part by mixing wood with crude rubber dissolved by any solvent and subsequently combining by vulcanization the product thus obtained with sulphur, oil, and beeswax, substantially as described.

2. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part by mixing wood with crude rubber dissolved by any solvent and subsequently combining by vulcanization the product thus obtained with sulphur, oil, beeswax, and crude rubber, substantially as described.

412,268. PROCESS OF MANUFACTURING VULCANIZED PLASTIC COMPOUNDS. WILLIAM KIEL, Butler, N. J., assignor to Kiel, Butler & Turnbull, New York, N. Y. Filed Jan. 19, 1888. Serial No. 260,921. (Specimens.)

Claim.—1. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part by vulcanizing to a hard state wood, sulphur-oil, and crude rubber, and subsequently combining the product thus obtained, reduced to a pow-

der or dust, with sulphur, oil, and crude rubber, substantially as described.



2. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part, consisting in vulcanizing to a hard state wood, sulphur, oil, and crude rubber, and subsequently combining the product thus obtained, reduced to a powder or dust, with sulphur, oil, beeswax, and crude rubber, substantially as described.

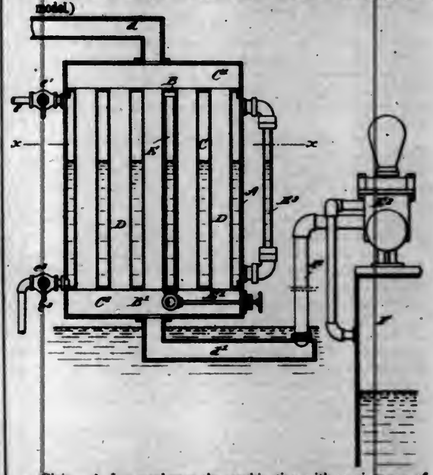
412,269. PROCESS OF MANUFACTURING VULCANIZED PLASTIC COMPOUNDS. WILLIAM KIRK, Butler, N. J., assignor to Kirk, Butler & Turnbull, New York, N. Y. Filed Jan. 19, 1889. Serial No. 296,922. (Specimens.)

Claim.—1. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part by vulcanizing together wood, sulphur, and a commingling vulcanizable substance, and subsequently combining by vulcanization the product thus obtained with crude rubber, substantially as described.

2. The herein-described process of manufacturing vulcanized plastic compounds of which wood is a constituent part by vulcanizing together wood, sulphur, and oil, and subsequently combining by vulcanization the product thus obtained with crude rubber, substantially as described.

412,270. FREIGHT-CAR. CHARLES H. KIMBALL, Chelsea, Mass. Filed Oct. 20, 1888. Serial No. 289,266. (No model.)

Claim.—1. A freight-car composed of a compartment for a source of heat, one or more compartments for storage, three courses of sheathing around the storage-compartments, and a non-heat-conducting material between the outside and middle courses and between the middle and inside courses, there being an air-space completely closed from the outside, continuing around the compartments, and opening only into the heating-compartment, as set forth.



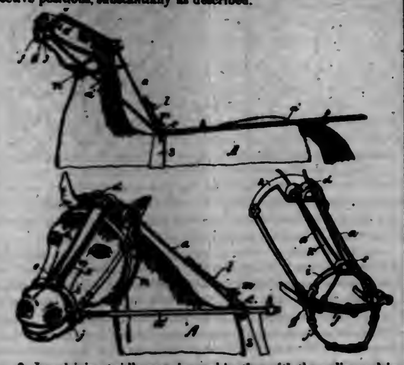
2. The box-car having the top, bottom, and ends and also the sides of it from the doorways therein to the said ends formed of two courses of sheathing *a* and *b*, properly supported and arranged apart, and having the spaces between said courses packed with sawdust or other suitable material, for the purpose set forth, and also having arranged within the inner course *b* another course *c* of the sheathing, a connected air-space being left between said courses *b* and *c* within and throughout the bottom and ends, and also in the top and sides of the car, between the doorways of the car and the said ends, substantially as shown and described.

3. The box-car having the top, bottom, and ends and also the sides of it from the doorways in said sides to the said ends formed of two courses of sheathing *a* and *b*, properly supported and arranged apart, the spaces between the said courses being packed with sawdust or other suitable material, for the purpose set forth, and also having arranged within the inner course *b* another course *c* of sheathing, a connected air-space between the said courses *b* and *c* within and throughout the bottom and ends, and also in the top and sides from the doorways to the said ends of the car, and also having guides secured to each side of the chambers F or G, in grooves between which are arranged to slide slat doors D and E, constructed as described, a series of bulk-head boards *g* also being arranged to slide in the grooves in which the door E slides, all substantially as shown and described.

4. A freight-car composed of two storage-compartments and a heating-compartment, there being doors between them, and completely around the storage-compartments an air-space closed from the outside air and opening into the heating-compartment, and around the entire car outside of the air-space a non-heat-conducting material, as set forth.

5. The box-car having the sliding doors I I, formed in sections provided with air-spaces and hinged together, as shown, an apron being fixed to the inner side of the upper section to cover the joint between them, said sections also having means of locking one to the other, as shown, the slat doors K and L, each arranged in guides in which they are supported either overhead or when drawn down into a vertical position against the inner face of the casing, or so as to close the doorways and form a space S between them, and the sliding doors to receive a packing of sawdust or other proper material, substantially as shown, and for the purpose described.

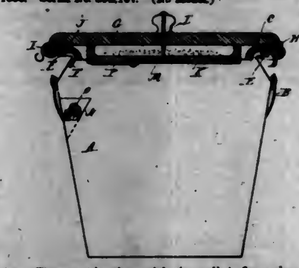
412,271. CONDENSER. CHARLES KIRK, New York, N. Y., assignor to Louis Hicke, same place. Filed Oct. 3, 1888. Serial No. 287,096. (No model.)



Claim.—1. In a condenser, the combination, with an air-pump, of a casing divided into a central water-chamber and end chambers and having the end chambers connected by tubes extending through the water-chamber, a water-supply pipe leading into the water-chamber, a tube extending from the lower end chamber up into the water-chamber, and a connection between the said lower end chamber and the pump, substantially as herein shown and described.

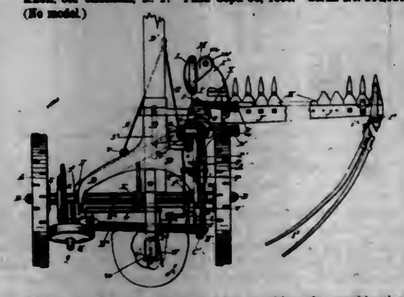
2. In a condenser, the combination, with an air-pump, of a casing A, divided into a central chamber C and end chambers C' C², and having the end chambers connected by tubes D, extending through the central chamber, a water-supply pipe d^3, connected to the central chamber, a tube E, extending from the lower end chamber up into central chamber and provided with a valve F in the said lower chamber, and a pipe d', leading from the said lower end chamber and connected with the pump, substantially as herein shown and described.

3. In a condenser, the combination, with a casing provided with horizontal partitions dividing the same into a central water-chamber and end steam-chambers, and tubes projected through the central chamber uniting the end chambers, of a water-supply pipe leading into the central chamber, a tube supported within the same opening into one end chamber, a tube connected to the condenser, and a pump attached to said tube adapted to exhaust air therefrom, substantially as and for the purpose specified.



412,272. BRIDLE. ROBERT S. KIRKHAM, Lexington, Ky. Filed Mar. 8, 1889. Serial No. 302,594. (No model.)

Claim.—1. In a driving-bridle gear, the combination, with the ordinary driving-bridle gear and the auxiliary reins *a*, passing through guides *d* and *c*, of the stiff plate *b*, lying along the nose of the horse and adapted to carry the said guides and maintain them in their respective positions, substantially as described.



2. In a driving-bridle gear, in combination with the ordinary driving-bridle gear, the muzzle-straps *i j* and guide *c*, the headstall A and guide *d*, the auxiliary bit *f*, auxiliary reins *a*, and the loop-connection *l*, substantially as set forth.

412,273. COMMODE. JAMES KIRKUP, Detroit, Mich. Filed Nov. 23, 1888. Serial No. 292,167. (No model.)

Claim.—The combination, with the pail A, formed near its upper edge with an inwardly-inclined annular portion and horizontal annular flange above said inclined portion, of the seat C on said horizontal portion and provided with the outwardly and downwardly inclined stop-flange F parallel with said inclined portion, and the cover G, hinged to the seat at a point diametrically opposite said flange and carrying a disinfectant-receptacle, substantially as and for the purpose specified.

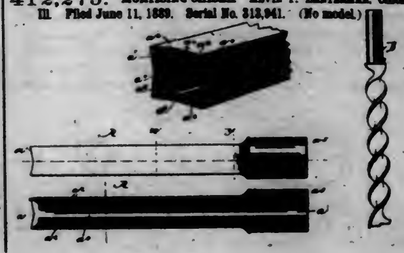
412,274. MOWING OR REAPING MACHINE. EDWARD M. KIRK, Old Chatham, N. Y. Filed Sept. 30, 1886. Serial No. 214,981. (No model.)

Claim.—1. In a mowing or reaping machine, the combination, with a revolving axle, drive-wheels connected with said axle by friction-clutches, a drive-gear fixed to the axle, and a sleeve loosely mounted on the latter, of the floating frame pivoted on said sleeve so that the said frame can be moved in either way in the direction of said sleeve, and a bracket connected with said floating frame and projecting rearward of the axle and supporting the gears, which are actuated by the drive-gear secured to the axle, whereby the floating frame can at will be made to carry the drive-gear mechanism into or out from engagement with the constantly-revolving drive-gear on the axle, substantially as and for the purposes set forth.

2. In a mowing or reaping machine, the combination, with the drive-gear fixed to the main axle and revolved by drive-wheels, and a sleeve loosely mounted on said axle, of a floating frame pivoted on said sleeve so as to be moved endwise at will in either direction, brackets secured to the rearward end of the floating frame, gear mechanism supported by said brackets, and sprocket-wheel H, actuated by the drive-gear, sprocket-wheel H', secured to the crank-shaft and driven by drive-chain H^2, actuated by sprocket-wheel H, and a lever for moving said floating frame endwise, substantially as and for the purposes set forth.

3. In a mowing or reaping machine, the combination, with the drive-gear fixed to the main axle, a sleeve loosely mounted on said axle, a floating frame pivoted on said sleeve and adapted to be moved in direction of the axis of the latter, the driven-gear mechanism carried by a bracket secured to the rear end of the floating frame so as to be moved with it, of a sprocket-wheel carried by an adjustable arm and driven by the drive-gear mechanism, and the second sprocket-wheel fixed on the crank-shaft and revolved by a chain belt actuated by the first sprocket-wheel, substantially as and for the purposes set forth.

4. In a mowing or reaping machine, the combination, with the crank-shaft, of floating frame pivoted to a sleeve loosely mounted on the main axle, the arm I', suspended and pivoted from portion F' of said floating frame, having the crank-shaft bearings, the inner shoe connected with said suspended arm, the tongue-frame, the progressive coil-shaped cam O, pivoted to a bracket connected with said tongue-frame, chain n', pinion O', segmental gear P, and lever P', all substantially as and for the purposes set forth.

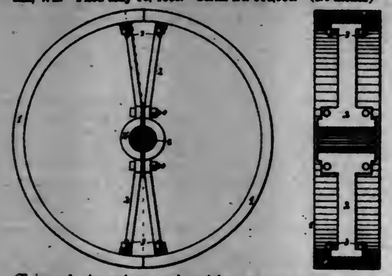


5. In a mowing or reaping machine, the combination, with the floating frame, the sleeve loosely mounted on the main axle to which the said frame is pivoted, the crank-shaft supported in bearings on the floating frame, and a tongue-frame pivoted to said sleeve, of the bifurcated draw-bar connected with the diagonal limb of the floating frame at two points on opposite sides of the tongue, a loop for supporting the forward end of said draw-bar, and a device for attachment of animals to the draw-bar, substantially as and for the purposes set forth.

6. In a mowing or reaping machine, the combination, with the main-axle sleeve loosely mounted thereon, floating frame pivoted on said sleeve, a tongue-frame also pivoted on said sleeve, arm I', suspended and pivoted from said floating frame, inner shoe I, and cutter-bar J, of the bifurcated draw-bar connected with the diagonal limb of the floating frame at two points on opposite sides of the tongue, and means for attachment of animals to said draw-bar, substantially as and for the purposes set forth.

7. In a mowing or reaping machine, the combination, with a drive-gear fixed to the main axle, and a sleeve loosely mounted upon said axle, of a floating frame pivoted on said sleeve and carrying the crank-shaft, driven gearing actuated by the drive-gear fixed to the main axle, sprocket-wheel H, driven by said driven gearing, sprocket-wheel H', secured to the crank-shaft and actuated by the drive-chain H^2, located rearwardly of the sleeve, as described, cam X, rigidly fixed upon said sleeve and provided with a lever, and the notch *x* in the floating frame, whereby the driven gear can at will be thrown into or out of engagement with the drive-gear on the main axle, substantially as and for the purposes set forth.

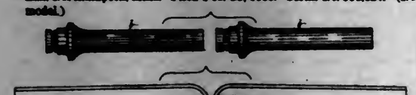
8. In a mowing or reaping machine, the combination, with the pitman Y, constructed as described, of the lever-jaws *y y*, pivoted together and provided with the tightening-bolt and having conical-formed recessed jaws *z* at one end, and the conical-shaped box-bearing Z, interposed between the wrist-pin and the jaws of the pitman, substantially as and for the purposes set forth.



412,275. MORTISING-CHISEL. ALVIN P. LAFFERMAN, Chicago Ill. Filed June 11, 1889. Serial No. 313,941. (No model.)

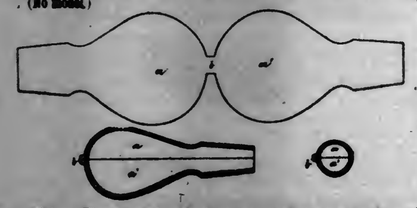
Claim.—1. A hollow mortising-chisel for the purpose described, having the wall of its bore provided with longitudinally-extending serrations, as set forth.

2. A hollow mortising-chisel for the purpose described, having the wall of its bore composed of longitudinally-extending widths of plain cylindric surface alternating with series of longitudinally-extending serrations, as set forth.



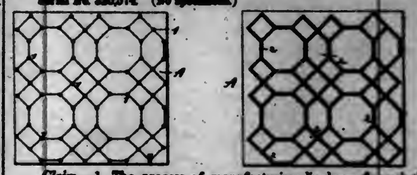
412,276. PULLEY. P. V. LAWSON and WALLACE I. FIELD, Menasha, Wis. Filed May 16, 1889. Serial No. 311,066. (No model.)

Claim.—1. As an improved article of manufacture, a separable pulley divided longitudinally of its bore into two equal sections, the hub and arms of each section being of metallic formation cast integral, and the ends of said arms terminating near the aforesaid dividing-line at a distance from each other slightly greater than the distance between their respective hub-sections, and the arm ends of each section being each provided with circular ribs, a bent wood rim having sockets therein adapted to receive said ribs, the bolts 3, concentric with the ribs and connecting said arms and rim-sections, and the clamp-bolts 4 through the hub-sections, whereby the pulley-sections may be connected one to the other and said hub-sections drawn toward each other and clamped upon a shaft, substantially as described.



2. In a separable pulley divided longitudinally of its bore into two equal sections and having the hub and arms of each section of metallic formation cast integral, and the ends of said arms terminating near the aforesaid dividing-line at a distance from each other slightly greater than the distance between their respective hub-sections, and the arm ends of each section being each provided with circular ribs, and a bent rim formed of a single thickness of wood, having sockets therein adapted to receive said ribs, the bolts 3, concentric with the ribs and connecting the arms and rim-sections, and the clamp-bolts 4 through the hub-sections, whereby the pulley-sections may be connected one to the other and the hub-sections drawn toward each other and clamped upon a shaft, and in combination a bushing of paper or other slightly-elastic material interposed between said hub-sections and shaft, substantially as described.

412,277. HOLLOW HANDLE FOR IMPLEMENTS. WILLIAM W. LEE, Northampton, Mass. Filed Feb. 23, 1889. Serial No. 300,827. (No model.)

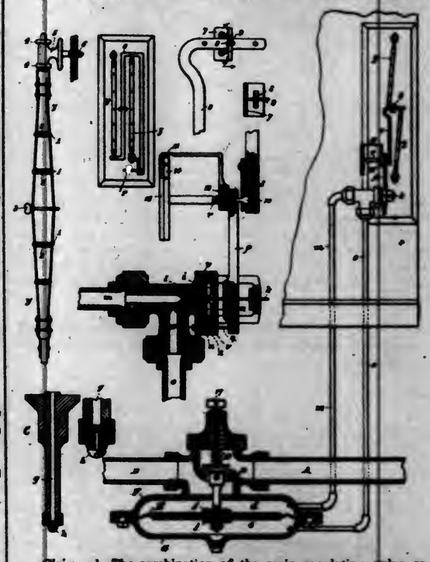


Claim.—The improved blank for hollow-handled implements above described, consisting of the two shells *a a*, stub *b*, and binder *c* united together, substantially as set forth.

412,278. BLANK FOR WELDED HOLLOW HANDLES. WILLIAM W. LEE, Northampton, Mass. Filed Feb. 23, 1889. Serial No. 300,828. (No model.)

Claim.—The blank described, composed of the two shells *a a'*, united by the strip *b*, integral with both shells, substantially as described.

412,279. PROCESS OF MANUFACTURING LINOLEUM FLOOR-CLOTH. DAVID H. MELVIN, Lincolnville, N. Y. Filed Aug. 13, 1889. Serial No. 320,574. (No specimens.)



Claim.—1. The process of manufacturing linoleum floor-cloth, consisting in forming granulated linoleum composition into sheets of spongy texture, cutting the sheets into shapes, arranging the shapes on a flexible back or foundation, and pressing these shapes into the foundation, substantially as set forth.

2. The process of manufacturing linoleum floor-cloth, consisting of forming sheets of spongy texture from unheated granulated linoleum composition, cutting the sheets into shapes, arranging the shapes in a block or form, placing the block with the face toward a canvas foundation drawn across a heated table, pressing said block or form until the shapes adhere to the canvas and their edges are partly joined, removing the block or form, and finally subjecting the whole to hydraulic or other pressure until all the interstices are closed, the shapes adhere to one another, and the whole sheet is made compact and smooth, substantially as set forth.

3. The process for the manufacture of linoleum floor-cloth, consisting in forming sheets of spongy texture from linoleum composition, cutting these sheets into shapes, arranging the shapes on a block or form, placing the shapes against a canvas, pressing the block until the shapes adhere to the canvas, removing the block, and finally heating and again pressing the materials, substantially as set forth.

412,280. THERMOSTATIC VALVE-REGULATOR. EDWIN C. MERRILL, Allegheny, Pa. Filed Mar. 16, 1889. Serial No. 303,586. (No model.)

Claim.—1. The combination of the main regulating-valve arranged to vary the size of the valve-aperture, the secondary valve controlling the pressure of the fluid operating said main valve, and the thermostat connected with and actuating said secondary valve when influenced by changes of temperature, substantially as described.

2. The combination of the main valve, the casing, a flexible diaphragm connected with said main valve and dividing said casing into two chambers, a secondary valve controlling the pressure of the fluid in said chambers, and the thermostat controlling said secondary valve, substantially as described.

3. The combination of the supply-pipe, the delivery-pipe, the main valve regulating the pressure of gas from the one to the other, the secondary valve controlling the pressure of gas in a branch pipe connected with the supply-pipe, and thereby operating said main valve, a thermostat connected with the secondary valve, and a return-pipe from the latter communicating with the feed-pipe, whereby the gas whose pressure is controlled by the secondary valve passes onto the furnace to maintain combustion at the burner, substantially as described.

4. The combination of the supply-pipe, feed-pipe, main regulating-valve having a small permanently-open passage, a secondary valve in a branch pipe supplied by said passage, a diaphragm connected with and actuating said main valve to close the same when the secondary valve is open, and a return-pipe from the secondary valve communicating with the delivery-pipe, whereby a constant supply of gas sufficient to maintain combustion is insured, substantially as described.

5. The combination of the main valve, the diaphragm supporting the same, said main valve having a permanently-open passage through the same, the secondary valve in a pipe around said diaphragm and controlling the pressures on opposite sides thereof, its return-pipe communicating freely with the delivery-pipe to the furnace, and the thermostat controlling said secondary valve, substantially as described.

6. The combination of the main valve, the supporting-diaphragm, the secondary valve in a passage around said diaphragm and controlling the pressures on opposite sides thereof, the valve-stem and actuating-lever for said secondary valve, and a thermostat comprising an expansible arm or arms connected with said actuating-lever through an adjustable connection, substantially as described.

7. The combination of the valve, the secondary valve controlling the same, the actuating-lever therefor, and the thermostat-lever for actuating the same, said actuating-lever being pivoted to a part which is held in position with yielding pressure, substantially as described.

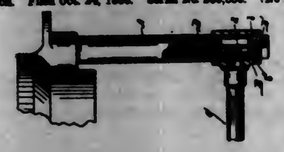
8. The combination, with a valve, of a thermostat connected therewith and comprising an expansible arm composed of two metal strips curved in opposite directions, with their concave sides facing each other and held together at several points by means of screws or rivets, substantially as described.

9. The combination, with a valve, of a thermostat for actuating the same and comprising a lever and two expansible arms connected with said lever on opposite sides of its fulcrum, substantially as described.

10. The combination, with a valve, of a thermostat for actuating the same and comprising a lever and two expansible arms connected with said lever on opposite sides of its fulcrum, the said fulcrum being movable in the direction of the pull and thrust of said arms, substantially as described.

11. The combination, with the valve and thermostat-lever, of an expansible arm composed of thin metal plates or strips fastened together at several points by rivets or screws, and provided with an adjusting-screw, substantially as described.

12. The combination of the valve, the actuating-lever therefor, the thermostat-lever and expansible arm or arms for actuating the same, and a screw passing through one of said levers and connected with the other by a flexible joint, whereby the space between said levers may be adjusted, substantially as described.

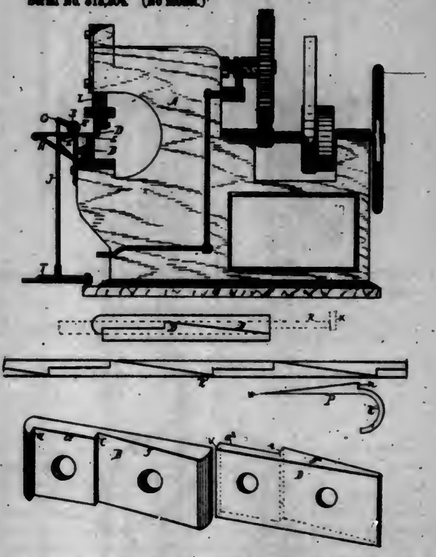


13. The combination of the valve, the actuating-lever therefor, the thermostat-lever, and the adjusting-screw connecting said levers, and provided with graduating-marks corresponding to degrees on a thermometer, substantially as described.

14. The combination of the valve, its actuating-lever, the thermostat-lever, the graduated adjusting-screw connecting the two levers, and the jam-nut carrying the index-finger, substantially as described.

15. The combination of the valve, its actuating-lever, the thermostat-lever, and the adjusting-screw connecting the two levers and having its head composed of two adjacent disks capable of turning independently of each other, one of said disks having graduating lines corresponding with the degrees on a thermometer and the other having figures indicative of such degrees, substantially as described.

16. The combination of the valve and the thermostat for actuating the same, said thermostat comprising a bent lever and two expansible arms connected therewith at the bend and at the free end, respectively, said lever being fulcrumed at a point intermediate between said connections, substantially as described.



412,281. GASOLINE-VAPOR BURNER. JOHN F. MONAHAN, Detroit, Mich. Filed Oct. 24, 1888. Serial No. 289,050. (No model.)

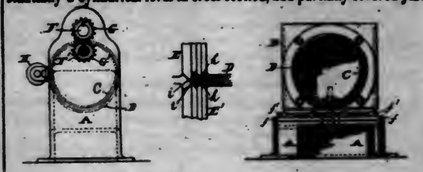
Claim.—1. The combination, with a gasoline-burner in which the stand-pipe constitutes a part of the gas-generating chamber, of a packing cartridge or plug located in the said stand-pipe and adapted to prevent pulsation, a detachable plug or cap in line with said cartridge, and a stem attached to the latter for facilitating its removal when the cap or plug is detached, substantially as described.

2. The combination, with a gasoline-vapor burner, of a pipe to one end of which the burner proper is directly secured, and provided at its opposite end with a removable cap or plug, and a packing-cartridge located in said pipe and adapted to be inserted or removed through the orifice closed by said cap or plug, substantially as described.

412,282. MACHINE FOR MAKING PLUMBERS' AND GAS-FITTERS' HOOKS. JOSHUA MOORE, Marseilles, Ill. Filed July 22, 1889. Serial No. 318,304. (No model.)

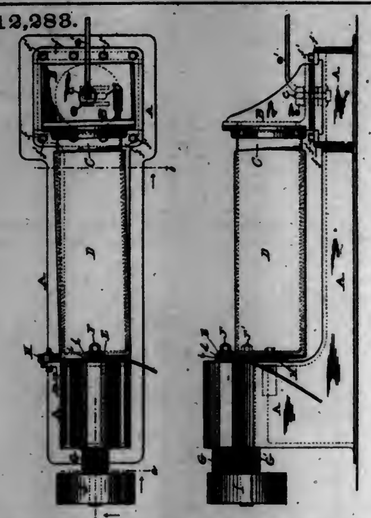
Claim.—1. In the shearing-machine shown and described, the combination of the shears B and D, each having the cutting-edges specified, the clamp H, and spring S, substantially as and for the purpose set forth.

2. In the shearing-machine shown and described, the combination of the shears B and D, each having the cutting-edges specified, the spring S, spring-clamp H, shaft F, having the cam E and arm G, rod J, and treadle T, substantially as and for the purpose set forth.



3. In a shearing-machine, the combination of the shear B, having the cutting-edges *a c' c g*, and the shear D, having the cutting-edges *b*, a^2, *r*, and g^2, substantially as and for the purpose set forth.

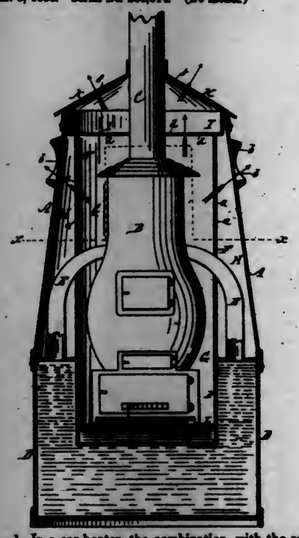
4. The combination of the shears B and D, each having cutting-edges for conjointly cutting gas-hook blanks formed to have the point W, shoulder *s*, and extending end R, for forming a hook, substantially as and for the purpose set forth.



5. The combination of the shears B and D, having respectively the cutting-edges for forming the shoulder *s* of the hook-blanks, substantially as and for the purpose set forth.

412,283. METHOD OF MAKING WIRE. CHARLES H. MORGAN, Worcester, Mass. Filed Apr. 27, 1888. Serial No. 308,982. (No model.)

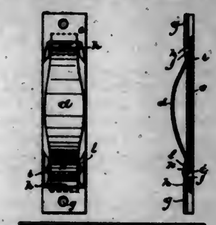
Claim.—In the manufacture of wire, the production of a continuous strand or series of long strands by cutting narrow strips spirally from a metallic cylinder, the stock being first compressed into substantially a cylindrical form in cross-section, and partially severed just



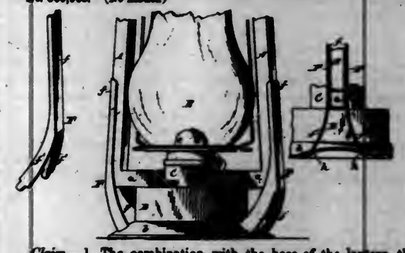
412,288.

in advance of severing the strand, simultaneously and by a continuous operation, substantially as set forth.

412,284. CAR-HEATER. MARTIN H. MORLEY, Rochester, N. Y. Filed Mar. 3, 1888. Serial No. 266,014. (No model.)



Claim.—1. In a car-heater, the combination, with the casing A, of the vertical partitions F F, perforated at their upper ends, said partitions dividing the casing into three compartments, as shown and described, and for the purpose specified.



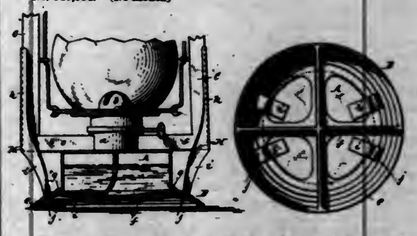
2. In a car-heater, the combination, with the open-topped casing A, of the cover I, fitting over and inclosing the top of the casing, and the conical cap K above the cover, said cover and cap being perforated to allow passage of the hot air from the furnace, and the smoke-pipe C, passing centrally through the cover and cap, as shown and described, and for the purpose specified.

412,285. SASH-HOLDER. ISAIAH H. MULFORD, East Orange, assignor of one-half to George M. Ballard, Newark, N. J. Filed Jan. 31, 1889. Serial No. 298,202. (No model.)

Claim.—The improved sash-holder herein described, combining a bed-plate *c*, having bearings *h h i i* and an abutment *l*, and a spring *d*, bowed and corrugated and arranged in engagement with the bearings and corrugation, substantially as and for the purposes set forth.

412,286. TUBULAR LANTERN. WARREN MCARTHUR, Chicago, Ill., assignor to the Steam Gauge and Lantern Company, Syracuse, and The P. H. Dietz Company, New York, N. Y. Filed May 8, 1888. Serial No. 309,965. (No model.)

Claim.—1. The combination, with the base of the lantern, the side tube, and its lower branch, of a side brace secured to the base of the lantern and to the side tube above the lower branch or elbow, substantially as set forth.



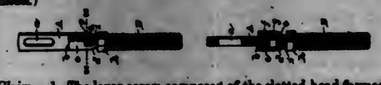
2. The combination, with the base of the lantern, the side tube, and its lower branch, of a bifurcated side brace secured with its shank to the side tube above its lower branch and with its arms to the base of the lantern, substantially as set forth.

3. The combination, with the base of the lantern and the side tube connected therewith, of a brace secured with its upper end to the outer side of the tube and extending downwardly from the outer side of the tube to the base, substantially as set forth.

4. The combination, with the side tube and the base of the lantern, of a brace having its trough-shaped upper portion secured to the outer side of the tube and its lower portion attached to the base of the lantern, substantially as set forth.

5. The combination, with the side tube and the oil-pot having the flange of its bottom plate provided with openings, of a bifurcated brace secured with its shank to the tube and having the reduced ends of its arms passed through the openings in the bottom plate and clinched on the under side, substantially as set forth.

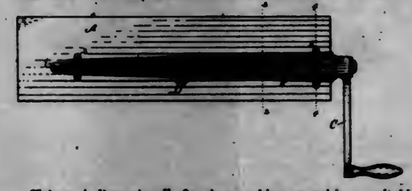
412,287. TUBULAR LANTERN. WARREN MCARTHUR, Chicago, Ill., assignor to the Steam Gauge and Lantern Company, Syracuse, and The P. H. Dietz Company, New York, N. Y. Filed Aug. 2, 1888. Serial No. 319,531. (No model.)



Claim.—1. The combination, with the oil-pot and the air-tubes connected therewith, of a separate base-frame upon which the oil-pot rests and braces connecting the air-tubes with the base-frame, substantially as set forth.

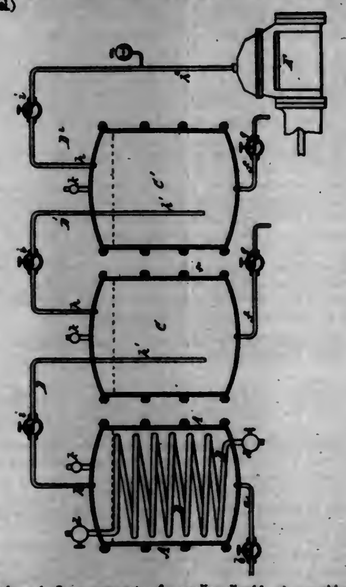
2. The combination, with the oil-pot and the air-tubes connected therewith, of a base-frame upon which the oil-pot rests, and which is provided with openings, and braces secured with their upper ends to the air-tubes and having their lower portions inserted through the openings in the base-frame and secured to the bottom of the oil-pot, substantially as set forth.

3. The combination, with the oil-pot and the air-tubes connected therewith, of a base-frame upon which the oil-pot rests, and which is provided with a raised rim in which the oil-pot is held against lateral displacement, and braces connecting the air-tubes with the base-frame, substantially as set forth.



412,288. LEVER-SCREW FOR SPINNING-MACHINES. JOHN F. MCGRATH, Taunton, Mass. Filed May 31, 1889. Serial No. 312,794. (No model.)

Claim.—1. The lever-screw composed of the slotted head formed with a cavity, as shown, and with prongs, and the screw formed with a head held in said cavity by said prongs, substantially as shown and described.



2. The lever-screw composed of the screw having a polygonal portion and a head above said portion, with a groove between the head and polygonal portion, and the slotted head formed with a cavity, as shown, and with prongs adapted to engage the head of the screw and hold the same in said cavity, as set forth.

412,289. DIPPER-HANDLE MACHINE. JOHN A. O'LEARY, Decatur, Mich. Filed May 23, 1889. Serial No. 311,787. (No model.)

Claim.—A dipper-handle-forming machine comprising a suitable base, the adjustable bearing-loops extended through the base and provided with adjusting-nuts, the tapered and longitudinally-channeled shaft detachably confined by said bearing-loops, and a stop at the end of said shaft, substantially as set forth.

412,290. APPARATUS FOR COOLING LIQUIDS. JOHN M. PFAUDLER, Rochester, N. Y. Filed July 26, 1888. Serial No. 280,797. (No model.)

Claim.—1. In an apparatus for cooling liquids, the combination of a closed receiving-tank, a closed condensing-tank containing a cooling-liquid, a pipe leading from the top of the receiving-tank to the interior of the condensing-tank, an exhaust-pump, and a pipe leading from the top of the condensing-tank to the pump, as and for the purpose specified.

2. In an apparatus for cooling liquids, the combination of a closed receiving-tank, a closed condensing-tank, an exhaust-pump, a pipe connecting the top of the receiving-tank with the interior of the condensing-tank, a pipe connecting the top of the condensing-tank with the pump, said pipes provided with check-valves, and a cooling-pipe extending through the receiving-tank, as shown and described, and for the purpose specified.

412,291. CARRIAGE-BOW-SOCKET. WILBUR J. PLANT, Cleveland, Ohio. Filed Aug. 19, 1889. Serial No. 321,203. (No model.)

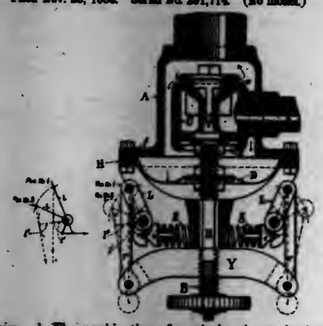
Claim.—1. In a bow-socket, duplicate plates, as A and B, having their lower extremities welded to the pin of the slat-iron and to an exterior tube, substantially as described.

2. In a bow-socket, an exterior tube, duplicate longitudinal plates placed interiorly to the outer tube, a slat-iron pin welded to the exterior tube and plates at their lower end, and means for uniting the plates at their outer end, substantially as described.

3. In a bow-socket, an exterior socket-tube, interior longitudinal plates conformably fitting the inner surface of the tube, a slat-iron pin welded to the lower ends of the plates and exterior tube, and means, substantially as described, for connecting the upper ends of the plates, all substantially as and for the purpose set forth.

4. In a bow-socket, an exterior tube, a slat-iron provided with an extended pin, interior plates welded to the slat-iron and exterior tube at their lower ends, and a filler, substantially as described, fitting conformably to the inner surface of the plates, all substantially as and for the purpose set forth.

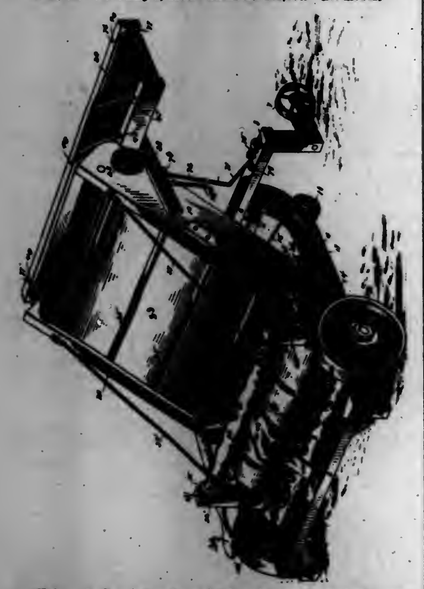
5. In a bow-socket, an exterior inclosing-tube, interior longitudinal plates, a slat-iron welded to the plates and exterior tube, and a filler for separating and re-enforcing the plates, substantially as described.



412,292. NAIL-DIE FOR HEELING-MACHINES. JOSEPH H. POPE, Brockton, Mass., assignor to the American Heeling Machine Company, same place. Filed Feb. 20, 1889. Serial No. 300,560. (No model.)

Claim.—A nail-die for heel-nailing machines, consisting of three superposed sections each provided with a series of rows of nail-holes, said sections rigidly but detachably united in fixed relation to each other by a vertical screw and steady-pins, with the several rows in one section in coincidence, respectively, with the several rows in the

other sections, and the central section of greater dimensions than the upper and lower sections and projecting laterally beyond the same to support the nail-die in a groove of the nail-die holder, substantially as shown and described.



412,293. PRESSURE-GOVERNOR. GEORGE B. PRICE, Philadelphia, Pa. Filed Nov. 23, 1888. Serial No. 291,714. (No model.)

Claim.—1. The combination of a spiral spring and a bent lever, the arms of which shall be of such relative length and arranged at such angles to each other as that the spring shall produce continuously a uniform power in a given direction at the end of longer arm of said lever.

2. In a pressure-governor, the combination of a spiral spring and bent lever mechanism with a balance-valve, flexible diaphragm, and suitable connections between the diaphragm, valve, and spring mechanism, substantially as shown.

412,294. HAY RAKE AND LOADER. RUDOLPH W. REHARD, Hagerstown, Pa. Filed May 3, 1888. Serial No. 272,670. (No model.)

Claim.—1. In a hay rake or loader, the combination of a rotatable main rake, a supplemental rake in front of the main rake, rotatable in an opposite direction and provided with teeth farther from the ground than the main-rake teeth, the teeth of the supplemental rake being removable, whereby it may be used with the teeth on heavy windrows or without the teeth on light windrows, and an adjusting-lever for varying the distance from the ground of the rakes.

2. In a hay-loader, the combination of the elevator, a horizontal side-delivery apron at the discharge end of the elevator, driven by the same source of power as the elevator, said apron being reversible to discharge to either side of the machine, a removable guard to keep the hay upon the apron, and supports for securing the guard to the outside of the apron-frame in either position of delivery.

3. The combination of the elevator-frame, a rotating spindle at the delivery end, a gear-wheel on each end of the spindle, a side-delivery frame and supports therefor, said frame being provided with a gear-wheel at one end, and detachable guards adapted to be secured in suitable supports to either top or bottom side of the frame, whereby the frame may be turned upside down and reversed and used to deliver hay at either side of the machine, as desired.

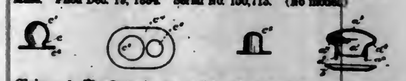
4. The combination of a main frame carrying a rake, a cross-beam pivoted to said frame at the rear and adapted to be rocked in a vertical plane, casters supporting said beam and located out of a vertical plane cutting the same, and an adjusting-lever secured to the beam and extending to the front of the machine, whereby when the lever is operated the beam will raise or lower the rake, as and for the purpose set forth.

5. In a hay-loader, the combination, with the elevator, of a stay 71, provided with arm 74, forming a hooked end on the stay, notches 72, and a catch 73, secured to the elevator-frame, co-operating with the stay, said catch encircling the stay and adapted to engage the notches.

412,295. SHAWL-STRAP. HOWARD W. REYNOLDS, Rochester, N.Y., assignor of one-half to H. H. Stoneburn, same place. Filed May 23, 1888. Serial No. 311,868. (No model.)

Claim.—1. A shawl-strap handle consisting of a central handle portion terminating in recesses adapted for the reception of and provided with a loosely-inclosed rotatable binding-roller and a superimposed binding-plate, substantially as specified.

2. A shawl-strap handle the ends of which terminate in recesses, a loose roller forming a binding device mounted in the recess, a superimposed binding-plate mounted above the recess, and opposite tape-receiving bars or keepers, substantially as specified.



3. A shawl-strap the ends of which terminate in recesses having a corrugated bottom, a superimposed inclined corrugated binding-plate, and a binding-roller the periphery of which is corrugated and mounted in the recess, and of a diameter greater than the depth of the same, substantially as specified.

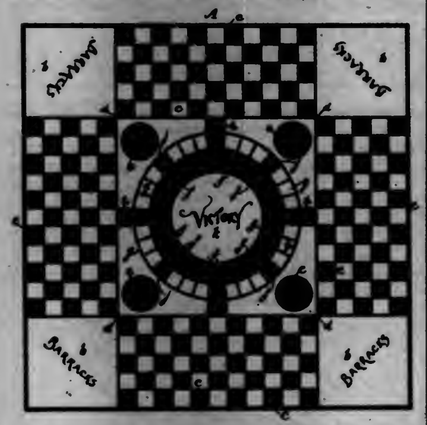
4. A shawl-handle the ends of which terminate in plates, consisting of side bars and end bars and two intermediate partitions connected at their bottoms to form a recess, and a superimposed inclined binding-plate, in combination with the binding device mounted in the recess and tapes connected to the end bars and adapted to be inserted laterally under the plate and over the binding device, substantially as specified.

5. The handle 1, terminating in the plates 2 and 13, the plate 2, provided with the opposite plates 4, the bars 5, partitions 7, connected with the bar 8, and the spar-roll 11, in combination with the tapes 3, connected to a spar 16 formed on one of the bars 5, passed under the plate 2 and over the opposite bar 5, and inserted laterally between the binding device 11 and the plate 13, substantially as specified.

6. A shawl-strap handle terminating in clamping devices for the straps, consisting of binding-roller and a superimposed binding-plate, the said binding device being separated from the plate by a slight space to receive the strap, which space is open at one side only to allow for the lateral insertion of the straps, as set forth.

412,296. GLOVE-FASTENING. WILLIAM S. RICHARDSON, Boston, Mass. Filed Dec. 19, 1884. Serial No. 150,713. (No model.)

Claim.—1. The fastening comprising the cap a^3, having the yielding sides a', washer b, and the connecting-arms a^3, all substantially as and for the purposes described.



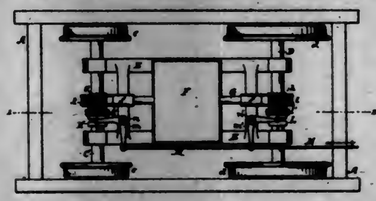
2. The combination of the cap a^3, having the inclined shoulder a^4, with the washer b, inclined as described, and fastening-arms a^3, all substantially as and for the purposes described.

3. The combination, in a fastening device, of a capped cocket comprising the cap a^3, the yielding sides a', integral with the said cap and bent in relation to the same to form the shoulder a^4, as specified, and to extend downwardly from said shoulder, with fastening-arms

for attaching the cap to the material, all substantially as and for the purposes described.

4. The combination of the ball member of the fastening device a', having the flange a^2, the plate a^4, having the holes a^5 a^6, and the cap-eyelet a^7, as specified, as and for the purposes set forth.

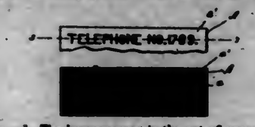
412,297. PARLOR-GAME. ALBERT B. RUTHERFORD, Chicago, Ill.; Emily Rutherford administratrix of said Albert B. Rutherford, deceased. Filed Jan. 20, 1888. Serial No. 297,973. (No model.)



Claim.—1. A game-board provided with four spaces upon the periphery at equal distances from each other, intervening parallelograms inclosing a square and divided into alternate checkered spaces, stations or spaces at or near the respective corners of said central square, a double row of spaces within said central square inclosing a goal or home, ways leading from said parallelograms, respectively, to the outer of said double row of spaces, and intervening ways leading directly to said goal, substantially as shown and described.

2. A game-board consisting of a square having square divisions at the corners, intervening checkered fields connecting with each other at the inner corners, ways leading therefrom to the outer of two spaced rows, a central field or goal, ways leading from said outer spaced row to said goal, and inclosed detached spaces between said outer row and said checkered fields, substantially as shown and described.

3. The combination, in a game-board, of the corner barracks b, intervening checkered skirmish-grounds a, ways h, spaces f, g, j, and f', guard-houses c, and a central goal, substantially as shown and described.



412,298. DRIVING-GEAR FOR CARS. EDWARD SAWOR, Philadelphia, Pa. Filed June 10, 1889. Serial No. 313,715. (No model.)

Claim.—1. The combination, in a power-impelled vehicle, of two or more axles, a motor-shaft, and mechanism whereby said shaft may be connected to or disconnected from either axle, the traction-wheels of one axle differing in diameter from those of the other axle or axles, whereby with a constant speed of motor-shaft different rates of propulsion of the vehicle may be maintained, substantially as specified.

2. The combination, in a power-impelled vehicle, of the axles, a single motor-shaft common to all of the axles, and mechanism whereby said shaft may be connected to or disconnected from either of said axles, the traction-wheels of one axle differing in diameter from those of the other axle or axles, whereby with a constant speed of motor-shaft different rates of propulsion of the vehicle may be maintained, substantially as specified.

412,299. MAKING STEREOTYPE-MOLDS. CHARLES SEARS, Chicago, Ill. Filed July 5, 1888. Serial No. 279,041. (No model.)

Claim.—1. The improvement in the art of preparing stereotype-molds, consisting in making each separate letter in the line successively and one at a time on the end fibers of a wood matrix-block, substantially as specified.

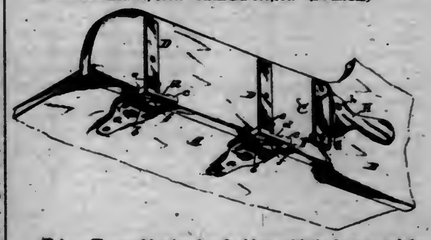
2. The improvement in the art of preparing stereotype-molds, consisting in subjecting the matrix, consisting of a block of dry wood having a smooth surface for receiving the impressions formed upon the ends of the fibers and sufficient body to resist the compacting-pressure, to the successive impact of the type-dies striking in close proximity to each other, substantially as specified.

412,300. HYDRO-METALLURGICAL METHOD OF EXTRACTING METALS. JASPER H. SELWYN, London, County of Middlesex, England. Filed Mar. 24, 1888. Serial No. 268,403. (No specimens.)

Claim.—1. The hydro-metallurgical process of separating sulphur and metals from their combinations, which consists in subjecting the pulverized materials to the action of chloride of sulphur for the purpose of separating the sulphur and forming the soluble chlorides of the metals and simultaneously or subsequently subjecting the charge to solvents of the metallic salts, as and for the purposes described.

2. In the hydro-metallurgical process of separating sulphur and metals from their combinations, which consists in subjecting the pulverized materials to the action of chloride of sulphur for the purpose of separating the sulphur and forming the soluble chlorides of the metals and simultaneously or subsequently subjecting the charge to solvents of the metallic salts, the final recovery of the chlorine and sulphurous acid gases evolved, as and for the purposes described.

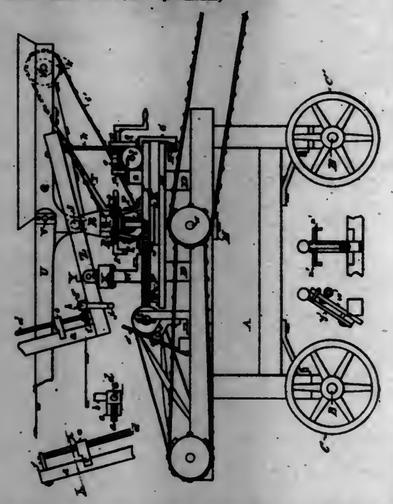
412,301. SHADE-HOLDER FOR CANDLES. PETER SLOAN, Marion Station, Pa. Filed Feb. 15, 1889. Serial No. 299,980. (No model.)



Claim.—1. In a shade-holder for candles, the combination of the band surrounding the candle, the standards attached to the band and carrying the shade-ring, and the horizontal spring-actuated fingers extending upward and bearing upon the upper end of the candle, and composed of a single piece of wire having shanks and coiled at the base of the shanks to force the fingers upward, the coils surrounding the standards, substantially as described.

2. In a shade-holder for candles, the combination, with the metallic band, and the standards carrying the shade-ring and provided with offsets c c above the band, of the spring-supporting fingers E, composed of a single piece of wire and provided with coils G, which fit on the standards and engage the said offsets c, substantially as and for the purpose specified.

3. A shade-holder provided with spring-actuated fingers composed of a single piece of wire and having the shanks, the coils at the lower end of the shanks to force the fingers inward, and the coils surrounding the standards, substantially as described.



412,302. FEED-CUTTER BOX. CLARENCE C. SHALLEY, Manitowoc, Wis. Filed Mar. 30, 1889. Serial No. 305,324. (No model.)

Claim.—The combination, in a feed-box, with the bottom and the

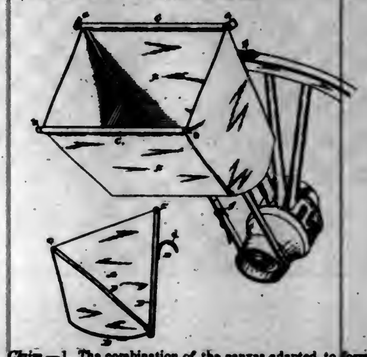
side, of the plate attached to the under side of the bottom and formed with an elongated slot and recessed cross-bar at its outer end, and the plate attached to the side, with one end provided with lugs *e* and *f* and working in said slot, substantially as shown and described.

412,803. **STRAW-STACKER.** JOSHUA M. SMITH, Springfield, assignor of one-half to Charles F. Wells, Moorefield, Ohio. Filed June 10, 1889. Serial No. 313,602. (No model.)

Claim.—1. In a straw-stacker, the combination, with the main frame, a circular track, one or more supporting-rollers, and a supporting-bracket having a roller engaging said track, of a master-wheel mounted upon said track carrying said bracket and supported by said rollers, motion-transmitting mechanism including a worm geared to said master-wheel, a carrier-frame, its hopper, and a carrier proper incumbent upon said wheel, pivoted levers, a winding-shaft and ropes connected thereto, an adjusting bar, screw-threaded rods, and a crank-shaft and gears therefor carried by said levers, the bar engaging the carrier-frame and the levers and winding devices supported by said wheel, a central shaft and power mechanism geared thereto, and striking and tripping devices for the swinging mechanism.

2. In a straw-stacker, the combination, with the main frame and a circular track, and rollers above and beneath said track engaging therewith, of a master-wheel supported by said track and rollers, the lower of said rollers being connected by a suitable bracket with the said master-wheel.

3. In a straw-stacker, the combination, with the main frame and a supporting-table, of a master-wheel supported above said table; a carrier and its elevating mechanism mounted upon said wheel, a shaft upon the main frame carrying a worm-gear that meshes with the said master-wheel and having pulleys and operating mechanism to rotate the pulleys in different directions, a clutch to engage the pulleys alternately with the shaft, tripping devices to actuate said clutch, and strikers carried by the master-wheel to engage the tripping-arm.



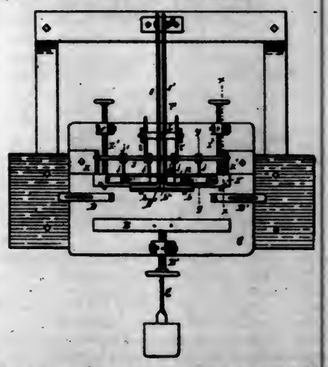
4. In a straw-stacker, the combination, with a master-wheel, of a hopper-frame incumbent upon the same, a carrier-frame pivoted to the hopper-frame, pivoted levers having bars at one end adjacent to the carrier-frame, a transverse crank-shaft having worms, screw-threaded shafts geared to said worms and connected by said bars, a transverse rod operated by said bars and in engagement with the carrier-frame, and a drum-shaft, its drums, a crank-shaft carried thereby, and ropes or chains connecting the levers with the drums of said shaft, the said elevating mechanism being also incumbent upon said master-wheel.

5. In a straw-stacker, the combination, with the main frame, a worm-shaft supported thereby and having two pulleys thereon, a clutch to engage them alternately with the shaft, and tripping devices connected with the clutch, of a master-wheel mounted upon said main frame and having worm-teeth meshing with said worm, a carrier, elevating mechanism therefor superincumbent upon said master-wheel, and strikers also carried by said master-wheel and adapted to engage with the tripping devices and to throw it in first one direction and then in the other.

6. In a straw-stacker, the combination, with the main frame, a shaft mounted therein, pulleys on the shaft, a clutch to engage the pulleys alternately with the shaft, and tripping mechanism including a pivoted weighted bar with projections to engage the tripping-arm, of a master-wheel geared to said shaft and carrying adjustable strikers.

7. In a straw-stacker, the combination, with a master-wheel, of carrier elevating and adjusting mechanism consisting of pivoted levers having perpendicular bars at one end, screw-threaded rods guided by said bars, a transverse bar carried by said rods and having jaws and engaging the perpendicular bars, and a crank-shaft geared to said screw-threaded rods, a drum-shaft, a crank-shaft geared thereto, and ropes or chains connecting said levers with the drums of said drum-shaft.

412,804. **FEED-BOX.** WALSO V. SNYDER, Canton, Ohio. Filed Jan. 14, 1889. Serial No. 296,261. (No model.)



Claim.—1. The combination of the canvas adapted to form the sides and ends of a feed-box, the bottom B, the bars C and C', located at the top of the box and provided with the extensions *b*, the links *a*, and the bars D and D', hinged together at their bottom or lower ends, substantially as and for the purpose set forth.

2. The herein-described feed-box, consisting of the canvas ends and sides, the hinged arms D and D', the bars C and C', located at the top of the box, and the supporting-hooks E, substantially as and for the purpose set forth.

3. The combination of the bars C and C', having the extensions *b*, the links *a*, the arms D and D', hinged together at their bottom ends, and the strap F, attached to the bottom B, and adapted to engage the hub of a vehicle, substantially as and for the purpose specified.

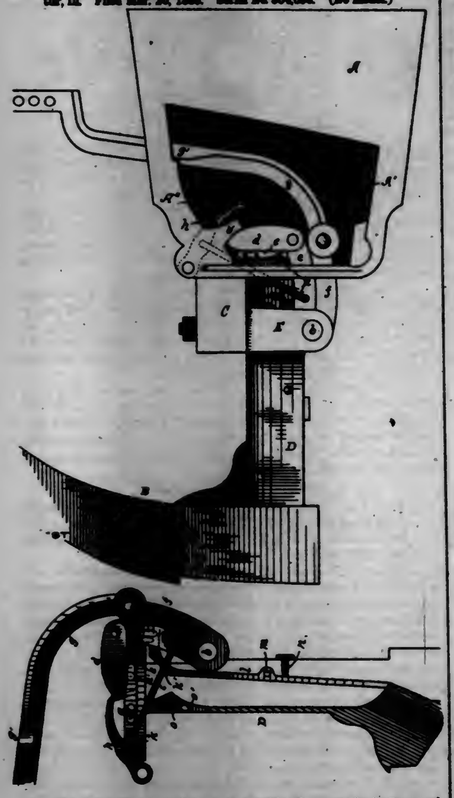
412,805. **BRUSH-NAILING MACHINE.** LOUIS STEGNER, Detroit, Mich., assignor of one-half to George C. Wetherbee, same place. Filed Mar. 2, 1889. Serial No. 301,772. (No model.)

Claim.—1. In a brush-nailing machine, the combination, with a supporting-frame, of the movable arm F, having a nail-bar engaged therewith, and a driving-bar, substantially as set forth.

2. In a brush-nailing machine, the combination, with a supporting bed or frame, of a movable arm F, having a nail-bar H engaged therewith, a driving-bar, and operating-lever, said bar mounted in brackets K K', said nail-bar and brackets constructed with inclined recesses and slots, respectively, substantially as set forth.

3. In a brush-nailing machine, the combination, with a supporting bed or frame, of a movable arm F, having a nail-bar engaged therewith, a driving-bar, and means for reciprocating said bar, said nail-bar provided with a spring H^3, substantially as set forth.

4. In a brush-nailing machine, the combination of the supporting bed or frame, the movable arm F, provided with a nail-bar H, removably engaged therewith, an adjustable nail-bar I, and a reciprocatory driving-bar, substantially as described.



5. In a brush-nailing machine, the combination of the supporting bed or frame, the movable arm F, provided with a nail-bar H, constructed with inclined orifices *h*, a nail-bar I, constructed with horizontal orifices *i*, and a reciprocatory driving-bar arranged to operate with either of said nail-bars, substantially as set forth.

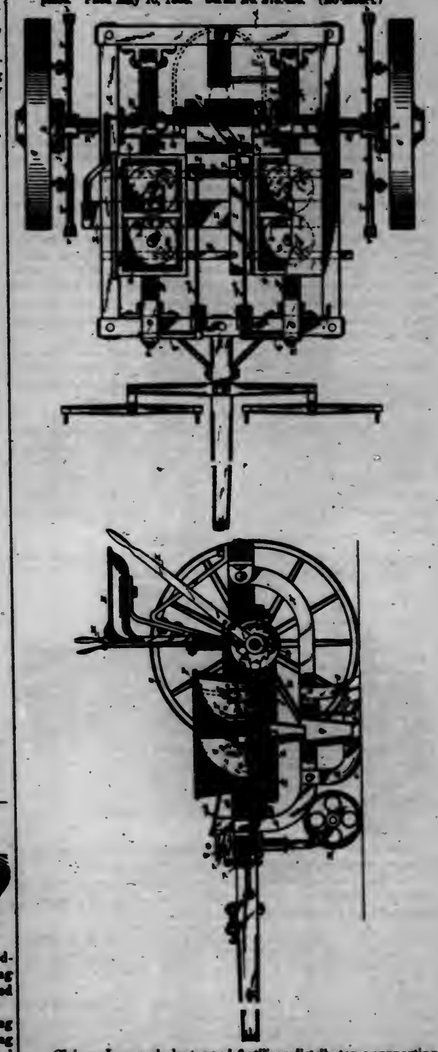
6. In a brush-nailing machine, a driving-bar adjustable relatively to a horizontal plane, substantially as set forth.

7. In a brush-nailing machine, an adjustable nail-bar, in combination with a driving-bar adjustable relatively to a horizontal plane, substantially as set forth.

8. In a brush-nailing machine, the combination, with a supporting-bed, of a driving-bar provided with driving-fingers projecting therefrom and an operating-lever, said bar supported independently of said lever, substantially as set forth.

412,806. **CORN-PLANTER.** FELIX R. TAFT and JOHN GREEN, Decatur, Ill. Filed Mar. 20, 1889. Serial No. 304,096. (No model.)

Claim.—1. In corn-planters, in combination, a rock-shaft, a seed-disk having peripheral teeth, an arm fixed on the shaft and carrying a pawl adapted to the teeth of the disk, and a secondary arm mounted loosely on the shaft behind the pawl-carrying arm, as set forth.



2. In corn-planters, in combination, a rock-shaft, a disk having seed-cells and peripheral teeth, an arm fixed on the shaft and carrying a pawl adapted to the teeth of the disk, a secondary arm mounted loosely on the shaft behind the pawl-carrying arm, a finger-bar adapted to the cells of the seed-disk, and a rod connecting the pawl-carrying arm with the finger-bar, as set forth.

3. In corn-planters, in combination, a seed-disk having peripheral teeth, a rock-shaft, an arm fixed on the shaft and carrying a pawl adapted to the teeth of the disk, a second drop-valve connected at its upper end with the pawl-carrying arm, and a secondary arm mounted loosely on the shaft behind the pawl-carrying arm, as set forth.

4. In corn-planters, in combination, a seed-disk, a disk-actuating arm fixed on a shaft, an arm loosely mounted on the shaft in contact with the fixed arm, and a bar to connect the loose arm with check-row mechanism, as set forth.

5. In corn-planters having a first and second drop, the intermediate corn-retarder, comprising the inclined upper end of the second drop-bar and the opposed yielding projection, as set forth.

412,807. **SEED-PLANTER AND FERTILIZER-DISTRIBUTER.** JOHN B. TAYLOR, Bartle, Ind., assignor of one-half to Dennis Gray, same place. Filed May 10, 1888. Serial No. 272,426. (No model.)

Claim.—In a seed-planter and fertilizer-distributer, a supporting-frame, drive-wheels supporting said frame, and two sets of seed and

fertilizer compartments supported on each side of said frame, the planting mechanism of which is actuated by a cam on the axle of said drive-wheels, in combination with two beams N N, each pivoted at one end to the rear of said frame, passing beneath one set of said compartments and above and out of contact with the ground, and adjustably and yieldingly supported at its front end at the front of said frame, independent treadles P P, for controlling the adjustment of each of said beams, a guiding-funnel Q, carried by each of said beams beneath the discharge-passage leading from the set of compartments above it for conducting the seed to the ground, a furrow-opener R, carried by each beam in front of said funnel, and a hill-coverer S, carried by each beam in the rear of said funnel, substantially as set forth.

412,808. CASTER. JOHN R. TERRY, Orion, Mich. Filed Aug. 2, 1888. Serial No. 281,777. (No model.)

Claim.—1. A ball-caster composed of the segmental sections E E' and provided with one or more grooves *d*, substantially as and for the purposes described.

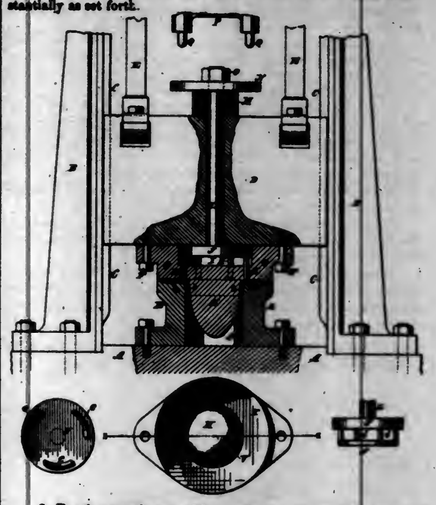
2. A caster consisting of two semi-spherical segments united rigidly by an axis, a plate with a thickened central portion at right angles to the said axis, said axis journaled through the plate, and large ends formed integral with the extremities of the plate beyond the peripheries of the segments, and in connection with said enlarged ends a forked support, said ends and forked supports adapted for engagement with each other by bending the ends of the fork toward the ends of the plate, thereby causing large spuds on one part to enter large spud-orifices in the other part, substantially as described, said plate being of less breadth than the diameter of the segments.

3. In a ball-caster, the combination, with the segments E E', each of said segments struck up from a single piece of metal, of the strengthening-pieces *e*, also struck up from pieces of metal and united with the inner faces of the segments E E', substantially as described.

412,809. PROCESS OF MAKING PASTE. GUSTAV TÜRK, Leuwarden, Netherlands. Filed Jan. 2, 1889. Serial No. 295,338. (Specimens.)

Claim.—The method of extracting adhesive paste from straw-boilings by filtering the boilings and evaporating the superfluous water, and then purifying the crude paste by mixing it with blood or albumen and afterward with a solution of sulphide of calcium, substantially as described.

412,810. CATTLE-GUARD. JOSEPH VAIL, Garden Grove, Iowa. Filed Mar. 21, 1888. Serial No. 304,217. (No model.)



Claim.—1. A cattle-guard for the purpose set forth, consisting of pipes set upright in the road-bed, substantially as described.

2. The combination, substantially as hereinbefore set forth, of pipes set upright in the ground between the cross-ties, and projections arranged upon the cross-ties, for the purpose described.

412,811. MACHINE FOR MANUFACTURING WROUGHT-METAL FLANGES FOR PIPE-COUPLINGS. GEORGE VAN WAGENEN and JOHN GRAVES, New York, N. Y. Filed July 27, 1889. Serial No. 318,616. (No model.)

Claim.—1. For the manufacture of flanges from sheet metal, the male and female dies hereinbefore described, the male dies having the spreader, one pair of said dies being adapted to form the hub portion of the flanges and the other pair to upset said hub preparatory to the same being threaded, substantially as and for the purposes set forth.

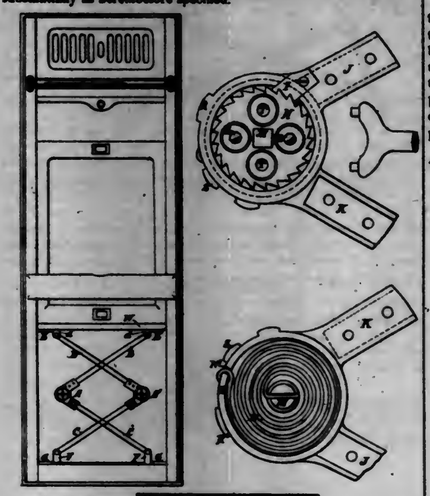
2. For the manufacture of flanges from sheet metal, the male and female dies adapted to form the hub on the centrally-apertured blank, the male die having the spreader, combined with the ejector for stripping the flange from the spreader after the hub has been formed, substantially as set forth.

3. For the manufacture of flanges from sheet metal, the male and female dies for forming the hub of the flange and the male and female dies for upsetting said hub, combined with ejectors for stripping the flanges from said male dies, substantially as set forth.

4. The male and female dies for forming the hub, the former having the spreader and the latter the central opening, combined with the male and female dies for upsetting the hub, the former having the annular groove and spreader and the latter the central opening, substantially as and for the purposes set forth.

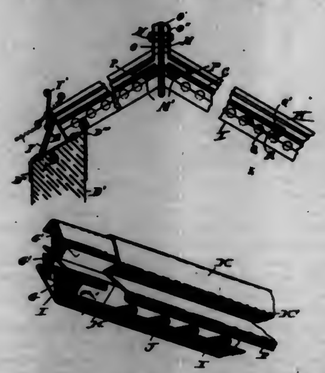
5. The male and female dies for forming the hub of the flange and upsetting said hub, the male dies being secured to a drop-carrier arranged between guides, combined with ejectors for stripping the flanges from the male dies, said ejectors being connected with the drop-carrier and having a more limited movement than the same, substantially as and for the purposes set forth.

6. The male die having the spreader and secured to the drop-carrier and the female die having the central opening, combined with the ejector secured to the spindle passing upward through said carrier, the cushion and disk on the upper end of said spindle, and the frame for arresting the ejector while the carrier continues its upward movement, substantially as set forth.



412,812. SASH-HOLDER. HARRY S. WADSWORTH, Ashford, County of Kent, and ROBERT HYDE, Sheffield, County of York, England. Filed May 31, 1889. Serial No. 311,985. (No model.) Patented in England Oct. 1, 1888, No. 14,072.

Claim.—1. In combination with a vertically-sliding window, window sash or shutter, a pair of levers beneath the same, a pivotal coupling uniting said levers in compass shape, a lifting-spring carried by the levers at said coupling and reacting against the respective levers, and pivotal attaching devices at the other extremities of the respective levers, substantially as hereinbefore specified.



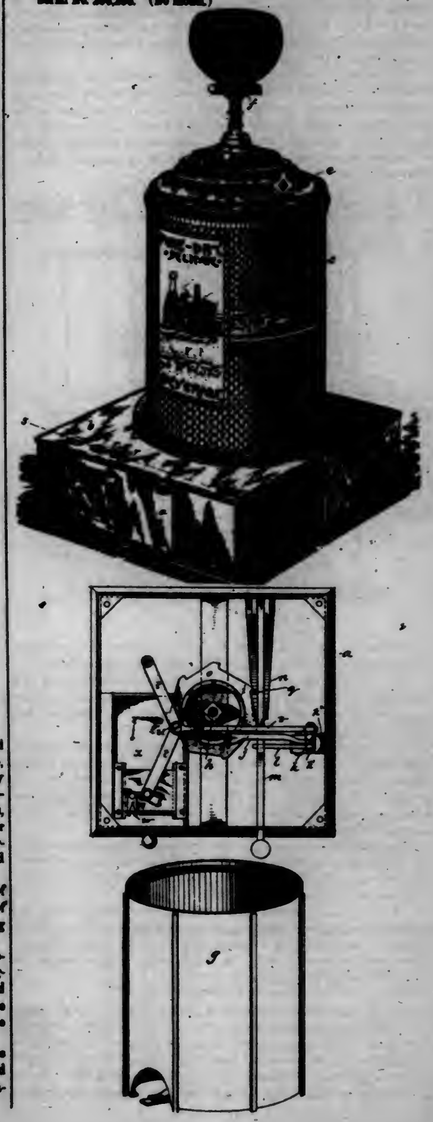
2. In combination with a vertically-sliding window, or the like, two pairs of levers beneath the same, pivotal couplings uniting the levers of each pair in compass shape, the respective pairs being reversed relatively to each other, lifting-springs carried by the levers at said couplings and reacting against the respective levers, and pivotal attaching devices at the other extremities of the several levers, substantially as hereinbefore specified.

3. In combination with a vertically-sliding window and a dust-excluder bar beneath the same, two pairs of levers beneath said bar, pivotal couplings uniting the levers of each pair in compass shape, lifting-springs carried by the levers at said couplings and reacting against the respective levers, and pivotal attaching devices at the other extremities of the several levers, the upper attaching devices carried by the said bar, substantially as hereinbefore specified.

4. The combination, with the levers and lifting-springs, of the within-described spring-boxes forming pivotal couplings, which unite the levers in compass shape and within which said springs are coiled, each box having a center pin to which one end of the spring is attached, an adjusting-wheel fast on said pin and adapted to be turned by a key, and a catch which engages with said wheel to fasten it within the box, substantially as hereinbefore specified.

412,813. SKYLIGHT. JOHN R. WEIR and BELL BERNDT, Toledo, Ohio. Filed Jan. 7, 1889. Serial No. 295,607. (No model.)

Claim.—1. In a skylight, the combination, with a ridge formed of a central portion and longitudinal edges at an obtuse angle thereto, of a ridge-plate inclosing the same and having its sides bent outwardly and downwardly to correspond with the longitudinal ledges, said ridge-plate being secured to the ridge by suitable bolts and spacing-blocks, and having its sides apertured and the rafters slotted at their upper ends, adapted to engage the longitudinal ledges and enter the apertures formed in the sides of the ridge-plate, substantially as shown and described.



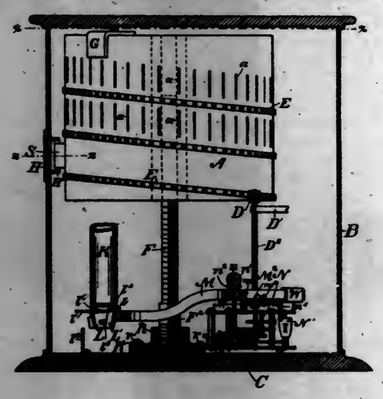
2. In a skylight, the combination, with a wall-covering plate, of a perforated flue secured to the same, dampers pivoted to the side of the flue to open or close the perforations, and metallic rafters resting upon the covering and flue, substantially as shown and described.

3. In a skylight, a wall-covering plate provided with an upwardly-turned angle portion, a perforated flue secured to the covering-plate, recesses formed in the angled plate, and coincident rests secured to the flue, in combination with rafters adapted to rest within the recesses and rests and abut against the flue, as and for the purpose set forth.

4. In a skylight, a rafter formed of the central piece G, the plates G' G', secured to each side of the same, the central portions of said plates being bent to form the shoulders H and provided with perforations, the upper portions being bent at acute angles to the central piece, the cap-piece G'' upon the upper ends, and gutter I, secured to the lower ends of the plates, all arranged and adapted to operate substantially as shown and described.

5. In a skylight, a rafter formed of a central piece, plates secured to each side of the same, the central portion of said plates being bent to form shoulders and provided with perforations, the upper portions being bent at acute angles to the central piece, the gutter secured to the lower ends of the plates, and the spring cap-plate formed with the inverted-V-shaped cops bent to clasp the upper portions of the plate, the lower ends of said cap-plate being bent outwardly and then downwardly to bear upon the glass held upon the shoulders of the plates, substantially as shown and described.

412,814. COMBINED ADVERTISING DEVICE AND CIGAR-TIP CUTTER. FREDERICK R. WHITE, Boston, Mass. Filed Jan. 14, 1889. Serial No. 296,598. (No model.)



Claim.—1. A combined advertising device and cigar-tip cutter consisting of an outer stationary cylinder *c*, provided with an opening, at or through which an advertisement may be displayed at the opening in the outer cylinder, a shaft connected with said inner cylinder, a ratchet-wheel on said shaft, a pawl engaging said ratchet-wheel, a lever and connections to operate said pawl, a sliding blade or knife to cut off the cigar-tip, and connections between said knife or blade and lever, whereby when the latter is operated the former will also be moved, substantially as set forth.

2. A combined advertising device and cigar-tip cutter consisting of a bed-plate and casing or support therefor, said bed-plate being provided with openings through which cigar-tips may be passed, a stationary cylinder provided with an opening supported on the bed-plate, a rotary cylinder arranged within the stationary cylinder, a shaft connected with said rotary cylinder, a ratchet-wheel on said shaft, a pawl engaging said ratchet-wheel, a lever and connections to operate said pawl, a blade arranged to slide beneath the bed-plate and on a line across the holes in said bed-plate, and connections between said knife and blade, whereby when the latter is operated the former will also be moved, as set forth.

3. In a cigar-tip cutter, the combination, with the cigar-tip-cutting mechanism, of the outer stationary cylinder provided with an opening through which advertisements may be displayed and an inner rotary cylinder containing a series of advertisements to be successively displayed at the opening in the outer cylinder, said inner cylinder being connected with the said cutting mechanism to be operated thereby, substantially as hereinbefore set forth.

412,315. COIN-OPERATED APPARATUS. HORACE M. WILSON, Cambridge, Mass. Filed Apr. 3, 1889. Serial No. 305,895. (No model.)

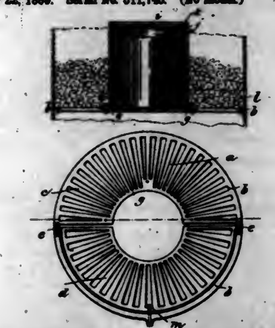
Claim.—1. In a coin-operated apparatus, a drum having slits spirally arranged around its periphery, substantially as described.

2. In a coin-operated apparatus, a revoluble delivery-drum provided with a supporting-screw, in combination with a protecting-casing provided with a mouth-piece, all arranged and operating substantially as and for the purposes described.

3. In a coin-operated apparatus, a counterbalanced lever provided with a coin-bucket made in two parts L L′, pivotally secured together, one of which is provided with a pin *l*′, in combination with a stop *P* and a revoluble disk M³, provided with a cam-shaped protuberance engaging with a pin *m*′ on said lever, all arranged and operating substantially as and for the purposes described.

4. In a coin-operated apparatus, a revoluble drum having a shutter, in combination with a coin-tube provided with a shutter-receiving opening *k*, whereby the said tube is automatically closed, substantially as and for the purposes described.

5. In a coin-operated apparatus, a delivery-drum having slits spirally arranged around its periphery, in combination with a protecting-casing provided with a mouth-piece, and mechanism whereby, when a coin is inserted, the drum is caused to revolve spirally, substantially as and for the purposes described.



412,316. FOLDING TABLE. NATHANIEL WEBB and ALDEN C. PETERSON, Arcadia, La. Filed June 26, 1889. Serial No. 315,304. (No model.)

Claim.—1. The combination, with the table-top, of the legs E, pivotally secured to the under side of the same, the legs I, adapted to bear against and disconnected from the under side of the table-top, the crossed braces between the said legs provided with longitudinal slots, and the securing-bolt mounted in the slots of the braces, as set forth.

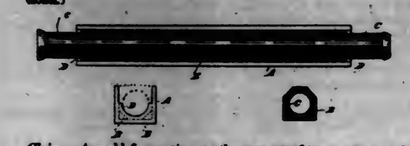
2. The combination, with the table-top, of the legs E, pivoted to the under surface thereof, and the upper and lower leg-connecting rungs F, the legs I, adapted to bear against and disconnected from the under side of said top, and connected by the upper and lower rungs H, of the diagonal braces G, having their upper ends pivoted to the upper rungs F and H, and their lower ends to the lower rungs F and H, and provided with longitudinal slots J, and notches K between their upper pivot and slots and adapted when the legs are folded upon the table to receive the two lower rungs, and the set-bolt L mounted in the slots, substantially as specified.

412,317. GRATE. ELIJAH B. WOOLSTON, Cropwell, N. J. Filed May 22, 1889. Serial No. 311,740. (No model.)

Claim.—1. The combination, with the fire-pot of a stove or similar device, of a grate consisting in a lower portion composed of a rigid and drop section having a central opening common to both sections, a vertical cylinder having closed vertical walls, and an open bottom registering with said central opening, and a removable grate in the top of the cylinder, all arranged and adapted to operate in the manner and for the purpose substantially as described.

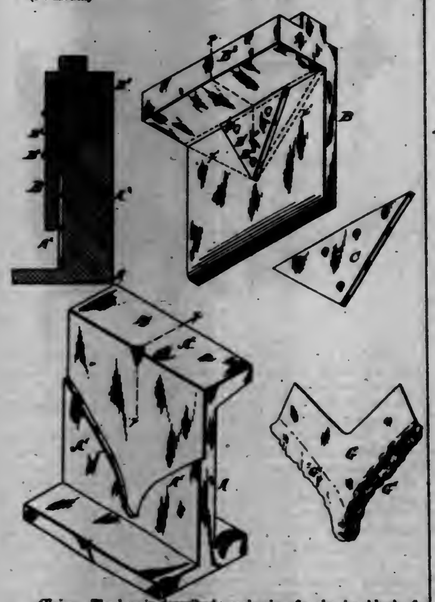
2. The combination, with the fire-pot of a stove or similar device, of a grate composed of a rigid and drop section having a central opening common to both, a vertical cylinder resting upon and secured to the rigid section and registering with said central opening, and a removable grate seated in the top of the cylinder, all arranged and adapted to operate as described.

3. In a grate for stoves and similar devices, a lower portion composed of a rigid and drop section having a central opening common to both, a vertical cylinder resting upon and secured to the rigid section and surrounding said central opening, said cylinder having closed vertical walls, in combination with a removable grate located in the upper part of the cylinder, in the manner and for the purpose substantially as described.



412,318. MOP. ISRAEL B. YOUNKCOB, Mitchell, Dak. Filed Apr. 3, 1889. Serial No. 305,980. (No model.)

Claim.—1. In a mop, the combination of the handle, the stationary member secured thereto and provided at its end with hooks adapted to engage the scrubbing-cloth, and the sliding member moving on the handle and provided at its end with a loop to receive the scrubbing-cloth, and having an eye G near said loop encircling the stationary member, substantially as set forth.

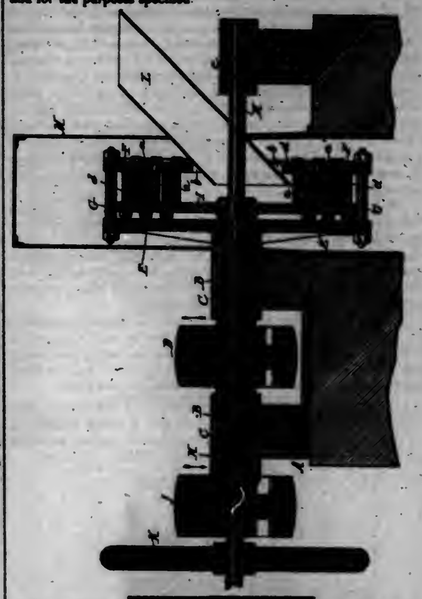


2. In a mop, the combination of the handle, the stationary member secured thereto and composed of twisted wire having its ends bent laterally and doubled on themselves to form hooks, and the sliding member moving on the handle and composed of twisted wire, the outer end of said sliding member being bent to form a loop adapted to engage the scrubbing-cloth, and an eye encircling the stationary member, as set forth.

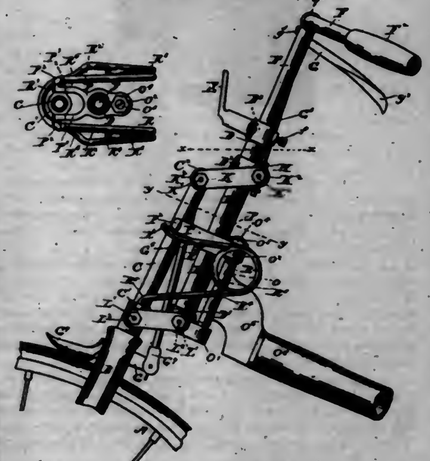
412,319. MOLD FOR CEMENT WROUGHT-IRON PIPES. LAMBERT B. BATTIN, Elizabeth, N. J. Filed Oct. 14, 1888. Serial No. 288,234. (No model.)

Claim.—A mold for casting on the cement of "cement wrought-iron pipe," which consists of a box square in cross-section, the strips B B filling the lower corners of said box, and end pieces in said box having circular bearings divided horizontally through the center for support of the iron pipe, and the sides of said box being sufficiently high to extend a distance above said iron pipe when the latter is in its place, as set forth.

412,320. MECHANISM FOR MAKING SHARES FOR LISTING-PLOWS. GEORGE S. BIXBY, Rockford, Ill., assignor to the L. A. Weyburn Company, same place. Filed Nov. 10, 1887. Serial No. 254,696. (No model.)



Claim.—The herein-described mechanism for shaping blanks for shares of listing-plows, consisting of a die-block A, provided with the die-section A′, the die-block B, and the interchangeable upsetting and spreading die sections B′ and C, all constructed and to be operated substantially as described.



412,321. CLAY-REDUCER. WALFRID BERGMAN, Los Angeles, Cal., assignor to Charles H. Frost, same place. Filed Apr. 5, 1889. Serial No. 306,111. (No model.)

Claim.—1. In a reducer and disintegrator, the combination of a rotating disk E on a shaft and a disk F, connected with and supported by the disk E and carrying rows of pins *a*, and the disk F, having a central feed-opening *b*, substantially as and for the purpose specified.

2. In a reducer and disintegrator, the combination of a disk E, mounted on a hollow shaft B, a disk F, supported by the disk E and provided with pins *a* and with a feed-opening *b*, a disk I, provided with pins *d*, and a shaft H, which carries the disk I, substantially as and for the purposes specified.

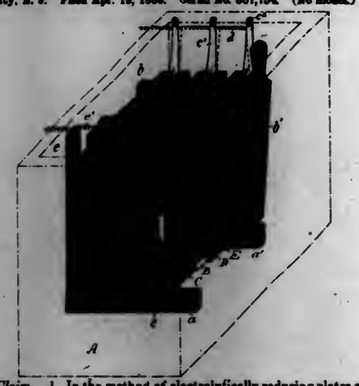
412,322. VELOCIPEDE. JAMES S. COPELAND, Hartford, Conn., assignor to the Pope Manufacturing Company, Portland, Me. Filed May 21, 1888. Serial No. 274,000. (No model.)

Claim.—1. In a velocipede-spring-frame mechanism having a fore pillar and an after pillar and connecting-links and a limiting-spring, the upper pair of links, as K K, longer than the lower pair, as L L, and constructed and combined essentially as set forth.

2. In a velocipede-spring-frame mechanism having a fore pillar and an after pillar and connecting-links and a limiting-spring, the tubular after pillar, as D, the encircling transverse lug, as D′, a lower center lug, as O′, and the intermediate encircling leg P, and the upper center lug, as O², constructed and combined substantially as set forth.

3. In a velocipede-spring-frame mechanism having a fore pillar and an after pillar and connecting-links and a limiting-spring, the up-

per center lug O^2, constructed and combined between the transverse lugs and the upper and lower links, essentially as set forth.



4. In a velocipede-spring-frame mechanism having a fore pillar and an after pillar and connecting-links, a spring, as R, with its ends R^1 R^2 secured to one of the pillars, and its middle part bent to form a loop, as R', above the same, and with the arms, as R^3 R^3, operating against stops, as P^2 P^2, connected to the other pillar, and with the coils R^2 R^2 and arms R^4 R^4, substantially as shown and described.

5. In a velocipede-spring-frame mechanism having a brake mechanism with the handle-lever at the handle-bar and connected with one portion of the frame and having the brake-spoon lever connected with another portion of the frame, a connecting rod or rods, as G^2 G^2, and a rocking link, as G^4, pivoted at or near the center of motion between the two parts of the frame, and constructed and combined to operate essentially as set forth.

6. In a velocipede-spring-frame mechanism having a fore pillar and an after pillar and connecting-links and a limiting-spring, and having a brake mechanism with the handle-lever connected with the handle-bar and with one of the pillars, and having a brake-spoon lever connected with the other pillar, connecting-rods, as G^2 and G^2, and a rocking link, as G^4, pivoted at a point between the pillars, and constructed and combined essentially as set forth.

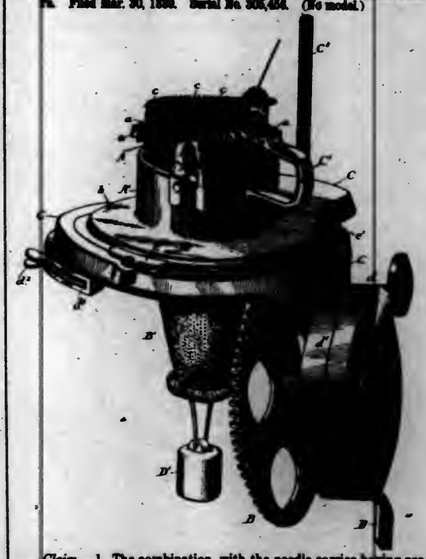
7. The combination of the handle-bar and supporting mechanism and fork of a velocipede, a brake-handle lever, as G, fulcrumed in a bracket on the under side of the handle-bar, jointed connecting-rods, as G^2 G^2, rocking link, as G^4, and brake spoon and lever, as G^2 G^2, constructed and combined to operate essentially as set forth.

412,823. METHOD OF ELECTROLYTICALLY REDUCING PLATES FOR SECONDARY BATTERIES. STANLEY G. C. CURRIE, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester City, N. J. Filed Apr. 19, 1889. Serial No. 307,754. (No model.)

Claim.—1. In the method of electrolytically reducing plates composed of one or more salts of a metal or metals to a metallic state, mounting the plates to be reduced in contact with perforated plates, and which latter plates are insulated from solid metal plates, substantially as and for the purposes set forth.

2. In the method of electrolytically reducing plates composed of a salt or salts of a metal or metals to a metallic state, mounting in a fluid in contact with the faces or sides of the plates to be reduced perforated metal plates, insulating-plates interposed between said perforated plates and solid metal plates, and causing the reduction of said plates composed of a metallic salt or salts, substantially as and for the purposes set forth.

3. The method of reducing crystallized plates to a metallic state, which consists in immersing in a fluid a system of perforated plates in contact with the crystallized plates forming cathodes and insulated from a system of solid metal plates forming the anodes, and then connecting said cathodes and anodes with a generator, substantially as and for the purposes set forth.



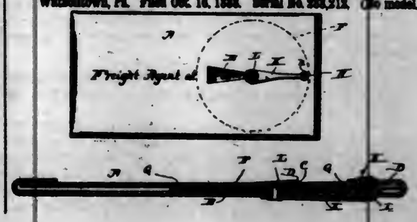
4. The method of electrolytically reducing crystallized plates to a metallic state, which consists in immersing in a fluid a system of perforated metal plates in contact with the crystallized plates and a system of solid metal plates insulated from said perforated opposing plates of similar material, and then connecting the cathodes and anodes with a generator, substantially as and for the purposes set forth.

5. The method of electrolytically reducing crystallized plates to a metallic state, which consists in immersing in a fluid a system of crystallized plates having perforated metal plates in contact with the faces thereof and perforated insulating-plates interposed between said perforated metal plates and solid metal plates, and then causing the reduction of said crystallized plates, substantially as and for the purposes set forth.

6. The method of electrolytically reducing crystallized plates to a metallic state, which consists in immersing in a fluid a system of crystallized plates in contact with perforated metal plates or devices and with perforated insulating-plates or devices interposed between said perforated metal plates and a system of solid metal plates of the same or other material, and then causing said crystallized plates to be reduced to a metallic state, substantially as and for the purposes set forth.

7. The method of electrolytically reducing plates composed of one or more salts of a metal or metals to a metallic state, which consists in immersing in a fluid the salt plates in contact with perforated metal plates, which latter are insulated from solid metal plates, and then causing reduction to a metallic state of said salt plates and elimination of extraneous matter therefrom, substantially as and for the purposes set forth.

412,824. KNITTING-MACHINE. GEORGE B. ELLIS, Philadelphia, Pa. Filed Mar. 30, 1889. Serial No. 305,464. (No model.)

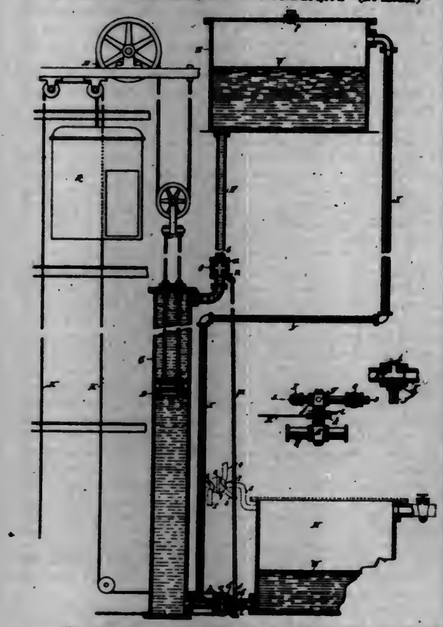


Claim.—1. The combination, with the needle-carrier having vertical slots formed therein for the reception of sinkers, and a series of sinkers having portions fitting in said slots, of the cam-carrier and a cam carried thereby for moving said sinkers vertically, substantially as hereinbefore set forth and described.

2. The combination, with the needle-carrier formed with vertical slots for the reception of sinkers, as described, a series of sinkers having portions fitting in said slots, and the cam-carrier, of the cam-plate A^3 and means for clamping said plate upon the cam-carrier, substantially as hereinbefore set forth and described.

3. The combination, with the needle-carrier having vertical slots formed therein for the reception of sinkers, and a series of sinkers having portions fitting in said slots, of the cam A^3, coming in contact with the horizontal portion of the sinkers and adapted to raise them vertically, substantially as hereinbefore set forth and described.

412,825. ENVELOPE. LOU. H. FETHERS and FULLER S. DEER, Watsontown, Pa. Filed Oct. 16, 1888. Serial No. 288,212. (No model.)



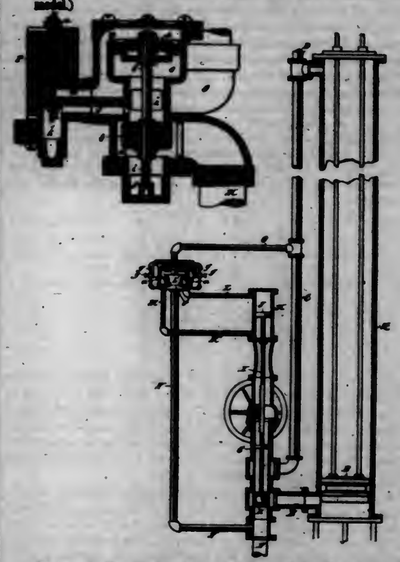
Claim.—1. The combination, with an envelope provided with an opening in its side, of the address-disk arranged within the envelope and having a portion of its surface opposite, so as to be exposed through the said opening, substantially as specified.

2. The combination, with an envelope provided with an opening E in its side, of the rotary disk pivoted to the inner side of the envelope and having its surface divided into sections adapted to be successively exposed through the said opening, substantially as described.

3. The combination of the envelope provided with an opening E, the disk pivoted within the envelope and provided with a series of perforations, and the clip, hook, or fastening engaging one of the said perforations and a corresponding perforation in the side of the envelope, substantially as specified.

4. The combination, with the envelope provided in its face with the opening E and with a perforation H near its open end, the flap B, covering said end and provided with the opening I, registering with the opening H, the disk F, pivoted, as at L, and provided with a series of perforations G, adapted to align with perforations H and I, and the pliable clip-hook K, pivoted to the envelope and extending at its free end through the registering perforations, substantially as specified.

412,826. PNEUMATIC ELEVATOR. WILLIAM P. GURNEE, New York, N. Y. Filed Dec. 31, 1888. Serial No. 294,994. (No model.)



Claim.—1. The combination, with the cylinder and piston of a pneumatic elevator, of a closed tank containing a body of liquid interposed between the pressure side of the piston and the compressed air for operating the same and filling the cylinder, a tank communicating with the cylinder upon the opposite side of the piston and containing a body of liquid sufficient to fill the cylinder upon that side of the piston, valves *a d*, for controlling the flow of the two bodies of liquid to and from the cylinder, and a hand-rope for operating said valves from the car, substantially as described.

2. The combination, with the cylinder and piston of a pneumatic elevator, of a closed tank containing a body of liquid interposed between the pressure side of the piston and the compressed air for operating the same and filling the cylinder, a tank communicating with the cylinder upon the opposite side of the piston and containing a body of liquid sufficient to fill the cylinder upon that side of the piston, valves *a d*, for controlling the flow of the two bodies of liquid to and from the cylinder, a valve *g*, for controlling the supply and exhaust of compressed air to and from said closed tank, and a hand-rope for operating said valves from the car, substantially as described.

3. The combination, in a pneumatic elevator, of a cylinder and piston, closed tanks communicating with the cylinder upon the opposite sides of the piston and containing bodies of liquid sufficient to fill the cylinder upon said respective sides of the piston, pipes and valve mechanism for admitting air under pressure to one of said tanks to drive the piston in one direction and for allowing said air to circulate from said tank to the other tank as the piston moves in the other direction and for allowing the air to escape from said last tank, and connections for operating said valve mechanism from the car, substantially as described.

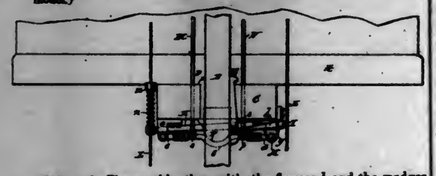
412,827. VALVE MECHANISM FOR ELEVATORS. WILLIAM P. GURNEE, New York, N. Y. Filed Dec. 31, 1888. Serial No. 294,995. (No model.)

Claim.—1. The combination, with the cylinder K and piston J, of valves *b*, controlling the supply and discharge of the fluid to and from the cylinder upon the opposite sides of the piston, the pistons *d*, connected to said valves *b*, and constantly subjected upon one side to the fluid-pressure to close the valves, ducts leading from the supply side of said valves to the opposite side of said pistons, valves *l*, controlling said ducts, so that the pressure can be equalized upon the opposite sides of said pistons to allow the valves *b* to open the supply and close the discharge to the respective sides of the piston J, and discharge-passages for allowing the fluid to escape to reduce the pressure upon one side of the pistons *d*, substantially as described.

2. The combination, with the cylinder K and piston J, of valves *b*, controlling the supply and discharge of the fluid to and from the cylinder upon the opposite sides of the piston, the pistons *d*, connected to said valves *b*, and constantly subjected upon one side to the fluid-pressure to close the valves, ducts leading from the supply side of said valves to the opposite side of said pistons, and valves *l*, controlling said ducts, so that the pressure can be equalized upon the opposite sides of said pistons to allow the valves *b* to open the supply and close the discharge to the respective sides of the piston J and permanently-open discharge-passages *g* for allowing the fluid to escape from the discharge side of said valves *l*, substantially as described.

3. The combination, with the cylinder K and piston J, of valves *b*, controlling the supply and discharge of the fluid to and from the cylinder upon the opposite sides of the piston, the pistons *d*, connected to said valves *b*, valves *l*, controlling the supply of the fluid to one side of said pistons, permanently-open discharge-passages *g* for the discharge of the fluid so supplied, and adjustable valves *y* for regulating the rate of discharge, substantially as described.

412,828. AUTOMATIC STOP MECHANISM FOR ELEVATORS. WILLIAM P. GURNEE, New York, N. Y. Filed Dec. 31, 1888. Serial No. 294,997. (No model.)



Claim.—1. The combination, with an elevator-car, its hoisting-cable, and the sheave over which said cable passes at the top of the shaft, of a threaded shaft D, provided with abutments and fixed to said sheave, a sheave E and barrel H, turning freely upon said shaft, a traveling nut *i*, working upon said threaded shaft between the abutments and connected to said barrel to lock it and the sheave E to the

shaft when it engages with either abutment, and a stopping-rope F, passing around said sheave E, substantially as described.

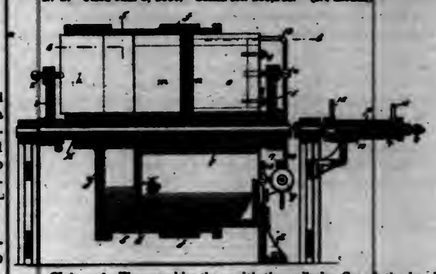
2. The combination, with an elevator-car, its hoisting-cable, and the sheave over which said cable passes at the top of the shaft, of a threaded shaft D, fixed to said sheave, a sheave E and barrel H, turning freely upon said shaft, a traveling nut *i*, working upon said threaded shaft between adjustable abutments and connected to said barrel to lock it and the sheave E to the shaft when it engages with either abutment, and a stopping-rope F, passing around said sheave E, substantially as described.

412,329. SAFETY DEVICE FOR ELEVATORS. William P. Gibson, New York, N. Y. Filed Dec. 31, 1888. Serial No. 294,966. (No model.)

Claim.—1. The combination, with the fingers A and the wedges for stopping the car, of the rods H, having the cams *g* formed to operate said fingers when the rods H are rocked in either direction, the arms G, fulcrumed upon bearings beneath the car and connected upon opposite sides of said bearings to the respective hoisting-cables and pivotally connected at one end to arms *d*, extending from said rods H, substantially as described.

2. The combination, with the rod I, carrying fingers A, and the wedges for stopping the car, of the rods H, having the cams *g* formed to operate said fingers when the rods H are rocked in either direction, the arms G, fulcrumed upon bearings beneath the car and connected upon opposite sides of said bearings to the respective hoisting-cables and pivotally connected at one end to arms *d*, extending from said rods H, and the arm K, extending from the rod I and connected to the governor-cable L, substantially as described.

3. The combination, with the elevator-car and its guides B, of wedges E, the fingers A, entering openings in the wedges, so as to move said wedges in either direction, the rods H, having the cams *g* formed to operate said fingers when the rods are rocked in either direction, the arms G, fulcrumed against bearings beneath the car and connected upon opposite sides of said bearings to the respective hoisting-cables, and pivotally connected at one end to arms *d*, extending from said rods H, substantially as described.



412,330. VALVE-OPERATING DEVICE FOR ELEVATORS. William P. Gibson, New York, N. Y. Filed Dec. 31, 1888. Serial No. 294,969. (No model.)

Claim.—1. The combination, with a rope B, connected to operate the stopping and starting mechanism of the elevator, of gripping-pulleys arranged to grip the rope with a moderate pressure and a movable deflecting-pulley for deflecting the rope upon one side of said gripping-pulleys, substantially as described.

2. The combination, with a rope moving freely over a pulley at the top of the elevator-shaft and having its ends connected to operate the stopping and starting mechanism to cause the car to ascend and descend as the rope is moved in opposite directions, of gripping-pulleys arranged to grip the rope with a moderate pressure and movable deflecting-pulleys located above and below said gripping-pulleys and arranged to deflect the rope upon opposite sides of said gripping-pulleys, substantially as described.

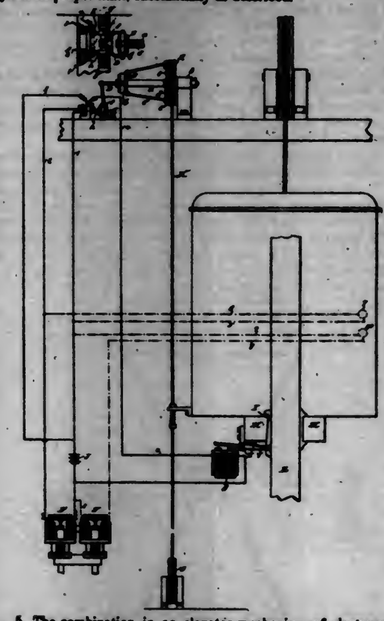
412,331. HYDRAULIC MOTOR. William P. Gibson, New York, N. Y. Filed Jan. 5, 1889. Serial No. 295,542. (No model.)

Claim.—1. The combination, with the cylinder G and the head K, fitting into the cylinder, one of said parts being fixed and the other oscillating, and one being capable of longitudinal movement with relation to the other, of the movable plate A, carried by the cylinder and fitting against the head K, the movable plate *m*, carried by the head K and fitting against the head of the cylinder at one side of the plate A, and the port 15, for admitting and exhausting the liquid to and from the cylinder between the plates, substantially as described.

2. The combination, with the oscillating and longitudinally-moving cylinder G, of the fixed head K, fitting into said cylinder, the plate A, carried by the cylinder G and movable in the direction of the length of the cylinder, so as to maintain contact with the head K, the plate *m*, carried by the head K and entering the cylinder at one side of the plate A and movable longitudinally with the cylinder, and a port 15, for admitting and exhausting the liquid to and from the cylinder between the plates, substantially as described.

3. The combination, with the oscillating and longitudinally-moving cylinder G, of the fixed head K, fitting into said cylinder, the plate A, carried by the cylinder G and movable in the direction of the length of the cylinder, so as to maintain contact with the head K, the plate *m*, carried by the head K and entering the cylinder at one side of the plate A and movable longitudinally with the cylinder, a port 15, for admitting and exhausting the liquid to and from the cylinder between the plates, and the cylinder *p*, having a piston 10 connected to the cylinder G to move the same longitudinally, substantially as described.

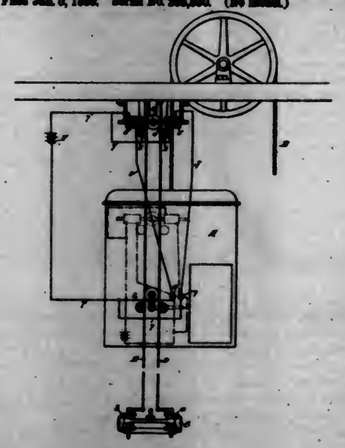
4. The combination, with the cylinder G and the head K, fitting into the cylinder, one of said parts being fixed and the other oscillating, and one being capable of longitudinal movement with relation to the other, of the movable plate A, carried by the cylinder and fitting against the head K, the movable plate *m*, carried by the head K and fitting against the head of the cylinder at one side of the plate A, and ports 14 15, for admitting and exhausting the liquid to and from the cylinder upon the opposite sides of the plate *m*, substantially as described.



412,332. ELECTRICALLY-CONTROLLED SPEED-GOVERNOR MECHANISM FOR ELEVATORS. William P. Gibson, New York, N. Y. Filed Jan. 5, 1889. Serial No. 295,543. (No model.)

Claim.—1. The combination, in an elevator mechanism, of an electro-magnet for operating a valve mechanism to stop the car, an electric circuit including said magnet and a circuit-closer, and a speed-governor operated by the movement of the car and arranged to operate said circuit-closer to close the circuit through said magnet when the speed of the car increases beyond the proper limit, substantially as described.

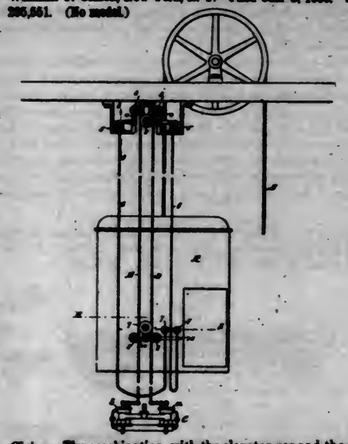
2. The combination, in an elevator mechanism, of an electro-magnet for operating a valve mechanism to stop the car, an electro-magnet G, for operating the safety appliances of the car, electric circuits including said respective magnets, a circuit-closer for each of said circuits, and a speed-governor operated by the movement of the car and arranged to operate said circuit-closers to close the circuits through the respective magnets successively when the speed of the car increases beyond its proper limit, substantially as described.



3. The combination, in an elevator mechanism, of a rope P, connected to operate a valve mechanism to stop the car, a deflecting-pulley *q*, for deflecting said rope to operate the valve mechanism, an electro-magnet for operating said deflecting-pulley, an electric circuit including said magnet and a circuit-closer, and a speed-governor operated by the movement of the car and arranged to operate said circuit-closer to close the circuit through said magnet when the speed of the car increases beyond the proper limit, substantially as described.

4. The combination, in an elevator mechanism, of a rope P, connected to operate a valve mechanism to stop the car, a deflecting-pulley *q*, for deflecting said rope to operate the valve mechanism, an electro-magnet for operating said deflecting-pulley, an electro-magnet G, for operating the safety appliances of the car, electric circuits including said respective magnets, a circuit-closer for each of said circuits, and a speed-governor operated by the movement of the car and arranged to operate said circuit-closers to close the circuits through the respective magnets successively when the speed of the car increases beyond its proper limit, substantially as described.

5. The combination, in an elevator mechanism, of electro-magnets F N, for operating the valve mechanism to control the up and down movements of the car, electric circuits including said respective magnets, a cable K, driven by the car and passing over a sheave A, a threaded shaft *l*, driven by said sheave, and a nut *n*, traveling upon said shaft and operating to close the circuit through the respective magnets as the car reaches the limit of its up and down movements, substantially as described.



412,333. ELECTRICALLY-CONTROLLED VALVE-OPERATING MECHANISM FOR ELEVATORS. William P. Gibson, New York, N. Y. Filed Jan. 5, 1889. Serial No. 295,560. (No model.)

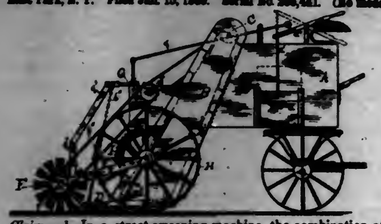
Claim.—1. The combination, with the elevator-car, of an auxiliary valve mechanism for controlling the movements of the car, ropes suspended from the top of the shaft and connected to said auxiliary valve mechanism to control the same, a deflecting mechanism consisting of deflecting-pulleys for deflecting said ropes, electro-magnets for operating said deflecting mechanism, and electric circuits, including said magnets and push-buttons, located upon the car, substantially as described.

2. The combination, with the elevator-car, of an auxiliary valve mechanism for controlling the movements of the car, ropes suspended from the top of the shaft and connected to said auxiliary valve mechanism to control the same, a deflecting mechanism consisting of deflecting-pulleys for deflecting said ropes, electro-magnets for operating said deflecting mechanism, electric circuits, including said magnets and push-buttons, located upon the car, a deflecting mechanism consisting of deflecting-pulleys carried by the car, and a hand-lever for operating said deflecting mechanism, substantially as described.

412,334. VALVE-OPERATING MECHANISM FOR ELEVATORS. William P. Gibson, New York, N. Y. Filed Jan. 5, 1889. Serial No. 295,561. (No model.)

Claim.—The combination, with the elevator-car and the auxiliary valve mechanism for controlling its movements, of ropes suspended from the top of the elevator-shaft and connected to said auxiliary valve mechanism to operate the same, a deflecting mechanism consisting of deflecting-pulleys for deflecting said ropes to cause the car to move in opposite directions, expansible bulbs connected to act upon said deflecting mechanism to deflect the respective ropes, collapsible bulbs carried by the car, and tubes containing a fluid and connecting the bulbs upon the car with the respective bulbs of the deflecting mechanism, substantially as described.

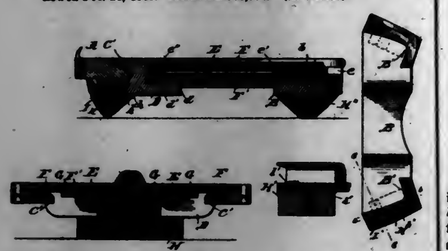
412,335. PULLEY. Robert Gilman, Kansas City, Mo. Filed Jan. 7, 1889. Serial No. 295,637. (No model.)



Claim.—1. The combination, with a pulley having a flanged peripheral portion, of a series of interchangeable rings keyed to the said peripheral portion, substantially as shown and described.

2. A pulley having its peripheral portion provided with transverse flanges, in combination with a bearing composed of interchangeable rings, said rings having transverse grooves adapted to register with and receive said flanges, as shown and described.

3. A pulley consisting of separate detachably-secured parts having a transverse flange, and a peripheral bearing consisting of a series of interchangeable rings, said pulley having a concentric groove in the periphery and at the line of division of said detachable parts, for the purpose described.



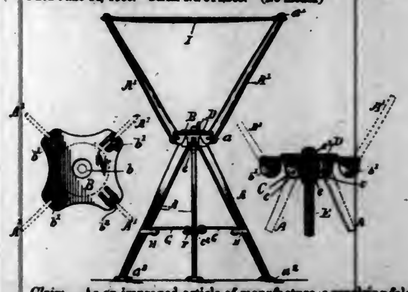
412,836. STREET-SWEEPING MACHINE. CHARLES GILLHAM, Rust Park, N. Y. Filed Jan. 15, 1889. Serial No. 296,441. (No model.)

Claim.—1. In a street-sweeping machine, the combination of a hinged dirt-pan, a finger-apron hinged to said pan and consisting of a series of ribs or fingers and an apron stretched across and connecting the same, a series of spiral springs equal in number to said ribs or fingers, their outer ends being connected thereto, respectively, a rod journaled on the under side of said dirt-pan and to which said springs are attached, and shoes fastened to the pan and situated between the springs, substantially as described.

2. In a street-sweeping machine, the combination of a storage-box, an elevator having an endless belt running over a pair of guide-rollers parallel with the floor of the elevator, a dirt-pan pivoted to said elevator, a revolving brush pivoted to the main driving-axle, a cog-wheel keyed to said axle and actuating a shaft journaled above the same, a pair of sprocket-chains passing around said shaft and actuating said brush and said endless elevator-belt, respectively, and mechanism, substantially as described, for elevating said brush and said dirt-pan simultaneously, in the manner and for the purpose set forth.

412,837. HORSESHOE. ALBERT B. HOLSEN, Chicago, Ill., assignor to the Holsen Horseshoe Company, same place. Filed Jan. 18, 1888. Renewed Feb. 26, 1889. Serial No. 301,582. (No model.)

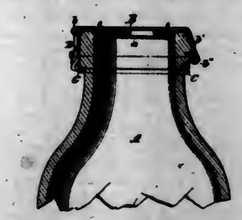
Claim.—1. In a horseshoe, the combination of a beveled shoe, a bar having a curved edge thereon with a groove fitting upon the beveled edge of said shoe at the forward end thereof, sockets in said bar, a thread in each of said sockets extending a portion of the way thereinto from the outer edge thereof, a bar having a groove at each end fitting upon said beveled shoe near the heel portion thereof, said bar having screw-threaded holes therein, and bolts having a like thread at one end passing through said holes, and having a thread at the other end thereof extending a short distance on said bolts and fitting into said thread in said sockets in the front bar, all substantially as described, and for the purpose set forth.



2. The combination of a horseshoe with a bar having a curved grooved edge fitting over the inner beveled edge of the shoe at the forward end thereof, sockets in said bar, a thread extending a short distance into each of said sockets from the outer edge thereof, a bar having a groove at each end fitting over the beveled edge of the shoe near the heel of said shoe and having a beveled edge or side interlocking with a lug on said heel of said shoe, the said bar also having screw-threaded holes therein, and bolts having a like thread thereon at one end passing through said holes and also having a thread at the other end thereof extending a short distance from said end and fitting into the thread in said sockets, all substantially as described.

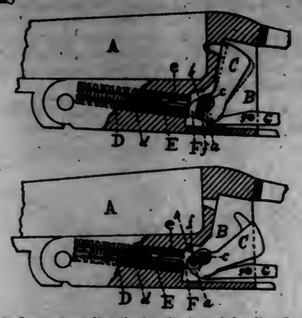
3. The combination of a horseshoe having a beveled inner edge with a bar having a curved grooved edge fitting over the beveled edge of said shoe at the forward part of said shoe, sockets in said bar having a thread extending a portion of the way thereinto from the outer edge thereof, a bar having a groove at each end thereof fitting over the beveled portion of said shoe near the heel thereof, said bar having screw-threaded holes therein, bolts having a like thread near one end thereof passing through each of said holes and also having a thread at the other end thereof extending a short distance from said end and fitting into the thread in said sockets, and a guard through which said bolts may pass and by which that portion of said bolts not in said sockets or passing through said bar is covered and protected, all substantially as described, and for the purpose specified.

4. The combination of a horseshoe with a bar having a curved grooved edge fitting over the inner beveled edge of the shoe at the forward end thereof, sockets in said bar, a thread extending a short distance into said sockets from the outer edge thereof, a bar having a groove at each end thereof fitting over the beveled edge of the shoe near the heel of said shoe and screw-threaded holes therein, the said bar also having a beveled side or lug thereon interlocking with a beveled edge or lug on the heel of said shoe, bolts having a like thread near one end thereof passing through the holes in said bar and also having a thread at the other end thereof extending a short distance from said end on said bolt and fitting into the thread in said sockets on said curved bar, and a guard through which said bolts may pass and by which they are protected from contact with rocks and other substances, all substantially as described.



5. In a horseshoe consisting of a main shoe, an auxiliary shoe, and calks secured to said main shoe by said auxiliary shoe, the combination of bolts passing through one of the bars forming said auxiliary shoe and into sockets in the other of the bars forming said auxiliary shoe, and a guard consisting of a strip of leather or other flexible material and a strip of zinc or other suitable material secured to said leather strip by copper or other suitable bolts, whereby an electric action may be obtained in said guard, all substantially as described, and for the purpose set forth.

412,838. FOLDING CHAIR. KELLOG T. HUELBURT, Lakewood, N. J. Filed June 14, 1889. Serial No. 314,285. (No model.)

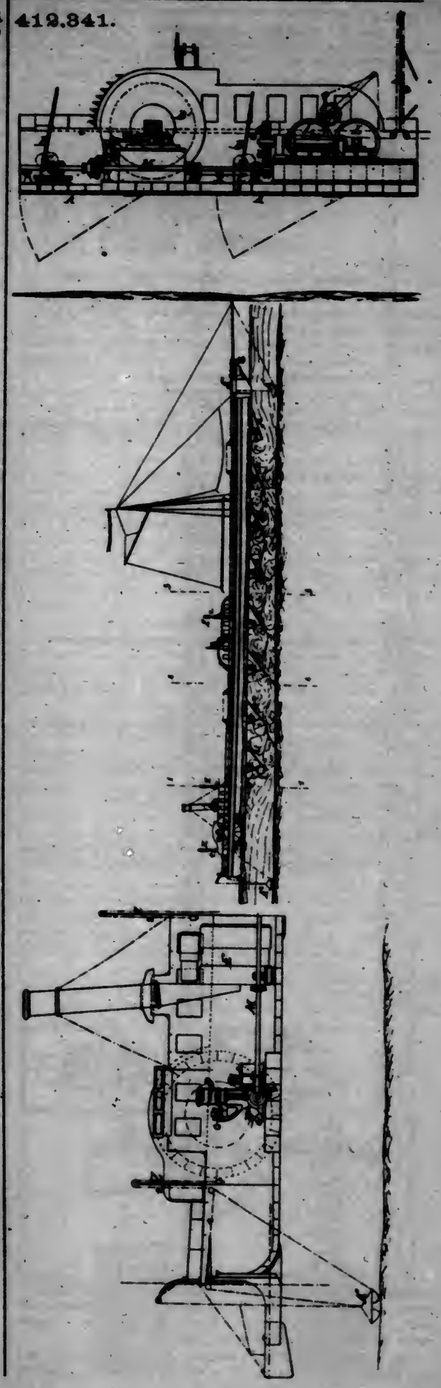


Claim.—As an improved article of manufacture, a revolving folding stool consisting of the stationary plate C, having an annular boss *b* on its upper surface and radial grooved bearings *c* on its lower surface, the legs A, suitably held in such grooved bearings, the plate B, superposed over the plate C and adapted to revolve around the annular boss *b*, the standard E, whereto the plates B C are secured between threaded nuts *c' c'*, so as to permit a horizontal rotary motion of the seat portion on the leg portion of said stool, the reciprocating plate F, whence the connecting-rods G radiate that serve to regulate the angle of the legs to the axial center, and the seat I, the whole co-operating as and for the purpose herein fully shown and described.

412,839. MILK-JAR. LYMAN D. JOHNS, New York, N. Y. Filed Apr. 17, 1889. Serial No. 307,544. (No model.)

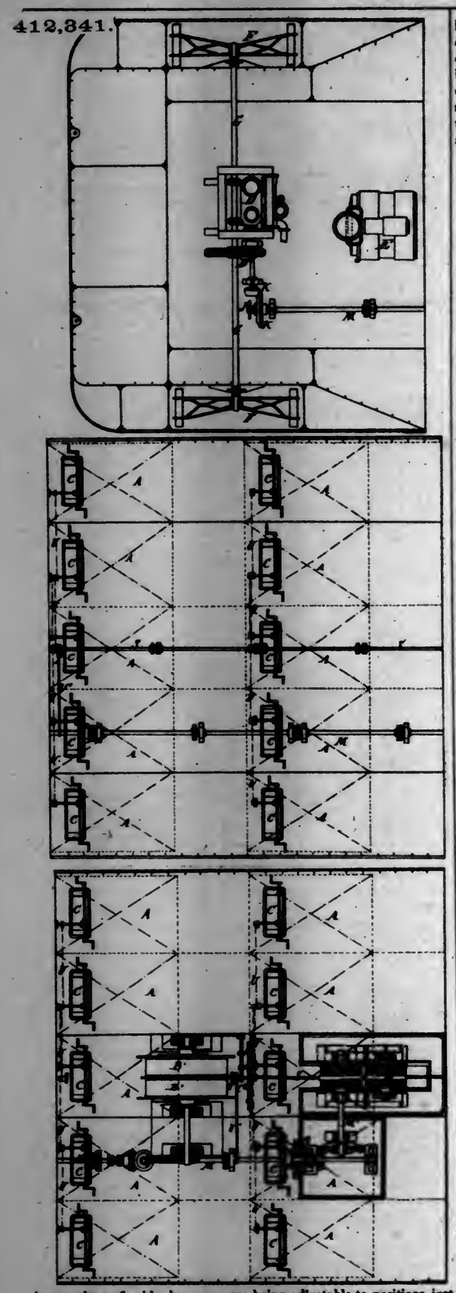
Claim.—In a milk-jar, the double shoulders *d' d'* and *e' e'*, extending around the neck of the jar, the former having the recess *d d* extending from the shoulder *d' d'* to the top of the jar, whereby the lower shoulder *d' d'* keeps the cover-holding wire in a fixed vertical position, and the recess *d d* allows the hinge portion D of the cover-holding wire to hug closer to the neck of the jar, and the upper shoulder *d' d'* provides the means for holding the catch F, substantially in the manner and for the purposes set forth.

412,840. REBOUND MECHANISM FOR BREECH-LOADING GUNS. CHARLES A. KING, Meriden, Conn. Filed Apr. 17, 1889. Serial No. 307,600. (No model.)



Claim.—1. In a rebounding device for breech-loading fire-arms, a strut pivoted near one end to the tumbler or hammer, the opposite end of said strut being seated against the end of the mainspring, said strut being provided with a projecting lug or stop adapted to limit its movement by contact with the pivot upon which the tumbler or hammer is hung, and a sear adapted to retain the hammer in its normal position by reason of frictional contact, all arranged to operate substantially as described, and for the purpose set forth.

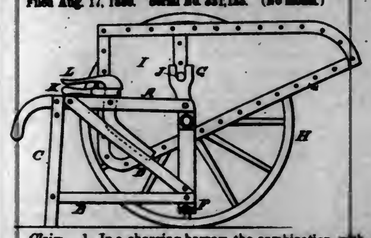
2. In a rebounding device for breech-loading fire-arms in which the barrel is hung forward to be tilted up at the breech in opening, the combination therewith of a hammer hung to the frame at the rear of the barrel, a longitudinal recess in the frame, a spring in said recess, a strut pivoted to the tumbler or hammer, its free end extending within and resting against the rear end of said spring, the said strut being provided with a projecting lug or stop adapted to limit its rearward movement by contact with the pivot upon which the tumbler or hammer is hung, an elongated hole or slot in the rear end of said strut to admit of the free forward and backward movement of the hammer after the other parts have stopped, and a sear adapted to retain the hammer in its normal position by reason of frictional contact, all arranged and operating substantially as shown, and for the purpose set forth.



3. In a breech-loading fire-arm in which the barrel is hung forward to be tilted up at the breech in opening, the combination therewith of the hammer hung in the frame at the rear of the barrel, a longitudinal recess in the frame forward of the hammer and in line below the pivot of the hammer, a helical spring in said recess, a follower in said recess and resting against the rear end of said spring, the said follower constructed with a recess from its rear end inward, and a strut hung by its rear end to the hammer below its pivot and extending into the recess in the follower, the forward end of the strut taking seat at the forward end of the recess and near the forward end of the follower, the said strut being provided near its rear end with an upwardly-projecting lug or stop adapted to limit its rearward movement by contact with the hammer screw or pivot, an elongated hole in said strut to admit of the free forward and backward movement of the hammer after the strut has stopped, substantially as shown and described.

412,841. DREDGING-BOAT. ALPHONSE LAMBERT, Paris, France. Filed Sept. 4, 1888. Serial No. 284,357. (No model.) Patented in France Sept. 6, 1887, No. 186,670, and in England July 2, 1888, No. 9,668.

Claim.—1. A boat for dredging the channels of rivers and the like, having a closed bottom, in combination with a plurality of rows of downwardly-extending independently-adjustable wings or vanes on said bottom, each row containing a plurality of wings or vanes, the



412,341.

lower edges of said wings or vanes being adjustable to positions just above an obstruction or bar, whereby the force of the current or tide passing between the wings or vanes and the obstruction or bar removes the latter, substantially as set forth.

2. A boat for dredging the channels of rivers and the like, having a closed bottom and a plurality of rows of downwardly-extending independently-adjustable wings or vanes on said bottom, each row containing a plurality of wings or vanes, the lower edges of said wings or vanes being adjustable to positions just above an obstruction or bar, in combination with anchoring devices, rotary drums on said boat, and cables connecting said drum with said anchoring devices for moving said boat against the current or tide, substantially as set forth, whereby the force of the current or tide passing between the vanes or wings and the obstruction or bar is increased.

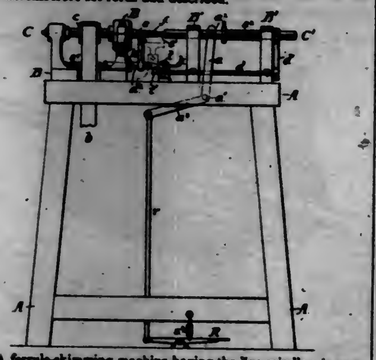
412,342. CHARGING-BARROW. GRANT C. MCNEIL, AKRON, OHIO. Filed Aug. 17, 1888. Serial No. 281,122. (No model.)

Claim.—1. In a charging-barrow, the combination, with a frame having wheels journaled on axles projecting from its sides and provided with journal-bearings located below the plane of the top of the wheels to support the box, of a box mounted in said frame between said wheels by means of journals projecting from its side and resting in said bearings, substantially as shown, and for the purpose specified.

2. In a charging-barrow, the combination of a frame consisting of two side pieces united at the rear by a cross-bar and at the front by an axle, the axle being bent to form three sides of a rectangle, the central part being horizontal and placed near the bottom of the side pieces, and the ends rising vertically and terminating in journal-bearings and having journals projecting from their sides and having wheels mounted thereon, with a box having side journals resting in said journal-bearings, substantially as shown, and for the purpose specified.

3. In a charging-barrow, the combination, with a hand-frame having side journals with wheels mounted thereon, and journal-bearings for the box located below the plane of the top of the wheels, of a box suspended between said wheels by means of side journals which rest in said bearings, the rear of said box when empty overbalancing the front, substantially as shown and described, and for the purpose specified.

4. In a charging-barrow, the combination, with a supporting-frame having wheels mounted on axles projecting from its sides, and journal-bearings to support the box located below the plane of the top of the wheels, of a box mounted thereon between said wheels by means of side journals resting in said bearings, and a movable latch to retain and release said box, substantially as shown and described.

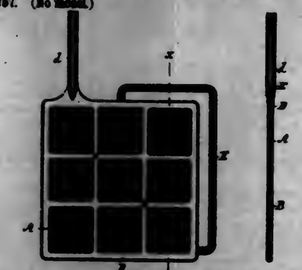


412,343. HAME-FASTENER. MARSH HOE, Davenport, Iowa. Filed Oct. 20, 1888. Serial No. 288,463. (No model.)

Claim.—In combination with a hame, the rim 6, extended to form the part 8, with pendent side pieces 9 and 10 attached, the female hook 11, pivoted between such side pieces, the spring 14, secured between such side pieces and acting against the free under side of said hook, and the rim 7, recessed upon its upper surface and extended beyond the end 5 of the hame, and terminating in the engaging-hook 18, substantially as described.

412,344. MACHINE FOR SKIMMING FERRULES. CORLY S. SMITH, Philadelphia, Pa. Filed July 24, 1889. Serial No. 318,502. (No model.)

Claim.—1. In a lathe or ferrule-skimming machine, an adjustable dead spindle or chuck for forcing on and securing by pressure the ferrule to the live-spindle and releasing the same when desired, and an adjustable stripper provided back of the ferrule for forcing off the ferrule from the live-spindle when the dead-spindle is removed, substantially as hereinbefore set forth and described.

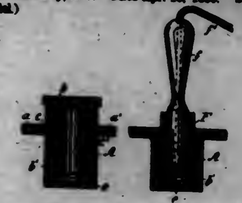


2. A ferrule-skimming machine having the live-spindle *a*, in combination with the spindle *d'*, connected with the shaft C', the shaft *d*, connected by the arm *d'* with the shaft C', operated by the elbow-lever *a*^{6} *a*^{6}, the rod *r*, and the lever R, the shaft *d*^{3}, the stripper A, connected with the shaft *d*^{3}, the triggers *t t'*, the cam *h*, and the springs *d*^{3} *a*^{6}, secured and adjusted to the frame A, substantially as hereinbefore set forth and described.

3. In a ferrule-skimming machine, a live-spindle *a*, mounted upon the frame A through the medium of the journal-bearings B, in combination with the spindle *d'*, the shaft C', the shaft *d*, connected by the arm *d'* with the shaft C', mounted on the frame A, having a lateral motion to and fro, the shaft *d*^{3}, mounted, as in the journal-bearing B, below the spindle *a*, the stripper A, connected with the shaft *d*^{3}, the trigger *t*, the catch *t'*, the cam *h*, and springs *d*^{3} *a*^{6}, in the manner and for the purpose substantially as hereinbefore set forth and described.

4. A ferrule-skimming machine having a live-spindle *a*, upon which the ferrule is adapted to fit, in combination with a dead-spindle for holding the ferrule on the live-spindle during the skimming operation and adjustable to release it when desired, a stripper A, adjusted back of the ferrule and adapted to throw it off the spindle *a* when the dead-spindle is released, the stripper A being operated by the same movement or motion which withdraws the dead-spindle, and an automatic trigger device by which the stripper is released from its connection with the dead-spindle and returned after forcing off the ferrule by means of a spring to its normal position, while the dead-spindle may remain open to receive the next ferrule, in the manner and for the purpose substantially as hereinbefore set forth and described.

412,345. FRAME FOR SECONDARY-BATTERY PLATES. WALTER F. SMITH, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester City, N. J. Filed Apr. 2, 1889. Serial No. 305,787. (No model.)



Claim.—1. The herein-described supporting-frame for a battery plate or element, provided with an auxiliary loop, substantially as and for the purposes set forth.

2. The herein-described supporting-frame, provided with a lug and partition-walls between and around plates composed of the salts or chlorides of a metal or metals to form an electrode, and said frame having a loop secured thereto, substantially as and for the purposes set forth.

3. The herein-described frame, supporting in position a series of plates to form an electrode, and provided with a permanent lug and an auxiliary loop or extension, substantially as and for the purposes set forth.

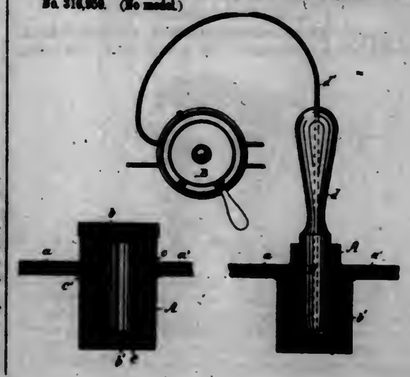
412,346. CONDUCTOR FOR BATTERIES. WALTER F. SMITH, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester City, N. J. Filed Apr. 12, 1889. Serial No. 307,703. (No model.)

Claim.—1. The herein-described device for connecting electric batteries, consisting of a vertically-divided male thimble having lateral strips attached to each half thereof, a female thimble, and a cap fitted to the ends of said male thimble and said female thimble, adapted to receive a material for preventing interruption of the current through the same, substantially as and for the purpose set forth.

2. The herein-described device for connecting electric batteries, consisting of a male thimble having strips attached thereto, a female thimble, gasket interposed between said female thimble and strips, and said thimble adapted to receive and hold mercury, substantially as and for the purposes set forth.

3. The herein-described device for connecting electric batteries, consisting of a male thimble having lateral strips and with a female thimble secured thereto, and a plug mounted in said male thimble with a conductor, substantially as and for the purposes set forth.

4. The herein-described device for connecting electric batteries, consisting of a male thimble having secured thereto a cup capable of containing mercury or other material, a gasket interposed between said cup and lateral strips formed integral with said male thimble, and a plug having a flexible conductor, substantially as and for the purposes set forth.



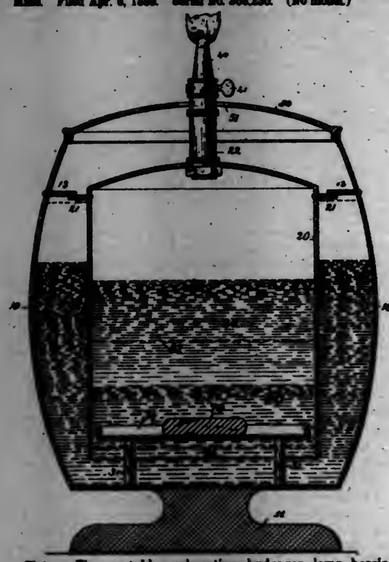
5. The herein-described device for connecting electric batteries, consisting of a divided male thimble having a tapering lower portion and lateral strips or ribbons, a female thimble fitting snugly onto said male thimble, and a plug connected with said male thimble having a flexible conductor, substantially as and for the purposes set forth.

6. The combination of two or more batteries, each composed of a series of plates or elements having lugs or terminals connected with a device consisting of a male thimble provided with lateral strips or ribbons, a cup and a cup secured to the respective ends of said thimble, and said cup adapted to receive a material for preventing the interruption of the electric current or currents through said device.

7. The combination, with two or more batteries, of a device consisting of a male thimble with strips, a cup secured to said thimble, and a plug having a flexible conductor connected with a switch-board or transmitting device, substantially as and for the purposes set forth.

8. The combination, with two or more batteries, of a device having a male thimble with lateral strips, a female thimble, a gasket or gaskets interposed between said strips and female thimble, and said female thimble arranged in connection with said male thimble to receive and hold mercury or other material, and a plug having a flexible conductor, substantially as and for the purposes set forth.

412,347. CONNECTING DEVICE FOR ELECTRIC BATTERIES. WALTER F. SMITH, Philadelphia, Pa., assignor to the United Electric Improvement Company, Gloucester City, N. J. Filed July 9, 1889. Serial No. 316,959. (No model.)



Claim.—1. The herein-described device for connecting electric batteries, consisting of a divided male thimble provided with a cap, a cap, and lateral ribbons or strips and the parts coated with a conducting material, substantially as and for the purposes set forth.

2. The herein-described device for connecting electric batteries, consisting of a divided male thimble with lateral ribbons or strips, a female thimble fitted thereto and adapted to contain mercury or other material, and said parts coated by electrolysis with nickel or other material, substantially as and for the purposes set forth.

3. The herein-described device for connecting electric batteries, consisting of a divided male thimble with strips or ribbons, a female thimble secured thereto, a gasket interposed between the strips or ribbons and the female thimble, and the parts of the device coated with a conducting material, and a plug with a flexible conductor mounted in said male thimble, substantially as and for the purposes set forth.

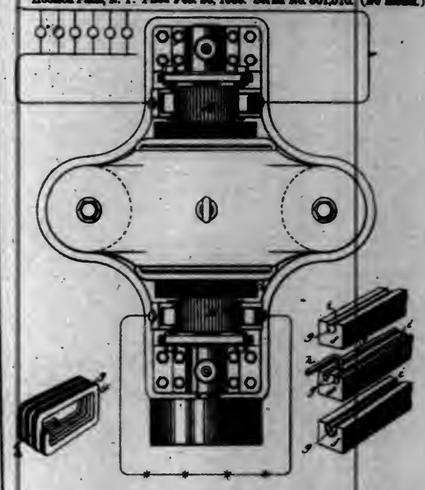
412,848. CARBURETING-LAMP. JAMES W. TALLMADGE, Boston, Mass. Filed Apr. 6, 1889. Serial No. 306,220. (No model.)

Claim.—The portable carbureting hydrogen lamp herein described, consisting of the portable lamp-body 10, provided with inwardly-projecting lugs 13, a supporting-stand 11 at its bottom, and a removable cover 50 at its top, said cover having a central aperture 51, the pan 30, supported on lugs 31 within said body, the gas-holder 20 also within said body and inclosing said pan, said gas-holder being provided with outwardly-projecting lugs for engaging the lugs of said body, and the pillar-cock burner 40, detachably secured to the top of said gas-holder and extending loosely through the central aperture of said cover, substantially as set forth.

412,849. DYNAMO-ELECTRIC MACHINE. CHARLES F. WIESLER, Hoosick Falls, N. Y. Filed Jan. 26, 1889. Serial No. 297,661. (No model.)

Claim.—1. An armature for dynamos or motors, consisting of coils or convolutions of flat plates, strips, bars, or ribbons of iron, in combination with a core for supporting the same, formed of wood or other non-conducting material upon which said conductors are wound.

2. In a dynamo or motor, an armature provided with a core of wood or other non-electro-magnetic material, in combination with a conductor wound thereupon, consisting of a continuous flat strip of iron having secured to one of its sides a flat strip of insulating material, the said conductor being wound on edge, substantially as and for the purpose described.



412,850. COMMUTATOR. CHARLES F. WIESLER, Hoosick Falls, N. Y. Filed Jan. 26, 1889. Serial No. 297,662. (No model.)

Claim.—1. A commutator formed by joining the extended ends of the coils on the armature in couples, and re-enforcing said ends by attaching thereto a block of metal, a segment of insulation being placed between the adjoining re-enforced ends, substantially as described.

2. The combination, with an armature, of a commutator formed of the joined extended ends of the coils of the armature, said ends being re-enforced by metal blocks secured thereto by means of pins, substantially as described.

412,851. DYNAMO-ELECTRIC MACHINE. CHARLES F. WIESLER, Hoosick Falls, N. Y. Filed Feb. 23, 1889. Serial No. 301,510. (No model.)

Claim.—1. An armature wound with two separate conductors, one embedded within the other, substantially in the manner set forth.

2. An armature wound with two separate conductors, one embedded within the other, one being of comparatively large cross-section and having grooves formed in it, the other being embedded in said grooves.

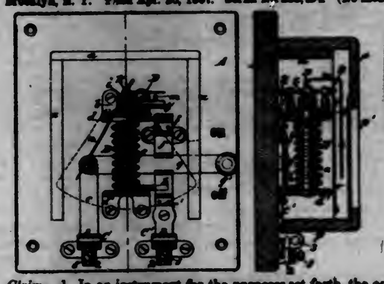
3. An armature having wound upon it the conductors of two separate circuits, one of said conductors having a rectangular cross-section and having its outer face grooved to receive the conductors of the other circuit.

412,852. DYNAMO-ELECTRIC MACHINE. CHARLES F. WIESLER, Hoosick Falls, N. Y. Filed Apr. 23, 1889. Serial No. 308,302. (No model.)

Claim.—1. In a dynamo or motor, a field-magnet made up of a series of spools arranged concentrically, one outside of the other, each spool being wound with a layer of insulated wire, the spools being rigidly secured together, in combination with pole-pieces secured against the flanges at each end of the magnet, and a bolt extending through the hollow core and securing the parts of the magnet and the pole-pieces together.

2. In a dynamo or motor, a field-magnet made up of a number of concentrically-arranged iron sleeves or spools, each spool carrying a layer of insulated wire, an air-space being left around each spool, and lateral openings or perforations in the sleeves to allow access of the air in said spaces to the adjacent winding of wire.

3. In a dynamo or motor, a field-magnet made up of a series of spools arranged concentrically one outside of the other, each spool being wound with a spool of insulated wire, the spools being all rigidly secured together by means of pins passing radially through the flanges of the spools, in combination with pole-pieces secured against the flanges at each end of the magnet.



412,853. DYNAMO-ELECTRIC MACHINE OR MOTOR. CHARLES F. WIESLER, Hoosick Falls, N. Y. Filed May 20, 1889. Serial No. 311,483. (No model.)

Claim.—1. In an electric motor or dynamo, the field-magnets formed of insulated spiral conductors arranged between the layers of a volute magnetizable metal, the heads of the roll or volute being grooved or scored radially and the inner ends of the conductors occupying said grooves, as set forth.

2. In an electric motor or dynamo, field-magnets formed of a layer of separate conductors woven together by cross-threads in the manner described and a layer of iron placed together and wound spirally upon themselves.

412,854. ELECTRIC-CURRENT INDICATOR. JAMES J. WOOD, Brooklyn, N. Y. Filed Apr. 20, 1887. Serial No. 235,454. (No model.)

Claim.—1. In an instrument for the purpose set forth, the combination, with a magnet, of a pivoted repellent armature having both pivoted and free ends in proximity to the same pole of the magnet, but with the pivoted end in a stronger magnetic field than the free end, substantially as set forth.

2. In an instrument for the purpose set forth, the combination, with a magnet, of a pivoted repellent armature having both pivoted and free ends in proximity to the same pole of the magnet, but with the pivoted end in a stronger magnetic field than the free end, and a stop for limiting the movement of the free end of the armature toward the magnet, adapted to prevent the movement thereof so close to the magnet as to cause it to be attracted thereto, substantially as set forth.

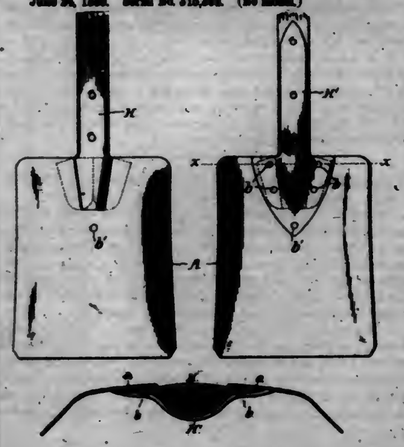
3. In an instrument for the purpose set forth, the combination, with a magnet having a polar prolongation or branch of diminished mass extended outside of the most intense field, of a pivoted repellent armature arranged with its pivoted end in proximity to the pole of the magnet and in the concentrated field thereof, and with its free end in proximity to said polar prolongation and in a weaker field, substantially as set forth.

4. In an instrument substantially such as set forth, the combination, with a magnet, of a pivoted repellent armature having both pivoted and free ends in proximity to the same pole of the magnet, but made most massive at the pivoted end and diminished toward the free end, and arranged with its pivoted end in a stronger magnetic field than the free end, whereby repulsion at the free end is insured, substantially as herein set forth.

5. In an instrument substantially such as set forth, the combination, with an electro-magnet, of a repellent armature D, pivoted near the pole thereof, a polar prolongation extending under the free end of the armature, and a non-magnetic stop between the free end of the armature and the prolongation, substantially as shown and described.

6. In an instrument for the purpose set forth, the combination, with a magnet, of a pivoted repellent armature, an index connected to and deriving motion from the armature, a scale traversed by said index and so arranged that when the armature is in equilibrium and is not repelled the index stands at zero, and a stop for limiting the movement of the free end of the armature toward the magnet, arranged to stop the armature at a point between its position of equilibrium and a position in which the free end of the armature would be attracted by the magnet, whereby the armature is movable between its zero position and said stop for test purposes, substantially as set forth.

7. In an instrument for the purpose set forth, the combination, with a magnet, of a pivoted repellent armature, an index connected to and deriving motion from the armature, a scale traversed by said index and so arranged that when the armature is in equilibrium and is not repelled the index stands at zero, and said scale marked with a test-point, such as T, beyond the zero, and a stop for limiting the movement of the free end of the armature toward the magnet, arranged to stop the armature with the index at the test-point, substantially as set forth.

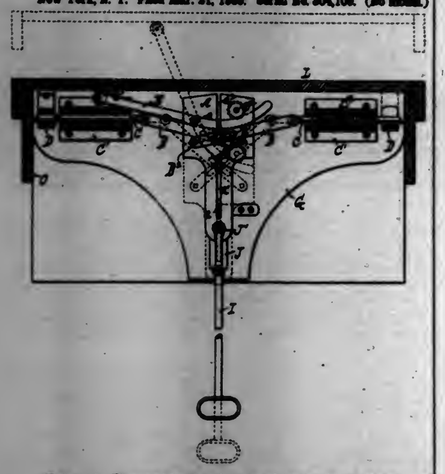


8. In an instrument substantially such as set forth, the combination, with an electro-magnet, of a pivoted repellent armature made in two or more longitudinal bifurcations or divisions, substantially as shown and described.

9. An astatic electro-magnetic testing-instrument consisting of a magnet having two active poles of opposite kinds, with two armatures, both pivoted on the same axis, and arranged, respectively, over the respective poles of the magnet, with the opposite free ends of said armatures adjacent to a portion or prolongation of the same poles, an index extending from said armatures or their axis, and a graduated scale over which the same moves, substantially as and for the purpose set forth.

10. In an instrument such as set forth, the combination, with an electro-magnet, of a pole-piece thereon having a curved concave face and a pivoted repellent armature pivoted concentric to said curve, with its free end adjacent to a portion or prolongation of the same pole, substantially as and for the purpose set forth.

11. In an electric testing-instrument such as set forth, the combination, with the electro-magnet, the pivoted repellent armature, and a stop, such as *m*, of an index-point extending from the armature on its axis and a fixed scale *o*, having a test-point, such as T, beyond the zero of the scale, with which the index registers when the armature is in contact with the stop, substantially as and for the purpose set forth.



412,855. SHOVEL OR SPADE. CHARLES W. WEBER, Philadelphia, Pa., assignor of one-half to Richard P. Wright, same place. Filed June 24, 1889. Serial No. 315,202. (No model.)

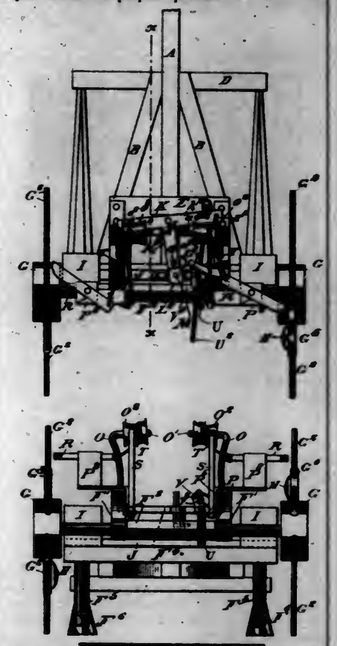
Claim.—1. In a shovel or spade, the flanges *a*, the back strap H, and the front strap H', secured together by riveting or otherwise, in the manner and for the purpose substantially as hereinbefore set forth and described.

2. In a shovel or spade, a blade having flanges *a* bent forward and down against the face of the blade, and having back and front handle-straps secured to the said flanges by riveting or otherwise, substantially as hereinbefore set forth and described.

412,856. SCUTTLE-LOCK. JOSEPH ERRAS and WILLIAM R. STEIN, New York, N. Y. Filed Mar. 21, 1889. Serial No. 304,109. (No model.)

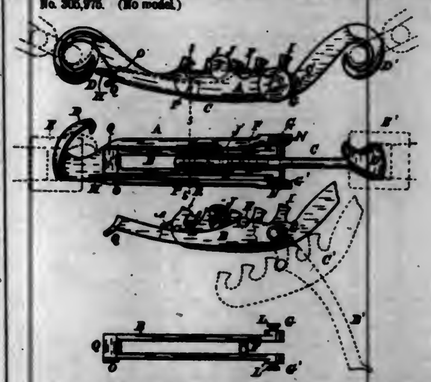
Claim.—1. The combination, in a scuttle safety-lock consisting of the combination of the metal plate G, having attached thereto the draw-plate A, said draw-plate being provided with the slots a' a^2 and the roller c^2, of the bolt-bars B B, having slots B' and connecting the draw-plate A with the spring-bolts C, said spring-bolts having the spring C^2 and casing c', the lever E, having the roller c' at an end and the pivot *e* near the curved end, the guide-stud *a*, the wedge-stop, and the rod I, all substantially arranged as shown and described.

2. The combination, in a scuttle safety-lock consisting of the combination of the metal plate G, having attached thereto the draw-plate A, said draw-plate being provided with the slots a' a^2 and the roller c^2, of the bolt-bars B B, having the slots B' and connecting the draw-plate A with the spring-bolts C, said spring-bolts having the spring C^2 and casing c', the lever E, having the roller c' at an end and the pivot *e* near the curved end, the guide-stud *a*, the wedge-stop, and the rod I, with the scuttle-lid L, having the staples D D, and the spring F, substantially as described and set forth.



3. In a scuttle safety-lock, the combination of the draw-plate A, having the slots a' a^2, the bolt-bars B B, spring-bolts C C, the stud *a*, the rod I, the roller c^2, and pivoted lever E, having curved end, with the hinged lid L, provided with the staples D, all arranged substantially as described, and for the purpose set forth.

4. In a scuttle safety-lock, the combination of the draw-plate A, having pivoted thereto the slotted bars B B, said bars operating spring-bolts C C, guide-stud *a*, operating in the slot a', and the pin B^2, connecting the bars B B and operating in the slots a^2 and B' B', with the rod I, with the hinged lid L, having the staples D D, and spring F, substantially as described and set forth.

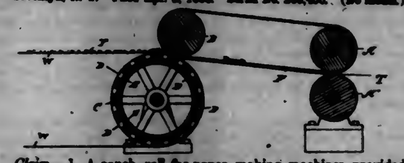


412,857. CHECK-ROW PLANTER. GEORGE AMES, Ottleyville, Kans. Filed Mar. 26, 1888. Serial No. 268,197. (No model.)

Claim.—1. The combination, with the main frame, the runners, the seed-boxes, and the reciprocating slide, of the walking-wheels provided with marking-spokes and with operating-spokes having projections upon their inner sides, the lever R, pivoted to the rear of the seed-boxes, one upon each side of the machine, the pivoted vertical levers S, and the ropes connecting the upper ends of the levers S with the inner ends of the levers R, substantially as described.

2. The combination, with the main-frame runners, walking-wheels, seed-boxes, and slide, of the T-shaped horizontal lever pivoted to the frame and having one of its arms adjustably connected with the slide, and the pivoted lever R, the levers S, drums C^2, and the ropes T, connected to the levers S, wound on the drums and connected to the lever R, interposed between the wheels and the other arms of the lever, whereby the slide is reciprocated by the movement of the lever, substantially as and for the purpose specified.

412,858. HAME-FASTENER. JAMES S. BAKER, Rochester, N. Y., assignor to Stewart & Baker, same place. Filed Apr. 4, 1889. Serial No. 305,975. (No model.)

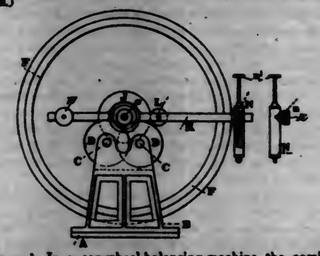


Claim.—1. The combination, with the slotted body A, having hook D, of the toothed strap C, provided with hook D', the slotted lever B, pivoted in the ends of the slotted body and provided with pin F, and the retaining-spring H, adapted to retain the lever in the locked position, substantially as described.

2. The combination, with the slotted body A, having hook D and provided with cross-bar J, of the toothed strap C, provided with hook D', the slotted lever B, pivoted in the ends of the slotted body and provided with the pin F, and the spring H, by which the lever is secured to the body, substantially as described.

3. The combination, with the slotted body A, having hook D and provided with cross-bar J, of the toothed strap C, having hook D', the slotted lever B, pivoted in the ends of the slotted body and provided with pin F, the said cross-bar being adapted to engage with one of the teeth of the strap to prevent its disengagement from the pin of the slotted lever, substantially as and for the purposes set forth.

4. The combination, with the slotted body A, having hook D, of the toothed strap C, provided with hook D', and the slotted lever B', pivoted in the ends of the body on the pins G G', having collars L L' on their extremities, substantially as described.



412,859. COUCH-ROLL FOR PAPER-MAKING MACHINES. JAMES BOYER, Whippany, N. J., assignor of one-half to George W. Thompson, Brooklyn, N. Y. Filed Apr. 2, 1888. Serial No. 269,402. (No model.)

Claim.—1. A couch-roll for paper-making machines, provided with longitudinal grooves or depressions in its surface, running in planes parallel to the axis of the roll, substantially as described, and for the purposes set forth.

2. A couch-roll for paper-making machines, provided with longitudinal grooves or depressions in its surface, and having therein holes or apertures, substantially as described, and for the purposes set forth.

412,860. CAR-WHEEL-BALANCING MACHINE. WILLIAM P. BARCLAY, Chicago, Ill. Filed Sept. 24, 1888. Serial No. 286,181. (No model.)

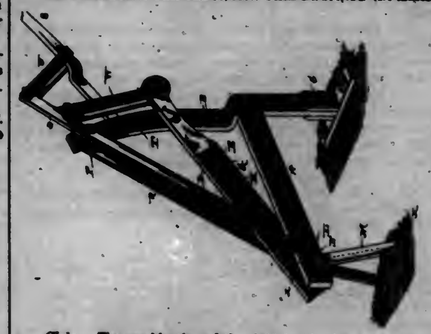
Claim.—1. In a car-wheel-balancing machine, the combination of the standards B, each having a pair of pivotal wheels D, situated so that their peripheries form a revolving bearing to the journals *e*, a mandrel E, and a tapered sleeve G, adapted to the central inclined part of mandrel E, substantially as shown and described.

2. In a car-wheel-balancing machine, a mandrel E and friction-wheel J, combined with movable lever K, supporting a pivotal eccentric friction-wheel L, with spring *l*, adjusted to hold friction-wheel L in contact with friction-wheel J, substantially as shown and described.

3. In a car-wheel-balancing machine, the combination of the journals *e*, a mandrel E, a lever K, and a spring-balance N, for indicating the resistance or pressure required to move said mandrel in a curvilinear direction when suspended from its journals *e*, substantially as shown and described.

4. In a car-wheel-balancing machine, the combination of a mandrel E, perforated with oblong holes *d'*, having projecting cotter *i*, the circular ring H, adjustable screws A, taking over mandrel E, and the screw-bolts S S, taking into ends of mandrel to actuate the ring H through the cotter *i*, so that sleeve G can be removed or forced up the central inclined part of mandrel, substantially as shown and described.

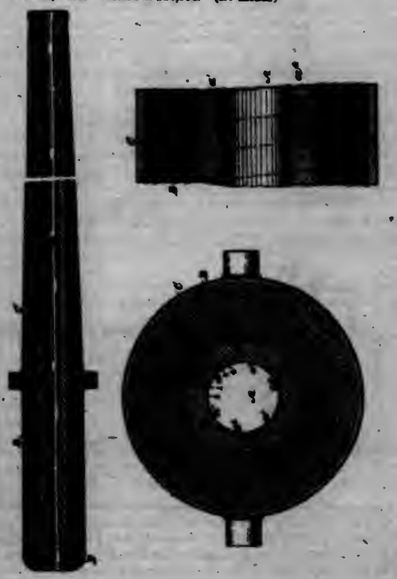
5. In a car-wheel-balancing machine, the combination of a mandrel E and divided sleeve G with circular plate *g*, attached by bolts *g'*, and the rubber rings *r*, encircling sleeve G, whereby expansion and contraction of said sleeve are permitted with reference to mandrel, substantially as shown and described.



6. In a car-wheel-balancing machine, the combination of the standards B, provided with pivotal wheels D, the mandrel E, bearing upon and revolving from peripheries of wheels D, and the sleeve G, taking onto mandrel E, so that a car-wheel can be suspended from its bore and revolved with the mandrel E, suspended from the peripheries of carrying-wheels D, substantially as shown and described.

412,861. CEILING-BLOCK FOR INCANDESCENT LIGHTS. ALFRED BRESSANI, New York, N. Y. Filed June 2, 1888. Serial No. 275,951. (No model.)

Claim.—In an electric cut-out, the combination, with a base-piece having a central recess and binding-posts and a cover adapted to close said recess, of contact-closers comprising resilient strips having connection with the binding-posts and having their ends extended away from the wall of the recess and provided with notches, retaining portions for the cover integral with the circuit-closers extending outwardly adjacent to the wall of the recess at approximate right angles to the circuit-closers, and having hook ends adapted to extend over the outer surface of the cover, substantially as specified.



412,862. SHEARS FOR CUTTING METAL. JAMES M. BROWN, New Market, Iowa. Filed Jan. 16, 1889. Serial No. 296,734. (No model.)

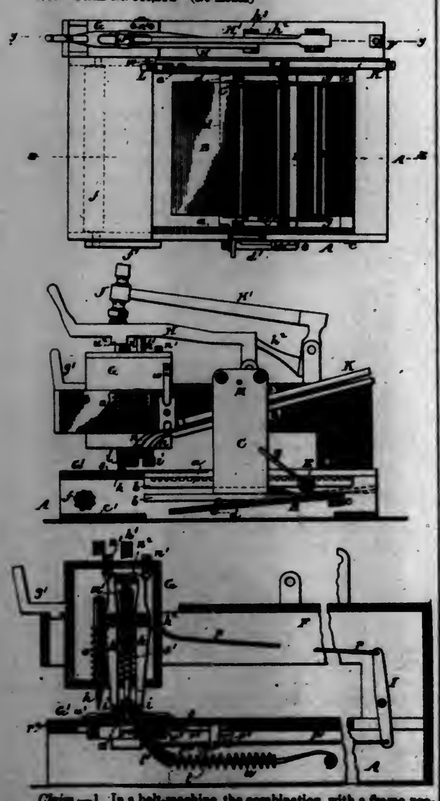
Claim.—The combination of the rigid jaw having the standard B formed integral with one end, the movable jaw pivoted to the rigid jaw, the braces R, extending from the standard to the pivot of the movable jaw, the link-lever O, pivoted to the standard, the operating-lever pivoted to the standard below the lever O, the links U, connecting the lever O with the operating-lever, and the links W, connecting the lever O with the movable jaw, as set forth.

412,863. ORDNANCE. JOHN H. BROWN, New York, N. Y. Filed Feb. 14, 1887. Serial No. 227,551. (No model.)

Claim.—1. A gun having its core formed in longitudinal sections, and its body formed of wire wound around the said longitudinal sections, substantially as set forth.

2. A gun having a core formed of longitudinal sections, a body portion formed of wire wound around the said core-sections, and an exterior jacket to protect the wire, substantially as set forth.

3. A piece of ordnance having a core-section composed of sections fitted together laterally, and a wire or ribbon wound around the same and externally screw-threaded or spirally ribbed, substantially as specified.



4. A piece of ordnance having a core-section composed of sections fitted together laterally and screw-threaded circumferentially, and a wire or ribbon screw-threaded or spirally ribbed and wound around the same, substantially as specified.

5. A piece of ordnance having a core-section composed of sections fitted together laterally, and several coils of wire or ribbon which is screw-threaded or ribbed upon contiguous surfaces, said coils of wire or ribbon being so disposed as to break joints, substantially as specified.

6. A piece of ordnance having a core-section composed of sections fitted together laterally, a screw-threaded wire or ribbon wound around the same, and an external screw-threaded outer shell engaging with the said wire or ribbon, substantially as specified.

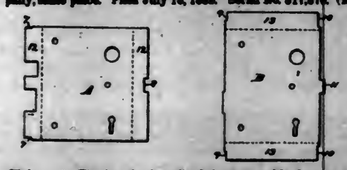
7. A piece of ordnance having a core-section composed of sections fitted together laterally and screw-threaded circumferentially, a wire or ribbon wound around said inner part and screw-threaded or spirally ribbed, and an outer shell engaging with the screw-thread or rib of the wire or ribbon, substantially as specified.

412,864. BELTING-MACHINE. JOSEPH H. BROWN, Farwell, Mich., assignor of one-half to Frank H. Presley, same place. Filed July 1, 1889. Serial No. 316,214. (No model.)

Claim.—1. In a belt-machine, the combination, with a frame provided with horizontal guides, of a movable frame provided with a cutting-blade D, a pivoted table B, and means for adjusting said table in inclination, substantially as and for the purposes described.

2. The combination, with a supporting-frame, of the sliding frame provided with the blade D, the pivoted table B, the roller R, connected with said sliding frame, and a cam-shaft by which said table is adjustable in inclination, and operating mechanism, substantially as set forth and described.

3. The combination, with a supporting-frame, of a movable head-block, two punches loosely mounted in said head-block and provided with springs, a cross-form mounted in said head-block and provided with a spring, two pivoted arms which are carried by said cross-form and are provided at their upper ends with a spring and at their lower ends with jaws adapted for holding a rivet, and a punch-block located under the head-block and provided with an opening for a punch and another opening for rivets, substantially as and for the purposes described.



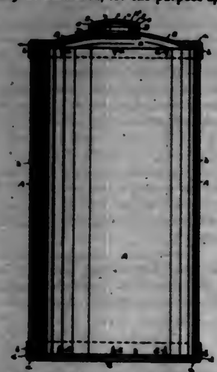
4. The combination, with the head-block G, of two punches *h h'*, which are loosely mounted therein and are provided with springs, a cross-form *m*, mounted within the head-block and provided with a spring, two arms *k*, which are pivoted to the cross-form and beveled at their upper extremities, which are provided with a spring, the lower extremities of said arms being provided with jaws *i*, which are adapted to hold a rivet, screws *n n'*, in position above said arms *k*, and a punch-block provided with apertures for the punch A and for rivets, substantially as set forth and described.

5. The combination, with a movable head-block, of a cross-form which is mounted therein and is provided with a spring, two arms pivoted to said cross-form and provided at their lower ends with jaws which are adapted for holding a rivet, two screws in position for contact with said pivoted arms at their upper extremities, which are provided with a spring, a punch-block provided with a slot *z*, an aperture *v'*, and a covering-plate *s*, a slide which is adapted to move in said punch-block and is connected by a rod *p'* with a pivoted lever I, which is connected by a rod with the head-block, a tool located under the slot *z* in position for contact with the end of a rivet when the latter is driven, said tool being loosely connected by a rod with said rod *p'* and actuated by the movement of *p'*, and a barr-holding rod *t*, fixed in position in said punch-block and provided with a spring, the free end of said rod being turned up to the aperture *v'*, substantially as set forth and described.

6. A movable punch-block provided with a stamping-punch which is mounted therein, in combination with a cross-form provided with a spring, two arms pivoted to said cross-form and provided at their lower ends with jaws which are adapted to hold a rivet, and two curved guides extending from said jaws, an inclined way adapted to hold rivets and conduct them to said curved guides, a tongue which is rigidly attached to the head-block, and a pivoted notched block in position to be engaged by said tongue and to pass the rivets severally from said inclined way to said curved guides, substantially as and for the purposes described.

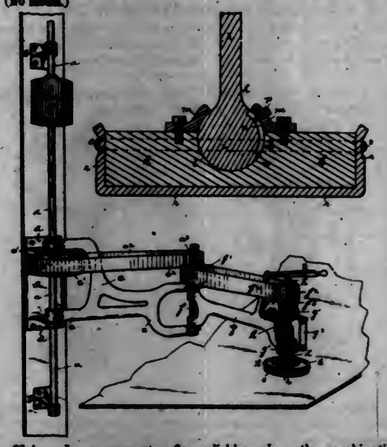
7. The combination, with the movable head-block provided with one or more punches, of the pivoted arm H, provided with a contact-surface, a pivoted arm H', provided with a hammer, and a hook *h''*, which is pivoted to the arm H' and is adapted to connect with arm H, substantially as set forth and described.

412,865. SHEET-METAL LOCK-CASE. CHARLES M. BURROWS, New Britain, Conn., assignor to the Russell & Erwin Manufacturing Company, same place. Filed July 16, 1888. Serial No. 317,870. (No model.)



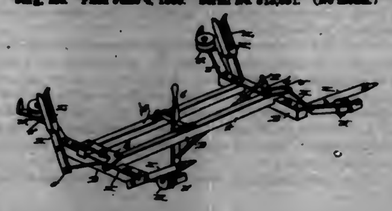
Claim.—1. The herein-described sheet-metal lock-case, consisting of two plates, each provided with flanges on two opposite side edges and fitted together, with the said flanges of each plate covering the edge of the case at the unflanged edges of the companion plate, substantially as described, and for the purpose specified.

2. The herein-described sheet-metal lock-case, consisting of two plates, each provided with flanges on two opposite side edges and fitted together, with the said flanges of each plate covering the edge of the case at the unflanged edges of the companion plate, the corners of the case being notched at the ends of said flanges, with the ends of the interlocking flanges received in said notches and forming rabbets, substantially as described, and for the purpose specified.



412,866. BOTTLE FOR LIQUID BLUING. JONATHAN C. CHAMBERLAIN, Chelsea, Mass., assignor to the Smyrar Crystal Blue Company, Saco, Me. Filed July 14, 1888. Serial No. 280,127. (No model.)

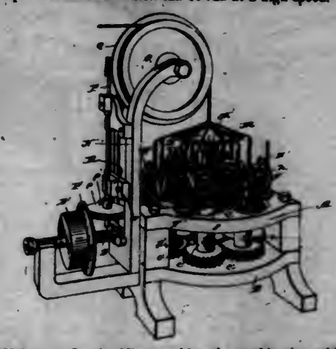
Claim.—1. A bottle or package for liquid bluing, &c., composed of a body A, made of paper-board, having notches *d* at its ends, heads B C, made of sheet metal and each having a groove *c*, to receive the ends, and a flange *b*, to surround the outside of the body, and a lining A, of resinous or other bituminous cement, filling said notches *d* and grooves *c*, substantially as described, for the purpose specified.



2. A bottle or package for liquid bluing, &c., having a discharge-tube D, in combination with a flange or ring *g*, separate from and inserted in and tightly fitting said tube, a layer *f* of paper cemented to said flange and closing said tube, and a perforated cap E, fitting over said tube and seated on said paper layer *f*, substantially as described, for the purposes specified.

412,867. APPARATUS FOR POLISHING PLATE-GLASS. AMASA F. CHAMBERS, Allegheny, Pa. Filed May 20, 1889. Serial No. 311,397. (No model.)

Claim.—In an apparatus for polishing glass, the combination, with an adjustable frame formed of hinged arms extending out from a bracket or support, and having a power-driven shaft at the forward end, of a polishing-disk mounted at the base of the shaft by a ball-and-socket joint having a feather-and-groove connection, substantially as and for the purposes set forth.



412,868. CHECK-ROW CORN-PLANTER. EDWARD CREEK, Strasburg, Ills. Filed June 4, 1888. Serial No. 313,091. (No model.)

Claim.—As an improvement in check-row corn-planters, the combination of the frame, the horizontal angle-levers G, pivoted thereon, the oscillating levers H I, the pitmen connecting the oscillating levers with the angle-levers, the lever C, mounted on the frame, and the pitmen pivoted at one end to said lever C, and provided at its free end with a T-head F, adapted to engage a perforation in either one of the angle-levers G, as specified.

412,869. BRAIDING-MACHINE. DANIEL DRAWBAUGH, Shanty's Mills, Pa., assignor of two-thirds to John A. Herman, Harrisburg, Pa., and Marcus Marx, Brooklyn, N. Y. Filed Apr. 27, 1889. Serial No. 308,722. (No model.)

Brief.—The object of the invention is to provide a compact and easily-operated machine which can be run at a high speed.

Claim.—1. In a braiding-machine, the combination, with the bed-plate and series of rotating disks working therein, having their upper faces flush with the faces of the bed-plate and the notches in their edges, of the series of spool-carriers having the extended bases resting on said bed-plate and disks and having the downward projection entering said notches, and the latches for guiding said carriers from one disk to the other, substantially as described.

2. In a braiding-machine, the combination, with the bed-plate, the series of rotating disks therein, having their upper and lower faces flush with the faces of the bed-plate, with notches in the edges of such disks, and the pivoted latches within the bed-plate, of the spool-carriers having the extended bases resting on said bed-plate, with the downward projections entering the notches and engaging the latches, and the nuts on the lower ends of said projections working against the lower face of the bed-plate and disks, substantially as described.

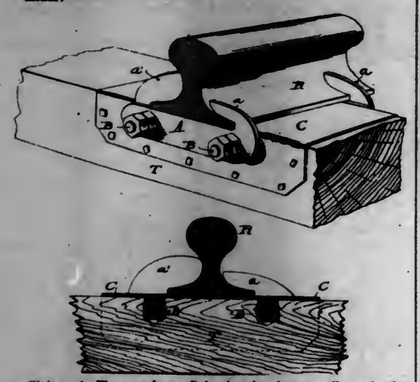
3. In a braiding-machine, the combination, with the bed-plate having the series of arc-shaped recesses and the series of circular apertures in the same, and the series of rotary disks in said apertures, and the spool-carriers moved by said disks, of the series of latches pivoted in said recesses, having the arc-shaped rear ends, substantially as and for the purpose set forth.

4. In a braiding-machine, the combination, with the bed-plate A, plate B, and series of rotary disks in plate A, with the upper and lower surfaces flush with surfaces of said plate, of the shafts on which said disks are mounted, journaled in plate B and having the intermeshing gear-wheels thereon, and the spool-carriers moved by said disks, and the latches E within the plate A, substantially as described.

5. In a braiding-machine, the combination, with the spool-carriers and means for moving them, substantially as described, of the enlarged vertically-adjustable central disk over which the braid is formed, as set forth.

6. In a braiding-machine, the combination, with the spool-carriers and means for moving them, substantially as described, of the vertically-adjustable central disk and the removable former at the center over which the braid is formed, substantially as described.

7. In a braiding-machine, the combination, with the spool-carriers and means for moving them, substantially as described, of the vertically-adjustable central disk and removable former at the center having an aperture through the same for the passage of a core, as and for the purpose set forth.



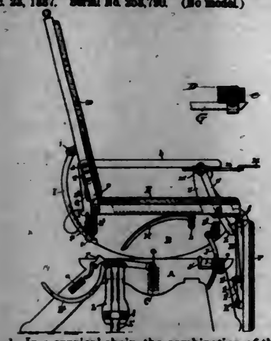
8. In a braiding-machine, the combination, with the drum over which the braid passes, having the gear-teeth thereon, of the gear engaging said teeth, the shaft in which said gear is mounted, the wheel adjustably mounted on said shaft, and the disk on the drive-shaft with which said wheel engages, substantially as described.

9. In a braiding-machine, the combination, with the drum over which the braid passes, having the gear-teeth thereon, of the worm-gear engaging said teeth, the worm-shaft, the wheel adjustably mounted on said shaft, the disk on the drive-shaft with which said wheel en-

gages, and the adjustable bearing for the worm-shaft for pressing said wheel and disk together, substantially as described.

10. In a braiding-machine, the combination, with the carrying mechanism, of a spool-carrier having the extended plate with the downward projection and nut, the spool-spindle, thread-guide, and spring, with the outwardly-turned upper end at the top, substantially as described.

412,370. **FASTENING FOR RAILROAD-RAILS.** WILLIAM R. DURRINE, Geneva, N. Y. Filed Feb. 20, 1889. Serial No. 300,559. (No model.)



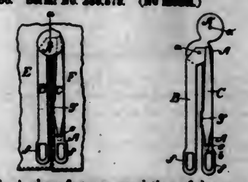
Claim.—1. The metal cap C, having its downwardly-projecting flanges provided with holes for securing the cap to the tie by means of spikes, and also with holes for the reception of the bolts B to secure the hooks A to the cap, substantially as shown and described.

2. In combination with the tie T, having the metal cap C secured thereon, the hook or hooks A, and bolts B, arranged to hold the rail R, substantially as shown and described.

3. The tie T, having notches cut in its upper edge, in combination with the metal cap C and bolts B, the parts being arranged as shown, whereby the bolts are kept from contact with the tie, substantially as and for the purpose set forth.

412,371. **SURGICAL CHAIR.** HENRY H. RIEBER, Indianapolis, Ind. Filed Dec. 22, 1887. Serial No. 258,780. (No model.)

Claim.—1. In a surgical chair, the combination of the platform, the rocking frame and spring-coupling connecting the two, the back, seat, and leg sections hinged together, the pivots securing the back-section to the rear of the rocking frame, the pivoted links connecting the seat section to the front of said frame, the pivoted segment I, its guide and locking-lever, for securing the back and seat sections in the desired position, and the pivoted segment J, with its guide and locking-lever, to lock the platform and rocker, substantially as shown and described.

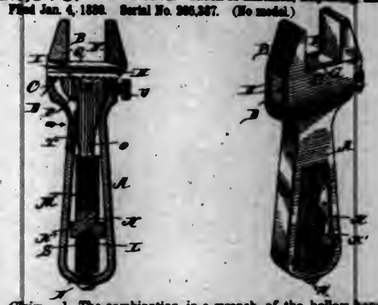


2. The combination, in a surgical chair, of the supporting-frame, the adjustable back and seat sections pivotally secured in said frame, with the elevating device for one side of the chair, consisting of the plate L, its sliding prop L', the lever L^2, and dogging-lever l', substantially as hereinbefore set forth.

3. The combination, substantially as hereinbefore set forth, of the supporting-frame, the back-section pivotally secured in said frame, the seat-section, and links c, for hinging the said sections together, the links c' for swinging the front end of the seat-section to the supporting-frame, locking-bolts for holding the links c parallel with the back-section, and the arm H and rock-shaft h, to elevate and gradually lower the seat-section independent of the back-section, for the purpose set forth.

4. The combination, substantially as hereinbefore set forth, of the platform A, rocking frame B, and spring-connection C, with the back, seat, and leg sections hinged together, as shown, and pivotally connected to the rocking frame, the segment I, hinged to the back-section, guide-box i', secured upon the cross-stretcher b^2 of frame B, the lever I', also pivoted to said cross-stretcher, the segment J, hinged to the rocking frame, the guide-box j', secured upon the cross-stretcher of the platform, and the lever J', said parts being arranged as set forth.

5. The pivotal connections for surgical chairs, consisting of the plate d, having a pin or trunnion projecting from it, the plate d^2, for receiving said pin, and the link c, hung upon said pin between said plates, in combination with the supporting-frame and adjustable back and seat sections.



412,372. **GLOVE-FASTENER.** ARALDO M. BRIGGS, Boston, Mass., assignor to the International Fastening Company, Portland, Me. Filed Nov. 3, 1888. Serial No. 289,579. (No model.)

Claim.—1. A glove-fastener consisting of the arms A and B and a spring C, having the end b and bracing-edge g, all joined together, substantially as described.

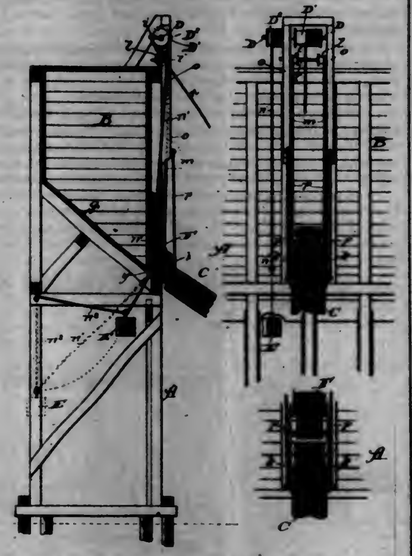
2. A glove-fastener consisting of two pivoted arms A B, one of which A is provided with a separate spring C, partially held between the arm A and the retaining portion A', riveted thereto, and partially by being buckled to said arm A, substantially as described.

412,378. **NUT-WRENCH.** PETER R. BRENNER, Ishpeming, Mich. Filed Jan. 4, 1889. Serial No. 295,367. (No model.)

Claim.—1. The combination, in a wrench, of the hollow handle having the rigid jaw, the movable jaw having the guide-arm, and the longitudinally-movable arm O in the hollow handle, adapted to engage and lock the arm of the movable jaw and be withdrawn from such engagement and having limited lateral movement, substantially as described.

2. The combination, in a wrench, of the hollow handle having the rigid jaw B, the movable jaw F, having the guide-arm with ratchet-teeth, the thumb-nut K, arranged in the hollow handle, the arm O, secured thereto, and provided with the ratchet-teeth adapted to engage those of the movable jaw and having limited lateral movement, and the spring pressing inward on the arm O, for the purpose set forth, substantially as described.

3. The combination of the hollow handle having the rigid jaw, the movable jaw having the guide-arm with ratchet-teeth, the thumb-nut having the socket L, the arm O, screwed to the thumb-nut, and having the head provided with ratchet-teeth, for the purpose set forth, the pin or screw engaging the socket L, the spring S in said socket bearing on the said pin, the spring T, bearing against one side of the arm O, and the adjusting-screw U, engaging the opposite side of said arm, substantially as described.



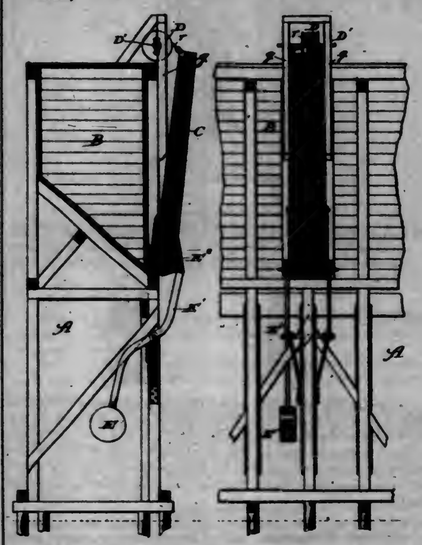
4. The combination, in a wrench, of the hollow handle having the rigid jaw B, the movable jaw F, having the guide-arm with ratchet-teeth, the thumb-nut K, arranged in the hollow handle, the arm O, secured thereto, and having the ratchet-teeth adapted to engage those of the movable jaw, said arm O being capable of vertical movement to bring said ratchet-teeth into and out of engagement with the movable jaw and having limited lateral movement, substantially as described.

5. The combination, in a wrench, of the hollow handle having the rigid jaw B, the movable jaw F, having the guide-arm with ratchet-teeth, the thumb-nut K, arranged in the hollow handle, the arm O, secured thereto and having the ratchet-teeth adapted to engage those of the movable jaw, the thumb-nut having a threaded connection with the arm O, and the adjusting-screw U, bearing against the arm O, substantially as described.

6. In a wrench, the handle having the rigid jaw B, combined with the movable jaw F, having the guide-arm O, provided with ratchet-teeth, the thumb-nut K, having threaded socket M, the arm O within the handle, and having the ratchet-teeth engaging those on the guide-arm and provided with a threaded end received in the threaded socket M, the spring bearing against the thumb-nut, and the spring bearing against the arm O, as set forth.

7. In a wrench, the handle having the rigid jaw B, combined with the movable jaw F, having guide-arm O provided with ratchet-teeth, the arm O, provided with ratchet-teeth engaging those on the arm O, and the adjusting-screw U, bearing against the arm O to move the same slightly, for the purpose set forth.

412,374. **DISCHARGE APPARATUS FOR COAL OR ORE BINS.** JOHN V. BENNER, Escanaba, Mich., assignor to the Pettibone, Mulliken & Company, Chicago, Ill. Filed May 21, 1889. Serial No. 311,097. (No model.)



Claim.—1. In a discharge apparatus for coal and ore bins, the combination, with the chute C, pivotally supported at its inner end, crank-shaft D, supported above the pivoted end of the chute and carrying the drum D', and cable n, connecting the chute from toward its free end with the drum D', of the auxiliary drum D^2 upon the crank-shaft D, weight E behind the pivoted end of the chute, a support for the weight guiding it in a defined arc during its rise and fall, and cable n', connecting the drum D^2 with the weight E and winding upon its drum in a direction contrary to that of the cable n, substantially as described.

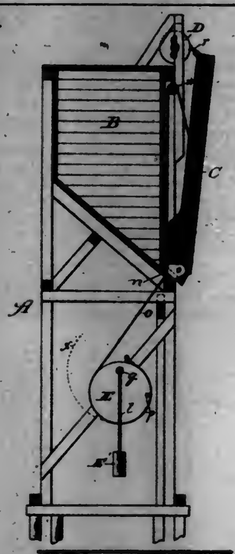
2. In a discharge apparatus for coal and ore bins, the combination, with the chute C, pivotally supported at its inner end, crank-shaft D, supported above the pivoted end of the chute and carrying the drum D', and cable n, connecting the chute from toward its free end with the drum D', of the auxiliary drum D^2 upon the crank-shaft D, weight E, pendulously supported behind the pivoted end of the chute, and cable n', connecting the drum D^2 with the weight E and winding upon its drum in a direction contrary to that of the cable n, substantially as described.

3. In a discharge apparatus for coal and ore bins, the combination, with the bin B, of a counterbalanced chute C, pivotally supported near its inner end on a horizontal bar m, to permit of its movement through a vertical arc, and movable on the said bar laterally through an arc, a pivotal bridge G, and means for raising and lowering the bridge, substantially as described.

4. In a discharge apparatus for coal and ore bins, the combination, with the bin B, having a discharge-opening, and a chute C, pivotally supported at the mid opening, of a door F, hinged at the discharge-opening, a rotary shaft l', supported on the bin and connected from near its free end with the door, and a hook k, secured to a stationary support, around which to pass the connecting medium between the door and shaft, substantially as and for the purpose set forth.

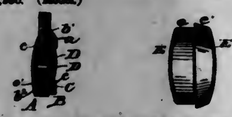
412,375. **DISCHARGE APPARATUS FOR COAL OR ORE BINS.** JOHN V. BENNER, Escanaba, Mich., assignor to the Pettibone, Mulliken & Company, Chicago, Ill. Filed May 21, 1889. Serial No. 311,098. (No model.)

Claim.—1. In a discharge apparatus for coal and ore bins, the combination, with the pivotal chute and means for operating it, of a counter-balance having an eccentrically-pivoted pulley E connected with the chute and raised and lowered on its pivot through an arc by the lowering and raising of the chute, substantially as and for the purpose set forth.



2. In a discharge apparatus for coal and ore bins, the combination, with the pivotal chute and means for operating it, of a counter-balance comprising a pulley E, eccentrically pivoted to a stationary support and provided with a leg p on its side, a cable or chain o connecting the pulley with the chute, and a weight E', suspended from a pivotal support and having its suspending medium in the path of the leg p, substantially as and for the purpose set forth.

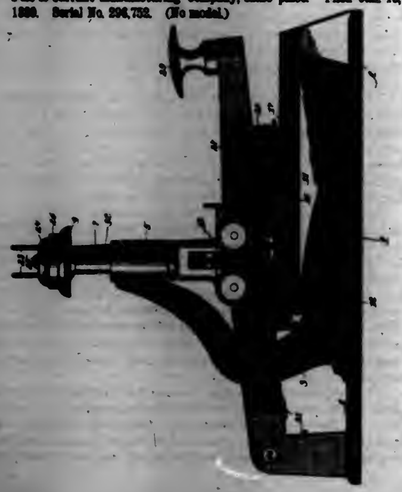
412,376. **DISCHARGE APPARATUS FOR COAL OR ORE BINS.** JOHN V. BENNER, Escanaba, Mich., assignor to the Pettibone, Mulliken & Company, Chicago, Ill. Filed May 21, 1889. Serial No. 311,099. (No model.)



Claim.—1. In a discharge apparatus for coal and ore bins, the combination, with the pivotal chute and means for operating it, of a lever E', pivotally connected at one end with the chute and carrying a weight E below and behind the chute and fulcrumed between the weight and its pivotal connection, substantially as and for the purpose set forth.

2. In a discharge apparatus for coal and ore bins, the combination, with the pivotal chute and means for operating it, of a lever E', fulcrumed between its extremities and linked from one end to the chute and carrying at its opposite end a weight E, extending below and behind the chute, substantially as and for the purpose set forth.

412,876.



412,877. COP-HOLDER FOR SEWING-MACHINE SHUTTLES. ALBERT H. FARNSWORTH, Yonkers, N. Y., assignor, by mesne assignments, to the Willimantic Linen Company, Hartford, Conn. Filed Oct. 31, 1887. Serial No. 253,980. (Model.)

Claim.—The cop-holder herein described, consisting of heads or disks E E', to be applied on opposite sides of a cop, the head or disk E, having a substantially cylindric flange *c*, fitting on a part of the width of the cop, and the head or disk E', having a flange of lesser width, which is flared outward slightly from the periphery of the cop to permit of the passage of thread from the cop, substantially as herein set forth.

412,878. MACHINE FOR RECEIPTING BILLS AND SEVERING COUPONS THEREFROM. DORR E. FELT, Chicago, Ill., assignor to the Felt & Tarrant Manufacturing Company, same place. Filed Jan. 14, 1889. Serial No. 296,752. (No model.)

Claim.—1. The combination of two dating-stamps, a severing device consisting of a fixed cutter and a movable cutter, a lever carrying the movable cutter and adapted to simultaneously operate the the movable cutter and both of the dating-stamps, and delivery-arms, as 37 and 38, substantially as and for the purposes specified.

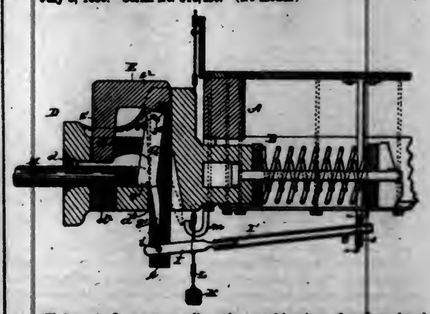
2. In a dating-machine, the combination of a fixed latch, as 43, secured to a moving part of the machine, pivoted delivery-arms, as 37 and 38, an arm, as 39, connected with one of the delivery-arms, and a pivoted hook, as 44, substantially as and for the purpose specified.

3. In a dating-machine, the combination of a bed A, two dating-stamps, a guide and shield, as 11, a guide, as 15, and stops 17 and 18, substantially as and for the purpose specified.

4. In a dating-stamp, the pivoted delivery-arms 37 and 38, in combination with a hook 44, latch 43, and spring 42, substantially as and for the purpose specified.

5. In a dating-machine, the combination of two stamps, a fixed knife, as 19, a movable knife, as 30, an operating-lever, one or more springs, as 31, and a guard, as 50, substantially as and for the purpose specified.

412,879. COMBINATION WALKING-CANE. WILLIAM FLAH and ANDREW G. BRANDT, Scranton, Pa. Filed May 13, 1889. Serial No. 311,302. (No model.)



Claim.—1. A walking-stick having a ferrule provided with a fan adapted to be withdrawn from the ferrule and pushed therein, substantially as specified.

2. A walking-stick provided with a ferrule having a sliding sleeve adapted to be forced within the ferrule and carrying a fan counteracted to open when the sleeve is drawn out and to close within the same when the sleeve is pushed in, substantially as specified.

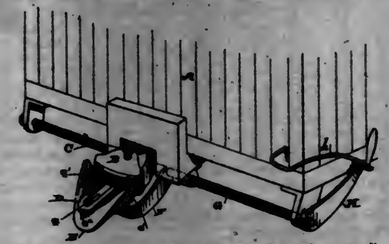
3. The herein-described walking-stick, consisting of the sections 2, pivoted, as at 3, and having at their upper ends the seat 4, secured, as at 5, and having the handle 6, adapted to receive the seat and serve as a drinking-cup, and having at their lower ends the ferrule 7, terminating in a whistle 8 and carrying the fan 10, substantially as specified.

4. A combination walking-stick consisting of the pivoted sections 2, carrying the seat 4 at the top, the hollow handle 6, in the form of a cup, to confine the seat and the upper ends of the sections, and the ferrule 7 at the bottom carrying the sliding and folding fan 10, as set forth.

412,880. CAR-COUPLING. ALEXANDER FOX, Galesburg, Ill. Filed July 5, 1889. Serial No. 316,460. (No model.)

Claim.—1. In a car-coupling, the combination of a draw-head, a coupling-pin having a shorter limb to engage with the coupling-link and a longer limb provided with a pin g^3, and a trigger having a shoulder *g* engaging with the draw-head and a slot g^2 engaging with pin g^3, substantially as described.

2. In a car-coupling, the combination of a draw-head, a coupling-pin having a shorter limb to engage with the coupling-link, and a longer limb provided with a pin g^3, and a trigger having a shoulder *g* engaging with the draw-head, a slot g^2 engaging with pin g^3, and the tail-piece or stop g', substantially as described.



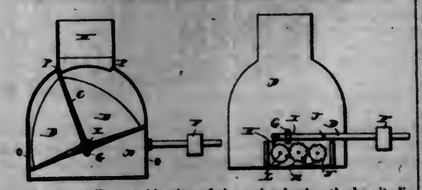
3. In a car-coupling, the combination of a draw-head, a coupling-pin having a shorter limb to engage with the coupling-link and a longer limb provided with a pin g^3, a trigger having a shoulder *g* engaging with the draw-head and a slot g^2 engaging with pin g^3, and

a lifting-bar extending across the car and adapted to raise the coupling-pin, substantially as described.

4. In a car-coupling, in combination with a draw-head and a vertically-sliding coupling-pin having limbs *c d* and a swinging catch or trigger hinged thereto, a rod I, hinged beneath the car, and a rod transversely of the car and carried by suspending-chains, substantially as and for the purpose specified.

5. In a car-coupling, in combination with a draw-head and a vertically-sliding coupling-pin having limbs *c d* and a swinging catch or trigger hinged thereto, a rod I, hinged to the coupling-pin, a hinged rod F, in which it slides endwise, and a lifting-bar extending across the car, substantially as and for the purpose specified.

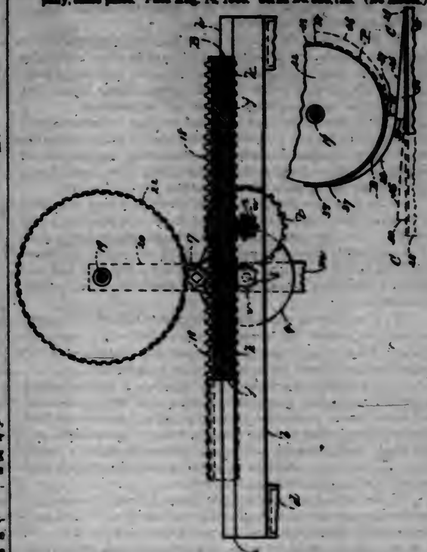
412,881. LINK-ADJUSTER FOR CAR-COUPLINGS. THOMAS H. GILMAN, WILLIAM C. HUEBEL, and LEROY GILMAN, Beaver, Nev. Filed May 8, 1889. Serial No. 310,179. (No model.)



Claim.—1. An adjuster and guide for the links of car-couplings, consisting of the swinging piece or block E, having a central bed or plane surface for holding and guiding the link, and upwardly-flaring side flanges for centrally adjusting said link, the distance between the tops of said flanges being greater than the distance between the limits of side play of the coupling-link, substantially as described.

2. An adjuster and guide for the links of car-couplings, consisting of the swinging piece or block E, having a central bed or plane surface for holding and guiding the link, upwardly-flaring side flanges for centrally adjusting said link, the distance between the tops of said flanges being greater than the distance between the limits of side play of the coupling-link, and a downwardly-inclined front lip joining the front edges of said flanges and the front of the bed-surface, substantially as described.

3. In an adjuster and guide for the links of car-couplings, the combination of the piece or block E, having a central bed or plane surface for holding and guiding the link, upwardly-flaring side flanges for centrally adjusting said link, said flanges having inclined fronts, and a downwardly-inclined front lip joining the inclined fronts of the flanges and the front of the bed-surface, the rock-shaft under the car, the lever for rocking said shaft, and the arm connecting the piece or block with said shaft, whereby it is thrown up under the link, substantially as described.



412,882. GRAIN-WEIGHER. LOUIS A. GILLET, Lawrenceville, Kans. Filed Nov. 6, 1888. Serial No. 289,145. (No model.)

Claim.—1. The combination of the casing having the longitudinally-arranged cross-bar near its mouth or upper end, the oscillating pan or receptacle arranged within the casing and having a transverse shaft extending through vertical slots in the sides of said casing and journaled in the arms of a bifurcated counterweighted lever, and a partition extending upward from the bottom of said pan or receptacle and adapted to engage notches or recesses between the longitudinal cross-bar and the sides of the casing, substantially as set forth.

2. In a grain-meter, the combination of a box or casing having vertically-slotted sides, a forked lever the arms of which are pivoted to the side of the casing and the outwardly-extending arm of which is counterweighted, the oscillating pan or receptacle within the casing having a vertical partition adapted to engage notches between the sides of said casing, and a cross-bar arranged near its mouth or upper end, and a transverse shaft extending through the slots in the sides of the casing and journaled in the arms of the forked lever, and a registering device actuated by a pawl attached to one of the arms of said lever, substantially as set forth.

412,888. MACHINE FOR MAKING ROLLED FORGINGS. CHARLES H. GOULD, Leominster, Mass., assignor to the Gould Rolling Machine Company, same place. Filed Aug. 14, 1888. Serial No. 282,726. (No model.)

Claim.—1. In a machine for making rolled forgings, companion forming-dies having, respectively, a horizontal and rotary movement, substantially as described.

2. In a machine for making rolled forgings, a horizontally-moving bed-die and a vertically-rotating companion die, substantially as set forth.

3. In a machine for making rolled forgings, companion forming-dies comprising a horizontally-reciprocating bed-die and a vertically-reciprocating rotary die, substantially as described.

4. In a machine for making rolled forgings, a horizontal bed-die and a vertically-rotating companion die moving in opposite directions, substantially as set forth.

5. In a machine for making rolled forgings, a horizontally-moving platen bearing a bed-die and driving a rotating shaft bearing a wheel provided peripherally with a companion die convex in longitudinal section, substantially as described.

6. In a machine for making rolled forgings, a body, a platen sliding horizontally thereon, a bed-die on said platen, a rotary shaft geared to the platen, a die-wheel on said shaft, and a convex die on said wheel registering with said bed-die, substantially as set forth.

7. In a machine for making rolled forgings, a body, a platen sliding horizontally thereon, a rotary shaft, a wheel thereon bearing a convex die registering with a bed-die on said platen, and mechanism for reciprocating the platen, substantially as described.

8. In a machine for making rolled forgings, a body, a horizontally-sliding platen provided with a rack, a shaft having a pinion meshing therewith and geared to the driving-shaft, a rack on the upper face of the platen, a shaft provided with a die-wheel and gear, a stub-shaft having a pinion meshing with said gear and rack, a horizontal die on the platen, and a convex die on the wheel, substantially as described.

9. In a machine for making rolled forgings, the dies C D, in combination with the body A, platen B, shaft 19, bearing the wheel 22 and gear 23, and mechanism, substantially as specified, for reciprocating said shaft and platen.

10. In a machine for making rolled forgings, a body, a horizontally-sliding platen bearing a bed-die and driving a shaft having an adjustable journal, a wheel on said shaft bearing a companion die convex in longitudinal section, and mechanism for reciprocating said platen, whereby said dies are moved in opposite directions in the same vertical plane, substantially as described.

11. In a machine for making rolled forgings, a bed-die fixed to a horizontally-moving platen, said die having longitudinally-diverging and vertically-inclined cutting-bosses, in combination with a companion

die having a similarly-constructed working-face convex in longitudinal section and arranged to rotate vertically, substantially as described.

12. In a machine for making rolled forgings, a horizontally-reciprocating bed-die and vertically-reciprocating rotary companion die, said dies moving in opposite directions in the same vertical plane and provided with longitudinally-diverging vertically-inclined cutting-bosses, substantially as described.

13. In a machine for making rolled forgings, a horizontally-reciprocating bed-die and a vertically-reciprocating rotary companion die, said dies being provided with working-faces comprising longitudinally-diverging vertically-inclined cutting-bosses having outwardly-inclined spreading faces, substantially as described.

14. In a machine for making rolled forgings, a horizontally-reciprocating bed-die and a vertically-reciprocating rotary companion die convex in longitudinal section, said dies having longitudinally-diverging vertically-inclined cutting-bosses arranged in diametrically-opposite positions, substantially as described.

15. In a machine for making rolled forgings, a body, a horizontally-sliding platen bearing a bed-die and driven by a pinion on a shaft geared to a driving-shaft, means for reciprocating said driving-shaft, a rotating shaft journaled in standards above said platen and geared thereto to revolve in an opposite direction, and a wheel on said shaft bearing a companion die convex in longitudinal section, substantially as described.

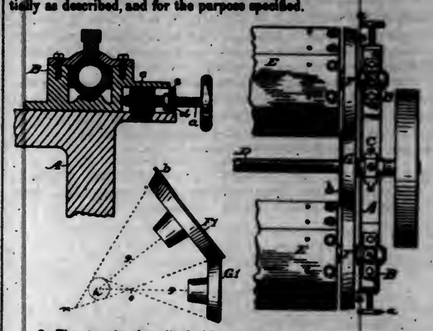
16. A machine for making rolled forgings, having a horizontally-reciprocating bed-die and vertically-reciprocating rotary companion die, said dies moving conjointly in diametrically-opposite directions and in the same vertical plane, substantially as described.

17. In a machine for making rolled forgings, a body, a reciprocating driving-shaft, an intermediate shaft geared thereto, a horizontally-sliding platen having a rack meshing with a pinion on said shaft, a stub-shaft and pinion meshing with a rack on said platen, and a gear on a rotary shaft journaled in standards above said platen, a bed-die on the platen, and a wheel on the rotating shaft bearing a convex companion die, substantially as described.

18. The body A and reciprocating platen B, bearing the die C, in combination with the shaft 19, geared to said platen to move in opposite directions thereto, the wheel 32 on said shaft, and the convex die D, secured on said wheel, all being arranged to operate substantially as described.

412,384. BRUSH. AUGUSTUS E. GRIESWALD, Chicago, Ill. Filed Jan. 24, 1889. Serial No. 297,365. (No model.)

Claim.—The combination, with a whisk-brush A, of a band B, extending around the brush, and a staple *p*, passed into the broom through the adjacent ends of the band and securing the said ends together, and a retaining medium for the staple, substantially as and for the purpose set forth.



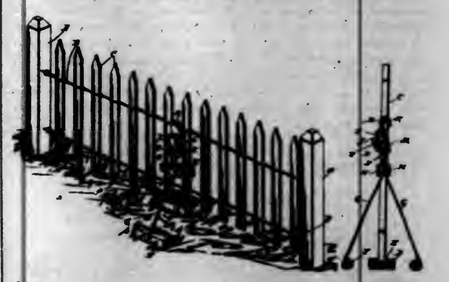
412,385. MANUFACTURE OF WINE. WILLIAM P. HAMLIN, Rogers, Ark. Filed June 13, 1889. Serial No. 313,909. (No specimens.)

Claim.—1. The herein-described method of manufacturing wine from the juices of fruits, consisting in adding to the juice bran, subjecting the same to the action of the bran for a period of time, then separating the juice from the bran and sweetening, next skimming and allowing the same to stand, as specified.

2. The herein-described method of manufacturing wine from the juices of fruits, consisting in adding to the juice wheat-bran, subjecting the same to the action of the bran, separating the juice by straining from the bran, sweetening, skimming, and next setting aside for fermentation, these steps being performed in the order named and in the manner described, as specified.

412,386. FRICTION-GEARING. JOHN HENDERSON, Jr., Waterbury, Conn. Filed Apr. 26, 1887. Serial No. 236,978. (No model.)

Claim.—1. The combination of the driving-shaft D, the driving-wheel G, the driven wheel F, and its shaft arranged parallel to said driving-shaft, the wheels G and F having single treads each parallel to each other and out of parallelism to said parallel shafts, substantially as described, and for the purpose specified.

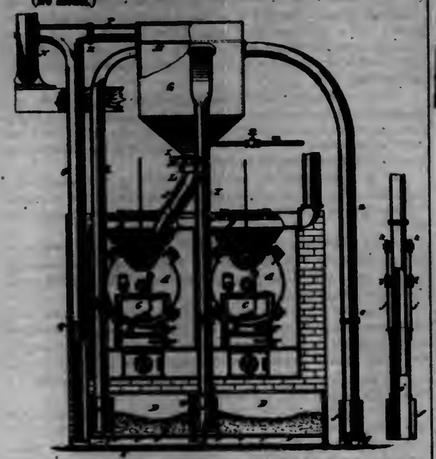


2. The herein-described friction-gearing for communicating power, consisting of the driving-shaft, the driving-wheel mounted thereon, the driven wheel on a carrying-shaft, each wheel having a single thread, one wheel being provided with a holding-flange, the treads of the two wheels being parallel to each other and out of parallel to a line running through their meeting point at the same proportionate distance from the axis of each wheel, substantially as described, and for the purpose specified.

3. The combination of a frame, the beveled friction-gearing mounted thereon, the pillow-block B, having a bearing for the driven wheel of said friction-gear, the nut *c*, and the shipping-screw *a*, substantially as described, and for the purpose specified.

4. The combination of a frame, the friction driving-gearing mounted thereon, the pillow-block B, having a bearing for the driving-wheel and carrying one end of the barrel-shaft, said block being adapted to rise and fall on the frame, and shipping mechanism that bears upon the pillow-block at a point below the axis of the barrel-shaft, whereby the weight of the barrel may be thrown on said friction-gearing, substantially as described, and for the purpose specified.

412,387. FENCE. HIRAM A. HOLDAHOR, Marlborough, Ohio. Filed June 26, 1889. Serial No. 315,503. (No model.)



Claim.—1. The combination of the tension-block adapted to be hung on the upper fence-wire, the brace-wire, and the tension-wire secured to the brace-wire and adjustably secured in the tension-block, as set forth.

2. The combination, with the fence, of the base-blocks D, having grooves in their upper sides to receive the lower ends of the pickets, the blocks H, secured to the pickets, the brace-wire passing upward between said blocks, the tension-block hung on the upper fence-wire, and the tension-wire secured to the brace-wire and adjustably fitted in the tension-block, as set forth.

3. The tension device consisting of the block J, provided with a hook K at its upper end and provided in its lower portion with the slot L, the groove M, and the opening N, the lug O on the side of the block, and the set-screw mounted transversely in the block and passing through the slot L, as set forth.

4. The combination, with the fence, of the blocks A, secured to the pickets, the brace-wire passing upward between said blocks, the tension-block hung on the upper fence-wire, and the tension-wire secured to the brace-wire and adjustably fitted in the tension-block, as set forth.

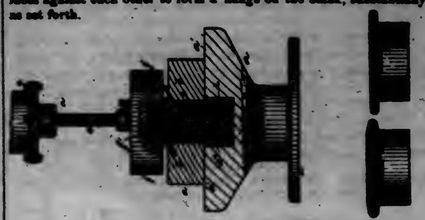
412,388. APPARATUS FOR USE IN CONNECTION WITH COFFEE-ROASTERS. GEORGE S. HENDERSON, Syracuse, assignor to the Hungerford Company, New York, N. Y. Filed Apr. 26, 1888. Serial No. 271,633. (No model.)

Claim.—1. The apparatus hereinbefore described for use in connection with coffee-roasters, said apparatus consisting of the elevated hopper having a discharge-pipe at its lower end, combined with an exhaust in communication with the hopper, an elevating-pipe for green coffee leading into the hopper, a box having a perforated bottom to receive the roasted coffee from the roaster, a pipe connected with the exhaust for creating a cooling draft through the coffee, and an elevating-pipe for returning the roasted coffee to the hopper, leaving the gravel and stones in the box, substantially as set forth.

2. In apparatus for handling coffee by air-suction, an exhaust, combined with the hopper and a conveying-pipe leading from the hopper to the coffee, the lower end of this pipe being provided with a sleeve *f*, having legs *g* and lugs h, and forming an air-space between it and said pipe, substantially as set forth.

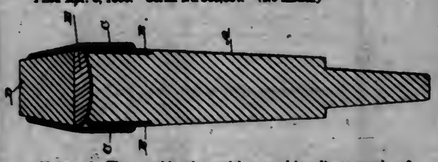
3. The elevated hopper having the discharge-pipe at its lower end, combined with an exhaust in communication with the hopper, the cooling-box for holding the coffee and having a perforated bottom, a draft-pipe extending from the exhaust to a point below said perforated bottom, and an elevating-pipe extending from said box to the hopper for conveying the coffee after being cooled to the hopper, leaving the gravel and stones in the box, substantially as set forth.

4. In apparatus for handling coffee by air-suction, the exhaust, combined with the hopper and a conveying-pipe leading from the hopper to the coffee, that portion of the pipe turning from a vertical line being reduced in diameter in one direction, substantially as set forth.



5. In apparatus for handling coffee by air-suction, the elevated hopper having a discharge-pipe at its lower end and an exhaust-pipe, combined with an elevating-pipe leading into said hopper and a weighted flexible apron suspended within the hopper over the mouth of said pipe, substantially as set forth.

6. The hopper having a discharge-pipe at its lower end and the perforated gate I', covering said discharge, combined with an exhaust connected with the hopper and a conveying-pipe leading from the base of the apparatus to said hopper, substantially as set forth

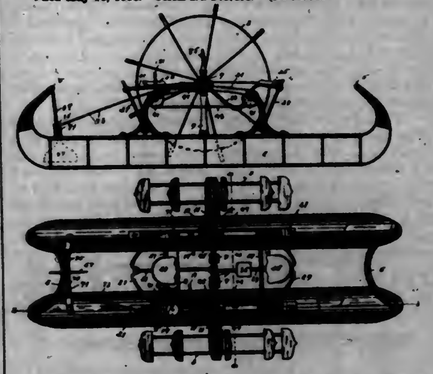


7. The apparatus for use in connection with coffee-roasters, said apparatus consisting of a hopper having the discharge-pipe at its lower end, combined with a receptacle to receive the roasted coffee from the roaster, an elevating-pipe for conveying the roasted coffee to the hopper, and an air-exhaust in communication with said hopper and with said receptacle, the exhaust-connection being separated from the roasted coffee in the receptacle while the coffee is being cooled by a perforated partition, substantially as set forth.

412,389. METHOD OF MAKING COLLARS FOR AXLES AND SKEINS. JOHN J. HENNWOOD, Allegheny, Pa., assignor to William P. Patterson, same place. Filed Feb. 26, 1889. Serial No. 301,120. (No model.)

Claim.—The herein-described process of forming flanged collars for axles and axle-skeins and other purposes, consisting in first swaging or compressing a tubular blank open at both ends longitudinally and so forming an annular swelled portion at one end thereon, and then compressing and flattening said swelled portion and forcing its faces against each other to form a flange on the blank, substantially as set forth.

412,390. TOOL-HANDLE. JONATHAN S. JAQUITH, Sierra City, Cal. Filed Apr. 3, 1889. Serial No. 305,867. (No model.)

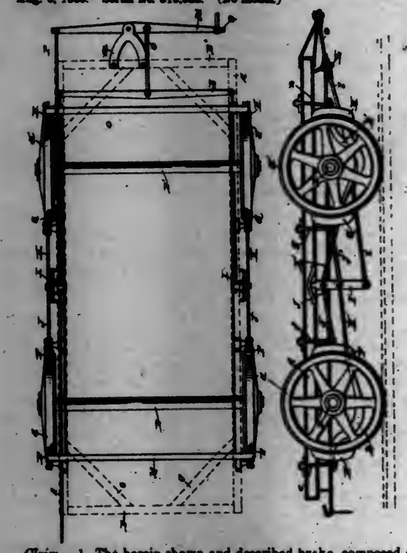


Claim.—1. The combination, with a tool handle or stock, of a threaded band fitted to the handle, a hollow nut adapted to be screwed upon said band, a cushion-block fitted in the projecting end of the hollow nut, and a loose metal bearing-plate between the cushion and handle or stock, substantially as described.

2. In combination with a tool handle or stock having a threaded band, a hollow nut seated on said band, a cushion-block seated in the nut with its outer end projecting therefrom, and the bearing-plate lying between the inner end of the cushion-block and the end of the handle or stock, said plate having a convex inner side fitting a concave seat in the end of said handle or stock, substantially as described.

3. In combination with a tool hand or stock, a threaded band or ring secured on its end, a hollow nut screwed on said band or ring and having its interior tapering, a tapering cushion-block seated in said nut with its outer end projecting therefrom, and a bearing-plate lying between the inner end of the cushion-block and the handle or stock, and having a convex inner side fitting a concave seat in the end of said handle or stock, substantially as described.

412,391. WATER-BICYCLE. CHARLES JOHNSTON, St. Paul, Minn. Filed May 10, 1888. Serial No. 273,462. (No model.)



Claim.—1. In a boat or water-bicycle having two independent hulls properly joined together, the combination, with a crank-shaft carrying and driving side paddle-wheels, of adjustable bearings for said shaft adapted to slide in or upon their supports longitudinally with the boat and to carry the paddle-wheels of the boat forward or aft, as desired, substantially as described.

2. In a boat or water-bicycle having two independent hulls properly joined together, the combination, with a crank-shaft carrying and driving side paddle-wheels, of the adjustable bearings 47, adapted to slide in or upon their supports longitudinally with the boat and to carry the paddle-wheels forward or aft, as desired, and the seats 23 and 25, supported upon the connecting rods or bars 31 and 33, joined, respectively, at one end to the crank-shaft and at the other end to the

bell-shaped supports 27 and 29, so that the seats are moved forward and backward with the paddle-wheels and shaft, substantially as described.

3. In a water bicycle or side-wheel boat, the combination, with the shaft 9, supporting and driving the paddle-wheels 3, and having adjustable sliding bearings 47, of the sprocket-chains 43, rigidly fastened to the bearing-boxes at 45, the sprocket-carrying shafts 37 and 39, and the lever 51, fixed to one of the shafts 37 and 39, by means of which the shaft is turned in either direction, so as to drive the sprocket-chains and shift the position of the paddle-wheel shaft, substantially as described.

412,892. CAR-BRAKE. WILLIAM JOSLIN, Cleveland, Ohio. Filed Aug. 6, 1888. Serial No. 319,982. (No model.)

Claim.—1. The herein shown and described brake, composed of the suspended brake-shoes E F and G H, the shoes E F being disposed on opposite sides of the wheel *d* and the shoes G H on opposite sides of the wheel *d'*, the vertical lever I between the wheels *d d'*, the rods J and J' connecting lever I with the shoes F and G, and the rods K and K', connecting the shoes E and H with the said lever I in line with the points of connection of the rods J and J' with the said lever, substantially as and for the purpose described.

2. The hereinbefore-described system of brake-levers, composed of the corresponding pairs of suspended brake-shoes E F and G H on opposite sides of the car-truck, the vertical levers I, connected by rods J J' with the shoes F and G, and by rods K and K' with the shoes E and H, the brake-beams N and O, connecting the shoes E and H on opposite sides of the truck, the lever L, connected with the levers I, and the lever M, pivoted between its ends and connected with the lever L, and adapted to have its ends connected with the crank-bars on the opposite sides of the car, substantially as set forth.

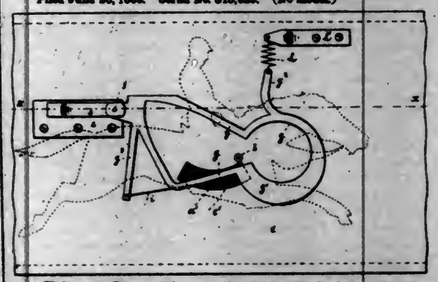
412,893. STEAM-ENGINE LUBRICATOR. HENRY R. KAY, Fall River, Mass., assignor of one-half to Albert S. Palmer, same place. Filed June 7, 1889. Serial No. 313,676. (No model.)

Claim.—1. In a lubricator, the combination of an oil-reservoir and tubular connections leading from its upper and lower extremities into the steam-pipe, the said reservoir having a supplemental chamber provided with an oil-inlet for supplying the reservoir, substantially as described.

2. In a lubricator, the combination, with an oil-reservoir, of a supplemental chamber attached to the same, having a lateral hollow projection and a sight-feed glass supported at one end by said hollow projection and connected therewith, the opposite end of said glass being held in place by a vertically-adjustable connection, substantially as described.

3. In a lubricator, the combination, with an oil-reservoir, of a supplemental chamber opening into the same, having a lateral hollow projection, a valve and valve-seat within said projection, a sight-feed, and an oil-guide within the same, the said oil-guide being supported by the valve-seat, substantially as described.

4. In a lubricator, the combination, with an oil-reservoir, of a sight-feed glass and an adjustable support for one end of the same, whereby glasses of different lengths may be used, substantially as described.



5. In a lubricator, the combination, with an oil-reservoir, of a support extending from the same and a lateral projection from said support, adjustable thereon, for the reception of one end of the sight-feed, substantially as described.

6. In a lubricator, the combination, with an oil-reservoir, of a support extending from the same and a lateral projection from said support, adjustable thereon, for the reception of one end of a sight-feed glass, the said lateral projection being adapted to permit the passage through it of a pipe connecting the sight-feed glass with the steam-pipe, substantially as described.

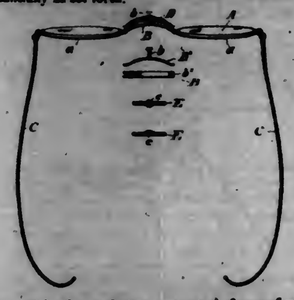
7. In a lubricator, the combination, with an oil-reservoir, of a supplemental chamber above the same, a rod secured to the top of said chamber, screw-threaded a portion of its length near the upper extremity, a movable part fitting loosely upon said rod and extending laterally and adjustable thereon by means of nuts, a sight-feed glass, one end of which is supported by said movable part, and a pipe passing through said movable part, adjustable thereon, for the purpose of connecting the sight-feed glass with the steam-pipe, substantially as described.

8. In a lubricator, the combination, with an oil-reservoir, of a water-supply for forcing the oil into the steam-pipe, a sight-feed glass, pipe connecting said reservoir and said sight-feed glass with said steam-pipe at two points, one above the other, both of said points being above the reservoir, and a wire extending through the sight-feed glass for guiding the oil, substantially as described.

412,894. MOVABLE SIGN. EDWARD K. KELLY, New York, N. Y. Filed June 26, 1889. Serial No. 315,620. (No model.)

Claim.—1. The combination of a slotted back plate with a sign pivoted thereto, a lever *g*, also pivoted thereto and connected to the sign, and with a spring *h*, by which the free end of the lever is suspended, the sign and the lever turning on different pivots, substantially as specified.

2. The combination of a pivoted sign *a* with an oscillating pivoted lever *g*, a spring *h*, by which the free end of the lever is suspended, and with a rod *i* and pin *d'* for connecting the lever to the sign, substantially as specified.



412,895. SPECTACLE-FRAME. HENRY E. KIRSTEIN, Rochester, N. Y. Filed June 19, 1889. Serial No. 314,797. (No model.)

Claim.—1. As an article of manufacture, a spectacle-frame having a self-adjustable nose-rest or uniting-bridge.

2. In combination with the lens-frames, lenses, and temples of spectacles, a spring-controlled nose-piece adjustable with respect to said lenses and lens-frames, substantially as set forth.

3. As an article of manufacture, a spectacle-frame of which that portion which rests upon the nose of the wearer is capable of an independent movement with respect to the lenses, substantially as set forth.

4. As an article of manufacture, a spectacle-frame of which that portion which rests upon the nose of the wearer is free to move with respect to the lenses, and is controlled in such movement by a spring device, substantially as set forth.

5. As an article of manufacture, a spectacle-frame of which that portion which rests upon the nose of the wearer is mounted upon side-bearings, so as to be capable of an independent movement with respect to the lenses, and is controlled in such movement by spring devices, substantially as set forth.

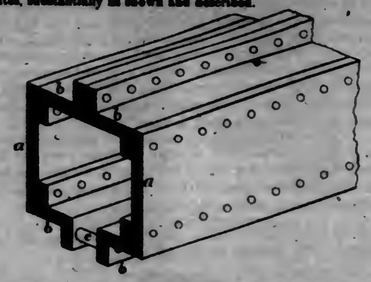
6. As an article of manufacture, a spectacle-frame within the uniting-bow of which is resiliently secured a supplemental nose bearing-piece, substantially as set forth.

7. As an article of manufacture, a spectacle-frame, a uniting-bow, a supplemental nose bearing-piece extremitally fitted to slide upon the sides of the uniting-bow, and a spring interposed between said supplemental nose bearing-piece and a rigid portion of the spectacle-frame, substantially as set forth.

8. As an article of manufacture, a spectacle-frame, a uniting-bow embodying an aperture, a supplemental nose bearing-piece mounted within said uniting-bow and provided with a stem which is entered within the aperture of the uniting-bow, and a spring interposed between said uniting-bow and supplemental nose bearing-piece, substantially as set forth.

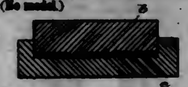
9. As an article of manufacture, a spectacle-frame, a uniting-bow embodying an aperture, a supplemental nose bearing-piece extremitally fitted to slide upon the sides of the uniting-bow and provided with a stem which is entered within the aperture of the uniting-bow, and a spring interposed between said uniting-bow and supplemental nose bearing-piece, substantially as set forth.

412,896. INKSTAND. JOHN LARKIN, Bradford, Pa. Filed May 20, 1889. Serial No. 312,491. (No model.)



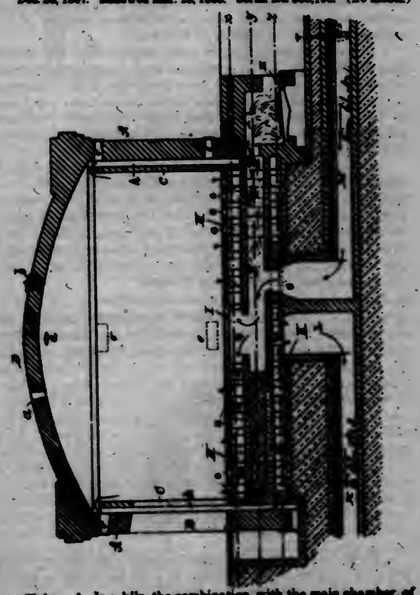
Claim.—1. An inkstand the reservoir of which is composed wholly of rubber, the bottom and sides of the reservoir being formed of thick rubber and the top of thin collapsible rubber, substantially as shown.

2. The combination, with an inkstand the reservoir of which is composed wholly of rubber, the bottom and sides of the reservoir being formed of thick rubber and the top of thin collapsible rubber, of an endwise-moving tube which extends down through the top into the body and provided with a cone or funnel at its outer end, whereby the top is depressed by a pressure upon the cone and the ink forced therein automatically, substantially as shown and described.



412,897. COLUMN, STRUT, GIRDER, &c. WILLIAM J. LEE, Trenton, N. J. Filed May 16, 1889. Serial No. 310,962. (No model.)

Claim.—1. A metallic column, strut, girder, or similar structure substantially rectangular in form, having one or more partly-open sides formed of flanged bars arranged with flanges projecting so that they may be fastened together by means of rivets or bolts and washers or similar contrivances without the use of lattice-bars or batten-plates, substantially as shown and described.



2. In a metallic column, strut, girder, or similar structure substantially rectangular in form, one or more sides thereof constructed of angle or Z-shaped bars with flanges placed back to back.

412,898. METHOD OF MANUFACTURING ARTICLES FROM SHELL, &c. GEORGE T. LINDELL, Leominster, Mass., assignor to the Shelton Comb Company, Huntington, Conn. Filed Feb. 11, 1887. Serial No. 227,267. (No model.)

Claim.—The improvement in the art of making open-work manufactured articles of horn, shell, celluloid, and like substances, which consists in first softening the blank or sheet of material to be treated, then compressing the same between suitably-engraved dies, whereby a deeply-depressed pattern is formed on one side, and finally abrading and removing the rear portion, leaving the article with openings or interspaces forming the desired pattern, substantially as described.

412,899. BRICK-KILN. FRANK P. HEYBURN, Chicago, Ill. Filed Dec. 26, 1887. Renewed Mar. 13, 1889. Serial No. 303,196. (No model.)

Claim.—1. In a kiln, the combination, with the main chamber, of a mixing-chamber in communication with the kiln-furnace and a distributing-chamber arranged beneath the main chamber and connected with the mixing-chamber by a flue, substantially as described.

2. In a kiln, the combination, with a main kiln-chamber, of a mixing-chamber in connection with the kiln-furnaces, an interposed distributing-chamber, and a return-flue practically surrounding the main kiln-chamber, substantially as described.

3. In a kiln, the combination, with a main kiln-chamber, of a mixing-chamber, an interposed distributing-chamber, and a return-flue practically surrounding the main kiln-chamber and leading to the mixing-chamber of the next succeeding kiln, substantially as described.

4. In a kiln, the combination, with the main kiln-chamber, of a mixing-chamber in communication with the furnace of the kiln, a fresh-air passage leading to the mixing-chamber, and an interposed distributing-chamber, substantially as described.

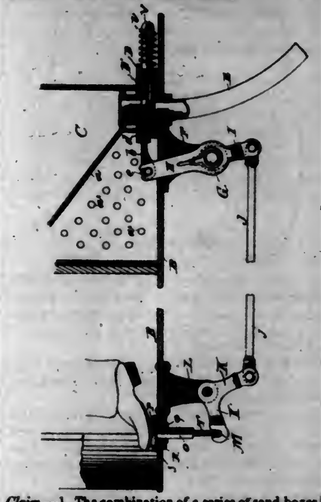
5. In a kiln, the combination, with the main kiln-chamber, of a mixing-chamber in connection with the kiln-furnace and with the escape-flue of the preceding kiln, an interposed distributing-chamber, and a return-flue surrounding the main kiln-chamber and provided with air-passages *o o*, substantially as described.

412,400. FOLDING CHAIR. ARNIS B. MILLIKEN, Chicago, Ill. Filed June 11, 1889. Serial No. 313,837. (No model.)

Claim.—1. A chair having its back and rear legs formed integrally, the back divided vertically into two sections hinged at their upper ends to a separating-block, a seat divided into two sections extended at right angles to the back-sections and pivotally connected thereto, front legs hinged to the forward ends of the seat-sections, and suitable brace-rods adapted to secure the parts of the chair in their extended position, substantially as described.

2. A folding chair having its back constructed in two sections, hinged, respectively, to an intermediate block or section and provided with a ledge to receive the rear edge of the seat, a seat constructed in two sections hinged to the back-sections, respectively, legs hinged to said seat-sections at their front edges, and suitable brace-rods adapted to secure the parts in their extended position, substantially as described.

3. A folding chair having its back and rear legs constructed integrally, the back divided vertically into two sections hinged at their upper ends to a separating-block, a seat constructed of two sections extended at right angles from the back-sections and hinged thereto at their rear edges, front legs hinged at their upper ends to the front ends of the seat-sections, longitudinal brace-rods connecting the front and rear legs, and diagonal brace-rods connecting the seat-sections and the front legs, substantially as described.



412,401. COMBINED CRAYON-SHARPENER, CUSHION, AND WEIGHT. GEORGE W. MILLS, Elizabeth, N. J., and JAMES MORPHETT, Brooklyn, N. Y. Filed Aug. 17, 1888. Serial No. 282,906. (No model.)

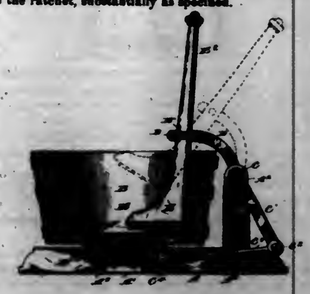
Claim.—1. In a combined crayon-sharpener, pin-cushion, weight, and crayon-holder, the combination of a flat top E with a knife H and the guide F, substantially as described.

2. In a combined crayon-sharpener, pin-cushion, weight, and crayon-holder, the combination of a flat top E with the knife H, guide F, and receptacle J, substantially as described.

412,402. SANDING APPARATUS FOR RAILWAY-CARS. HENRY MILLER, Jr., New York, and MARY A. COMBS, Brooklyn, assignors to the Jordan-Mills Manufacturing Company, New York, N. Y. Filed Dec. 24, 1888. Serial No. 294,512. (No model.)

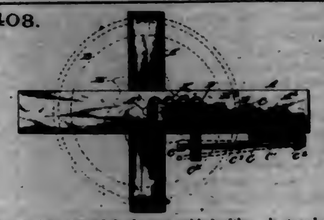
Claim.—1. The combination of a series of sand-boxes having horizontal valves, said valve and box being located above the car-floor, with a vibrating shaft having rocker-arms extending through the car-floor and engaging with the said valve, and a treadle mechanism, the said shaft and treadle being connected, substantially as described.

2. The sand-box C, provided with a horizontal valve D', located above the car-floor, in combination with the vibrating shaft G, arm H, connecting the said shaft and valve, arm I and treadle being connected, substantially as described.



3. In a treadle mechanism, the combination of a push-pin reduced in diameter at one end, and a bell-crank lever provided with a transverse depression and a longitudinal slot in one of its arms for interchangeable engagement with the push-pin, substantially as described.

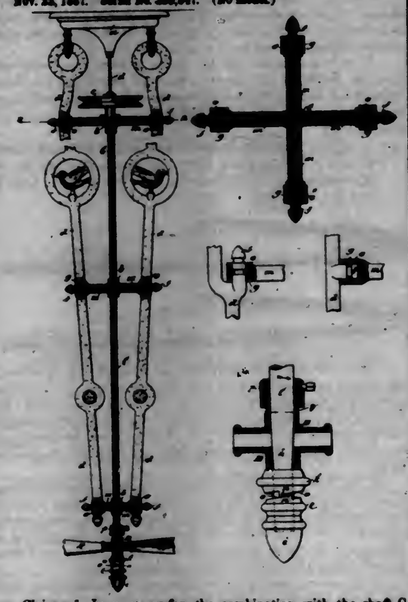
4. The combination, with a sand-box, of a vibrating shaft operatively connected thereto, a push-pin reduced in diameter at one end, and a bell-crank lever provided with a transverse depression and a longitudinal slot in one of its arms, the said lever and shaft being connected, substantially as set forth.



5. The combination, with a sand-hopper, of a valve located beneath the hopper, a spring connected directly to the valve, a vibrating shaft operatively connected thereto, a push-pin reduced in diameter at one end, and a bell-crank lever provided with a transverse depression and a longitudinal slot in one of its arms, the said lever and shaft being operatively connected, substantially as set forth.

412,403. WASHING-MACHINE. JOHN W. MULLINS, London, Ky. Filed May 17, 1889. Serial No. 311,116. (No model.)

Claim.—1. The combination, with a base having a pivot and an upright, of a tub having a ratchet bearing on said pivot, arms pivoted to the upright, a pounder pivoted to the free end of one of said arms, and the pawl O', pivoted at one end, and its other end, after passing through a keeper on the base, turned up to form a vertical portion to engage the ratchet, substantially as specified.

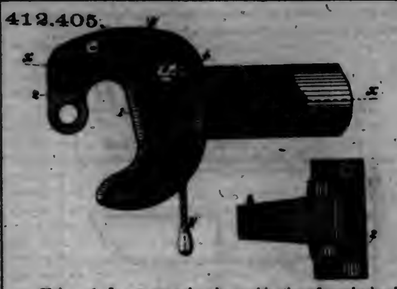


412,408.

2. The combination of the base provided with a pivot and standard, a pounding-lever pivotally connected to a curved arm, a straight arm, a pivot or shaft common to both arms and rigidly connected with the same, a pawl pivoted to the straight arm and mounted in a staple constructed to permit lateral movement therein of the pawl, and the tab provided with the ratchet, substantially as specified.

412,404. POWER-FAN. PETER MURRAY, Jr., Newark, N. J. Filed Nov. 22, 1887. Serial No. 255,947. (No model.)

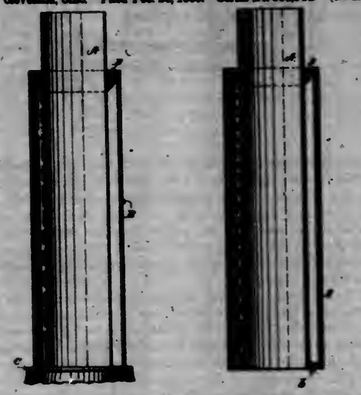
Claim.—1. In a power-fan, the combination, with the shaft C, having the head *i*, of the hub B, mounted to turn freely upon said shaft, and the loose collars *k l*, having the coacting inclines or cam-surfaces *o*, substantially as described.



2. In a power-fan, the combination, with the shaft C, having the head *i*, of the hub B, mounted to turn freely upon said shaft, and the loose collars *k l*, having the coacting inclines or cam-surfaces *o* and engaging shoulders *n*, substantially as described.

3. In a power-fan, the combination, with the shaft C, having the tapered end portion A, of the hub B, mounted to turn freely upon said tapered portion, and the loose collars *k l*, having the coacting inclines or cam-surfaces *o*, substantially as described.

412,405. CAR-COUPLING. WILLIAM MCCONWAY, Pittsburg, Pa. Filed Aug. 8, 1889. Serial No. 320,062. (No model.)



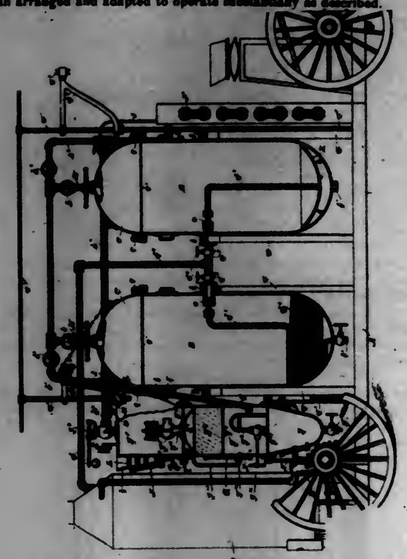
412,405.

Claim.—1. In a car-coupler, the combination of a swinging hook provided with a tail, and a ball for locking the hook in a closed position, substantially as set forth.

2. In a car-coupler, the combination of a swinging hook provided with a tail, a ball for locking the hook in a closed position, and a lifting device for moving the ball out of the path of travel of the hook, substantially as set forth.

412,406. JACKET FOR LAMP-CHIMNEYS. THOMAS MCGOWAN, Cleveland, Ohio. Filed Feb. 26, 1889. Serial No. 301,544. (No model.)

Claim.—1. The combination, with a lamp-chimney, of a jacket surrounding the chimney leaving an air-space between the two, such space being hermetically sealed at both top and bottom, substantially as set forth.

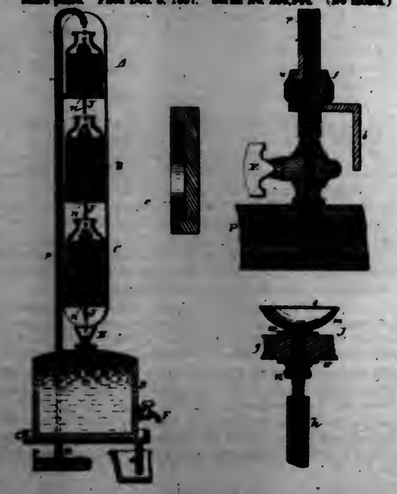


2. The combination, with a lamp-chimney, of a jacket surrounding the chimney leaving an air-space between the two, such space being hermetically sealed at the bottom and having a packing-ring between the jacket and chimney at or near the top of the latter for closing such air-space at the top, such packing-ring being adapted to serve as a reflector, substantially as set forth.

412,407. DISTILLING APPARATUS. PEDRO HAPELIN, Napa, Cal. Filed Mar. 6, 1888. Serial No. 302,151. (No model.)

Claim.—1. In a distilling apparatus, the combination of a series of boilers, the independent steam-boiler, the rectifier and the condenser, pipes connecting the steam-boiler with the boilers of the series, and controlling-cocks in said pipes whereby the steam may be directed in any or all of the boilers of the series, pipes connecting the boilers of the series with the rectifier and condenser, and cocks controlling said pipes whereby the vapor may be directed from any or all of the boilers into the rectifier or into the condenser, and a pipe connecting the rectifier with the condenser, substantially as described.

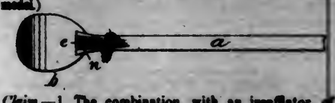
2. In a distilling apparatus, the series of swinging boilers having pivotal trunnions, the steam-boiler, the rectifier, and the condenser, in combination with the horizontal steam-pipe *d* from the boiler, the horizontal branches *d'* of said pipe, the vertical pipes d^3, extending downwardly between the boilers from the branch pipes, the coupling-pipes d^5 d^5, extending from the vertical pipes into the boilers through their trunnions, the controlling-cocks d^6 in the pipes d^5 d^5, the pipes H from the tops of the boilers, the controlling-cocks h in said pipes, the pipes h', connecting the pipes H with the rectifier, the pipes h^2, connecting said pipes H with the condenser, the cocks h^3, controlling-pipes h' h^3,



and the pipe h^4, connecting the top of the rectifier with the condenser, all arranged and adapted to operate substantially as described.

3. In a distilling apparatus and in combination with its distilling-boiler, the rectifier G, consisting of the chest g, to which steam is admitted, the cylinder g' above, connected with the distilling-boiler and having perforated diaphragms with intervening charcoal, the valve-controlled siphon connecting the cylinder with the chest below, the cylinder g^2 above, having the valve-controlled outlet, and the valve-controlled passage connecting said cylinder with the lower cylinder g', substantially as described.

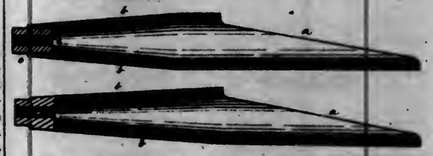
4. In a distilling apparatus, the boilers having side trunnions pivotally mounted, whereby said boilers may be tilted, in combination with the removable covers or lids of said boilers having side handles, the fixed frame-work a' above the boilers, the brackets a^3 of the frame-work, the pulleys a^4 in the ends of the brackets, and the chains connected with the handles of the covers or lids and passing over the pulleys, whereby the covers or lids are supported when the boilers are tilted from under them, substantially as described.



412,408. **FILTERING AND CLARIFYING WATER.** ALBERT G. HOWARD, Springfield, Mass., assignor of one-half to Stephen W. Bowles, same place. Filed Dec. 3, 1887. Serial No. 256,944. (No model.)

Claim.—1. The combination, with a jar or receptacle provided with an eduction pipe or outlet, of an induction-pipe comprising a water-passage and a transverse diaphragm in such passage, each side of which is a plane surface at right angles to the walls of passage, said diaphragm having a fine central perforation, substantially as described.

2. In an apparatus for filtering and clarifying water, the combination, with a jar or jars containing a material for filtering, clarifying, and deodorizing the water, of a water-supply pipe and a valve therein provided with a water-passage and a transverse diaphragm in such passage, each side of which is a plane surface at right angles to the walls of passage, said diaphragm having a fine central perforation, substantially as described.

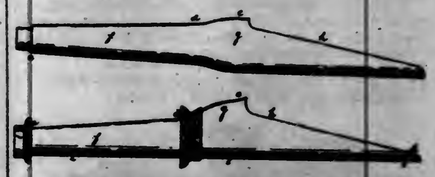


412,409. **TONGUE-DEPRESSING INSUFFLATOR.** JOSEPH D. GROSSER, Newark, N. J. Filed Feb. 1, 1889. Serial No. 298,302. (No model.)

Claim.—1. The combination, with an insufflator, of a spoon-shaped tongue-depressor having a highly-polished surface curved downwardly at its outer end and attached tangentially to the nozzle of the insufflator, as and for the purpose set forth.

2. The combination, with the convex polished tongue-depressor b, of the insufflator-tube having a flattened nozzle with the central depression c, forming the outlet-channels d d, and attached tangentially to the convex side of the tongue-depressor, as and for the purpose set forth.

412,410. **METHOD OF SECURING PLUGS IN TUBULAR SKEINS.** WILLIAM F. PATTERSON and JOHN J. IRSENWOOD, Allegheny, Pa.; said Isherwood assignor to said Patterson. Filed Feb. 26, 1889. Serial No. 301,118. (No model.)

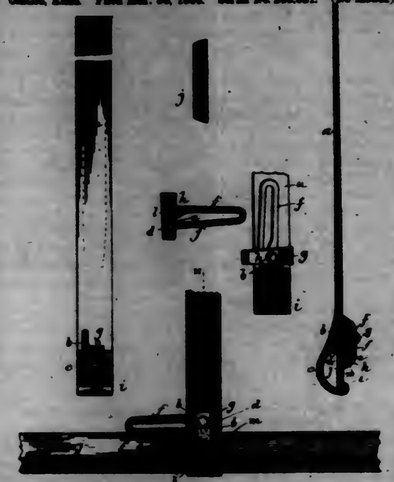


Claim.—1. The herein-described improvement in the art of securing plugs in and forming the spindle portions of axles or axle-skeins, consisting in first partially tapering or reducing a tubular blank, then inserting and welding the plug in the end thereof, and then completing the tapering or reduction of the blank to bring the spindle portion to the finished shape, substantially as and for the purposes set forth.

2. The herein-described improvement in the art of securing plugs in and forming the spindle portions of axles or axle-skeins, consisting in first partially tapering or reducing a tubular blank, then inserting the plug in the end thereof, and then completing the tapering or reduction of the blank to bring the spindle portion to the finished shape, substantially as and for the purposes set forth.

3. The herein-described step in the art of securing plugs in the ends of and forming the spindle portions of axles or axle-skeins, consisting in inserting the plug in the hollow end of the blank, welding it therein, and then tapering or reducing the spindle portion of the blank and bringing it to its finished shape, substantially as and for the purposes set forth.

412,411. **METHOD OF MANUFACTURING HOODED SKEINS.** WILLIAM F. PATTERSON, Allegheny, Pa. Filed Feb. 25, 1889. Serial No. 301,113. (No model.)

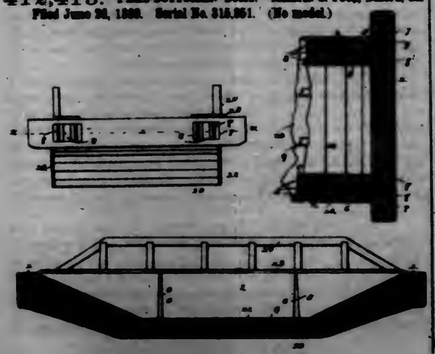


Claim.—1. The herein-described improvement in the manufacture of hooded axle-skeins, consisting in reducing or tapering a wrought-metal tube on two different lines, forming the spindle portion and an enlarged tapered portion for the hood above the same, and drawing or setting the metal in said hood portion to one side of the blank, so as to form the hood of the skein, substantially as and for the purposes set forth.

2. The herein-described improvement in the manufacture of hooded axle-skeins, consisting in reducing or tapering a wrought-metal tube on two different lines, forming the spindle portion near an enlarged tapered portion for the hood above the same, and then drawing the metal in said hood portion to one side of the blank and setting the spindle, hood, and tail of the skein in proper line, substantially as and for the purposes set forth.

3. The herein-described step in the art of forming hooded axle-skeins, consisting in reducing or tapering a wrought-metal tube on two different lines, forming the spindle portion and an enlarged tapered portion above the same for the hood, substantially as and for the purposes set forth.

412,412. **GRIPPER FOR PRINTING-PRESSES.** WILBUR C. PAUL, Olathe, Kans. Filed Mar. 30, 1889. Serial No. 305,081. (No model.)



Claim.—1. The combination of a solid gripper-bar having a key-stone shape, and a gripper having a bend to encircle the lower side of the bar, and means for securing the same in position, substantially as described.

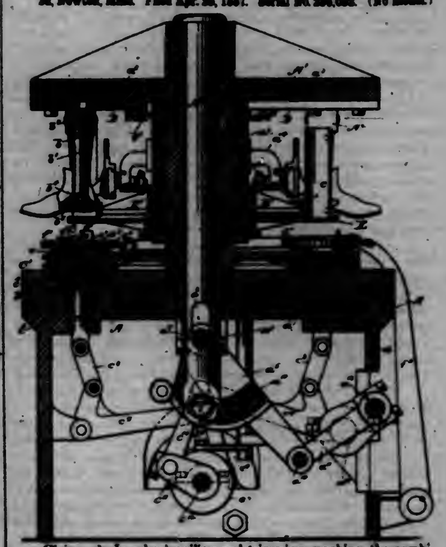
2. The combination, with the gripper-bar and gripper, of a clutch for securing the latter to the bar, said clutch comprising a pivoted spring-lever having a clutch-tooth d, to clamp the upper edge of the bar, and a cross-bar h, to ride on the face j of the bar, said clutch coacting with the clutch i on the gripper to firmly lock the latter on the bar, substantially as described.

3. The combination of a bar of a gripper, and a spring-lever clutch for locking the same on the bar on printing-presses or other machines wherein such a combination may be required, and operating as set forth in the specification.

4. The combination of a gripper-bar j and a gripper, Fig. 1, of a platen press with a spring-clutch, Fig. 2, for securing said gripper in place on the bar, all substantially as described.

412,418. **FLAT-BOTTOMED BOAT.** MARTIN S. PEEK, Buford, Ga. Filed June 20, 1888. Serial No. 316,851. (No model.)

Claim.—1. In a flat-bottom boat, the herein-described frame-beams, composed of several layers of planks breaking joints with each other, and having beveled ends, in combination with wedges driven upwardly into the joints between the adjacent ends of the planks, as set forth.



2. In a flat-bottom boat, the herein-described frame-beams, composed of several layers of planks breaking joints with each other, and wedges driven upwardly into the joints between the adjacent ends of the planks, in combination with the head-blocks having mortises to receive the tenoned ends of said side beams, and the bottom planks secured to the under sides of the side beams, thereby retaining the wedges in position in their respective joints, substantially as set forth.

3. The combination, with the head-blocks having outwardly-beveled mortises, of the side beams composed of several layers of planks breaking joints with each other, and having tenoned ends entering the said mortises, and the wedges driven into the outer ends of said tenons, substantially as set forth.

4. The combination of the head-blocks, the side beams composed of several layers of planks breaking joints with each other and having wedges driven upwardly into the joints between the adjacent ends of the planks, the bottom frame, the bottom planks secured to the under side of the latter and to the lower edges of the side beams, and the floor laid upon the upper side of the said flooring-frame, substantially as set forth.

5. In a flat-bottom boat, the combination of the mortised head-blocks, the tenoned side beams composed of several layers of planks breaking joints with each other, and having wedges driven upwardly into the joints between the adjacent ends of the planks, the flooring-frame, the two layers of bottom planks secured to the latter and to the lower edges of the side beams and breaking joints with each other, the guard-cleats secured over the joints between the bottom planks and the side beams and on the upper edges of the latter, the floor and the railings, all arranged and operating substantially as and for the purpose herein shown and specified.

412,414. **HEEL-BALING MACHINE.** FREEMAN F. RAYMOND, 2d, Newton, Mass. Filed Apr. 26, 1887. Serial No. 236,092. (No model.)

Claim.—1. In a heel nailing and trimming machine, the combination of two or more jacks having a horizontal and vertical adjustment and each of which supports or carries a work-support, said lasts or work-supports, two or more nail-driving devices, a heel-trimming apparatus adapted for use with each heel-nailing device, the main shaft of the machine, and intermediate connecting mechanism, substantially as specified, whereby the nail-driving devices are first simultaneously operated to attach two or more heels to as many shoes and the heel-trimming devices then simultaneously operated to trim said attached heels, as and for the purposes set forth.

2. In a heel nailing and trimming machine, the combination of two or more horizontally-adjustable jacks, each of which supports a last or work-support, the last or work-supports, two or more gangs of nail-drivers, a carrier having devices, substantially as described, for

applying the top lift to the attached heels, as set forth, and a heel-trimming apparatus, as set forth, for each gang of drivers, as and for the purposes specified.

3. In a heel nailing and trimming machine, the combination of two or more jacks having a horizontal and vertical adjustment, the lasts or work-supports carried by said jacks, a carrier provided with two or more devices for automatically delivering the top lifts from a stack to position for adjustment to the heels of the boot or shoe, two or more heel-trimming devices, and the mechanism, as set forth, intimately connecting and simultaneously operating the devices in the order named, as and for the purposes specified.

4. In a heel nailing and trimming machine, the head A, carrying two or more jacks A', in combination with rod A^2, the cam-lever c^3, having the cam-groove c^{14}, the cam-pin c^{12}, the crank c^{13}, and connecting-rod c^{11}, substantially as described.

5. In a heel-nailing machine, two or more templets C, mounted upon a common bed or table C', and a cam-actuated lever for lifting and lowering said table or bed, as and for the purposes specified.

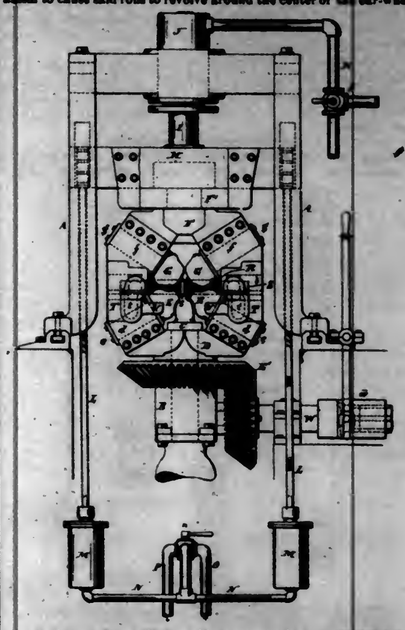
6. The combination of two or more templets C, mounted upon a table or bed C', the movable plate D, having the inclined surfaces d, and the bed A, having the inclined surfaces d', as and for the purposes specified.

7. The combination of two or more templets C, mounted upon a common bed C', a lifting plate or device D, and a cam connected with said plate or lifting device for operating the same at any predetermined interval to cause it to lower and lift the table C', as and for the purposes described.

8. The combination, in a heel-nailing machine, of two or more templets C, mounted upon a common table C', a head c^4, supporting a gang or group of drivers c^5 for each templet, and a shaft c^{23}, connected with each head by means of a crank c^{11}, link c^{10}, lever c^9, and toggles c^7, as and for the purposes described.

9. The combination of a top-lift carrier-plate E, adapted to present simultaneously a number of top lifts to as many attached heel-blanks, with a cam e^3 and connecting mechanism, substantially as described, for moving the plate at a predetermined time, as and for the purposes specified.

10. The combination of the head A', two or more jacks suspended therefrom, each of which carries a last or work-support, and devices for moving the head and jacks vertically in relation to the templets C, said templets C mounted upon a bed C', and means, substantially as described, for changing the level of the said templets, and a reciprocating head for each templet carrying a gang or group of drivers, and operative mechanism, substantially as specified, whereby the head A and jacks are first moved downward to compress two or more heel-blanks to the soles of the boot or shoe, the heads supporting the nail-drivers simultaneously moved upward to drive the attaching-nails, the jacks then lifted and the templets lowered to permit the insertion or placing of the top lifts and their holding-plates, and the head A' again moved downward to cause the top lifts to be spanked to the attached heel-blanks, as and for the purposes described.



11. The combination, in a heel-nailing machine, of a jack A^2, a last or work-support c^2, the head A', carrying the jack, a cam c^{14}, controlling the vertical movements of the said head, a templet C, and devices for lowering and raising the same, a head carrying a gang or group of drivers operated by a toggle c^7, lever c^9, crank c^{11}, and link c^{10}, connecting the crank with the lever, the shaft c^{13}, carrying said crank c^{11}, and the shaft c^{15}, operating the cam c^{14}, whereby the head A' is caused to make two or three full vertical movements for each complete vertical movement of the head c^4, as and for the purposes described.

12. The combination, in a heel nailing and trimming machine, of the head A', adapted, by mechanism substantially as described, to have two or more vertical movements imparted to it, and a period of rest at the end of the downward vertical movement, two or more templets C, the heads c^4, each of which carries a gang or group of drivers adapted to have upward vertical movements imparted to them immediately upon the completion of the first downward movement of the head A', means, substantially as described, for varying the height of the templets C, after the driving of the attaching-nails and before the spanking of the top lifts to the attached heel, a separate trimming mechanism for each nail-driving device, adapted to be operated upon the end of a second or third downward movement of the head A' and while it remains stationary, as and for the purposes described.

13. In a heel nailing and trimming machine, two or more jacks having a vertical and horizontal adjustment, each of which supports a last or work-support, two or more nail-driving devices, two or more heel-trimming devices, a common prime motor intimately connected, respectively, with said jacks, nail-driving devices, and heel-trimming devices, whereby they are caused to be operated simultaneously, substantially as set forth.

412,415. ROLLING-MILL FOR CAR-WHEELS. BENJAMIN F. REYNOLDS, Norristown, Pa. Filed Mar. 8, 1889. Serial No. 302,491. (No model.)

Claim.—1. In a rolling-mill for rolling car-wheels, a support for the car-wheel, whereby the wheel is held stationary, in combination with rolls arranged above and below the car-wheel, and power mechanism to cause said rolls to revolve around the center of the car-wheel.

2. In a rolling-mill for rolling car-wheels, a stationary support for the car-wheel, whereby the wheel is held stationary, in combination with rolls arranged above and below the car-wheel and between the hub of the wheel and periphery, rolls arranged about the periphery of the car-wheel and between the plane of the upper and lower rolls for rolling the tire or tread portion of the wheel, and power mechanism to cause said rolls to revolve around the center of the car-wheel.

3. In a rolling-mill for rolling car-wheels, a support for the car-wheel, whereby the wheel is held stationary, in combination with rolls arranged above and below the car-wheel, power devices to move said rolls toward or from each other, and power mechanism to cause said rolls to revolve around the center of the car-wheel.

4. In a rolling-mill for rolling car-wheels, the combination of a central stationary support for the car-wheel, whereby the wheel is held stationary, with two rotary frames and one or more rolls carried in each frame and caused thereby to revolve around the central support and each made to conform in shape to the corresponding surfaces of the car-wheel to be rolled.

5. In a rolling-mill for rolling car-wheels, the combination of a central stationary support for the car-wheel, whereby the wheel is held stationary, with two rotary frames, one or more rolls carried in each frame and caused thereby to revolve around the central support and each made to conform in shape to the corresponding surfaces of the car-wheel to be rolled, a connection between the two frames, and power devices to move said frames to or from each other.

6. In a rolling-mill for rolling car-wheels, the combination of a central stationary support for the car-wheel, whereby the wheel is held stationary, with two rotary frames, one or more rolls carried in each frame and caused thereby to revolve around the central support and each made to conform in shape to the corresponding surfaces of the car-wheel to be rolled, a connection between the two frames, power devices to move said frames to or from each other, and one or more rolls carried by said frames and arranged to roll the periphery of the car-wheel.

7. In a rolling-mill for rolling car-wheels, the combination of a central stationary support for the car-wheel, whereby the wheel is held stationary, with two rotary frames, one or more rolls carried in each frame and caused thereby to revolve around the central support and each made to conform in shape to the corresponding surfaces of the car-wheel to be rolled, a connection between the two frames, power devices to move said frames to or from each other, one or more rolls carried by said frames and arranged to roll the periphery of the car-wheel, a slide supporting each said last-mentioned rolls on one of the frames, and cam mechanism carried by the other frame to operate the slide to move the said last-mentioned rolls to or from the periphery of the car-wheel.

8. In a rolling-mill for rolling car-wheels, the combination of a central stationary support for the car-wheel, whereby the wheel is held stationary, with two rotary frames, one or more rolls carried in each frame and caused thereby to revolve around the central support and each made to conform in shape to the corresponding surfaces of the car-wheel to be rolled, a connection between the two frames, power devices to move said frames to or from each other, one or more rolls carried by said frames and arranged to roll the periphery of the car-wheel, a slide supporting each said last-mentioned rolls on one of the frames, cam mechanism carried by the other frame to operate the slide to move the said last-mentioned rolls to or from the periphery of the car-wheel, and wheel-lifting devices operated by the last-mentioned frame to lift the wheel off its support simultaneously with the separations of the rolls.

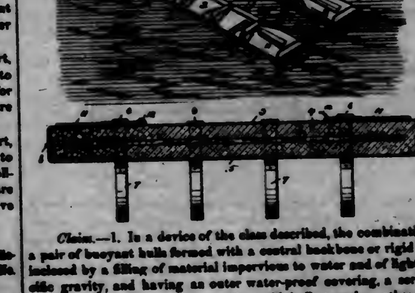
9. In a rolling-mill for rolling car-wheels, the combination of a central stationary support for the car-wheels, whereby the wheel is held stationary, with two rotary frames, one or more rolls carried in each frame and caused thereby to revolve around the central support and each made to conform in shape to the corresponding surfaces of the car-wheel to be rolled, power mechanism to reciprocate one of said frames and its rolls with respect to the other frame and its rolls, and wheel-lifting devices moved with said reciprocating frame to lift the wheel off its central support when the rolls are separated.

10. The combination of a stationary support for a car-wheel casting or blank, whereby the wheel is held stationary, with a rotating frame, and one or more rolls carried thereby and made to conform to the curvature of the car-wheel face to be rolled and caused to revolve around the stationary support and car-wheel.

11. The combination of a stationary support for a car-wheel casting or blank, whereby the wheel is held stationary, with a rotating frame, and one or more loose or idler rolls having oblique axes and carried thereby and made to conform to the curvature of the car-wheel face to be rolled and caused to revolve around the stationary support and car-wheel.

12. The combination of a central support for a car-wheel casting or blank, whereby the wheel is held stationary, a rotary frame above and another below said support and car-wheel, supported thereby and concentric with respect therewith, and rolls having rolling ends made to conform to the faces of the car-wheel and journaled on axles arranged obliquely in the plane of rotation of the frames, whereby said rolls are caused to revolve about the axis of the wheel and also about their own oblique axis.

13. The combination of a central support for a car-wheel casting or blank, whereby the wheel is held stationary, a rotary frame above and another below said support and car-wheel, supported thereby and concentric with respect therewith, and rolls having rolling ends made to conform to the faces of the car-wheel and journaled on axles arranged obliquely in the plane of rotation of the frames, whereby said rolls are caused to revolve about the axis of the wheel and also about their own oblique axis and in which the obliquity of the axles of the rolls of one frame is greater than that of the axles of the rolls of the other frame.



14. The combination of a central support for a car-wheel casting or blank, whereby the wheel is held stationary, a rotary frame above and another below said support and car-wheel, supported thereby and concentric with respect therewith, rolls having rolling ends made to conform to the faces of the car-wheel and journaled on axles arranged obliquely in the frames, whereby said rolls are caused to revolve about the axis of the wheel and also about their own oblique axis, and power mechanism to force said frames and their rolls toward each other.

15. The combination of a central stationary car-wheel support, whereby the wheel is held stationary, a rotary frame adapted to travel around said support, and one or more rolls carried thereby for rolling the periphery or tread of the car-wheel, whereby said rolls are caused to revolve about said car-wheel.

16. The combination of a central stationary car-wheel support, whereby the wheel is held stationary, a rotary frame adapted to travel around said support, one or more rolls carried thereby for rolling the periphery or tread of the car-wheel, whereby said rolls are caused to revolve about said car-wheel, and power devices to move said rolls toward or from the car-wheel.

412,416. TRY-GAGE FOR BOILERS. GEORGE W. REDMAN, Bellefonte, Pa. Filed June 3, 1887. Renewed Sept. 13, 1889. Serial No. 323,616. (No model.)

Claim.—1. In a try-gage, the combination of the gage-body A, having the valve-seat A' at its inner end, and the tube or stem F, movable longitudinally in the gage-body, and the valve G, loosely fitted on the said tube and adapted to move thereon, for the purpose set forth, substantially as described.

2. The combination, in a try-gage, of the gage-body A, having the projecting valve-seat A' on its inner end, the longitudinally-movable tube F in the gage-body, and the valve G, secured to the inner end of the said tube and provided with the packing-ring of soft metal adapted to be compressed against the valve-seat A', for the purpose set forth, substantially as described.

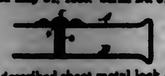
3. The combination, in a try-gage, of the gage-body A, having the annular beveled or sharpened valve-seat A' at its inner end, the tube F, movable longitudinally in the gage-body, for the purpose set forth, and the valve G, pivoted or loosely secured to the inner end of the tube F, the said valve having the annular packing-ring I, of soft metal, for the purpose set forth, substantially as described.

4. The combination, in a try-gage, of the gage-body A, having the discharge-opening O, the gland fitting in the gage-body and having the opening M, communicating with the opening O, and the longitudinally-movable tube or stem F, closed at its inner and outer ends and provided with the openings a and b, the said tube or stem having the pivoted valve at its inner end adapted to bear against the inner end of the gage-body, for the purpose set forth, substantially as described.

5. The combination of the gage-body having the openings E and D, the latter being provided with the grooves D', and the opening O, extending through one side of the gage-body, the stem or tube F, fitting in the opening E and extending through the opening D, the said tube having the openings a and b, the gland surrounding the tube and fitting in the opening D and provided with the stud to enter the groove D' and the slot registering with the opening O, the sleeve screwed to the front end of the gage-body and bearing against the gland, the valve secured to the inner end of the stem or tube, and the discharge-pipe R, communicating with the opening I, substantially as described.

6. The combination, in a try-gage, of the gage-body having the projecting arm S, provided with the slot P, the longitudinally-movable tube or stem fitting in the gage-body and having the openings a and b, for the purpose set forth, and the knob secured to the front end of the tube and having the pin working in the slot T to limit the movement of the tube and knob, substantially as described.

412,417. LIFE-SAVING APPARATUS. OLE REMMEN, Minneapolis, Minn. Filed Apr. 27, 1889. Serial No. 308,982. (No model.)



Claim.—1. In a device of the class described, the combination of a pair of buoyant hulls formed with a central hook-bone or rigid core, inclosed by a filling of material impervious to water and of light specific gravity, and having an outer water-proof covering, a series of centrally-depending loops connecting said hulls together, other flexible connections at the ends of said hulls shorter than said loop connections, but equal to each other in length, series of circumferential

bands surrounding each of said hulls and secured thereto, hand-ropes arranged horizontally on the outer and inner sides of said hulls and longitudinally thereof, and series of independent loops secured to the circumferential bands of said hulls and adapted to be thrown outward from said hulls to support persons on the outside of said hulls, or when turned inward to support persons between said hulls, substantially as described.

2. The combination, with a pair of buoyant hulls of substantially uniform size and arranged parallel with each other, of the rope S, surrounding both said hulls horizontally and connecting their ends together and forming convenient hand-loops on the outer side of said hulls, the inner hand-rope 9, arranged on the inner side of the hulls longitudinally thereof and secured to the rope 6 at either end midway between the ends of the hulls, the series of circumferential bands 6, surrounding said hulls, the depending loops 7, secured at either end to the bands 6 on the under side of said hulls at points substantially in the medial line of said hulls, and the loops 10, secured, respectively, to the bands 6 and adapted to be thrown either outward or inward of said hulls and to serve as a support for persons clinging thereto, substantially as and for the purposes set forth.

3. The combination, with a pair of buoyant hulls arranged parallel with each other and having flexible end connections with each other, hand-ropes secured longitudinally thereof on their inner and outer sides, circumferential bands surrounding each of said hulls and secured thereto, depending loops secured at either end to said bands on the under side of said hulls and substantially along their medial lines, independent hand-loops secured upon the upper side of said hulls to said circumferential bands, and suitable hand-paddles attached to said hulls and adapted to be clipped under said circumferential bands when not in use, substantially as and for the purpose set forth.

412,418. SHEET-METAL LATCH-CASE. HENRY R. RUSSELL, Jr., New Britain, Conn., assignor to the Russell & Erwin Manufacturing Company, same place. Filed May 31, 1889. Serial No. 312,672. (No model.)

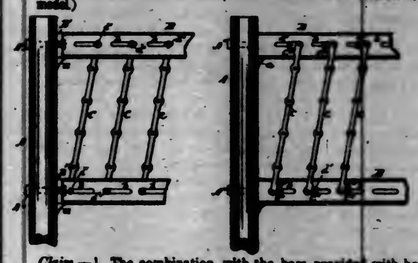
Claim.—The herein-described sheet-metal lock or latch case having a post or posts secured to the body thereof and a cap provided with a socket swaged upon its inside for receiving the ends of said posts, substantially as described, and for the purpose specified.

412,419. SHEET-METAL LOCK-CASE. HENRY R. RUSSELL, Jr., New Britain, Conn., assignor to the Russell & Erwin Manufacturing Company, same place. Filed July 16, 1889. Serial No. 317,991. (No model.)

Claim.—1. The herein-described sheet-metal lock-case, having screw-seats swaged or struck up in its plates in the form of perforated hollow bosses projecting inwardly, substantially as described, and for the purpose specified.

2. The herein-described sheet-metal lock-case, having screw-seats swaged or struck up in its plates in the form of perforated hollow bosses projecting inwardly about half the thickness of the case, and having also the reversely-swaged central portion, substantially as described, and for the purpose specified.

412,420. VEHICLE. WILLIAM H. SHAFFER, Curtisville, Ind. Filed Apr. 26, 1889. Serial No. 308,903. (No model.)

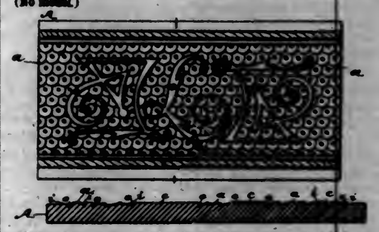


Claim.—1. In a vehicle of the class described, the combination, with the axle, of the downwardly-bowed side springs C, each comprising a plurality of leaves clipped at their centers to bolsters *d*, the upper leaf *e* projecting forwardly and connecting with the shafts, and the vehicle-body B, supported from the ends of the next leaf below, substantially as specified.

2. In a vehicle of the class described, the combination, with the axle, of the downwardly-bowed side springs C, each comprising a plurality of leaves clipped at their centers to bolsters *d*, the upper leaf *e* projecting forwardly and connecting with the shafts, and the leaf *f* next below having transverse eyes e^1 in its end, pins *g*, passing through said eyes, stirrups G, hooked to the projecting ends of said pins, the vehicle-body E, its bottom standing normally below said eyes, pad rods G', connected to said bottom at their lower ends and pivotally connected to said stirrups at their upper ends, as and for the purpose set forth.

3. In a vehicle of the class described, the combination, with the axle, of the downwardly-bowed side springs C, each comprising a plurality of leaves clipped at their centers to bolsters *d*, the upper leaf *e* projecting forwardly and connecting with the shafts, and the leaf *f* next below having transverse eyes e^1 in its end, pins *g*, passing through said eyes, stirrups G, hooked to the projecting ends of said pins, the vehicle-body E, downwardly-bowed end springs F, secured thereto, said springs having longitudinal eyes *f'* in their ends, pins A, passing through said eyes, stirrups H, hooked to the projecting ends of said pins, and rods G', having eyes in each end loosely engaging the bodies of said stirrups, whereby the upper stirrup will permit a longitudinal movement and the lower a transverse movement of the body independent of the axle, substantially as described.

412,421. SPOOL-HOLDING FRAME FOR LOOMS. OTTO W. SWAHN, Philadelphia, Pa. Filed Mar. 30, 1889. Serial No. 305,695. (No model.)



Claim.—1. The combination, with the bars provided with horizontal slots and set-screws or bolts, of uprights or stringers having slots, as set forth.

2. The combination, with the bars provided with horizontal slots and set-screws or bolts, of the uprights or stringers having ears *C C* on their ends and slots C^2 C^2 in the ears, into which the set-screws or bolts take, as set forth.

3. A spool-holding frame for Jacquard looms, having suitable supports, and bolts in said supports, longitudinal bars having bent slotted ends set over the aforesaid bolts and longitudinal slots in the body thereof, and stringers or uprights having slotted ends and bolts for attaching them to the longitudinal bars, as set forth.

412,422. ORNAMENTAL WOOD STRIP OR PANEL. WILLIAM SCHRAMME, Brooklyn, N. Y. Filed Nov. 5, 1888. Serial No. 290,262. (No model.)

Claim.—As a new article of manufacture, wood strips or panels having ornamental paper pressed into the surface thereof, the edges *e e* of the paper being pressed below the surface of the wood, and the main or entire surface of the paper between the depressed edges being raised and embossed, substantially as described.

412,423. MACHINE FOR GRINDING VALVES OF TUBE-SHAFTS. ELIJAH U. ENGELS, Minden, N. Y. Filed July 31, 1889. Serial No. 321,004. (No model.)

Claim.—1. In combination with the stationary valve-seat holders arranged in a row, the oscillatory head A, extended lengthwise over said row, the slide C, mounted on said head and arranged to reciprocate lengthwise thereof, and the valve-carriers connected to said slide, substantially as described and shown.

2. In combination with the stationary valve-seat holders arranged in a row, the oscillatory head A, extended lengthwise over said row, the slide C, mounted movably longitudinally on said head, the valve-carriers *b b*, connected to said slide, the block *a*, arranged movably in the direction of the length of the slide, and the arm *c*, connecting the said block, with the slide C, substantially as described and shown.

3. In combination with the frame, cranks, or eccentrics, and pitmen D D', stationary valve-seat holders connected to the frame, the oscillatory head A, connected to the pitmen D, the slide C, mounted on said head, the valve-carriers connected to said slide, the slide *l*, connected to the pitman D' and provided with the diagonal slot *l'*, the block *a*, sliding longitudinally in said slot, and the arm *c*, pivoted to said block and connected to the slide C, substantially as described and shown.

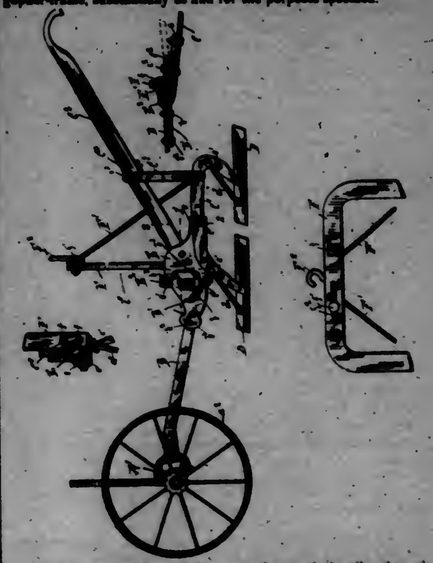
4. In combination with slide C and the valve *v*, provided with the leg *v'*, the valve-carriers consisting of the stem *s*, extending through the slide and provided at one end with the head *i* and socket *t* in said head, the eccentric *r*, connected to the opposite end of the stem *s*, and the spring *o*, interposed between the slide and head of the stem, substantially as described and shown.

412,424. CAR-AXLE LUBRICATOR. GEORGE P. SHERMAN, Milwaukee, Wis., assignor of one-half to John R. Mitchell, Saigus, Iowa. Filed Feb. 12, 1889. Serial No. 300,022. (No model.)

Claim.—1. In a device for lubricating journals, the combination, within the inclosing journal-box, of a rotating lubricating-wheel provided with a series of teeth projecting from the surface of its periphery, with the journal provided with corresponding depressions for the reception of said series of teeth, and an elastic or flexible support for retaining the peripheries of said lubricating-wheel and journal in contact, substantially as and for the purpose specified.

2. The combination, within a journal-box C, of a lubricating-wheel D, provided with a series of teeth E and lubricant-conveying grooves G, and journal B, provided with series of depressions or apertures F, formed for the reception of said series of teeth E, and supporting-bearings for retaining said wheel D in contact with said journal, substantially as and for the purposes specified.

3. The combination of the journal-box C, lubricating-wheel D, provided with a series of teeth E, wheel-supporting axle H, axle-supporting journal-bearings I I, located upon the respective sides of said axle H, adapted to permit of the lateral movement of said axle with the thereon-supported wheel D, supporting-springs J, affixed at one end to the inclosing-box C and at their opposing ends to said journal-bearings I, and journal B, provided with a series of depressions F for the reception of said series of teeth E, all substantially as and for the purpose specified.



412,425. LAMP-LIGHTER. HERMANN SMITS, Germantown, N. Y. Filed Feb. 20, 1889. Serial No. 300,655. (No model.)

Claim.—A lighting implement consisting of a stem provided with V-shaped ribs *c*, and at one end having a loop *a* and at the other end a holder *c*, substantially as described.

412,426. SOPHER CULTIVATOR. DAVID SNELLING, Freedom, Ill. Filed Apr. 8, 1889. Serial No. 306,491. (No model.)

Claim.—1. The combination, with the cultivator-frame, of the gopher-frame consisting of two beams provided with shovels and the arch rigidly connecting the same, and the draft-beams, substantially parallel and of equal length and pivoted at their rear ends to the gopher-frame, substantially as and for the purposes specified.

2. The combination, with the gopher-beams, the handles, the arch, and the draft-beams, of the castings E, adapted to receive and support said parts, which are connected thereto, substantially as and for the purposes specified.

3. The combination, with the gopher-frame having apertured lugs *c'*, of the draft-beams B, the castings E', adjustably connected to the rear end of the draft-beams and provided with apertured lugs b^2, and the pivot-bolts B^2, passing through said lugs, substantially as and for the purposes specified.

412,427. MUFF. CHRISTIAN SCHAFFHAUS, St. Paul, Minn. Filed Mar. 15, 1889. Serial No. 303,026. (No model.)

Claim.—In a muff, the rubber-tube end rings A A', covered with fur, and the body of the muff made of fur covering B, silk lining C, and hair filling D, and secured between these rings A A', substantially as set forth.

412,428. HARROW. LE ROY W. SNYDER, Auburn, N. Y. Filed Apr. 27, 1889. Serial No. 308,817. (No model.)

Claim.—1. In a harrow, the arrangement and combination of bars crossing each other and being connected at their points of intersection by means of rivets, one of said bars being corrugated, substantially as described.

2. In a harrow, the combination and arrangement of corrugated draft and cross bars connected at their points of intersection by means of rivets, substantially as described.

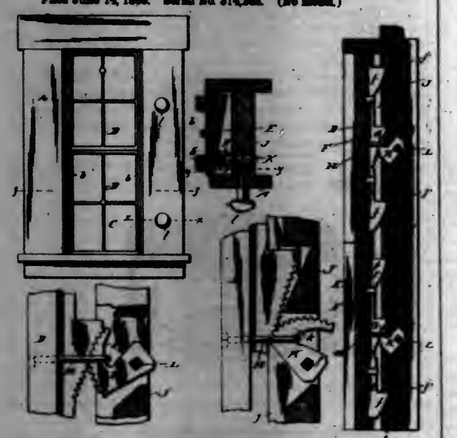
3. A harrow-frame provided with bars grooved or channeled at their points of crossing and rigidly secured to each other at their intersection by metallic fastenings clinched at a point exterior to the surface of the bars, substantially as described.

4. A harrow-frame provided with arched bars grooved or channeled at their points of crossing and rigidly secured to each other at their intersection by rivets, substantially as described.

5. In a harrow, the combination and arrangement of corrugated metallic draft and cross bars having their flat facial surfaces at their point of intersection in direct contact with each other and being secured together by means of rivets, substantially as described.

6. A harrow-frame provided with arched bars rigidly secured to each other by metallic fasteners clinched at a point exterior to the surface of the bars, substantially as described.

412,429. PACKING-BOX. ALBERT H. STILWELL, Philadelphia, Pa. Filed July 15, 1889. Serial No. 317,626. (No model.)



Claim.—1. A box A, having the staggered bulk-heads secured to its walls, substantially as and for the purpose set forth.

2. A box A, having the staggered bulk-heads secured to its walls, in combination with the secondary bottom G, as and for the purpose set forth.

3. A box A, having the staggered bulk-heads secured to its walls, in combination with the secondary bottom G, having bulk-heads secured thereto, as and for the purpose stated.

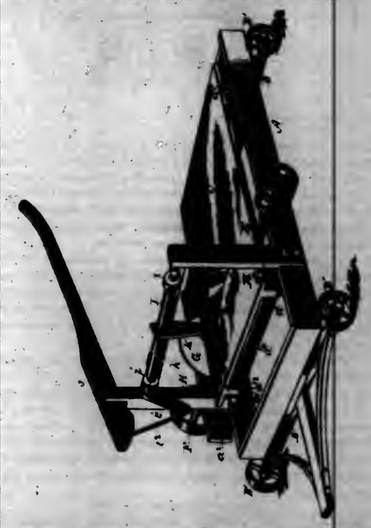
412,430. WINDOW-CASING. ALLEN SWAB, Elizabethville, Pa. Filed June 14, 1889. Serial No. 314,262. (No model.)

Claim.—1. The combination, with a window-casing having a movable section and the sliding sash, of the sliding bar having cams *f* placed between the said section and a fixed part of the casing, the keeper H, the shaft, and the segment on the shaft, substantially as described.

2. The combination, with the window-casing having a movable section for the purpose described and having a board J, of the bar F, having cams *f*, and the toothed incline G of the shaft and the correspondingly-toothed segment K on the said shaft, substantially as set forth.

3. The combination, with the window-casing having a movable section D and a board J, of the keeper H, secured to section D, the shaft L, and the cam K on shaft L, adapted to move section D out and having the cam-edge *k*, which acts on the keeper H and draws the said section D back, substantially as set forth.

4. In a window-casing, the combination, with the movable section and the board J, of the bar F, having cams *f*, and a toothed incline G, the keeper H, and the shaft having a toothed segment, which segment is provided with a rear cam-edge *k*, substantially as described.

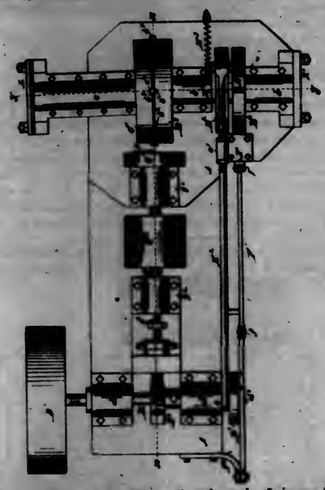


5. In a window-casing having a board J, the combination of the movable section, the bar F, held to the section by keepers, and having cams *f* and a toothed incline, the keeper H, the shaft, and the toothed segment on the shaft, having a cam-edge *k*, substantially as described.

412,431. CATTLE-TAG. DANIEL H. TALBOT, Sioux City, Iowa. Filed Feb. 7, 1889. Serial No. 299,094. (No model.)

Claim.—A cattle-tag formed in two sections, each having an integral tube or sleeve, one tube or sleeve having a reduced portion adapted to enter and be upset in the other sleeve or tube, and formed at the inner end of said reduced portion with an annular step-shoulder for the inner end of said second or outer tube or sleeve to abut, the joint between the two sleeves being at about the center of the button when the two sections are secured in place on the animal, substantially as set forth.

412,432. FIRE-WOOD-SAWING MACHINE. ANOS TALMER, Truro, Ill. Filed Mar. 18, 1889. Serial No. 303,708. (No model.)



Claim.—1. In a fire-wood-sawing machine, in combination with a carrier-frame supported on wheels which run on ways on a main frame, a lever J on said frame, shaft I and its supports, and having crank-arms *i*' and K, a link *i*², connecting the lever J and crank *i*', and a carrier-plate connected with crank K by a link L, substantially as described.

2. In a fire-wood-sawing machine, in combination with a main frame and a carrier-frame located thereon, a shaft I, carried on a bar A, which is supported on standards H, crank-arm *i*', link *i*², and lever J, and crank-arm K, and link L, which connects it with the carrier-frame, substantially as described, and for the purpose specified.

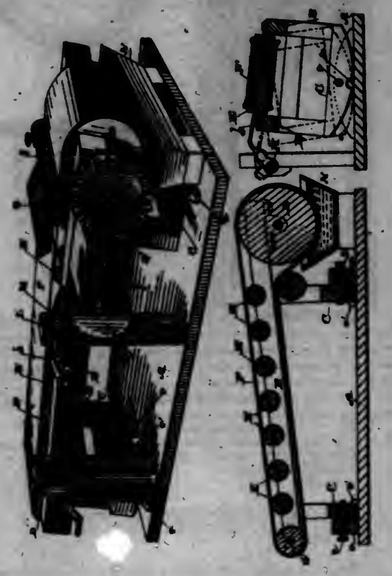
3. In a fire-wood-sawing machine, in combination with a frame

A, mounted on wheels, and having side bars *a*, with ways *a*', the carrier-plate C, having wheels *c*², and legs *d* and *m* integral therewith, the shaft I, journaled in brackets *i*, which project from a bar supported on standards H, and provided with a crank *i*' and link *i*², which connects said crank with a lever J, a crank K, and link L, which connects it with legs *m*, integral with the carrier-plate, and a saw G, fixed to a shaft E, which is journaled in the frames A and *a*', substantially as described, and for the purpose specified.

412,433. MACHINE FOR TURNING THE ENDS OF PIECES OF METAL. HARRISON H. TAYLOR, Detroit, Mich., assignor to the Detroit Machine Screw Works, same place. Filed May 15, 1886. Serial No. 273,091. (No model.)

Claim.—1. In a machine for turning the ends of pieces of metal, the combination, with the rotatable jaws C' B², constructed to receive the pieces of metal between their adjacent faces, of a disk located between the jaws to limit the engagement of said pieces therewith, substantially as set forth.

2. In a machine for turning the ends of pieces of metal, the combination, with the rotatable jaws C' B², constructed to receive the pieces of metal between their adjacent faces, of a removable intermediate disk, substantially as set forth.



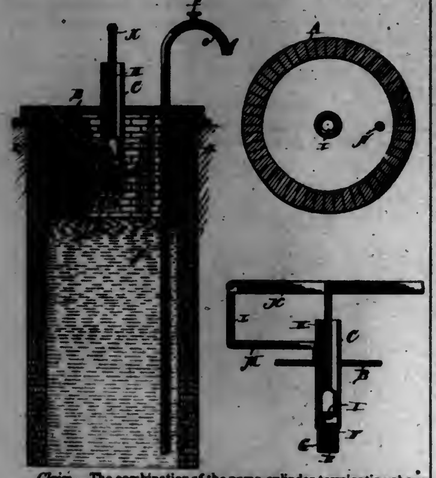
3. In a machine for turning the ends of pieces of metal, the combination, with the rotatable shafts B and C, provided with metal-holding jaws upon their adjacent ends, of a ratchet-wheel and a stop-wheel mounted upon one of said shafts, reciprocating rods F² and F', a pivoted lever E', connected to one of said rods, a pawl pivoted to said lever, a spring secured to said lever for retracting the same, a reciprocatory and rotatable cutter-spindle, a main drive-shaft provided with a cam for reciprocating the cutter-spindle, and means secured to said drive-shaft for reciprocating the rods F² F', substantially as set forth.

4. In a machine for turning the ends of pieces of metal, the combination, with the rotatable shafts B and C, provided with metal-holding jaws upon their adjacent ends, of a ratchet-wheel and a stop-wheel mounted upon one of said shafts, the drive-shaft provided with a crank having projecting pins, rods F² F', one of which is provided with a bolt for engaging the stop-wheel and the other connected with a lever carrying a pawl to engage the ratchet-wheel, said rods being reciprocated by the pins upon the said crank when the drive-shaft is rotated, thereby operating the metal-holding jaws, substantially as set forth.

5. In a machine for turning the ends of pieces of metal, the combination, with the rotatable shafts B and C, provided with metal-holding jaws upon their opposing ends, of a ratchet-wheel and a stop-wheel mounted upon one of said shafts, the drive-shaft provided with a crank having projecting pins, rods F² F', one of which is jointed and pivoted at one end and provided with a bolt at its opposite end to engage the stop-wheel, the other rod provided with a lever at one end, said lever carrying a pawl to engage the ratchet-wheel, both of said rods being operated by the pins upon the said crank when the drive-shaft is in motion, substantially as set forth.

6. In a machine for turning the ends of pieces of metal, the combination, with the rotatable shafts B and C, provided with metal-holding jaws upon their opposing ends, of a ratchet-wheel and a stop-wheel mounted upon one of said shafts, a drive-shaft, a cam, and a crank engaged therewith, the crank being provided with projecting pins, rods F² F', one of which is connected with a pawl to engage the ratchet-wheel and the other provided with a bolt to engage said stop-wheel, and a rotatable and reciprocatory spindle provided with a cutter, said rods and spindle being operated simultaneously by the crank and cam, respectively, on the drive-shaft, substantially as set forth.

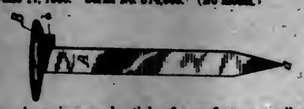
412,434. ORE-CONCENTRATOR. JAMES TELLOCK, Angel's Camp, Cal. Filed July 24, 1888. Serial No. 280,933. (No model.)



Claim.—1. In an ore-concentrator, a frame having rockers by which it is supported, and power mechanism connected with said frame for moving it on its rockers, in combination with an endless belt mounted on the frame, the drums D D', the former having the gear I, a counter-shaft on the frame parallel with the travel of the belt, a pinion and ratchet-wheel on said counter-shaft, and a pawl engaging the ratchet, whereby an intermittent or periodical travel is imparted to said belt, substantially as herein described.

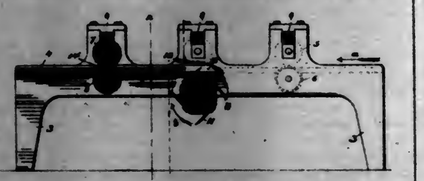
2. In an ore-concentrator, a frame having rockers on which it rests, and a power mechanism connected with the frame for moving it on its rockers, in combination with an endless belt mounted on the frame, a counter-shaft on the frame parallel with the belt-gearing between said belt and one of the driving-drums, a ratchet on the counter-shaft, and a stationary pawl adapted to engage and partially rotate the ratchet as it comes in contact with it by the rocking movement of the frame on which the belt is mounted, substantially as herein described.

3. In an ore-concentrator, a laterally-rocking frame and an endless belt mounted thereon, in combination with a driving-drum carried by the frame and over which the belt passes, a gear on the shaft of the driving-drum, a pinion on a counter-shaft carried by the frame at one side of the belt and parallel with its travel and meshing with the said gear, and a ratchet on said counter-shaft, and a stationary pawl adapted to engage and partially turn said ratchet by the movement of the rocking frame, whereby a periodical travel is imparted to the endless belt, substantially as herein described.



4. In an ore-concentrator, a frame having rockers on which it rests and an endless belt mounted upon said frame, in combination with a crank-shaft and connecting-link for moving the frame on its rockers, a driving-drum carried by the frame and over which the endless belt passes, a counter-shaft at one side of the belt and parallel with its travel, a ratchet carried by said counter-shaft for rotating said driving-drum, the pinion J and gear I, and a stationary pawl for engaging and partially turning the ratchet by the movement of the rocking frame, whereby a periodical travel is imparted to the belt, substantially as herein described.

412,435. PUMP. WILLIAM THORNE, Moscow, Idaho. Filed Apr. 26, 1889. Serial No. 308,698. (No model.)

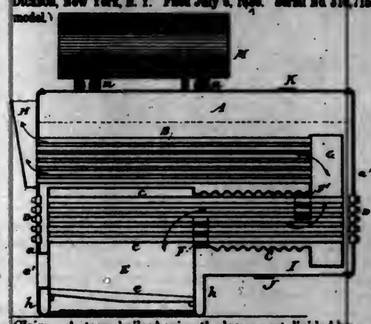


Claim.—The combination of the pump-cylinder terminating above the water-level and having downwardly-extending brackets connected by a cross-piece, an elastic cushion mounted upon the said cross-piece and bearing against an annular elastic packing-ring at the lower end of the cylinder, and the vertically-moving piston fitting in the cylinder and having a downwardly-opening valve, substantially as herein described, and for the purpose specified.

412,436. RAILROAD-SPIKE. HENRY M. WALTHAM, Lomira, Wis. Filed June 17, 1889. Serial No. 314,662. (No model.)

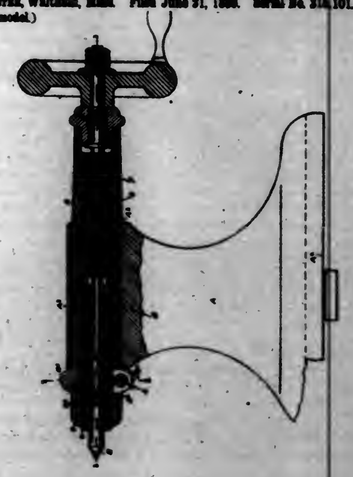
Claim.—As an improved article of manufacture, a railroad-spike whose body A is uniformly straight centrally and tapers downwardly at one-fifth of the distance from the bottom to a point *a*, which is in the axial line of the body A, its upper terminus being provided with a shoulder *b* at right angles to the axis of the body A, surmounted by a head B, parallel therewith, and projecting on the side opposite said shoulder a greater distance beyond the body A than on the side adjacent thereto, to secure a more stable joinder, as herein set forth and illustrated.

412,437. HOOP-KNOTTING MACHINE. PETER B. WARNER, Green Bay, Wis. Filed Apr. 11, 1889. Serial No. 306,820. (No model.)



Claim.—1. In a hoop-knotting machine, the combination of a longitudinally-grooved bed-plate having a transverse series of longitudinal slots opening into the grooves in said bed-plate, a rotatable shaft or arbor arranged transversely of said bed-plate and underneath said slots, a series of knives adjustably secured to said shaft and adapted to be carried in the rotation of said shaft through said slots in the bed-plate and having bits of the form of cross-section of said grooves, and a pressure-roll arranged transversely of said bed-plate and above said knife-shaft, and adapted to hold the hoops passing through the machine in said grooves, and to bring any knots or other projections on said hoops in contact with said knives, substantially as described.

2. In a hoop-knotting machine, the combination of a bed-plate provided with half-oval longitudinal grooves on its upper surface, a series of longitudinal slots opening into said grooves, and a transverse slot in the body of the bed-plate at one side of said series of slots, a knife-cylinder journaled transversely of said bed-plate and underneath said series of slots, and adapted to rotate its knives through said slots, said knives being adjustably secured on said cylinder and having bits corresponding in form to the cross-sections of their respective grooves, a spring-controlled presser-roll arranged above said knife-cylinder and adapted to hold the hoops passing through the machine upon the bottom of the grooves and knots upon their under surfaces in contact with said knives, a spring-controlled feed-roll arranged above said transverse slot, and an under feed-roll rotated in said slot and provided with annular grooves corresponding in form to the grooves in the bed-plate and in alignment with said grooves, substantially as and for the purpose set forth.



3. In a hoop-knotting machine, the combination, with the bed-plate 2, having the half-oval longitudinal grooves 4, the series of longitudinal slots 13, opening into said grooves, and the transverse slots 14, of a series of knives having bits corresponding to the cross-sections of said grooves adapted to be rotated in said slots 13 in vertical planes parallel with said grooves, the presser-roll 12, arranged transversely of said bed-plate and above said series of slots 13, and provided with a spring 9, the feed-rolls 5 and 7, journaled above the slots 14 transversely of the bed-plate, and the feed-rolls 6 and 8, journaled underneath said bed-plate and rotating in the slots 14, and having annular grooves corresponding in form and aligning with the grooves of said bed-plate, substantially as and for the purposes set forth.

412,438. WATER-TUBE BOILER. RICHARD WATKIN and JOHN DICKSON, New York, N. Y. Filed July 6, 1889. Serial No. 316,715. (No model.)

Claim.—A steam-boiler having the lower part divided by a water-leg partition into two compartments, and having in each of these compartments a separate furnace, a separate fire-flue, and the water-tube *c*, the latter running through said flues from head *a* to head *a'*, as and for the purpose set forth.

412,439. TAIL-STOCK SPINDLE FOR LATHES. ANDREW WEBSTER, Waltham, Mass. Filed June 21, 1889. Serial No. 315,101. (No model.)

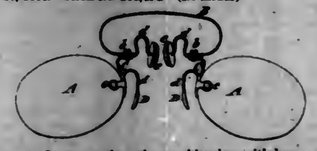
Claim.—1. The combination, with a lathe-spindle, of a bushing B, surrounding it, and constructed with transverse slits B^1 B^2, and a longitudinal slit B^3, in combination with a screw E, joining and engaging the walls of the longitudinal slit, substantially as described, for the purposes specified.

2. The combination, with a lathe-spindle, of a bushing B, surrounding said adapted to be fastened to and released from it, and having a shoulder B^3, in combination with the tail-stock of the lathe adapted to receive said bushing and to make a rest for its said shoulder B^3, substantially as described, for the purpose specified.

412,440. AZO COLORING-MATTER. ARTHUR WEINBERG, Frankfort-on-the-Main, Germany, assignor to Leopold Cassella & Co., same place. Filed Jan. 8, 1889. Serial No. 296,267. (Specimens.)

Claim.—As a new article of manufacture, the new coloring-matter of the general formula

$$R(SO_3Na)x—N=N—C_6H_3—N=NC_{10}H_5NH_2$$



soluble in water, nearly insoluble in spirits, and produced by the action of diazoic derivatives of compounds obtained from naphthylamine and diazo-sulphonic acids upon alpha or beta naphthylamine.

412,441. SUSPENSORY-BANDAGE. ARTHUR J. WELLS, Syracuse, N. Y. Filed July 1, 1889. Serial No. 316,223. (No model.)

Claim.—The combination, with a suspensory-pouch, of a loop *c*, secured to said pouch, a pouch-supporting strap supported by said loop *c*, and a protecting-apron *f*, substantially as and for the purpose described.

412,442. EYEGLASSES. WALTER S. WELLS, New York, N.Y. Filed Nov. 10, 1883. Serial No. 290,494. (No model.)

Claim.—1. In an eyeglass, the combination, with lenses, of posts or standards secured to said lenses and having portions extending upwardly beyond the axes of said lenses, and pads for the nose mounted upon and rigidly secured to said upwardly-extending portions, substantially as specified.

2. In an eyeglass, the combination, with lenses, of posts or standards secured thereto, and bearing-pads for the nose, and other pads for the nose mounted upon and rigidly secured to upwardly-extending portions of said posts or standards, substantially as specified.

3. In an eyeglass, the combination, with lenses, of posts or standards having portions extending upwardly above the axes of said lenses, nose-pads adapted to grip the nose and secured to said posts or standards, and other nose-pads rigidly secured to said upwardly-extending portions above the pads first named and having a backward and downward extension, said last-named pads being also adapted to grip the nose, substantially as specified.

4. In an eyeglass, the combination, with lenses, of posts or standards secured thereto, nose-pads secured to said posts or standards and adapted to grip the nose, and other nose-pads rigidly secured to said standards above and to the rear of the nose-pads first named, and also adapted to grip the nose, substantially as specified.

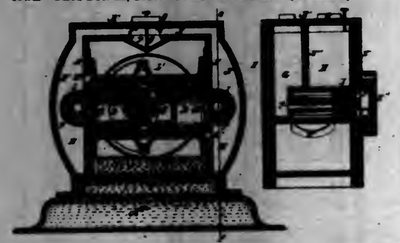
5. In an eyeglass, the combination, with lenses, of posts or standards secured thereto, pads for the nose rigidly secured to said posts or standards, certain of said pads being arranged in the same plane as the lenses and other of said pads being arranged above the other pads and to the rear thereof, substantially as specified.

6. In an eyeglass, the combination, with lenses, of posts or standards secured to said lenses and having upwardly-extending portions above the axes of the lenses, pads secured to said posts or standards, and other pads above the pads first named and also secured to said posts or standards, said pads having a bearing upon the nose approximately at the points of a triangle, substantially as specified.

412,443. HEATER. ELIJAH S. WILSON, Englewood, Ill. Filed Nov. 26, 1888. Serial No. 291,853. (No model.)

Claim.—1. In a heater substantially of the nature set forth, in combination with the shell and fire-chamber, a pair of intercommunicating fluid-receptacles forming, respectively, a receptacle for the cooler or return fluid and a receptacle for the discharge or heated fluid, the latter being nearest and the former further from the fire-chamber, and partitions for the said receptacles, one extending from the lower part of the return-fluid receptacle toward its top and the other from the upper part of the discharge-fluid receptacle toward its base, substantially as described.

2. In a heater substantially of the nature set forth, in combination with the shell and fire-chamber, a pair of intercommunicating fluid-receptacles supported one above the other within the shell, a manifold for the return fluid communicating with the upper of said receptacles, a manifold for the supply of heated fluid communicating with the lower of said receptacles, and partitions for the said receptacles, one extending from the lower part of the return-fluid receptacle toward its top and the other from the upper part of the discharge-fluid receptacle toward its base, substantially as described.



3. In a heater substantially of the nature set forth, in combination with the shell and fire-chamber, a pair of intercommunicating fluid-receptacles I and K, the latter supported above the former within the shell, a partition I' for the receptacle I, extending from its upper side short of its base, a partition K' for the receptacle K, extending from its base short of its upper side, a return-fluid inlet *f* leading into the receptacle K near its base, and an outlet *e* for the heated fluid, leading from the receptacle I near its top, substantially as described.

4. In a heater substantially of the nature set forth, in combination with the shell and fire-chamber, a series of receptacles I, supported within the shell near the fire-chamber at intervals affording intervening spaces A, a cover *i*, surmounting the said receptacles and closing the spaces A, an open passage *g* between two of the rearmost receptacles, a series of receptacles K, supported above the receptacles I at intervals affording intervening spaces *h'* and each communicating with one of the last-named receptacles, a cover *i'*, surmounting the receptacles K and closing the spaces *h'*, an open passage *g'* between two of

the foremost receptacles K, an inlet-opening *d'* for return fluid in each receptacle K, and an outlet-opening *e* for the heated fluid in each receptacle I, substantially as described.

5. In a heater substantially of the nature set forth, in combination with the shell and fire-chamber, a series of receptacles I, supported within the shell near the fire-chamber at intervals affording intervening air-spaces *h*, a cover *i*, surmounting the said receptacles and closing the spaces *h*, an open passage *g* between two of the rearmost receptacles, a partition I', and an outlet *e* for the heated fluid in each receptacle I, a manifold M, communicating with the outlets *e*, a series of receptacles K, supported above the receptacles I at intervals affording intervening spaces *h'* and each communicating with one of the last-named receptacles, a cover *i'*, surmounting the receptacles K and closing the spaces *h'*, an open passage *g'* between two of the foremost receptacles K, a partition K', and an outlet *e* for the return fluid in each of the last-named receptacles, and a manifold N, communicating with the inlets *d'*, substantially as described.

412,444. STEAM-ENGINE. WILLIAM O. WORTH, Cedar Rapids, Iowa. Filed Dec. 22, 1887. Serial No. 258,763. (No model.)

Claim.—1. In an engine of the class described, the herein-described improvement in the shell, consisting in providing the same with outwardly-curved ends A", contiguous plane bearing-faces A' for the heads of an inclosed cylinder, and intermediate steam-chests adapted to receive a steam-valve, all substantially as and for the purpose set forth.

2. In an engine substantially as described, the combination of a rectangular shell having suitable steam and exhaust ports, crank-shaft mounted centrally with respect to said shell, pistons and cylinders having reciprocal motions perpendicular to each other on said crank, an eccentric mounted on the crank-shaft within said shell, and steam-valves arranged opposite the outer ends of the cylinders and actuated by said eccentric, substantially as and for the purpose set forth.

3. In an engine of the class described, the shell A, having the steam-ports G G, adapted to communicate with the end of valve I, and the exhaust-ports H H, adapted to communicate with the open ends of the cylinders, substantially as and for the purpose set forth.

4. In an engine of the class described, the shell A and the receptacle P, t ranged substantially as set forth, and adapted to catch surplus oil from the exhaust-steam.

5. The combination in an engine, substantially as described, of the shell A, steam-ports H H, receptacle P, the downwardly-extending projection *c* to deflect the steam, and means for letting the oil out of said receptacles, substantially as described.

412,445. CULTIVATOR-TOOTH. HIRAM ADAM, Rome, N. Y., assignor of one-half to Alfred Ehrhart, same place. Filed June 12, 1889. Serial No. 313,969. (No model.)

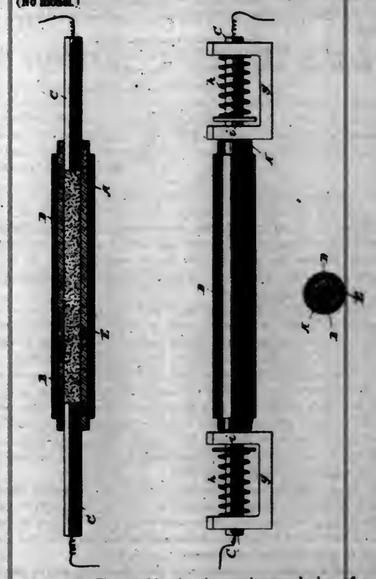
Claim.—The improved cultivator or harrow tooth formed integral with the shank, and having a horizontal V-shaped point-section curving sharply upward to a practically-vertical main portion, said main portion beginning slightly convex and increasing in convexity to the top of the tooth or blade, substantially as shown and described.

412,446. COMBINED CUPPING DEVICE AND VACUUM-PUMP. HOBART R. ALLEN, Indianapolis, Ind. Filed Jan. 3, 1889. Serial No. 295,868. (Model.)

Claim.—1. In a cupping device, a cup-shaped casing of elastic rubber corrugated vertically at its lower portion to stiffen that portion and having an annular outwardly-projecting flange at its lower open end, substantially as described.

2. In a cupping device, the one-piece elastic body A, open at its lower end and having an opening in its upper portion, the diaphragm-plate B, dividing the body into compartments, with a valve-closed port between them, the disk F, secured to the inner upper side of the casing, and the handle connected therewith, substantially as and for the purpose described.

3. In a cupping device, a one-piece cup-shaped elastic casing divided by a plate with a valve-closed port therein into two compartments, and having an exhaust-port in its upper portion, in combination with a handle secured to the upper portion by a disk or plate upon the inside, having a conical valve thereon to close the exhaust-port in the casing, and a washer upon the outside to tightly impinge the casing between it and the disk, substantially as shown and described, and for the purpose set forth.



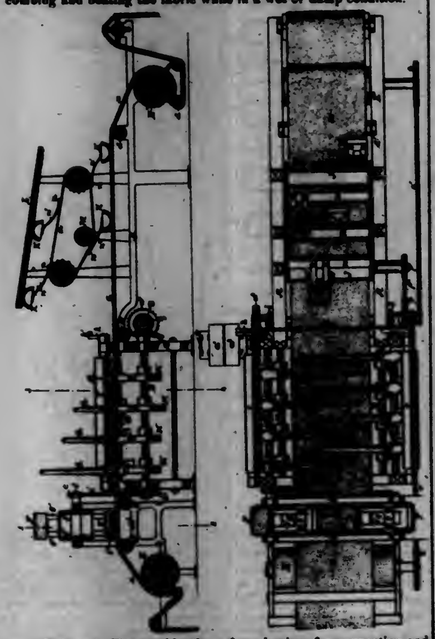
412,447. PROCESS OF DEPHOSPHORIZING IRON. GEORGE ARCHBOLD, New York, N. Y., assignor to Hiram Gilbert Bond, same place. Filed Aug. 23, 1889. Serial No. 321,769. (Specimens.)

Claim.—The method, substantially as herein described, of smelting iron ores, which consists in reducing the charge in the presence of the above-described oxysalts of barium.

412,448. PROCESS OF DEPHOSPHORIZING IRON AND STEEL. GEORGE ARCHBOLD, New York, N. Y., assignor to Hiram Gilbert Bond, same place. Filed Aug. 23, 1889. Serial No. 321,770. (Specimens.)

Claim.—The process of refining crude or pig iron and converting the same into malleable iron and steel, which consists in subjecting the crude molten metal to the action of the oxysalts of barium, substantially as described.

412,449. ARTIFICIAL RESISTANCE FOR ELECTRIC CIRCUITS. CHARLES R. ARNEW, Chicago, Ill. Filed June 27, 1889. Serial No. 315,799. (No model.)



Claim.—1. The combination, in a resistance device, of a refractory tube containing a refractory resistance material and inclosed in a refractory casing, substantially as set forth.

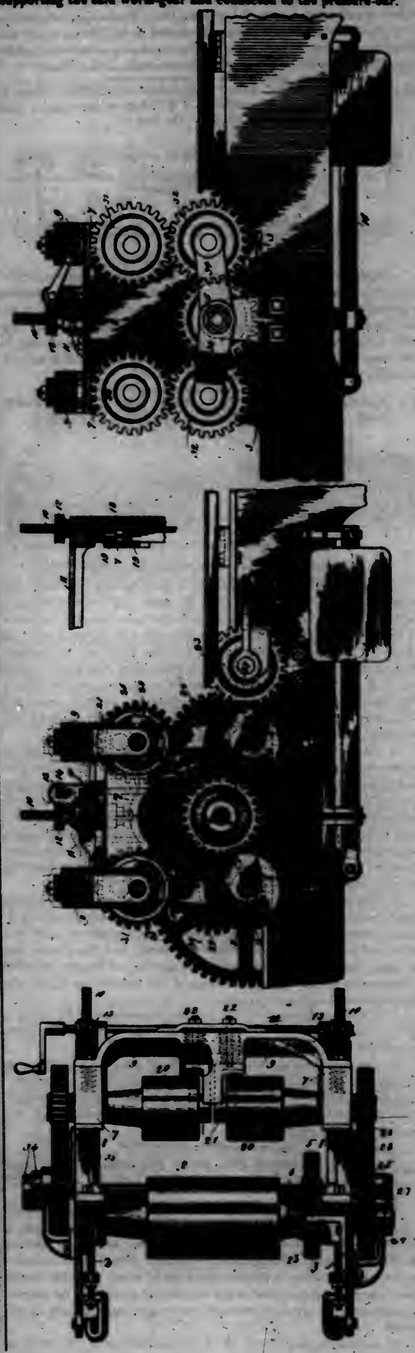
2. As a new article of manufacture, an artificial resistance device consisting of a tube of porcelain, powdered plumbago in the tube, plugs forming terminals of the electric circuit and confining the plumbago, a protecting-covering of metal, and a non-conducting material between the porcelain tube and the protecting-covering, substantially as described.

412,450. MACHINE FOR BEATING AND COMBING OUT PILE FABRICS. JOHN BARR, Philadelphia, Pa. Filed Nov. 5, 1888. Serial No. 289,964. (No model.)

Brief.—The object of the machine is to raise the nap or pile by combing and beating the fabric while in a wet or damp condition.

Claim.—1. The combination of mechanism for supporting and traversing the strip of fabric with two sets of combs, mechanism for traversing one set of combs crosswise of the fabric and the other set lengthwise of the same, a set of beaters, and means for operating the same, said set of beaters being located between the two sets of combs, whereby the final action upon the fabric is that of one of the sets of combs, substantially as specified.

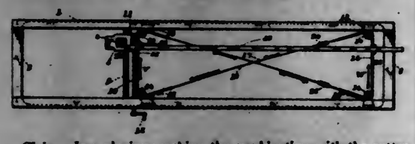
2. The combination of means for supporting and traversing the strip of fabric with a belt or equivalent carrier, means for operating the same, and a toothed comb supported on said carrier by means of a spring stem or shank, substantially as specified.



3. The combination of means for supporting and traversing the fabric, a belt or equivalent carrier, means for operating the same, and combs supported on said carrier by means of spring stems or shanks, said combs having toothed convex faces for acting on the fabric, substantially as specified.

4. The combination of means for supporting and traversing the fabric, a belt or equivalent comb-carrier, means for operating the same, combs having spring stems or shanks connected to said carrier, and a toothed plate or table with which the combs are brought into contact in their passage, substantially as specified.

5. The combination of means for supporting and traversing the strip of fabric, belts having spring stems or shanks carrying combs for acting upon the fabric, opposite drums for carrying said belts, means for operating the belts, and a directing-roll located between the drums and in a lower plane than the rear drum, whereby the belts will rise at an angle from the fabric on approaching said rear drum, all substantially as specified.



412,451. FEED-WORKS FOR WOOD-WORKING MACHINES. EDWIN BENJAMIN, South Evanston, Ill., assignor to the Benjamin Machine Company, of Illinois. Filed Dec. 12, 1888. Serial No. 293,127. (No model.)

Claim.—1. The combination, in a wood-working machine, of a movable frame-work carrying the top rolls, an elevating-screw partaking of the upward and downward movement of said frame-work, a worm-gear fitted on said screw, and a cross-piece resting loosely upon the stand or fixed portion of the frame-work, said cross-piece supporting the said worm-gear and connected to the pressure-bar.

2. The combination, in a wood-working machine, of standards attached to the bed, a cross-piece, as 11, resting loosely upon said standard and connected to the pressure-bar, a frame-work adapted to slide upon said standards, feed-rolls carried in said frame-work, and devices, as screw 10 and gear 12, for connecting said frame rigidly but adjustably with said cross-piece, substantially as described.

412,452. GUIDE-BAR FOR PLANING-MACHINES. ROWIN P. HOWLES, Buffalo, N. Y., assignor to H. & R. Holmes, same place. Filed June 12, 1888. Serial No. 276,883. (No model.)

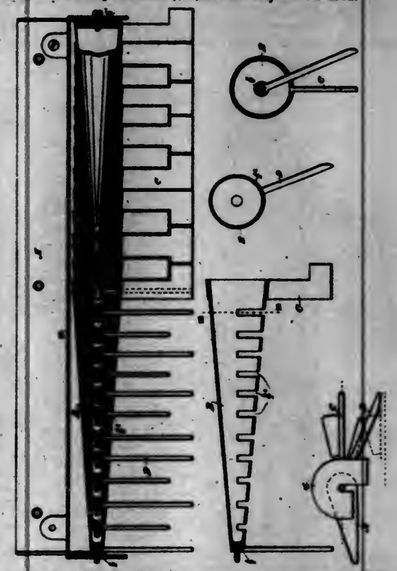
Claim.—In a planing-machine, the combination, with the cutter-head, the screw for actuating the same, and a guide-bar extending longitudinally of the machine-frame, of an actuating-belt for the guide-bar running over pulleys at the sides of the machine and crossed centrally between the pulleys, and a guide-bar connected at one end to one strand of the belt and at the opposite end to the cutter-head, substantially as and for the purposes described.

412,453. CARRIAGE-AXLE. JOSEPH BLAIR, St. Charles, Quebec, Canada. Filed Mar. 16, 1887. Serial No. 231,011. (No model.)

Claim.—1. The combination, with a carriage-axle provided with an annular offset I and a collar C on the inner end of the axle B, of a bearing D, fitting on the said axle-spindle and provided with an annular flange at its inner end having grooves and slots on the inside and segmental offsets on the outside, and a collar fitting on the annular offset of the axle and having segmental projections engaging the said groove of the flange, and a collar also fitting on the annular offset I of the axle and having grooves into which fit the external segmental projections on the flange of the bearing D, substantially as shown and described.

2. The combination, with the axle A, the spindle B, formed thereon and grooved on its upper side, the collar C on the inner end of the spindle and the offset I in the rear of the collar, an aperture L, extending through the offset and collar, the bolster or beam O on top of the axle and having a vertical reservoir N leading into the aperture L, and the cover P therefor, of the bearing D, fitting on the spindle and having a securing-collar at its inner end in rear of the collar C, and the guard Q, secured to the axle and covering the oil-reservoir and joint between the said securing-collar, substantially as set forth.

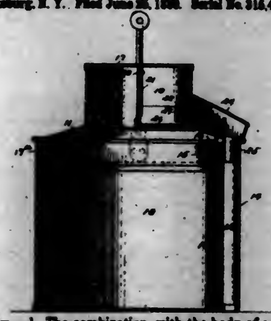
3. The combination, with the spindle B, having an annular groove near its outer end and a collar C near its inner end, of the bearing D, having inner and outer securing-collars J K at its rear end, the said collars and bearing having interlocking recesses and projections, and the projections D' on the outer end of the bearing of the cap or collar G, having recesses G' for the passage of the projections D and the securing-screws.



4. The combination, with the spindle, of the bearing D, having a cap G on its outer end, and the spring H between the end of the spindle and the cap, substantially as set forth.

5. The combination, with the spindle B, having the collar C at its inner end and the annular groove E near its outer end, of the bearing D, having securing-collars at its rear end, screws F, passing through it into the groove E, and the collar or cap G on the outer end of the bearing, substantially as set forth.

412,454. COUPLING KEY-BOARD FOR ORGANS. CARL BRÖSSEL, Pasadena, Cal. Filed Mar. 30, 1889. Serial No. 305,454. (No model.)

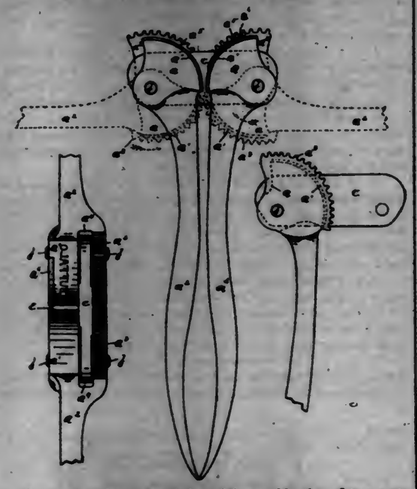


Claim.—1. A coupling key-board for organs, consisting of a series of supplementary keys placed above the main keys of the organ, a series of arms or levers adapted to extend over and lie in contact with the main keys, and a series of concentric slotted tubes connecting the supplementary keys with the arms or levers, whereby as the former are pressed down the latter are forced down also to operate the corresponding keys of the main key-board, substantially as described.

2. A coupling key board for organs, consisting of the series of supplementary keys placed above the main keys of the organ, the series of arms or levers adapted to lie over and in contact with the main keys of the organ, and the concentric series of axially-rotating tapering and slotted tubes connecting the supplementary keys with the arms or levers, whereby as the former are operated the latter press down the main keys of the organ, substantially as described.

3. A coupling key-board for organs, comprising a frame adapted to be attached to the organ-face and having a front casing, the concentric series of tapering slotted tubes mounted and adapted to be axially moved in said casing, the series of keys attached to said tubes, and the series of arms or levers attached to said tubes, arranged and adapted to operate substantially as described.

412,455. COOKING OR HEATING VESSEL. HENRY BOSWORTH, Canandaigua, N. Y. Filed June 26, 1888. Serial No. 316,471. (No model.)



Claim.—1. The combination, with the body of a vessel provided with a peripheral passage extending from top to bottom, of a cover provided with a dome having open and closed compartments, an inclosed angled channel formed upon the cover, connecting with the closed dome-compartment and capable of connection also with the body-passage, and a valve-connection between the compartments of the dome, substantially as shown and described.

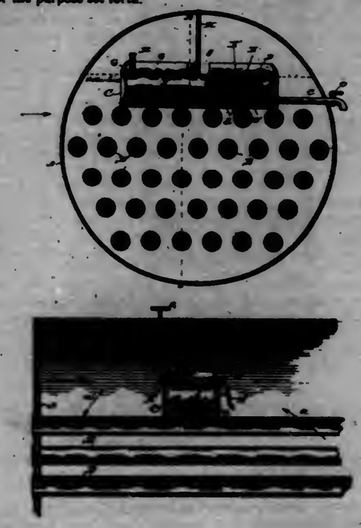
2. The combination, with the body of a vessel provided with a peripheral passage extending from top to bottom, and an interior sealing-chamber, of a flanged top or cover provided with a dome having open and closed compartments, an inclosed channel formed upon the cover, communicating with the closed dome-chamber and the body-passage, and a valve-connection between the compartments of the dome, substantially as described.

3. The combination, with the body of a vessel provided with a peripheral vertical passage extending from top to bottom, and an interior trough or sealing-chamber near the top, of a cover provided with a flange capable of entering the trough or sealing-chamber, and a dome having an open compartment and closed compartment provided with a detachable wall, a valve-connection between the dome-compartments, and an angled inclosed chamber formed upon the cover, connecting the closed dome-compartment and body-passage, substantially as described, and for the purpose specified.

412,456. SEAL-PRESS. CLARENCE V. BOSWORTH, Buffalo, N. Y. Filed July 3, 1888. Serial No. 277,886. (No model.)

Claim.—A seal-press consisting of the combination of two parts, each composed of a handle, a segmental compression-piece, and a segmental gear, having a slot between the compression-piece and the gear, with a connecting-strip within the slots between the gears and compression-pieces, and pivot-pins whereby the connecting-strip is pivoted at its opposite ends to the two parts.

412,457. SHIFTING MECHANISM FOR STEM WINDING AND SETTING WATCHES. FERDINAND DOUBRIN, D. Saint, Switzerland. Filed Apr. 4, 1889. Serial No. 306,026. (No model.) Patented in Switzerland Dec. 24, 1888, No. 220.



Claim.—1. The combination, with the winding and setting mechanism in a watch, of a pivoted bar or lever H and the bezel G, notched to engage one end of the lever H and capable of being partially rotated, substantially as and for the purposes set forth.

2. The combination, with the stem A, crown-pinion B, pivoted swinging plate D, and wheels C in the winding and setting mechanism, of the pivoted bar or lever H and the movable bezel G, notched on its inner edge and adapted to engage and move the lever H, substantially as and for the purposes set forth.

412,458. BOILER-CLEANING DEVICE. CLARK BROWN, Prospect, Ill. Filed June 16, 1888. Serial No. 314,698. (No model.)

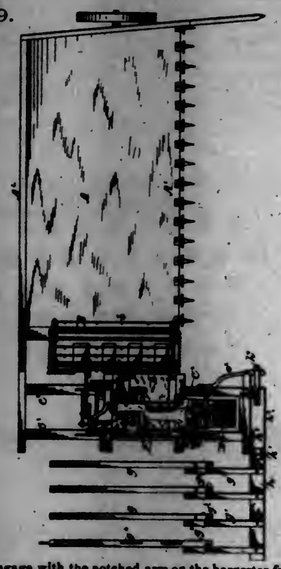
Claim.—1. In a device of the class described, the combination, with a box provided with a discharge-pipe and having a top formed with an opening or openings, of a cover adapted to close or expose said opening and means for operating said cover for the purpose of opening or closing the same, substantially as and for the purpose set forth.

2. The combination, with a boiler, of a box set therein and having its upper margin approximately at the water-level and having its top partly open, a discharge-pipe extending from the box through the boiler-shell and provided with means for opening and closing it, a cover adapted to close or expose the opening in the top of the box, and means for operating the cover from a point outside the boiler for the purpose of closing or exposing such opening, substantially as and for the purpose set forth.

3. The combination, with the boiler A, of the box C, set therein and provided with a discharge-pipe c, extending outward through the shell of the boiler and having a stop-cock c', the grating-top D D', the cover E E', resting on the top D D' and adapted to close or expose the openings in the top, and the operating-rod H, extending outward through the shell of the boiler and connected with the cover E, whereby the cover may be adjusted with reference to the top of the box for the purpose of closing or exposing the openings thereto.

4. The combination, with the boiler, of the box C, having the discharge-pipe c, and the grating-top D D', provided with the dependent flanges d, the cover E E', resting on the top D D', the operating-rod H, extending outward through the shell of the boiler and adapted to operate the cover D D', and means, substantially as shown and described, for admitting steam to the box, substantially and for the purpose set forth.

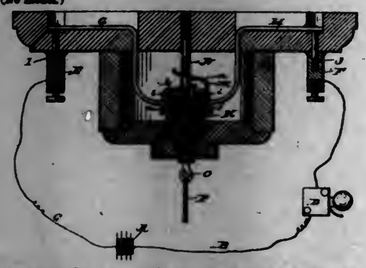
5. The combination, with the box C, provided with the discharge-pipe c, apron F, and wings G, and having the grating-top D D', of the sliding cover E E', resting on the top, and the operating-rod H, extending through the shell of the boiler, substantially as and for the purpose set forth.



6. The combination, with the box C, having the discharge-pipe c and grating-top D D', of the cover E, resting on the top, the operating-rod H, and the pipes K K, connecting the interior of the box with the steam-space above the water-level of the box, substantially as and for the purpose set forth.

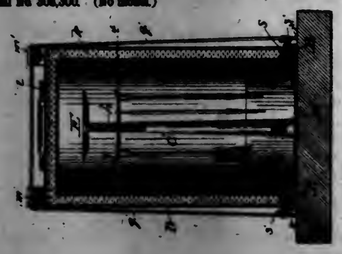
412,459. SELF-BINDING HARVESTER. DAVID R. BROWN, St. Louis, Mo., assignor to the Walter A. Wood Mowing and Reaping Machine Company, Hoosick Falls, N.Y. Filed Apr. 6, 1888. Serial No. 269,797. (No model.)

Claim.—The combination of a harvester-frame having a grain-binding mechanism mounted thereupon, a notched arm c' secured thereto, and a bundle-carrier-supporting arm also hinged to said frame and carrying a series of slats having other slats hinged to these slats secured to the hinged carrier-supporting arm, and a hand-lever



412,459.

adapted to engage with the notched arm on the harvester-frame, substantially as and for the purpose described.



412,460. CIRCUIT-CLOSER FOR SIGNALING APPARATUS. GEO. D. BURTON, New Ipswich, N. H. Filed July 3, 1888. Serial No. 307,150. (No model.)

Claim.—1. In a system of train-signaling, the combination, with an electric generator and conductors leading therefrom, of a circuit-closer consisting of a frame having an insulated post, to which the terminals of the circuits are connected, the one terminal overlapping the other and the two fitting in a notched rod, said rod terminating in a ring or handle.

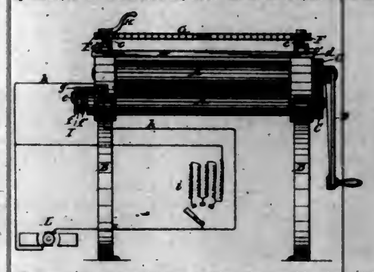
2. As a new article of manufacture, a circuit-closer consisting of a frame having an insulated post, to which the terminals of the circuits are connected, the one terminal overlapping the other and the two fitting in a notched rod, said rod terminating in a ring or handle.

412,461. BRUSH-KEEPER. ABRAM L. CARON, Chicago, Ill., assignor of one-half to Jules Bourst, Auburn, Ind. Filed Apr. 23, 1889. Serial No. 308,300. (No model.)

Claim.—1. In a brush-keeper, the combination of a base A, a cover fitting closely upon the base, a fastening device for securing the cover in place upon the base, and a brush-support inclosed by the cover, substantially as described.

2. In a brush-keeper, the combination of a base A, a cover fitting closely upon the base, a fastening device for securing the cover in place upon the base, and a brush-support and dish C, inclosed by the cover, substantially as described.

3. In a brush-keeper, the combination of a base A, a cover supported on the base to rest upon a seat B of yielding material, a fastening device for securing the cover in place upon the seat, and a brush-support inclosed by the cover, substantially as described.



4. In a brush-keeper, the combination of a base A, a cover B, formed of two thicknesses of metal, and an intermediate chamber *k*, a fastening device for securing the cover in place upon the base, and a brush-support inclosed by the cover, substantially as described.

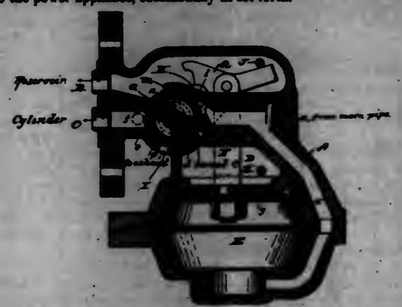
5. In a brush-keeper, the combination of a base A, a cover, a fastening device for securing the cover in place upon the base, a brush-support C, inclosed by the cover, and a plate E upon the support, substantially as and for the purpose set forth.

6. In a brush-keeper, the combination of a base A, a cover supported on the base and provided with mechanism for securing it thereon against the admission of air, comprising a lever *g*, fulcrumed upon the base, a stirrup *g'*, pivotally secured to the lever to engage the top of the cover and press the latter upon its seat when the lever is lowered, and a brush-support inclosed by the cover, substantially as described.

7. In a brush-keeper, the combination of a base A, a removable dish C upon the base, and a brush-support C' above the dish, a ring B of yielding material about the dish, a cover D to inclose the brush-support resting upon the ring, and a fastening device for securing the cover in place upon the base, substantially as described.

412,462. PHOTOGRAPH-BURNISHER. CLARENCE T. CARLEY, Syracuse, N. Y. Filed June 21, 1889. Serial No. 315,068. (No model.)

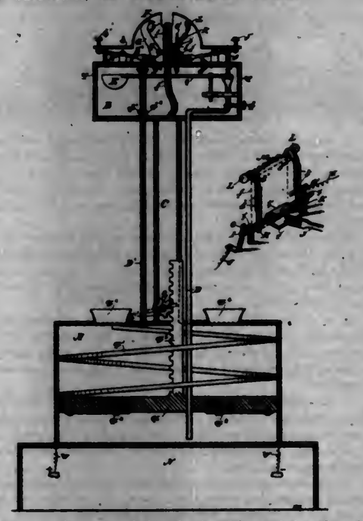
Claim.—1. In a burnishing-machine, the combination, with the burnishing-roller, of an electric heater connected with said roller to heat the same, as set forth.



2. In a burnishing-machine, the combination of a hollow burnishing-roller and an electric heater inclosed by said roller, as set forth and shown.

3. In a burnishing-machine, the combination of a hollow burnishing-roller, a non-metallic core in said roller, metallic collars attached to said core, an electric coil surrounding said core and out of contact with the roller and connected to the collars, and conductors connecting the collars with the electric generator, substantially as set forth and shown.

4. In combination with the hollow burnishing-roller, a hollow non-metallic core seated in said roller, metallic collars on the ends of said core, and an electric heat-developing conductor surrounding the core and extending longitudinally through the interior thereof and connected to the aforesaid collars, brushes bearing on the collars, and conductors connecting the brushes with the electric generator, substantially as described and shown.



412,463. AUTOMATIC COCK-VALVE. JESSE F. CARPENTER, Berlin, Germany. Filed June 11, 1888. Serial No. 313,945. (No model.)

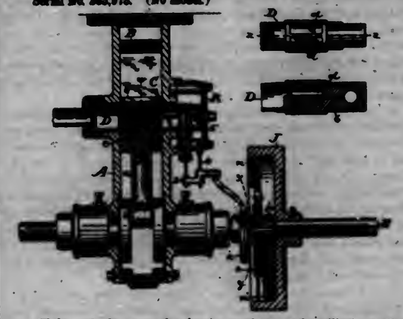
Claim.—1. A valve mechanism comprising a box, a diaphragm dividing the same into two chambers and in open communication by means of a main pipe with a primary source of fluid-pressure on both of its sides, and also in communication with a secondary source of fluid-pressure on one side and a valve mechanism interposed between this secondary source of fluid-pressure and one side of the diaphragm, and also interposed between both sources of fluid-pressure, and an apparatus for utilizing the motive fluid for the application of force, and provided with an outlet to the atmosphere, all constructed and arranged substantially as described, whereby the main pipe may be automatically exhausted at each valve apparatus of a series at the first part of the stroke and before the first slight application of force to the power appliance, substantially as set forth.

2. A valve-box having a pressure-chamber, a diaphragm arranged in said chamber, a stem rising from such diaphragm, a lever pivoted to such stem, a valve pivotally connected to such lever, a secondary container of pressure, and a power-applying apparatus, the valve having suitable ports for controlling the passages from the main pipe to the secondary container and to the atmosphere, and other passages leading from the secondary container to the power appliance, and other passages leading from the power appliance to the atmosphere, all combined and arranged substantially as described, whereby upon reduction of pressure at the main station the main pipe at each valve apparatus will be exhausted automatically at the first part of the stroke and before the first slight application of power by the power appliance and without the intervention of check-valves or equivalent medium, substantially as set forth.

412,464. ELECTRIC IGNITING DEVICE FOR LAMPS. MANUEL CARRANZA, Guatemala, Guatemala, and JOSÉ M. TIBOCO, San Francisco, Cal. Filed Oct. 11, 1888. Serial No. 287,962. (No model.)

Claim.—1. In a lamp, a lighter for the wick, consisting of a swinging frame adapted to be moved forward and backward to close and open an electric circuit, said frame having a spiral platinum wire in said circuit, whereby it is heated to incandescence, the said wire being in contact with the top of the wick, substantially as herein described.

2. In a lamp, a rocking or swinging frame in an electric circuit and adapted to be moved forward and backward to close and open said circuit, a wire carried by said frame and adapted by the movement of the frame to be thrown into contact with the wick, and an electric circuit including the wire, whereby it is heated to incandescence, thereby lighting the wick, substantially as herein described.



3. In a lamp, and in combination with the wick thereof, a swinging frame carrying the wire M, adapted by the movement of the frame to be thrown into and out of contact with the wick of the lamp, the wires of an electric circuit, and connections between said wires and the swinging frame, whereby the circuit is alternately closed and opened by the swinging of said frame, substantially as and for the purpose herein described.

4. In a lamp, the rock-shaft I and the lever-connections and button by which it is operated, in combination with the arms of the rock-shaft, the wire M, secured between the tops of the arms and adapted to be thrown into contact with the top of the wick by the movement of the shaft, and an electric circuit, including the wire, whereby it is heated to incandescence and lights the wick, substantially as herein described.

5. In a lamp, and in combination with its wick-tube and contained wick, the rock-shaft I, the button and lever-connections by which said shaft is moved, and the spring by which it is returned, the arm secured to said shaft, the wire M, secured between the arms, and an electric circuit, including the wire, for rendering it incandescent, substantially as and for the purpose herein described.

6. In a lamp, and in combination with its wick-tube and contained wick, the sectional insulated rock-shaft, the button and lever-connections, and the spring by which said shaft is operated, the arms secured to said shaft, the wire M, secured between the tops of the arms and adapted to be thrown into and out of contact with the wick, the electric-circuit wires *w*, the contact-piece O, connected with one wire and bearing on one end of the shaft, and the contact-piece O', connected with the other wire and with which one of the arms of the shaft is adapted to come in contact when the wire is thrown over into contact with the wick, whereby the circuit through the wire is closed and said wire rendered incandescent to light the wick, substantially as herein described.

412,465. STEAM-ENGINE. JOHN T. CARR, Bristol, assignor to the J. T. Carr Engine Company, New Britain, Conn. Filed Feb. 14, 1888. Serial No. 263,973. (No model.)

Claim.—1. In an engine having a piston and oscillating cylinder, the herein-described balanced valve, consisting of a movable part which rocks with the oscillating movement of the cylinder and is provided with radial ports, and a stationary part having radial ports, and which serves as the seat or bearing for said rocking part, the confronting walls of said stationary and moving parts being also provided with the balancing-chamber communicating with the interior of said cylinder, substantially as described, and for the purpose specified.

2. In an engine, the combination of the hollow axle having radial ports and the rocking block or piston fitted thereon, having ports acting in connection with the ports of said hollow axles as valves, said axle and piston having between their confronting faces the balancing-chamber, substantially as described, and for the purpose specified.

3. In an engine having a piston and oscillating cylinder, the valves consisting of a movable part which rocks with the oscillating movement of the cylinder and is provided with radial ports, and a stationary part having radial ports, in combination with a cut-off in the steam-passage leading to said ports, and a governor connected with said cut-off for varying the time of operating said cut-off relatively to the opening and closing of the valves proper, substantially as described, and for the purpose specified.

4. The combination of an engine of the class described with the steam-chamber K, a pipe inclosed in said chamber—as, for instance, the end of hollow axle D—the middle partition 6 within said pipe, the cut-off 5, sliding in said pipe and partition, and the governor for operating said cut-off, substantially as described, and for the purpose specified.

412,466. APPARATUS FOR RAISING DOUGH. JOHN F. CASE, Brooklyn, N. Y. Filed Feb. 15, 1889. Serial No. 300,077. (No model.)

Claim.—1. A bread-raiser consisting of a dough-chamber having

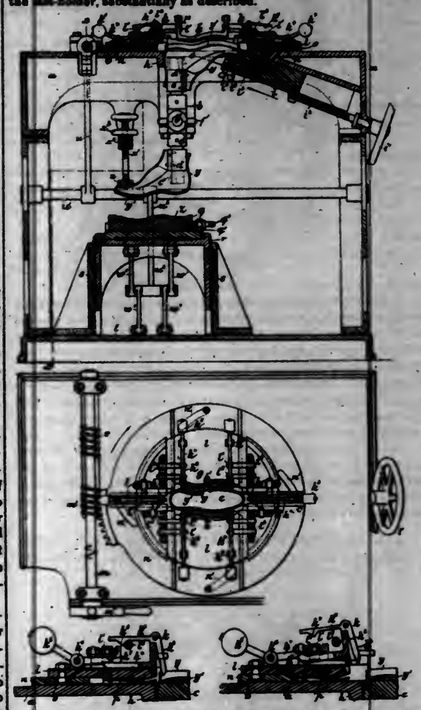
a water-vessel set into and forming part of the bottom wall thereof, a permanent shelf immediately beneath the water-vessel, and a lamp or other equivalent source of heat upon said shelf and beneath said vessel and adapted to apply heat directly thereto.

2. A bread-raiser consisting of a dough-chamber having a water-vessel set into and forming a part of the bottom wall thereof and so mounted therein that it is capable of being slid forward out of said wall for refilling or cleaning.

3. A bread-raiser consisting of a dough-chamber having a water-vessel set into and forming part of the bottom wall thereof and so mounted therein that it is capable of being slid forward out of said wall, and a door adapted to close against such water-vessel and retain the latter in position.

4. A bread-raiser consisting of a casing divided by a closed horizontal partition into an upper dough-chamber and a lower heating-chamber, said partition having a water-vessel set thereinto and constituting a portion thereof, a permanent shelf in the lower part of said heating-chamber immediately beneath said water-vessel, a lamp upon said shelf and immediately beneath said water-vessel, and a door covering one side of said dough-chamber and extending down to and covering the front of said partition, but arranged to leave the front of the heating-chamber open, so that the lamp therein is accessible and the products of combustion may escape therefrom while the dough-chamber is closed to the outer air.

5. A bread-raiser consisting of a casing open on one side and divided by a closed horizontal partition into an upper dough-chamber and a lower heating-chamber, said dough-chamber having a door covering its front side, a water-vessel set into the bottom of the dough-chamber and forming part of the closed horizontal partition and so mounted that it can be slid out of the dough-chamber and adapted to be held in place by the said door, said heating-compartment being open at its front side and having openings in the lower part of its closed sides, a shelf in the heating-chamber immediately beneath said water-vessel, and a lamp on said shelf arranged directly under said water-vessel and adapted to heat the latter.



6. A bread-raiser consisting of a casing open throughout its entire extent on one side, a horizontal closed partition dividing said casing into an upper dough-chamber and a lower heating-chamber, said dough-chamber having steam-outlet apertures in its upper part, shelves in said dough-chamber for supporting the dough-pans, a removable water-vessel set into the bottom of the dough-chamber and constituting a portion of the said closed horizontal partition and mounted therein so that it can be slid out of the dough-chamber, a shelf in the heating-chamber immediately beneath the water-vessel, a lamp on said shelf directly under said water-vessel, whereby the water in said vessel is heated, and a door on the open side of said casing, said door closing the dough-chamber entirely and terminating just below said closed partition, whereby said heating-chamber is left open on one side and said water-vessel is held in place.

412,467. LASTING-MACHINE. JOHN CAVE, PAUL CAVE, ARMS CAVE, FREDERICK CAVE, and ARTHUR CAVE, Rushden, County of Northampton, England. Filed June 28, 1888. Serial No. 277,895. (No model.)

Claim.—1. In a shoe-lasting machine, the combination, with a last-holder pivoted intermediate its ends and adapted to receive a last at each end, of lasting devices and sole-pressing devices in planes separated by a space substantially equal to the length of the last-holder, whereby when the said last-holder is turned to its operative position the lasting devices may operate in connection with one last and the sole-pressing devices in connection with the other, substantially as described.

2. The combination, with a last-holder pivoted intermediate its ends and adapted to receive a last at each end, of stationary separated lasting devices and sole-pressing devices and two stationary toe-supports, substantially as described.

3. In a shoe-lasting machine, a last-holder pivoted intermediate its ends and separated lasting devices and sole-pressing devices, the said sole-pressing devices moving and exerting pressure longitudinally of the last-holder, whereby the pressure of the lasting devices tends to neutralize the pressure of the sole-pressing devices on the trunnion of the last-holder, substantially as described.

4. In a shoe-lasting machine, a last-holder pivoted intermediate its ends and adapted to receive a last at each end, the last-receiving portion of each end being adjustable to and from its pivot, in combination with lasting devices and sole-pressing devices in planes separated by a space substantially equal to the length of the last-holder, substantially as described.

5. In a shoe-lasting machine, a last-holder composed of three parts, the central part being pivoted and a right and left hand screw extending longitudinally thereof and engaging the end parts, whereby the end parts of the last-holder may be simultaneously adjusted, substantially as described.

6. In a shoe-lasting machine, a last-holder composed of three parts, the central part having the yoke B, the right and left hand screw, and the hand-wheel *f* on said screw located within said yoke, and the ends *e e*, engaging the outer ends of the screw, substantially as described.

7. The combination, with a last-holder pivoted intermediate its ends and adapted to receive a last at each end, of separated lasting devices and sole-pressing devices, a driving-shaft, intermediate gearing connecting said shaft and said lasting and sole-pressing devices, substantially as described.

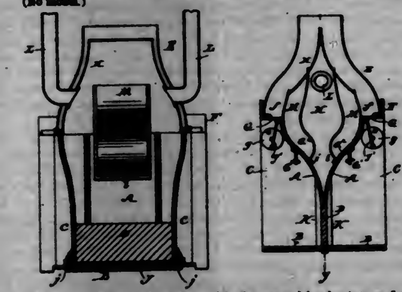
8. The combination, with a last-holder pivoted intermediate its ends and adapted to receive a last at each end, of separated lasting devices and sole-pressing devices, a driving-shaft provided with a worm, a cam-ring for operating the lasting devices, having a segment engaging the worm on the driving-shaft, a lever provided with a gear-segment engaging a worm on said driving-shaft, and a toggle connecting said lever and said sole-pressing device, substantially as described.

9. In a lasting-machine, the combination, with a last-holder, of lasting devices comprising upper-holding pinchers, one pair on each side of the shoe, having jaws conforming to the shape of the shoe and adapted to grasp the upper throughout the main portion of its length, and straight heel and toe pinchers intermediate said side pinchers, substantially as described.

10. In a lasting-machine, the combination, with a last-holder, of slides mounted radially with respect to the center of the sole of the last, pinchers pivoted on said slides adapted to be held in an elevated position, and cams and toppets for depressing said pinchers, one of said devices being mounted on the slides and the other mounted rigidly on a stationary part of the machine, whereby a movement of the slides effects the downward movement of the pinchers, substantially as described.

11. In a shoe-lasting machine, the combination, with a last-holder, of a slide arranged radially with relation to the center of the sole of the last, a pair of pinchers pivotally mounted on said slide and adapted to be held in an elevated position, a cam for lowering said pinchers, and a cam for closing the movable jaw of said pinchers, substantially as described.

12. In a shoe-lasting machine, the combination, with a last-holder, of a slide mounted radially with respect to the center of the sole of the last, pinchers for grasping the upper on the last pivotally mounted on said slide, a clamp for engaging and pressing down the edge of the upper, and a cam for closing and releasing the movable jaw of said pinchers, substantially as described.



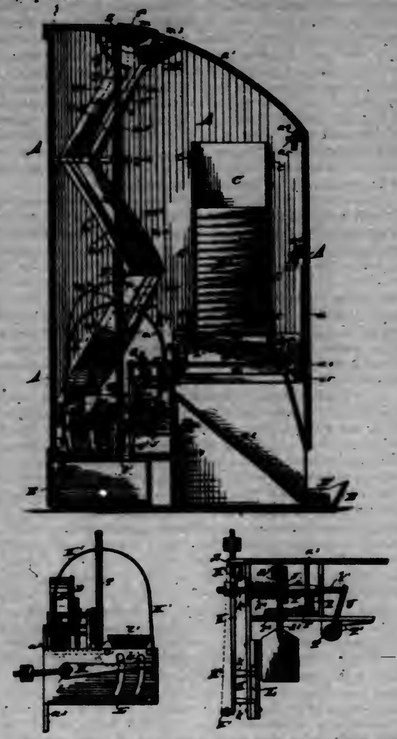
13. In a shoe-lasting machine, the combination, with a last-holder, of slides mounted radially with respect to the center of the last, pinchers mounted on said slides, cams for depressing the pinchers, cams for operating the movable jaws of the pinchers, a cam-ring engaging and operating all of said slides, and a driving-shaft operating said ring, whereby a movement of the driving-shaft effects the moving of the slides and the gripping and releasing of the upper, substantially as described.

14. In a shoe-lasting machine, a toe-support separated from the lasting devices and consisting of a movable body provided with a pivoted portion for engaging the toe, a set-screw for adjusting the pivoted toe-supporting portion, and a screw for adjusting said movable body, substantially as described.

15. In a shoe-lasting machine, a toe-support separated from the lasting devices and provided with a pivoted portion for engaging the toe, said pivoted portion having mounted therein a sliding spring-pressed block provided with spring-jaws for directly engaging the toe of the shoe, a screw for adjusting the pivoted portion, and a screw for adjusting the support, substantially as described.

16. In a shoe-lasting machine, the combination, with a toe-support mounted in inclined guides, of a screw for moving and retaining the same, said toe-support having a pivoted portion provided with inclined portion P^1, and a sliding spring-pressed block provided with spring-jaws for directly engaging the toe of the shoe, and a screw for adjusting the pivoted portion, substantially as described.

412,468. FIRE-PLACE AND HEATER. JOSEPH S. CLOUD and SAMUEL D. DRAHAM, Spartanburg, S. C., assignors to themselves and John C. White, Norfolk, Va. Filed Feb. 26, 1889. Serial No. 301,188. (No model.)



Claim.—1. The combination, with the curved back plates, of an air-heater H, having flues M, substantially as described.

2. The back plates A, having the openings G^2 and the dampers *f*, in combination with the air-heater H, held above the back plates, and provided with the flues M, coinciding with the openings G^2, and the dampers G', controlling the openings G^2, substantially as described.

412,469. COIN-OPERATED VENDING-MACHINE. FREDERIC B. GUMAER, New York, N. Y., assignor to the American Automatic Vending Machine Manufacturing Company, of New York. Filed Dec. 19, 1888. Serial No. 294,023. (No model.)

Claim.—1. In a coin-operated vending-machine, the combination, with a clock-works mechanism tripped into action by a coin, of a table, a goods-box held thereat, a slide reciprocating on the table at the discharge end of the box, gearing at the table actuated from the clock-works, and one or more toppets on said gearing operating the slide to deliver the goods.

2. In a coin-operated vending-machine, the combination, with a clock-works mechanism tripped into action by a coin, of a table having a series of slots, a series of goods-boxes held at the table, a series of slides reciprocating on the table at the discharge ends of the boxes, gearing near the table actuated from the clock-works, and toppets on said gearing operating the slides to deliver the goods, said clock-works mechanism geared with the coin-lever-tripping devices to operate one slide to deliver one piece of goods at each tilting of the coin-lever by the proper coin.

3. In a coin-operated vending-machine, the goods-delivery apparatus comprising a table, one or more goods-boxes arranged thereat, and one or more slides reciprocating between the table and boxes, and provided with edge-guards, preventing abstraction of goods, substantially as herein set forth.

4. In a coin-operated vending-machine, the combination, with a clock-works mechanism tripped into action by a coin, of a table F, having slots *f*, one or more goods-boxes C at the table, slides C', fitted between the table and boxes and provided with pins or shoulders *c'*, one or more shafts A, journaled near the table, toppets *h'* on said shafts, and gear-wheels on said shafts actuated from the clock-works and operating the slides, substantially as herein set forth.

5. In a coin-operated vending-machine, the combination, with a clock-works mechanism tripped into action by a coin, of a table F, having slots *f*, one or more goods-boxes C at the table, slides C', fitted between the table and boxes and provided with pins or shoulders *c'* and guards C^3, one or more shafts A, journaled near the table, toppets *h'* on said shafts, and gear wheels or pinions H on said shafts actuated from the clock-works and operating the slides, substantially as herein set forth.

6. In a coin-operated vending-machine, the combination, with a clock-works mechanism, of a table, one or more goods-boxes thereat, one or more delivery-slides reciprocating on the table at the box or boxes, gearing near the table carrying toppets actuating the delivery slide or slides and operated from the clock-works mechanism, a pivoted or tilting coin-lever, a notched disk or plate on the rock-shaft of said lever, and a detent or arm on the clock-works, stopping them when it is out of alignment with the notch of the coin-lever-shaft disk and allowing operation of the clock-works and delivery-slides when the lever tilts and holds the notch in the path of the detent, substantially as herein set forth.

7. In a coin-operated vending-machine, the combination, with a clock-works mechanism, of a table, one or more goods-boxes thereat, one or more delivery-slides reciprocating on the table at the boxes, gearing near the table carrying tappets actuating the delivery slide or slides and operated from the clock-works mechanism, a slotted coin chute or guide, a coin-lever held to an endwise-movable rock-shaft having a radial pin or arm, said lever provided with coin-holding fingers or coin-support entering the coin-passage of the chute or guide, retracting devices for the endwise-movable shaft and for the lever, a notched disk or plate on said shaft, a detent or tappet on the clock-works adapted to stop them when out of alignment with the notch of the disk or plate, a pin on one of the clock-works gear-wheels, and a retracting trip-lever engaged by the latter pin and engaging the coin-lever shaft to move it endwise, substantially as described, whereby, as the coin-lever is tilted, the disk-notch may be brought into register with the clock-works detent to trip said works and the goods-delivery slides into action, and when one package of goods is delivered the coin-lever will be moved bodily to drop the coin and will rise and stop the clock-works, as and for the purposes set forth.

8. In a coin-operating vending-machine, the combination, with a coin-lever held to an endwise-movable rock-shaft provided with a radial pin and with a device for retracting it endwise, a notched disk or plate on said shaft, and a rotating tappet in a clock-works mechanism adapted to stop at said disk and work through its notch when the coin-lever is tilted, of a pin on one of the clock-works wheels, a trip-lever having tappet-arms, one engaged by the clock-works pin and the other engaging the coin-lever-shaft pin, substantially as described, whereby, when the coin-lever is tilted by a proper coin, the clock-works will be started to actuate a goods-delivery mechanism, and after a package is delivered the coin-lever is moved bodily to discharge the coin, as set forth.

9. In a coin-operated vending-machine, the combination, with a coin-lever held to an endwise-movable rock-shaft provided with a radial pin and with a device retracting it endwise, a notched disk or plate on said shaft, a retracting device restoring the lever to normal position, and a rotating tappet in a clock-works mechanism adapted to stop at said disk and work through its notch when the coin-lever is tilted, of a pin on one of the clock-works wheels, and a trip-lever having tappet-arms, one engaged by the clock-works pin and the other engaging the coin-lever-shaft pin, said latter tappet having a shoulder opposing the shaft-pin as the shaft and tilted coin-lever receive bodily movement from the trip-lever, substantially as described, whereby, when the coin-lever is tilted by a proper coin, the clock-works will be started to actuate a goods-delivery mechanism, and the coin-lever will be shifted bodily to discharge the coin, and the shoulder on the tappet will assure passage of the clock-works pin clear of the trip-lever before the coin-lever resumes its normal position, as herein set forth.

10. In a coin-operated vending-machine, the combination, with a clock-works mechanism, of a table, one or more goods-boxes C thereat, one or more delivery-slides at the boxes, gearing *h* H at the table, operated by the clock-works, tappets *K'*, driven by said gearing and actuating the slides, a coin-lever, a notched disk or plate J *i* on the lever rock-shaft, and a detent I on the clock-works adapted to stop them when out of line with the disk-notch *i*, substantially as described, for the purposes set forth.

11. In a coin-operated vending-machine, the combination, with a clock-works mechanism, of a table, one or more goods-boxes C thereat, one or more delivery-slides at the boxes, gearing *h* H at the table, operated by the clock-works, tappets *K'*, driven by said gearing and actuating the slide or slides, a coin-lever held to an endwise-movable rock-shaft retracted by a spring, a radial pin R and notched disk-plate J *i* on the lever-shaft, a coin chute or guide having slots *l l*, said coin-lever having tapering fingers entering said slots, and a tappet I on the clock-works, stopping them by contact with the disk J, but allowing their operation when the coin-lever is tilted to bring the notch *i* of the disk into the path of the tappet, all arranged for operation substantially as herein set forth.

12. In a coin-operated vending-machine, the combination, with a clock-works mechanism, of a table, one or more goods-boxes C thereat, one or more delivery-slides at the boxes, gearing *h* H at the table, operated by the clock-works, tappets *K'*, driven by the gearing and actuating the slides, a coin-lever held to an endwise-movable shaft adapted to be retracted by a spring, a radial pin R and notched disk J *i* on the lever-shaft, a coin chute or guide, said coin-lever having laterally-projecting fingers or coin-support entering the coin-passage of the chute, a tappet I on the clock-works, stopping them by contact with the disk, but allowing their operation when the coin-lever is tilted to bring the notch *i* of the disk into the path of the tappet, a trip-lever P, having arms *p p'*, the arm *p'* acting on the coin-lever-shaft pin R, and a pin *o* on the clock-works, acting on the arm *p* of said trip-lever, all arranged for operation substantially as herein set forth.

13. In a coin operated vending-machine, the combination, with a coin-chute, goods-receptacles, and mechanism delivering the goods, of a coin-lever having a laterally-projecting coin-support and adapted to lower or tilt by lodgment of a coin on it at the chute to trip the goods-delivery mechanism into action, and adapted, also for bodily lateral movement to strip or dislodge the coin from it, substantially as herein set forth.

14. In a coin-operated vending-machine, the combination, with an endwise-movable shaft provided with a retracting device, of a coin-lever held to said shaft and having lateral fingers or support on which the coin lodges, and a coin chute or guide into which the coin-support of the lever passes to sustain the coin, substantially as described, whereby the lever coin-support has motion in the chute as the lever tilts and the bodily lateral movement of the lever will discharge the coin from it, as set forth.

15. In a coin-operated vending-machine, the combination, with the coin-lever and clock-works mechanism, of a spring which sustains the coin-actuated lever in position to allow operation of the clock-works, substantially as herein set forth.

16. In a coin-operated vending-machine, the combination, with clock-works mechanism and a coin-lever fulcrumed at a normal balance, of a spring which sustains the coin-actuated lever in position to allow operation of the clock-works, substantially as herein set forth.

17. In a coin-operated vending-machine, the combination, with the coin-lever and clock-works mechanism, of a spring connected at one end to the coin-receiving end of the lever and at the other end to an adjacent support and sustaining the coin-actuated lever in position to allow operation of the clock-works, substantially as herein set forth.

18. In a coin-operated vending-machine, the combination, with a clock-works mechanism and a coin-lever, of a spring sustaining the coin-actuated lever in position to allow operation of the clock-works, and connected at one end to the lever and connected at its other end to a plate adjustable for setting the lever by the spring relatively to the weight of the coin and to a tripping mechanism of the clock-works which the lever controls, substantially as herein set forth.

19. In a coin-operated vending-machine, the combination, with a clock-works mechanism and an endwise-movable rock-shaft having a retracting device, of a coin-lever held to said shaft and provided with lateral fingers or support on which the coin lodges, a coin chute or guide into which the coin-support of the lever passes, and a spring connected to the coin-lever and sustaining it when actuated by a coin in position either to allow or to prevent operation of the clock-works, substantially as herein set forth.
